Donné en notre château des Tuileries, le 26e jour du mois de Décembre de l'an de grace 1827, et de notre règne le quatrième.

Signé CHARLES.

Par le Roi : *le Ministre Secrétaire d'état des finances,*
Signé JH. DE VILLÈLE.

INSTRUCTION GÉNÉRALE de la COMMISSION des MONNAIES pour L'EXÉCUTION de L'ORDONNANCE ROYALE du 26 Décembre 1827.

L'ordonnance royale du 26 Décembre 1827, qui remplace par une commission l'administration des monnaies, a eu pour but principal de reporter sur le fonctionnaire dépositaire, et seul possesseur des matières destinées à être fabriquées, la responsabilité qui pouvait peser sur le Gouvernement, tant qu'il existait des comptables à cautionnement, sous le nom de *Caissiers*.

Pour conserver au Gouvernement et au public les garanties nécessaires à leur sécurité, l'ordonnance a décidé que les cautionnements versés par les directeurs de la fabrication remplaceraient ceux précédemment versés par les caissiers, et que ces derniers, sous la dénomination de *Contrôleurs au change*, exerceraient sur l'enregistrement et le mouvement des matières et des espèces une surveillance telle que, chaque jour et à chaque instant, la situation positive et matérielle des travaux du directeur pût être constatée.

Par suite de ces dispositions, quelques modifications ont dû être apportées aux instructions précédentes, et la Commission des monnaies a pensé qu'en les indiquant aux fonctionnaires, elle devait leur retracer les obligations établies par les règlements antérieurs, en leur recomman-

* Cet article a subi quelques modifications de détail par mesures administratives.
† Cet article a été modifié en plusieurs de ses parties par mesures administratives.

dant toutefois l'observation des lois monétaires non abrogées.

Du Directeur des Essais.

Fonctions et Attributions.

Le Directeur des essais est admis, avec voix délibérative, aux séances de la Commission des Monnaies, toutes les fois qu'il y est question d'objets concernant les essais.

Il propose à la Commission ses vues sur le perfectionnement des opérations relatives aux essais.

Il donne son avis sur les questions chimiques qui lui sont faites par le Président de la Commission des Monnaies.

Il s'assure de la pureté des agents chimiques employés au laboratoire, et de l'exactitude des poids et balances d'essai. Il vérifie également la qualité du plomb et des acides dont les essayeurs de la garantie doivent se pourvoir au dépôt établi près la Commission.

Il veille à ce que les fonctionnaires du laboratoire remplissent avec exactitude leurs obligations respectives, et à ce que les essais et autres opérations n'éprouvent aucun retard.

Il est juge des opérations du vérificateur et des essayeurs; il a le droit de les faire recommencer, et d'en ordonner la continuation jusqu'à parfaite exécution.

Il fait tenir deux registres distincts; l'un pour les essais et la vérification du titre des espèces monnayées et des lingots ou matières d'or et d'argent; l'autre pour les analyses ou autres opérations chimiques ordonnées par le Président de la Commission.

Procès-verbal de chacune des opérations des Essayeurs et du Vérificateur est inscrit, jour par jour, au registre à ce destiné; et ce registre est signé, 1°, par les Essayeurs qui ont opéré; 2°, par le Vérificateur, lorsqu'il est intervenue; 3°, par le Directeur des essais; 4°, par l'un des Commissaires généraux. Expédition de ces procès-verbaux est adressée chaque jour au Président de la Commission par le Directeur des essais, avec son avis motivé, s'il y a lieu.

Le registre pour l'essai du titre des espèces, des lingots et des matières d'or et d'argent, est déposé, tous les ans, aux archives de la Commission. Celui destiné aux analyses ou travaux chimiques reste en dépôt au laboratoire.

Le Directeur des essais règle et vise les mémoires des dépenses relatives au laboratoire, et les soumet à l'ordonnancement du Président de la Commission. Il rend compte, tous les ans, et plus souvent s'il est nécessaire, de la portion de boutons d'essai d'or et d'argent qu'il aura jugé convenable de conserver pour les expériences du laboratoire.

Il procède, en présence du Vérificateur, à l'examen des candidats pour les places d'Essayeurs de la garantie et du commerce. Le résultat de cet examen est transmis à la Commission, qui délivre, s'il y a lieu, un certificat de capacité.

En cas d'absence par maladie ou par congé, le Directeur des essais est remplacé de droit par le Vérificateur, et, à défaut de celui-ci, par l'un des Essayeurs.

Détermination du Titre des Espèces.

Les Essayeurs et le Vérificateur ne devant pas connaître à quelle monnaie appartiennent les échantillons sur lesquels ils sont chargés d'opérer, la Commission des Monnaies, avant de remettre au Directeur des essais les trois pièces à essayer, fera disparaître, en présence de ce fonctionnaire (*s'il juge convenable d'assister à l'opération*), la partie des trois pièces portant les différents monétaires, en employant des numéros de reconnaissance, à l'aide desquels on pourra toujours connaître à quelle monnaie appartiennent les échantillons.

Si les pièces difformées ne suffisaient pas pour l'essai, les échantillons réservés, après avoir subi la même opération, seraient aussi remis au Directeur des essais sur sa demande. Une note indicative de cette remise remplacera dans l'armoire des échantillons le paquet de ces trois pièces.

Les pièces provenant des différentes monnaies, envoyées au laboratoire, seront placées sans distinction sur la table, afin que le hasard décide seul de l'ordre dans lequel seront faits les essais. (*Le poids d'essai est d'un gramme pour l'argent, et d'un demi-gramme pour l'or.*)

Chaque Essayeur prend une des trois pièces : la troisième est gardée, pour, en cas de besoin, être essayée par le vérificateur.

Si les deux Essayeurs sont d'accord, et si les titres sont dans les remèdes voulus par la loi, la Commission des Monnaies autorise la délivrance de la fabrication.

Si les deux Essayeurs, également d'accord, trouvent leurs deux pièces hors des remèdes, le Vérificateur est appelée à vérifier les deux pièces.

Si ce fonctionnaire en trouve une hors des limites, la refonte de la brève est prononcée.

Mais s'il trouvait les deux pièces dans les limites, il serait procédé à une reprise d'essai sur les deux pièces par le Directeur.

Si l'une des deux pièces est trouvée par le Directeur hors des remèdes, la refonte est ordonnée; si les deux pièces sont au contraire trouvées par lui dans les remèdes, le jugement du titre est, dans ce cas, établi sur le terme moyen des quatre essais du vérificateur et du Directur.

Si les titres rapportés par les deux Essayeurs ne sont pas d'accord, quoique trouvés dans les limites, le Vérificateur intervient et opère sur la troisième pièce.

Si le titre accusé par lui est d'accord avec le titre de l'un des Essayeurs, le jugement sera conforme à ce titre; si le titre est entre ceux des deux Essayeurs, ou encore s'il est en dehors de ces titres, mais toujours dans les remèdes légaux, le jugement est établi sur le terme moyen des trois titres.

Mais, dans le cas où l'essai du Vérificateur se trouverait hors des limites, alors le Directeur des essais ordonne un essai *consultatif* sur la troisième pièce. Si ce dernier essai se trouve hors des limites, il y a lieu à la refonte; si au contraire il est dans les limites, il y a lieu à une reprise par le Directeur sur la même pièce; si le Directeur la trouve également hors des limites, la refonte est prononcée par la Commission.

Si le Directeur trouve cette même pièce dans les limites, le jugement aura lieu sur le terme moyen des trois essais faits, 1°, par les Essayeurs sur les deux premières pièces; 2° par le Directeur sur la troisième.

S'il résulte du rapport des deux Essayeurs que l'une des pièces est dans le remède, et l'autre hors du remède, le Vérificateur essaye la pièce trouvée hors des limites; la refonte sera prononcée, s'il la juge de même hors des limites. S'il la rapporte dans les limites, le Directeur fait une reprise d'essai sur la même pièce. Il y a lieu à refondre si le Directeur la déclare hors des limites; mais s'il la trouve dans les remèdes, le titre déclaré par le Vérificateur est enregistré à la place du titre trouvé hors des limites par l'un des Essayeurs. Le jugement du titre de la délivrance se continue alors comme si les Essayeurs avaient primitivement trouvé leurs deux pièces à bon titre.

Si les deux Essayeurs ont trouvé les deux premières pièces hors des limites, sans être néanmoins d'accord sur le titre, le Vérificateur opère sur l'une et l'autre pièce. S'il en trouve une hors du remède, la refonte sera prononcée; mais s'il les déclarait toutes deux dans les limites, le Directeur alors essayerait ces deux mêmes pièces. Si l'une d'elles est jugée par lui hors des limites, la refonte est ordonnée; mais s'il rapporte les deux pièces dans les remèdes, le jugement du titre est établi sur la moyenne des quatre essais du Vérificateur et du Directeur.

Au surplus, le tableau synoptique* ci-joint retrace tous ces cas, et facilite l'application à chacun d'eux des présentes dispositions.

Vérification des Lingots et Matières.

Toute opération étrangère au service monétaire étant interdite aux Essayeurs et au Vérificateur dans le laboratoire, le Directeur des essais veille à ce qu'il ne soit procédé à l'essai d'aucune matière sans l'autorisation spéciale du President de la Commission des Monnaies.

Dans les cas de vérification de titre des lingots ou matières d'or et d'argent ordonnée par le Président, et ensuite du jugement rendu par la Commission, le Directeur des essais fait apposer sur lesdits lingots et matières un poinçon dont il est dépositaire, et portant ces mots : *Commission des Monnaies.*

Du Vérificateur des Essais.

Le Vérificateur des essais doit concourir, sous la surveillance du Directeur des essais, en cas de désaccord entre les deux essayeurs, aux opérations et analyses chimiques demandées par le Président de la Commission des Monnaies.

Il est appelé à vérifier les titres des monnaies et des matières d'or et d'argent, dans les cas et de la manière qui ont été expliqués ci-dessus, à l'article du Directeur des essais.

Il remet ses rapports au Directeur des essais.

Il signe le registre et les procès-verbaux des opérations auxquelles il a concouru.

Il assiste à l'examen des Essayeurs du commerce.

En cas d'absence par congé ou par maladie, ou lorsqu'il supplée le Directeur des essais absent, il est remplacé par un des essayeurs.

Des Essayeurs.

Les Essayeurs doivent posséder les connaissances et la pratique nécessaires pour executer les analyses, travaux

* See page 251 for the "tableau synoptique."

chimiques et expériences qui ont rapport à l'art monétaire, et qui seraient ordonnés par le Président de la Commission des Monnaies.

Les Essayeurs opèrent chacun séparément; ils inscrivent, jour par jour, le résultat de leurs opérations, conformément à l'article 24 de l'ordonnance du 26 Décembre 1827, sur le carnet tenu au laboratoire sous la surveillance du Directeur des essais.

Le Directeur fait dresser procès-verbal de leurs opérations sur les registres du laboratoire à ce destinés, et qui seront signés, 1°, par eux; 2°, par le Vérificateur, lorsqu'il aura été appelé à vérifier leurs essais; 3°, dans tous les cas, par le Directeur des essais et par le Commissaire général chargé spécialement de ce détail. (*Articles* 13 *et* 15 *de l'ordonnance.*)

En cas d'absence par congé ou par maladie, ou lorsqu'ils suppléent le Vérificateur, les Essayeurs sont remplacés, sous leur responsabilité, par l'Aide-Essayeur attaché au laboratoire, ou par un essayeur du commerce présenté par l'Essayeur et agréé par la Commission, sur la proposition du Directeur des essais.

L'indemnité due à l'Essayeur du commerce, et réglée à l'amiable, sera aux frais du fonctionnaire qui aura donné lieu au remplacement.

Du Graveur Général.

Le Graveur général est chargé de la confection des poinçons matrices, coins et coussinets nécessaires à la fabrication des espèces, ainsi que des poinçons et matrices pour la marque d'or et d'argent.

Il doit faire à l'avance tous ses travaux préparatoires, pour être toujours prêt à satisfaire aux demandes de la Commission des Monnaies.

Il est responsable des abus qui proviendraient de l'inhabileté ou de l'infidélité de ses employés et ouvriers.

Toutes les demandes qui lui seront faites pour objet de son service devront être signées par le Président de la Commission ou le Commissaire général désigné à cet effet.

Il lui sera délivré, par le Commissaire général chargé de la réception de ses diverses fournitures, un récépissé qu'il devra produire à l'appui de ses mémoires.

Tous les objets livrés par lui devront être de première qualité, et ne seront reçus qu'après épreuve. Celle des coins destinés à frapper l'or et l'argent sera faite sur des flans d'essai de cuivre, et celle pour les coins destinés à frapper le bronze, sur des flans de bronze, à moins qu'il n'en soit autrement ordonné par la Commission.

L'épreuve des poinçons-matrices et autres objets relatifs à la marque d'or et d'argent aura lieu en présence d'un des membres de la Commission, qui s'adjoindra, pour l'épreuve des coins, carrés et coussinets nécessaires à la fabrication des espèces, le Commissaire du Roi et le Contrôleur du monnayage près l'hotel des monnaies de Paris.

Tout ce qui aura été reconnu défectueux restera à la charge du graveur, et sans indemnité.

Il sera chaque fois dressé procès-verbal de ces opérations.

Le Graveur général sera tenu de faire les essais et expériences qui lui seront prescrits par la Commission, pour le perfectionnement des coins, coussinets, etc. etc.

Il devra prévenir, à l'avance et par écrit, le Président de la Commission des livraisons qu'il sera en mesure d'effectuer, d'après les commandes qui lui auront été faites; et il sera ensuite informé du jour où les livraisons devront avoir lieu.

Les mémoires de ces fournitures seront réglés et ordonnancés par le Président de la Commission.

Chaque fois qu'il en sera requis, le Graveur général devra justifier non-seulement des matrices, poinçons et coins, etc. etc. qu'il aura fournis, mais encore de tous ceux qu'il aura fabriqués, qui auront été admis ou rejetés à l'épreuve, et qui auraient manqué à la trempe ou par quelque autre accident; en un mot, il devra toujours être en mesure de prouver l'emploi qu'il en aura fait.

Les coins manqués au travail ou à l'épreuve seront soumis à la difformation, de la même manière que les coins hors de service.

Par suite des dispositions qui précèdent, le Graveur général est tenu d'avoir un registre coté et parafé par la Commission, lequel mentionnera par ordre de nature tous les objets qu'il aura fabriqués et la destination qu'ils auront reçue.

Ce registre sera vérifié par l'un des Commissaires généraux, et arrêté tous les trois mois, et plus souvent s'il est jugé convenable, par le Président de la Commission ou le Commissaire-Général à ce délégué.

A la fin de chaque trimestre, le Graveur général adressera au Président de la Commission un état de situation des objets qui auront été fabriqués, livrés ou réformés, de ceux restant en dépôt entre ses mains, et enfin de ceux en cours de fabrication.

Il procédera gratuitement, en présence de la Commission, toutes les fois qu'il en sera requis, à la vérification des pièces de monnaie arguées de faux, et à celles des marques de la garantie apposées sur les bijoux et matières d'or et d'argent.

Si la Commission jugeait convenable d'ordonner l'apposition d'un point secret de reconnaissance sur ceux des coins destinés à la fabrication des espèces qui pourraient recevoir ce signe, le Graveur général sera tenu d'exécuter cette disposition sans augmentation du prix des coins.

Il se conformera d'ailleurs aux arrêtés et règlements antérieurs, pour tout ce qui n'est point abrogé par la présente instruction.

Des Commissaires du Roi.

Les Commissaires du Roi sont sous les ordres immédiats de la Commission des Monnaies, et responsables de l'exécution des instructions qui leur ont été transmises* par le Président. Ils sont spécialement chargés de surveiller toutes les opérations monétaires, ainsi que les travaux de tous les fonctionnaires; et ils s'assurent si chacun remplit exactement les devoirs qui lui sont imposés.

Ils exercent la police dans les ateliers monétaires†; s'il s'y commet quelque délit, ils en dressent procès-verbal, dont ils remettent ou envoient, dans les vingt-quatre heures, expédition à l'autorité judiciaire et au Président de la Commission.

Les Commissaires du Roi correspondent avec le Président de la Commission pour le tenir exactement informé de l'entrée des matières au change, de l'état de la fabrication, des obstacles ou embarras qui pourraient l'entraver et auxquels ils ne croiraient pas pouvoir remédier eux-mêmes; de la conduite des autres fonctionnaires, si elle donnait lieu à de justes plaintes; en un mot, de tout ce qui peut intéresser le service.

Le Commissaire du Roi, étant le premier fonctionnaire de l'hôtel des monnaies près lequel il est placé, a l'autorité administrative pour l'exécution des lois, ordonnances et règlements; et à ce titre tous les autres fonctionnaires lui sont subordonnés en tout ce qui a rapport au service.

Nul fonctionnaire ne peut s'absenter sans un congé par écrit du Président de la Commission, demandé par le Commissaire du Roi.

Dans ce cas, ou dans celui de maladie, les fonctionnaires, autres que le Commissaire du Roi, sont tenus, pour éviter toute interruption dans le service, de se faire remplacer par des hommes de leur choix, dont ils demeurent personnellement responsables, et sauf l'approbation du Président de la Commission.

Le Commissaire se fait remplacer par le Contrôleur au change.

Le Commissaire a le droit de convoquer les fonctionnaires, soit pour leur communiquer les ordres et les instructions qu'il aura reçus du Président de la Commission, lorsqu'il n'a pas été chargé formellement de leur en remettre extrait certifié par lui, soit pour les entretenir de quelque objet relatif au service.

Pour concilier l'activitè des travaux avec la possibilité de les surveiller, les heures du travail sont fixées pour chaque monnaie, savoir, du 1er Avril au 1er Octobre, de six heures du matin à huit heures du soir, et du 1er Octobre au 1er Avril, de sept heures du matin à sept heures du soir. Toutefois, si l'importance ou l'urgence des travaux l'exigeait, le Commissaire du Roi pourrait, sur la demande motivée du Directeur, et après en avoir obtenu l'approbation du Président, autoriser leur prolongation.

Ils proposeront au Président de la Commission la distribution des logements, en se concertant à cet égard avec les fonctionnaires qui y ont droit; et ils tiendront la main à ce que chacun de ces fonctionnaires occupe le logement qui lui aura été assignée dans l'hôtel.

La plus grande surveillance est recommandée au Commissaire sur les opérations du change. Il veille également à l'exécution des tarifs qui règlent le prix des matières et espèces qui y sont versées, et il prononce sur les difficultés qui pourraient s'élever entre le public et le Directeur.

Il cote et parafe tous les registres tenus par le Directeur, par le Contrôleur au change et par le Contrôleur au monnayage.

Il vérifie et vise les états et bordereaux réclamés par le Président de la Commission des monnaies et ceux qui doivent être transmis à la comptabilité générale des finances.

Il est dépositaire des étalons et dénéraux qui doivent servir à la vérification des poids métriques et du poids des pièces.

* Arrêté du Gouvernement du 30 Mai 1803 (10 Prairial, an XI.) art. 17, paragraphe 1.

† Arrêté du Gouvernement du 30 Mai 1803 (10 Prairial an XI.) art. 17, paragraphe 3.

Il procède, quand il le juge convenable, à la vérification des poids et balances autres que ceux d'essai. A Paris, l'étalon sera déposé a la Commission.

Il vérifie, aussi souvent qu'il le juge nécessaire, si la totalité des matières inscrites sur les registres du Contrôleur au change existent, soit dans les ateliers du Directeur, soit dans la caisse du change, déduction faite des déchets, du poids des espèces passés en delivrance et des échantillons.

Tous les mois, il adresse au Président de la Commission un procès-verbal de vérification de la caisse du change et des matières restées dans les travaux du Directeur, conformément au modèle qui lui est adressé.

Il est dépositaire des clefs de la salle du monnayage et de celle des délivrances.

Il reçoit, sur demande adressé par lui au Président de la Commission des Monnaies, les coussinets destinés à marquer les pièces sur tranche et les coins nécessaires au monnayage, qu'il doit tenir sous clef. Il en fait la remise au Contrôleur du monnayage, au fur et à mesure des besoins du service, et tient registre de leur emploi.

Il décide, sur l'avis du Contrôleur du monnayage, quand ils sont hors de service, et il les fait difformer immédiatement. Il se fait remettre tous les mois, par le Contrôleur du monnayage, un état du nombre des pièces frappées, et indicatif de la durée (*terme moyen*) des coins mis hors de service.

Cet état est adressé, tous les trois mois, au Président de la Commission par le Commissaire du Roi, avec ses observations sur les causes du plus ou moins de durée des coins.

Il fait, tous les trois mois, le renvoi au Président de la Commission des coins difformés pendant le trimestre, et y joint l'état de situation des coins et coussinets restants.

Il a soin de faire ses demandes assezà l'avance pour ne pas exposer les travaux à être interrompus, en spécifiant le nombre de coins et de coussinets présumé nécessaire.

Ce prélèvement des échantillons, au hasard et sans choix* sur chaque fabrication, étant une opération dont le régularité est de la plus haute importance,† il y sera procédé de la manière suivante :

Indépendamment du mélange qui devra être fait de tous les flans composant une fabrication, aussitôt après le monnayage de ces flans, le Commissaire du Roi et le Contrôleur au monnayage prélèveront, chacun au hasard, cinq pièces (*en tout dix*) sur chaque manne ou corbeille composant la fabrication, pour réunir toutes ces pièces ainsi prélevées dans une manne particulière, les y mêler, et y prendre, chacun aussi au hasard et sans choix, les trois échantillons (*en tout six*) qui doivent être enfermés par le Commissaire, en présence du Directeur et du Contrôleur au monnayage, immédiatement et sans être pesés, dans le paquet destiné à être scellé par ces trois fonctionnaires de leurs cachets respectifs, et à être transmis par le Commissaire au Président de la Commission des Monnaies.‡

En exécution des articles 23 et 26 de l'ordonnance, le Commissaire du Roi, qui ne peut procéder à la vérification du poids et de l'empreinte de chaque pièce qu'après la réception du jugement, donne aussitôt connaissance de ce jugement aux fonctionnaires dépositaires des deux autres clefs, fait extraire en leur présence la fabrication jugée de la caisse de dépôt, qui est renfermée immédiatement par eux.

Si la refonte est ordonnée, il fera refondre en sa présence, et en celle du Directeur et du Contrôleur au change, la totalité des pièces composant la fabrication, et il en sera dressé procès-verbal, que signeront les trois fonctionnaires.§

Si la fabrication a été jugée bonne, le Commissaire vérifie scrupuleusement l'empreinte et le poids de chaque pièce, et il rebute toutes celles qui sont défectueuses ou hors des limites de poids, pour être immédiatement refondues comme ci-dessus.‖

Il est dressé de cette opération un procès-verbal qui indique le nombre, le poids et la valeur, 1°, de la totalité de la fabrication ; 2°, des pièces rebutées pour être refondues; 3°, des espèces trouvées dans les limites prescrites par la loi, bonnes à être mises en circulation, et qui formeront la délivrance à remettre au Directeur.

Sur ce second procès-verbal, la Commission des Monnaies prononce le jugement définitif, dont le Président addresse l'expedition au Commissaire du Roi, lequel en donne extrait certifié au Directeur et au Contrôleur au change (¶) ; c'est sur cette dernière pièce que la comptabilité du Directeur doit être établie définitivement.

Le Commissaire pourra se faire aider au bureau de la délivrance par des personnes qu'il choisira, à la charge de demeurer personnellement responsable du poids des pièces et de la beauté des empreintes.

Il lui est alloué, pour indemnité, des frais de comptage, qui sont réglés, sur la proposition du Président de la Commission, par le Ministre des finances.

Il veille à la conservation des bâtiments, des machines et du mobilier appartenant au Gouvernement, et à ce que les réparations à la charge des fonctionnaires soient faites exactement.

A chaque mutation de fonctionnaire, il fait dresser, contradictoirement avec celui qui sort (*ou, en cas de décès, avec ses ayants cause*) un état des lieux et inventaire des machines et du mobilier appartenant au Gouvernement; et il exige que les objets manquants ou détériorés par toute autre cause que par vétusté soient rétablis ou réparés. Il dresse, contradictoirement avec le fonctionnaire entrant en exercice, un semblable état des lieux et inventaire.

Lorsque les bâtiments exigent des réparations à la charge de l'Etat, il s'addresse à l'ingénieur ou à l'architecte du département ou de la ville, pour qu'il dresse le devis estimatif des ouvrages à faire. Il adresse ces devis, avec les observations dont il les croit susceptibles, au Président de la Commission des Monnaies, qui les fait vérifier et les approuve, s'il y a lieu.

Dans les cas de dégradations imprévues qui pourraient compromettre la sûreté des bâtiments, le Commissaire est tenu de prendre de suite, pour leur conservation, toutes les précautions d'urgence jugées indispensables, jusqu'à ce qu'il puisse procéder aux réparations nécessaires, comme il est dit ci-dessus, et comprendre dans le devis les frais de travaux conservatoires.

La plus grande exactitude est recommandée au Commissaire dans l'envoi des mémoires et pièces justificatives de dépenses, à la fin de chaque trimestre, et particulièrement avant la fin de l'année, pour l'ordre de la comptabilité, afin que chaque dépense puisse être réglée en temps utile, pour le trimestre auquel elle s'applique.

Du Directeur de la Fabrication.

A l'avenir, ausun Directeur de la fabrication ne pourra entrer en fonctions sans avoir préalablement justifié du versement du cautionnement auquel il est assujetti par l'ordonnance royale du 26 Décembre dernier, qui le rend justiciable de la Cour des comptes.

Le Directeur ne peut recevoir qu'en présence du Contrôleur au change les espèces et matières apportées au bureau du change et destinées à la fabrication.

Il en établit, avec le Contrôleur, la valeur, au prix du tarif légal, lequel devra être affiché ostensiblement au bureau ; et il s'en charge en recette, d'après le titre connu ou dûment constaté.

Il est seul responsable du payement des bons qu'il a souscrits. L'échéance de ces bons sera réglée, pour chaque monnaie, par la Commission.

Ces bons devront être visés par le Contrôleur au change, à leur sortie et lors de leur rentrée.

Il tiendra les livres et registres nécessaires à la reddition de ses comptes, et au mouvement des matières destinées à la fabrication et des espèces fabriquées.

Ces livres, dont le nombre et la forme sont déterminés par l'instruction de la comptabilité générale du Ministère des finances, en date du 25 Janvier 1828, seront toujours tenus au courant des opérations, de manière que leur seule inspection puisse faire connaître la situation du Directeur.

Il est maître de ses fontes et alliages, et il conduit ses travaux comme il l'entend, en se conformant aux lois et règlements.

Il ne peut, sous aucun prétexte, employer dans ses travaux, si ce n'est pour alliage, d'autres matières que celles enregistrées au bureau du change, lesquelles doivent toujours être converties en espèces et servir au payement des bons revêtus du visa du Contrôleur. Toutes les autres matières qu'il pourrait recevoir, à quelque titre que ce soit, et qui ne seraient pas destinées à être immédiatement versées au bureau du change, devront être déposées dans une caisse ou bureau particulier, entièrement séparé des lieux et ateliers affectés à la fabrication.

Il ne peut, sans le consentement de la Commission, changer aucune des constructions ni distributions existant dant les lieux et ateliers qu'il occupe dans l'hôtel des monnaies.

Il est soumis aux vérifications matérielles qui pourront être ordonnées par le Ministre des finances ou par le Président de la Commission des monnaies, ainsi qu'à celles qui seront jugées nécessaires par le Commissaire du Roi, auquel il ne peut refuser l'entrée d'aucun de ses ateliers.

* Articles 21 et 22 de l'ordonnance.
† Loi du 28 Mars 1803 (7 Germinal an XI.), art. 22.
‡ Article 21 de l'ordonnance.
§ Arrêté du 30 Mai 1803 (10 Prairial an XI.), art. 39, paragraphe 2.
‖ *Ibidem*, paragraphe premier.
¶ Arrêté du 10 Prairial an XI., (30 Mai 1803), art. 42.

Le Directeur est dépositaire d'une des clefs de la caisse à trois serrures. Il peut assister à la prise des échantillons, ou s'y faire représenter ; mais il doit personnellement signer les procès-verbaux d'envoi des échantillons, ainsi que les procès-verbaux de délivrance des espèces monnayées, et ce *sans retard.*

Il peut également assister au jugement du titre de ses fabrications, soit en personne lorsqu'il se trouve à Paris en vertu d'un congé délivré par le President de la Commission, soit par un fondé de pouvoir.

Il est tenu d'éclairer et de chauffer convenablement le bureau du change et l'atelier du monnayage, et de déférer aux avis du Contrôleur du monnayage sur les abus qui résulteraient de la négligence ou de l'incapacité des ouvriers et monnayeurs, et sur la nécessité tant du rodage des coins et rotules que du polissage des carrés.

Il addresse au Commissaire du Roi les demandes et réclamations qu'il peut avoir à former. Ce fonctionnaire est tenu de les faire parvenir, sans aucun délai, au President de la Commission, dont il transmet immédiatement les réponses au Directeur de la fabrication.

Les balanciers, les coins et coussinets pour marquer sur tranche seront seuls fournis par le Gouvernement. (*Article 3 de l'arrêté du 16 messidor an* XI.)

Du Contrôleur au Change.

Indépendamment des garanties exigées du Directeur, et de la surveillance générale exercée sur toutes les parties de la fabrication, le Gouvernement a voulu établir auprès de ce fonctionnaire un surveillant spécial de l'emploi des matières et de la situation matérielle de ses travaux.

Tel est le but des fonctions du Contrôleur au change.

Sa dénomination seule indique déjà la nature de ses principales attributions.

Il contrôle toutes les opérations du change.

C'est en sa présence (*article 17 de l'ordonnance*) que le Directeur reçoit les matières destinées à la fabrication. Le Contrôleur au change en constate l'origine, le poids, le titre et la valeur ; il les enregistre, avec indication du nom du propriétaire, de sa qualité et de sa demeure.

Il tient état des bons souscrits et délivrés aux porteurs de matières, de leur montant et de leur échéance.

Il les vise, avant la remise qui doit en être faite, et lorsqu'ils sont présentés au payement.

Il s'assure que leur échéance est calculée d'après l'importance des fabrications.

Il veille à ce que les intérêts du public ne soient jamais lésés, soit par une fausse application du tarif légal, qui doit être affiché ostensiblement au bureau, soit par des erreurs sur le titre ou le poids des matières, soit enfin par le retard du payement des bons souscrits.

Il réfère immédiatement au Commissaire du Roi des contestations qui pourraient s'élever, au bureau du change, entre le public et le Directeur de la fabrication.

Les registres qu'il devra tenir, conformément à la présente instruction, pour l'enregistrement des matières, l'acquit des bons, ou toute autre écriture relative à son service, lui sont indiqués par la comptabilité générale des finances. (*Circulaire en date du 25 Janvier* 1828.)

Ils devront toujours être au courant, afin qu'à chaque instant ils puissent servir à vérifier la position des travaux du Directeur.

S'il s'élevait quelque difficulté sur le titre des lingots et matières apportés au change, le Contrôleur doit requérir que ce titre soit dûment constaté, si les porteurs ne s'arrangeaient pas à l'amiable avec le Directeur ; auquel cas, le titre réciproquement consenti servira de base à l'enregistrement du Contrôleur.

Il doit opérer le cisaillement immédiat des espèces reconnues fausses.

Dans le cas où le titre commun des matières apportées au change, par un particulier, serait au-dessous de $\frac{900}{1000}$, le Contrôleur doit prévenir le porteur qu'il sera passible du droit d'affinage sur la portion de matières au-dessous dudit titre, et laisser la faculté de les verser à cette condition ou de les remporter.

Il enverra, chaque mois, au Président de la Commission, par l'intermédiaire du Commissaire du Roi, qui devra le certifier, un état sommaire de situation conforme au modèle qui lui est addressé, et qui fera connaître la qualité des matières versées au Directeur ; le montant des espèces passées en délivrance ; et le restant dans les travaux, déduction faite des déchets et des échantillons.

Le Contrôleur au change est placé sous la direction spéciale du Commissaire du Roi, qu'il peut être admis à suppléer, lorsqu'il en est requis par ce dernier.

Du Contrôleur au Monnayage.

L'ordonnance royale du 26 Décembre dernier n'a rien changé aux attributions du Contrôleur au monnayage.

Il est chargé, sous la direction du Commissaire du Roi, de surveiller particulièrement les opérations relatives au monnayage et à la marque sur tranche.

Il veille à la conservation des machines à cordonner, des balanciers, des coins et des coussinets.

Il s'assure que les flans sont bien blanchis, et recuits de manière à faciliter l'action du balancier et à menager les carrés. Dans le cas contraire, il peut suspendre le monnayage, et il en réfère immédiatement au Commissaire du Roi.

Il doit avoir une connaissance parfaite du mécanisme des balanciers, sur lequel il lui a été transmis une instruction spéciale. Il vérifie s'ils sont montés avec soin, ainsi que les coussinets ; il ordonne le changement des pièces accessoires, lorsqu'il y a lieu ; et, à cet effet, il veille à ce que chaque balancier soit convenablement approvisionné de pièces de rechange.

Il doit n'admettre au monnayage que des flans régulièrement découpés, et les soumettre préalablement à un calibre destiné à cet effet, afin de rejeter ceux qui seraient défectueux.

Il doit en constater, contradictoirement avec le Directeur, sur le registre à ce destiné, le nombre et le poids.

Il obligera les ouvriers monnayeurs à faire usage du parafaux.

Il tiendra note de l'emploi des coins et coussinets ; il recherchera es causes qui pourraient s'opposer à leur durée, et les indiquera au Commissaire du Roi, auquel il remettra exactement ceux reconnus hors de service.

Il est responsable des flans qui lui ont été livrés par le Directeur de la fabrication, jusqu'après leur conversion en espèces et leur remise au Commissaire du Roi, qui en effectue le dépôt dans la caisse à trois clefs ; le Contrôleur au monnayage reste dépositaire d'une d'elles.

Ceux des flans qui n'auraient pu être frappés dans el cours de la journée seront par lui rendus en compte au Directeur de la fabrication, chaque soir, après la cessation des travaux, pour faire partie de la brève suivante.

Il participe à la prise des échantillons, et signe le procès-verbal de leur envoi à la Commission des Monnaies.

Il veille à ce qu'aucune personne étrangère aux travaux ne puisse s'introduire dans la salle du monnayage sans autorisation.

Disposition Générale.

Aucun fonctionnaire des monnaies ne peut être installé qu'aprés avoir justifié de la prestation du serment exigé par les lois et règlements.

La présente instruction rappelant aux divers fonctionnaires des monnaies les devoirs qu'ils ont à remplir, l'instruction du 24 thermidor an XI. (22 Août 1803), et celles qui en dérivent sont et demeurent abrogées.

Fait et arrêté par la Commission des monnaies.

Paris, le 15 Février 1828.

Signé Comte De Sussy, *Pair de France*, Président ;
Lambert et Brunet, Commissaires généraux.

Approuvé :
Paris, le 5 Mars 1828.
Le Ministre Secrétaire d'Etat des finances
Signé Roy.

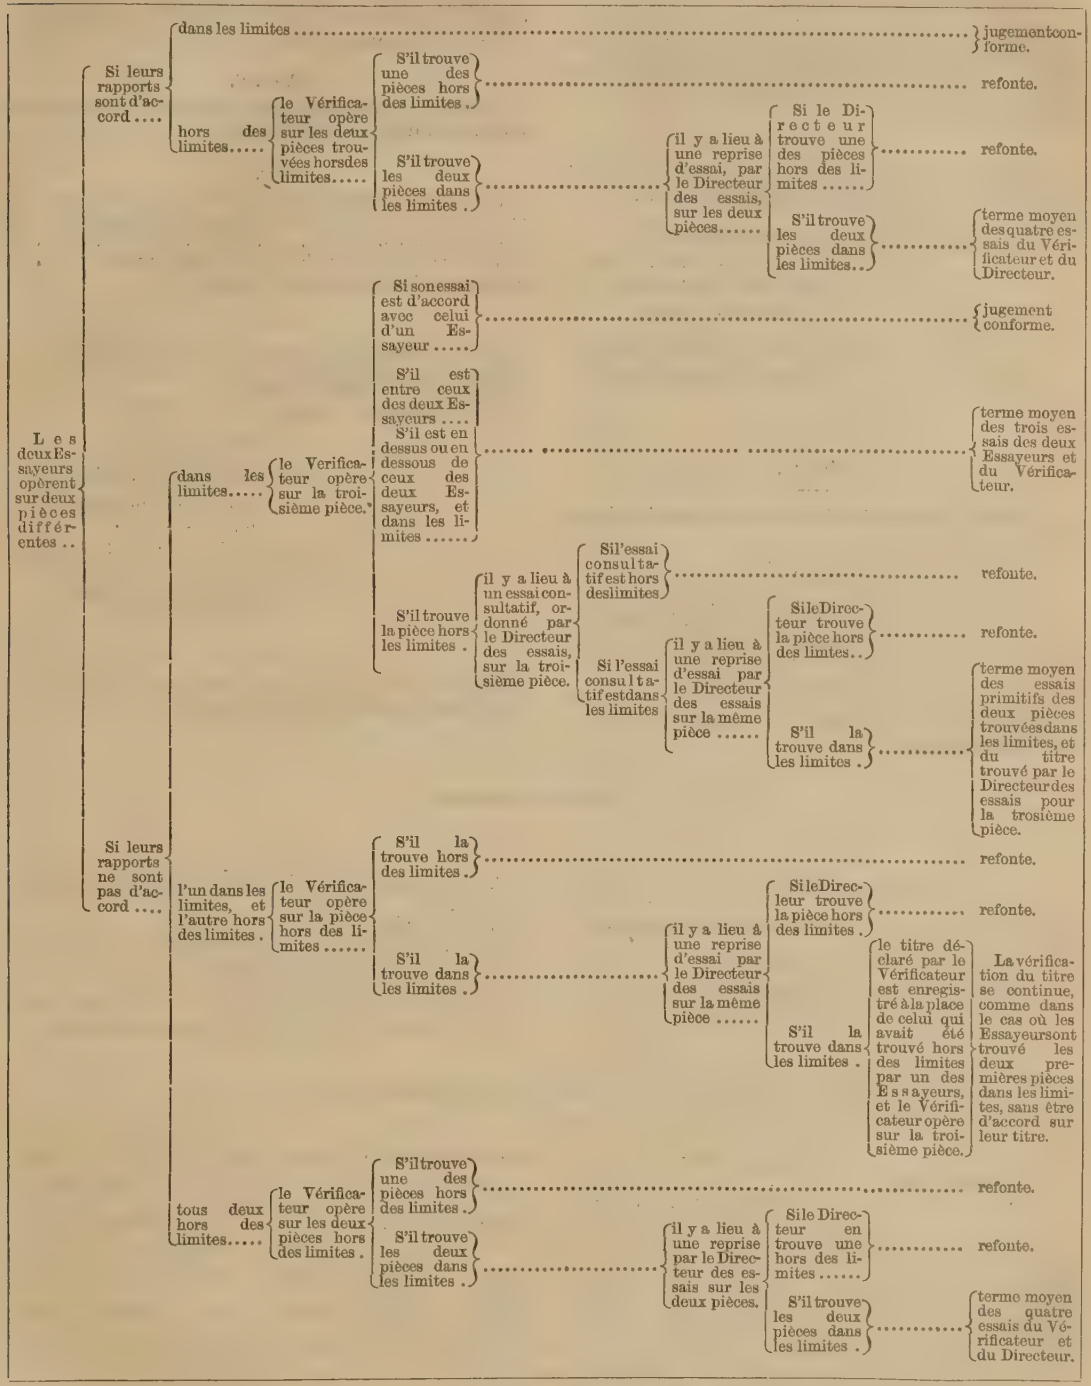
Commission des Monnaies.

TABLEAU SYNOPTIQUE.

Des divers cas qui peuvent se présenter dans la vérification du titre des Espèces, et des bases qui serviront à asseoir le jugement de la Commission des Monnaies.



Les deux Essayeurs opèrent sur deux pièces différentes ..
Si leurs rapports sont d'accord ....
dans les limites ..... jugement conforme.
hors des limites.....
le Vérificateur opère sur les deux pièces trouvées hors des limites.....
S'il trouve une des pièces hors des limites . refonte.
S'il trouve les deux pièces dans les limites .
il y a lieu à une reprise d'essai, par le Directeur des essais, sur les deux pièces.....
Si le Directeur trouve une des pièces hors des limites ..... refonte.
S'il trouve les deux pièces dans les limites.. terme moyen des quatre essais du Vérificateur et du Directeur.
dans les limites.....
le Vérificateur opère sur la troisième pièce."
Si son essai est d'accord avec celui d'un Essayeur ..... jugement conforme.
S'il est entre ceux des deux Essayeurs ....
S'il est en dessus ou en dessous de ceux des deux Essayeurs, et dans les limites ..... terme moyen des trois essais des deux Essayeurs et du Vérificateur.
S'il trouve la pièce hors les limites .
il y a lieu à un essai consultatif, ordonné par le Directeur des essais, sur la troisième pièce.
Si l'essai consultatif est hors des limites refonte.
Si l'essai consultatif est dans les limites
il y a lieu à une reprise d'essai par le Directeur des essais sur la même pièce .....
Si le Directeur trouve la pièce hors des limtes.. refonte.
S'il la trouve dans les limites . terme moyen des essais primitifs des deux pièces trouvées dans les limites, et du titre trouvé par le Directeur des essais pour la trosième pièce.
Si leurs rapports ne sont pas d'accord ....
S'il la trouve hors des limites . refonte.
l'un dans les limites, et l'autre hors des limites .
le Vérificateur opère sur la pièce hors des limites .....
S'il la trouve dans les limites .
il y a lieu à une reprise d'essai par le Directeur des essais sur la même pièce .....
Si le Directeur trouve la pièce hors des limites . refonte.
S'il la trouve dans les limites .
le titre déclaré par le Vérificateur est enregistré à la place de celui qui avait été trouvé hors des limites par un des Essayeurs, et le Vérificateur opère sur la troisième pièce.
La vérification du titre se continue, comme dans le cas où les Essayeurs ont trouvé les deux premières pièces dans les limites, sans être d'accord sur leur titre.
tous deux hors des limites.....
le Vérificateur opère sur les deux pièces hors des limites .
S'il trouve une des pièces hors des limites . refonte.
S'il trouve les deux pièces dans les limites .
il y a lieu à une reprise par le Directeur des essais sur les deux pièces.
Si le Directeur en trouve une hors des limites ..... refonte.
S'il trouve les deux pièces dans les limites . terme moyen des quatre essais du Vérificateur et du Directeur.

Approuvé par la Commission des Monnaies.

Signé : Comte DE SUSSY, *Pair de France*, Président ; LAMBERT et BRUNET, Commissaires généraux.

AU NOM DU PEUPLE FRANÇAIS.

LE PRÉSIDENT DE LA RÉPUBLIQUE,

Vu la loi du 7 germinal an XI (29 Mars 1803) ;

Vu l'article 1er de l'ordonnance du 25 Février 1835, qui fixe le taux des frais de fabrication des monnaies d'or et d'argent ;

Vu l'ordonnance du 30 Juin 1835 et les tarifs qui y sont annexés ;

Vu le décret du 22 Mai 1849, qui maintient les frais de fabrication des monnaies d'or à payer aux directeurs des monnaies, tout déchet compris, à 6 francs par kilogramme, au titre monétaire (900 millièmes), et réduit à 1 fr. 50 cent. par kilogramme les frais de fabrication des monnaies d'argent ;

Vu les tarifs des espèces et matières d'or et d'argent établis par la Commission des monnaies et médailles, d'après les bases indiquées ci-dessus ;

Décrète :

ARTICLE PREMIER.

A compter du 1er Octobre prochain, les espèces et autres matières d'or et d'argent de France et des pays étrangers

Appendix, No. 12.

Gold Coinages and Mint Regulations.

France.

seront payées aux changes des monnaies conformément aux tarifs annexés au présent décret, lesquels seront publiés et affichés dans les bureaux du change des hôtels des monnaies.

Art. 2.

En cas de contestation sur le titre, la Commission des monnaies et médailles sera consultée, et après avoir fait vérifier, au laboratoire des essais, le titre des matières qui auront été l'objet de la contestation, elle le constatera d'une manière authentique.

Art. 3

Le ministre des finances est chargé de l'exécution du présent décret, qui sera inséré au Bulletin des lois.

Fait à l'Élysée national, le 15 Septembre 1849.

Signé Louis-Napoléon Bonaparte.

Le Ministre des finances,
Signé H. Passy.

Pour ampliation :
Le Secrétaire général des finances,
Signé Guillemardet.

Décret.

Napoléon, par la grâce de Dieu et la volonté nationale, Empereur des Français,

A tous présents et à venir, salut :

Vu la loi du 7 germinal an XI (29 Mars 1803) ;

Vu les décrets des 22 Mai et 15 Septembre 1849 ;

Vu le décret du 22 Mars 1854, portant qu'à compter du 1er Avril 1854 les frais de fabrication des monnaies d'or à payer aux directeurs seront fixés à 6 fr. 70 cent. par kilogramme de matières au titre monétaire (900 millièmes) ;

Vu le nouveau tarif des espèces et matières d'or, établi par la Commission des monnaies et médailles, d'après les bases indiquées ci-dessus ;

Sur le rapport de notre ministre secrétaire d'État au département des finances,

Avons décrété et décrétons ce qui suit :

Article premier.

A dater du 1er Avril 1854, les espèces et matières d'or seront payées aux changes des monnaies conformément au tarif annexé au présent décret.

Art. 2.

Le tarif mentionné ci-dessus sera publié et affiché dans les bureaux du change des monnaies.

Art. 3.

En cas de contestation sur le titre des matières présentées aux bureaux du change des monnaies, la Commission des monnaies sera consultée, et après avoir fait vérifier, au laboratoire des essais, le titre desdites matières, elle le constatera d'une manière authentique.

Art. 4.

Notre ministre secrétaire d'État au département des finances est chargé de l'exécution du présent décret, qui sera inséré au Bulletin des lois.

Fait au palais des Tuileries, le 8 Avril 1854.

Signé Napoléon.

Par l'Empereur :
Le Ministre Secrétaire d'État au département des finances,
Signé Bineau.

Pour ampliation et par autorisation :
Le Chef du bureau des dépêches, archives et contre-seing,
Signé Millot.

(The Tariffs referred to in the above Decrees are not inserted on account of their great length.)

Netherlands.

THE NETHERLANDS.

1–5. Information about the five first queries is afforded in the here-annexed statement.

6. The limit of wear has not been fixed.

7. Tax or seignorage is not exacted. The charge for coining is paid by the person presenting the bullion, in cash, in legal tender.

8. No period is fixed by law for the surrender of the coined gold.

9. The coining is executed by contract.

10, 11. The Mint is open to the public for the purpose of coinage. Neither the Government nor the Mint are bound to give bullion in exchange for coins.

12. As, this long while, gold has no more been coined the regulations for the administration offer no importance.

Golden Trade-money of the Netherlands.

Prussia.

PRUSSIA.

(Translation.)

The denomination of the Prussian gold coins is :

Double Friedrichsd'or,
Friedrichsd'or,
Half Friedrichsd'or,
Crown, and
Half Crown.

Friedrichsd'ors have not been coined since the year 1855 ; and, according to the Vienna coinage-treaty of 24 January 1857, and the coinage-law of 4 May 1857, they are not to be coined any more.

The coinage of crowns has taken place since the passing of the law just mentioned.

2. The weight of

	Grammes.
a double Friedrichsd'or is	13·363170,
a Friedrichsd'or	6·681585,
a half Friedrichsd'or	3·340793,
a crown	11·111111,
a half crown	5·555555,

and 37·416267 double,
74·832534 single, or
149·665068 half Friedrichsd'ors,
45 crowns, or
90 half crowns,
weigh one pound or 500 grammes.

3. The standard fineness of the Friedrichsd'ors is 902⅞, or 902·77777 thousandth parts; so that,

41·445712 double,
82·891424 single, or
165·782848 half Friedrichsd'ors

contain a pound of pure gold.

The crowns are coined at a standard fineness of 900 thousandth parts, and therefore 50 whole or 100 half crowns contain a pound or 500 grammes of pure gold.

4. The Friedrichsd'ors struck before the year 1817 with free stamps are of various diameters, for those struck in the ring since that time, the fixed diameter is as follows:

For the double, 25 millimetres.
„ single, 22 „
„ half, 19 „

The diameter of the crown is 24 millimetres that of the half crown 20 millimetres.

5. With the Friedrichsd'ors the tolerance or allowed deviation in weight amounted to 2·5 per thousand; no deviation in fineness was legally allowed.

For the single whole or half crowns a tolerance is legally allowed of

2½ thousandth parts in weight,
2 thousandth parts in fineness.

6. The limitation of wear for the Friedrichsd'ors is that it must not exceed 2·5 per thousand.

The limitation of wear for the crowns corresponds with the weight tolerance.

Whole or half crowns which deviate more than 2½ thousandth parts from the normal weight, that is, if they be found lighter respectively than 11·033333 grammes or 5·541666 grammes, are not to be reissued from the public coffers.

7. The answers to this and the remaining questions relate only to the crown coinage, Friedrichsd'ors being no longer coined, as has already been stated in answer to No. 1.

The Mint receives gold if the quantity is not less than two pounds, if it be found malleable, and not below 900 thousandth parts in fineness; for such serviceable gold the Mint pays 49·8 crowns per pound fine, and as the pound of fine gold is coined into 50 crowns, there is a deduction of 0·4 per cent. coining charges from the person who brings the gold.

8. When the quantity of gold that is brought in can be paid for from the stock of crowns in the chest, the payment is made immediately after the fineness is ascertained, that is, after one or a few days. If the store of crowns is not sufficient to pay for the gold, then the bringer must wait until the crowns have been coined, which may be eight days or more, according to circumstances.

There is no legally appointed term within which the bringer of the gold must be satisfied.

9. The coining is done only by the State.

10. On the conditions stated above in 7 and 8, the public can send in gold to the Mint, and it will not be refused.

11. Neither the Mint nor the Government is bound to give bars in exchange for coin.

12. The regulations respecting coining are to be found in the Vienna coinage-treaty of 24 January 1857, and in the coinage-law of 4 May 1857, of each of which a copy is sent herewith. At the conclusion of the treaty of 24 January 1857 the proceedings* for the assay of gold, as prescribed in the appendix, were agreed to.

Berlin, 15 June 1861.

COINAGE CONVENTION.

The Empire of Austria and the Principality of Lichtenstein on the one part, and the States united together in the General Coinage Convention of the 30th of July 1838, on the other part, having agreed, for the purpose of establishing a mutual understanding on the coinage, to enter into special negotiations, as is provided for in Art. 9. of the treaty of commerce and customs, of the 19th July 1853, have respectively appointed for this purpose the following plenipotentiaries:

His Majesty the Emperor of Austria:
the Ministerial Finance Counsellor, Johann Anton Brentano, Knight of the Austrian Imperial Order of Leopold;

His Majesty the King of Prussia:
the Finance Privy Counsellor, Karl Theodor Seydel, Knight of the Order of the Red Eagle, IV. class;

His Majesty the King of Bavaria:
the Upper Mint Master, Franz Xaver von Haindl, Knight of the Royal Bavarian orders of the Bavarian Crown, and of St. Michael, &c.;

His Majesty the King of Saxony:
the Director of the Upper Chamber of Accounts, Ministerial Finance Director and Privy Counsellor, Baron Adolph von Weissenbach, Commander, II. class, of the Saxon Verdienstorden, &c.;

His Majesty the King of Hanover:
the Finance Counsellor, Mint Master Wilhelm Brüel, member of the IV. class of the Royal Guelphic Order;

His Majesty the King of Wirtemberg:
the Government Counsellor in the Ministry of the Interior, Adolph Müller;

His Royal Highness the Grand Duke of Baden:
the Privy Referendary and Counsellor Dr. Vogelmann, Commander of the Grand Ducal Order of the "Zähringe Löwe," &c.;

His Royal Highness the Elector of Hesse:
the Upper Counsellor of Mines, Johann Rudolph Siegmund Fulda;

His Royal Highness the Grand Duke of Hesse:
the Upper Government Surveyor Hektor Rössler, Knight of the Order of Philip the Magnanimous, &c.;

His Royal Highness the Grand Duke of Saxony:
the Counsellor of State, Gottfried Theodor Stichling, Commander, II. class, of the Grand Ducal Order of the House of Saxony of the White Falcon, &c.;

His Royal Highness the Grand Duke of Oldenburg:
the Royal Hanoverian Counsellor of Finance, &c., Wilhelm Brüel;

His Highness the Duke of Saxe Meiningen:
the Royal Bavarian Upper Mint Master, Franz Xaver von Haindl;

His Highness the Duke of Saxe-Coburg and Gotha:
the Royal Saxon Privy Counsellor, &c., Baron Adolph von Weissenbach;

His Highness the Duke of Saxe Altenburg:
the Grand Ducal Saxon Counsellor of State, Gottfried Theodor Stichling;

His Highness the Duke of Brunswick:
the Royal Prussian Upper Privy Counsellor, Karl Theodor Seydel;

His Highness the Duke of Nassau:
the Royal Bavarian Upper Mint Master, Franz Xaver von Haindl;

His Highness the Duke of Anhalt-Dessau-Köthen, their Highnesses the Duke and Duchess Regent of Anhalt-Bernburg, and his Highness the Prince of Schwarzburg-Sondershausen:
the Royal Prussian Upper Finance Privy Counsellor, Karl Theodor Seydel;

His Highness the Prince of Schwarzburg-Rudolstadt:
the Royal Bavarian Upper Mint Master, Franz Xaver von Haindl;

His Highness the Sovereign Prince of Lichtenstein:
the Imperial Austrian Ministerial Counsellor in the Ministry of the Interior, J. U. Dr. Cajetan von Mayer, Knight of the Austrian Imperial Orders of Leopold and Franz Joseph, &c.;

His Highness the Prince of Waldeck and Pyrmont:
the Royal Prussian Upper Finance Privy Counsellor, Carl Theodor Seydel;

His Highness Prince Reuss, elder line:
the Grand Ducal Saxon Counsellor of State, Gottfried Theodor Stichling;

His Highness Prince Reuss, younger line:
the Royal Saxon Privy Counsellor, &c. Baron Adolph von Weissenbach;

His Highness the Prince of Schaumburg-Lippe:
the Royal Hanoverian Finance Counsellor, &c., Wilhelm Brüel;

His Highness the Prince of Lippe:
the Royal Prussian Upper Finance Privy Counsellor Karl Theodor Seydel;

His Highness the Sovereign Landgrave of Hesse:
the Grand Ducal Hessian Government Surveyor, Hektor Rössler;

The Senate of the Free City of Frankfort:
the Senator Franz Alfred Jakob Bernus, &c.;

by whom the following Coinage Convention has been drawn up and concluded.

ART. 1.

The pound, of the weight of 500 grammes, as is used for levying customs, shall serve as the basis of the coinage in the states of the Contracting Powers, and be exclusively established as the coinage weight in their mints. It shall for this purpose undergo an independent division into a thousand parts, with further decimal divisions.

* It has not been thought necessary to translate and print these proceedings.

ART. 2.

With regard to the pure silver currency on the basis of the new pound, the constitution of the coinage of the contracting states shall be regulated in such a way that in those states the circulation by thalers and groschen, or that by gulden and hundredth parts, or that by gulden and kreutzers, shall either correspond or be made to correspond:

either the thirty thaler standard (in the place of the hitherto used fourteen thaler standard) of 30 thalers out of the pound of pure silver;

or the forty-five gulden standard, of 45 gulden, out of the pound of pure silver;

or the fifty-two and a half gulden standard (instead of the 24½ fl. standard hitherto used) of 52½ gulden out of the pound of pure silver,

must be made the standard coinage of the country.

ART. 3.

(*a*) In the Kingdom of Prussia, with the exception of the States of Hohenzollern, in the Kingdoms of Saxony and Hanover, in the Electorate of Hesse, in the Grand Duchy of Saxony, in the Dukedoms of Saxe-Altenburg, Saxe-Gotha, Brunswick, Oldenburg with Birkenfeld, Anhalt, Dessau-Koethen, and Anhalt-Bernburg, in the Principality of Schwarzburg-Sondershausen, and the lower Lordship of the Principality of Schwarzburg-Rudolstadt, in the Principalities of Waldeck and Pyrmont, Reuss, elder line, and Reuss younger line, Schaumburg-Lippe and Lippe,

the thirty thaler standard;

(*b*) In the Empire of Austria and the Principality of Lichtenstein,

the forty-five gulden standard;

(*c*) In the Kingdoms of Bavaria and Wirtemberg, in the Grand Duchies of Baden and Hesse, in the Duchy of Saxe-Meiningen, in the Principality of Saxe-Coburg, in the Prussian States of Hohenzollern, in the Duchy of Nassau, in the Sovereignty of the Principality of Schwarzburg-Rudolstadt, in the Landgraviate of Hesse-Homburg, and in the Free City of Frankfort,

the fifty-two and a half gulden standard,

shall be respectively considered and established as the coinage standards and bases of the legal currency in those countries.

Accordingly,

The word "Thalerwährung" shall denote coins of the 30-thaler standard, based on the 14-thaler standard;

"Oesterreichische Währung," those of the 45-fl. standard;

"Süddeutsche Währung," those of the 52½ fl. standard, on the 24½ florin standard.

ART. 4.

The coins from the 30 thaler and the 52½ fl. standard shall have exactly the same value as those of the same name coined on the old 14 thaler and 24½ fl. standards, so that in all payments and obligations no difference may be made between the old coins of the 14 thaler and 24½ fl. standard, and the new ones of the 30 thaler and 52½ fl. standard, unless there should be such special agreement as is provided for at the end of Article 8.

ART. 5.

Each of the contracting states shall limit its coinage to such pieces as conform to the mode of calculation agreeing with the established coinage standard (Arts. 2. and 3.)

An exception shall be made in favour of Austria, who may continue to coin the so-called "Levantine thalers" with the image of the Empress Maria Theresa and the date 1780 of the old mixture, as money of commerce.

The smallest coins of the coinage standard of the country allowed to be struck, and recognized as divisions of the higher pieces, shall be—

the $\frac{1}{6}$ thaler piece, on the 30 thaler standard;
the $\frac{1}{4}$ fl. piece, on the 45 fl. standard;
the ¼ fl. piece, on the 52½ fl. standard.

The contracting states bind themselves to limit the coinage of small pieces to what is required.

ART. 6.

The contracting powers bind themselves in the coinage of large silver coins, both of the principal coins and their divisions—current coins—exactly to follow their national standards (Art. 3), and to use the greatest care that each piece be coined of the full quality and weight. They mutually agree at the same time to the principle that no reduction shall take place, under the pretext of a so-called remedy, in the quality and weight of the coins; on the contrary, a deviation from the proper quality or weight can only be so far excused, as absolute accuracy cannot be attained.

ART. 7.

The purity shall be expressed in thousandth parts.

In ascertaining the purity of the silver coinage, the wet process shall always be employed.

ART. 8.

For the purpose of advancing and facilitating mutual intercourse among the contracting states, two principal silver coins answering to the coinage standards mentioned in Art. 2. shall be struck under the name of convention thaler (Vereinsthaler), viz.

1. The 1 thaler convention piece of $\frac{1}{30}$ of a pound of pure silver, equal to one thaler in thaler currency, to 1½ fl. in Austrian currency, and to 1¾ fl. in South German currency, respectively.
2. The 2 thaler convention piece of $\frac{1}{15}$ of a pound of pure silver, equal to 2 thalers in thaler currency, to 3 fl. in Austrian currency, and to 3½ fl. in South German currency, respectively.

The same unlimited validity is assigned to these convention coins throughout the circuit of the contracting states, in all pay offices of the state, in all public establishments as well as in private transactions, and in all payments on bills of exchange, as to the special coins of the country. Besides which no one shall refuse them at their full value, even in the case when the promise to pay mentions a special kind of coin particularly belonging to the coinage of the country. Moreover, any one in the contracting states having expressly promised to pay, or stipulated to be paid in, convention coin, can insist on paying or being paid in that coin.

ART. 9.

The two thaler pieces (of 3½ fl.) coined as convention money, by the states taking part in the coinage convention of July 30th, 1838, shall be put on an equality, in every respect, with the coins of the Convention (Art. 8.)

The thaler pieces struck in conformity with the Coinage Convention of the 30th July 1838, as well as those struck before the year 1839, according to the former 14 thaler standard, shall, in the states of all the contracting powers, receive the same unbounded validity as the special coins of the country.

ART. 10.

The proportion of pure metal and alloy composing the convention money shall be fixed at nine hundred thousandth parts of silver and one hundred thousandth parts of copper. 13½ double or 27 single convention thalers will therefore weigh one pound. The deviation, more or less, may not, according to the provision of the principle recognized in Art. 6., amount to more than three thousandth parts in fineness; in weight, it may not exceed, in each 1 thaler convention piece, four thousandth parts of its weight, and in each 2 thaler convention piece three thousandth parts of its weight.

The diameter shall be fixed for the 1 thaler convention piece at 33 millimetres, and for the 2 thaler convention piece at 41 millimetres. Both shall be coined in ring (im Ringe) with a smooth rim embellished with a sunken inscription or ornament.

On the face is to be engraved the image of the sovereign, and, in the case of the Free City of Frankfort, the emblem of the same.

On the reverse, in the inscription which surrounds the arms of the country, the relation of the coin to the pound of pure silver, and its express denomination as one thaler or two thaler convention coin, as well as the year, must be stated. By the last the actual year of coinage is always to be understood.

ART. 11.

The amount of 2 thaler convention pieces to be coined is left to the judgment of each particular state.

With regard to the 1 thaler convention pieces, however,—

(1.) Each of the contracting states shall coin at least 24 pieces for every hundred souls of its population within the period from 1857 to the 31st of December 1862.

(2.) Within every period of four years after the 1st January 1863, at least 16 pieces shall be coined for every hundred souls of its population by each of the contracting states.

ART. 12.

The contracting powers shall, from time to time, test each other's newly issued convention coins as to fineness and weight, and communicate to each other any observations they may have to make in consequence of their investigations.

Should it unexpectedly happen that the coin, issued by any one of the contracting Governments, should not be found to attain the standards of weight and fineness fixed by the Convention, such state assumes the obligation to call in, either at once or after a decision by arbitration, the whole of the convention coinage of the year to which the faulty pieces belong.

ART. 13.

The contracting states bind themselves jointly never to reduce the settled value of their own large silver coinage, nor to withdraw it from currency, unless a space of time of at least four weeks is fixed for its redemption, and proclaimed publicly at least three months before its expiration.

Each state, moreover, binds itself to call in by degrees, for the purpose of re-melting, the said coins, including convention pieces of its own coinage, when, in consequence of long circulation and wear, they have sustained a considerable diminution of their original metallic value, and also always to receive at their offices such worn pieces, even when the inscription has become indistinct, at the full value at which they were put into circulation.

ART. 14.

It is permitted for payments in small transactions and for the making up of change, to coin smaller coins, both in silver and in copper, according to a lighter standard than the coinage standard of the country (Arts. 2. and 3), but having a nominal value agreeing with that coinage.

These shall always bear on the face the express statement of "Scheidemünze," and may not exceed, in silver, the half of the smallest current divisional piece; in copper, on the other hand, they may not exceed six and five pfennings (Pfennig) or pieces of four hundredth parts and two kreuzer pieces respectively. In copper coins the nominal value is not to be expressed as a fraction of a higher series of coins, but according to the unit or number of units, or according to the fraction which it forms of the coinage of the same nature, as pfenninge (Pfennige), kreuzer, &c.

The silver small coin shall not in future be coined, in any of the states of the contracting powers, after a lower standard than $34\frac{1}{2}$ thalers in thaler currency, $51\frac{3}{4}$ fl. in Austrian currency, or $60\frac{3}{8}$ fl. South German currency.

In the coinage of small copper coins, the ratio of the nominal value must never exceed 112 thalers in thaler currency, 168 fl. in Austrian currency, and 196 fl. in South German currency for 1 "Zollzentner" of copper.

The contracting powers also bind themselves jointly not to issue more silver and copper small coins than is required, in each particular country, for making payments in small transactions, and giving change. They will also reduce to this proportion the small coinage, now in circulation, if it should exceed the amount required.

No one, in the countries of the contracting powers, shall be required to take, in small coin, a payment equal to the smallest of the larger coins.

ART. 15.

Each contracting power engages—

a. Never to reduce the settled value of its own silver and copper small coinage, and only to permit its being withdrawn from currency after a space of time, of at least four weeks, has been fixed for its redemption, and publicly proclaimed at least three months before its expiration.

b. When, in consequence of length of circulation and wear, the impression on such coins has become indistinct, to call them in by degrees for remelting at the same value at which they were put in circulation:

c. And also to change the small coinage of every kind, if required, for the large currency of the country, at certain of their pay offices to be indicated.

The sum fixed for exchange, however, must, with regard to silver small coins, not amount to less than 20 thalers or 40 gulden, and with regard to copper small coins to less than 5 thalers or 10 gulden.

ART. 16.

The fixing of the rate at which, in the district of the 45 fl. standard, in consequence of the transition to the new standard, the coins of the old coinage standard of the country and the small coins shall be redeemed, or allowed to remain in circulation, is reserved for the government whom it concerns, according to what is provided in Art. 19 of the trade and customs convention of Feb. 19th, 1853.

ART. 17.

The provisions of Article 13 and 15 rendering it obligatory to receive large silver coin and small coin at the offices of the state at their full value, do not apply to perforated coins, or to such as have been diminished in weight otherwise than by fair use, nor do they apply to false money.

ART. 18.

For the purpose of further facilitating mutual transactions, and for the promotion of trade with neighbouring countries, the Contracting Powers may coin convention trade coins in gold under the names of crown and half-crown.

1. The crown of $\frac{1}{30}$ of a pound of pure gold.
2. The half crown of $\frac{1}{100}$ of a pound of pure gold.

The Contracting Powers may not coin any other gold pieces. An exception, however, is made in the case of Austria, which retains the right of coining ducats of the present kind to the end of 1865.

The silver value of the convention gold coins in ordinary intercourse is entirely fixed by the relation of the supply to the demand. They must not, therefore, be considered as a medium of payment of the same nature as the legal silver currency of the country, and no one is legally bound to receive them as such.

ART. 19.

The proportion of pure metal and alloy in the convention gold pieces is fixed at nine hundred thousandth parts of gold and one hundred thousandths parts of copper. 45 crowns and 90 half crowns will therefore weigh a pound. The deviation more or less may not, according to the principle recognized in Article 6, exceed two thousandth parts with regard to fineness; and with regard to weight, the deviation in each piece, whether the crown or half crown, shall not exceed two and a half thousandth parts of its weight. In testing the purity of the gold coinage the established processes shall always be employed.

The diameter of the convention gold pieces is fixed at 24 millimetres for crowns, and at 20 millimetres for half-crowns; both shall be coined in ring (im Ringe), with a smooth rim embellished with a sunken inscription or ornament.

The face is to contain the image of the sovereign, and, in the case of the Free City of Frankfort, the arms of the city.

On the reverse must be stated the ratio of the coin to the pound of pure gold, and its express quality as convention coin, and also the name of the coin (corona) in a wreath of oak leaves open at the top, and the date of the year. By the last, the actual date of coinage is always to be understood.

Convention gold coins which have respectively the normal weight of $\frac{1}{45}$ and $\frac{1}{90}$ of a pound, with the allowed deviation of two and a half thousandth parts, and have not been diminished in weight by violent or unlawful means, shall be considered as being of full weight in all payments.

ART. 20.

The provisions of Articles 6 and 12 apply equally to convention gold pieces. The contracting states, however, do not bind themselves to call in, at the public expense, or to receive back into their coffers at their original metallic value, those convention gold pieces which, in consequence of circulation, wear, &c., have suffered a diminution of their original metallic value.

The regulations which a state makes respecting the circulation of these gold coins within its territory, especially with regard to their reception at its pay offices, their depreciation which, in payments to the offices of the state, has to be considered with regard to the want of weight and cost of recoinage, the calling in, the recoining, &c., as well as the police coinage regulations (münzpolizeiliche Bestimmungen) relative to these gold pieces, are applied also to gold coins of the same name in the contracting states.

Convention gold coins which do not attain the required weight (Art. 19.), and have been taken in payment at government offices and at public institutions under the authority of the state, namely, money and credit institutions, banks, &c., must not be reissued by the government offices and the last-named institutions.

On receiving such gold pieces, a reduction corresponding to the want of weight can be made, and this reduction has to be determined, when payments are to be made into the pay offices of the state, by an addition of $\frac{1}{2}$ per cent. of the treasury rate (Kassenkurs) for every $\frac{1}{10}$ of a thousandth part of a pound (50 milligrammes) loss of weight from the regular weight of $\frac{1}{45}$ and $\frac{1}{90}$ of a pound, for the cost of recoinage.

ART. 21.

The contracting powers shall take care that the basis of the coinage standard of the country, for the pure silver

currency, shall never be altered or depreciated. For this purpose

(*a.*) Each state is at liberty to permit convention gold coins (Art. 20) to be paid into their offices, instead of silver, according to a previously settled fixed rate, and to extend this permision either to all transactions and offices, or only to some. Such previous settlement of the rate is, however, never to last more than six months, and must at the expiration of the last month always be renewed for the following official treasury period of exchange (Kassenkursperiode). The rate cannot be fixed at a higher value than that given to that coinage by the average of the official commercial rate of exchange (Börsenkurs) during the previous six months. Each government also reserves to itself the right to alter this rate at any time within the period fixed, and to suspend it when it thinks proper.

(*b.*) A treasury rate of exchange shall henceforth only be fixed for convention gold coins, and not for other kinds of coined gold.

(*c*). The widest circulation is to be given to the notices by which the official rate of exchange is fixed. They must be published beforehand, even when a change in rate for the next fixed period is not intended, and must contain,

(*aa.*) The statement of the average trade exchange (Handelskurs) at the principal places of exchange during the six months immediately preceding.

(*bb.*) The treasury rate of exchange fixed accordingly.

(*cc.*) The duration of the value of the same.

(*dd.*) The reservation to alter or recall this rate of exchange, if necessary, even before the expiration of the period fixed (*cc.*)

(*ee.*) The declaration that such rate of exchange only affects payments to be made into offices of the state.

(*d.*) In the countries of the contracting powers, pay offices of the state as well as public institutions under the authority of the state, such as money and credit institutions, banks, &c., shall not be allowed in future, in payments to be made by them, to make any proviso with regard to the medium of payment, in silver or gold, in such a way that, for the latter a certain fixed relative value should be expressed beforehand in silver money.

ART. 22.

None of the contracting powers has the right to issue, or to allow to be issued, paper money of a forced currency, unless provision is made that such paper money may be exchanged, at any time, at the request of the holder, for silver money of its full value. Those exceptions which may have existed hitherto shall be abolished on the 1st January 1859, at the latest.

Paper money or other representatives of value, put into circulation as money, either by the state, or by institutions existing under the authority of the state, may, henceforth, not be issued; silver and the legal existing currency of the country being used instead.

ART. 23.

Those contracting powers which are bound by the coinage convention of the 30th July 1838, acknowledge among themselves that, from the time when the present treaty comes into operation, the provisions of the same are at once to take the place of the provisions of the above named coinage convention; and that the latter is to be also considered as prolonged by the duration fixed for the former (Art. 27.)

Moreover the special treaties made partly between the states of the former 14 thaler standard, partly between those of the 24½ fl. standard, on the subject of coinage, viz., the coinage convention and the special agreement concerning small coins, dated Munich, August 25th, 1837, the special protocol agreement, dated Dresden, July 30th, 1838, and the convention, dated Munich, March 27, 1845, in so far as the separate provisions contained in them may not be considered as altered by the present treaty, or by the said states among themselves, shall be considered as still in force.

ART. 24.

The contracting powers shall impart to each other all laws and ordinances which shall be issued for the regulation of the coinage in the sense of the present treaty, as well as the notices respecting the carrying into effect of the same, which are published in the states of each of them.

They bind themselves, also, at the end of every year, to impart to each other the official information concerning the issues of every kind made during the preceding year, as well as the denomination of the different kinds of coins, and to publish such information. In both cases the total value of all the money coined since the adoption of the present coinage standard of the country has to be stated at the same time.

ART. 25.

The agreement on the coinage entered into, together with the Trade and Customs Convention of the 19th February 1853, and added to that Convention as Supplement IV., remains still in force, and shall be valid instead of the agreement of the states bound together by the German Customs and Trade Convention, dated Karlsruhe, October 21st, 1845, also between the latter among themselves, and it shall have the same duration as the present Convention.

ART. 26.

In case other German states, or such foreign states as follow one of the two systems of customs, wish to enter into the present coinage treaty, the contracting powers declare themselves ready to enter into negotiations for the purpose of carrying such desire into effect.

ART. 27.

The duration of the treaty is, in the first instance, fixed until the end of the year 1878. It shall then, unless the withdrawal of one of the parties is declared, or another agreement entered into, be considered as tacitly prolonged from five years to five years.

But such a withdrawal is only to be permitted after the said Government has made known its resolution to the contracting Governments, at least two years before the expiration of the period expressly fixed or tacitly prolonged; upon which further negotiations are to be immediately entered into between all the contracting states, in order to make a settlement, with regard to the declaration of withdrawal, by a mutual understanding.

ART. 28.

The present convention shall be ratified as soon as possible, and come into force on the 1st of May 1857.

Done at Vienna, January 24th, 1857.

COLLECTION of LAWS for the PRUSSIAN STATES.

(Translation.)

(Gesetz-Sammlung für die Königlichen Preussischen Staaten.)

No. 24.

(No. 4666.) LAW ON COINAGE.

We, FREDERICK WILLIAM, by the grace of God, King of Prussia, &c. &c., with the concurrence of both Houses of the Parliament of our kingdom, in consequence of the annexed Coinage Convention, concluded on the 24th of January of this year, between the Governments of the States which entered into the Coinage Convention of July 30th, 1838, on the one part, and the Imperial Government of Austria and that of the Principality of Lichtenstein on the other part, decree as follows:

§ 1.

The Prussian pound, of the weight of 500 grammes, established by § 1 of the law of the 17th of May, last year, (Ges. Samml. p. 545,) as the unit of Prussian weight, shall, in the place of the hitherto used coinage standard of 233·855 grammes, be exclusively established as the basis of the coinage. It shall, for this purpose, be divided into a thousand parts with further decimal divisions.

§ 2.

The thaler continues to be the regular silver coin of the country. Besides the thaler there shall be, as hitherto, pieces a sixth of a thaler in value, and double thalers may also be coined.

§ 3.

As regards the ratio of the thaler to the former coinage standard of pure silver, the pound (§ 1) of pure silver shall now be divided into 30 thalers, 15 double thalers, and 180 sixth of a thaler pieces, and thus the "thirty-thaler standard" shall take the place, as legal standard for the coinage, of the fourteen-thaler standard hitherto used.

The thirty-thaler standard, on the basis of the pound (§ 1), shall be treated the same as the old fourteen-thaler standard, inasmuch as in all payments and obligations, no difference shall be made between the coin standards, and consequently between coins of the same name based on the old 14-thaler standard, and on the future 30-thaler standard. The word "Thalerwährung," put in the place of every other name for the coinage of the country, is used to denote coins produced under both standards.

§ 4.

The thaler shall, without prejudice to its nature and value as the special silver coin of the country, be coined in the form and with the attribute of a convention coin, or confederation thaler (Vereinsthaler).

The same shall be the case with regard to the coinage of double thalers.

The right to coin thalers and double thalers for particular purposes, and exclusively as coin of the country, is reserved.

§ 5.

The amount of pure metal and alloy for thalers and double thalers shall be fixed in the proportion of nine hundred thousandth parts of silver and one hundred thousandth parts of copper; and for sixth of a thaler pieces, in the proportion of five hundred and twenty thousandth parts of silver and four hundred and eighty thousandth parts of copper.

$13\frac{1}{2}$ double thalers and 27 thalers as well as $93\frac{6}{10}$ sixth of thalers, will therefore always weigh one pound. (§ 1.)

§ 6.

In the coinage of these pieces no reduction shall take place in future, in their value and weight, under the pretext of a so-called remedy, the more so as every care will be taken that they shall have full value and weight. But as absolute accuracy with regard to each separate piece cannot be attained, the deviation, more or less, shall amount—

In the case of each double thaler, to not more in weight than three thousandth parts of its weight; and in purity to not more than three thousandth parts:

In the case of each thaler, to not more, with regard to weight, than four thousandth parts of its weight; and in purity, to not more than three thousandth parts:

In the case of each sixth of a thaler piece, to not more in weight than ten thousandth parts of its weight; in purity, to not more than five thousandth parts.

§ 7.

The thaler shall further be divided into 30 silber-groschen, and the silber-groschen into 12 pfennings, and there shall be coined, as heretofore,—

(1.) As silver small change: two and a half silber-groschen pieces, silber-groschen pieces, and half silber-groschen pieces;

(2.) As copper small change: four, three, two, and one pfenning pieces.

These small coins, which are destined for the settlement of small transactions and the balancing of accounts, shall not be circulated in a greater amount than may be necessary for the attainment of those objects.

No one is bound to receive in small coin payments which may be made in sixth of a thaler pieces. On the other hand, the acceptance of the small coin may not be refused in public pay offices and institutions any more than in private transactions, when the payment to be made is less than the sixth part of a thaler, or when less than a sixth of a thaler piece is required to settle a balance.

§ 8.

In the small silver coinage, in consequence of the now established alteration of the coinage weight, the pound of pure silver shall always produce $34\frac{1}{2}$ thalers.

414 two-and-a-half silber-groschen pieces,
1035 silber-groschen pieces,
2070 half-silber-groschen pieces

will therefore always contain a pound of pure silver.

The proportion of the metals (Feingehalt) is fixed—

For the two-and-a-half silver-groschen pieces, at three hundred and seventy-five thousandth parts of pure silver to six hundred and twenty-five thousandth parts of copper:

For the silber-groschen pieces and the half-silber-groschen pieces at two hundred and twenty thousandth parts of pure silver, to seven hundred and eighty thousandth parts of copper: Therefore—

155·25 two-and-a-half silber-groschen pieces,
227·70 silber-groschen pieces,
455·40 half silber-groschen pieces,

always weigh a pound.

§ 9.

In the small copper coinage 100 lb. of copper shall produce at most 112 thalers.

The particular regulations respecting the issue of small copper pieces, as well as the proportion of weight in which the single pieces stand to each other, shall be made by royal decree. In the meantime 100lbs. (§ 1) of copper shall, in consideration of the present change in the coinage weight, produce 92·5926 thalers, and as many copper pieces as make a thaler shall weigh 36 thousandth parts of a pound (§ 1).

§ 10.

The following coins, equally with those of the country, shall be received and paid at their full value at all public pay offices and institutions, as well as generally in commercial transactions, viz.:

(1.) The thalers coined in conformity with the General Coinage Convention of the 30th July 1838 (Gesetz-Sammlung, 1839, p. 18), as well as those coined before the year 1839, by the States of the Zoll- and Handelsverein, on the fourteen thaler standard.

(2.) The double thalers ($\frac{1}{7}$ of a mark pieces, or three-and-a-half gulden pieces) coined as convention coins, up to the present time, by the States of the Zoll and Handelsverein, conformably to Articles 7 and 8 of the said Coinage Convention.

(3.) The thalers and double thalers coined as convention money, in conformity with the Coinage Convention of the 24th of January of this year, of those states which have entered into this Convention, or who shall join it hereafter.

The acceptance of the coins described under Nos. 2. and 3. at their full value shall also, in this case, be obligatory on all, even when the wording of the obligation to pay implies the use of a different kind of coinage.

§ 11.

Gold commercial coins shall be coined under the names of "crown" and "half-crown" in the form and with the attribute of confederation coins, viz.:

(1.) The crown of $\frac{1}{50}$ of a pound (§ 1) of pure gold:

(2.) The half-crown of $\frac{1}{100}$ of a pound of pure gold.

These coins shall be the special gold coins of the country, and other gold pieces shall not henceforth be coined.

§ 12.

The proportion of the metals in the crown and half-crown shall be fixed at nine hundred thousandth parts of gold and one hundred thousandth parts of copper; 45 crowns and 90 half-crowns will therefore weigh one pound (§ 1).

The deviation, more or less, may, under the provision of the principle expressed in § 6 of this law, not exceed, in the case of each single crown or half-crown, with respect to weight, two and a half thousandth parts of its weight, and, with regard to fineness, two thousandth parts.

§ 13.

For facilitating calculation with crown pieces, the crown shall be divided into ten parts, under the name of "kronzehntel." Still smaller pieces shall be given, in connection with the crown, without special names, but as decimal parts of the kronzehntel.

§ 14.

The silver value of the gold coinage shall be entirely fixed by the relation of the supply to the demand, and no one is bound to take gold in the place of the legal silver value of the country.

Nor are public institutions under the authority of the state, especially money and credit institutions and banks, in payments to be made by them, permitted to make any proviso with regard to the medium of payment in silver or gold, in such a way that for the latter a certain fixed relative value should be expressed beforehand in silver money.

§ 15.

Gold coins of the normal weight of $\frac{1}{45}$ and $\frac{1}{90}$ of the pound (§ 1) respectively, with the allowed variation of two and a half thousandth parts, and which have not been

diminished by violent or unlawful means, shall be considered as of full weight in all payments.

Gold coins which do not attain the above-named weight, minus the deviation allowed, and have been received in payment at Government pay offices or at public establishments existing under the authority of the State, namely, money and credit establishments and banks, may not be again issued by Government offices and such last-named establishments.

§ 16.

Our Finance Minister is empowered to settle the price at which the crown and the half-crown shall be taken into our pay offices, either generally or with a restriction to certain offices and payments, and to do so with regard to the commercial rate of exchange (Handelskurswerth).

Our Finance Minister shall, besides this Treasury rate (Kassenkurs), also fix the reduction in value at which such gold coins as do not attain the standard (§ 15) shall be taken into our pay offices, in consideration of their lightness and the cost of re-coinage.

The established rate, as well as the permission to receive crowns and half-crowns instead of silver coins in our offices, may at any time be revoked or restricted by the publication of a proclamation by our Finance Minister.

§ 17.

The crowns and half-crowns coined as convention money, in conformity with the Coinage Convention of January 24th of this year, of those states which have taken part in this Convention, or which shall hereafter enter into it, shall be placed on an equality with the crowns and half-crowns of home coinage, both in our pay offices, and generally in commercial transactions. No difference shall, therefore, be made between the gold coins of those states and those of home coinage in commercial transactions, unless other stipulations have been made, especially with reference to the acceptance of the coins in our offices, and to the deduction which is to be made for the deficiency in weight and for the cost of re-coinage (§ 16), as well as with reference to the prohibition of re-issuing such gold coins as do not come up to the standard.

§ 18.

Obligations to pay, which name a certain number of Prussian Friedrichsd'or according to the coinage standard fixed by the coinage laws hitherto in existence, especially the Act of September 30th, 1821 (Gesetz Sammlung, p. 159,) or which name a certain sum expressed in Prussian Friedrichsd'or, or lastly a sum expressed in gold thaler so that the payment may be legally demanded in Prussian Friedrichsd'or, must, if they originated after the 31st of December 1831, either be paid in Prussian Friedrichsd'or, or in silver current (Silberkurant), at the rate of five thalers twenty groschen to the Friedrichsd'or.

§ 19.

Our Ministry of State is also further authorized to fix the value above which foreign gold and silver coins, with the exception of those mentioned in §§ 10 and 17, must not be offered or given in payment in ordinary transactions.

And the said ministry, after a period deemed expedient according to circumstances, shall be empowered to prohibit entirely the circulation of such kinds of foreign coins as are uncertain in their quality, or which have a lower value than the one expressed in the coinage, or of which the extrinsic value has been lowered in the country in which they were coined and circulated, or which might be prohibited in a neighbouring state.

§ 20.

The provisions of §§ 2, 3, 4, 5, 6, 7, 8 and 9 of this law do not apply to the states of Hohenzollern.

There the existing gulden currency continues, with this condition, that the pound (§ 1) of pure silver must henceforth produce fifty-two and a half gulden and consequently the fifty-two and a half gulden standard takes the place of the twenty-four and a half gulden standard as the legal coinage standard. But no difference must be made between the two coinage standards any more than between the two coins of the same name, as has been provided for the thaler currency in § 3 of this law, and the words "South German currency (Suddeutsche Währung) are to be used in reference to the coins issued according to both standards.

There shall be published a royal decree, in connection with the special treaty between the States of the south German currency, concerning the coinage of gulden, of parts of gulden, and small coins. The principle enunciated in § 6 shall likewise be carried out in the coinage of gulden and parts of gulden.

§ 21.

This law comes into operation at the same time as the Coinage Convention of the 24th January of this year.

On the same day the law on coinage in the Prussian states, of the 30th September 1821, (Gesetz Sammlung, p. 159,) the Cabinet Order of the 5th of March 1839, respecting the coinage of double thalers and two-and-a half gulden pieces as convention money (Gesetz Sammlung, p. 92), and the ordinance respecting the issue of two-and-a-half silber-groschen pieces, small coinage, of June 28th, 1843, (Gesetz Sammlung, p. 255,) cease to be in force.

§ 22.

Our President of the Council and our Minister of Finance are charged with the carrying out of this law.

Given under our hand and seal.

Potsdam, May 4th 1857.

(L.S.) Frederick William.

v. Manteuffel. v. d. Heydt. Simons. v. Raumer. v. Westphalen. v. Bodelschwingh. Count v. Waldersee. v. Manteuffel II.

doubloon of 2 „	0·016	

Remedy for fineness, 0·002

6. Limit of Wear: the coins are not current if their deficiency of weight exceeds,

	Grammes.
In the doubloon of 10 crowns	0·049
„ 4 „	0·029
„ 2 „	0·016

7. The coining of gold coins, to which alone these questions seem to refer, is free from any duty, provided that private persons bring ductile and malleable bullion, which can be reduced to the standard without need of refining it or of incorporating it with pure gold. If the gold is brittle, or below the standard, it is not received, or is subject to a discount of 2 crowns (20 rls.) per kilogramme of the gross weight.

8. Up to the year 1861 the value of the bullion was returned within a space of 15 days at most; but the increasing extent of the deliveries of bullion, and the circumstance that the existing coinage-law of 26th June 1864 does not fix any term, have been the cause that the returns are now made within a space of time proportionate to the extent of the delivery. The Mint can coin daily above 60,000 gold coins. Nevertheless, the parcels of lesser extent are always paid for in ready money from the funds of the establishment.

9. The gold and silver coins are coined exclusively by state functionaries without the aid of private industry. The copper coins are manufactured by contract.

10. The Mint receives from the public all bullion fit for coining, provided that the extent of the delivery exceeds 1000 crowns (10,000 rls.)

11. The Mint of Madrid, the only one in Spain where gold and silver coin are now coined, is restricted to the coining of money properly so called.

12. Herewith are copies of the regulations, which are considered of general interest:

No. 1. Instructions upon the acquisition of bullion, assays, and other operations, of 16th December 1858.

No. 2. Instructions of 13th December 1860, upon the assay of coins taken from the circulation.

†No. 3. Regulations of 22nd September 1865 for the coining of bronze money.

Madrid, 18th May 1868.

---

* Note.—Besides these coins there are gold coins struck at the Manilla Mint of 4, 2, and 1 hard dollars (pesos fuertes), which, being of a different standard and weight, are not legally current in the Kingdom.

† This is not inserted, as it does not bear upon the subject of the inquiry by this Commission.

(Translation.)

No. 1.—INSTRUCTION concerning the PURCHASE of BULLION, on ASSAYS, and other OPERATIONS, of the 16th December 1858.

ART. 1. The unit of weight in the mints of the kingdom, for all their operations, without exception, shall be the kilogram and its fractions.

The entries of accounts shall be as far as milligrams.

The weight of the bullion, as well in transactions with the public as in the interior transactions of the establishment, shall be taken by weighings of 10 kilograms in the gold and of 25 in the silver.

ART. 2. In the assays in general the standard shall be computed by thousandths and half thousandths.

ART. 3. The tariffs in force of 3,018 reales (*a*) for a mark of fine gold, and of 124 reales (*a*) for that of silver of equal standard, are to be considered as applicable only to the purchase of bullion, meaning as such that of which the gross weight does not exceed in the total that of the standard weight reduced, which ought besides to combine complete ductility, and be alloyed precisely with copper alone.

That which is not met with in this case, or which contains more than 16 milligrams of gold, shall be subjected to a proportionate discount for refining and parting, conformably to the types in force, but the gold which it contains shall be given as a bonus. The fractions which do not reach to this limit shall remain in favour of the Mint.

The bullion of which the standard is under 0·700, or which contains metals that render the refining more difficult, shall not be admissible.

The purchase of jewels and plate (vagillas) shall no longer take place, and in the future there shall not be received any portion of bullion under the value of 10,000 reales.

Nevertheless, the current doubloons, though defective, and the national monies which shall be presented for sale, paying for their value on the same terms as hitherto, shall continue to be admitted.

All the national coins, including those struck in America under the Spanish rule, are excepted from the payment of expenses of refining or parting, whatever may be the proportion in which they are sent.

ART. 4. The re-melting of worn-out coins for the account of the Treasury shall be the object of special regulations.

ART. 5. The silver bullion purchased is to be reduced into coins in the following proportion:

$\frac{4}{10}$ in duros.
$\frac{2}{10}$ in escudos.
$\frac{2}{10}$ in pesetas.
$\frac{1}{10}$ in medias.
$\frac{1}{10}$ in reales.

This proportion is to be carried out in the total work of the year, but not in partial works.

ART. 6. The admission of bullion shall take place on the Mondays, Wednesdays, and Fridays of every week, from ten in the morning to one in the afternoon.

The bullion and coins shall be presented accompanied by two invoices drawn up according to form No. 1. These invoices shall be delivered to the Master of the Mint, so that he may authorize their admission and their assays, without which requisite not any part of them shall be received or assayed, whatever may be their importance.

ART. 7. The re-weighing of the bullion being verified, a copy of the invoice shall be delivered to the owner, certified with the weight of the same by the weigher, the office (contaduria) taking note of it, the treasurer signing the receipt, and the master attesting it.

ART. 8. The other invoice shall pass into the hands of the assayers, who shall claim the ingots from the treasurer, giving him a provisionary receipt.

The assays being ended, the standard and the total value shall be stated by the assayers, and in the same way the bullion which is to be rejected, stating the motive, and finally the quantities which are to be refined or parted, returning the original invoice to the superintendent, who shall send to the owner of the bullion a communication as to the result of the assays, with the consequent advices.

The owner of the bullion is to answer within the precise term of 24 hours. A failure to answer will be interpreted as a proof of assent, and the metal shall immediately enter the Treasury, the purchase being considered as settled.

(*a*) These types have been altered to reales 3,047·77 for the mark of fine gold, and reales 196·88 for the mark of silver of the same standard, equivalent to 1214 escudos for a kilogram of fine gold, and 85 escudos 600 millims for the kilogram of silver, adopted in virtue of the new monetary system of the 26th June 1864.

Until then the ingots of this kind shall be kept in the Treasury with due separation.

ART. 9. Having obtained the consent of the owner of the bullion, it shall be marked and numbered, if in bars, or, if in coins, they shall be placed in bags and entered in the Treasury with the authorized forms. The office (contaduria) shall forward in favour of the aforesaid owner a certificate according to form No. 2, which shall serve him as a receipt, exchanging it for the copy of the invoice which shall be immediately annulled by means of a drill, and then sent to its place of deposit.

ART. 10. The sending back of the bullion ought to take place according as the state of the funds and the works shall allow it, which in no case shall exceed a fortnight (*b*). The period for the return shall be fixed by the office (contaduria) with the approbation of the master of the mint, as stated in form No. 2.

ART. 11. When the day of maturity arrives the owner of the bullion shall present himself to receive its value, showing the certificate which was sent to him, in order that it may serve as a justification for its respective delivery.

ART. 12. The weigher and teller shall keep diaries of weight and date for the gold, for the silver, and for the auriferous bullion, in which he states the weight of all the items entered, refused, and sent to be worked in the Mint, according to forms Nos. 3 and 4. The form of the rough diaries which are to establish a greater security remains at his own discretion.

ART. 13. The assayers shall keep the following books:

Assays of entry of gold and silver	Form No. 5.
Ditto of purchase	No. 6.
Ditto of the manufacture of the coins of silver	No. 7.
Ditto of gold	
Ditto of unwrought ingots and sweepings and other residues	No. 8.

ART. 14. It is absolutely forbidden to make any assay which is not for purchases or other operations of the mint, and for those an express order shall be given beforehand from the master of the mint.

ART. 15. Every assay shall be considered as terminated in one day, its result stated in writing, accompanied by the residue of gold and silver, in order that the master of the mint may verify them when he may deem it convenient.

The weight of the quantity of matter taken for the assay (bocados) at its reception and at its return shall be stated on the margin of each paper.

ART. 16. After the 1st January 1859 the duties of assay shall not be claimed, except in the case when the parties presenting the bullion do not agree with the valuation of the mint and withdraw it.

ART. 17. The melter shall keep an office diary according to form No. 9, and the rough diaries which he thinks necessary, the form of which remains at his discretion.

ART. 18. The melter shall be accountable for the gross and net weight of the detail of the alloys, and for the discharge (data) of what results from the assay of the pots (crazadas) and of the ingots, proceeding from the sweepings (rallete) and other residues. It shall be provided that the pots of silver shall be of 50 kilograms and those of gold of 25 kilograms, with a small allowance (differencia).

ART. 19. The pieces (bocados) for the assays shall be precisely taken by the assayer who is present at the melting in conformity with the regulations, sending them in a closed and sealed parcel, with mention of its weight, to the master of the mint, in order that he may in his turn send them to the assayer. The approbation of the ingots shall likewise take place under the direction of the master of the mint, and they are to remain until then in a safe with three keys.

ART. 20. The pots (crazadas) are to be melted separately as they are received by the melter without mixing sweepings, cuttings, or solid amalgam (desarogados).

ART. 21. The sweeping of the workshops shall be done daily and before the going away (withdrawal) of the assayer entrusted with the melting, and the sweepings, as well as the fragments of bullion, dust and other residues, shall be weighed in his presence, and shut up in the safe with the three keys, one of which shall remain in possession of the assayer, the other in the hands of the store keeper, and the third in those of the melter.

ART. 22. The profit of the sweepings (beneficio de tierras) shall be made by the melter, and the washing, the cleaning of the amalgamating machine (descargas de los molinetes)

(*b*) This term is never actually observed

and the separating of the quicksilver (desazogado) shall be done in presence of the assayer and of a representative of the office, in order that the former may fix the required permits, and the latter may take note of the metals obtained. This profit shall be deposited in the strong box of the department with the precautions ordered, being kept and melted with the required separations when the master of the mint shall determine it.

ART. 23. The accounts of the melter shall be rendered quarterly, and there shall be a complete purifying of the residues.

ART. 24. The melter shall communicate daily to the master of the mint the operations of his department according to the terms expressed in form No. 10.

ART. 25. The workshops of refining and separation shall be entrusted to one of the assayers. The accounts and discharge of these workshops shall be made according to the gross and net weight of the bullion with the respective certificates of assay.

ART. 26. The assayer shall keep a diary of the operations according to the terms expressed in form No. 11.

ART. 27. When an operation of refining or separation shall be ended, the assayer shall render a detailed account to the master of the mint of its results, stating the quantity used (invertida), and the degree of fineness, the time employed, and the expenses incurred, and the real or apparent waste experienced.

ART. 28. The pieces ('bocados') for the assay of discharge ('data') shall be taken by the master of the mint himself, or in his absence by the accountant, taking note of their weight.

ART. 29. The chief coiner shall be accountable for the gross weight of the pots and the net weight, which according to the assays of the same appear in the delivery of the melter, and the conditions for the gross weight, which in each delivery or return of the coins or bullion, may be verified, measuring the fineness according to the assay of the samples.

ART. 30. In order that the charge and the discharge may be made to the chief coiner on the same basis for each 50 kilograms of silver coins, and each 25 kilograms of gold coins, being the weight which each pot shall approximately contain, the following samples shall be used:

Centenes duros, Escudos. } one coin.
Pesetas two coins.
½ Pesetas, three coins.
Reales, four coins, when the assay shall be done.

The fineness which according to the aforesaid assays shall be recognized, shall serve as a standard in the coining department.

ART. 31. The assay which has until now taken place previously to the delivery of the samples is henceforward suppressed.

The number of these samples shall be reduced to what is necessary for the analysis of the chief assayer of the kingdom.

ART. 32. The remelting of the scissel (cizallas) shall continue to take place under the inspection of an assayer. The bars obtained, the sweepings, grains, and other residues, shall be kept in a safe with three keys, which shall be entrusted to the chief coiner, the assayer, and an assistant of the Comptrolling Office (contaduria).

ART. 33. The remelting of the scissel and the profit of the sweepings and other residues shall take place with the same precautions already mentioned for the melting in Articles 20 and 21.

In the same manner the accounts of the chief coiner shall be settled quarterly.

ART. 34. The chief coiner shall keep the following books:

	Form.
Accounts of the stronghold (tesorillo) for works in gold	No. 12.
Ditto in silver	
Ditto of the workshop for laminating gold	No. 13.
Ditto for silver	
Ditto, ditto, for cutting gold	No. 14.
Ditto for silver	
Ditto, ditto, for blanking gold	No. 15.
Ditto for silver	
Blanks to be weighed of gold	No. 16.
Ditto of silver	
Blanks for coining gold	No. 17.
Ditto silver	
Diary of melting	No. 18.

The form of the diaries to be used shall remain at his own discretion.

ART. 35. The chief coiner shall keep a part diary of the operations of his department according to the forms expressed in forms No. 19; and when scissel and other residues are remelted, he shall supply another in conformity with that of the first melting.

ART. 36. The delivery of the blanched blanks for approbation shall be made by the chief coiner to the weigher and teller, being considered as an interior operation of the workshop.

ART. 37. The weigher and teller shall deliver the approved blanks (cospeles) to the assistant in charge of the coining room, in presence of the chief coiner, in order that the latter may make the proper notes of them, and take charge of those which turn out to be defective.

ART. 38. The weigher and teller shall keep a diary of these operations according to the terms stated in form No. 20, and shall transmit a part diary to the master of the mint, as stated in model No. 21.

ART. 39. All the deliveries of blanks (cospeles) shall be done by weight and account.

ART. 40. During the hours of rest the coining mills (volantes) shall remain closed and unprovided with dies.

ART. 41. They shall not be able to work under the direction of the keeper of the coins, except with the indispensable dies and collars (virolas), and those shall be kept in the coining room in a safe of acknowledged solidity.

The key of this safe shall remain in the hands of the keeper of the coins.

ART. 42. The demands for dies and collars shall be addressed to the master of the mint in writing, in order that he may authorize the grant to be made by the engravers after having been taken note of by the Comptrolling Office. When the new dies and collars are delivered, those which are useless, or which want parting, shall be given back.

ART. 43. The keeper of the dies is obliged to deliver and receive personally the dies and the collars (troqueles y virolas), and shall be answerable for the same, not only during their application to the works, but also during their transfer from one department to another.

ART. 44. The keeper of the dies shall keep the following books:

Diary of coinage according to model No. 22;
Ditto of entry, inversion, and issue of dies and collars according to form No. 23.

He shall keep the auxiliary diaries which he may deem convenient for the better administration of his department.

ART. 45. Each day he shall give to the master of the mint an account of his operations as stated in form No. 24, and each month an account according to form No. 25, which shall be transmitted to the central Direction.

ART. 46. The deposit of the dies and collars, whether fit for use or useless, shall be made in a safe with two keys, one in the hands of the accountant, the other in those of the chief engraver.

The multiplying die-press (volante de hincar) shall remain under three keys, two of them being in the possession of the functionaries named, and the third in that of the master of the mint.

ART. 47. No die or collar whatever shall be delivered without a previous order from the master of the mint, unless an equal number of useless pieces is returned, and unless the keeper of the dies presents himself in person to receive the new ones.

ART. 48. To avoid the coinage of deaf blanks (cospeles ojosos) when the correctness of their weight has been ascertained in the chief coiner's office, immediately after the cutting and before the blanching, the ringing of the pieces shall be tested. This testing shall be done by means of an apparatus which shall be delivered by the department of engraving according to special instruction.

ART. 49. There shall be in the safe a deposit of at least 12 pairs of dies and a proportionate number of collars for each class of coins.

ART. 50. The following books shall be kept:
A diary of the fabrication according to form No. 26;
Ditto of inversion according to form No. 27.

ART. 51. The engraver shall each day give an account of his operations to the Master of the Mint, according to the terms indicated in No. 28.

ART. 52. The engraver shall retain under his own exclusive responsibility only the pieces in course of fabrication. As soon as they are finished they shall be kept in the safe mentioned in Art. 46.

ART. 53. The operation of multiplying the dies (hincar) shall take place in presence of the accountant, in order that he may take note of the dies reproduced, distinguishing those fit for use from the useless ones.

ART. 54. Every three months he shall proceed to the defacing of the useless dies, and he shall draw up a statement respecting it according to form No. 29, which shall be sent to the general direction of the department.

ART. 55. The demands for fuel, utensils, &c, are to be forwarded to the office of the Master of the Mint, in order that he may give his approval; and afterwards, through intervention of the accountant, they shall be granted.

ART. 56. The storekeeper shall keep a book of entry and issue, according to form No. 20, in which are included all the articles used by the Mint in its various operations, excepting the copper.

ART. 57. Every day the storekeeper shall give to the Master of the Mint a statement of the effects received and supplied for the department under his care.

ART. 58. The Comptrolling Office (contaduria) shall keep the following books:

Diary of the provisional deposits	- Form No.	31.
Do. of the purchase of bullion	- - „	32.
Do. of the expenses and details of refining and parting	- - - „ - „	33.
Do. do. do. of melting	„	34.
Do. do. do. of the chief coiner's office	„	35.
Do. do. do. of coining	„	36.
General diary of the charges and deliveries	- „	37.
Do. do. of the dies and collars	- „	38.
Do. do. of the stores	- - „	30.

The Comptrolling Office shall supply the following statements:

Diary of the operations	- Form No.	39.
Weekly diary of the dies	- - „ - „	28.
Fortnightly diary of certificates	- „ - „	40.
Do. do. of entries and expenses	„ - „	41.

ART. 59. Henceforward the execution of private works, such as the coining of medals, the verification of weights for private establishments, the engraving of seals, &c. in the Mints, and the department of engraving, is absolutely forbidden, unless such works are especially authorized by the Central Direction.

ART. 60. The Central Direction reserves to itself the appointment, when it thinks it convenient, of special delegates, who shall ascertain and collect information as to the exact accomplishment of the present instruction. The credentials with which they shall be provided shall be a sufficient title to make them acknowledged; and upon their production the chiefs of the respective establishments shall supply them with details and notices, and shall prepare the certificates (argueos) and verifications which they may point out.

ART. 61. The prescriptions of the Ordinance of July 16th 1730, and the other regulations of the department, shall remain in full force and vigour.

Copy.
The Under Secretary,
MAGAZ.

(Translation)

No. 2. INSTRUCTION of the 13th of December 1860 on the Assay of Coins withdrawn from Circulation.

Provisional instructions for the regulation and government of the Laboratory of the Chief Assayer of the kingdom, drawn up by this direction for the correct accomplishment of the Royal Order of September 18th 1859.

ART. 1. The Laboratory of the Chief Assayer shall confine itself for the present to supplying the Mints of the kingdom with the most useful chemical agents, and the most indispensable materials for the analysis and assay of the precious metals.

ART. 2. The collections of agents or re-agents shall comprise:—

Pure nitric acid;
Concentrated sulphuric acid;
Pure sulphuric acid;
Sulphurous acid;
Hydrochloric acid;
Boric acid;
Acetic acid;
Liquid ammonia;
Caustic ditto;
Chloride of lime;
Ditto of ammonia;
Carbonate of lime;
Do. of soda;
Do. of ammonia;
Do. of lead;
Acetate of lead;
Sulphate of copper;
Do. of iron;
Caustic potassa;
Borax;
Oxide of lead;
Pure gold;
Do. silver;
Do. copper;
Do. lead;
Normal liquor;
1/10 salt do.
Do. silver do.

ART. 3. He shall likewise take care to supply the graduated glasses, the mufles, matrasses, coppels, retorts, jars for the acids and waters, and capsules of china ware.

ART. 4. The Laboratory shall likewise supply the ovens for refining (copelar) according to the model of Mr. Darcet, immediately replacing those which are used, if they are not of this system.

ART. 5. It shall supply the scales for assaying and the collection of weights (dinerales), and all the requisites necessary for the assay by the wet process.

ART. 6. In the interim, while other things are being prepared, the Laboratory shall confine its labours to works of preparation, rectification or verification of the reactives, materials, and utensils above named; buying them where it is most convenient, and availing itself of the help of the workshop of machinery in the engraving department, as often as necessary, but with the intervention in all cases of the Master of the Madrid Mint.

ART. 7. The demands shall be addressed by the Master of the Mint directly to the Chief Assayer. In case of the demand being in his opinion either insufficient or excessive he shall suspend its fulfilment until he shall give notice of it to the General Direction, and the Direction shall decide.

ART. 8. The supplies are to commence from the first of next January, subject to the estimate inserted to that effect in Art. 2. of the 57th Chapter of the Estimates of 1861, among the general expenses of the department of Engraving.

ART. 9. In the following years the Masters of the Mints shall deliver with due previous notice to the Chief Assayer an estimate for the supplying of the establishment, under his charge, in order that the latter, on inspecting it as well as the other contracts (atenciones) of this part of the service, may be able to draw up the corresponding demand in order that it may be included in the general estimates.

ART. 10. The necessary credits for the requisites of the Laboratory shall be included in the same chapter and article as those of the materials of fabrication of the department of Engraving, and their transfers (inversion) and vouchers shall be registered by the comptrolling office of the Madrid Mint, in the same way and manner as has been done until now for the other expenses of the said department.

ART. 11. The Chief Assayer shall render to the comptrolling office of the Mint a vouched account of all the expenses which have been incurred quarterly in the Laboratory; in respect of what concerns the transfer and justification of the said accounts he has to adhere to what has been provided for in the general rules in force in this matter. These accounts are to be examined and approved by the general direction in council of the chiefs of the same.

ART. 12. The Chief Assayer shall supply every six months to the General Direction of the branch a statement, in which shall be set forth the materials existing at the end of the previous six months, those bought during the current half year, those supplied during the same time to each mint, and those existing and disposible for the following half

year. In this statement all the materials shall have their value marked according to the type of the purchase price.

ART. 13. Every three months, or more frequently, if the General Direction orders it, an assay shall take place for each Mint, with coins taken from among those which are in circulation in the respective localities.

ART. 14. To this end the General Direction shall claim from the governors of provinces the necessary samples, the number of which shall vary according to the circumstances.

The quantities submitted to the assay are to be sufficient each half year to prove the exactness of the allowance on the measure (talla).

ART. 15. In the delivery, examination and assay of these samples the following rules shall be observed:

1. The governor of the province shall apply, as he deems proper, to the commercial firms, banks, and other mercantile establishments in frequent relations with the Mint, in order that they may supply the aforesaid samples.

2. These samples ought to be in the most perfect state of preservation, and those who supply them ought to point out as approximately as possible the time when they received them from the Mint, or, in default of this, any other quarter from which they may have proceeded.

3. The Governor shall deliver the samples to the Direction, in parcels sealed with wax and certified, through the post, or through any other means which he thinks safe and proper, taking care that the packing may be regulated according to its class and quality.

4. When received, the General Direction shall deliver them to the Engraver, in order that the latter may give information about the engraving, which being done, the Engraver shall pass them to the Chief Assayer, acquainting the Direction that he has done so.

5. The Chief Assayer, as soon as he shall have received the samples, shall ascertain their weight, and shall execute his assay, giving a statement of both operations to the General Direction.

6. If, when the weight of the samples has been ascertained, any of them are found to be out of the allowance, the assay shall not be proceeded with, notice of the case being given to the General Direction.

7. If, when the assay of the standard is ended, it should be found to be out of the allowance, notice shall be given to the General Direction, delivering to it what may result and remain from the samples, in order that it may resolve concerning them.

8. In cases of this kind, and before any notice, the Chief Assayer shall repeat the operations.

9. If the result of the examination is in conformity with the preceding one, on giving notice of it to the General Direction the Chief Assayer shall deliver at the same time the samples and their remains to the Mint of Madrid, stating in a certificate from whence they come, their nominal value, their gross weight before the assay, as well as their intrinsic value when the operation shall be concluded, and the waste incurred during the operation.

10. The value of the coins delivered as samples shall be paid when they are delivered, a previous order to this effect having been given by the Governor of the province for the treasury of the respective Finance Office, being stated in account as a transfer of funds under the denomination of "remittance to the Mint of Madrid of samples for the Chief Assayer of the kingdom."

11. When the coins for samples shall have been received, the General Direction shall communicate the fact to the Master of the Mint of Madrid, in order that he may forward the suitable bill of payment for its value, in favour of the Treasury remitting it, and may order its entry and delivery for the Laboratory of the Chief Assayer; so that, the assays being ended, the Chief Assayer may hand over the remains of the patterns, that they may be delivered to the treasury of the Mint, with the formalities ordered by the instruction, and with the view that the waste or the loss from the operation should be suitably entered to the credit designed for this effect in the estimate of the Laboratory, producing the proper certificate of the Chief Assayer mentioned in paragraph 9.

12. In order to note the delivery and details of the samples of this kind which are received in the Laboratory, a suitable register shall be opened in the Comptrolling Office of the Mint, the entries of which shall be signed by the Master of the Mint, the Accountant, the Treasurer, and the Chief Assayer; the account consisting of the gross weight and nominal value of the samples before they have been assayed, and the details (data), the gross and net weight, and the intrinsic value of the same at a time, and moreover the waste experienced in each assay.

ART. 16. When the General Direction shall grant it, samples of metals in work shall be assayed, conformably to what is provided in the Royal Order of the 19th April 1856.

ART. 17. These samples for the account of the Mints of Seville and Barcelona shall be taken by the Governors, or, in their absence, by a special delegate.

ART. 18. The delivery, receipt, and assay shall be made according to the conditions provided for in paragraphs 1, 3, 4, 5, 6, 7, 8, and 9 of Article 15, in order that the assay and examination being terminated they may be delivered directly by the Chief Assayer to the Mint from which they come, by the next mail; care being taken that the paper is certified, and a note made, in writing on the margins of the official paper, of the weight of the samples when received and returned.

ART. 19. The samples of metals in work in the Mint of Madrid shall be taken by the Chief Assayer personally, being subjected for their examination, assay, and return to the rules contained in the previous Article.

ART. 20. For the execution of the manipulations of the Laboratory, the Chief Assayer shall use the services of the assistant placed under his order, if he thinks proper, but without being able to decline for himself the responsiblity which is involved in the accomplishment of his duties. From this rule are excepted all the works relative to the examination of samples bought again, and the information relative to false coins, which are to be made solely by the Chief Assayer, because they cannot, under any pretence or motive whatever, be entrusted to the assistant.

ART. 21. In case of the absence or sickness of the Chief Assayer, he shall be replaced by the First Assayer of the Mint of Madrid, or whoever fulfils his duties, according to the practice observed hitherto.

ART. 22. The Laboratory shall have the proper funds to pay an attendant, of known aptitude and probity, to take care of its cleanliness and good order, to light the ovens, and do anything else that may be required by the Chief Assayer or his assistant.

ART. 23. The premises of the Laboratory shall be so arranged as to afford a convenient dwelling, in order that the Chief Assayer may reside there, and duly take care of the valuables therein deposited.

ART. 24. For the general direction of the department, suitable measures shall be taken to provide the Chief Assayer with the necessary stamps for franking his official correspondence.

Madrid, Nov. 26th, 1860.

By order, Pedro Paston y Maseda, 13th December 1860. Her Majesty has deigned to approve this Instruction.

SALAVERRIA.

5. Or: tolérance du poids, 2 dragmes par mille en dessus ou en dessous.
„ tolérance du titre, 2 millièmes en dessus ou en dessous.
Argent: tolérance du poids, 3 dragmes par mille en dessus ou en dessous.
„ tolérance du titre, 3 millièmes en dessus ou en dessous.

6. Il n'y a pas de loi fixant le temps de circulation des pièces. Les monnaies détériorées ou trop usées s'achètent au prix des matierès non monnayées suivant le titre.

7. Le droit perçu pour la fabrication est prélevé sur l'or fin, c'est-à-dire, par la retenue de 1°/₀. Quant à l'argent, la retenue est de 2·734 °/₀ frais de fabrication, déchet et coût de l'alliage compris.

8. La fabrication des monnaies est faite par l'Etat.

9. Le terme de paiement est ordinairement de huit à dix jours, et un peu plus long si la matière apportée exige des opérations d'affinage et autres.

10. Le public apporte continuellement des matières d'or et d'argent que l'Hôtel Impérial des Monnaies achète d'après le titre, à raison de 48 piastres par dragme de l'or fin à 1000/1000es, et 3 piastres 5 paras par dragme de l'argent fin à 1000/1000es. Toutefois les matières susceptibles d'affinage ne sont payées que 47 piastres et demie par chaque dragme d'or fin, et 3 piastres 1 para par chaque dragme d'argent fin.

11. Il n'y a jamais eu d'exemple jusqu'aujourd'hui que l'Hôtel des Monnaies ait donné des lingots d'or ou d'argent contre des pièces d'or ou d'argent.

Le Directeur Général.
(Signed) Mihran Duz.
Constantinople, ce 7 Mai 1868.

Bavaria.

BAVARIA.

(Translation.)

1. The gold pieces coined in Bavaria are called "crowns." Whole and half crowns are coined.

2. The crown weighs $11\frac{111}{1000}$ grammes. One hundred crowns contain precisely one kilogramme of fine gold.

3. Their fineness is $\frac{900}{1000}$.

4. The diameter of the crown is 24 millimètres; that of the half-crowns 20 millimètres.

5. The "tolerance" (excess or deficiency) is—
(*a.*) As regards weight, $2\frac{1}{2}$ thousandth parts on each piece;
(*b.*) As regards fineness, two thousandth parts.

6. The limit as regards deficiency in weight, beyond which the pieces cease to be legally current, is fixed at five thousandth parts.

7. On all bullion coined (for a third party) a charge not exceeding one half per cent. must be paid. The amount of this charge can be paid in money; or, at the request of the person bringing the gold, it may be deducted from the gold itself.

8. There is no fixed regulation with respect to the time within which the coined pieces must be delivered after receipt of the bullion.

It is left to the Director of the Mint to come to an understanding thereupon with the person bringing the bullion.

9. The coinage is executed by and for account of the State.

10. It is open to all persons to bring either gold or silver to the Mint, the equivalent of which is to be delivered to them in coined money, bearing the Royal impression.

11. Neither the Mint nor the Government is bound to give bullion in exchange for coin.

Organisation of the Mint.

12. The Mint is placed under the immediate control of the Ministry of Finance; its authorities report to that department, and receive their instructions from it.

Appendix, No. 12.

Gold Coinages and Mint Regulations.

Bavaria.

The persons employed at the Mint, all of whom have covenanted rights (with reference to retirement, pension, &c.), are the following:—

1. One director in chief, having the title of "head master of the Mint," who is at the same time "first warden."
2. One "master of the Mint."
3. One "second warden," who is likewise charged with the duty of testing the gold and silver.
4. One chief bookkeeper and administrator.
5. One cashier.
6. One comptroller.
7. One medallist.
8. One clerk.

The workmen consist, firstly, of such as are permanently engaged, and have a right to a pension; of these there are 20, besides one machinist.

There are, secondly, supplementary workmen, who are engaged as occasion requires, and who may be at any time discharged.

Greece.

GREECE.

My Lord, Athens, May 23, 1868.

In accordance with the instruction contained in your Lordship's dispatch marked "Circular, commercial," of the 13th ultimo, I have the honour to enclose herewith a paper replying, to the best of my ability, to the questions submitted to your Lordship by the International Coinage Commission now sitting in England, in so far as the gold coinage and Mint regulations of Greece are concerned.

I have not thought it necessary to enter into any details with respect to the gold coinage legally in circulation at this moment, because Greek gold coins are practically known only as numismatic curiosities, and fetch large prices on account of their rarity; and because, moreover, the existing system will be abolished on the 1st of January 1869, when the French monetary system will come into force, the only difference being that the word "drachma" will be substituted for "franc," and the word "lepton" for "centime."

I, however, enclose a copy of the law abolishing the existing coinage, and enacting the adoption of the French system, and also a statement of the denomination, weight, fineness, and dimensions of the coins struck in Greece or abroad, under the system now in force.

I have, &c.
The Lord Stanley, E. M. Erskine.
&c. &c.

1. Denominations: pieces of 100, 50, 20, 10, and 5 drachmas.

2. Weight: 32·25806, 16·12903, 6·45161, 3·22580, and 1·61290 grammes respectively.

3. Fineness: 900 thousandths.

4. Dimensions: 35, 28, 21, 19, and 17 millimetres respectively.

5. Tolerance, as far as weight is concerned, one milligramme for the 100 and the 50 drachma pieces; two milligrammes for the 20 and 10 drachma pieces, and 5 milligrammes for the pieces of 5 drachma.

As far as fineness is concerned, two thousandths are allowed as "tolérance" for each of the five denominations of gold coin.

6, 7, 8, 9, 10, 11, 12. The Minister of Finance is unable to answer any of these questions, because no Royal ordinance has yet been published on the subject; but, practically, it is obvious that as Greece has adopted or is about to adopt the French monetary system, the principles recognised by the States which have joined the French monetary league will be applied in this kingdom also.

There is, nominally, a Mint in Greece, but, for the present, at all events, all the Greek coins which may be put into circulation will be manufactured at the Imperial Mint in France.

For this reason also there are of course no regulations for the administration of the Greek Mint, which is solely occupied at present with the manufacture of bank notes.

Athens, May 23rd, 1868.

Loi sur le Systéme Monétaire.

Titre I.

De l'unité monétaire.

Article 1. L'unité monétaire en vigueur, composée, suivant l'ordonnance royale en date du 8 Fevrier 1833, de

4 grammes $\frac{477}{1000}^{es}$ d'argent, au titre de $\frac{9}{10}$ de fin et de $\frac{1}{10}$ d'alliage, est remplacée par une nouvelle unité plus pesante, composée de 5 grammes entiers d'argent, au titre de $\frac{9}{10}$ de fin et $\frac{1}{10}$ d'alliage de cuivre, sous la même dénomination de *drachme ;* elle sera divisée en cent parties égales ou *lepta*.

L'unité monétaire ainsi composée n'est représentée que dans la pièce de monnaie d'une valeur quintuple, c'est-à-dire, dans la pièce de cinq drachmes.

Article 2. Une unité monétaire semblable est représentée aussi par de l'or ; la valeur relative de ce métal, comparée à celle de l'argent, étant de 15 et ½ pour un.

Titre II.

De la monnaie principale.

Article 3. Sur les bases posées par les articles précédents on frappera les pièces de monnaie suivantes :

Une pièce d'argent de cinq drachmes, et des pièces d'or de cent, de cinquante, de vingt, de dix et de cinq drachmes.

Le poids, le titre, la tolérance pour l'exactitude du poids et du titre, ainsi que le diamètre de ces pièces, sont déterminés comme il suit.

Espèce de monnaies.	Poids.		Titre.		Diamètre.
	Poids légal.	Tolérance en plus ou en moins.	Titre légal.	Tolérance en plus ou en moins.	
	grammes	mil			millimètres.
Pièce d'argent de 5 dr.	25	3	900 millièmes.	2 millièmes.	37
Pièce d'or „ 100 „	32·25806	1			35
„ „ 50 „	16·12903				28
„ „ 20 „	6·45161	2			21
„ „ 10 „	3·22580				19
„ „ 5 „	1·61290	3			17

Article 4. Toutes les monnaies ci-dessus sont reçues par la caisse publique et par les particuliers suivant la valeur qui y est marquée, pour acquit de toutes les obligations contractées à partir de l'application de la présente loi.

Article 5. La fabrication de ces monnaies peut avoir lieu pour de compte des particuliers, moyennant paiement des frais de fabrication qui seront réglés par ordonnance royale.

Titre III.

Des monnaies de billon ou d'appoint.

Article 6. Il sera frappé deux espèces de monnaie de billon, les unes d'argent, les autres de bronze ou de cuivre. Les pièces d'argent seront de *deux* drachmes, d'*une* drachme, de *cinquante* lepta, et de *vingt* lepta. Les pièces de cuivre ou de bronze seront de *dix* lepta, de *cinq* lepta, de *deux* lepta, et d'*un* lepto.

Article 7. Le poids, le titre, la tolérance de poids et de titre, ainsi que le diamètre de chacune de ces pièces, sont déterminés comme il suit :

Espèce de monnaie.	Poids.		Titre.		Diamètre.
	Poids légal.	Tolérance en plus ou en moins.	Titre légal.	Tolérance en plus ou en moins.	
	grammes	millièmes	millièmes.		millimètres.
Pièce de 2 drachmes	10·00	5	835	3	27
„ 1 „	5·00				23
„ 50 lepta -	2·50	7			18
„ 20 „ -	1·00	10			16

Article 8. Le poids, le titre, et la tolérance de poids, ainsi que le diamètre des pièces de cuivre ou de bronze rapportées à l'article 6, sont determinés comme il suit :

Espèce de monnaie.	Poids.		Titre.		Diamètre.
	Poids légal.	Tolérance en plus ou en moins.	Titre légal.	Tolérance en plus ou en moins.	
	grammes				millimètres.
Pièce de 10 lepta -	10	18 grms. sur un kilogr.	—	—	30
„ 5 „ -	5		—	—	25
„ 2 „ -	2		—	—	20
„ 1 lepto -	1		—	—	15

Article 9. La valeur des monnaies de billon ci-dessus qui seront frappées ne pourra jamais dépasser en tout, pour les pièces d'argent la proportion de 6 drachmes, et pour les pièces de cuivre la proportion de 2 drachmes, par âme de population du royaume.

Article 10. La fabrication des monnaies d'appoint a lieu exclusivement pour le compe du trésor public, et le profit qui en resulte est calculé comme recette de l'Etat.

Article 11. Ces monnaies de billon ou d'appoint sont reçues suivant la valeur qui y est marquée. Toutefois les particuliers ne sont pas tenus de recevoir à chaque paiement plus de 50 drachmes en pièces d'argent, et plus de 5 drachmes en pièces de cuivre ou de bronze, quelle que soit la somme qui leur est payée ; mais la caisse publique les recoit pour quelque somme que ce soit.

Titre IV.

Du type des monnaies.

Article 12. Sur chacune des monnaies ci-dessus, monnaies principales ou de billon, seront gravés : l'effigie du Roi avec les mots Georges 1er Roi des Hellènes, la valeur de la pièce et le millésime, outre les autres détails qui seront réglés par ordonnance royale.

Titre V.

De la fabrication des monnaies.

Article 13. A défaut d'hôtel des monnaies national il est permis de faire fabriquer des monnaies dans un des hôtels des monnaies de France, après une entente préalable sur les frais de fabrication et le mode de contrôle du poids, du titre, &c., suivant les dispositions de la présenté loi.

Titre VI.

Des monnaies des états étrangers.

Article 14. Les monnaies des états étrangers sont reçues par la caisse publique et par les particuliers suivant l'évaluation qui en sera faite comparativement à la nouvelle unité monétaire.

Article 15. L'évaluation de ces monnaies a lieu par ordonnance royale sur la base suivante :

Les monnaies des états qui ont une unité monétaire égale à la nôtre, pour le poids et le titre, conservent la même valeur, sans aucune deduction à titre de frais de fabrication. Celles des autres états ont une valeur proportionnelle à la quantité de métal precieux qu'elles renferment, suivant les bases de notre unité monétaire, après réduction d'au moins 1 °/₀ sur les pièces d'argent, d'un quart p. °/₀ sur les pièces d'or, à titre de frais de fabrication et de diminution de poids ou altération provenant de la circulation.

Article 16. La circulation des monnaies de billons de cuivre ou de bronze des états étrangers est interdite.

Est également interdite la circulation des monnaies de billon d'argent des états qui n'ont pas la même unité monétaire que nous, ni les mêmes dispositions dans la fabrication de ces monnaies.

Les monnaies de billon des états qui ont la même unité monétaire que nous, et qui ont adopté pour la fabrication de ces monnaies les bases consacrées par la présente loi, sont reçues dans les caisses de l'état jusqu'à la somme de 100 drachmes à chaque paiement.

Titre VII

Dispositions transitoires.

Article 17. L'évaluation des monnaies grecques existantes a lieu comparativement à la nouvelle unité monétaire, sans aucune réduction à titre de frais ou de diminution de poids, pendant un an à partir de l'application de la nouvelle loi. Après ce delai elle sont elle-mêmes soumises à une réduction suivant l'article 15 de la présente loi.

La caisse publique, en recevant ces monnaies, les transforme en nouvelles, suivant des dispositions de la présente loi.

Article 18. L'évaluation de la livre anglaise qui servait d'unité monétaire dans les Iles Ionnienes a lieu également suivant son rapport à la nouvelle unité monétaire, sans réduction à titre de frais ou de diminution de poids, pendant un an à partir de l'application de la presente loi.

Après ce delai elle sera soumise elle aussi à la reduction suivant l'article 15.

Article 19. Les monnaies de cuivre existantes seront retirées graduellement de la circulation à mésure qu'elle seront remplacées par de nouvelles. Elle seront reçues comme aujourd'hui suivant la valeur qui y est marquée.

Article 20. Dès que la présente loi sera applicable, toutes les dettes existantes de l'état et des particuliers seront converties en d'autres sommes sur la base de la

nouvelle drachme, dont 89 parties ou lepta correspondent à une drachme ancienne, de sorte que 100 des anciennes drachmes équivalent à 89 drachmes nouvelles.

Mais la conversion des sommes déterminées par les lois en vigeur, pour pensions, traitments, indemnities, impôts, amendes, etc., aura lieu suivant le rapport de 100 drachmes anciennes à quatre-vingt dix nouvelles, c'est-à-dire, avec déchet de 10 %. Les fractions du lepto sont negligées, quand elles ne depassent la moitié du lepto. Elles sont calculées pour un lepto entier lorsqu'elles en dépassent la moitié.

Les droits de timbre et de timbre-poste ne seront soumis à aucune conversion. L'ancienne drachme sera pour ces droits assimilée à la nouvelle.

Article 21. La conversion des dettes et d'autres comptes que pourraient exister dans les Isles Ioniennes sur la base de la livre anglaise comme unité monétaire aura lieu ; la livre anglaise étant évaluée à drachmes nouvelles 25 et 20 lepta ; le vingtième de cette livre, c'est-à-dire, le shelling, à 1 drachme 26 ; et le deux-cent-quarantième de cette livre, c'est-à-dire, le denier, à 10 lepta et ½.

Article 22. La présente loi commence à être appliquée à partir du 1er Janvier 1869.

Article 23. La fabrication de monnaies nationales, suivant les prescriptions de la présente loi, est autorisée dès la publication de cette loi. Mais ces monnaies auront jusqu'à l'époque fixée par l'article précédent pour l'application du nouveau systéme la valeur ci-dessous.

Les pièces d'or de		100 dr.	vaudront	112 dr.
„	„	50 „	„	56 „
„	„	20 „	„	22 40 dr.
„	„	10 „	„	11 20 „
„	„	5 „	„	5 60 „
„	d'argent de	5 „	„	5 60 „
„	„	2 „	„	2 24 „
„	„	1 „	„	1 12 „
„	„	50 lepta	„	56 „
„	„	20 „	„	22 „

Sont reçues à la même valeur les monnaies des états qui ont la même unité monétaire que nous. Mais pour les pièces ayant la valeur de 2 drachmes et au dessous il est fait application des dispositions de l'article 11 et du paragraphe 3 de l'article 16 de la présente loi.

Les nouvelles monnaies de cuivre ou de bronze auront la même valeur que les monnaies de même métal actuellement en circulation.

Article 24. Toute disposition contraire à la présente loi est abrogée,

Athènes, 10/22 Avril 1867.

TABLEAU des monnaies, qu'on a frappé en Grèce, à Munich et à Paris conformement aux arrêtés Royaux de 1833, 1835, 1843, 1850.

—	Denomination des pièces.	Valeur en drachme.	Titre en millième.	Poids exacte ou droit par pièce en grammes.	Diamètre in millimètre.
Or	Tessaracoudadrachme	40	0·900	11·553	—
	Icossadrachme	20		5·776	—
Argent	Pentadrachme	5	0·900	22·385	36
	Drachme	1		4·477	21
	Hémidrachme	½		2·238	17
	Tetartodrachme	¼		1·119	15
Cuivre	Décalepton	0·10	cuivre pur ou metal de canon.	12·990	—
	Pentalepton	0·05		6·495	23
	Dilepton	0·02		2·598	17
	Monolepton	0·01		1·299	15

L'unité du système monnaitaire est la drachme.

Russia.

RUSSIA.

MY LORD, St. Petersburgh, May 27, 1868.

With reference to your Lordship's Commercial Despatch marked Circular, of the 13th ultimo, instructing me to furnish your Lordship with such information as I could obtain, on certain points specified in an enclosure in your Lordship's Despatch regarding the gold coinage and Mint regulations of Russia, I have the honour to report that I communicated the enclosure in your Despatch to General Greig, the Assistant Minister of Finance, with a request for his good offices to assist me in meeting your Lordship's wishes. His Excellency has therefore addressed a letter to me, which I forward herewith, enclosing a memorandum, which will, I trust, furnish to a certain extent the information requested by the International Coinage Commission, though General Greig states that he cannot communicate to me a copy of the Russian Mint regulations, as they are now under revision, having been found inefficient.

I have, &c.,

The Lord Stanley, M.P. ANDREW BUCHANAN.
&c. &c.

---

1. On fabrique en Russie deux espèces de monnaie d'or : (*a*) les demi-impériales, et (*b*) les ducats de Hollande.*

2. Chaque demi-impériale doit peser 1 zolotnik $51\frac{75}{275}$ dolis,† dont 1 zolotnik 39 dolis d'or fin, et chaque ducat $78\frac{528}{1000}$ dolis, dont 76 $\frac{892}{1000}$ d'or fin.

3. Le titre de l'or qu'on emploie pour la fabrication des demi-impériales est de 88 zolotniks d'or fin sur 96 zolotniks d'or allié ($\frac{1}{12}$ ou 916.6), et pour les ducats de 94 zolotniks d'or fin sur 96 zolotniks d'or allié (979.1 système décimal français).

4. La demi-impériale a 9 lignes en diamètre.‡ Les estampilles pour la fabrication des ducats sont de la même dimension ; mais comme à raison de la grande finesse des disques d'or dont on se sert pour leur fabrication, les ducats sont frappés sans anneau leur diamètre peut varier selon la plus ou moins grande force du coup, la malléabilite du métal, et autres circonstances.

5. Dans la fabrication des monnaies d'or aucune tolérance n'est admise pour le titre ; quant au poids, la tolérance est fixée ; pour les ducats, à $\frac{3}{4}$ de doli par pièce en plus on en moins, à condition toutefois que 1000 pièces ne pèsent ni moins de 8 livres 49 zolotniks,§. ni plus de 8 livres 50 zolotniks, et pour les demi-impériales à $\frac{3}{4}$ de doli par pièce, soit à 1 zolotnik pour 1000 pieces.

6. Le minimum du poids, auquel la demi-impériale peut être acceptée en paiement dans les caisses du Trésor, est de 1 zolotnik 50 dolis. Il n'existe pas de règle spéciale à ce sujet pour les ducats. Par consequent on doit se servir à leur usage de le loi générale d'après laquelle les caisses du Trésor et des institutions de crédit de l'état acceptent, hormis les demi-impériales, toute monnaie dont on peut distinguer l'empreinte, et ne refusent que la monnaie rognée, trouée ou limée.

7. Aucune taxe n'est prélevée pour le monnayage de l'or que les particuliers apportent à l'hôtel des monnaies si le métal a le titre établi, on un titre plus élévé, et s'il est forgeable et a du cuivre pour alliage.

Si le titre de l'or est inférieur à celui de la monnaie, c'est à dire, de 88 à 64 zolotniks de fin sur 96 zolotniks, mais le métal est forgeable et l'alliage en est de cuivre, on prélève une taxe fixeé à - - - - - - 0·35 %.

Si l'or est argentifère contenant au moins 5 zolotniks d'or par livre au titre supérieur de 64 zolotniks de fin sur 96, on déduit par livre alliée - - - 40 cop.

Si c'est de l'argent aurifère au titre supérieur de 64, la déduction s'élève par livre alliée à - - - - 80 cop.

Si l'or est d' un titre inférieur à celui de 64 les déductions se font d'après le plus ou moins grand contenu de l'or fin.

Si l'or est cassant, et a pour alliage d'autres substances que le cuivre, on déduit pour frais de purification par livre alliée - - - - - - 40 cop.

Si l'or est expédié des mines appartenant tant aux particuliers qu à l'état, on déduit les frais de fabrication fixés pour les demi-impériales sur chaque livre d'or fin à - - - - - 2 roub. 94 $\frac{266}{297}$ c.

Pour les ducats, sur chaque livre d'or fin à
4 roub. 20 $\frac{680}{1269}$ c.

Pour l'affinage de l'argent aurifère on perçoit 2 zolotniks d'argent fin par livre allieé, soit - - - - 47 $\frac{39}{96}$ c.

Sur l'argent qui reste dans l'or (argentifère) on prélève 88 dolis d'argent fin par livre d'or fin contenu dans ce métal, soit - - - - - - 21 $\frac{59}{81}$ cop.

En sus il est prélevé pour frais d'affinage de l'argent aurifère provenant des mines de l'Altay $10\frac{2}{7}$ c. par livre alliée
„ „ Nertchinsk $11\frac{6}{14}$ c. „
„ d'autres mines $22\frac{6}{7}$ c. „

Pour la purification de l'or cassant et de bas titre on prélève 2 roub. $86\frac{2}{3}$ cap. en or fin sur chaque livre alliée et de l'or argentifère 2r. $86\frac{2}{3}$ c. et 2 zolotniks 88 dolis d'argent fin par livre d'or fin contenu dans ce métal.

8. Les personnes qui apportent le métal à la Monnaie en reçoivent la valeur en monnaie après deux jours, mais si le métal apporté est de l'argent aurifère la monnaie n'est délivrée qu'après trois jours.

---

* La valeur légale de la demi-impériale est de 5 roubles 15 cop. en argent, et du ducat de 2 roubles 93½ cop.
† 1 zolotnik = 96 dolis = 4·266 grammes.
‡ 1 ligne = 2.540 millimètres.
§ 1 livre = 96 zolotniks = 0·410 kilogrammes.

On reçoit la monnaie en échange des métaux provenant des mines des particuliers et de l'état six mois après le jour où a été délivrée la quittance constatant la réception du métal par la Direction locale des Mines.

9. La fabrication des monnaies se fait exclusivement par l'état.

10. Chacun peut apporter du métal pour être converti en monnaie.

11. Sur l'autorisation du département des mines l'hôtel des monnaies délivre au particuliers, ainsi qu'aux établissements de la couronne le métal en échange de la monnaie.

Sur l'or livré à des particuliers en échange de monnaie on perçoit 7 roubles en or par livre d'or au titre de 94 et au dessus.

Les établissements de l'état, à l'exception du Cabinet de Sa Majesté l'Empereur, ne paient que la moitié, soit 3 roubles 50 cop. par livre.

Switzerland.

SWITZERLAND.

Berne, le 27 Mai 1868.

Par sa note du 20 courant, Monsieur le Ministre de Sa Majesté Britannique près la Confédération a transmis au Conseil fédéral, de la part de son Gouvernement, une série de questions relatives à la législation monétaire suisse, en le priant d'y répondre.

Le Conseil fédéral a, en conséquence, l'honneur de faire à son Excellence la communication suivante :

En ce qui concerne d'abord les monnaies d'or, la Suisse n'en a pas fait frapper jusqu'à présent. Par la loi fédérale du 31 Janvier 1860, les monnaies d'or Françaises qui sont frappées dans la proportion d'une livre d'or pour quinze livres et demi d'argent ont été declarées moyen légal de paiement, aussi longtemps qu'elles ont en France cours légal. Ont aussi le même cours les monnaies d'or d'autres états qui sont frappées en concordance parfaite avec les espèces françaises correspondantes. Par la convention monétaire avec la France, la Belgique, et l'Italie du 23 Décembre 1865, la Suisse s'est engagée, dans le cas où elle ferait jamais frapper des monnaies d'or, à remplir les dispositions contenues à l'Art. 2. de la convention susmentionnée.

Ce qui précède répond aux questions Nos. 1–6.

Quant à la question sous No. 9, toutes les frappes de monnaie ont lieu à l'hôtel des monnaies appartenant à la Confédération, qui possède tous les arrangements nécessaires pour fabriquer les 3 espèces de monnaie suisses (argent, nikel et cuivre) suivant les besoins. On pourrait aussi procéder facilement dans cet établissement à des frappes de monnaies d'or.

Par la réponse à la question No. 9, il est aussi répondu aux questions Nos. 7 et 8 ; il faut seulement ajouter que pour les frappes de monnaie d'argent, la convention monétaire précitée du 23 Décembre 1865 fait seule règle.

Comme réponse aux questions Nos. 10, 11, et 12, le Conseil fédéral a l'honneur de transmettre ci-joint à Monsieur John Savile Lumley l'ordonnance du 17 Mars 1860 sur l'organisation de l'Hôtel fédéral des Monnaies, tout en faisant observer qu'il n'existe aucune espèce d'obligation pour la Confédération d'échanger des barres contre du métal monnayé, mais en cas d'offres l'administration ne chercherait pas à se soustraire à des opérations de cette espèce. L'Hôtel des Monnaies n'est pas en relation directe avec le public.

Le Conseil fédéral joint encore à l'ordonnance du 17 Mars 1860, la convention monétaire du 23 Décembre 1865,* et les lois fédérales sur les monnaies des 7 Mai 1850 et 31 Janvier 1860, et il saisit cette occasion pour renouveler à son Excellence les assurances de sa haute considération.

Au nom du Conseil fédéral,
Le Président de la Confédération,
DUBS.
Le Chancelier de la Confédération,
SCHIESS.

Son Excellence John Savile Lumley,
Esq., Envoyé extraordinaire et
Ministre Plénipotentiaire de S. Ma-
jesté Britannique près la Confédé-
ration Suisse.

ORDONNANCE SUR L'ORGANISATION DE L'HÔTEL FÉDÉRAL DES MONNAIES. (Du 17 Mars 1860.)

Le Conseil Fédéral Suisse, en exécution de l'arrêté fédéral du 28 Janvier 1854,* vu la proposition du Département fédéral des Finances, arrête :

I. DISPOSITIONS GÉNÉRALES.

Article 1. L'Hôtel des Monnaies exploite pour le compte de la Confédération, et sous la direction supérieure du département des Finances :

1. La fabrication des monnaies ;
2. La fabrication des timbres-poste pour l'administration des postes.

L'hôtel des monnaies peut, avec le consentement de l'autorité compétente supérieure, être chargé d'autres ouvrages.

Art. 2. Les monnaies seront fabriquées dans la mesure des sommes fixées au budget, et versées à la valeur nominale dans la caisse d'état fédérale.

Art. 3. Le capital d'exploitation sera avancé a l'administration des monnaies par la caisse d'Etat fédéral moyennant un intérêt de 4 % l'an.

II. FONCTIONNAIRES.

Art. 4. Les fonctionnaires de l'Hôtel des monnaies sont :

1. Un directeur ;
2. Un vérificateur et teneur des livres.

Leur traitement est fixé par la loi fédérale du 30 Juillet 1858.†

Art. 5. Le Conseil fédéral designera deux commissaires pour le contrôle du titre et du poids des monnaies ; ils doivent être confirmés chaque année.

En cas d'absence ils se remplacent mutuellement.

Leurs fonctions seront déterminées par le règlement du 28 Décembre 1854.

a. *Directeur des Monnaies.*

Art. 6. Le Directeur des Monnaies est chargé :

1. De la direction générale et spéciale de la fabrication et de l'administration ;
2. De la tenue des contrôles de fabrication ;
3. De la garde des matériaux et des coins originaux ;
4. De l'essai du titre des monnaies nouvellement frappées ;
5. Du contrôle des comptes à payer ou à encaisser ; il y appose son visa ;
6. De la surveillance des bâtiments ainsi que des machines et utensiles de la monnaie ;
7. De l'élaboration de rapports sur toutes les questions qui concernent les monnaies ;
8. De surveiller les monnaies en circulation, et d'examiner les pièces fausses qui lui sont transmises, et sur lesquelles il tiendra un contrôle spécial.

A la fin de chaque mois le Directeur des Monnaies est en outre tenu de remettre au Département des Finances un rapport détaillé sur chaque branche de son administration ; il joindra à ce rapport un état des recettes et des dépenses qui lui sera remis par le teneur des livres.

Art. 7. Le Directeur a la compétence d'acquitter les frais d'achat, de fabrication, de main d'œuvre, et de réparations, portés au budget, et dont le montant n'excède pas cinquante francs ; quant aux autres dépenses, ainsi que pour les divers achats de matériaux et de machines servant à la fabrication des monnaies et des timbres-poste, il devra préalablement rechercher l'approbation de l'autorité compétente supérieure.

Il a la faculté d'engager et de congédier les ouvriers.

Art. 8. Le Directeur doit fournir un cautionnement de fr. 30,000, et il est responsable pour les employés aussi bien que pour les ouvriers.

b. *Vérificateur et Teneur de Livres.*

Art. 9. Le vérificateur et teneur de livres est chargé de réviser et de compter les monnaies fabriquées, et de remettre à la caisse d'Etat fédérale celles qui lui auront été designées par les commissaires des monnaies.

Art. 10. Il gère, d'après les règles de la comptabilité en partie double, la caisse et la comptabilité de l'Hôtel des Monnaies.

Il contrôle les crédits.

Lorsqu'un crédit est près d'être épuisé, le vérificateur en avisera immédiatement le Directeur, afin que celui-ci puisse présenter à l'autorité supérieure une demande de crédit supplémentaire.

A la fin de chaque mois le vérificateur et teneur de livres remettra au Directeur un état des recettes et des dépenses de l'administration. Cet état doit concorder parfaitement avec les livres. (Art. 6.)

---

* For the text of the Convention, see page 158.

* Rec. off., vol. IV., p. 19. † Rec. off., vol. VI., p. 64.

Art. 11. En cas d'absence ou de maladie du Directeur, le vérificateur le remplacera.

Si le vérificateur est lui-même empêché pendant un certain temps de remplir ses fonctions, le Département des Finances pourvoira à son remplacement provisoire.

Art. 12. Le vérificateur et teneur de livres fournit un cautionnement de dix mille francs.

III. Employés.

Art. 13. Sont adjoints au Directeur en qualité d'aides,—

Un mécanicien, pour la partie technique ;

Un surveillant, pour la partie administrative.

Ils sont l'un et l'autre sous sa direction, et ont à lui fournir un cautionnement.

Art. 14. Les aides sont nommés par le Conseil Fédéral, qui fixe aussi leur traitement.

IV. Portier.

Art. 15. L'emploi du portier consiste :

A ouvrir et fermer la porte d'entrée de l'Hôtel des Monnaies ;

A ouvrir et fermer les autres locaux de l'Hôtel en tant que les fonctionnaires ou employés n'en sont pas chargés ;

A nettoyer les appartements de la Monnaie, à l'exception du logement du Directeur.

Le portier peut aussi être chargé du service de concierge et de commissionaire.

Art. 16. Le portier est nommé par le Département des Finances, qui fixe aussi son salaire.

V. Ouvriers.

Art. 17. Il sera engagé un nombre suffisant d'ouvriers pour l'exploitation de l'établissement.

L'engagement ainsi que le renvoi des ouvriers fait partie des attributions du Directeur. (Art. 7.)

Art. 18. Chaque ouvrier est tenu de fournir au Directeur un cautionnement.

On n'engagera aucun ouvrier qui ne puisse justifier d'une conduite irréprochable.

Art. 12. Le salaire des ouvriers est fixé par le Département des Finances.

VI. Timbres-Poste et Ouvrages Accessoires.

Art. 20. La fabrication des timbres-poste a lieu sur commande du Département des Postes.

Le Conseil fédéral fixera le prix par mille des timbres-poste fabriqués.

Les prescriptions touchant le contrôle des timbres-poste sont contenues dans le règlement du 28 Décembre 1854.

Art. 21. Le Département des Finances vérifiera au moins une fois par année la provision de papier à timbres-poste, et s'assurera si elle répond à l'indication des contrôles.

Art. 22. Toutes les opérations de la monnaie, non mentionnées dans le présent règlement, sont désignées sous le nom d'ouvrages accessoires.

Art. 23. La Monnaie ne peut se charger de l'exécution d'ouvrages accessoires sans l'autorisation du Département des Finances.

Dès qu'il est parvenu à l'Administration des Monnaies une commande pour un ouvrage accessoire quelconque, le Directeur la présente, en y ajoutant le prix d'exécution, au Département des Finances, qui décidera si l'ouvrage doit être exécuté, et à quelles conditions.

VII. Dispositions Finales.

Art. 24. Lorsque l'Administration des Monnaies est chargée d'ouvrages autres que ceux prévus à l'Article 2, ses fonctionnaires seront tenus de se répartir entr'eux, dans la mesure de leurs occupations ordinaires, les travaux qu'exigera l'exécution de ces ouvrages. S'ils ne peuvent s'entendre à cet égard, le Département des Finances décidera.

Art. 25. Le présent règlement entrera en vigeur dès le jour de sa publication, et les ordannances du 26 Décembre 1854,* 19 Janvier 1857, et 13 Août 1858† sont abrogées.

Berne, le 17 Mars 1860.

Le Président de la Confédération,
F. Frey-Herosée.
Le Chancelier de la Confédération,
Schiess.

Loi sur les Monnaies Fédérales. (7 Mai 1850.)

L'Assemblée fédérale de la Confédération Suisse, en exécution de l'Art. 36 de la Constitution fédérale, après avoir pris connaissance du projet présenté par le Conseil fédéral,

Arrête :

Article 1. Cinq grammes d'argent, au titre de neuf dixièmes ($\frac{9}{10}$) de fin, constituent l'unité monétaire suisse sous le nom de *franc*.

Art. 2. Le franc se divise en cent (100) *centimes* (rappes).

Art. 3. Les espèces suisses de monnaie sont :

(*a.*) En argent :
La pièce de cinq francs,
La pièce de deux francs,
La pièce de un franc,
La pièce de un demi-franc (50 centimes).

(*b.*) En billon :
La pièce de vingt centimes (rappes),
La pièce de dix centimes (rappes),
La pièce de cinq centimes (rappes).

(*c.*) En cuivre :
La pièce de deux centimes (rappes),
La pièce de un centime (rappe).

Art. 4. Les espèces d'argent sont toutes au titre de l'unité monétaire ; elles contiennent autant de fois le poids de cette unité que leur valeur nominale l'indique.

La pièce de vingt centimes est frappée au poids de $3\frac{1}{4}$ grammes, et contient $\frac{150}{1000}$ d'argent fin ; la pièce de dix centimes au poids de $2\frac{1}{2}$ grammes, et contient $\frac{100}{1000}$ d'argent fin ; la pièce de cinq centimes au poids de $1\frac{2}{3}$ grammes, et contient $\frac{50}{1000}$ d'argent fin. L'alliage des monnaies de billon se compose de cuivre, de zinc et de nikel.

Les espèces de cuivre consistent en cuivre avec un alliage d'étain.

La pièce de deux centimes doit peser $2\frac{1}{2}$ grammes.

La pièce de un centime doit peser $1\frac{1}{3}$ gramme.

Art. 5. La tolérance du titre des monnaies suisses est fixée comme suit :

Pour toutes les monnaies d'argent la tolérance est de deux millièmes ($\frac{2}{1000}$) en dedans, et autant en dehors ; c'est-à-dire, soit en moins, soit en plus. Pour les monnaies de billon, elle sera de sept millièmes ($\frac{7}{1000}$) en dedans et en dehors.

Les déviations qui pourraient survenir en dedans devront toujours être compensées par des déviations équivalentes en dehors.

Art. 6. La tolérance du poids, soit en dedans, soit en dehors, c'est-á-dire en moins ou en plus, est fixée comme suit :

(a.) *Pour les monnaies d'argent :*
A trois millièmes ($\frac{3}{1000}$) pour la pièce de cinq francs,
A cinq millièmes ($\frac{5}{1000}$) pour la pièce de deux francs,
A cinq millièmes ($\frac{5}{1000}$) pour la pièce de un franc,
A sept millièmes ($\frac{7}{1000}$) pour la pièce de $\frac{1}{2}$ franc.

(b.) *Pour les monnaies de billon :*
A douze millièmes ($\frac{12}{1000}$) pour la pièce de vingt centimes,
A quinze millièmes ($\frac{15}{1000}$) pour la pièce de dix centimes,
A dix-huit millièmes ($\frac{18}{1000}$) pour la pièce de cinq centimes.

(c.) *Pour les monnaies de cuivre :*
A quinze millièmes ($\frac{15}{1000}$) pour les pièces de deux et un centimes.

Dans les espèces d'argent et de billon la déviation n'est permise que par pièce ; dans les espèces de cuivre, elle est permise pour chaque fois dix francs de valeur nominale ou 1000 grammes de poids. Toutes déviations en dedans devront être compensées par des déviations en dehors.

Art. 7. Le diamètre des espèces d'argent doit être le même que celui des espèces Françaises correspondantes.

Art. 8. Nul n'est tenu de recevoir en paiement des monnaies étrangères autres que celles qui sont frappées en exacte concordance avec le système monétaire établi par la présente loi, et que le Conseil fédéral aura reconnu, après examen, comme remplissant cette condition.

Quant aux contrats passés avant la mise en vigueur de cette loi, les Cantons sont tenus d'établir encore dans le courant de l'année 1850 une échelle de réduction, qui devra être approuvée par le Conseil fédéral, pour la réduction des valeurs mentionnées dans ces contrats, aussi bien que des espèces qui seraient stipulées expressément et qui auraient été fondues d'après la présente loi. Les Cantons feront faire aussi des tableaux de réduction conformes à cette échelle.

Les contrats passés après la mise en vigueur de cette loi, en espèces ou valeurs étrangères déterminées, seront

executés selon la teneur des conventions. Cependant les accords pour gages ou salaires doivent être conclus sur le pied monétaire légal, et les salaires ne peuvent être payés qu'en espèces légales.

Art. 9. Il est interdit aux caisses publiques de la Confédération d'accepter en paiement d'autres espèces que les monnaies légales. Seulement, dans des temps extraordinaires, où par suite des cours de change élevés il y aurait manque de monnaies légales, ces caisses devront être autorisées à accepter d'autres espèces. A cet effet, dès que et aussi longtemps que le cours de change correspondant au pied monétaire français est d'un demi ou de plus d'un demi pour cent au-dessus du pair, le Conseil fédéral établit pour les espèces frappées à un autre coin que les espèces légales, un tarif correspondant à leur valeur, d'après lequel elles doivent être acceptées par les caisses publiques de la Confédération.

Art. 10. Personne ne peut être tenu à recevoir en paiement une valeur de plus de vingt francs en pièces d'argent inférieures à celle de un franc, de plus de vingt francs en billon, et de plus de deux francs en monnaie de cuivre, quel que soit du reste le montant du paiement.

Art. 11. Le Conseil fédéral désigne dans chaque Canton les caisses chargées d'échanger au besoin les espèces suisses de billon ou de cuivre contre des espèces d'argent; mais cela seulement pour des valeurs de cinquante francs et au-dessus.

Art. 12. L'Assemblée fédérale détermine chaque fois la quotité et les espèces des monnaies à frapper.

Art. 13. Les pièces de monnaie Suisse usées seront retirées de la circulation, refondues et remplacées par des neuves; les frais de ces opérations seront portés chaque fois au budget des dépenses.

Le Conseil fédéral suisse arrête:

Article unique.

La présente loi fédérale sur la réforme du système monétaire Suisse sera communiquée à tous les gouvernements cantonaux pour la faire publier en la forme usitée, et sera insérée dans la feuille fédérale et au recueil officiel de la Confédération.

Berne, le 10 Mai 1850.

Au nom du Conseil fédéral suisse,
Le Président de la Confédération,
H. Druey.
Le Chancelier de la Confédération,
Schiess.

Loi Fédérale portant modification de la loi fédérale sur les monnaies. (Du 31 Janvier 1860.)

L'Assemblée fédérale de la Confédération suisse,

Vu les messages et les propositions du Conseil fédéral, datés du 30 Décembre 1859 et du 24 Janvier 1860, en modification de la loi fédérale sur le système monétaire du 7 Mai 1850,* arrête:

Art. 1. Les pièces d'or françaises qui sont frappées dans la proportion de 1 lb. d'or fin pour 15½ lb. d'argent fin, seront admises à leur valeur nominale comme monnaie légale, aussi longtemps qu'elles ont en France un cours légal à leur valeur nominale.

Cette décision s'applique également aux pièces d'or d'autres Etats qui sont frappées en parfaite concordance avec les espèces françaises correspondantes.

Le Conseil fédéral décidera après examen quelles sont les especès d'or étrangères qui remplissent les conditions voulues, et qui peuvent être admises comme monnaie légale.

Art. 2. Les pièces divisionnaires en argent de 2 francs, 1 franc et un demi-franc seront frappées désormais comme monnaies de crédit; elles auront comme les pièces actuelles autant de fois le poids de 5 grammes que leur valeur nominale l'exprime; en revanche, elles n'auront plus que $\frac{8}{10}$ de fin.

Art. 3. La tolérance du titre et du poids des nouvelles espèces suisses de deux francs, un franc et un demi-franc est celle fixée pour les monnaies en argent, aux articles 5 et 6 de la loi du 7 Mai 1850 sur les monnaies fédérales.

Le diamètre de ces espèces est le même que celui des espèces suisses correspondantes.

Art. 4. Personne n'est tenu à recevoir en paiement plus de vingt francs en espèces divisionnaires d'argent.

Art. 5. Le Conseil fédéral décidera quelles monnaies divisionnaires étrangères sont admises dans la circulation et à quelles conditions.

Art. 6. Les espèces suisses de monnaie en argent de deux francs, un franc, et un demi-franc (50 centimes), frappées en conformité de la loi du 7 Mai 1850 sur les monnaies fédérales, seront retirées de la circulation dans les délais et les formes prescrits par le Conseil fédéral.

Art. 7. Les monnaies divisionnaires suisses d'argent frappées en exécution de la présente loi pourront être échangées dans les caisses désignées à cet effet contre de la monnaie légale principale, conformément à l'art. 11 de la loi du 7 Mai 1850 sur les monnaies fédérales.

Art. 8. L'excédant de recette pouvant résulter des nouvelles frappes de monnaie sera mis en réserve pour être employé, le cas échéant, à couvrir tout ou partie des frais provenant du retrait des pièces de monnaies suisses usées, conformément à l'art. 13 de la loi du 7 Mai 1850 sur les monnaies fédérales. Les intérêts de ce fonds de réserve seront joints aux capitaux.

Art. 9. Le budget déterminera la quantité des nouvelles monnaies à frapper comme pour les autres espèces de monnaies suisses.

Art. 10. Le Conseil fédéral est chargé de la publication et de l'exécution de la présente loi, qui entrera immédiatement en vigueur.

Ainsi arrêté par le Conseil des États suisse.

Berne, le 30 Janvier 1860.

Le Président, F. Briatte.
Le Secrétaire, J. Kern-Germann.

Ainsi arrêté par le Conseil national suisse.

Berne, le 31 Janvier 1860.

Le Président, Peyer Im Hof.
Le Secrétaire, Schiess.

Le Conseil fédéral décrète:

La loi fédérale ci-dessus sera mise à exécution.

Berne, le 6 Février 1860.

Le Président de la Confédération,
F. Frey-Herosée.
Le Chancelier de la Confédération,
Schiess.

Arrêté Fédéral concernant la frappe de monnaies divisionnaires d'argent. (Du 2 Février 1860.)

L'Assemblée fédérale de la Confédération suisse, vu le rapport et les propositions du Conseil fédéral, du 31 Janvier 1860, arrête:

1. Le Conseil fédéral est autorisé à faire frapper dans le courant de cette année:

1,000,000 de pièces de un franc;
2,000,000 de pièces de deux francs.

A cet effet il lui est alloué un crédit supplémentaire de fr. 4,324,850.

2. Le Conseil fédéral est chargé de faire confectionner pour les monnaies divisionnaires d'argent un nouveau coin portant à la face la croix fédérale.

Il lui est alloué dans ce but un crédit supplémentaire de fr. 5,000.

3. La frappe de monnaies de nikel prévue au budget pour 1860 n'aura pas lieu en tant qu'elle n'a pas déjà été effectuée.

Ainsi arrêté par le Conseil national suisse.

Berne, le 1 Février 1860.

Le Président, Peyer Im Hof.
Le Secrétaire, Schiess.

Ainsi arrêté par le Conseil des États suisse.

Berne, le 2 Février 1860.

Le Président, F. Briatte.
Le Secrétaire, J. Kern-Germann.

Le Conseil fédéral décrète:

L'arrêté fédéral ci-dessus sera mis à exécution.

Berne, le 6 Février 1860.

Le Président de la Confédération,
F. Frey-Herosée.
Le Chancelier de la Confédération,
Schiess.

---

* Recueil off., t. i., p. 305.

GUATEMALA.

To Questions 1 & 2.

The denominations and weights of the gold coins are as follows:—

The Ounce ($16) weighs	-	542·1176	grains	Spanish.
Half do. ($8)	do.	- 271·0588	do.	do.
Quarter do. ($4)	do.	- 135·5294	do.	do.
Coin of 2 dollars	do.	- 67·7647	do.	do.
Coin of 1 do.	do.	- 33·8823	do.	do.
Coin of ½ do.	do.	- 16·9411	do.	do.

To Question 3.

The fineness is ·875 = 21 carats.

To Question 4.

The diameters of the coins are as follows:—

The ounce	33	millimetres.
Half do.	27	do.
Quarter do.	21	do.
Coin of 2 dollars	17	do.
Coin of 1 dollar	14	do.
Coin of ½ do.	10	do.

To Question 5.

The "tolerance" in weight allowed in the manufacture of the coins is as follows:—

In the ounce	1½	grain,	Spanish.
Half do.	1	do.	do.
Quarter do.	¾	do.	do.
Coin of 2 dollars	¾	do.	do.
Coin of 1 dollar	½	do.	do.
Coin of ½ do.	¼	do.	do.

The "tolerance" in the fineness is one mil. (·001).

To Question 6.

The amount of "wear" (frai) allowed in circulation is 4 grains Spanish in the ounce of 16 dollars, and in fractional proportion downwards. Nevertheless, though the deficiency exceeds 4 grains, provided it be within the limit of 32 grains, the ounce is, by law, current with the payment of a "cuartillo" ($\frac{1}{32}$ part of a dollar=1½*d.*), for every grain short weight; the same rule applying to the smaller coins in proportion.

To Question 7.

The expenses of coining are covered by the price at which the mint buys the bullion, which varies according to the standard; the price paid for bullion of from ·833 fineness up to the finest quality being at the rate of $18.96 each ounce, at $\frac{1000}{1000}$ fineness (=24 carats), the ounce containing 576 grains Spanish, while the rate paid for bullion of a purity below ·833 is $18 the ounce, of same weight and fineness as above.

To Question 8.

There is no period fixed by law for payment for bullion; this depends upon circumstances. If the gold has not to be refined the payment is generally made within eight or ten days after the receipt of it, and in a fortnight if it has to be submitted to the refining process.

To Question 9.

The coining is executed by the State.

To Question 10.

The mint is open to the public for the purpose of coinage.

To Question 11.

The mint or the government is not bound to give bullion in exchange for coin.

N.B.—The Guatemalian *dollar* is equal to *four shillings* English.

URUGUAY.

My Lord, Monte Video, 27 June 1868.

In conformity with the instructions contained in Mr. Hammond's circular commercial of 13 April 1868 to Mr. Lettsom, requiring information respecting the gold coinage and mint regulations of this Republic, I have the honour to report as follows.

There exists no actual coinage of the Republic.

On the 13th June 1862 a legislative decree was passed establishing an intended coinage, and defining its details, but nothing in furtherance thereof has been since effected.

I have the honour to enclose two copies, with translation of the said decree.

Article 8 of the decree enclosed determines the respective values of the foreign coins in circulation.

The provisional government of the late General Flores, on the 31st October 1867, issued a decree for the coinage within the Republic or abroad, by contract, of one hundred thousand dollars of bronze money in accordance with Article 5 of the law of 13th June 1862, but of which it is unnecessary to enter into the particulars as it has not been, and is not likely to be, carried into operation.

I have the honour to be,
My Lord,
With the highest respect,
Your Lordship's
Most obedient
Humble servant,
J. St. John Munro.

The Right Honble.
Lord Stanley,
&c. &c. &c.

(Translation.)
Monte Video, 23 June 1862.
Decree.

Art. 1. From the 1st of January 1863 the silver dollar and the gold doubloon are declared to be the national coin of the Oriental Republic.

Art. 2. The silver dollar, weighing 25·480 grammes with 917 parts silver, shall be divided into 100 cents, and shall replace in account the nominal dollar of 800 cents.

Art. 3. The gold doubloon, weighing 16·970 grammes with 917 parts gold, shall represent the value of 10 silver dollars.

Art. 4. As soon as convenient there shall be coined such an amount of money as the general assembly may determine.

Art. 5. For smaller change there shall be coined, with the same quality, the necessary bronze money, its place being meanwhile supplied by the copper coinage of 40, 20, and 50 cents now in circulation, assigning to them the value of 4, 2, and ½ cents of the new coin.

Art. 6. The diameter and rim of the silver dollar shall be equal to those of the Spanish silver dollar; it shall have on its inverse the arms of the Republic surrounded by the words "Republica Oriental del Uruguay," and on its obverse between two branches of laurel and olive its denomination (value), beneath which the year of its coinage and, if that be effected in any particular part of the Republic, the name of the place.

Art. 7. The diameter of the gold doubloon shall be equal to that of the Chilian condor; it shall have the arms of the Republic and the same inscriptions as the dollar, and the rim shall be smooth, having inscribed on it "Libre y constituida."

Art. 8. Until the coining of national money be effected foreign gold and silver coins shall continue in circulation at their current value, such value being established by the present law according to the following scale:—

1. The Spanish silver dollar, the Mexican dollar, and the Brazilian patacon of 960 reis, equal to one national dollar.
2. The Brazilian 2-milree piece, weighing 25·495 grammes and containing ·917 of pure silver, equal to one dollar.
3. The French and Italian 5-franc pieces, weighing 25 grammes and containing ·900 of pure silver, equal to 90 cents or 9 rials.

The divisions and sub-divisions of the last-named coins shall have equal proportionate value with them.

The Spanish and American gold ounces, weighing 27·045 grammes and with ·875 of pure gold, equal to 15 dollars 36 cents.*

The Brazilian 20-milree gold piece, weighing 17·926 grammes and with ·917 of pure gold, equal to 10 dollars 56 cents.

The 20-franc gold napoleon, weighing 6·451 grammes and with ·900 pure gold, equal to 3 dollars 60 cents.

The Sardinian 20-franc gold piece, weighing 6·451 grammes and with ·900 of pure gold, equal to three dollars 60 cents.

The English gold sovereign, weighing 7·981 grammes with ·917 pure gold, equal to 4 dollars 70 cents.

The Spanish gold doubloon, of 100 sterling rials, weighing 8·336 grammes and with ·901 of pure gold, equal to 4 dollars 80 cents.

The Chilian gold condor, weighing 15·253 grammes and with ·900 of pure gold, equal to 9 dollars.*

The United States gold eagle, weighing 16·717 grammes and with ·900 of pure gold, equal to 9 dollars 60 cents.

The gold dollar of the same coinage, weighing 1·671 grammes and with ·900 of pure gold, equal to 96 cents.

The double pieces, multiples, and sub-divisions in like proportions.

Art. 9. Contracts and obligations entered into prior to the date established in the first Article of this law are not affected by it.

Art. 10. From the 1st of July 1863 the banks of issue, discount, and deposit shall be obliged to make their issue in notes or promissory notes conformable to this law, and with them to replace those actually in circulation.

Art. 11. The minimum value of the notes which the banks may issue shall be of one doubloon, without prejudice to the temporary licences provided in the statutes of their establishment regarding minor emissions.

Art. 12. The payment of amortization and interest of the funded debt, the internal debt, and of any other that may be consolidated, shall be reduced to the money denominations established by this law.

Art. 13. (Annuls all laws and dispositions which are at variance with the present law.)

* Notwithstanding the value given to the Chilian condor by t law its current value is only that of 8 dollars 80 cents.

SWEDEN.

COPY of a STATEMENT from the DIRECTOR in CHIEF of the MINT and the ASSAY ("KONTROLL") OFFICE to the ROYAL DEPARTMENT of FINANCE, dated Stockholm, the 19th of May 1868.

In reply to the despatch of the Chief of the Royal Department of Finance, dated the 14th instant, the undersigned begs leave to deliver in the following answers relative to the questions contained in the document communicated by a "Mint Commission" appointed in England, which document is herewith returned.

1. The Swedish gold currency consists of the following coins: single, double, and quadruple ducats; but the two latter denominations have not been minted for several years.

2. A single ducat weighs 82 "korn" Swedish = 3·48562 grammes French; double and quadruple ducats weigh respectively twice and four times the above weight.

3. The fusion from which the ducat is minted contains 80 parts pure gold and two parts copper; the proportion of gold being, consequently, equal to about 0·9756.

4. The diameter of the single ducat is = 6·4 "linier" Swedish, equal to about 19 "millimetres" French. The diameter of the double ducat is 7·2 "linier" = 21·38 millimetres. The diameter of the quadruple ducat is 8·5 "linier" = 25·24 millimetres.

5. The deviation ("remedium") allowed is three thousandths either above or below the before-mentioned standards of weight and fineness; but, in fact, the newly minted ducats are never defective to the extent of one thousandth part in weight, and scarcely one half thousandth part in fineness.

6. Silver having hitherto been the only standard of value in Sweden, and, as a consequence, the gold currency not being generally employed in circulation, and only regarded as an article of value with a fluctuating price, no legal enactments have been found requisite relative to the wear and tear of ducats.

7. On delivering in gold for mintage, $\frac{3}{10}$ per cent. of the weight of the gold is paid to the Mint as mintage duty; and this charge, or mintage duty, is deducted from the gold delivered in, after which the remainder is paid to the owner of the gold in ducats of full value. If the gold be immalleable, or the proportion less than 0·9756, an additional refining duty of 3 riksdaler per "skalpund" of the gross weight is paid, being about 10 francs for each "Kilogramme" of gold delivered in.

8. The owner of gold delivered in for mintage receives ducats of equivalent value, so soon as the gold has been weighed, assayed, and valued; and the officers of the Mint have completed the prescribed measures for effecting the control thereof, which generally extends over two, or, at the most, three days after the date of delivery, unless Sundays or feast days intervene. Their is no special enactment relative to this point.

9. The mintage is effected at the expense of the Royal Mint.

10. The public does not possess the right of free admission to the Mint. Any person desiring to inspect the works must request permission to do so of the "Director" in Chief, or of the "Master of the Mint."*

11. Neither the Mint nor the State is bound to deliver gold in ingots in exchange for ducats.

12. Printed copies of the Royal Statute of the 9th of May 1835 (the latest) relative to the mintage of gold, and also the Royal Regulations of the 30th of April 1836, now in force at the Mint, are annexed hereto.

GEORGE FREUDBERG A. P. GEORGE,
Stockholm, Translator.
17 June 1868.

COPY of a DESPATCH from the ROYAL DEPARTMENT of FINANCE to his Excellency the MINISTER OF STATE FOR FOREIGN AFFAIRS, dated Stockholm, the 30th of May 1868.

In consequence of the despatch from your Excellency, dated the 12th of this month, in which your Excellency was pleased to request to be furnished, through me, with certain information desired by the British Government relative to existing enactments in this country, bearing on mintage regulations and gold currency, I have desired the Director in Chief of the Mint and Assay ("Kontroll") Office to give the information required to the Department of Finance.

In pursuance hereof, I have received from Mr. Akerman, Director in Chief of the Royal Mint, &c., &c., the statement which I herewith enclose to your Excellency, together with the annexed copies of the Royal Statute of the 9th of May 1835, relative to the standard of metallic currency and of the Royal Mint Regulations of the 30th of April 1836. In forwarding this statement I would only beg leave to remark that it appears to me that the 10th of the questions to which the British Government has requested answers would have been answered more correctly than it has been in the statement of the Director in Chief by referring to the enactment in § 8* of the above-mentioned Mint Regulations. I also consider it my duty to remind your Excellency that the last assembled "Riksdag," adopting in the main a proposition made by His Majesty, repealed the prescriptions relative to the standard of metallic currency contained in the above-mentioned Royal Statute of the 9th of May 1835, and enacted as follows with reference thereto:—

"That the following coins be minted in gold: one of
" such value and weight in gold as, after comparison, by
" means of weighing, shall be found exactly to correspond
" to the ten-franc piece adopted, through the Mint Con-
" vention of the 23rd of December 1865, by France,
" Belgium, Italy, and Switzerland; and also another of
" such value and weight in gold as, by the application of
" the rules laid down by the same Convention, shall exactly
" correspond to the value and weight of twenty-five
" francs.

"That these gold coins shall contain nine parts pure
" gold and one part copper, or contain a proportion of
" nine hundred thousandth parts of gold, which fusion is
" denominated Mint gold.

"That the deviation ("remedium") in the fineness in each
" coin may extend to two thousandth parts either above or
" below the prescribed proportion of gold, and the deviation
" in weight for each coin likewise extend to two one
" thousandth parts above or below the prescribed weight;
" and—

"That a mintage duty be deducted from gold delivered
" in for mintage to such amount as shall be determined by
" His Majesty, yet not exceeding $\frac{3}{10}$ per cent.; in addition
" to which a refining duty shall be charged pursuant to
" prescriptions in force on gold that is immalleable."

It is true that these enactments have not as yet been enforced by Royal proclamation, but there is every reason to presume that they will be so enforced as soon as dies for the new gold currency shall have been adopted, designs for which have already been demanded of the Director in Chief of the Mint and Assay Department. It is probable that, at first, only ten-franc pieces will be minted, and the mintage of the twenty-five-franc pieces postponed until France shall have determined upon the emission of a similar coin.

1835. No. 27.

SWEDISH COLLECTION OF LAWS.

(To be read from the pulpit.)

HIS Majesty's gracious Statute concerning the Standard of Money; given at the Castle of Stockholm, 9th of May 1835.

We Charles John, by the grace of God, King of Sweden, Norway, of the Goths and the Vandals, make known, that in consequence of what We and the Estates of the Realm have resolved, in the present Diet, touching the coining of silver and gold, We have thought fit to issue this renewed gracious statute concerning the standard of money, which, as far as concerns silver money, is maintained entirely the same as that appointed by our gracious statute of the 25th of June 1830.

§ 1. The Swedish silver money which shall hereafter be coined shall contain three parts of fine silver to one of copper, and thus be of 12 lod standard, ("tolf-lödigt"). This mixture is called Mint silver.

§ 2. At our Mint the following silver money shall be coined, namely:—

Whole specie rixdollars,
Half specie rixdollars,
Quarter specie rixdollars,
Eighths of a specie rixdollar,
Sixteenths of a specie rixdollar.

* See the Despatch following this statement for a correction of this answer to question 10, and see also page 271, § 8.

* See page 271.

§ 3. From two pounds provision weight (victualie wigt) of Mint silver shall be coined—

Twenty-five whole specie rixdollars, or 50 half specie rixdollars, or 100 quarter specie rixdollars, or 200 eighths of a specie rixdollar, or 400 sixteenths of a specie rixdollar.

§ 4. 1stly. The remedy in fineness is, upon each pound provision weight of Mint silver, three one thousandth parts of a pound provision weight of fine silver over, or as much under, the standard fixed in § 1.

2ndly. The remedy in weight is upon whole specie rixdollars, of which 25 equal two pounds weight, three one thousandth parts over or under, per pound; upon half specie rixdollars, of which 50 equal two pounds, four one thousandth parts, over or under, per pound; upon quarter specie rixdollars, of which 100 equal two pounds, seven one thousandth parts, over or under, per pound; upon eighths of a specie rixdollar, of which 200 equal two pounds, seven one thousandth parts, over or under, per pound; and upon sixteenths of a specie rixdollar, of which 400 equal two pounds weight, 10 one thousandth parts, over or under, per pound, all provision weight.

§ 5. From silver which is delivered in for coining three-fourths per cent. is to be deducted, under the name of Mint tax, to compensate for the expense of coining.

§ 6. Of gold shall be coined single ducats, double ducats, and four-ducat pieces.

§ 7. From one pound provision weight of fine gold shall be coined 125 single ducats and double ducats, and four-ducat pieces in proportion thereto.

§ 8. The standard of ducats is maintained as nearly as possible the same with that hitherto fixed, so that 80 parts of fine gold are alloyed with two parts of copper, and a single ducat thus weighs 82 ten thousandth parts of a pound provision weight.

§ 9. The remedy in fineness on ducats is fixed at three one thousandth parts of a pound provision weight of fine gold, over or under, on each pound of such weight.

The remedy in weight is fixed at three one thousandth parts, over or under, on each pound provision weight of ducats.

§ 10. Mint tax shall be deducted at the rate of three tenths per cent. on gold delivered in for coining, in addition to which, according to the regulation in force, a charge for refining is payable on gold of lower standard than that fixed for ducats.

This all whom it concerns are obediently to observe. For further certainty We have subscribed it with Our own hand, and caused it to be confirmed with Our Royal Seal. The Castle of Stockholm, the 9th of May 1835.

Charles John.

1836. No. 16.

Swedish Collection of Laws.

Regulations for the Royal Mint in Stockholm, graciously approved and established by His Majesty, the 30th of April 1836.

Art. 1.

Of the business, government, and staff of the Mint.

§ 1. The right to coin gold, silver, and copper, likewise to strike medals and jettons, shall exclusively belong to His Majesty's Mint.

§ 2. The Mint is under the supreme government of His Majesty and the National College of Mines.

§ 3. The immediate superintendence of the Mint is vested in the Director-in-Chief of that establishment, who is also head of the Control Establishment, and to whom belongs all the business formerly devolving on the Mint wardens. He has, under the inspection of His Majesty and the National College of Mines and in conformity with this regulation, right of decision in all that concerns the action and maintenance of the Mint, likewise the general management and regulation of it. In questions touching the Mint which are discussed by the College of Mines he shall first deliver his opinion.

His opinion respecting the value of metal occurring for assay is always final. Nevertheless he is answerable for the result, and a charge may be instituted against him in due order for neglect of duty.

The Director-in-Chief has equal rank with the councillors in His Majesty's and the States' colleges, and receives, during official journeys, posting and daily allowances similarly with them.

The remaining officers of the Mint are,—

1stly. The Master of the Mint, who directs all coining or stamping of gold, silver, and copper, likewise separation and testing of the precious metals when required.

2ndly. The Chamberlain of the Mint, who there, as well as at the Control Establishment, manages the cashier's business, and accounts for the receipts of both establishments.

3rdly. The Mint Assayer, who tests the purity of all gold and silver coming into the Mint; likewise the meltings for coining before they are poured out, as well as the finished coins before they are issued from the Mint.

§ 4. The Director-in-Chief is nominated by His Majesty, upon the presentation of the President of the College of Mines, but the Master of the Mint, the Chamberlain, and the Mint Assayer upon the proposal of the College of Mines.

§ 5. In order to be eligible for the office of Director-in-Chief, Master of the Mint, or Mint Assayer, it is requisite to have passed the mining examination (bergs examen) in one of the universities of the realm; and for the post of Chamberlain, to have passed the finance or the law examination (kammeral eller hof rätts examen), and also to possess ability in keeping accounts.

The candidate for the office of Mint Assayer shall, in addition to this, be examined by the Director-in-Chief in the art of assaying, in the presence of the College of Mines.

§ 6. The candidates for the offices of Master of the Mint, Chamberlain, and Mint Assayer, shall at their application give security, the first for 4,000 rixdollars banco, the second for 2,000, and the last for 1,000 rixdollars banco, to make good any liability that may be imposed on them at the Mint.

§ 7. The foreman at the Mint is engaged and dismissed by the College of Mines, on the proposition of the Director-in-Chief.

Similarly with the messenger of the Mint.

Workmen at the Mint who have daily pay, or who work by agreement, are engaged and discharged by the Master of the Mint.

Art. 2.

Of the reception of gold and silver for coining.

§ 8. Every one has the right to deliver in gold and silver to the Mint to be coined.

§ 9. Such bullion shall be jointly received by the Master of the Mint and the Chamberlain.

§ 10. Notice of the bringing of bullion for coining is to be given to the Master of the Mint, who appoints a time for it, which he intimates to the person delivering it in (the importer).

§ 11. Parcels of gold, the value of which does not amount to $\frac{1}{10}$ part of a pound provision weight (skalpund victualie wigt) of fine or pure gold, are not received for coining.

§ 12. Neither are parcels of silver received which do not in value amount to one pound provision weight of fine silver.

§ 13. Gold and silver imported in separate pieces shall be melted together into ingots before being weighed for entry in the books.

§ 14. Gold or silver, the weight of which does not exceed 25 lbs. provision weight, shall be melted together into one ingot, unless the importer desires that the bullion should be cast into smaller ingots. He is entitled to be present at the melting into ingots.

§ 15. Bullion which is imported for coining must not be cast into ingots of greater weight than about 60 lbs. provision weight.

The College of Mines fixes a tariff, according to which the melting together of gold or silver is paid for.

§ 16. After the bullion has been melted together into ingots it shall be weighed.

§ 17. The weighing of the bullion takes place in the Mint office, in the presence of the Master of the Mint and the Chamberlain, and the importer has a right to be present.

§ 18. All weighing at the Mint shall be by the pound provision weight and its hundredth parts. The scales and weights shall annually, in the month of January, be adjusted in the presence of the Director-in-Chief and the Advocate Fiscal of the College of Mines.

§ 19. The scales upon which silver is weighed should give a clear result for $\frac{3}{100}$ parts of a pound provision weight, and those upon which gold is weighed for $\frac{3}{1000}$ parts of a pound provision weight.

§ 20. Weighed ingots or bars shall be stamped with number and weight, which, together with the name of the importer, shall be entered in separate importation journals by the Master of the Mint and the Chamberlain, who gives an interim receipt for the bullion.

§ 21. If the importer wishes the bullion to be received before the day appointed for its melting down and weighing, this ought not to be refused. Nevertheless, in such a case, the importer shall provide the bullion with a sealed covering. The Master of the Mint and the Chamberlain are responsible for the cover remaining in an undisturbed state until the melting down of the bullion is undertaken. The importer receives an interim receipt for his deposit.

ART. 3.

Of the assaying and valuation of gold and silver which is imported for coining.

§ 22. Before the valuation of the bullion melted together and entered on the books takes place, its purity must be properly tried by assaying.

§ 23. For this purpose the Mint Assayer shall, in the office of the Mint, cause assay pieces to be cut from the upper and under sides of each ingot.

§ 24. These assay pieces to weigh together $\frac{15}{1000}$ parts of a pound when they are of silver, but only $\frac{25}{10000}$ parts of a pound when of gold.

§ 25. The importer has a right to be present at the assaying process if he desires it, and mentions it.

§ 26. After the assay has taken place the Mint Assayer shall, in the office of the Mint, cause the fineness of each ingot assayed to be marked upon it with punches, and put his own stamp upon it.

§ 27. The ingots thus stamped are placed in a strong-room in the joint custody of the Master of the Mint, the Chamberlain, and the Mint Assayer.

§ 28. After the fineness of the gold and silver delivered in for coining has been tried, the Mint certificate, addressed to the importer, shall be issued by the Master of the Mint, the Chamberlain, and the Mint Assayer, upon which shall be stated the delivery number of the parcel assayed, its gross weight, fineness, and net amount, as well as its value calculated in gold or silver money.

§ 29. Upon the Mint certificate for gold and silver imported, the amount of the Mint tax, as well as other expenses, shall be specifically mentioned.

§ 30. The Chamberlain is responsible for the accuracy of the accounts. Nevertheless the Master of the Mint and the Assayer shall each separately make the same calculations and compare them with those of the Chamberlain.

§ 31. For the amount due to the importer, on the Mint certificate mentioned in §§ 28 and 29, the Chamberlain shall issue an order on the Exchange Bank, which shall be countersigned by him, and signed by the Director-in-Chief of the Mint and a member of the College of Mines, after it has been previously, together with the Mint certificate, entered and noted in the office of the Advocate Fiscal of the College of Mines. The Mint certificate should accompany the order when signed.

§ 32. The order signed is afterwards given to the importer in exchange for his receipt on the Mint certificate.

The importer, nevertheless, shall first pay the charges which are specifically entered on the Mint certificate, but have not been previously deducted from its amount.

§ 33. Since the Mint must profit by the privilege granted by the Estates of the Realm, of receiving through the Loan Bank parcels of gold, and of silver which have come in and been redeemed by way of advance, a certificate shall be issued of the bullion's being deposited in the Mint on account of the Loan Bank, and in the certificate shall be set out the particulars referred to in §§ 28 and 29.

The certificate shall be noted and signed in the same manner as § 31 directs respecting the order before it is delivered to the importer. The provisions of § 32 are also valid in this case.

ART. 4.

Of the coining of gold, silver, and copper.

§ 34. The Director-in-Chief, as often as it is required, makes a proposition to the College of Mines as to the order in which, and the kind of coin into which, coining of gold, silver, and copper shall take place.

§ 35. The Master of the Mint fixes a time for executing the melting for coining, and selects the bullion for it, and the Director is informed of the proposed melting the day before.

§ 36. Before the bullion for the melting is taken from the strong-room, the Master of the Mint shall, in conformity with the regulation about the standard of money, make up the melting account, which is examined by the Chamberlain.

§ 37. The Master of the Mint is entitled to take into his custody, the day before the melting, the bullion appointed for it, out of the store mentioned in § 27.

§ 38. In melting gold for coining, the addition of unassayed gold must not be made.

§ 39. After the pouring out of each melting of gold for coining, the Director-in-Chief shall cause the metal to be assayed before it is worked up.

§ 40. When a melting of silver for coining is undertaken, comprising assayed ingots, with the addition of scissel or defective money, then, as a check on the assaying, the ingots shall be first melted down and a crucible specimen taken from them before the scissel or defective money is added, or the defective money and the scissel may be first melted down, and sample taken from them, before the ingots are added, so that in case an inferiority to standard results in the melting, it may be traced how far the defect arises from a mistake in the previous assaying of the ingots or from another cause. The Mint Assayer being always answerable for the loss which the Mint may suffer through his means.

§ 41. There must not be added in melting for coining any spillage or waste ("abguss"), as it is called, from preceding meltings, or filings, but such metal shall be cast, separately for each coinage melting, into ingots, and be assayed and stamped by the Mint Assayer.

§ 42. The Mint Assayer has the right of being present at all meltings.

§ 43. When the amount of silver fixed for a melting is melted down, the Director-in-Chief is informed of it, and he and the Mint Assayer take assay samples from the melted mass.

In addition to which a third sample should be taken and sealed with the seals of the Director-in-Chief and the Master of the Mint.

This sample is preserved by the Chamberlain until the melting is coined, when it is delivered back again to the Mint silver store

§ 44. When both the assay samples have been tried, and the melting found correct as to its standard, the bullion is poured out into bars, and the Director-in-Chief and the Mint Assayer shall assay the first and last bars poured out, before any bar is given out for further working.

§ 45. If more bullion is added after the crucible assay has been made, a fresh crucible sample shall be taken and assayed before further casting into bars takes place.

§ 46. The result of each trial shall be reported to the Master of the Mint in writing.

§ 47. The Master of the Mint shall, in a book called the melting book, under a separate number, enter an account of each melting, from the time it is placed in the crucibles until the finished coin is received from it. The melting book shall also be signed by the Chamberlain, who thereby attests the accuracy of the particulars entered. He shall also be present at all weighings to or from the separate workshops.

§ 48. As vouchers for the values set down, the written reports of the Director-in-Chief and the Master of the Mint respecting the fineness of the crucible samples and of the finished coin are appended to the melting book.

§ 49. When a melting is coined notice is given to the Director-in-Chief.

§ 50. The Director-in-Chief causes the coined parcels to be weighed in the presence of the Master of the Mint, the Chamberlain, and the Mint Assayer. The weight and description of coin are entered in a separate minute book (Protocolls bok) kept for the purpose.

§ 51. Out of the whole quantity weighed and stamped the Director-in-Chief takes three ducats, three whole or three half specie dollars, and a number corresponding to these of the smaller denominations of money. These trial coins are placed in an envelope which is sealed with the seals of the Master of the Mint and the Chamberlain.

§ 52. The remainder of the coin is placed in a separate strong-room under the charge of the Director-in-Chief, the Master of the Mint, and the Chamberlain, after the Director-in-Chief has satisfied himself, by weighing several small sums by the pound, that, in respect of weight, they are so made as to be fit to be issued from the Mint.

§ 53. These weighings shall be entered in the minute book mentioned in § 50.

§ 54. If it is found in weighing that the coins in weight either exceed or fall below the remedy allowed in the statute concerning the standard of money, the whole parcel shall be gone over by the care of the Master of the Mint, and the defective coins separated; the remainder shall be treated as a new untried parcel.

§ 55. The Director-in-Chief takes with him to the laboratory of the Mint and Control Establishment the sealed specimen coins, and takes them out of the envelope, in the presence of the Mint Assayer.

§ 56. After the weight of the coin per lb. has been tried and found correct, the Director-in-Chief causes a round piece to be cut out of three of the trial coins, of about half the weight of the coin, to be employed for examining the fineness.

§ 57. The pieces cut out are flattened, and each of them is provided with its mark. The coins from which they have been cut are marked with the same marks as the pieces. Two of the pieces are now examined, in respect of their fineness, by the Director-in-Chief and the Mint Assayer. The third piece is preserved for future use, to be employed in another trial should it be required.

§ 58. For further check on the fineness there shall always be weighed two assay pieces of the same gold or silver money, for examination by the wet process for silver, and by sublimation and the parting assay for gold, so that they may check one another.

§ 59. The whole pound of assay weight corresponds to $\frac{1}{200}$ parts of a pound provision weight, and is divided into thousandth parts.

§ 60. Should the difference between the result of the Director-in-Chief and the Mint Assayer be only $\frac{3}{1000}$ parts of the assay weight, the fineness of the coin is fixed according to the mean of these assays.

§ 61. If these assays do not agree so closely, the Director-in-Chief shall examine the third flattened piece mentioned in § 57. If the assay made thereon agrees with either of those previously made, the fineness of the coin is determined accordingly. If the result of the assay now in question falls between the two assays previously made, the fineness of the coin is fixed at a mean of all three assays.

§ 62. If the last trial does not fall between the two previously made, the Director-in-Chief shall immediately make a fresh assay upon an equal quantity of metal of each of the three flattened pieces mentioned in § 57, and this assay shall determine the fineness of the coin, unless the Director-in-Chief, in consideration of any error occurring in the assaying, may deem it necessary to make yet a further trial, which shall likewise be taken from an equal portion of each of the three pieces, and which then serves for direction. Should the coins be such as can be approved, all trials of them must necessarily, if they have been performed without mistake, fall within the remedy allowed for the standard of the coin. In the contrary case the cause of the variation is most strictly investigated.

§ 63. Should the Director-in-Chief, for reasons occurring, find it necessary to order fresh samples to be taken and assayed from any parcel of coin, or the Master of the Mint desire it, the proceeding is to be in the order already prescribed.

§ 64. The final issue of the assay is reported to the Master of the Mint in writing. The results of the several trials are all entered in a minute book kept for the purpose. The coins from which assay pieces have been cut are placed, separately for each melting, in an envelope, which is sealed by the Director-in-Chief. He marks upon it to which melting the coins belong, their fineness, and when they were assayed. The envelope, together with an extract from the minutes of the weighing and assaying, shall immediately be delivered to the College of Mines, and there be kept for ten years, after which time the trial coins, or so-called pledges (wedermälena), are taken out of the envelope and delivered back to the Mint, which debits itself for the value of the metal.

§ 65. If the fineness of the coin exceeds or falls short of the remedy allowed, the Director-in-Chief immediately reports the circumstance to the College of Mines, which then orders it to be melted down.

The loss sustained by the Mint is made good by the officer who has been the cause of the error. The defective money remains, until its melting down in the presence of the Director-in-Chief takes place, under his charge jointly with the Master of the Mint and the Chamberlain.

§ 66. When the parcel of coin is found of proper fineness and weight, but not before, it shall be delivered to the Mint Assayer out of the strong-room mentioned in § 52.

§ 67. The Mint Assayer then causes the money to be counted in the Mint office into small sums, and each separate sum to be weighed. Money defective in form is separated in the counting.

§ 68. The weights of the separately counted sums are entered in a book kept for the purpose.

§ 69. The counted and weighed coin is paid in, the following day, by the Chamberlain, to the account of the Mint in the Bank of the Estates of the Realm (Rikets Ständers Bank) on a proper receipt.

The money separated during the counting is placed in the strong-room named in § 27, into which the spillage and cuttings, &c. belonging to the same melting have previously delivered as they came in from the workshops.

Art. 5.

Of the stamping of medals and jettons.

§ 70. Medals of gold shall be coined of the same fineness as ducats.

Silver medals shall contain $\frac{900}{1000}$ parts of fine silver.

§ 71. Every bar of gold or silver which is used for coining medals, shall be assayed by the Mint Assayer, who causes the value to be marked upon it and his own stamp.

§ 72. Of every new medal or jetton the Master of the Mint shall, before any specimen is issued, lay aside one in silver for His Majesty's Coin Cabinet, at the expense of the owner of the dies.

The Master of the Mint must not, without special Royal direction, strike other medals or jettons than those which have been approved by the Academy of Belles Lettres, or the Swedish Academy.

§ 73. Medals and jettons may be issued by the Master of the Mint, on receipt of payment according to the tariff of charges which the College of Mines has the right to fix, in consideration of the expenses of manufacture. The payment received is delivered by the Master of the Mint to the Chamberlain, who accounts for the amount.

§ 74. The balance which may remain of the receipts from the manufacture of medals, after the expenses of day labour, of repairs to the medal presses and other necessary tools, &c., as also of materials have been deducted, falls to the Master of the Mint.

Art. 6.

Of the accounts of the Mint.

§ 75. Proper accounts of all effects and money received into the Mint shall be kept by the Chamberlain in a ledger, which ought to contain separate accounts—

For all gold and silver delivered into the Mint during the year, or received since the previous year;
For the manufacture of gold and silver coin;
For the exchange of uncoined silver and specie.
For the amount of the Mint tax;
For the manufacture of medals;
For the copper used for alloy or for coining;
For the manufacture of copper money; and
For the Mint's other receipts and expenditure.

§ 76. To the account for the manufacture of gold and silver money, is appended the melting book mentioned in § 47 as a verification.

§ 77. The melting book should, separately for each melting, show—

The weight, quality, and net amount in fine metal, of all bullion used for the melting.
The quantity of bars and spillage ("abguss")—the latter cast into ingots—received from the melting, also how great the waste has been in it.
The quantity of money pieces (blanks) and scissel (or cuttings) obtained from the bars, and the loss on their annealing, rolling, and cutting.
The waste in blanching the pieces of money.
The amount and weight in gross and in fine metal of the stamped good coins, as well as of those defective in form.
A calculation of the loss or profit on coining the melting.

The melting book ought finally to contain an account of the turning to profit of the gold and silver sweepings collected during the year, and to show how much precious metal these have contained per cubic foot, what they have yielded in amalgam or lead, and the weight of the gold or silver obtained from these last.

§ 78. The Chamberlain shall, in a cash book, account for all cash receipts with specific vouchers for each separate sum.

§ 79. The Mint certificates for the year shall be appended to the ledger and cash book as vouchers for the correct entry of the imported bullion, also for the proper debiting of the dues which are paid in by those who import gold and silver for coining.

§ 80. A separate account for all articles of consumption and other property purchased during the year, or in stock at its commencement, shall accompany the ledger.

A memorandum book shall be kept of all bullion placed in the strong-room, mentioned in § 27, or taken from it.

This book should always be kept, with the bullion, in the strong-room.

This regulation shall be in force from and after the 1st day of July of the present year. All this is for the humble observance of those concerned. The Castle of Stockholm, the 30th April, 1836.

Charles John.
C. D. Skogman.

(Translation.)

INSTRUCTION for the Control Establishment, graciously approved and confirmed by His Majesty, the 30th of April 1836.

§ 1. The Control Establishment, which is instituted for the assaying and control stamping of gold, silver, and tin work, is, in union with the Mint, under the superintendence of His Majesty and the national College of Mines.

§ 2. The staff of the Control Establishment consists of a Director-in-Chief, who is also head of the Mint; a Controller; a Chamberlain, who is also in the service of the Mint in the same capacity; and of two clerks appointed to the Control Office; besides which, for the necessary attendance and assistance, there shall be a messenger and a stamp servant.

§ 3. The Director-in-Chief and the Chamberlain are nominated by His Majesty, in the manner directed in the regulation for the Mint. The Controller is nominated also by His Majesty, on the presentation of the College of Mines. No person is considered competent to hold the office of Controller, on being presented to the place, until he has duly passed the mining examination (Bergs examen), and the presentation should be accompanied by the special opinion of the Director-in-Chief on the candidate's ability and fitness for performing the duties of the office.

§ 4. As clerks at the Control Office, suitable persons who have passed the mining examination are appointed by the College of Mines, through an extract from their minutes, on the report of the Director-in-Chief, and at the utmost for three years at a time. These clerks receive as fee, during their time of service, the pay which has been customarily given.

The messenger and stamp servant are engaged for an undefined time, also by the College of Mines, by an extract from their minutes, on the presentation of the Director-in-Chief.

§ 5. The duties of the Director-in-Chief in his capacity of head of the Control Establishment are, in general, to see and to take care that Swedish gold, silver, and tin work is not sold or exposed for sale, without being, in respect of its quality, duly control stamped, and provided with the other marks enjoined; to exercise superintendence over the assaying and control stamping itself; also, partly personally, in the course of his official duty, partly through the magistrates of towns, and other persons concerned, to take care that frauds be not practised in the manufacture of gold, silver, and tin work, but that the laws in force respecting the control system are strictly observed in all particulars; that if abuse or infraction of the control laws should come to his knowledge, he should immediately take the necessary measures and steps for the removal of the former, and for the prosecution of the manufacturer inculpated before the tribunals, through the proper crown prosecutor, whenever circumstances may dictate such a course; to exercise the greatest care in seeing that the collection of, and accounting for, the revenue from control stamping is duly effected, and that the orders on this subject are observed by the parties concerned; that if the magistrates or others, who have to do with control stamping in country places, shall not fulfil the duties which devolve upon them in this respect, conformably with the laws, or if His Majestys officers neglect to send in within the time prescribed the control accounts coming into them from the magistrates, he shall give early notice of it to the College of Mines, in order to obtain correction; that he himself, when his other duties permit, or by specially selected commissioners, by means of journeys through the country, should endeavour to obtain reliable information as to how and in what degree the control laws are there observed by those concerned; to aid with advice and instruction the gold and silver workers in all that concerns the turning of these metals to good account, likewise their proper alloying and assaying with all that relates to it; to hold examinations of those who in the country wish to obtain their freedom as gold and silver workers, and if they are found to possess satisfactory insight and experience in the art of assaying and computing alloys, to issue official certificates to them; both personally, and through the magistrates of towns and other persons concerned, to see that gold and silver workers are provided with good and accurate balances and adjusted weights; likewise that the necessary instruments for assaying gold and silver are not wanting at goldsmiths' in country places; and finally to give advice to the College of Mines in questions that may occur concerning the control system, or in cases which are found to be of such a nature that the opinion of the Control Establishment thereupon is desired by the abovementioned college.

§ 6. Should the Director-in-Chief be on a journey, or hindered for a short time by sickness or other cause from discharging his official duties at the Control Office, they shall be carried on, in all that concerns the controlling there, by the Controller, and on such occasions the College of Mines, on the recommendation of the Director-in-Chief, selects either one of the clerks or other fit person, upon his own responsibility, to perform the duties of the Controller.

§ 7. The Controller has most immediately business with and inspection of the proper execution of the assaying and control stamping, and it thus depends in a great measure on his zeal and prudence whether this goes on rightly. It is incumbent therefore on him to be present in the Control Office on the customary stamping days, and at other times as often as the business requires it, and as it is his duty in general to perform the assays in and for control stamping, he shall also be answerable for their correctness.

It shall likewise be the duty of the Controllor to verify the accuracy of the annual consumption of such materials as are necessary for assaying, and are entered in the customary account of expenditure.

§ 8. It is principally the duty of the Chamberlain, according to the lists of gold, silver, and tin articles delivered in, which are drawn up by the parties interested and handed to him, to effect the collection of the control stamping dues accruing in the capital, and to pay the dues for each month completed into the bank to the account of the Royal Exchequer (Kongl. Ränte kammar), so early that the exchequer receipt may be delivered by the Director-in Chief to the College of Mines before the 10th of the following month, together with a statement drawn up in the office of the articles stamped during the month, showing what ought to come in as stamp duty; to receive and in due order account for the income of the Control Office, an account of which for each year should be drawn up by him, early enough to be sent in with the vouchers relating to it from the College of Mines to His Majesty's and the States Revenue Court (Kammar Rätt); before the end of March in the following year, also to account for the annual collection of the control stamping dues, in a special ledger for the dues received in Stockholm, and by a general statement drawn up of the collection of control dues in the country, founded on the special accounts received from the towns and other places where control stamping takes place; and all this so early that the accounts for each year may be delivered to the College of Mines before the end of the month of July in the following year, so that they may go thence to the Revenue Court for proper revision in the superior revision department of the Revenue Court (Kammar Rättens Ofver Revisions Department).

§ 9. The duty of the clerks shall principally be to assist the Director-in-Chief and the Controller in the assaying of gold, silver, and tin, to countersign the official letters of the Director-in-Chief, to assist him in the secretarial business arising in the office, and for the rest, in respect to the performance of the duties appertaining to the office, to be strictly guided by the orders of the Director-in-Chief and the Controller.

Although the important gold and silver assays which are undertaken by the clerks, properly take place upon the responsibility of the Controller and under his inspection, it may however occur when any clerk is found, after examination by the Director-in-Chief, to be perfectly capable, and has made himself worthy of a special confidence, that the right and permission be given to him to undertake certain assays occurring in the office, upon his own responsibility, as far as they cannot be accomplished by the Controller himself, but no clerk must be appointed to the discharge of the Controller's duty who has not previously been found qualified, by the Director-in-Chief, to have the performance of assays upon his own responsibility entrusted to him.

§ 10. The Control Office shall always be kept open and accssible to the public on the stamp days appointed by the laws, viz., Mondays, Tuesdays, Thursdays, and Fridays, when a holiday does not happen on them; and it is the duty of the Director-in-Chief, as often as his other business permits it, personally to visit the office, and see that the subordinate servants of the establishment properly discharge their duties, and that the rights and the convenience of private individuals who have business with the office, and the rights and interest of the State in respect of the proper debiting of the control stamping dues and the so-called double duties, are observed.

§ 11. Gold, silver, and tin articles may be delivered in to the Control Office on the appointed stamp days from 8 to 10 a.m. in the customary order, but the manufacturers of such articles are entitled, in the manner and under the conditions which the laws allow, even at other times to get the control, stamping effected when circumstances render it necessary and special notice of it is given to the Controller.

§ 12. The gold, silver, and tin work delivered in on the stamping days ought to be withdrawn from the office the same day, except that in certain cases the assaying thereof

may lead to greater trouble and loss of time than is usually repuired for the assay, or a question arising about doubtfulness or inferiority of the standard value may occasion a counter trial in the presence of the owner to be ordered, for which a special time is appointed by the Director-in-Chief.

§13. All goods delivered in to the Control Office for assaying and control stamping, must, in order to be received, be accompanied by two regular lists, subscribed with the owner's name, which shall each exactly show the number of pieces, weight, and description of the goods. Of these lists, one remains in the Control Office as an appendix to the journal for the day; the other, upon which the amount of the control duty is stated, accompanies the goods when they are delivered back.

§ 14. The goods delivered in for control stamping are weighed, immediately after they are brought in, in the presence of the Controller or one of the clerks. It is the duty of the person who weighs them, whilst the deliverer is still present, to enter the owner's name, together with the number and weight of the goods, in a paged journal kept for the purpose, and authenticated by the seal of the Director-in-Chief. The accuracy of the journal for each day is confirmed by the signature of the Controller or the clerk who keeps the journal for the time, and it is to be observed here that each parcel of goods, as well as the lists of the deliverer, are to be numbered according to a sequence of numbers running through the year.

§ 15. It is the duty afterwards of the Controller, or the clerk who keeps the assay journal for the day, as soon as it can be done after the assay has been effected, to calculate the control duty which is to be paid for each parcel received, and enter it in the journal, and the goods must not be withdrawn from the office by the owner, after the control stamping has been performed, until he has paid to the Chamberlain or his representative the control dues accruing on them.

§ 16. From the goods delivered in for control stamping, the Controller causes the weight of metal requisite for the assay to be taken in a suitable way; nevertheless the strictest care must be taken in doing so, under liability of compensating for injury done, that the articles delivered in are not thereby injured, either in their form or decoration.

§ 17. The specimen thus taken is examined by the Controller or by one of the clerks, under his inspection and responsibility, unless the clerk who performs the examination has been authorized by the Director-in-Chief to conduct the assay on his own responsibility. In either case, however, the Director-in-Chief would be also answerable for the result, in the event of such error or neglect being committed in its performance, as could reasonably be ascribed to a want of superintendence on his part or the absence of those necessary directions which it would be his duty, as head of the Control Establishment, to give and to see carried into execution.

§ 18. The value when found correct in assaying is entered in the above-mentioned assay journal by the side of the weight of the goods to which the assay relates, and the manufacturer or deliverer in of the goods is entitled, together with them, to receive back the metal taken from them and remaining after the assay.

§ 19. Silver delivered in, the quality of which is found to amount to the lowest standard allowed by the laws, or to exceed it, likewise gold and silver which in assaying is found to contain as much fine metal as the stamps placed upon it indicate, and the laws allow, shall without further difficulty under the inspection of the Controller, or the person who discharges his duty, be duly control stamped, provided the articles shall otherwise be found to be provided with correct and clear stamps, showing the makers name, the date, and the place of manufacture.

§ 20. The control stamps shall be kept in a separate strong-room appropriated to the purpose. These stamps are only given out therefrom for use on the stamping days or when the Director-in-Chief gives special permission for it, and are to be replaced immediately after the control stamping is effected. The responsibility rests with the Controller of seeing that this is done in due order, and that the articles delivered in are not injured by carelessness in imposing the stamp.

§ 21. Should objection be made to the justice of the decision by the owner of any goods found to be of doubtful or inferior fineness, or exemption from the double duty charged upon them be claimed, the Director-in-Chief must specially order a new assay of the goods in question in the presence of himself and the owner or his representative, a suitable time being fixed, in the manner already ordained by the laws.

§ 22. If, however, the true value should not be sufficiently made clear by the counter assay thus ordered in respect of some variation occurring in the result, and should the manufacturer concerned demand a further examination of the goods, notice of the circumstance must be given to the College of Mines, which has the right of ordering the performance of a new assay, by selected unexceptionable persons qualified for the purpose; and the College of Mines, after such further trial has been made in the presence jointly of one of its members, of the Director-in-Chief, and of the owner of the goods, having taken exact information as to the result obtained from the trials collectively, must decide upon the case.

§ 23. With respect to goods which, on account of proved inferiority to standard, cannot be passed for control stamping, it is proceeded, in other respects, in the mode specially ordained and prescribed by the laws.

§ 24. The assay samples forwarded from the country to the Control Office, which have been taken from the articles brought for control stamping, are examined at the office in the order in which they have come in, and, as soon as it can be done, by the Controller, with the assistance of the clerks appointed to the office; and the result is communicated to the Director-in-Chief, who is bound to acquaint the magistrates or other persons concerned, with the value determined, within three months after the samples have been forwarded to the office; besides which, it is the duty of the Director-in-Chief on these occasions specially to take the measures which the laws and the circumstances occurring, may require.

§ 25. Should a doubt arise respecting the fineness or true value of the assay specimens sent in from the country, the manufacturer is entitled, to have a checking assay performed at the office, in the presence of himself or his representative, in the manner already mentioned, provided the quantity of assay pieces prescribed in the laws has been duly forwarded to the Control Office. But should the manufacturer not be satisfied with the assay thus made, it is proceeded in the manner already directed in § 22 in case the necessary quantity of the goods in question for performing a new assay should be found.

This instruction shall be in force from and after the 1st of July of the present year. Which is for the dutiful observance of all concerned. The Castle of Stockholm, the 30th of April 1836.

CHARLES JOHN.
C. D. SKOGMAN.

(Translator, *G. W. Porter*.)

UNITED STATES.

1, 2. Denominations and weight:

	Weight. Grains.
Double eagle or $20	516
Eagle „ $10	258
Half eagle „ $5	129
Quarter eagle „ $2½	64½
Three dollars	77 4/10
One dollar	25 8/10

3. All nine tenths or 900 thousandths fine.

4. Their dimensions are fixed by Mint regulation, not by law; they are as follows:

	Diameter in twentieths of an inch.	Thickness in thousandths of an inch (average).
Double eagle	26	77
Eagle	21	60
Half eagle	17	46
Quarter eagle	16	34
Three dollars	15	34
One dollar (old)	10	25
One dollar (new)	11	18

5. (a.) Tolerance of weight, one half grain to each of the three larger coins; one quarter grain to each of the three smaller coins.

(b.) Tolerance of fineness, two thousandths; but in practice it is limited to one half thousandth.

6. There is no legal limit of wear. Pieces that are bored, clipped, or unduly worn are refused and disappear from circulation.

7. The Mint charge for coining is one half of one per cent., which the person presenting the bullion pays. He also pays expenses of refining, &c., when the bullion requires it.

8. Coin is delivered in exchange for bullion as soon as the bullion can be melted and assayed; usually the coin is delivered the third day. To enable us to do this the Government keeps a sufficient deposit of gold in the Mint.

9. The coining is executed by Government, not by contract.

10. The Mint is open to the public; and all its supplies are from that source. Coinage executed by the Government only.

11. The Government is bound to supply stamped bars in exchange for bullion or foreign coins, at a small charge equal to the expense of making the bars.

12. Copies of regulations and laws concerning Mint forwarded.

INSTRUCTIONS relative to the TRANSACTION of BUSINESS at the MINT of the UNITED STATES, and its Branches.

Printed by order of the Director, for the use of the Mint and Branches.*

(A.) *Of the Purchase of Bullion for Coinage on behalf of the United States.*

1. All bullion deposited at any of these institutions shall be weighed in the presence of the treasurer, the register of the deposits, and the depositor or his agent, or an opportunity given to such depositor or his agent to witness the same. But if the bullion be of less value than one hundred dollars, (which may be nearly enough judged by its weight and appearance,) or if it be so bare as to be deemed unsuitable for the operations of the Mint, it may be legally refused. The weigh-clerk and the register will enter in their respective books the name of the depositor, the date of each deposit, the kind of bullion, and the state or country from whence it is derived, if it can be ascertained; if the deposit is foreign coin, the country where it is coined will be stated, except where it is composed of mixed coins, in which case an estimate may be made of the coinage, if reasonably practicable; if not, it may be stated to be "mixed foreign coins."

2. If the bullion be not in such state before melting that its value can be ascertained, the chief officer of the institution will adopt every possible guard to insure its safety in being carried from the weigh-room to the deposit melting-room, and until it is there melted and brought back to the weigh-room to be re-weighed; which re-weighing shall be made by the persons before mentioned, and careful entries thereof made in their respective books. A table of deposits requiring a melt before assay shall be made at the end of each week. It shall give the number of the deposit, the name of the depositor, the description of bullion, and the weights respectively before and after melting, and the loss in weight, as well as the per-centage loss. This statement shall be handed to the melter and refiner, who will carefully examine the same, and note on the table whether the differences in the weights before and after melting are such as are usual and ordinary, and fairly resulting from the nature of the deposit, in each case. The table will then be submitted to the chief officer of the institution for his examination and his action theron, if necessary, and be preserved in his office.

3. If the bullion deposited is gold containing a considerable quantity of silver, it will be so noted in the weigh books, and so also in the opposite case; and the bullion will be entered in the gold or silver weighing book, according as the gold or silver appears to excel in weight. If there are several parcels, they are weighed separately according to the wishes of the depositor, but it is not usual to make distinct assays of separate parcels belonging to the same individual unless for some sufficient reason. The weights before melting are expressed in the left hand of the two sets of columns of the book in ounces and decimal parts of an ounce, and the weight after melting in the right hand column.

4. In receiving deposits, gold is weighed to the one hundredth (·01) of an ounce, and silver to the five hundredth (·05) of an ounce. Less weights than these are not used in receiving deposits, but where the balance indicates a near approach to the ·01 for gold, or ·05 for silver, the slight deficiency is disregarded, and the full figures are set down.

5. The treasurer gives a receipt for the weight before melting, which the depositor is required to surrender to the Mint when he calls for payment of his deposit. If the depositor gives his receipt to a third party he must endorse it before doing so.

6. After the deposits are melted, the treasurer shall deliver to the assayer, from each parcel of bullion, a sufficient portion for the purpose of being assayed, which shall be returned to the treasurer, as is provided by the tenth section of the Mint law. The melter and refiner will then re-weigh each deposit separately, and compare the weights with those furnished him by the treasurer, in order that discrepancies, if any, may be detected and corrected; and after adding in the weights returned by the assayer, will ascertain whether the total weight of a certain number of deposits agrees with that of the treasurer.

7. In order to secure the bullion in passing through the several operating rooms, it shall be placed in boxes so constructed that when placed on each other they will not slide laterally; and several such piles being placed on a car, the uppermost series shall be covered with a strong sheet-iron cover with a continuous rim of at least two inches projecting downwards, and the whole secured by a chain passing lengthwise over the series, and so constructed that it may be locked at different links according to the height on the piles of each car. One key of such lock shall be placed in the hands of the foreman while superintending operations on the bullion, and another in the hands of the officer to whom the bullion is charged.

8. It is the duty of the weigher to see that the usual and proper limits of loss on melting deposits are not exceeded, or, if they are, to satisfy himself that the peculiarity of the case justified it.

It has been ascertained as near as practicable what should be the ordinary loss, and what the extreme limit of loss, in melting gold and silver deposits preparatory to the assay, if the bullion has been carefully melted.

The following statement of losses will be useful on this point.

Gold. Loss in weight.

Description.	Of parcels of					
	5 ozs. to 20 ozs.		20 ozs. to 100 ozs.		100 ozs. to 500 ozs.	
	Ordinary.	Extreme.	Ordinary.	Extreme.	Ordinary.	Extreme.
Clean bars, lumps, and cakes.	·01	·02	·01	·05	·03	·25
Grains and dust, average loss 3 per cent.; if very clean, 1 per cent.; dirty, 4 to 5 per cent.	—	—	—	—	—	—
Coins - - - -	·01	·02	·01	·03	·03	·15
Jewelry and plate* -	·01	·02	·01	·05	·03	·25
Amalgam, irregular and uncertain.	—	—	—	—	—	—
Laminated - - -	·01	·02	·01	·05	·03	·25

* Uncertain on account of solder, &c.

Silver.

Description.	Deduction if not melted.	Ordinary loss if melted.	Extreme loss if melted.
1. Bars, pigs, and test bottoms, clean.	$\frac{1}{10}$ of 1 per cent.	$\frac{1}{2}$ of 1 per cent.	$\frac{1}{2}$ of 1 per cent.
2. The same, not clean	Must be melted	$\frac{1}{2}$ of 1 per cent.	of 1 per cent.
3. Coins - -	$\frac{7}{10}$ of an oz. per 1000	$\frac{1}{10}$ of 1 per ct.	$\frac{3}{4}$ of 1 per ct.
4. Jewelry and plate -	Must be melted	$\frac{1}{2}$ of 1 per ct.	$\frac{1}{2}$ of 1 per ct.
5. Amalgam - -	Must be melted	2 to 5 per ct.	5 to 10 per ct.

The "extreme loss" on coins refers to such as the small Spanish and other small coins, &c.

N.B.—Clean bars of gold are frequently melted in small quantities without any loss; and when a single lot is deposited, and appears to have been well melted, it is sometimes assayed without re-melting, and of course reported without loss. The above estimate of losses on gold supposes that a protective flux (as borax or soda ash) has been used. A refining flux (as nitre) is not used in melting for assay, unless the metal be in a very impure and intractable condition; in which case, as the loss will be uncertain and considerable, the depositor ought to be informed in regard to the process. In every case of melting the depositor has the benefit of the grains in the flux, which in each case is separately ground and washed, and also the benefit of the scrapings of the pot.

9. As soon as the weight after melting (and after deduction where melting is dispensed with) is ascertained, one of the treasurer's clerks will transcribe the date of the deposit, name of the depositor, description and number of bullion, and weight after melting, upon a blank, called the assayer's report. This is taken to the assayer, who, at the same time, or previously, cuts off such small portions of the gold bullion as may be necessary for his operations, and takes the granulations of silver for the same purpose.

10. The assayer will insert in the report the fineness of the bullion, and the fineness of the gold or silver parted therefrom, provided the precious metal contained shall be worth one dollar or more, after allowing for cost of parting and necessary alloy. He will also state in the report the charges or deductions to which the deposit is subject.

Rate of Charges on Deposits of Gold and Silver Bullion at the Mint in Philadelphia, and at the Assay Office in New York.

I. FOR TOUGHENING OR REFINING.

1. On gold, not ductile, and not containing silver to the amount of one dollar, clear of parting charges, *one cent to*

* Printed at Philadelphia in 1867.

three and a half cents per ounce of gross weight after melting, according to the condition of the metal.

2. On silver (whether a purchase or deposit), not ductile, and not less than 750 fine, *one-third cent to one cent* per ounce, as above.

3. On coppery silver, ductile, below 750 fine, two rates of charge:

If below 600, *three cents* per ounce of standard metal contained.

If from 600 to 749, *two and a half cents*, as above.

If 750 or above, no charge.

4. On base silver (alloyed with copper, lead, or tin), not ductile, and below 750 fine, the same charges as under No. 3, with the addition of *one-half cent to three cents* per ounce of gross weight, according to condition.

5. For refining coppery silver of any fineness, in order to return fine stamped bars (990 or over) the following charges, according to the fineness of the metal offered:

980 and above,	½ cent	per	ounce gross.
950 to 979,	1 cent	„	„
750 to 949,	2 cents	„	„
600 to 749,	2½ cents	„	„
Under 600,	3 cents	„	„

6. For refining coppery gold already ductile, in order to return fine stamped bars, *five cents* per ounce gross.

If not ductile, or if very base, the additional charge of *one to three and a half cents* per ounce gross, according to condition.

II. For separating Gold from Silver.

1. When the mixture is free from copper:

Proportion of Gold.					
1 to 200 thous.,	1½	cents	per	oz.	gross, after melting.
200 to 600 „	2	„	„	„	
601 to 700 „	3	„	„	„	
701 to 800 „	4	„	„	„	
801 to 946 „	5	„	„	„	

2. When the alloy is partly copper:

If not over 50 thous. of copper, no additional charge.

From 50 to 150, *one cent* per ounce additional.

Over 150, *two cents* per ounce additional.

And if the metal be brittle, then a further charge of *one to three and a half cents* per ounce, according to condition.

III. For making Bars.

1. For melting gold, nearly fine, and returning the same in stamped bars, *six cents per hundred dollars.*

2. For making standard bars of gold or silver, *fifty cents per hundred dollars.*

3. For melting silver after parting, in order to return fine stamped bars, *one half cent* per ounce, *fine.*

On partible gold or silver, intended for fine bars, there are two charges,—for parting and for making bars.

On gold or silver intended for fine bars, not partible, there is only the charge for refining.

Note.—The distinction used in the language of the Mint laws, between *refining* and *separating*, is observed in the foregoing items of charge. Refining here refers only to the use of fluxes, for taking out base metals; or, in case of iridosmium (commonly called iridium), to repeated meltings and subsidence, or whatever other method may be found most expedient. It will occasionally happen that a deposit is to be charged both for refining and separating, as, where it is desirable first to remove refractory metals, so that they may not embarrass the parting process, or reappear in the parted metal.

3. *Limit to the separating of Gold and Silver.*—Neither gold or silver shall be separated for the benefit of the depositor, when the net product of operation, estimated upon the above charges, shall be less than one dollar.

11. The assayer's report is then put into the hands of one of the treasurer's clerks, specially charged with the calculation of deposits, who will transfer the fineness therein given to a sheet forming the abstract of bullion deposits. This clerk shall make the necessary calculation, based upon the weight and fineness of the deposit as reported, and enter his report in the several columns found upon the sheet or abstract. When this operation has been completed, the abstract exhibits the entire history of a deposit, beginning with the weight after melting, and closing with its net value, and the mode of its payment.

12. The director's (or superintendent's) clerk, before filling the warrant for the payment of a depositor, will ascertain the correctness of the net value on the abstract, multiplying the weight after melting of the deposit by the net value (given in tables prepared for that purpose) of an ounce of gold at the particular fineness reported. If he agrees with the treasurer's clerk the warrants for payments are filled up and signed by the director (or superintendent). One of the treasurer's clerks then makes out an assay memorandum, stating the transaction in detail, and giving the net value of each parcel for the use and satisfaction of the depositor.

13. When the depositor presents his receipt, he will sign the receipt on the back of the warrant and the duplicate in the register of warrants. The coin is then paid to him, and he receives likewise the memorandum above-mentioned.

14. A press copy of the calculations as spread upon the abstract of bullion deposits is retained in the Mint, Branch Mint, or Assay Office.

15. The Act of 4th March 1853, c. 97, page 62, of Mint Pamphlet, requires the profits of the Mint to be transferred annually to the treasury of the United States. In the abstract of bullion deposits, the charge of a half per cent. for coinage must be credited to "Bullion Deposit, profit and loss," transferable to the treasury of the United States.

The deductions from depositors being the charges for parting and for manufacturing bars, and all other charges authorized to be made at the principal Mint, and the Branch Mints at New Orleans and San Francisco, and the Assay Office at New York, must at the end of each quarter, or oftener if necessary, be paid into the treasury of the United States, to the credit of the respective appropriations for the ordinary expenses of these institutions. At the Branch Mints of Dahlonega and Charlotte, the foregoing charges must be placed quarterly to the credit of the treasurer of the United States. The funds available by law for the ordinary expenses of the Mints and Assay Office, having thus been placed in the treasury of the United States, to the credit of the above appropriation, requisitions for the same may be made on the Secretary of the Treasury in the same manner as on the specific appropriation. The same course will be observed in relation to the silver parted for the benefit of the Mint at the different institutions.

The premium allowed on the silver purchased and parted must be charged to "Silver Purchase, profit and loss," the balance to the credit of which account is transferable to the treasury of the United States. When a transfer is made at any of the Branch Mints and at the Assay Office, the Superintendent thereof will report the same to the Director of the Mint.

(B.) *Of the Accounts of Officers in the Mint, Branch Mints, and Assay Office.*

1. The only officers who account with each other are the Treasurer with the Melter and Refiner, and the Treasurer with the Coiner; and in receiving and paying deposits, and in making transfers of bullion and clippings, these officers either attend personally or by their delegated representatives. The small parcels of bullion which are employed by the Assayer in his operations are in point of law within the custody of the Melter and Refiner.

2. From time to time the Treasurer will deliver gold and silver bullion and clippings to the Melter and Refiner; both these officers will make entries of these deliveries in their books. The Melter and Refiner is charged with the standard weight of deposits, after their quality has been reported by the Assayer, and with the actual weight of clippings, which are always presumed to be of standard fineness.

3. When the ingots or fine gold bars have been prepared by the Melter and Refiner, assay slips are to be taken off from the first and last ingot of each melt, or from a small fine gold bar, by the Assayer, who will report the fineness of such as are within the proper limits; if not within such limits, they are reported as condemned, and must be remelted by the Melter and Refiner. The Act of 18th January 1837 provides that gold ingots for coinage may vary from 898 to 902, but the practice is rarely to pass gold ingots varying more than from 899·5 to 900·5, and silver ingots from 898 to 901·5. Fine gold bars may be reported when they have a fineness of 992 or more.

4. The Assayer's reports of approved ingots are kept on file by the Treasurer. The ingots having been approved, the Coiner, Melter and Refiner, and Treasurer, or their delegates, attend at the weighing, and three accounts must be taken of the weights at the time. It is necessary that the Coiner should attend (as well as the Melter and Refiner), because the ingots are weighed but once, and the delivery to the Treasurer by the Melter and Refiner is simultaneous with the delivery by the Treasurer to the Coiner.

5. In weighing gold and silver ingots and bullion, the maximum weight which the scale-beam is calculated to bear should not be exceeded; and the largest number of ingots of the various denominations, within the limit above mentioned, should be placed upon the scale (the number varying with the different denominations), and accurately

weighed, and the account kept by each officer in ounces and hundredths of an ounce, the $\frac{1}{100}$th of an ounce being the smallest weight used in weighing gold, and the tenth of an ounce the smallest weight used in weighing silver.

6. The adjustment of weight of single pieces of gold and silver coin must be so performed as to satisfy the Coiner that they are within the legal limits. And when a delivery of coins is made by that officer to the Treasurer, the latter may first examine a number of single pieces, to form an idea of the whole working. But there is to be no selection of pieces for the trial of the Annual Assay, nor a weighing of them by the Assayer, at the delivery.

7. At the time of such delivery, the Assayer will also attend, and the Treasurer will take one piece for every $20,000 of double eagles; one piece for every $10,000 of eagles; one piece for every $5,000 half eagles; one piece for every $5,000 quarter eagles; and ten pieces will be taken from every delivery of gold dollars, to the amount of $50,000; if a less amount is delivered, the assay pieces will be proportionately less. The Treasurer takes one piece for every 2,500 pieces for silver without regard to the denomination.* The assay pieces will be taken after the actual delivery of the coins (agreeably to section 27th); such pieces will be noted in the book kept for the purpose, stating their numbers, kind, weight, value, and to what warrants they correspond; at the principal Mint they will be kept and secured in the manner prescribed by the 27th section of the Mint law. At the Branch Mints, the assay pieces, after being taken in the manner prescribed by said section, are required to be carefully secured, and enveloped, and transmitted monthly by mail to the Director of the Mint.

8. At the close of the quarter, the Treasurer, Coiner, and Melter and Refiner, sum up, each in his own book appropriated for that purpose, the various deliveries of bullion, ingots, clippings and coins. If all accounts agree in standard weight and value, the Director's (or Superintendent's) clerk will make out warrants for the same, as if the various daily deliveries of each kind constituted one delivery, at the end of the quarter. These warrants are signed by the Director (or Superintendent), receipted on the back by the proper officer, and form the basis of the Treasurer's journal entries; they will be forwarded also to the first Auditor at Washington, quarterly, with the other vouchers of the Treasurer. The Coiner, and Melter and Refiner, furnish quarterly abstracts of their accounts, to be forwarded, with the Treasurer's counter statements thereof, to the auditing department at Washington.

9. Once at least in every year, at such time as the Director shall appoint, the Coiner, and Melter and Refiner, shall deliver up to the Treasurer all the coins and bullion in their possession, accompanied with statements of the two officers just named, of the amount of bullion of each kind (gold or silver) received and returned by them respectively during the year; also, the amount returned for the purpose of settlement, and the difference between the amounts charged and the amounts credited to them respectively.

10. The Melter and Refiner shall be charged at the end of each quarter with the amount parted for the benefit of the Mint, and not for depositors; and he shall present once in every year a fair estimate of the proceeds, after deducting all charges of such sweeps as he may have not smelted, such estimate to be verified by trials and calculations of the Assayer; and if the Coiner's and Melter and Refiner's accounts shall be found just, and the Director (or Superintendent) be well satisfied that there has been a *bonâ fide* waste of the precious metals, he shall allow the same by his warrants, provided the claim do not exceed the limits prescribed in sections twenty-three and twenty-nine of the law already referred to.

11. Any of the duties herein enjoined upon the operative officers and the Treasurer may be performed by an assistant, clerk or employee, who may be designated for that purpose; but this authorization, being for the convenience of the officers, and the proper despatch of business, is not to be considered as impairing their own responsibilities for the bullion placed in their custody.

Note.—The amount of silver alloy left in a deposit of silvery gold is based upon the estimate that the gold is refined to 990. In order to make this into standard gold, it is necessary to add 100 parts of copper; there being 10 parts of silver therein not parted out. This gives the proportion of silver alloy, as compared with the mass, as 1 to 110, or $\frac{1}{110}$th. Now $\frac{1}{110}$th of the mass, or of the standard weight of the gold, shows the amount of the pure silver contained, and this is equal to $\frac{1}{99}$th of the same standard for silver. In the abstract it is stated that $\frac{1}{99}$th of the standard weight of gold gives the standard weight of silver left therein, and the remainder of the silver constitutes the amount parted out for the benefit of the depositor. By this arrangement it becomes unnecessary to keep an account of silver alloy, as heretofore, when the total amount of silver was charged to the Melter and Refiner, and he was afterward credited with the silver alloy, although it was only *theoretically* put back by him into the gold.

The Account of the ordinary Expenses of the Mint, the Branch Mints, and the Assay Office.

These accounts are classified as follows:

1. *Salaries of Officers and Clerks.*

These are paid quarterly. Pay rolls are made up according to forms furnished, containing details as to occupation, time, and amounts paid. These are receipted; a duplicate is retained in the Mint. The original is enclosed in the warrant of the Director (or Superintendent), which is issued for the total amount of the pay roll, and will be sent with the quarterly account to Washington.

2. *Wages of Workmen.*

These are paid monthly. Duplicate pay-rolls will be prepared as in the preceding case; a duplicate retained on file at the Mint, Branch Mint, or Assay Office, and the original enclosed in a warrant of the Director (or Superintendent), will be sent with the quarterly account.

3. *Incidental and Contingent Expenses.*

Previous to the obtaining of any articles necessary for any of these institutions, a requisition for such supplies must be made by the proper officer of each department, on the Director (or Superintendent at a Branch Mint), stating the article and price; and, if approved, an order for the same is issued. The articles will be delivered to the department ordering the same, and shall be compared with the order therefor, as to quality, quantity and price, and the bills (in duplicate) must be examined and certified to be correct. Regular accounts shall be kept of the supplies, and an entry made of every order issued, and the account books will show to what purpose the articles are applied. The bills stating the items in detail, having been examined and certified as above, are placed in the hands of the Director (or Superintendent), by whom a warrant is issued for their payment. This warrant (with the bills) is then placed in the Treasurer's hands. When payment is demanded, the duplicate bills are to be receipted by the party to whom payment is due, or by some one authorized in writing to receive the payment; and a receipt is also taken on the foot of the warrant. The warrant is entered on the "Register of Warrants paid," and the proper number and date attached. One of the bills is enclosed in the warrant, which is to be presented to the paying clerk for payment. The duplicate bill is placed on file.

The moneys of this account are derived from the specific appropriations made by law for the salaries of officers and clerks, wages of workmen, and incidental and contingent expenses, for the several institutions herein named; and also from the charges and deductions available by law for their support, and are made thus available in the manner herein-before mentioned.

A journal and ledger account is kept, in which all moneys received are charged to the Treasurer of the Mint, and credited to the United States.

At the close of each quarter, the accounts of "Salaries of Officers and Clerks," "Wages of Workmen," "Incidental and Contingent Expenses," respectively, are charged, and the "Treasurer of the Mint" credited with the total amount paid under each head during the quarter. These several accounts are closed at the same time by the account of "The United States."

The books belonging to the ordinary account are the journal and ledger, register of warrants paid, register of petty expenses, and register of appropriations.

The Register of Warrants Paid exhibits in separate columns the date of payment, number of warrant, to whom paid, for what paid; amount paid, in two columns, one for incidental and contingent expenses, and the other for salaries and wages.

The Register of Petty Expenses. All bills of ten dollars and less are paid without a separate warrant for each bill. They are entered in a register, giving, in separate columns, date, number, name, for what paid, and amounts. Each bill is indorsed with its number, name and date; and at the close of the quarter an abstract of the petty expense register is prepared, which, with the petty bills indorsed, is covered by a warrant of the Director (or Superintendent), if ascertained to be correct, in favour of the Treasurer of the Mint, or Branch Mint, for the whole amount. This warrant is entered on the "Register of Warrants Paid," all the petty

*At the Branch Mint, San Francisco, in order to avoid the transmission of considerable amounts of coin by mail, only one-half of the number of assay pieces herein prescribed is taken.

payments being thus regarded as paid on the last day of the quarter.

The Register of Appropriations. This book will exhibit on the debit side, in separate columns, the annual appropriation by Congress, for wages, salaries, &c., and the deductions from depositors, and other items, transferred from time to time to the Treasury of the United States, and on the credit side, in corresponding columns, the amount from time to time drawn from the United States Treasury.

At the close of each quarter a statement of the ordinary account is rendered to the first Auditor of the Treasury.

This account consists of,—1. A cash account, being an abstract of the journal entries. 2. Abstracts from the register of warrants paid; viz., abstract of warrants paid for the incidental and contingent expenses; abstract of warrants paid for wages of workmen; abstract of salaries of officers and clerks (as the salaries are paid quarterly the pay-roll is a sufficient abstract). The warrants belonging to each of these heads, with its appropriate abstract, are to be separately enveloped and indorsed.

General Regulations for the Mint and its Branches.

1. The Act of 18th January 1837, and subsequent laws compiled in the Mint Pamphlet, and such subsequent laws as may be from time to time passed, shall be regarded as presenting the general duties of the several officers of the Mint, its Branches, and the Assay Office.

2. It is required of each officer to give his personal attendance during Mint hours, except he be unavoidably or necessarily absent, in which case he shall be represented by his assistant or representative, where such assistant or representative has been or may be authorized by the proper authority; such officer being responsible for the acts of his assistant or representative. A regular attendance of the assistants, clerks, and workmen shall be enforced during such hours as the chief officer may require.

3. When temporary appointments are made as authorized by the Fourth Section of the General Mint law, the fact of such appointment, and the cause of it, will be reported to the Secretary of the Treasury, through the Director of the Mint.

4. Visits for information, or to witness the operations of the Mint, may be permitted by the chief officer of the institution, in such manner, however, as to cause no interruption to the officers, clerks, and workmen, in their appropriate duties, or occasion exposure of the precious metals or coin.

5. The chief officer at each institution will, at the end of each month, make an examination similar to that presented by the Twelfth Section of the Act of the 6th of August, 1846, and make a report thereof through the Director to the Treasury Department. A similar report will be made by the Director in respect to the principal Mint.

6. An examination will also be made at the end of each quarter, and oftener, if necessary, of the general condition of the respective institutions, and the manner in which the operations have been conducted; a report of which examination shall be made as above provided.

7. Care will be taken to secure the bullion and coin either in locked pans or boxes, with spring locks, during the usual minting or bar-making process; and at the end of each day's operations, such bullion and coin shall be carefully placed in the vaults of the institution.

8. No profit can accrue to any officer, clerk, or workman of these institutions, by reason of the legitimate operations thereof; and no private or extra official work can be done therein, with or without compensation or reward, by any such officer, clerk, or workman. If this rule be violated by any officer or clerk, the fact shall be reported to the Treasury Department. If violated by any workman, he will be forthwith dismissed.

9. The number of workmen employed shall be regulated by the amount of work to be performed; a due regard being had to economy and the public service.

10. The several officers who are charged with the custody of bullion shall be debited and credited with the same, in the manner prescribed in the general Mint law, and the subsequent enactments on that subject.

11. Each officer will keep a regular set of books, showing their transactions with each other; and the operative officers will keep pass-books of their daily transactions with the Treasurer, and will, at the end of every week, compare their accounts with those kept by the Treasurer. This last-named officer will ascertain, at the close of each day, the amount of coin in his hands.

12. A sufficient number of trustworthy persons will be employed as watchmen, doorkeepers, &c. The watchmen will relieve the messengers in charge at 6 o'clock, P. M., and will in their turn be relieved by the messengers in charge at 6 o'clock, A. M. Rounds will be prescribed by the Director (or Superintendent), who will devise such mode of securing proper vigilance, on the part of watchmen and others, as he may deem expedient.

13. The messengers, doorkeepers, &c., at the end of office hours, and the workmen, at the end of working hours, will severally close the doors, window-shutters, and other fastenings, and put everything in its proper place and in a state of security, in their respective portions of the building. At the end of working hours, the messengers and doorkeepers in charge of the buildings shall make a careful examination throughout, to see that the fastenings are secure, the fires safe, and no one concealed in the building. When relieved by the watchmen at 6 o'clock, P. M., the watchmen shall repeat the same inspection and examination, and the messengers and doorkeepers, as soon as they relieve the watchmen, at 6 o'clock, A. M., will again repeat this inspection.

14. The watchmen will be furnished with fire and other arms kept in constant readiness for immediate use.

15. Such holidays will be allowed as are usual at the place where the Mint, Branch, or Assay Office is situated, and the afternoons of Saturdays, from 2 o'clock.

16. The principal officer of each department of business will report to the Director (or Superintendent) any instance of neglect of duty, or want of fidelity, in any of the persons employed in his department, and also make a like report if he has reason to suspect the integrity of any person so employed. This information will be communicated as soon as it comes to the knowledge of the officer, and without any delay.

17. The Chief Coiner will prepare and present, at the end of each month, a statement exhibiting the loss or wastage in each of the operations of his department, as follows:—1. Loss in rolling, including annealing, 2. Loss in cutting. 3. Loss in adjusting, assorting, and milling. 4. Loss in cleaning and whitening. 5. Loss in striking, if any.

18. The Melter and Refiner will prepare, and present at the end of each month, a statement exhibiting the amount of gold and silver bullion operated upon, and the result of his enquiries, checks and weighings, to ascertain the wastings thereon.

19. These statements will show the amount of bullion operated upon, the aggregate loss, and the loss per thousandth.

20. It shall be at the option of the Director (or Superintendent at a Branch Mint) to permit or require work of the men before or after the prescribed hours; but for all such over-work, or where more than ten hours labor is performed, extra pay shall be allowed, at the rate of one-tenth of a day's wages per hour.

21. A roll shall be kept by each officer, to be noted day by day, of the actual attendance of the workmen employed in his proper branch of business, which will be reported, at the end of each month, to the Director (or Superintendent). He will also make to such officer, at the end of each month, a confidental report, for the purpose of keeping him advised of the habits of attention, the skill, sobriety and fidelity of each workman, or the reverse. This report must be in writing, and presented as soon after the close of each month as it can conveniently be prepared.

22. The hours for commencing and ending work will be communicated to the workmen by their respective officers.

23. The bell shall be rung by the doorkeepers at the hours prescribed for commencing and ending work, and at 12 o'clock.

24. During the working hours, none of the men can leave the institution without permission from their officers, and it shall be the duty of the foremen to report to their officers any absences during such hours.

25. If any foreman or workman is absent without leave of his proper officer, a deduction shall be made from such person's wages, if for part of a day, at the rate of one-tenth of a day's wages per hour; and any absences without such leave, either for part of a day or for one or more days, shall be a cause of dismissal, on the report of the proper officer to the Director (or Superintendent). Applications for leave of absence shall be made in writing, stating the cause of such application. If the officer in whose department such applicant is employed is of opinion that the reasons are satisfactory, he will so endorse it, whereupon it will be presented to the Director (or Superintendent) for his action thereon.

26. A reasonable time will be allowed for dinner, which will be brought to the building by the men; but, if sent to them, must be received and distributed by the messengers and door-keepers.

27. The workmen must not pass from the rooms in which they are employed into those appropriated for other operations.

28. Smoking is prohibited in the Mint and its Branches.

I.

Provisions of the Constitution of the United States.

Constitutional provisions as to coinage and legal tender.

The Congress shall have power to coin money; regulate the value thereof, and of foreign coins; and fix the standard of weights and measures. (Art. 1, Sec. 8.)

No State shall coin money, or make anything but gold and silver a legal tender in payment of debts. (Art. I, Sec. 10.)

Part II.—Acts establishing and locating Mint of U.S. and its Branches.

II.

April 2, 1792.

Establishment and Location of the Mint.

Establishment and location of the Mint.

Be it enacted, &c., That a Mint, for the purpose of a national coinage, be and the same is established, to be situate and carried on at the seat of government of the United States for the time being. (Act of April 2d, 1792: the seat of government being then at Philadelphia.)

May 14, 1800.

Be it enacted, &c., That until the 4th day of March 1801 the Mint shall remain in the city of Philadelphia, and be carried on as heretofore, under the laws now in force, any law to the contrary notwithstanding. (Act of May 14th, 1800.)

March 3, 1801.

Be it enacted, &c., That the Mint shall remain in Philadelphia, until the 4th day of March, in the year 1803. (Act of March 3d, 1801.)

This act was revived and continued in force and operation, for successive periods of five years, until the 4th of March 1828, when the location of the Mint at Philadelphia was made permanent by the following enactment:

May 19, 1828.

Be it enacted, &c., That the act entitled "An Act concerning the Mint," approved March the third, one thousand eight hundred and one, be and the same hereby is revived and continued in force and operation until otherwise provided by law. (Act of May 19th, 1828, Sec. 1.)

III.

Act to establish Branches of the Mint of the United States.

March 3, 1835.

Branch Mints established at New Orleans, Charlotte, and Dahlonega.

Be it enacted, &c., That branches of the Mint of the United States shall be established as follows: one branch at the city of New Orleans for the coinage of gold and silver; one branch at the town of Charlotte in Mecklenburg county in the State of North Carolina, for the coinage of gold only: and one branch at or near Dahlonega in Lumpkin county, in the State of Georgia, also for the coinage of gold only. And for the purpose of purchasing sites, erecting suitable buildings, and completing the necessary combinations of machinery for the several branches aforesaid, the following sums, to be paid out of any money in the Treasury not otherwise appropriated, shall be and are hereby appropriated: for the branch at New Orleans, the sum of two hundred thousand dollars; for the branch at Charlotte, fifty thousand dollars; and for the branch at Dahlonega, fifty thousand dollars.

Officers thereof.

Sect. 2.—And be it further enacted, That so soon as the necessary buildings are erected, for the well conducting the business of each of the said branches, the following officers shall be appointed upon the nomination of the President, and with the advice and consent of the Senate: one Superintendent, one Treasurer, one Assayer, one Chief Coiner, one Melter, and one Refiner.* And the Superintendent of each Mint shall engage and employ as many clerks and as many subordinate workmen and servants as shall be provided for by law; and the salaries of the said officers and clerks shall be as follows:—For the Branch Mint at New Orleans; to the Superintendent, the sum of two thousand five hundred dollars; to the Treasurer, the sum of two thousand dollars; to the Chief Coiner, the sum of two thousand dollars; to the Assayer, Melter, and Refiner, the sum of two thousand dollars each; to two clerks, the sum of twelve hundred dollars each; to the subordinate workmen and servants, not exceeding twenty in number, such wages and allowances as are customary and reasonable, according to their respective stations and occupations. For the branches at Charlotte and Dahlonega; to the Superintendents, each the sum of two thousand dollars, who shall respectively discharge the duty of Treasurers; to the Chief Coiners, each the sum of one thousand five hundred dollars; to the Assayers, Melters, and Refiners, each the sum of one thousand five hundred dollars; to the clerks, not exceeding one at each Branch, the sum of one thousand dollars; and to the subordinate workmen and servants, not exceeding the number of five at each of the said Branches, such wages and allowances shall be paid as are customary and reasonable, according to their respective stations and occupations. And for the purpose of paying the said salaries, wages, allowances, and the incidental expenses of the said Branches of the Mint for the year one thousand eight hundred and thirty-five, the following sums, to be paid out of any money in the Treasury not otherwise appropriated, be and the same hereby are appropriated: for the Branch at New Orleans, the sum of thirty-five thousand dollars; for the Branches at Charlotte and Dahlonega, the sum of fifteen thousand dollars each.

*See following Act of Feb. 13, 1837 modified by Act of March 3, 1851. See p. 292.

Oath of officers.

Sect. 3.—And be it further enacted, That the officers and clerks to be appointed under this act, before entering upon the duties thereof, shall take an oath or affirmation before some judge of the United States faithfully and diligently to perform the duties thereof; and shall each become bound to the United States of America, with one or more sureties to the satisfaction of the Director of the Mint and the Secretary of the Treasury, with conditions for the faithful and diligent performance of the duties of their offices. (This section is amended by Act of April 2, 1844, see p. 281.)

Bond and security required.

Director of the Mint at Philadelphia to have general control of the Branch Mints; his duties for that purpose.

Sect. 4.—And be it further enacted, That the general direction of the business of the said Branches of the Mint of the United States shall be under the control and regulation of the Director of the Mint at Philadelphia, subject to the approbation of the Secretary of the Treasury; and for that purpose it shall be the duty of the said Director to prescribe such regulations, and require such returns, periodically and occasionally, as shall appear to him to be necessary, for the purpose of carrying into effect the intention of this act in establishing the said Branches; also for the purpose of discriminating the coins which shall be stamped at each Branch, and at the Mint itself; also for the purpose of preserving uniformity of weight, form, and fineness in the coins stamped at each place; and for that purpose to require the transmission and delivery to him at the Mint, from time to time, of such parcels of the coinage of each Branch as he shall think proper, to be subjected to such assays and tests as he shall direct.

Laws for the regulation of the Mint of the United States extended to the Branches.

Sect. 5.—And be it further enacted, That all the laws and parts of laws made for the regulation of the Mint of the United States, and for the government of the officers and persons employed therein, and for the punishment of all offences connected with the Mint or coinage of the United States shall be and the same are hereby declared to be in full force, in relation to each of the Branches of the Mint by this act established, so far as the same shall be applicable thereto. (Act of March 3d, 1835.)

IV.

Amendments to the foregoing Act establishing Branch Mints. Feb. 13, 1837.

Amendment declaring the officers of the Branch Mints; their duties and salaries.

*See following Act of Feb. 27, '43.

Be it enacted, &c., That the officers of the Branch Mint at New Orleans shall be one Superintendent, one Treasurer, one Assayer, one Melter and Refiner, and one Coiner; and that the officers of the Branch Mints at Charlotte and Dahlonega, severally, shall be one Superintendent, who shall also perform the duties of Treasurer; one Assayer, who shall also perform the duties of Melter and Refiner;* and one Coiner. And the annual salaries of the said officers shall be as follows: for the Branch at New Orleans, to the Superintendent two thousand five hundred dollars; to the Treasurer, the Assayer, the Melter and Refiner, and the Coiner, each two thousand dollars; for the Branches at Charlotte and at Dahlonega, to the Superintendent two thousand dollars; and to the Assayer and the Coiner, each fifteen hundred dollars.

Sect. 2.—And be it further enacted, That so much of the act, entitled "An Act to establish Branches of the Mint of "the United States," approved the third day of March, one thousand eight hundred and thirty-five, as is inconsistent with the provisions of this act, be and the same is hereby repealed. (Act of Feb. 13th, 1837.)

Feb. 27, 1843.

Be it enacted, &c., That an act passed the thirteenth day of February, one thousand eight hundred and thirty-seven, to amend an act, entitled "An Act to establish Branches of "the Mint of the United States," passed the third day of

* Printed at Philadelphia in 1867.

Duties of melter and refiner of the Branch Mints at Dahlonega and Charlotte imposed upon the coiners.

March, one thousand eight hundred and thirty-five, be and is hereby altered and amended, so as to transfer the duties of melter and refiner from the assayer to the coiner, at the Branches of Dahlonega in Georgia, and of Charlotte in North Carolina, respectively, and that all laws and parts of laws conflicting with this act be and they are hereby repealed. (Act of Feb. 27th, 1843.)

April 2, 1844. Oath required of officers and clerks of Branch Mints, how to be taken.

Be it enacted, &c., That the oath or affirmation required by the third section of an act passed March third, eighteen hundred and thirty-five, entitled "An Act to establish "Branches of the Mint of the United States," may be taken before any judge of the superior court, or of any court of record, in the State where the Branch of which the person taking said oath is an officer or clerk, is situated. (Act of April 2d, 1844.)

V.

Providing for an U. S. Assayer in California.

Sept. 30, 1850. Secretary of Treasury authorized to contract with assaying works in California, to assay and fix the value of gold, under supervision of the State Assayer.

The Secretary of the Treasury be and he is hereby authorized and directed to contract, upon the most reasonable terms, with the proprietors of some well established assaying works now in successful operation in California, upon satisfactory security, to be judged by the Secretary of the Treasury, who shall, under the supervision of the United States assayer, to be appointed by the President, by and with the advice and consent of the Senate, perform such duties in assaying and fixing the value of gold in grain and lumps, and forming the same into bars, as shall be prescribed by the Secretary of the Treasury, and that the said United States assayer shall cause the stamp of the United States, indicating the degree of fineness and value, to be affixed to each bar or ingot of gold that may be issued from the establishment. Provided that the United States shall not be held responsible for the loss of any gold deposited with said proprietors for assay.* (Act of September 30th, 1850.)

Proviso. *Repealed by the 9th sect. of Act of July 3, 1852, following.

VI.

July 3, 1852.

Act establishing a Branch Mint in California.

Branch Mint established in California.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That a Branch of the Mint of the United States be established in California, to be located by the Secretary of the Treasury, for the coinage of gold and silver.

Building to be procured. Officers to be appointed.

SECT. 2.—And be it further enacted, That suitable buildings shall be procured or erected for carrying on the business of said Branch Mint, and the following officers shall be appointed so soon as the public interests may require their services, upon the nomination of the President, and with the advice and consent of the Senate, to wit; one Superintendent, one Treasurer, one Assayer, one Melter and Refiner, and one Coiner. And the said Superintendent shall engage and employ as many clerks and as many subordinate workmen and servants as shall be provided for by law. And until the 30th of June, one thousand eight hundred and fifty-five, the salaries of said officers and clerks shall be as follows: to the Superintendent and to the Treasurer, the sum of four thousand five hundred dollars each; to the Assayer, to the Melter and Refiner, and to the Coiner, the sum of three thousand dollars each; to the clerks, the sum of two thousand dollars each; to the subordinate workmen such wages and allowance as are customary and reasonable, according to their respective stations and occupations.

Workmen to be engaged.

Salaries of officers.

Wages of workmen.

Security required of officers and clerks.

SECT. 3.—And be it further enacted, That the officers and clerks to be appointed under this act, before entering upon the duties thereof, shall take an oath or affirmation before some judge of the United States or of the Supreme Court of the State of California, faithfully and dilligently to perform the duties thereof, and shall each become bound to the United States of America, with one or more sureties, to the satisfaction of the Director of the Mint and the Secretary of the Treasury or the District Attorney of the United States, for the State of California, with conditions for the faithful and diligent performance of their offices.

Director of the Mint to have control of the Branch Mint.

His duties for that object.

SECT. 4.—And be it further enacted, That the general direction of the business of said Branch of the Mint of the United States shall be under the control and regulation of the Director of the Mint at Philadelphia, subject to the approbation of the Secretary of the Treasury; and for that purpose it shall be the duty of the said Director to prescribe such regulations, and require such returns periodically and occasionally, as shall appear to him to be necessary for the purpose of carrying into effect the intention of this act in establishing the said Branch; also for the purpose of discriminating the coin which shall be stamped at said Branch and at the Mint itself; and also for the purpose of preserving uniformity of weight, form, and fineness, in the coins stamped at said Branch; and for that purpose to require the transmission and delivery to him at the Mint, from time to time, of such parcels of the coinage of said Branch as he shall think proper, to be subjected to such assays and tests as he shall direct.

Laws regulating the Mint to be applied to said Branch.

SECT. 5.—And be it further enacted, &c., That all the laws and parts of laws now in force for the regulation of the Mint of the United States, and for the government of the officers and persons employed therein, and for the punishment of all offences connected with the Mint or coinage of the United States, shall be and they are hereby declared to be in full force in relation to the Branch of the Mint by this act established, so far as the same may be applicable thereto.

Branch to be exempt from State taxation.

SECT. 6.—And be it further enacted, That no permanent location of said Mint shall be made or buildings erected therefor until the State of California shall, by some law or other public act, pledge the faith of the State that no tax shall at any time be laid, assessed, or collected by the said State, or under the authority of the said State, on the said Branch Mint, or on the buildings which may be erected therefor, or on the fixtures and machinery which may be used therein, or on the lands on which the same may be placed; but nothing in this section contained shall be understood as implying an admission that any such power of taxation rightfully exists.

To be place of deposit for public money, the Treasurer to perform the duties of Assistant Treasurer.

SECT. 7.—And be it further enacted, That the said Branch Mint shall be the place of deposit for the public moneys collected in the custom houses in the State of California, and for such other public moneys as the Secretary of the Treasury may direct; and the Treasurer of said Branch Mint shall have the custody of the same, and shall perform the duties of an Assistant Treasurer, and for that purpose shall be subject to all the provisions contained in an act entitled "An Act to provide for the "better organization of the Treasury, and for the "collection, safe keeping, transfer, and disbursement "of the public revenue," approved August the sixth, one thousand eight hundred and forty-six, which relates to the Treasurer of the Branch Mint at New Orleans.

Gold to be issued in assayed bars or ingots.

SECT. 8.—And be it further enacted, That, if required by the holder, gold in grain or lumps shall be refined, assayed, cast into bars or ingots, and stamped in said Branch Mint or in the Mint of the United States or any of its branches, in such manner as may indicate the value and fineness of the bar or ingot, which shall be paid for by the owner or holder of said bullion, at such rates and charges and under such regulations as the Director of the Mint, under the control of the Secretary of the Treasury, may from time to time establish.

Act providing for U. S. Assayer in California repealed when this Act takes effect.

SECT. 9.—And be it further enacted, That so soon as the said Branch Mint is established in the State of California, and public notice shall be given thereof in the mode to be designated by the Secretary of the Treasury, then so much of the act making appropriations for the civil and diplomatic expenses of the government for the year ending 30th June 1851, and for other purposes, as provides for the appointment of an United States Assayer, and the contracting for the assaying and fixing the value of gold in grains or lumps, and for forming the same into bars, be and the whole of the clause containing said provisions shall be hereby repealed.

Building and machinery not to exceed $300,000.

SECT. 10.—And be it further enacted, That before the Secretary of the Treasury shall procure or erect the buildings provided for in the second section of this act, or commence operations under any of the provisions of the same, at San Francisco, State of California, it shall first be his duty to make a contract or contracts for the erection of said buildings, and procuring the machinery necessary for the operations of said Mint, at a sum or sums which shall not in the whole exceed the sum of three hundred thousand dollars, which said contract or contracts shall be secured by good and sufficient sureties, to the satisfaction of the said Secretary of the Treasury and the President of the United States. (Act of July 3d, 1852, c. 54.)

March 3, 1853. No building to be purchased for said Branch.

And be it further enacted, That the time for receiving bids under the act of third of July, one thousand eight hundred and fifty-two, for the erection of a Mint in California, be extended to the first of April, one thousand eight hundred and fifty-three, and that the sum of three hundred thousand dollars appropriated by said act, or so much thereof as may be necessary, shall be applied only to the erection and putting in operation a Mint in California, and not to the purchase of any building for that purpose. (Act of March 3d, 1853, c. 96, s. 6.)

VII.

Establishing an Assay Office in New York.

March 4, 1853.

Assay office established in New York.

SECT. 10.—And be it further enacted, That the Secretary of the Treasury is hereby authorized and required to

APPENDIX, No. 12.

Gold Coinages and Mint Regulations.

United States.

establish in the city of New York an office for the receipt, and for the melting, refining, parting, and assaying of gold and silver bullion and foreign coins, and for casting the same into bars, ingots, or disks. The Assistant Treasurer of the United States in New York shall be Treasurer of the said assay office; and the Secretary of the Treasury shall, with the approbation and consent of the President of the United States, appoint such other officers and clerks, and authorize the employment of such assistants, workmen, and servants as shall be necessary for the proper conduct and management of the said office, and of the business pertaining thereto, at such compensation as shall be approved by the President: Provided, that the same shall not exceed that allowed for corresponding services under existing laws relating to the Mint of the United States and its Branches.

Officers, clerks, and workmen. Their compensation.

Deposits, how received and treated.

SECT. 11.—And be it further enacted, That the owner or owners of any gold or silver bullion, in dust or otherwise, or of any foreign coin, shall be entitled to deposit the same in the said office, and the Treasurer thereof shall give a receipt, stating the weight and description thereof, in the manner and under the regulations that are or may be provided in like cases of deposits at the Mint of the United States with the Treasurer thereof. And such bullion shall without delay be melted, parted, refined, and assayed, and the net value thereof, and of all foreign coins deposited in said office, shall be ascertained, and the Treasurer shall thereupon forthwith issue his certificate of the net value thereof, payable in coins of the same metal as that deposited, either at the office of the Assistant Treasurer of the United States in New York, or at the Mint of the United States, at the option of the depositor, to be expressed in the certificate, which certificates shall be receivable at any time within sixty days from the date thereof, in payment of all debts due to the United States at the port of New York for the full sum therein certified. All gold or silver bullion and foreign coin deposited, melted, parted, refined or assayed as aforesaid shall, at the option of the depositor, be cast in the said office into bars, ingots, or disks, either of pure metal or of standard fineness (as the owner may prefer), with a stamp thereon of such form and device as shall be prescribed by the Secretary of the Treasury, accurately designating its weight and fineness: Provided, that no ingot, bar, or disk shall be cast of less weight than five ounces, unless the same be of standard fineness, and of either one, two, or three ounces in weight. And all gold or silver bullion, and foreign coin, intended by the depositor to be converted into the coins of the United States, shall, as soon as assayed and its net value certified as above provided, be transferred to the Mint of the United States, under such directions as shall be made by the Secretary of the Treasury, and at the expense of the contingent fund of the Mint, and shall there be coined. And the Secretary of the Treasury is hereby authorized, with the approval of the President of the United States, to make the necessary regulations for the adjustment of the accounts between the respective officers, upon the transfer of any bullion or coin between the assay office, the Mint and Assistant Treasurer in New York.

Where certificates of deposit payable.

Receivable for U. S. dues at New York.

Bullion may be cast into bars if required.

Bullion to be transferred to the Mint for coinage.

Adjustments of accounts on transfers of bullion.

Assay office under general direction of the Director of the Mint.

SECT. 12.—And be it further enacted, That the operations of melting, parting, refining, and assaying in the said office shall be under the general directions of the Director of the Mint, in subordination to the Secretary of the Treasury; and it shall be the duty of the said Director to prescribe such regulations and to order such tests as shall be requisite to insure faithfulness, accuracy, and uniformity in the operations of the said office.

Laws relative to the Mint to be applied to assay office.

SECT. 13.—And be it further enacted, That the laws of the United States for the government of the Mint and its officers in relation to the receipt, payment, custody of deposits, and settlement of accounts, the duties and responsibilities of officers and others employed therein, the oath to be taken and the bond and sureties to be given by them (as far as the same may be applicable) shall extend to the assay office hereby established, and to its officers, assistants, clerks, workmen and others employed therein.

Of charges at said office.

SECT. 14.—And be it further enacted, That the same charges shall be made and demanded at the said assay office for refining, parting, casting into bars, ingots, or disks, and for alloy, as are or shall be made and demanded at the Mint; and no other charges shall be made to depositors than by law are authorized to be made at the Mint; and the amount received from the charges hereby authorized shall be accounted for and appropriated for defraying the contingent expenses of the said office.

Of the building and machinery for assay office.

SECT. 15.—And be it further enacted, that the Secretary of the Treasury is authorized to procure, by rent, lease, or otherwise, a building or apartments in the city of New York, suitable for the operations of said office, unless he shall be of opinion that suitable apartments in the custom house in that city may be assigned for this purpose. And he is also hereby authorized and directed to procure the necessary machinery and implements for the carrying on the operations and business of the said office.

Salary of Assistant Treasurer to be increased.

SECT. 16.—And be it further enacted, That the salary of the Assistant Treasurer of the United States in New York, from and after the time that the said office shall be opened and in operation, shall be six thousand dollars per annum, instead of the sum now allowed.—(Act of March 4th, 1853, c. 97, § 10 to 16.)

Appropriations for assay office.

SECT. 1.—* * * * For carrying into effect the provisions of this act establishing an assay office in the city of New York, in addition to the charges authorized to be received, one hundred thousand dollars is hereby appropriated out of any money in the Treasury not otherwise appropriated. * * * * *—(Act of March 4th, 1853, c. 97.)

VIII.

Act to establish a Branch Mint of the United States at Denver, Col.

April 21, 1862.

Branch Mint at Denver to coin gold.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That a branch of the Mint of the United States be located and established at Denver, in the Territory of Colorado, for the coinage of gold.

Officers of Mint.

SECT. 2.—And be it further enacted, That for carrying on the business of said branch, the following officers shall be appointed as soon as the public interest shall require their service, upon the nomination of the President, by and with the advice and consent of the Senate; namely, one Superintendent, one Assayer, one Melter and Refiner, and one Coiner; and the said Superintendent shall employ as many clerks, subordinate workmen, and labourers, under the direction of the Secretary of the Treasury, as may be required. The salaries of the said officers shall be as follows: to the Superintendent, the sum of two thousand dollars; to the Assayer, the sum of eighteen hundred dollars; to the Melter and Refiner, eighteen hundred dollars; to the Coiner, eighteen hundred dollars; to the clerks, subordinate workmen, and labourers, such wages and allowances as are customary, according to their respective stations and occupations.

Pay.

Oath and bond of officers.

SECT. 3.—And be it further enacted, That the officers and clerks to be appointed under this Act, before entering upon the execution of their offices, shall take an oath or affirmation, before some judge of the United States of the supreme court of said Territory, faithfully and diligently to perform the duties of their offices, and shall each become bound to the United States of America, with one or more sureties, to the satisfaction of the Director of the Mint, or the Secretary of the Territory of Colorado and of the Secretary of the Treasury, with the condition of the faithful performance of the duties of their offices.

Branch to be under control of the Director of Mint, &c.

SECT. 4.—And be it further enacted, That the general direction of the business of the said branch of the Mint of the United States shall be under the control and regulation of the Director of the Mint at Philadelphia, subject to the approbation of the Secretary of the Treasury; and for that purpose it shall be the duty of the said Director to prescribe such regulations and require such returns periodically and occasionally, and to establish such charges for parting, assaying, refining, and coining, as shall appear to him to be necessary for the purpose of carrying into effect the intention of this Act in establishing said branch; also for the purpose of preserving uniformity of weight, form, and finish in the coin stamped at said branch.

Director to prescribe regulations, &c.

Branch Mint to be deposit for public moneys.

SECT. 5.—And be it further enacted, That said branch mint shall be a place of deposit for such public moneys as the Secretary of the Treasury may direct. And the Superintendent of said branch mint, who shall perform the duties of treasurer thereof, shall have the custody of the same, and also perform the duties of assistant treasurer; and for that purpose shall be subject to all the provisions contained in an act entitled "An Act to provide for the "better organization of the treasury, and for the collection, "safe keeping, transfer, and disbursement of the public "revenue," approved August 6, 1846, which relates to the treasury of the branch mint at New Orleans.

1846, ch. 90, vol. ix. p. 59.

Certificates of deposit may be issued in payment for deposits for coinage.

SECT. 6.—And be it further enacted, That the Superintendent of said branch mint be authorized, under the direction of the Secretary of the Treasury, and on terms to be prescribed by him, to issue in payment of the gold dust and bullion deposited for assay and coinage or bars, drafts or certificates of deposit, payable at the Treasury or any Sub-Treasury of the United States, to any depositor electing to receive payment in that form.

Laws for regulation of Mint applicable to branch.

SECT. 7.—And be it further enacted, That all the laws and parts of laws now in force for the regulation of the Mint of the United States, and for the government of the officers and persons employed therein, and for the

punishment of all offences connected with the Mint or coinage of the United States, shall be and they are hereby declared to be in full force in relation to the branch of the Mint by this Act established, as far as the same may be applicable thereto.

Appropriation.

SECT. 8.—And be it further enacted, That the sum of $75,000 be and the same is hereby appropriated, out of any money in the Treasury not otherwise appropriated, to carry into effect the provisions of this Act, and to meet the expenses of the current year and for the fiscal year ending 30th of June 1863.

Approved, April 21, 1862.

IX.

March 3, 1863.

Title to Property in Denver, Colorado Territory, for the purposes of a Branch Mint.

Secretary of the Treasury to receive conveyance of rights of grantors to certain lots in Denver.

Resolved, &c., That the Secretary of the Treasury be and he is hereby authorized to receive and accept from said Clarke, Gruber, and Company such relinquishments and conveyances of their right or claim to said lots and property as he, the said Secretary, shall deem sufficient for the extinguishment of any claim, right, or title which the said Clarke, Gruber, and Company may or can have thereto.

Lots to be reserved from sale, &c.

And said lots and property shall thereafter be reserved from public sale, pre-emption or homestead settlement, and shall remain the property of the United States.

Approved, March 3, 1863.

X.

March 3, 1863.

An Act to establish a Branch Mint of the United States in the Territory of Nevada.

Branch Mint established at Carson City, Nevada.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That a Branch of the Mint of the United States be located and established at Carson City, in the Territory of Nevada, for the coinage of gold and silver.

President to appoint officers of Mint.

SECT. 2.—And be it further enacted, That for carrying on the business of said Branch the following officers shall be appointed, as soon as the public interest shall require their service, upon the nomination of the President, by and with the advice and consent of the Senate; namely, one Superintendent, one Assayer, one Melter and Refiner, and one Coiner; and the said Superintendent shall employ as many clerks, subordinate workmen, and labourers, under the direction of the Secretary of the Treasury, as may be required. The salaries of the said officers shall be as follows: to the Superintendent, the sum of two thousand dollars; to the Assayer, the sum of eighteen hundred dollars; to the Melter and Refiner, eighteen hundred dollars; to the clerks, subordinate workmen, and labourers, such wages and allowances as are customary, according to their respective stations and occupations.

Salaries.

Officers and clerks to take the oath.

SECT. 3.—And be it further enacted, that the officers and clerks to be appointed under this Act, before entering upon the execution of their offices, shall take an oath or affirmation, before some judge of the United States or of the supreme court of said Territory, faithfully and diligently to perform the duties of their offices, and shall each become bound to the United States of America, with one or more sureties, to the satisfaction of the Director of the Mint, or the Secretary of the Territory of Nevada, and of the Secretary of the Treasury, with the condition of the faithful performance of the duties of their offices.

Bond.

Director of Mint to direct business of Branch.

SECT. 4.—And be it further enacted, That the general direction of the business of said Branch of the Mint of the United States shall be under the control and regulation of the Director of the Mint at Philadelphia, subject to the approbation of the Secretary of the Treasury; and for that purpose it shall be the duty of the said Director to prescribe such regulations and require such returns periodically and occasionally, and to establish such charges for parting, assaying, refining, and coining as shall appear to him to be necessary for the purpose of carrying into effect the intention of this Act in establishing said Branch; also for the purpose of preserving uniformity of weight, form, and finish in the coin stamped at said Branch.

Branch Mint to be place of deposit for public moneys.

Superintendent to have custody.

SECT. 5.—And be it further enacted, That said Branch Mint shall be a place of deposit for such public monies as the Secretary of the Treasury may direct. And the Superintendent of said Branch Mint, who shall perform the duties of Treasurer thereof, shall have the custody of the same, and also perform the duties of Assistant Treasurer; and for that purpose shall be subject to all the provisions contained in an Act, entitled "An Act to provide for a "better organization of the Treasury, and for the collection, safe keeping, transfer, and disbursement of the "public revenue," approved August 6, 1846, which relates to the Treasury of the Branch Mint at New Orleans.

1846, ch. 90, vol. ix. p. 59.

SECT. 6.—And be it further enacted, That the Superintendent of said Branch Mint be authorized, under the direction of the Secretary of the Treasury, and on terms to be prescribed by him, to issue, in payment of the gold dust and bullion deposited for assay and coinage or bars, drafts or certificates of deposit, payable at the Treasury or any Sub-Treasury of the United States, to any depositor electing to receive payment in that form.

Superintendent may pay for dust, &c. deposited by drafts or certificates of deposit.

SECT. 7.—And be it further enacted, That all the laws and parts of laws now in force for the regulation of the Mint of the United States, and for the government of the officers and persons employed therein, and for the punishment of all offences connected with the Mint or coinage of the United States, shall be and they are hereby declared to be in full force in relation to the Branch of the Mint by this Act established, as far as the same may be applicable thereto.

Laws regulating Mint, &c. made applicable to this Branch.

SECT. 8.—And be it further enacted, That the sum of $100,000 be and the same is hereby appropriated, out of any money in the Treasury not otherwise appropriated, to carry into effect the provisions of this Act, and to meet the expenses of the current year and for the fiscal year ending the 30th June 1864.

Appropriation to carry this Act into effect.

Approved, March 3, 1863.

XI.

An Act to establish a Branch Mint of the United States at Dalles City, Oregon. July 4, 1864.

Be it enacted, &c., That a Branch of the Mint of the United States be located and established at Dalles City, in the State of Oregon, for the coinage of gold and silver.

Branch Mint established at Dalles City, Oregon.

SECT. 2.—And be it further enacted, That for carrying on the business of the said Branch, the following officers shall be appointed, as soon as the public interest shall require their service, upon the nomination of the President, by and with the advice and consent of the Senate; namely, one Superintendent, one Assayer, one Melter and Refiner, and one Coiner; and the Superintendent shall employ as many clerks, subordinate workmen, and labourers, under the direction of the Secretary of the Treasury, as may be required. The salaries of the said officers and clerks shall be as follows: to the Superintendent, the sum of two thousand dollars; to the Assayer, the sum of eighteen hundred dollars; to the Melter and Refiner, eighteen hundred dollars; to the clerks, subordinate workmen, and labourers, such wages and allowances as are customary, according to their respective stations and occupations.

Officers of the Branch Mint.

Salaries.

SECT. 3.—And be it further enacted, That the officers and clerks to be appointed under this act, before entering upon the execution of their offices, shall take an oath or affirmation before some judge of the United States or of the supreme court of said State, faithfully and diligently to perform the duties of their offices, and shall each become bound to the United States of America, with one or more sureties, to the satisfaction of the Director of the Mint, or the district judge of the United States for the District of Oregon, and of the Secretary of the Treasury, with the condition of the faithful performance of the duties of their offices.

Officers, &c. to take oath.

SECT. 4.—And be it further enacted, That the general direction of the business of said Branch Mint of the United States shall be under the control and regulation of the Director of the Mint at Philadelphia, subject to the approbation of the Secretary of the Treasury; and for that purpose it shall be the duty of the said Director to prescribe such regulations, and to require such returns, periodically and occasionally, and to establish such charges for parting, assaying, refining, and coining, as shall appear to him to be necessary for the purpose of carrying into effect the intention of this Act in establishing said Branch, also for the purpose of preserving uniformity of weight, form, and finish in the coin stamped at said Branch.

Branch to be under the control, &c. of the Director of the Mint.

Rules and regulations.

SECT. 5.—And be it further enacted, That said Branch Mint shall be a place of deposit for such public monies as the Secretary of the Treasury may direct. And the Superintendent of said Branch Mint, who shall perform the duties of treasurer thereof, shall have the custody of the same, and also perform the duties of assistant treasurer, and for that purpose shall be subject to all the provisions contained in an Act entitled "An Act to provide for the "better organization of the Treasury, and for the collection, "safe keeping, transfer, and disbursement of the public "revenue," approved August 6, 1846, which relates to the treasury of the Branch Mint at New Orleans.

Branch Mint to be a place of deposit for public moneys.

Superintendent to be Assistant Treasurer.

1846, ch. 90, vol. ix. p. 59.

SECT. 6.—And be it further enacted, That the Superintendent of said Branch Mint be authorized, under the direction of the Secretary of the Treasury, and on terms to be prescribed by him, to issue in the payment of the gold dust and bullion deposited for assay and coinage or bars, drafts or certificates of deposit, payable at the Treasury

Certificates of deposit may be paid for gold dust and bullion.

APPENDIX, No. 12.

Gold Coinages and Mint Regulations.

United States.

or any Sub-Treasury of the United States, to any depositor electing to receive payment in that form.

SECT. 7.—And be it further enacted, That all the laws and parts of laws now in force for the regulation of the Mint of the United States, and for the government of the officers and persons employed therein, and for the punishment of all offences connected with the Mint or coinage of the United States, shall be and they are hereby declared to be in full force in relation to the Branch of the Mint by this Act established, as far as the same may be applicable thereto.

Laws for regulation of Mint, &c. to apply to this Branch.

SECT. 8.—And be it further enacted, That the sum of $100,000 be and the same is hereby appropriated, out of any money in the Treasury not otherwise appropriated, to carry into effect the provisions of this act, and to meet the expenses of the current year, and for the fiscal year ending the 30th of June 1865.

APPROVED, July 4, 1864.

XII.

July 23, 1866. *Branch Mints at New Orleans, Charlotte, and Dahlonega, may be discontinued.*

Machinery, fixtures, &c. of Branch Mints at New Orleans, Charlotte, and Dahlonega, may be removed or sold.

The Secretary of the Treasury be and he is hereby authorized, at his discretion, to remove the whole or any portion of the machinery, apparatus, and fixtures of the Branch Mints of the United States at New Orleans, Charlotte, and Dahlonega, to such other Branch Mints as in his opinion may require the same, or at his discretion to discontinue the Branch Mint at New Orleans, Charlotte, and Dahlonega, and to dispose of the property belonging thereto, if he shall deem it expedient, at public auction, to the highest bidder. (Act of July 23, 1866.)

These Branch Mints may be discontinued.

PART III.—ACTS regulating U. S. Coins, their Denominations, Weights, Values, &c.

XIII.

April 2, 1792. *Money of Account of the United States.*

Money of account of the United States.

Be it enacted, &c., That the money of account of the United States shall be expressed in dollars or units, dismes or tenths, cents or hundredths, and mills or thousandths; a disme being the tenth part of a dollar, a cent the hundredth part of a dollar, a mill the thousandth part of a dollar; and that all accounts in the public offices, and all proceedings in the courts of the United States, shall be kept and had in conformity to this regulation. (Act of April 2d, 1792, Sec. 20.)

XIV.

April 2, 1792. *Gold Coins of ten, five, and two and a half dollars, and silver coins of one hundred, fifty, twenty-five, ten, and five cents authorized.*

Denominations and proportional values of coins of U. S.

Eagles.

Half Eagles.

Quarter Eagles.

Dollars.

Half dollars.

Quarter dollars.

Dismes.

Half dismes.

Cents.

Half cents.

Be it enacted, &c., That there shall be, from time to time, struck and coined at the said Mint, coins of gold, silver, and copper of the following denominations, values, and descriptions, viz.: EAGLES: each to be of the value of ten dollars, or units. * * * * HALF EAGLES: each to be of the value of five dollars. * * * * * * * QUARTER EAGLES: each to be of the value of two dollars and a half dollar. * * * * DOLLARS, or units: each to be of the value of a Spanish milled dollar, as the same is now current. * * * * HALF DOLLARS: each to be of half the value of the dollar, or unit. * * * * QUARTER DOLLARS: each to be of one-fourth the value of the dollar, or unit. * * * * DISMES: each to be of the value of one-tenth of a dollar, or unit. * * * * HALF DISMES: each to be of the value of one-twentieth of a dollar. * * * * CENTS: each to be of the value of the one-hundredth part of a dollar. * * * * HALF CENTS: each to be of the value of half a cent. * * * * (Act of April 2d, 1792, Sect. 9*. We have substituted asterisks for those parts of this section which are now obsolete, relating to the standard and weight of the coins. Sufficient particulars on this subject may be found under the head relating to the "Old standards and weights of coins," *infra*).

* See Acts of Mar. 3, '49, Mar. 3, '51, Feb. 21, 1853, pages 284 and 285.

XV.

April 2, 1792. *Old Standards and Weights of Coins.*

SILVER COINS.

Old standards and weights of silver coins.

Be it enacted, &c., That the standard for all silver coins of the United States shall be one thousand four hundred and eighty-five parts fine to one hundred and seventy-nine parts alloy, and accordingly that one thousand four hundred and eighty-five parts in one thousand six hundred and sixty-four parts of the entire weight of each of said coins shall consist of pure silver, and the remaining one hundred and seventy-nine parts of alloy, which alloy shall be wholly of copper. (Act of April 2d, 1792, Sect. 13.)—[This standard corresponds to 892·4 thousandths, nearly.]

By Sect. 9 of the same act, the weight of the dollar is fixed at four hundred and sixteen grains of the above standard, and the weight of the parts of the dollar in proportion.

This standard and weight were retained until the end of the year 1836, and the coins of this period are still legal tenders of payment.

GOLD COINS.

Old standards and weights of gold coins.

Be it enacted, &c., That the standard for all gold coins of the United States shall be eleven parts fine to one part alloy and accordingly that eleven parts in twelve of the entire weight of each of the said coins shall consist of pure gold, and the remaining one-twelfth part of alloy; and the said alloy shall be composed of silver and copper, in such proportions, not exceeding one-half silver, as shall be found convenient. (Act of April 2d, 1792, part of Sect. 12.)

This standard corresponds to twenty-two carats, or to 916$\frac{2}{3}$ thousandths.

By Sect. 9. of the same act, the weight of the eagle was fixed at two hundred and seventy grains, and the weight of the half and quarter eagle in proportion.

This standard and weight were retained until the end of July 1834, when the following enactments came into force.

June 28, 1834.

Be it enacted, &c., That the gold coins of the United States shall contain the following quantities of metal; that is to say, each eagle shall contain two hundred and thirty-two grains of pure gold, and two hundred and fifty-eight grains of standard gold; each half eagle, one hundred and sixteen grains of pure gold, and one hundred and twenty-nine grains of standard gold; each quarter eagle shall contain fifty-eight grains of pure gold, and sixty-four and a half grains of standard gold. Every such eagle shall be of the value of ten dollars; every such half eagle shall be of the value of five dollars; and every such quarter eagle shall be of the value of two dollars and fifty cents. And the said gold coins shall be received in all payments, when of full weight, according to their said respective values; and, when of less than full weight, at less values, proportioned to their respective actual weights. (Act of June 28th, 1834, Sect 1.)

Be it further enacted, That all gold coins of the United States minted anterior to the thirty-first day of June next shall be receivable in all payments at the rate of ninety-four and eight-tenths of a cent per pennyweight. (Sect. 3 of the same act.)

The above standard, which corresponds to 21 carats 2$\frac{14}{43}$ grains, 899·225 thousandths, continued until the act of January 1837, when it was changed to 900 thousandths.

The weights of the gold coins were not, however, altered; and all gold coins made after July 31st, 1834, are legal tenders, according to their nominal values.

To provide for a Copper Coinage. May 8, 1792.

Copper coins current.

Be it enacted, &c., That after the expiration of six calendar months from the time when there shall have been paid into the treasury, by the said Director, in cents and half cents, a sum not less than fifty thousand dollars,—which time shall forthwith be announced by the Treasurer in at least two gazettes or newspapers, published at the seat of the government of the United States for the time being,—no copper coins or pieces whatsoever, except the said cents and half cents, shall pass current as money, or shall be paid or offered to be paid or received in payment for any debt, demand, claim, matter, or thing whatsoever, and all copper coins or pieces, except the said cents and half cents, which shall be paid or offered to be paid or received in payment, contrary to the prohibition aforesaid, shall be forfeited; and every person by whom any of them shall have been so paid or offered to be paid or received in payment shall also forfeit the sum of ten dollars; and said forfeiture and penalty shall and may be recovered, with costs of suit, for the benefit of any person by whom information of the incurring thereof shall have been given. (Act of May 8th, 1792, Sec. 2. The announcement required having been duly made by the Treasurer of the United States, this enactment is in full force.)

XVII.

Mar. 3, 1849.

Gold Coins of twenty dollars and one dollar authorised.

Double eagle and gold dollar authorized.

SECT. 1.—Be it enacted, etc., That there shall be, from time to time, struck and coined at the Mint of the United States, and the branches thereof, conformably in all respects to law (except that on the reverse of the gold dollar the figure of the eagle shall be omitted), and conformably in all respects to the standard for gold coins now established by law, coins of gold of the following denominations and

values; viz., double eagles, each to be of the value of twenty dollars or units; and gold dollars, each to be of the value of one dollar or unit.

legal tender.

SECT. 2.—That for all sums whatever the double eagle shall be a legal tender for twenty dollars; and the gold dollar shall be a legal tender for one dollar.

Laws relating to coinage applicable thereto.

SECT. 3.—That all laws now in force in relation to the coins of the United States, and the striking and coining of the same, shall, so far as applicable, have full force and effect in relation to the coins herein authorized, whether the said laws are penal or otherwise, and whether they are for preventing counterfeiting or debasement, for protecting the currency, for regulating and guarding the process of striking and coining, and the preparations therefor, or for the security of the coin, or for any other purpose.

Deviation of weight allowed in the gold coin.

SECT. 4.—That in adjusting the weights of gold coins henceforward, the following deviations from the standard weight shall not be exceeded in any of the single pieces, namely; in the double eagle, the eagle, and the half eagle, one-half of a grain, and in the quarter eagle and gold dollar, one quarter of a grain; and that in weighing a large number of pieces together, when delivered from the Chief Coiner to the Treasurer, and from the Treasurer to the depositors, [the deviation from the standard weight shall not exceed three pennyweights in one thousand double eagles; two pennyweights in one thousand eagles; one and one-half pennyweights in one thousand half eagles; one pennyweight in one thousand quarter eagles; and one-half pennyweight in one thousand gold dollars. (Act of March 3d, 1849, c. 109.)

XVIII.

Coinage of silver three-cent piece authorized.

March 3, 1851.

Three cent piece authorized.

And be it further enacted, That from and after the passage of this act, it shall be lawful to coin at the Mint of the United States, and its Branches, a piece of the denomination and legal value of three cents, or three hundredths of a dollar, to be composed of [three-fourths silver and one-fourth copper, and to weigh twelve grains and three-eighths of a grain];* that the said coin shall bear such devices as shall be conspicuously different from those of the other silver coins, and of the gold dollar, but having the inscription United States of America, and its denomination and date; and that it shall be a legal tender in payment of debts for all sums of thirty cents and under; and that no ingots shall be used for the coinage of the three-cent piece herein authorized, of which the quality differs more than five-thousandths from the legal standard; and that in adjusting the weight of the said coin, the following deviations from the standard weight shall not be exceeded; namely, one-half of a grain in the single piece, and one pennyweight in a thousand pieces. (Act of March 3d, 1851, c. 21, § 11.)

*See infra, Act of Mar. 3, 1853, s. 7.

A legal tender for thirty cents.

Allowed variations of weight and fineness.

XIX.

Three-dollar piece authorized.—Amendments relating to silver coinage, mint charges, stamped bars, &c.

Feb. 21, 1853.

New weights prescribed for half dollar, quarter dollar, dime, and half dime.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That from and after the first day of June, eighteen hundred and fifty-two,* the weight of the half-dollar piece or fifty cents shall be one hundred and ninety-two grains, and the quarter dollar, dime, and half dime shall be respectively one-half, one-fifth, and one-tenth of the weight of said half dollar.

* See Act of Mar. 3, 1853.

Legal tender for five dollars.

SECT. 2.—And be it further enacted, That the silver coins issued in conformity with the above section shall be legal tenders in payment of debts for all sums not exceeding five dollars.

Regulations as to their coinage and the profits thereof.

SECT. 3.—And be it further enacted, That in order to procure bullion for the requisite coinage of the sub-divisions of the dollar authorized by this act, the Treasurer of the Mint shall, with the approval of the Director, purchase such bullion with the bullion fund of the Mint. He shall charge himself with the gain arising from the coinage of such bullion into coin of a nominal value exceeding the intrinsic value thereof, and shall be credited with the difference between such intrinsic value and the price paid for said bullion, and with the expense of distributing said coins as herein-after provided. The balances to his credit, or the profit of said coinage, shall be, from time to time, on a warrant of the Director of the Mint, transferred to the account of the Treasury of the United States.

How said coins to be distributed.

SECT. 4.—And be it further enacted, That such coins shall be paid out at the Mint in exchange for gold coins at par, in sums not less than one hundred dollars; and it shall be lawful also to transmit parcels of the same, from time to time, to the Assistant Treasurers, depositaries, and other officers of the United States, under general regulations, proposed by the Director of the Mint, and approved by the Secretary of the Treasury: Provided, however, that the amount coined into quarter dollars, dimes, and half dimes shall be regulated by the Secretary of the Treasury.

SECT. 5.—And be it further enacted, That no deposits for coinage into the half dollar, quarter dollar, dime and half dime, shall hereafter be received, other than those made by the Treasurer of the Mint, as herein authorized, and upon account of the United States.

Gold Coinage and Mint Regulations.

United States.

Private deposits for coinage in such pieces prohibited.

SECT. 6.—And be it further enacted, That, at the option of the depositor, gold or silver may be cast into bars or ingots of either pure metal or of standard fineness, as the owner may prefer, with a stamp upon the same, designating its weight and fineness; but no piece of either gold or silver shall be cast into bars or ingots of a less weight than ten ounces, except pieces of one ounce, of two ounces, of three ounces, and of five ounces, all of which pieces of less weight than ten ounces shall be of the standard fineness, with their weight and fineness stamped upon them; but in (all) cases, whether the gold and silver deposited be coined or cast into bars or ingots, there shall be a charge to the depositor, in addition to the charge now made for refining or parting the metals, of one-half of one per centum; the money arising from this charge of one-half per centum shall be charged to the Treasurer of the Mint, and from time to time, on warrant of the Director of the Mint, shall be transferred into the Treasury of the United States: Provided, however, that nothing contained in this section shall be considered as applying to the half dollar, the quarter dollar, the dime, and half dime.

Authorizing assayed bars, ingots, or disks.

Modified by Act of Mar. 3, 1853, see below.

Charges for coinage required to be transferred to U.S. Treasury.

SECT. 7.—And be it further enacted, That from time to time there shall be struck and coined at the Mint of the United States and the branches thereof, conformably in all respects to law, and conformably in all respects to the standard of gold coins now established by law, a coin of gold of the value of three dollars or units; and all the provisions of an act entitled "An Act to authorise the coinage of gold dollars and double eagles," approved March 3d, 1849, shall be applied to the coin herein authorized, so far as the same may be applicable; but the devices and shape of the three-dollar piece shall be fixed by the Secretary of the Treasury.

Three dollar piece authorized.

Devices to be fixed by Secretary of Treasury.

SECT. 8.—And be it further enacted, That this Act shall be in force from and after the first day of June next.* (Act of February 21, 1853, c. 79.)

*See Act of Mar. 3, '51, infra.

And be it further enacted, That when gold or silver shall be cast into bars or ingots or formed into disks at the Mint of the United States, or any of the branches thereof, or at any assay office of the United States, the charge for refining, casting, or forming said bars, ingots, or disks shall be equal to, but not exceed, the actual cost of the operation, including labour, wastage, use of machinery, materials, &c., to be regulated from time to time by the Secretary of the Treasury. And the Secretary of the Treasury is hereby authorized to regulate the size and devices of the new silver coin authorized by an act entitled "An Act amendatory of existing laws relative to "the half dollar, quarter dollar, dime, and half dime," passed at the present session; and that to procure such devices, as also the models, moulds, and matrices, or original dies for the coins, disks, or ingots authorized by said act, the Director of the Mint is empowered, with the approval of the Secretary of the Treasury, to engage temporarily for that purpose the services of one or more artists, distinguished in their respective departments, who shall be paid for such services from the contingent appropriation for the Mint; and that hereafter the three-cent coin now authorized by law shall be made of the weight of three-fiftieths of the weight of the half dollar, as provided in said act, and of the same standard of fineness. And the said act entitled "An Act amendatory of existing "laws relative to the half dollar, quarter dollar, dime and "half dime," shall take effect and be in full force from and after the first day of April, one thousand eight hundred and fifty-three, anything therein to the contrary notwithstanding. (Act of March 3, 1853, c. 96, § 7.)

March 3, 1853.

Of charges for making bars, ingots or disks.

Of the devices of silver coin and the mode of procuring new dies.

Standard weight and fineness of three cent piece altered.

Silver coinage bill takes effect April 1, 1853.

XX.

An Act relating to Foreign Coins, and to the Coinage of Cents at the Mint of the United States.

Feb. 21, 1857.

How much Spanish and Mexican coins are to be received for by United States.

SECTION 1.—Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the pieces commonly known as the quarter, eighth, and sixteenth of the Spanish pillar dollar, and of the Mexican dollar, shall be receivable at the Treasury of the United States, and its several offices, and at the several post offices and land offices, at the rates of valuation following; that is to say, the fourth of a dollar, or piece of two reals, at twenty cents; the eighth of a dollar, or piece of one real, at ten cents; and the sixteenth of a dollar, or half real, at five cents.

APPENDIX, No. 12.

Gold Coinage and Mint Regulations.

United States.

Said coins to be recoined.

SECT. 2.—And be it further enacted, That the said coins, when so received, shall not again be paid out, or put in circulation, but shall be recoined at the Mint. And it shall be the duty of the Director of the Mint, with the approval of the Secretary of the Treasury, to prescribe such regulations as may be necessary and proper to secure their transmission to the Mint for recoinage, and the return or distribution of the proceeds thereof, when deemed expedient, and to prescribe such forms of account as may be appropriate and applicable to the circumstances: *Provided*, that the expenses incident to such transmission or distribution, and of recoinage, shall be charged against the account of silver profit and loss, and the net profits, if any, shall be paid from time to time into the Treasury of the United States.

Former Acts making foreign coins a currency or legal tender repealed.

Assays of foreign coins to be made, and annually reported.

SECT. 3.—And be it further enacted, That all former acts authorizing the currency of foreign gold or silver coins, and declaring the same a legal tender in payment for debts, are hereby repealed; but it shall be the duty of the Director of the Mint to cause assays to be made, from time to time, of such foreign coins as may be known to our commerce, to determine their average weight, fineness, and value, and to embrace in his annual report a statement of the results thereof.

Weight and composition of cents.

SECT. 4.—And be it further enacted, That from and after the passage of this act, the standard weight of the cent coined at the Mint shall be seventy-two grains, or three-twentieths of one ounce troy, with no greater deviation than four grains in each piece; and said cent shall be composed of eighty-eight per centum of copper and twelve per centum of nickel, of such shape and device as may be fixed by the Director of the Mint, with the approbation of the Secretary of the Treasury; and the coinage of the half cent shall cease.

Weight and alloy of cent coin changed by Act of April 22, 1864.

Purchase of bullion therefor.

SECT. 5.—And be it further enacted, That the Treasurer of the Mint, under the instruction of the Secretary of the Treasury, shall, from time to time, purchase from the bullion fund of the Mint the materials necessary for the coinage of such cent piece, and transfer the same to the proper operative officers of the Mint to be manufactured and returned in coin. And the laws in force relating to the Mint and the coinage of the precious metals, and in regard to the sale and distribution of the copper coins, shall, so far as applicable, be extended to the coinage herein provided for: *Provided*, that the net profits of said coinage, ascertained in like manner as is prescribed in the second section of this act, shall be transferred to the Treasury of the United States.

Former laws extended to such cents.

Profits.

Such cents may be paid out and transmitted, &c.

SECT. 6.—And be it further enacted, That it shall be lawful to pay out the said cent at the Mint in exchange for any of the gold and silver coins of the United States, and also in exchange for the former copper coins issued; and it shall be lawful to transmit parcels of the said cents, from time to time, to the Assistant Treasurers, depositaries, and other officers of the United States, under general regulations proposed by the Director of the Mint, and approved by the Secretary of the Treasury, for exchange as aforesaid. And it shall also be lawful for the space of two years from the passage of this act, and no longer, to pay out at the Mint the cents aforesaid for the fractional parts of the dollar herein-before named, at their nominal value of twenty-five, twelve and a half, and six and a quarter cents, respectively.

To be paid out for certain coins at old rate for two years.

Annual report of Director of the Mint to be made up to June 30.

SECT. 7.—And be it further enacted, That hereafter the Director of the Mint shall make his annual report to the Secretary of the Treasury, up to the thirtieth of June in each year, so that the same may appear in his annual report to Congress on the finances.

Approved, February 21, 1857.

XXI.

March 3, 1859.

Authority for exchanging Cents extended Two Years.

Provisions of Act of 1857, ch. 56, s. 6. extended for two years from Feb. 21, 1859.

And be it enacted, &c., That the authority given by the sixth section of the act entitled "An Act relating to "foreign coins and to the coinage of cents at the Mint "of the United States," approved February 21, 1857, to pay out at the Mint the cents authorized and directed by said act to be coined, in exchange for the fractional parts of the dollar therein named, at their nominal value of twenty-five, twelve and a half, and six and a quarter cents, respectively, shall and the same hereby is extended to two years from and after the twenty-first day of February 1859, and no longer. (Act of March 3, 1859.)

XXII.

June 25, 1860.

Cents no longer to be exchanged at Mint.

Act of 1859, ch. 80, s. 2, vol. xi. p. 422, relating to the payment of cents from Mint repealed.

Be it enacted, &c., That the second section of the act "making appropriations for the legislative, executive, "and judicial expenses of the government for the year "ending the 30th of June 1860," approved 3rd of March 1859, shall be and the same is hereby repealed. (Act of June 25, 1860.)

XXIII.

April 22, 1864.

Two-Cent Piece authorized, and Standard of Cent altered.

1857, ch. 56, vol. xi, p. 163

Be it enacted, &c., That from and after the passage of this act the standard weight of the cent coined at the Mint of the United States shall be forty-eight grains, or one-tenth of one ounce troy; and said cent shall be composed of ninety-five per centum of copper, and five per centum of tin and zinc, in such proportions as shall be determined by the Director of the Mint; and there shall be from time to time struck and coined at the Mint a two cent piece of the same composition, the standard weight of which shall be ninety-six grains, or one-fifth of one ounce troy, with no greater deviation than four grains to each piece of said cent and two-cent coins; and the shape, mottoes, and devices of said coins shall be fixed by the Director of the Mint, with the approval of the Secretary of the Treasury; and the laws now in force relating to the coinage of cents, and providing for the purchase of material and prescribing the appropriate duties of the officers of the Mint and the Secretary of the Treasury be and the same are hereby extended to the coinage herein provided for.

Standard weight, &c. of the cent.

Two-cent pieces to be coined.

Shape, devices, &c.

Present laws extended thereto.

SECT. 2.—And be it further enacted, That all laws now in force relating to the coins of the United States and the striking and coining the same shall, so far as applicable, be extended to the coinage herein authorized, whether said laws are penal or otherwise, for the security of the coin, regulating and guarding the process of striking and coining, for preventing debasement or counterfeiting, or for any other purpose.

Director of Mint to secure conformity of alloy in such coins.

SECT. 3. And be it further enacted, That the Director of the Mint shall prescribe suitable regulations to insure a due conformity to the required weights and proportions of alloy in the said coins; and shall order trials thereof to be made from time to time by the assayer of the Mint, whereof a report shall be made in writing to the Director.

Such coins to be legal tender, and for what sums.

SECT. 4.—And be it further enacted, That the said coins shall be a legal tender in any payment, the one-cent coin to the amount of ten cents, and the two-cent coin to the amount of twenty cents; and it shall be lawful to pay out said coins in exchange for the lawful currency of the United States (except cents or half cents issued under former acts of Congress) in suitable sums, by the Treasurer of the Mint, and by such other depositaries as the Secretary of the Treasury may designate, under general regulations proposed by the Director of the Mint and approved by the Secretary of the Treasury; and the expenses incident to such exchange, distribution, and transmission may be paid out of the profits of said coinage; and the net profits of said coinage, ascertained in like manner as is prescribed in the second section of the act to which this is a supplement, shall be transferred to the Treasury of the United States.

Penalty for making coins intended to be passed as cents, &c.

SECT. 5.—And be it further enacted, That if any person or persons shall make, use, or pass, or cause to be made, issued, or passed, any coin, card, token, or device whatsoever, in metal or its compounds, intended to pass or be passed as money for a one-cent piece or a two-cent piece, such person or persons shall be deemed guilty of a misdemeanor, and shall, on conviction thereof, be punished by a fine not exceeding $1000, and by imprisonment for a term not exceeding five years.

Approved, April 22, 1864.

XXIV.

March 3, 1865.

An Act to authorize the Coinage of three-cent pieces, and for other purposes.

A three-cent piece to be coined.

Be it enacted, &c., That so soon as practicable after the passage of this act, there shall be coined at the Mint of the United States a three-cent piece, composed of copper and nickel in such proportions, not exceeding twenty-five per centum of nickel, as shall be determined by the Director of the Mint, the standard weight of which shall be thirty grains, with no greater deviation than four grains to each piece; and the shape, mottoes, and devices of said coin shall be determined by the Director of the Mint, with the approval of the Secretary of the Treasury. And the laws now in force relating to the coinage of cents, and providing for the purchase of material, and prescribing the appropriate duties of the officers of the Mint, and of the Secretary of the Treasury, be and the same are hereby extended to the coinage herein provided for.

Composition, weight, shape, device, &c.

striking and coinage of the same, shall, so far as applicable, be extended to the coinage herein authorized, whether said laws are penal or otherwise, for the security of the coin, regulating and guarding the process of striking and coining, for preventing debasement or counterfeiting, or for any other purpose. And the Director of the Mint shall prescribe suitable regulations to insure a due conformity to the required weights and proportions of alloy in the said coin, and shall order trials thereof to be made, from time to time, by the Assayer of the Mint, whereof a report shall be made in writing to the Director.

SECT. 3.—Be it further enacted, &c., That the said coin be a legal tender in any payment to the amount of sixty cents. And it shall be lawful to pay out said coins in exchange for the lawful currency of the United States (except cents, or half cents, or two-cent pieces issued under former acts of Congress) in suitable sums, by the Treasurer of the Mint, and by such other depositaries as the Secretary of the Treasury may designate, and under general regulations approved by the Secretary of the Treasury; and under the like regulations the same may be exchanged, in suitable sums, for any lawful currency of the United States; and the expenses incident to such exchange, distribution, and transmission may be paid out of the profits of said coinage; and the net profits of said coinage, ascertained in like manner as is prescribed in the second section of the act entitled "An act relating to foreign coins, "and the coinage of cents at the Mint of the United "States," approved February 21, 1857, shall be transferred to the Treasury of the United States: Provided, that from and after the passage of this act no issues of fractional notes of the United States shall be of a less denomination than five cents, and all such issues of a less denomination at that time outstanding shall, when paid into the Treasury or any designated depository of the United States, or redeemed or exchanged as now provided by law, be retained and cancelled.

SECT. 4.—Be it further enacted, &c., That if any person or persons shall knowingly make, issue, or pass, or cause to be made, issued, or *past* [passed] any coin, card, token, or device whatsoever in metal or its compounds, intended to pass or be passed as money, for the coin authorized by this act, or for coin of equal value, such person or persons shall be deemed guilty of a misdemeanor, and shall, on conviction thereof, be punished by a fine not exceeding one thousand dollars, and by imprisonment for a term not exceeding five years, at the discretion of the court.

SECT. 5.—Be it further enacted, &c., That in addition to the devices and legends upon the gold, silver, and other coins of the United States, it shall be lawful for the Director of the Mint, with the approval of the Secretary of the Treasury, to cause the motto, "In God we trust," to be placed upon such coins hereafter to be issued as shall admit of such legend thereon.

SECT. 6.—Be it further enacted, &c., That the one and two cent coins of the United States shall shall not be a legal tender for any payment exceeding four cents in amount; and so much of the laws of the United States heretofore enacted as are in conflict with the provisions of this act are hereby repealed.

Approved, March 3, 1865.

XXV.

Five-cent nickel coins authorized.

Be it enacted, &c., That so soon as practicable after the passage of this act, there shall be coined at the Mint of the United States a five-cent piece composed of copper and nickel, in such proportions, not exceeding twenty-five per centum of nickel, as shall be determined by the Director of the Mint, the standard weight of which shall be seventy-seven and sixteen-hundredths grains, with no greater deviation than two grains to each piece; and the shape, mottoes, and devices of said coin shall be determined by the Director of the Mint, with the approval of the Secretary of the Treasury; and the laws now in force relating to the coinage of cents, and providing for the purchase of material and prescribing the appropriate duties of the officers of the Mint, and the Secretary of the Treasury be and the same are hereby extended to the coinage herein provided for.

SECT. 2.—And be it further enacted, That all laws now in force relating to the coins of the United States, and the striking and coining of the same, shall, so far as applicable, be extended to the coinage herein authorized, whether said laws are penal or otherwise, for the security of the coin, regulating and guarding the process of striking and coining, for preventing debasement or counterfeiting, or for any other purpose; and the Director of the Mint shall prescribe suitable regulations to insure a due conformity to the required weights and proportions of alloy in said coin, and shall order trials thereof to be made from time to time by the Assayer of the Mint, whereof a report shall be made in writing to the Director.

SECT. 3.—And be it further enacted, That said coin shall be a legal tender in any payment to the amount of one dollar; and it shall be lawful to pay out such coins in exchange for the lawful currency in the United States (except cents or half cents, or two-cent pieces, issued under former acts of Congress) in suitable sums, by the Treasurer of the Mint, and by such other depositaries as the Secretary of the Treasury may designate; and under general regulations approved by the Secretary of the Treasury, and under the like regulations, the same may be exchanged in suitable sums for any lawful currency of the United States; and expenses incident to such exchange, distribution, and transmission may be paid out of the profits of said coinage, and the net profits of said coinage, as ascertained in the manner prescribed in the second section of the act entitled "An Act relating to foreign coins and the coinage of cents "at the Mint of the United States," approved February 21, 1857, shall be transferred to the Treasury of the United States: *Provided*, that from and after the passage of this act no issues of fractional notes of the United States shall be of a less denomination than ten cents; and all such issues at that time outstanding shall, when paid into the Treasury, or any designated depository of the United States, or redeemed or exchanged, as now provided by law, be retained and cancelled.

To be legal tender to the amount of one dollar.

To be paid in exchange for currency.

1857, ch. 56, § 2, vol. xi. p. 163.

No fractional currency of less than ten cents to be issued, and old issues to be cancelled.

SECT. 4.—And be it further enacted, That if any person or persons not lawfully authorized shall knowingly make, issue, or pass, or cause to be made, issued, or passed, or aid in the making, issuing, or passing, of any coin, card, token, or device whatsoever, in metal or its compounds, intended to pass or be passed as money for the coin authorized by this act, or for coin of equal value, such person or persons shall be deemed guilty of a misdemeanor, and shall, on conviction thereof, be punished by a fine not exceeding one thousand dollars, and by imprisonment for a term not exceeding five years, at the discretion of the court.

Unauthorized making, etc. of such coins punished.

SECT. 5.—And be it further enacted, That it shall be lawful for the Treasurer and the several Assistant Treasurers of the United States to redeem in national currency, under such rules and regulations as may be prescribed by the Secretary of the Treasury, the coin herein authorized to be issued, when presented in sums of not less than one hundred dollars.

Approved, May 16, 1866.

May be redeemed in sums of not less than one hundred dollars.

PART IV.—ACTS regulating the value of Foreign Coins in U.S.

XXVI.

Foreign Coins current.

Feb. 9, 1793.

And be it further enacted, &c., That all foreign gold and silver coins (except Spanish milled dollars and parts of such dollars) which shall be received in payment for monies due to the United States, after the said time when the coinage of gold and silver coins shall begin at the Mint of the United States, shall, previously to their being issued in circulation, be coined anew, in conformity to the act entitled "An Act establishing a Mint, and regulating the "Coins of the United States." (Act of Feb. 9, 1793, Sec. 3.)

Foreign coins paid to the United States to be recoined before being issued into circulation.

XXVII.

Respecting Coinage and Tender.—By JOHN ADAMS, *the President of the United States of America.*

July 22, 1797.

A PROCLAMATION.

WHEREAS an Act of the Congress of the United States was passed on the ninth day of February 1793 entitled "An Act regulating foreign coins, and for other purposes," in which it was enacted "that foreign gold and silver coins "shall pass current as money within the United States, "and be a legal tender for the payment of all debts and "demands," at the several and respective rates therein stated; and that "at the expiration of three years next "ensuing the time when the coinage of gold and silver "agreeably to the act intituled 'An Act establishing a "'Mint, and regulating the coins of the United States,' "shall commence at the Mint of the United States (which "time shall be announced by the Proclamation of the "President of the United States), all foreign gold coins, "and all foreign silver coins, except Spanish milled dollars, "and parts of such dollars, shall cease to be a legal tender "as aforesaid."

1793, ch. 5. vol. i. p. 300.

1792, ch. 16.

Vol. i. p. 246.

Now, therefore, I, the said John Adams, President of the United States, hereby proclaim, announce, and give notice to

Coinage of silver declared to

APPENDIX, No. 12.

Gold Coinages and Mint Regulations.

United States.

have commenced Oct. 15, 1794, and the coinage of gold July 1, 1795.

Foreign coins not to be a tender after those dates.

all whom it may concern that, agreeably to the Act last above-mentioned, the coinage of silver at the Mint of the United States commenced on the fifteenth day of October 1794, and the coinage of gold on the thirty-first day of July, 1795; and that consequently, in conformity to the act first above-mentioned, all foreign silver coins, except Spanish milled dollars and parts of such dollars, will cease to pass current as money within the United States, and to be a legal tender for the payment of any debts or demands after the fifteenth day of October next, and all foreign gold coins will cease to pass current as money within the United States, and to be a legal tender as aforesaid for the payment of any debts or demands, after the thirty-first day of July which will be in the year of our Lord 1798.

In testimony whereof I have caused the seal of the United States to be affixed to these presents, and signed the same with my hand. Done at Philadelphia, the 22d day of July, in the year of our Lord 1797, and of the independence of the United States the twenty-second.

JOHN ADAMS.

By the President.
TIMOTHY PICKERING,
Secretary of State.

XXVIII.

June 28, 1834.

Gold Coins of Great Britain, Portugal, Brazil, France, Spain, Mexico, and Colombia to pass current and be assayed.

Rate at which gold coins of Great Britain, Portugal, Brazil, France, Spain, Mexico, and Colombia shall pass current.

SECT. 1.—Be it enacted, &c., That from and after the thity-first day of July next the following gold coins shall pass current as money within the United States, and be receivable in all payments, by weight, for the payment of all debts and demands, at the rates following; that is to say, the gold coins of Great Britain, Portugal, and Brazil, of not less than twenty-two carats fine, at the rate of ninety-four cents and eight-tenths of a cent per pennyweight; the gold coins of France, nine-tenths fine, at the rate of ninety-three cents and one tenth of a cent pennyweight; and the gold coins of Spain, Mexico, and Columbia, of the fineness of twenty carats three grains and seven-sixteenths of a grain, at the rate of eighty-nine cents and nine-tenths of a cent per pennyweight.*

*Repealed by 3d Sect. Act of Feb. 21, 1857. See ante.

Such coins to be assayed annually. Repealed and supplied by the 3d section of Act of Feb. 21, 1857. See ante.

SECT. 2.—And be it further enacted, That it shall be the duty of the Secretary of the Treasury to cause assays of the aforesaid gold coins, made current by this Act, to be had at the Mint of the United States at least once in every year, and to make report of the result thereof to Congress. (Act of June 28th, 1834.)

XXIX.

June 25, 1834.

Silver Coins of Mexico, Peru, Chili, Central America, Brazil, and France to pass current and be assayed.

Rate at which silver coins of Chili, Central America and Brazil, shall pass current.

SECT. 1.—Be it enacted, &c., That from and after the passage of this Act the following silver coins shall be of the legal value, and shall pass current as money within the United States, by tale, for the payment of all debts and demands, at the rate of one hundred cents the dollar; that is to say, the dollars of Mexico, Peru, Chili, and Central America, of not less weight than four hundred and fifteen grains each; and those restamped in Brazil of the like weight; and of not less fineness than ten ounces fifteen pennyweights of pure silver in the Troy pound of twelve ounces of standard silver. And the five-franc pieces of France, when of not less fineness than ten ounces and sixteen pennyweights, in twelve ounces Troy weight of standard silver, and weighing not less than three hundred and eighty-four grains each, at the rate of ninety-three cents each.*

*Repealed by the 3d Sect. Act of Feb. 21, 1857. See ante.

such coins to be assayed annually. Supplied by Act of Feb. 21, 1857. See ante.

SECT. 2.—And be it further enacted, That it shall be the duty of the Secretary of the Treasury to cause assays of the aforesaid silver coins made current by this Act to be had at the Mint of the United States, at least once in every year, and to make report of the result thereof to Congress. (Act of June 25th, 1834.)

XXX.

March 3, 1843.

Gold Coins of Great Britain and France, and Silver Coins of Spain, Mexico, Peru, Bolivia, and France, to pass current.

Rate at which gold coins of Great Britain and France shall pass current.

SECT. 1.—Be it enacted, &c., That from and after the passage of this Act the following foreign gold coins shall pass current as money within the United States, and be receivable, by weight, for the payments of all debts and demands, at the rates following; that is to say, the gold coins of Great Britain, of not less than nine hundred and fifteen and a half thousandths in fineness, at ninety-four cents and six-tenths of a cent per pennyweight; and the gold coins of France, of not less than eight hundred and ninety-nine thousandths in fineness, at ninety-two cents and nine-tenths of a cent per pennyweight.

Supplied by Act of Feb. 21, 1857. See ante.

SECT. 2.—And be it further enacted, That from and after the passage of this Act the following foreign silver coins shall pass current as money within the United States, and be receivable by tale for the payment of all debts and demands, at the rates following; that is to say, the Spanish pillar dollars, and the dollars of Mexico, Peru, and Bolivia, of not less than eight hundred and ninety-seven thousandths in fineness, and four hundred and fifteen grains in weight, at one hundred cents each; and the five-franc pieces of France,* of not less than nine hundred thousandths in fineness, and three hundred and eighty-four grains in weight, at ninety-three cents each.*

Rate at which silver coins of Spain, Mexico, Peru, Bolivia, and France shall pass current.

*See below Act of May 22, '46, as to franc.

*Repealed by 3d Sect. Act of Feb. 21, 1857. See ante.

SECT. 3.—And be it further enacted, That it shall be the duty of the Secretary of the Treasury to cause assays of the coins made current by this Act to be had at the Mint of the United States, at least once in every year, and to make report of the result thereof to Congress. (Act of March 3, 1843, c. 69.)

Such coins to be assayed annually. Repealed and supplied by Act of Feb. 21, 1857. See ante.

XXXI.

March 3, 1843.

Value of Coins of Prussia, Portugal, Bremen, Madeira, the Azores, Hamburg, Russia, and India.

Rate of computation at the custom houses of the coins of Prussia, Portugal, Bremen, Madeira, the Azores, Hamburg, Russia, and British India.

Be it enacted, &c., That in all computations of the value of foreign moneys of account at the custom houses of the United States, the thaler of Prussia shall be deemed and taken to be of the value of sixty-eight and one half cents; the mil-reis of Portugal shall be deemed and taken to be of the value of one hundred and twelve cents; the rix dollar of Bremen shall be deemed and taken to be of the value of seventy-eight and three-quarter cents; the thaler of Bremen, of seventy-two grotes, shall be deemed and taken to be of the value of seventy-one cents; that the mil-reis of Madeira shall be deemed and taken to be of the value of one hundred cents; the mil-reis of the Azores shall be deemed and taken to be of the value of eighty-three and one-third cents; the marcbanco of Hamburg shall be deemed and taken to be of the value of thirty-five cents; the rouble of Russia shall be deemed and taken to be of the value of seventy-five cents; the rupee of British India shall be deemed and taken to be of the value of forty-four and one-half cents; and all former laws inconsistent herewith are hereby repealed. (Act of March 3, 1843, c. 92.)

XXXII.

May 22, 1846.

Value of Coins of Sweden, Norway, Denmark, Germany, Austria, Italian States, France, Belgium, and British American Provinces.

Rate of computation at the custom houses of the coins of Sweden, Norway, and Denmark; Prussia and Northern States of Germany; Austria and Augsburg, Lombardo-Venetian kingdom and Tuscany, France and Belgium; Naples, Sicily, Nova-Scotia, New Brunswick, Newfoundland, and Canada.

Be it enacted, &c., That in all computations at the custom houses, the foreign coins and moneys of account herein specified shall be estimated as follows, to wit:—The specie dollar of Sweden and Norway at one hundred and six cents. The specie dollar of Denmark at one hundred and five cents. The thaler of Prussia and of the Northern States of Germany at sixty-nine cents. The florin of the Southern States of Germany at forty cents. The florin of the Austrian Empire and of the city of Augsburg at forty-eight and one-half cents. The lira of the Lombardo-Venetian Kingdom, and the lira of Tuscany, at sixteen cents. The franc of France and of Belgium, and the lira of Sardinia, at eighteen cents six mills. The ducat of Naples at eighty cents. The ounce of Sicily at two dollars and forty cents. The pound of the British provinces of Nova Scotia, New Brunswick, Newfoundland, and Canada, at four dollars. And all laws inconsistent with this Act are hereby repealed. (Act of May 22d, 1846.)

XXXIII.

Feb. 26, 1857

To ascertain the relative Value of the Unitary Coins of the United States and Great Britain.

Agent, &c. to confer with Great Britain as to coinage.

Resolved, by the Senate and House of Representatives of the United States of America, in Congress assembled, that the Secretary of the Treasury be and he is hereby authorized and directed to appoint some suitable person as agent or commissioner to confer with the proper functionaries in Great Britain in relation to some plan or plans of so mutually arranging, on the decimal basis, the coinage of the two countries as that the respective units shall be thereafter easily and exactly commensurable, and to embody the result of such conference in a statement and report, to be laid before Congress as early as practicable; and that the compensation of said agent or commissioner shall not exceed five thousand dollars in full for his services and expenses.

Approved, February 26, 1857.

XXXIV.

July 29, 1858. *American Coin may be exchanged for Japanese Coin.*

Foreign coin. ART. V. All foreign coin shall be current in Japan, and pass for its corresponding weight of Japanese coin of the same description. Americans and Japanese may freely use foreign or Japanese coin in making payments to each other.

Exchange of coin. As some time will elapse before the Japanese will be acquainted with the value of foreign coin, the Japanese government will, for the period of one year after the opening of each harbor, furnish the Americans with Japanese coin, in exchange for theirs, equal weights being given, and no discounts taken for recoinage. Coins of all descriptions (with the exception of Japanese copper coin) may be exported from Japan, and foreign gold and silver uncoined.

Coins (except copper) may be exported from Japan.

Treaty with Empire of Japan, July 29, 1858.

XXXV.

Value of the new silver florin of Austria.

March 2, 1861. Be it enacted, &c., That the new silver florin of Austria shall, in all computations at the custom houses, be estimated at forty-six cents and nineteen hundredths of a cent.

New silver florin of Austria.

Approved, March 2, 1861.

PART V.—ACTS to prevent and punish counterfeiting U. S. Coins.

XXXVI.

April 21, 1806. *Against counterfeiting, impairing, or lightening the Coins.*

Impairing, lightening, &c. the coins. And be it further enacted, That if any person shall fraudulently and for gain's sake, by any art, way, or means whatsoever, impair, diminish, falsify, scale, or lighten the gold or silver coins which have been or which shall hereafter be coined at the Mint of the United States, or any foreign gold or silver coins which are by law made current, or are in actual use and circulation as money within the United States, every person so offending shall be deemed guilty of a high misdemeanor, and shall be imprisoned not exceeding two years, and fined not exceeding two thousand dollars. (Act of April 21st, 1806, sect. 3.)

Penalty therefor.

March 3, 1825. Be it enacted, &c., That if any person or persons shall falsely make, forge, or counterfeit, or cause or procure to be falsely made, forged, or counterfeited, or willingly aid or assist in falsely making, forging, or counterfeiting any coin in resemblance or similitude of the gold or silver coin which has been or hereafter may be coined at the Mint of the United States, or in the resemblance or similitude of any foreign gold or silver coin which by law now is or hereafter may be made current in the United States, or shall pass, utter, publish, or sell, or attempt to pass, utter, publish, or sell, or bring into the United States from any foreign place, with intent to pass, utter, publish, or sell as true any such false, forged, or counterfeited coin, knowing the same to be false, forged, or counterfeited, with intent to defraud any body politic or corporate, or any other person or persons whatsoever, every person so offending shall be deemed guilty of felony, and shall on conviction thereof be punished by fine, not exceeding five thousand dollars, and by imprisonment and confinement at hard labour not exceeding ten years, according to the aggravation of the offence.

Making or uttering counterfeit gold or silver coin.

Penalty therefor.

Making or uttering counterfeit copper coins. And be it further enacted, that if any person or persons shall falsely make, forge, or counterfeit, or cause or procure to be falsely made, forged, or counterfeited, or willingly aid or assist in falsely making, forging, or counterfeiting any coin in the resemblance or similitude of any copper coin which has been or hereafter may be coined at the Mint of the United States, or shall pass, utter, publish, or sell, or bring into the United States from any foreign place with intent to pass, utter, publish, or sell as true any such false, forged, or counterfeited coin, with intent to defraud any body politic or corporate, or any other person or persons whatsoever, every person so offending shall be deemed guilty of felony, and shall on conviction thereof be punished by fine, not exceeding one thousand dollars, and by imprisonment and confinement to hard labour not exceeding three years. (Act of March 3d, 1825, sect. 20, 21.)

Penalty therefor.

XXXVII.

Against Offences at the Mint.

March 3, 1825. Be it enacted, &c., That if any of the gold or silver coins which shall be struck or coined at the Mint of the United States shall be debased or made worse as to the proportion of fine gold or fine silver therein contained, or shall be of less weight or value than the same ought to be, pursuant to the several acts relative thereto, through the default or with the connivance of any of the officers or persons who shall be employed at the said Mint, for the purpose of profit or gain, or otherwise with a fraudulent intent, and if any of the said officers or persons shall embezzle any of the metals which shall at any time be committed to their charge for the purpose of being coined, or any of the coins which shall be struck or coined at the said Mint, every such officer or person who shall commit any or either of the said offences shall be deemed guilty of felony, and shall be sentenced to imprisonment and hard labour for a term not less than one year nor more than ten years, and shall be fined in a sum not exceeding ten thousand dollars. (Act of March 3d, 1825, sect. 24.)

Debasing the coins by persons employed in the Mint, or

Embezzling the metals or coins.

Penalty therefor.

XXXVIII.

Feb. 26, 1857. *To preventing the counterfeiting of the Coins of the United States.*

Investigation of J. T. Barclay's plan for preventing abrasion and counterfeiting of coin. Resolved, &c., that the Secretary of the Treasury be authorized to cause inquiry to be made by two competent commissioners into processes and means claimed to have been discovered by J. T. Barclay, for preventing the abrasion, counterfeiting, and deterioration of the coins of the United States, and to report the results of the said inquiry to Congress at its next session, with his opinion as to the probable value of the alleged discoveries; and the sum of $2,500 out of any money in the Treasury not otherwise appropriated is hereby appropriated for that purpose.

Approved, February 26, 1857.

XXXIX.

June 8, 1864. *An Act to punish and prevent the counterfeiting of Coin of the United States.*

Penalty for counterfeiting coin of the United States. Be it enacted, &c., That if any person or persons, except as now authorized by law, shall hereafter make or cause to be made, or shall utter or pass, or attempt to utter or pass, any coins of gold or silver, or other metals or alloys of metals intended for the use and purpose of current money, whether in the resemblanse of coins of the United States or of foreign countries, or of original design, every person so offending shall, on conviction thereof, be punished by fine not exceeding three thousand dollars, or by imprisonment for a term not exceeding five years, or both, at the discretion of the court, according to the aggravation of the offence.

Approved, June 8, 1864.

PART VI.—ACTS relating to Duties and Salaries of Officers and Employees of U. S. Mint and Branches.

XL.

Jan. 18, 1837. An Act supplementary to the Act, entitled "An Act "establishing a Mint and regulating the Coins of the "United States."

Officers of the Mint. SECTION 1.—Be it enacted by the Senate and House of Representatives of the United States of America, in Congress assembled, that the officers of the Mint of the United States shall be a Director, a Treasurer, an Assayer, a Melter and Refiner, a Chief Coiner, and an Engraver, to be appointed by the President of the United States, by and with the advice and consent of the Senate.

How appointed.

Their duties. SECT. 2.—And be it further enacted, that the respective duties of the officers of the Mint shall be as follows:

1. Of the Director. *First.* The Director shall have the control and management of the Mint, the superintendence of the officers and persons employed therein, and the general regulation and supervision of the business of the several branches. And in the month of January of every year* he shall make report to the President of the United States of the operations of the Mint and its branches for the year preceding, and also to the Secretary of the Treasury from time to time as said Secretary shall require, setting forth all the operations of the Mint subsequent to the last report made upon the subject.

* (Now at end of fiscal year. See ante; Sect. 7, Act of Feb. 21, 1857.)

2. Of the Treasurer. *Second.* The treasurer shall receive and safely keep all monies which shall be for the use and support of the Mint; shall keep all the current accounts of the Mint, and pay all monies due by the Mint, on warrants from the Director. He shall receive all bullion brought to the Mint for coinage; shall be the keeper of all bullion and coin in the Mint, except while the same is legally placed in the hands of other officers; and shall, on warrants from the director, deliver all coins struck at the Mint to the persons to whom they shall be legally payable. And he shall keep regular and faithful accounts of all the transactions of the Mint

in bullion and coins, both with the officers of the Mint and the depositors; and shall present, quarter yearly, to the Treasury Department of the United States, according to such forms as shall be prescribed by that department, an account of the receipts and disbursements of the Mint, for the purpose of being adjusted and settled.

3. Of the Assayer.

Third. The Assayer shall carefully assay all metals used in coinage, whenever such assays are required in the operations of the Mint; and he shall also make assays of coins whenever instructed to do so by the Director.

4. Of the Melter and Refiner.

Fourth. The Melter and Refiner shall execute all the operations which are necessary in order to form ingots of standard silver or gold suitable for the Chief Coiner, from the metals legally delivered to him for that purpose.

5. Of the Chief Coiner.

Fifth. The Chief Coiner shall execute all the operations which are necessary in order to form coins, conformable in all respects to the law, from the standard silver and gold ingots and the copper planchets legally delivered to him for this purpose.

6. Of the Engraver.

Sixth. The Engraver shall prepare and engrave, with the legal devices and inscriptions, all the dies used in the coinage of the Mint and its branches.

Director to appoint assistants and clerks.

SECT. 3.—And be it further enacted, That the Director shall appoint, with the approbation of the President, assistants to the Assayer, Melter and Refiner, Chief Coiner and Engraver, and clerks for the Director and [Treasurer]* whenever, on representation made by the Director to the President, it shall be the opinion of the President that such assistants or clerks are necessary. And it shall be the duty of the assistants to aid their principals in the execution of their respective offices, and of the clerks to perform such duties as shall be prescribed for them by the Director.

* (See Resolution, March 3, 1851, p. 292.)

Their duties.

Officers pro tempore.

SECT. 4.—And be it further enacted, That whenever any officer of the Mint shall be temporarily absent, on account of sickness, or any other sufficient cause, it shall be lawful for the Director, with the assent of the said officer, to appoint some person attached to the Mint to act in the place of such officer during his absence; and that the Director shall employ such workmen and servants in the Mint as he shall from time [to time] find necessary.

Workmen and servants.

Oath of office prescribed.

SECT. 5.—And be it further enacted, That every officer, assistant, and clerk of the Mint shall, before he enters upon the execution of his office, take an oath or affirmation before some judge of the United States, or judge of the superior court, or any court of record of any State, faithfully and diligently to perform the duties thereof.

Bond and security required.

SECT. 6.—And be it further enacted, That the following officers of the Mint, before entering upon the execution of their respective offices, shall become bound to the United States, with one or more sureties, to the satisfaction of the Secretary of the Treasury, in the sums herein-after mentioned, with condition for the faithful and diligent performance of the duties of their offices, viz.: the Treasurer in the sum of ten thousand dollars; the Assayer in the sum of five thousand dollars; the Melter and Refiner in the sum of ten thousand dollars; and the Chief Coiner in the sum of ten thousand dollars. And that similar bonds may also be required of the assistants and clerks, in such sums as the Director shall determine, with the approbation of the Secretary of the Treasury.

Salaries of the officers, assistants, and clerks.

Salaries increased by Act of April 7, 1866. See p. 292.

SECT. 7.—And be it further enacted, That there shall be allowed to the officers of the Mint the following salaries per annum:—To the Director, for his services, including travelling expenses incurred in visiting the different branches, and all other charges whatever, three thousand five hundred dollars; to the Treasurer, Assayer, Melter and Refiner, Chief Coiner, and Engraver, each two thousand dollars; to the assistants and clerks, such annual salaries shall be allowed as the Director may determine, with the approbation of the President: Provided, that an assistant shall not receive more than fifteen hundred dollars, and that a clerk shall not receive more than twelve hundred dollars. To the workmen and servants shall be allowed such wages, to be determined by the Director, as may be customary and reasonable, according to their respective stations and occupations; and that the salaries provided for in this section shall be payable in quarterly instalments.

See Act of August 4, 1854.

Wages of the workmen and servants.

Standard for gold and silver coins.

SECT. 8.—And be it further enacted, That the standard for both gold and silver coins of the United States shall hereafter be such, that of one thousand parts by weight, nine hundred shall be of pure metal, and one hundred of alloy; and the alloy of the silver coins shall be of copper, and the alloy of the gold coins shall be of copper and silver, provided that the silver do not exceed one-half of the whole alloy.

Alloys.

Weight of silver coins.

SECT. 9.—And be it further enacted, That of the silver coins, the dollar shall be of the weight of four hundred and twelve and one-half grains; the half dollar of the weight of two hundred and six and one-fourth grains; the quarter dollar of the weight of one hundred and three and one-eighth grains; the dime, or tenth part of a dollar, of the weight of forty-one and a quarter grains; and the half dime, or twentieth part of a dollar, of the weight of twenty grains and five-eighths of a grain. And that dollars, half dollars, and quarter dollars, dimes and half dimes, shall be legal tenders of payment, according to their nominal value, for any sums whatever.*

1853, ch. 79.

*See p. 285.

Weight of gold coins.

SECT. 10.—And be it further enacted, That of the gold coins, the weight of the eagle shall be two hundred and fifty-eight grains; that of the half eagle one hundred and twenty-nine grains; and that of the quarter eagle sixty-four and one-half grains. And that, for all sums whatever, the eagle shall be a legal tender of payment for ten dollars; the half eagle for five dollars; and the quarter eagle for two and a half dollars.*

*See Acts of March 3, '49, Feb. 21, 1853. Pp. 284 and 286.

What coins of old standard are legal tender.

SECT. 11.—And be it further enacted, That the silver coins heretofore issued at the Mint of the United States, and the gold coins issued since the thirty-first day of July, one thousand eight hundred and thirty-four, shall continue to be legal tenders of payment for their nominal values, on the same terms as if they were of the coinage provided for by this act.

Weight of copper coins.

SECT. 12.—And be it further enacted, That of the copper coins, the weight of the cent shall be one hundred and sixty-eight grains, and the weight of the half cent eighty-four grains.* And the cent shall be considered of the value of one-hundredth part of a dollar, and the half cent of the value of one two-hundredth part of a dollar.

*Coinage of the half cent discontinued under the provisions of the Act of Feb. 21, 1857. See ante.

Devices and legends on the coins.

SECT. 13.—And be it further enacted, That upon the coins struck at the Mint there shall be the following devices and legends: Upon one side of each of said coins, there shall be an impression emblematic of liberty, with an inscription of [the word LIBERTY, and the year of the coinage; and upon the reverse of each of the gold and silver coins there shall be the figure or representation of an eagle, with the inscription UNITED STATES OF AMERICA, and a designation of the value of the coin; but on the reverse of the dime and half dime, cent and half cent, the figure of the eagle shall be omitted.*

*See ante, Acts of Feb. 21 and Mar. 3, 1853.

Deposits of bullion to be received for coinage on certain conditions.

SECT. 14.—And be it further enacted, That gold and silver bullion brought to the Mint for coinage shall be received and coined by the proper officers, for the benefit of the depositor: Provided, that it shall be lawful to refuse, at the Mint, any deposit of less value than one hundred dollars, and any bullion so base as to be unsuitable for the operations of the Mint: And provided also, that when gold and silver are combined, if either of these metals be in such small proportion that it cannot be separated advantageously, no allowance shall be made to the depositor for the value of such metal.

Receipt to be given for bullion by Treasurer.

SECT. 15.—And be it further enacted, That when bullion is brought to the Mint for coinage, it shall be weighed by the Treasurer, in the presence of the depositor, when practicable, and a receipt given, which shall state the description and weight of the bullion: Provided, that when the bullion is in such a state as to require melting before its value can be ascertained, the weight after melting shall be considered as the true weight of the bullion deposited.

Bullion to be assayed.

SECT. 16.—And be it further enacted, That from every parcel of bullion deposited for coinage, the Treasurer shall deliver to the Assayer a sufficient portion for the purpose of being assayed; but all such bullion remaining from the operations of the assay shall be returned to the Treasurer by the Assayer.

Assayer to report to Treasurer.

SECT. 17.—And be it further enacted, That the Assayer shall report to the Treasurer the quality or standard of the bullion assayed by him; and he shall also communicate to the Treasurer such information as will enable him to estimate the amount of the charges herein-after provided for, to be made to the depositor, for the expenses of converting the bullion into standard metal fit for coinage.

Charges to depositor.

SECT. 18.—And be it further enacted, That the only subject of charge by the Mint to the depositor shall be the following:*—For refining, when the bullion is below standard; for toughening, when metals are contained in it which render it unfit for coinage; for copper used for alloy, when the bullion is above standard; for silver introduced into the alloy of gold; and for separating the gold and silver, when these metals exist together in the bullion; and that the rate of these charges shall be fixed, from time to time, by the Director, with the concurrence of the Secretary of the Treasury, so as not to exceed, in their judgment, the actual expense to the Mint of the materials and labour employed in each of the cases aforementioned; and that the amount received from these charges shall be accounted for, and appropriated for defraying the contingent expenses of the Mint.

*See ante, Act of March 3, 1853.

Rate thereof, how to be fixed.

Amount thereof appropriated to contingent expenses of the Mint.

Memorandum and certificate to be given

SECT. 19.—And be it further enacted, That from the report of the Assayer and the weight of the bullion, the Treasurer shall estimate the whole value of each deposit,

to depositors.

and also the amount of the charges or deductions, if any; of all which he shall give a detailed memorandum to the depositor; and he shall also give at the same time, under his hand, a certificate of the net amount of the deposit, to be paid in coins of the same species of bullion as that deposited.

Melter and Refiner to have bullion transferred to him by Treasurer, and to prepare standard ingots therefrom.

SECT. 20.—And be it further enacted, That parcels of bullion shall be, from time to time, transferred by the Treasurer to the Melter and Refiner; that a careful record of these transfers, noting the weight and character of the bullion, shall be kept; and that the bullion thus placed in the hands of the Melter and Refiner shall be subjected to the several processes which may be necessary to form it into ingots of the legal standard, and of a quality suitable for coinage.

Ingots to be assayed, and if reported legal, to be transferred to Treasurer.

SECT. 21.—And be it further enacted, That the ingots thus prepared shall be assayed by the Assayer, and if they prove to be within the limits allowed for deviation from the standard, they shall be transferred by the Melter and Refiner to the Treasurer, accompanied by the Assayer's certificate of their fineness; and that a careful record of the transfer shall be kept by the Treasurer.

Allowed variations from standard in the ingots.

*See ante, Act of March 3, 1851.

SECT. 22.—And be it further enacted, That no ingots of gold shall be used for coinage, of which the quality differs more than two thousandths from the legal standard; and that no ingots of silver shall be used for coinage, of which the quality differs more than three thousandths from the legal standard.*

Accounts with Melter and Refiner.

SECT. 23.—And be it further enacted, That in the Treasurer's account with the Melter and Refiner, the Melter and Refiner shall be debited with the standard weight of all the bullion placed in his hands, that is to say, with the weight of metal of legal standard fineness which it will make; and that he shall be credited by the standard weight of all the ingots delivered by him to the Treasurer; and that once at least in every year, at such time as the Director shall appoint, the Melter and Refiner shall deliver up to the Treasurer all the bullion in his possession, in order that his accounts may be settled up to that time; and, in this settlement, he shall be entitled to a credit for the difference between the whole amount of bullion delivered to him, and received from him, since the last settlement as an allowance for necessary waste: Provided, that this allowance shall not exceed two thousandths of the whole amount of gold and silver bullion respectively that had been delivered to him by the Treasurer.

Settlements thereof.

Allowance for wastage.

Chief Coiner to have ingots delivered to him by Treasurer, and to coin the same.

SECT. 24.—And be it further enacted, That the Treasurer shall, from time to time, deliver over to the Chief Coiner ingots for the purpose of coinage; that he shall keep a careful record of these transfers, noting the weight and description of the ingots; and that the ingots thus placed in the hands of the Chief Coiner shall be passed through the several processes necessary to make from them coins in all respects conformable to law.

Allowed variations from the standard weights of the coins.

SECT. 25.—And be it further enacted, That in adjusting the weights of the coins the following deviations from the standard weight shall not be exceeded in any of the single pieces:—In the dollar and half dollar one grain and a half; in the quarter dollar, one grain; in the dime and half dime, half a grain; in the gold coins, one quarter of a grain; in the copper coins, one grain in the pennyweight; and that in weighing a large number of pieces together, when delivered from the Chief Coiner to the Treasurer, and from the Treasurer to the depositors, the deviations from the standard weight shall not exceed the following limits:* Four pennyweights in one thousand dollars; three pennyweights in one thousand half dollars; two pennyweights in one thousand quarter dollars; one pennyweight in one thousand dimes; one pennyweight in one thousand half dimes; two pennyweights in one thousand eagles; one and a half pennyweight in one thousand half eagles; one pennyweight in one thousand quarter eagles.

*See ante, Acts of Mar. 3, '49, Mar. 3, 1851.

Chief Coiner shall deliver the coins to the Treasurer, who shall test the legal weight thereof.

SECT. 26.—And be it further enacted, That the Chief Coiner shall, from time to time, as the coins are prepared, deliver them over to the treasurer, who shall keep a careful record of their kind, number and weight; and that in receiving the coins it shall be the duty of the Treasurer to see whether the coins of that delivery are within the legal limits of the standard weight; and if his trials for this purpose shall not prove satisfactory, he shall cause all the coins of this delivery to be weighed separately, and such as are not of legal weight shall be delivered to the Melter and Refiner, as standard bullion, to be again formed into ingots and recoined.

Coins to be reserved for the annual assay.

SECT. 27.—And be it further enacted, That at every delivery of coins made by the Chief Coiner to the Treasurer, it shall be the duty of the Treasurer, in the presence of the Assayer, to take, indiscriminately, a certain number of pieces of each variety for the annual trial of coins (the number being prescribed by the Director), which shall be carefully labelled and deposited in a chest appropriated for the purpose, kept under the joint care of the Treasurer and Assayer, and so secured that neither can have access to its contents without the presence of the other.

Clippings, &c. how disposed of.

SECT. 28.—And be it further enacted, That the Chief Coiner shall, from time to time, deliver to the Treasurer the clippings and other portions of bullion remaining after the process of coining, and that the Treasurer shall keep a careful record of their amount.

Account with Chief Coiner.

SECT. 29.—And be it further enacted, That in the Treasurer's account with the Chief Coiner, the Chief Coiner shall be debited with the amount in weight of standard metal of all the bullion placed in his hands, and credited with the amount, also by weight, of all the coins, clippings, and other bullion delivered by him to the Treasurer; and that once at least in every year, at such time as the Director shall appoint, the Chief Coiner shall deliver to the Treasurer all the coins and bullion in his possession, so that his accounts may be settled up to that time; and in this settlement he shall be entitled to a credit for the difference between the whole amount of ingots delivered to him, and of the coins and bullion received from him, since the last settlement as an allowance for necessary waste: Provided, that this allowance shall not exceed two thousandths of the whole amount of the silver, or one and one-half thousandths of the whole amount of the gold, that had been delivered to him by the Treasurer.

Settlement thereof.

Allowance for wastage.

Depositors, how and when to be paid.

SECT. 30.—And be it further enacted, That when the coins which are the equivalent to any deposit of bullion are ready for delivery, they shall be paid over to the depositor, or his order, by the Treasurer, on a warrant from the Director; and the payments shall be made, if demanded, in the order in which the bullion shall have been brought to the Mint, giving priority according to priority of deposit only; and that in the denominations of coin delivered, the Treasurer shall comply with the wishes of the depositor, unless when impracticable or inconvenient to do so, in which case the denominations of coin shall be designated by the Director.

Public money to be deposited in Mint to secure prompt payment to depositors.

SECT. 31.—And be it further enacted, That for the purpose of enabling the Mint to make the returns to depositors with as little delay as possible, it shall be the duty of the Secretary of the Treasury to keep in the said Mint, when the state of the treasury will admit thereof, a deposit of such amount of public money, or of bullion procured for the purpose, as he shall judge convenient and necessary, not exceeding one million of dollars, out of which those who bring bullion to the Mint may be paid the value thereof, as soon as practicable after this value has been ascertained; that the bullion so deposited shall become the property of the United States; that no discount or interest shall be charged on money so advanced; and that the Secretary of the treasury may at any time withdraw the said deposit, or any part thereof, or may, at his discretion, allow the coins formed at the Mint to be given for their equivalent in other money.*

*See p. 293, Act of May 23, 1850.

Annual assay of coins.

SECT. 32.—And be it further enacted, That to secure a due conformity in the gold and silver coins to their respective standards and weights, an annual trial shall be made of the pieces reserved for this purpose at the Mint and its branches, before the judge of the district court of the United States for the eastern district of Pennsylvania, the attorney of the United States for the eastern district of Pennsylvania, and the collector of the port of Philadelphia, and such other persons as the President shall from time to time designate for that purpose, who shall meet as commissioners, for the performance of this duty, on the second Monday in February annually, and may continue their meetings by adjournment, if necessary; and if a majority of the commissioners shall fail to attend at any time appointed for their meeting, then the Director of the Mint shall call a meeting of the commissioners at such other time as he may deem convenient; and that before these commissioners, or a majority of them, and in the presence of the officers of the Mint, such examination shall be made of the reserved pieces as shall be judged sufficient; and if it shall appear that these pieces do not differ from the standard fineness and weight by a greater quantity than is allowed by law, the trial shall be considered and reported as satisfactory; but if any greater deviation from the legal standard or weight shall appear, this fact shall be certified to the President of the United States, and if, on a view of the circumstances of the case, he shall so decide, the officer or officers implicated in the error shall be thenceforward disqualified from holding their respective offices.

Treasurer shall purchase copper bullion in planchets.

SECT. 33.—And be it further enacted, That copper bullion shall be purchased for the Mint, from time to time, by the Treasurer, under instructions from the Director; that the cost shall be paid from the fund hereinafter provided for; and that the copper bullion shall be

of good quality, and in the form of planchets, fit for passing at once into the hands of the Chief Coiner.*

SECT. 34.—And be it further enacted, That the copper planchets shall be delivered, from time to time, by the Treasurer to the Chief Coiner, to be by him coined; and all such copper shall be returned to the Treasurer by the Chief Coiner, weight for weight, without allowance for waste.

*See ante, Act of Feb. 21, 1857.

SECT. 35.—And be it further enacted, That it shall be the duty of the Treasurer of the Mint to deliver the copper coins in exchange for their legal equivalent in other money, to any persons who shall apply for them: Provided, that the sum asked for be not less than a certain amount to be determined by the Director, and that it be not so great as, in his judgment, to interfere with the capacity of the Mint to supply other applicants.

Which shall be coined.

And sold to applicants therefor.

SECT. 36.—And be it further enacted, That the copper coins may, at the discretion of the Director, be delivered in any of the principal cities and towns of the United States, at the cost of the Mint, for transportation.

Copper coins may be sent to distant places in the U. States, at cost of Mint.

SECT. 37.—And be it further enacted, That the money received by the Treasurer in exchange for copper coins shall form a fund in his hands, which shall be used to purchase copper planchets, and to pay the expenses of transportation of copper coins; and that if there be a surplus, the same shall be appropriated to defray the contingent expenses of the Mint.*

Of the fund reserved from copper coins.

* The sections relating to copper coinage are modified by the Act of Feb. 21, 1857, which see ante.

SECT. 38.—And be it further enacted, That all acts or parts of acts heretofore passed relating to the Mint and coins of the United States, which are inconsistent with the provisions of this act, be and the same are hereby repealed.

Repealing clause.

Approved, January 18th, 1837.

XLI.

Sept. 30, 1850.

Salaries at Branch Mint, New Orleans.

Be it enacted, etc., at New Orleans. For salaries of Superintendent, Treasurer, Assayer, Coiner, Melter and Refiner, and clerks, seventeen thousand three hundred dollars;—the salary of the Treasurer being hereby increased from 1st July 1850 to four thousand dollars; the salary of Chief Clerk to eighteen hundred dollars; of the other clerks to fifteen hundred dollars; and the employment of an additional clerk at fifteen hundred dollars is hereby authorized. (General Appropriation Bill, Sept. 30th, 1850.)

XLII.

March 1851.

Appointment of Clerks to Mint Treasurers.

Treasurers of the Mints to have appointment of their own clerks.

Whereas, by existing laws, the Treasurers of the United States Mint are required to give bond in heavy penalties for the faithful performance of their duties and of those under them; and whereas it is but just the selection of their clerks should be under their control; therefore—

Resolved, &c. &c., that so much of the second section of the Act approved March 3d, 1835, "An Act to establish "Branches of the Mint of the United States," as vests the appointments of the clerks of the Treasury in the Superintendent of each Mint be and the same is hereby repealed; and that the several Treasurers of the United States Mints be and they are hereby authorized to appoint their own clerks, subject, however, to the approval of the Secretary of the Treasury. (Joint Resolution, March 3d, 1851.)

XLIII.

August 4, 1854.

Salaries of Mint Clerks increased.

Increase of salary of clerks in the Mint authorized.

SECT. 13.—That the 7th section of the Act of January eighteenth, eighteen hundred and thirty-seven, entitled "An Act supplementary to the Act entitled 'An Act 'establishing a Mint, and regulating the coins of the United 'States,'" be so amended as to extend the limit for the annual salary of clerks in the Mint of the United States to eighteen hundred dollars each, from and after the first day of July, eighteen hundred and fifty-four, at the discretion of the officers authorized by law to appoint, with the approbation of the President of the United States, including also one Clerk in the office of the Assistant Treasurer at Philadelphia, and that the salary of the Chief Clerk at New Orleans shall be twenty-two hundred dollars from and after the first of July 1854.

XLIV.

March 3rd, 1863.

Clerks to be designated by Treasurer of the Mint.

Treasurer of the Mint to designate Chief Clerks.

SECT. 12.—Be it enacted, &c., That the Treasurer of the Mint of the United States, by virtue of that office Assistant Treasurer of the United States at Philadelphia, is authorized to designate from among the Clerks in his said offices respectfully, one to act as Chief Clerk to the Treasurer of the Mint, and one other to act as Chief Clerk to the Assistant Treasurer of the United States.

Chief Clerks may act as Treasurer or Assistant Treasurer.

SECT. 13.—And be it further enacted, That, in case of the sickness or unavoidable absence of the Treasurer of the Mint, he may, in his discretion, authorize the respective Chief Clerks to act in his place, and to discharge all the duties required by law of the Treasurer of the Mint or Assistant Treasurer of the United States at Philadelphia.

Duties of Chief Clerks and other Clerks in Mint.

SECT. 14.—And be it further enacted, That the Chief and other Clerks in the Treasury Department of the Mint shall give such assistance in the Assistant Treasury of the United States at Philadelphia, in the receipt, custody, and disbursement of the public money, as may be required of them by the Treasurer, with the same responsibility for the faithful performance of such duty as is imposed upon them by the laws in force for the government of the Mint and the Officers and Clerks thereof. (Act of March 3d, 1863.)

XLV.

April 7, 1866.

Salaries of the Officers of the Mint at Philadelphia.

Salaries of officers of the Mint at Philadelphia and Assistant Treasurers.

That from and after the first day of April 1866 there shall be paid annually, instead of the yearly salaries at present authorized, to the Director of the Mint at Philadelphia, four thousand five hundred dollars; to the Treasurer, three thousand five hundred dollars, and one thousand five hundred dollars for additional compensation as Assistant Treasurer of the United States; to the Melter and Refiner, three thousand dollars; to the Assayer, three thousand dollars; to the Assistant to the Assayer, two thousand dollars; to the Chief Coiner, three thousand dollars; to the Assistant to the Chief Coiner, two thousand dollars; to the Engraver, three thousand dollars; to one clerk, two thousand five hundred dollars; to two clerks, two thousand dollars each; to four clerks, one thousand five hundred dollars each; to the Treasurer of the Branch Mint at San Francisco, for salary as Assistant Treasurer of the United States, in addition to his salary as Treasurer of said Mint, one thousand five hundred dollars.

* * * * (Act of April 7, 1866.)

PART. VII.—ACTS other than those relating to Coins or Coinage.

MISCELLANEOUS.

XLVI.

May 3, 1795.

Unexpended Appropriations.

Unexpended appropriations, how disposed of.

Be it enacted, &c., That in regard to any sum which shall have remained unexpended upon any appropriation (other than for the payment of interest on the funded debt, for the payment of interest upon, and reimbursement, according to contract, of any loan or loans made on account of the United States, for the purpose of the sinking fund, or for a purpose in respect to which a longer duration is specially assigned by law,) for more than two years after the expiration of the calendar year in which the act of appropriation shall have been passed, such appropriation shall be deemed to have ceased and been determined; and the sum so unexpended shall be carried to an account on the books of the Treasury, to be denominated "The Surplus Fund," &c. (Act of March 3d, 1795, Sect. 16.)

XLVII.

May 19, 1828.

Standard Weights of the Mint.

Standard Troy pound of the Mint declared.

Be it enacted, &c., That, for the purpose of securing a due conformity in weight of the coins of the United States, to the provisions of the ninth section of the act passed the second of April, one thousand seven hundred and ninety-two, entitled "An Act establishing a Mint, and regulating the Coins of the United States," the brass troy pound weight procured by the minister of the United States, at London in the year one thousand eight hundred and twenty-seven, for the use of the Mint, and now in the custody of the Director thereof, shall be the standard troy pound of the Mint of the United States, conformably to which the coinage thereof shall be regulated.

Corresponding weights to be procured for the Mint, and tested at the annual assay.

And be it further enacted, That it shall be the duty of the Director of the Mint to procure, and safely to keep, a series of standard weights corresponding to the aforesaid troy pound, consisting of an one pound weight and the requisite subdivisions and multiples thereof, from the hundredth part of a grain to twenty-five pounds; and that the troy weights ordinarily employed in the transactions of the Mint shall be regulated according to the above standards, at least once in every year, under his inspection, and their accuracy tested annually in the presence of the Assay Commissioners on the day of the annual assay. (Act of May 19th, 1828, Sect. 2, 3.)

ay 19, 1828.

ullion fund r payment deposits t re- ricted in nount; see ge 289, Act n. 18, 1837, 31.

XLIX.

Amendment relative to the Bullion Fund for Payment of Deposits.

Be it enacted, &c., That, for the purpose of enabling the Mint and Branch Mints of the United States to make returns to depositors with as little delay as possible, it shall be lawful for the President of the United States, when the state of the Treasury shall admit thereof, to direct transfers to be made from time to time to the Mint and Branch Mints for such sums of public money as he shall judge convenient and necessary, out of which those who bring bullion to the Mint may be paid the value thereof, as soon as practicable after this value has been ascertained; that the bullion so deposited shall become the property of the United States; that no discount or interest shall be charged on money so advanced: and that the Secretary of the Treasury may at any time withdraw the said deposit, or any part thereof, or may, at his discretion, allow the coins formed at the Mint to be given for their equivalent in other money: Provided, that the bonds given by the United States Treasurers and Superintendents of the Mints shall be renewed or increased at the discretion of the Secretary of the Treasury, under the operation of this act. (Act of May 23, 1850, c. 12.)

L.

Profits of the Mint.

* * * * and it shall be the duty of the Director of the Mint to cause to be paid annually into the Treasury of the United States the profits of the Mint, and to present a quarterly account of the expenditures of the Mint to the Secretary of the Treasury. * * * (Act of March 4, 1853, c. 97.)

Gold coinages and Mint Regulations.
United States.
March 4, 1853.
Profits of the Mint to be paid to the Treasury.

LI.

Refining of Gold Bullion at the Mint.

And be it further enacted, That when prviate establishments shall be made to refine gold bullion, the Secretary of the Treasury, if he shall deem them capable of executing such work, is hereby authorized and required to limit the amount thereof which shall be refined in the Mint at Philadelphia, from quarter to quarter, and to reduce the same progressively, as such establishments shall be extended or multiplied, so as eventually, and as soon as may be, to exclude refining from the Mint, and require that every deposit of gold bullion made therein for coinage shall be adapted to said purpose, without need of refining: Provided, that no advances in coin shall be made upon bullion after this regulation shall be carried into effect except upon bullion refined, as herein prescribed. (Act of March 4, 1853, c. 97, § 5.)

March 4, 1853.
Refining of gold in private establishments to be encouraged.

LII.

Provisions for limiting Amount of refining at the Mint extended to the Branch Mints and Assay Office.

Be it enacted, &c., That the provisions of the fifth section of chapter ninety-seven of the Act of Congress, approved March 3, 1853, requiring the Secretary to limit the amount of refining at the Mint, whenever private establishments shall be capable of refining bullion, shall be extended to the several branches of the Mint and to the United States Assay Office at New York, in all cases where deposits of bullion are made for coins or fine bars. (Act of February 20, 1861, Sect. 3.)

Feb. 20, 1861.
Provisions of Act of 1853, ch. 97. s. 5. vol. x. p. 212, extended.

APPENDIX No. XIII.

SWEDEN.

APPENDIX, No. 13.
Sweden.
Adoption of principles of Convention of 1865.

LETTERS from the FOREIGN OFFICE to the TREASURY, transmitting Information relative to the CURRENCY of SWEDEN.

SIR, Foreign Office, April 4, 1868.

I AM directed by Lord Stanley to transmit to you, for the information of the Lords Commissioners of Her Majesty's Treasury, a copy of a despatch from Her Majesty's minister at Stockholm, reporting the proposed coinage in Sweden of gold pieces, valuing twenty-five francs and ten francs.

I am, &c.
The Secretary E. C. EGERTON.
to the Treasury.

MY LORD, Stockholm, March 30, 1868.

IT may be proper to inform you that this Government, in pursuance of the decisions of the Paris Monetary Conference of last year, has proposed to the diet the coinage of gold pieces, of the exact weight and value of ten francs, while engaging to coin pieces of twenty-five francs as soon as they shall have appeared in France.

I have, &c.
The Lord Stanley, (Signed) G. S. S. JERNINGHAM.
&c. &c.

SIR, Foreign Office, May 1, 1868.

I AM directed by Lord Stanley to transmit to you, to be laid before the Lords Commissioners of the Treasury, copy of a despatch from Her Majesty's minister at Stockholm, reporting proceedings in the Swedish Chambers on the currency question.

I am, &c.
The Secretary E. C. EGERTON.
to the Treasury.

MY LORD, Stockholm, April 24, 1868.

YOUR Lordship is aware that by the Swedish Constiution the Diet has the right to issue paper money, as a legal tender, through the bank of Sweden, payable in silver and at sight.

It may be proper to mention that a motion for suppressing a forced paper currency, and for substituting a gold for a silver standard, has been carried in the First Chamber by sixty-five to fifty-three, but lost in the Second by eighty-nine to seventy-six, through the influence of the peasant party, though the ultimate success of the proposal would seem to be considered probable.

I have, &c.
The Lord Stanley, (Signed) G. S. S. JERNINGHAM.
&c. &c.

SIR, Foreign Office, May 7, 1868.

I AM directed by Lord Stanley to transmit to you, to be laid before the Lords Commissioners of Her Majesty's Treasury, copy of a despatch from Her Majesty's minister at Stockholm on the subject of the adoption of a gold currency in Sweden on the French monetary system.

I am, &c.
The Secretary E. C. EGERTON.
to the Treasury.

MY LORD, Stockholm, April 29, 1868.

WITH reference to my despatch No. 32, of the 30th ult., I have the honour to state that the Diet has accepted the Government's proposition for a gold coinage of 10 and 25 francs in value, with a view to adopt the French monetary system.

I have, &c.
Lord Stanley, (Signed) G. H. JERNINGHAM.
&c. &c.

APPENDIX No. XIV.

GERMANY.

APPENDIX, No. 14.
Germany.
Scheme for Decimal Monetary System.

LETTER from the FOREIGN OFFICE to the TREASURY, forwarding an Extract from a Prussian Newspaper relative to the MONETARY SYSTEM of GERMANY.

SIR, Foreign Office, May 4, 1868.

I AM directed by the Secretary of State for Foreign Affairs to transmit to you, to be laid before the Lords Commissioners of Her Majesty's Treasury, an Extract from a Prussian newspaper, which has been received from Her Majesty's Ambassador at Berlin, on the subject of introducing an unitary monetary system into Germany, in unison with the decimal monetary system of France.

I am, &c.
The Secretary E. C. EGERTON.
to the Treasury.

APPENDIX, No. 14.

Germany.

Scheme for Decimal Monetary System.

PROJET d'unité monétaire franco-allemande.

Voici un des projets proposés pour établir l'unité des monnaies en Allemagne, en se conformant au système decimal français et aux usages et appellations reçues dans le pays.

Le thaler allemand de la valeur de 2 florins 20 kreuzer vaudrait 1 thaler ⅓ en monnaie prussienne actuelle,—2 *Gulden* ou florins autrichiens,—et 5 francs. Ce thaler serait partagé en 50 parties, pour lesquelles on conserverait la dénomination de *Groschen*, et le *Groschen* lui-même contiendrait 10 *Pfennigs*. Les pièces ayant cours seraient les suivantes :

Thaler allemand.	Groschen.	Pfennigs.	Valeur dans l'Allemagne du Nord.	Valeur dans l'Allemagne du Sud.	Valeur en Autriche.	Valeur en francs.	Valeur en centimes.
			thal. gr.	fl. kr.	fl. kr.		
1 =	50 =	500 =	1 10 =	2 20 =	2 — =	5 =	500
	25 =	250 =	20 =	1 10 =	1 — =	2½ =	250
	20 =	200 =	16 =	56 =	80 =	2 =	200
	12½ =	125 =	10 =	35 =	50 =	1¼ =	125
	10 =	100 =	8 =	28 =	40 =	1 =	100
	5 =	50 =	4 =	14 =	20 =	½ =	50
	2½ =	25 =	2 =	7 =	10 =	¼ =	25

Les monnaies d'or seraient :

Thaler allemand.	Valeur dans l'Allemagne du Nord.	Valeur dans l'Allemagne du Sud.	Valeur en Autriche.	Valeur en France.	Valeur en Angleterre.
	thals. gr.	fl. kr.	fl.	fr.	livr. sh.
1 =	1 10 =	2 20 =	2 =	5 =	— 4
2 =	2 20 =	4 40 =	4 =	10 =	— 8
4 =	5 10 =	9 20 =	8 =	20 =	— 16
5 =	6 20 =	11 40 =	10 =	25 =	1 —
10 =	13 10 =	23 20 =	20 =	50 =	2 —

De cette façon le nouveau système s'accorderait avec le système français, dont les pièces d'or auraient exactement leurs correspondantes en Allemagne, et avec le système Anglais avec lequel il aurait encore un grand rapport. Le pfennig serait précisément la même chose que le centime et le groschen équivaudrait à la pièce française de deux sous. Le sou ou la pièce de 5 centimes serait par là même représenté par la pièce de ½ groschen.

La nouvelle monnaie ne différerait pas beaucoup, on le voit, de celle actuellement en usage. On compterait encore par florins et par thalers, et on aurait cet avantage que la monnaie n'étant pas trop petite, on n'aurait pas toujours à opérer sur de grands nombres, comme cela a lieu quand on calcule par francs.

APPENDIX No. XV.

GERMANY.

APPENDIX, No. 15.

North German Confederation.

Resolution of Federal Parliament relative to Decimal System.

DESPATCH from Her Majesty's Ambassador at Berlin reporting the Introduction of the Decimal System of Weights and Measures into the NORTH GERMAN CONFEDERATION, and a Resolution of the Federal Parliament declaring the Adoption of a Decimal Monetary System to be necessary.

MY LORD, Berlin, June 20, 1868.

I HAVE the honor to inform your Lordship that the Federal Parliament has passed a law introducing into the North German Confederation the decimal metre system of weights and measures, retaining in part the German denominations in conjunction with the French denominations derived from the Greek. This new system will come into operation on the 1st January 1872.

Conjointly with the passing of this measure a resolution was voted by the House declaring necessary the adoption of a decimal monetary system, and requesting the Presidency of the Confederation to submit a law to this purport. As soon as the law is published, I shall have the honor of transmitting to your Lordship a copy translation of it.

I have, &c.,

(Signed) AUGUSTUS LOFTUS.

The Lord Stanley, M.P.,
&c. &c.

APPENDIX No. XVI.

GERMANY.

APPENDIX, No. 16.

Germany.

Resolutions relative to Universal Coinage adopted by a Committee of the Federal Parliament.

RESOLUTIONS respecting UNIVERSAL COINAGE, adopted by the Committee of the Federal Parliament of North Germany on the Law of Weights and Measures, transmitted by Her Majesty's Ambassador at Berlin to the Foreign Department in his Despatch, No. 106, of the 27th June 1868.

[*Extracted from a précis inclosed in the above despatch.*]

The Commission discussed the following resolutions which were finally adopted :—

1. That a decimal system of coinage should be submitted to the Reichstag which should afford a guarantee for a universal system for all civilized nations.

2. That negociations should be instituted with those states who have adopted the metrical system to provide that that system shall not be departed from except by means of a conference of all those states.

The proposer of the first resolution suggested that the French franc should be adopted; other members suggested that the English shilling (= 10 silver groschen) would ensure greater advantages. This question was left undecided, and the principle alone of a pure decimal system was adopted.

As regarded the second resolution it was agreed that, although no state who had adopted the metrical system would be likely to give it up again, yet that a treaty would be useful to prevent any one state from disturbing the unity of weights and measures for any individual purposes.

APPENDIX No. XVII.

ROUMANIA.

APPENDIX, No. 17.

Roumania.

Adoption of principles of Convention of 1865.

DESPATCH, with ENCLOSURES, from Her Majesty's Agent and Consul General at BUCHAREST, relative to the Adoption in Roumania of the principles of the Monetary Convention of December 1865.

MY LORD, Bucharest, June 2, 1868.

I HAVE the honour to acknowledge the receipt of your Lordship's despatch, No. 24, of the 21st ultimo, instructing me to transmit copy of the law by which the Roumanian government modified their system of currency, by an adoption of the principles of the Monetary Convention of December 1865, concluded between France, Belgium, Italy, and Switzerland.

In my despatch, No. 19, of the 4th March 1865, I reported some preliminary measures of this government, with reference to an alteration of their monetary system, and I have since abstained from further remarks on the subject for fear of creating misapprehension on a question which has produced and continues to cause great confusion in all the monetary transactions of the principalities.

I have the honour to enclose a copy of the "Monitorul," No. 89, of the 4th May 1867, containing the law modifying the currency. I transmit a translation of this law.

The same "Monitorul" contains the "Cahier des Charges," for the supply of a copper coinage of the nominal value of 4,000,000 of "leys" or francs. I also transmit a translation of that document. The contract was taken by the "Bank of Roumania" at f. 3·60 per kilogramme, and was executed by Messrs. Ralph Heaton and Sons of Birmingham.

A portion of the new copper coinage having reached Bucharest, and the government having published a tariff of the relative values in francs or "leys" of the numerous foreign coins in circulation, the law was ordered to be applied on the 1st January last. The bankers and principal shopkeepers at first attempted to comply with the new regulations, but met with such general opposition that after a few days they were compelled to return to the old system of piastres and paras. The government continues to keep the public accounts in the new money, but has to explain every transaction in the old.

If this was the only mischief, it would be of light importance. Unfortunately the government promulgated the

new valuation of foreign coins, without previous consultation with those who could have given them correct information, as some were calculated far too high, and others too low. The first found their way into the treasury, the latter left the country. The market tradesmen immediately adopted every mistake in their favour, by a new tariff of their own in the old denomination of piastres and paras. The effect was to raise considerably the price of almost every article of consumption. The new copper coins circulate, not as 10 and 5 bani, but as 12 and 6 paras. The market disputes have frequently assumed a serious character, but matters have now calmed down; the government regulations with respect to the coinage, being like many others, totally disregarded by the public in general.

The piastre having no existence, was and is a mere money of account. The government, in introducing the franc or "ley" without any coinage to represent it, virtually attempted to change one money of account for another; and, as if this was not a sufficiently difficult operation, complicated the matter by giving the new coin the same denomination as the old; "ley" being the Roumanian term for piastre. A peasant, told that his Russian ruble, which he had been accustomed to look upon as representing 10½ leys, was now only 4 leys, would most likely immediately bury it, to wait for more favourable times.

I have, &c.

From the "Monitorul," No. 89, of 4th May 1867.

Law regulating the Currency of Roumania.

(Translation.)

Charles I., by the grace of God and the will of the nation, Prince of Roumania, to all now and ever greeting. In conformity with the report of our Minister of Finance, No. 13,477, together with which has been laid before us a law for the establishment of a new monetary system voted by the Legislative Bodies, in conformity with the 93 Art. of the Constitution, we have sanctioned and sanction, we have promulgated and promulgate the following law for the establishment of a new monetary system, and for the coining of national monies.

Art. 1. The decimal monetary system is adopted as it exists in France, Italy, Belgium, and Switzerland. Five grains of silver, of which 835 out of 1,000 are of fine silver, and 165 out of 1,000 are of alloy, form the monetary unit of Roumania; this unit being termed "ley" (leŭ).

Art. 2. The "ley" is divided into 100 parts termed "banis" (banĭ).

Art. 3. The Roumanian coins are:—

A. Gold:	B. Silver:
Piece of 20 leys.	Piece of 2 leys.
„ 10 „	„ 1 ley.
„ 5 „	„ ½ „ or 50 banis.

Art. 4. The standard of the gold coins is as follows: nine parts out of ten fine gold, and one part out of ten alloy, having the following weights and dimensions. The piece of 20 leys, $6\frac{452}{1000}$ grammes in weight and 21 millimètres in diameter. The piece of 10 leys, $3\frac{226}{1000}$ grammes in weight and 19 millimetres in diameter. The piece of 5 leys, $1\frac{613}{1000}$ grammes in weight and 17 millimetres in diameter. The allowance of deficiency and excess as regards the standard and weight is 3 millièmes less and more than the exact standard and the exact weight. Differences on the side of deficiency must be made up for by differences on the side of excess.

Art. 5. The standard of the silver coins is as follows: 835 parts out of 1,000 fine silver, and 165 out of 1,000 alloy. Their weights and dimensions are as follows:

The piece of 2 leys, 10 grammes 27 millimetres diameter.
„ 1 ley 5 „ 23 „ „
„ ½ „ 2½ „ 18 „ „

The allowance of deficiency and excess as regards the exact standard is 3 millièmes. The allowance in weight is, for pieces of 2 leys and 1 ley, 5 millièmes; for pieces of ½ ley or 50 banies, 7 millièmes of deficiency and excess.

Art. 6. The copper coins are composed of $\frac{95}{100}$ copper, $\frac{4}{100}$ tin, $\frac{1}{100}$ zinc, with the allowance of 7 millièmes of deficiency and excess. Their weights and dimensions are as follows:

The piece of 10 bahnies, 10 grammes 30 millimtrs. diameter.
„ 5 „ 5 „ 25 „ „
„ 2 „ 2 „ 20 „ „
„ 1 „ 1 „ 15 „ „

The allowance in weight is 15 millièmes of deficiency and excess.

Art. 7. After the first issue of copper money, the accounts of the state will cease to be kept in old leys and paras, and the new system will be adopted. It is likewise enacted that all public establishments, all bankers, merchants, and traders keep their books and accounts in leys and banies, conformably to the new monetary system.

Art. 8. For the regulation of accounts and the calculation of old leys and paras in new leys and banies and vice versâ, Table A.* is annexed, according to which will be made the conversion of all accounts, promissory notes, bonds, bills of exchange, drafts, and all kinds of contracts bearing date anterior to the application of the present law. All debts incurred before the present law in old leys and paras, and paid after its enactment, will be settled conformably with this table.

Art. 9. Copper money will first be coined and issued, the want of which is more pressingly felt. Silver and afterwards gold monies will be coined and put in circulation as soon as the financial means permit. To begin with, copper money will be struck in the following quantity:

					Leys.
25,000,000	pieces of	10	banies,	value	2,500,000
25,000,000	„	5	„	„	1,250,000
10,000,000	„	2	„	„	200,000
5,000,000	„	1	„	„	50,000
					4,000,000

Art. 10. The coins will bear on the obverse the arms of the country, and on the reverse the statement of their nominal value and date.

Art. 11. The gold and silver coins of France, Belgium, Italy, and Switzerland, coined according to the same monetary system, will be received at all the public treasuries in the country as legal tender, and on the same terms as the national money.

Art. 12. Other foreign gold and silver coins at present circulating in the country will be received at all the public treasuries, until the first issue of the national silver and gold monies at the rates stated in Table B.† annexed to this law. After the lapse of six months from the first issue of silver and gold coins, all money not representing the decimal monetary system stipulated by the International Convention of the 23rd December 1865 will cease to be a legal tender.

Art. 13. The coinage of the money will be executed by private contract, all the necessary precautions being taken to ensure their manufacture being identical with that of the French monies, as well as regards the standard, weight, and dimensions as stipulated by the present law, as in regard to the allowance accorded and the quantity required and prescribed.

Art. 14. This monetary system will be enforced from the date of a notification of three months; the time of such notification being fixed by the Minister of Finance.

Art. 15. The government will fix by an administrative measure the time after which the public treasuries will cease to accept gold and silver monies other than the legal tender.

Art. 16. No one will be compelled to receive a larger sum in copper money than five leys, whatever the amount to be paid.

Art. 17. After the lapse of six months from the first issue of the national money, the foreign copper coins which are at present in circulation in the country will cease to be a legal tender.

Art. 18. The legislative bodies will fix from time to time as shall be desirable, and on the motion of the Minister of Finance, the kinds and quantities of coins to be struck.

Art. 19. The old national monies will be called in, and melted down, and replaced by other new ones. The disbursement for this operation will be specified in the budget of the state. This law, together with the act for carrying it into effect (Cahier des Charges), was voted by the Chamber of Deputies in their session of the 29th March 1867, and was adopted by a majority of 68 against 6.

(L.S.) (Signed) PACLEANU,
Vice-President.
C. T. GRIGORESCU,
Secretary.
A. ANDRONIC,
Director of the Bureau.

This law was voted by the Senate of Roumania in their citting of 6 April 1867, and was adopted by a majority of 31 to 6.

(Signed) PLAGINO,
Vice-President.
G. SIMBATEANO,
Senator Secretary.

† Table B. was not forwarded to the Commission.

APPENDIX, No. 17.
Roumania.
Adoption of principles of Convention of 1865.

We order that the present law be sealed with the seal of State, and published in the official "Monitorul."

Our Ministers for the Department of Finance and Department of Justice are charged with the carrying out and publication of this decree.

Given at Bucharest, 14 April 1867.

(Signed) CHARLES.
C. A. CUGULESCO, Minister of Justice.
A. VASESCO, Minister of Finance.

PUBLICATION.

En vertu de la loi du 14/26 Avril, le Gouvernement des Principautées-Unies ayant décidé la mise en adjudication de la fabrication de la monaie de Billon, publie le Cahier de Charge, et fait savoir que les enchères seront tenus à Bucharest au Ministère des Finances le 3/15 Juillet 1867.

CAHIER DE CHARGE concernant la fabrication d'une nouvelle monnaie de cuivre pour les Principautées-Unies.

La fabrication de la nouvelle monnaie de cuivre, représentant les fractions de l'unité monétaire suivant la loi du $\frac{14}{26}$ Avril 1867, sera donnée en entreprise.

A cet effet, il sera tenu une licitation publique par soumissions cachetées au Ministère des Finances et en présence de Monsieur le Ministre des Finances.

Le jour de la licitation, ainsi que les conditions, contenues dans le présent cahier de charges, seront publiés quarante jours à l'avance du jour fixé pour la licitation dans le Moniteur officiel, et seront répétés à plusieurs réprises.

Les personnes qui voudront concourir à la licitation seront tenues de déposer un cautionnement provisoire d'au moins cent mille francs, sans lequel aucune soumission ne sera acceptée. Les personnes qui voudront concourir pour le compte d'un tiers auront à déposer en outre leur pleins pouvoirs dûment légalisés.

Les soumissions doivent être cachetées et contenir sur l'enveloppe l'indication des noms et prénoms du soumissionnaire, et si la soumission se fait pour compte d'un tiers ses noms et prénoms, ainsi que la somme et la nature du cautionnement provisoire.

Au jour fixé pour la licitation, les soumissions cachetées, revetues des noms du soumissionnaire et accompagnées du cautionnement provisoire, seront reçues au Ministère des Finances depuis onze heures du matin jusqu'à une heure de l'après midi. Cette heure sonnée, nulle soumission ne sera plus reçue, et il sera procédé immédiatement à l'ouverture des soumissions en séance publique; toutes les offres seront lues à haute voix, et inscrites sur une liste préparée d'avance.

Le cautionnement provisoire du soumissionaire, qui aura fait l'offre la plus avantageuse, sera retenu, et devra être completé dans un délai de quinze jours jusqu'à la valeur de deux cent mille francs. Les cautionnements des autres soumissionnaires seront restitués immédiatement et séance tenante.

En cas de parité entre deux ou plusieurs offres, le Ministre des Finances procédera immédiatement à une licitation verbale entre ces derniers soumissionaires. Aucune offre ne sera plus admise ni prise en considération aprés l'adjudication faite.

Le résultat de l'adjudication sera soumis à l'approbation du Conseil des Ministres et à la confirmation de Son Altesse Sérénissime le Prince Régnant.

Si le soumissionaire, qui avait fait l'offre la plus avantageuse, voudrait se désister et renoncer à la concession, ou s'il ne pouvait ou ne voulait pas remettre le cautionnement définitif dans le délai fixé de quinze jours, le cautionnement provisoire sera de droit acquis au Gouvernement, à titre de dédomagement sans que le soumissionaire ait le droit d'y faire la moindre objection.

Si pendant l'éxécution du contrat le concessionaire cesserait les fournitures successives des monnaies, il perdrait, excepté le cas de force majeure, le prix de la livraison précédente de monnaie qui restera acquis au Gouvernement à titre de dédomagement pour infraction du contrat.

Le cautionnement, soit provisoire soit définitif, doit être déposé en numéraire métalique ou en obligations de l'Etat roumain, qui seront acceptées au pair.

La quantité, la valeur nominale, le titre, le poids et les dimensions des monnaies de cuivre, dont la fabrication est donnée en entreprise, sont fixés comme suit:

1°. Quantités.

			Valeur nominale.
25,000,000 pièces à 10-cent.	- P-tres.	-	2,500,000
25,000,000 „ „ 5 „	- „	-	1,250,000
10,000,000 „ „ 2 „	- „	-	200,000
5,000,000 „ „ 1 „	- „	-	50,000

Total 65 millions pièces de quatre espèces en valeur nominale de 4 millions piastres ou francs.

2°. Titre.

Toutes ces monnaies seront composées de 950 millièmes cuivre, 40 millièmes étain et 10 millièmes zinc, avec une tolérance de 7 millièmes.

3°. Poids.

Les pièces de 10-cent. péseront	-	10 grammes.
„ „ 5 „ „	-	5 „
„ „ 2 „ „	-	2 „
„ „ 1 „ „	-	1 „

Il est accordé une tolérance du poids de 15 millièmes en plus et en moins. Les différences en moins devront être compensées par les différences en plus.

Par conséquent, il y aura à fabriquer 400,000 kilogrammes divisés de la manière suivante:

250,000 killogrammes pièces de	10-cent.
125,000 „ „	5 „
20,000 „ „	2 „
5,000 „ „	1 „

Les offres se feront par dix kilogrammes composés de quatre différentes espèces de monnaie, savoir:

625 pièces de 10-cent.	-	-	6250	grammes.
625 „ „ 5 „	-	-	3125	„
250 „ „ 2 „	-	-	500	„
125 „ „ 1 „	-	-	125	„
1625 pièces.			10,000	grammes.

4°. Dimensions.

Les pièces de 10 centimes auront	30	millimètres	de	diamètre.
„ „ 5 „	25	„	„	„
„ „ 2 „	20	„	„	„
„ „ 1 „	15	„	„	„

Toutes ces différentes pièces de la nouvelle monnaie du pays en cuivre seront frappées à l'endroit aux armes du pays, et au revers figurera la valeur nominale et le milésime, pareils aux desseins qui seront remis au concessionnaire lors de la signature du contrat.

Le terme pour la fabrication et livraison de la totalité des monnaies sus mentionnées est fixé pour le maximum à douze mois à partir du jour de la signature du contrat. Les livraisons devront s'effectuer successivement et seront échelonnées de la manière suivante:

A la fin du sixième mois après la signature du contrat, le concessionnaire aura à livrer au Gouvernement franco à Bucarest—

3,500,000 pièces de 10-cent.	au poids de	-	35,000	kilogr.
3,400,000 „ 5 „	„	-	17,000	„
1,500,000 „ 2 „	„	-	3,000	„
500,000 „ 1 „	„	-	500	„
8,900,000			55,500	kilogr.

A la fin du 7-e, 8-e, 9-e, 10-e et 11-e, mois les mêmes quantités.

A la fin du douzième mois:

4,000,000 pièces de 10-cent.	au poids de	-	40,000	kilogr.
4,600,000 „ 5 „	„ „	-	23,000	„
1,000,000 „ 2 „	„ „	-	2,000	„
2,000,000 „ 1 „	„ „	-	2,000	„
11,600,000			67,000	kilogr.

RÉCAPITULATION.

Les six premières livraisons:		
53,400,000 pièces au poids de	-	333,000 kilogr.
La 7-e livraison:		
11,600,000 pièces au poids de	-	67,000 „
65,000,000 pièces.		400,000 „

Il sera loisible au concessionaire de commencer plustôt les livraisons, et de terminer avant l'époque fixé de douze mois, pourvu qu'entre chaque livraison se trouve un intervalle d'un mois. Il sera également libre de diviser une livraison mensuelle en deux, et de faire dans un mois deux ou plusieurs envois, qui néanmoins ne compteront que pour une seule livraison.

MODE DE PAIEMENT.

Les offres se feront en francs, et le paiement se fera en or et pièces de vingt francs (napoléons d'or).

Lors de la première livraison, c'est-à dire, au moment que le Gouvernement aura reçu les 8,900,000 pièces, le cautionnement sera restitué.

Lors de la deuxième livraison, il sera payé au concessionnaire le prix convenu pour les quantitées fournies de la première livraison, et ainsi de suite, savoir à chaque livraison mensuelle sera acquitée la precédente. Le prix de la 7-eme et dernière livraison sera acquittée un mois après la réception.

Quoique le Gouvernement accorde au concessionaire la faculté d'opérer les livraison à des époques plus rapprochées et en plus grandes quantités, il est néanmoins bien entendu que les paiements ne sont exigibles que par appoints mensuels proportionnés aux quantités stipulées pour les livraisons mensuelles.

Le concessionnaire ne pourra pas demander des intérêts pour le délai de paiement s'il est effectué dans les limites prescrites.

FABRICATION ET TRANSPORT.

Tout ce qui concerne l'acquisition des matériaux, des coins et des viroles, la confection de la gravure, des matrices, les ustensils et la fabrication, ainsi que le numérotage, l'empaquétage et le transport jusqu'à Bucharest, est à la charge et aux risques et périls du concessionaire ; le Gouvernement n'ayant à payer que le prix convenu franco Bucharest.

Le transport de la frontière du pays jusqu'à Bucharest, quoiqu'à la charge du concessionaire, se fait au risque et péril de Gouvernement.

Aucun droit de douane ou autre ne sera prélevé pour l'importation de cette monnaie.

Echéant un cas de force majeure, qui empêcherait le transport des monnaies dans le pays, il sera loisible au concessionaire de demander la résiliation de son contrat pour le restant des monnaies à fabriquer. Dans ce cas, les quantités déjà fabriquées, mais pas encore expediées, seront reçues par un délégué du Gouvernement à l'endroit de la fabrication, et le Gouvernement en payera le prix contracté, après déduction du prix de transport calculé selon le tarif es temps ordinaires. Dans ce cas, la reprise et la continuation de la fabrication sera facultative pour les deux parties, et ne pourra avoir lieu qu'après une entente préalable.

Le concessionaire pourra également, échéant le cas de force majeure, demander une simple suspension plus ou moins longue des expéditions. Dans ce cas, le Gouvernement pourra accepter ou refuser la demande de suspension, mais il devra se prononcer dans le délai de vingt jours si la suspension a lieu.

Deux commissaires du Ministère des Finances seront chargés de la surveillance de la fabrication, du titre, de la dimension, du poids et de la tolérance, du numérotage et du pésage des monnaies ; ils assisteront à l'empaquétage, et donneront leur déclaration au nom du Gouvernement pour les quantitées fabriquées et expediées conformément aux conditions de ce Cahier, après avoir apposé leurs sceaux sur les barils ou caisses.

Les frais de sejour sur les lieux des commissaires du Gouvernement sont à la charge du concessionaire, et sont fixés à 20 francs par jour pour chacun, plus 1000 francs pour frais de voyage. Les poinçons, coins, viroles, etc., seront déposés chaque soir, après que la fabrication journalière aura cessée, entre les mains du commissaire du Gouvernement.

Les commissaires devront assister à tour de rôle à la fabrication et inscrire dans un registre les quantités des differentes espèces de monnaies fabriquées pendant le jour. Cette constatation sera signée par le comissaire du jour et par le concessionaire ou son fondé de pouvoir.

Après que toute l'opération aura été terminée, toutes les formes qui ont servi à la fabrication seront remises aux dits commissaires, afin de les apporter dans le pays ou elles resteront déposées au Ministère des Finances.

Le maximum du prix auquel l'adjudication de la monnaie de cuivre pourra se faire, conformément aux conditions de ce Cahier de charges, est fixé à 5 francs le kilogramme.

Le présent Cahier de charges, ainisi que la loi monétaire, ont été vôtés par la chambre des Dêputés et le Sénat, et promulgués par le Décret Princier sous No. 629, le 19 Avril 1867.

Le Ministre des Finances, A. VASESCO.

APPENDIX No. XVIII.

ROMAN STATES.

EDICT for the Adoption in the ROMAN STATES of a new Monetary System in accordance with the principles of the Monetary Convention of December 1865, and Notice of the Minister of the Finances establishing the legal exchange between the old and new systems.

(Translation.)

Giacomo Antonelli, Cardinal of the Holy Roman Church, Deacon of St. Agatha at the Suburra, Secretary of State of His Holiness our Lord Pope Pius the ninth.

The frequent oscillations in the value of the precious metals, which among all nations serve for contracts and operations of all kinds domestic, as well as foreign, have for several years in this respect claimed all the attention of His Holiness, in order to bring to the subject those remedies which shall be considered the most suitable for preserving with the other States of Europe a just equilibrium, as well as interesting for the prosperity of the commerce of his most loved subjects. A few partial provisions, nevertheless, were adopted in the monetary system of the Pontifical State ; but it did not escape the wisdom of His Holiness, that in order completely to attain the object, and thus to make easy the means of responding to the exigencies of international exchanges, it would have been very opportune to introduce into the Pontifical State a monetary system identical with that of other States with which it has the largest and the most direct commercial relations.

Hence upon the proposition of Monsignor Treasurer General, Minister of Finance, in conformity with the opinion of the Council of State and of the 'Consulta' of the State for the Finances, and the deliberation of the Council of Ministers, His Holiness has commanded us to publish, as in His Sovereign name we do publish the following regulations :

ART. 1. The new monetary unit of the Pontifical State is based upon the value of 5 grammes of silver, and of 0·32258 grammes of gold, both of the standard of 900 thousandths, and it takes the denomination of LIRA PONTIFICIA.

ART. 2. This new unit is divided into centimes, and is also represented by 20 soldi, each of the value of five centimes.

ART. 3. From the present day, henceforth shall be struck coins of gold, silver, and bronze representing the lira, its multiple and sub-multiple, of the following value and weight :—

	Species of Coins.	Value in Lire.	Cent	Weight in Grams.
In Gold	Coin of Lire	100	„	32·2580
	„	50	„	16·1290
	„	20	„	6·4516
	„	10	„	3·2258
	„	5	„	1·6129
In Silver	Coin of Lire	5	„	25·0000
	„	2	50	12·5000
	„	2	„	10·0000
	„	1	„	5·0000
	„	„	50	2·5000
	„	„	25	1·2500
In Bronze	Coin of centimes	„	10	10·0000
	„	„	5	5·0000
	„	„	2½	2·5000
	„	„	1	1·0000

ART. 4. The standard of the gold coins and of the silver coin from lire 5, shall be of 900 thousandths, with the allowance of 2 thousandths in more or less ; that of the coins from lire 2·50 and the following shall be of 835 thousandths, with the allowance of 3 thousandths in more or less.

ART. 5. The coins of bronze shall be of a triple alloy, composed of 95 parts of copper, 4 of tin, and 1 of zinc. The allowance of the standard in more or less shall be of one hundredth in copper, and of half a hundredth for each of the other two metals.

ART. 6. The allowances in more or less permitted in the weight of the aforesaid coins shall be—

FOR THE GOLD.		
In pieces of Lire 100	Thousandths	1.
„ „ 50, 20, and 10	„	2.
„ „ 5	„	3.
FOR THE SILVER.		
In pieces of Lire 5	Thousandths	3.
„ „ 2·50, 2, and 1.	„	5.
„ of Centimes 50	„	7.
„ „ „ 25	„	10.
FOR THE BRONZE.		
In pieces of Centimes 10, and 5	Thousandths	20.
„ „ „ 2½, and 1	„	25.

APPENDIX, No. 18.

Roman States.

Adoption of principles of Convention of 1865.

ART. 7. The number of each kind of coins contained in a kilogram, and their respective diameter, shall be as follows:

			Number per Kilogram.	Diameter in Millimetres.
IN GOLD	Coin of Lire	100	31	35
	"	50	62	28
	"	20	155	21
	"	10	310	19
	"	5	620	71
IN SILVER	Coin of Lire	5	40	37
	"	2 50	80	30
	"	2	100	27
	"	1	200	23
	"	" 50	400	18
	"	" 25	800	15
IN BRONZE	Coin of Centimes	" 10	100	32
	"	" 5	200	25
	"	" 2½	400	22
	"	" 1	1000	15

ART. 8. The gold and silver coins shall have on the obverse the effigy, the name of the Pontiff, and the year of the Pontificate; on the reverse the inscription "Stato Pontificio," the value of the coin, and the year of the coinage inserted in a wreath of oak and laurel. The rim of the gold coin shall be marked with a ring of alternate sharp and round furrows, that of the silver coins with a ring of sharp furrows. The coins of bronze shall have on the obverse the effigy and the name of the Pontiff, the year of the Pontificate, and the year of the coinage; on the reverse the value expressed in soldi and in centimes, and the inscription "Stato Pontificio." These coins shall be struck with a smooth rim.

ART. 9. In conformity with the preceding regulations, the proportion of 1 to 15. 50 remaining in force in the monetary values of the gold and silver already settled by the Sovereign Act of the 10th January 1835, the monetary value of a kilogram of fine gold shall be reckoned at lire 3444. 44. 444., that of a kilogram of fine silver at lire 222. 22. 222.

ART. 10. From the aforesaid values shall be deducted the duty for the expenses of coinage at the rate of lire 7. 44. 444. for each kilogram of fine gold, corresponding to lire 2. 16. for each 1000 of value, and of lire 1. 66. 666. for each kilogram of fine silver, corresponding to lire 7. 50. for each 1000 of value.

ART. 11. By the effect of Art. 9. and 10. the gold and silver bullion which shall be delivered into the Mint to be coined, shall be paid for at the rate of lire 3437. for each kilogram of fine gold, and of lire 220. 56. for each kilogram of fine silver; excepting the deductions in force for melting, for assay, for refining and for division, whenever the aforesaid operations shall take place.

ART. 12. The coins from lire 2. 50. and the following in silver, and those in bronze shall be exclusively coined on the Government account; the respective quantities of both kinds shall be regulated according to the exigencies of the home circulation. The coins in gold and those from lire 5 in silver may be also coined on the account and at the request of private individuals.

ART. 13. The legal and invariable relation between the new and the old monetary unit is the following: "The "Pontifical scudo is equivalent to five lire and thirty-"seven and a half centimes (L. 5. 37. 5); the lira is "equivalent to 18 bajocchi and 60 and a half centimes "(baj. 18. 60. 5.)" This relation shall be observed from to-day and henceforth in all payments and in the valuation of contracts, and in all sorts of public and private acts, which may have taken place from the most remote times and which may also take place in the future.

ART. 14. The present Pontifical coins of gold and of silver circulating in the State shall continue to have a legal circulation together with the lire, until their total withdrawal shall be gradually executed at their nominal value; those of copper from bajocchi 2, 1, ½, and the quattrino shall have circulation from to-day henceforth at the value of soldi 2, 1, ½, and of one centime. With the present edict shall be afterwards announced to the public the epoch in which all the aforesaid coins shall cease to have a legal currency, and the new monetary unit in lire and centimes shall be henceforth exclusively adopted in all the acts and in the accounts of public and private interests.

ART. 15. All the gold coins in francs and lire, and those of silver from francs and lire five, coined in other States according to the new system authorized by the present edict, shall have a legal circulation for the same nominal value in the Pontifical State. The foreign coins of gold and silver enumerated in the tariff of the 10th January 1835 shall continue to have a legal currency at the value declared in the same tariff. With the notification of Monsignor Minister of Finance shall be published the Tariff of the Pontifical and foreign coins, with the relative tables of reduction based on the relation fixed in Art. 13 between the old and new monetary unit.

Monsignor Treasurer General, Minister of Finance, is charged to give full execution to the present sovereign regulations.

Given in Rome from the Secretariat of State, the 18th June 1866.

G. CARD. ANTONELLI.

(Translator, *G. Bullen.*)

MINISTRY OF FINANCE.

NOTIFICATION.

(Translation.)

By the edict of the Secretariat of State dated June the 18th, 1866, His Holiness Our Lord having deigned to order the change of the monetary system in the Pontifical State, it has been established that the new monetary unit shall be the Lira, divisible in centimes, and also represented by 20 soldi of the value of 5 centimes each. It has been afterwards determined in Article 13 that the legal and invariable relation between the new and the old monetary unit shall be the following:

The Pontifical scudo equal to five lire and thirty-seven and a half centimes; the Pontifical lira equal to eighteen bajocchi and sixty and a half centimes.

However, the present Pontifical coins of gold and silver in circulation are to have a legal currency together with the Lire until their withdrawal shall take place at their nominal value, in execution of Article 15 of the aforesaid edict; and as a rule for all contracts, past and future, the tariff of both coins, with the relative tables of reduction based on the relation above indicated, shall become public law.

To avoid henceforth any trouble which may occur in petty commerce in the exchanges of the two kinds of coins, another similar table is added for cases in which the smallest fractions cannot in fact be realized.

Finally, notice is given that in both tariffs the so-called "mezzi grossi" have not been taken into consideration, because the coining of them having been abandoned from the most remote times, the number of such coins in circulation is extremely small, and therefore the same being declared for the present moment out of the currency, the public offices are authorized to execute their withdrawal by means of exchange with other coins.

By another notification shall be afterwards published the tariff and corresponding table of reduction of the foreign coins of gold and silver of a system different from that now adopted, which coins, according to the aforesaid Article 15, shall in the meanwhile remain in circulation for the value assigned in the Tariff of January 10th, 1835.

From the Ministry of Finance, the 19th June 1866.

The Treasurer General Minister of Finance,

G. FERRARI.

TARIFF of the Pontifical coins of gold and silver in circulation, based upon the relation of Lire 5. 37. 5. for a Scudo, and of Bajocchi 18. 60. 5. for a Lira.

TABLE I.

REDUCTION of the SCUDO and its Divisions into Lire.

APPENDIX No. XIX.

ITALY.

NOTE from COUNT MENABREA to Her Majesty's Minister at Florence, relative to the Introduction of the Decimal System of Coinage and of Weights and Measures into Italy, with accompanying documents.

(Translation.)

SIR, Florence, July 10, 1868.

In compliance with the request contained in your note of the 5th ult., I feel I can do no better than transmit to you the undermentioned documents, in which the Royal British Commission will find the details it seeks respecting the regulations for monetary circulation at the time when the decimal system was first introduced into Italy:—

1. An account, preceding the project of law for the unification of the monetary system, presented by the Marquis Pepoli, when minister to the Chamber of Deputies, June 9, 1862.

2. A report of the parliamentary commission appointed to examine the said project of law, presented to Parliament July 25, 1862.

3. A law, dated August 24, 1862, on the unification of the monetary system.*

It is well to mention that in the first of these three above-named documents, details will be found of all the Italian provinces, excepting Venice and Mantua, which at that time were still under Austrian domination. To the 576 millions 52 thousand francs' worth of money (non-decimal) supposed to be then in circulation, it is necessary to add 16 millions in mixed brass money, *i.e.* in Austrian lire and fractions of florins, which it is presumed were actually in circulation in Venetia and Mantua, also 1,200,000 francs in copper Austrian coins, which, together with the above-named Austrian lire and florins, will be soon withdrawn from circulation.

The variety of coins which were then in circulation in the various provinces, and the inconveniences arising from coins in circulation in some provinces being refused in others, disposed people voluntarily to accept the new monetary system, which has encountered no difficulties in its applications, with the exception, perhaps, of in some provinces of the ex-kingdom of the two Sicilies. But this was but a slight difficulty, and one which daily diminished, and indeed has almost entirely disappeared, according as the difficulties of communication were overcome, that popular instruction was extended, and the new order of things consolidated. The rules adopted by government to render obligatory the introduction of the new monetary system are those laid down in the 11th art. of the law of August 24, 1862, which is here annexed.

With regard to weights and measures, her Majesty's Commissioners will find in the enclosed report presented to the Minister of Agriculture and Commerce, the answer to the questions required.

Although this report is dated December 31, 1865, and in this wise is of 2½ years back, it contains so good and clear an account of the obstacles and difficulties with which the introduction of the metrical and decimal system into the various parts of the kingdom had to contend, that little or nothing remains to add to it to place the British Commission "au fait" of the actual state of things.

Anyway it may be useful to add, that as soon as the metric law was published all the municipalities in the kingdom were ordered to open night and Sunday schools, in which popular lessons in the metric decimal system were given. Their system of teaching was then rendered obligatory, both in public and private schools, and it was not omitted officially to inform the ecclesiastical authorities in order that the same instruction might be given in the seminaries and other religious establishments.

In order to facilitate the task of the teachers, the government published a manual on the subject, illustrated with many figures, representing measures and the instruments for weighing according to the metric decimal system, which were authorized to be made by the regulation of October 13, 1861.

* This law will be found at page 241.

At the same time every commune was instructed to provide itself with the metric decimal weights and measures so that the teachers might, with these models, find the proportion of the new measures to the old, and practically explain the difference between one system and the other, accustoming the citizens easily to regulate the price of their various goods to the new weights and measures.

These dispositions were of the greatest use in diffusing the new system, and overcome the difficulties which were naturally to be feared from the deep-rooted habit of the old system.

An innovation which does not appear in the accompanying report is the transfer of the service of weights and measures from the superintendence of the ministry of Agriculture, Industry and Commerce, to that of the ministry of Finance, by the royal decree of May 8, 1866.

In the provinces this service, placed originally under the superintendence of the prefectures, passed by a decree, dated June 10, 1866, into the hands of the Director of Taxes and the Domain, and is now actually under that of the Director of Direct Taxation and Tithes.

The executive part, so to speak, of this service is performed by special officers. There are 84 of these, and they reside in the capital of the province.

Many and daily arrangements of more or less importance are being made to ensure the necessary vigilance over the weights and measures on the part of the agents of the government, to provide against contravention of the existing laws, and to do away with as much as possible the remains of the old customs which are contrary to the new system, and so forth.

All this may be, however, summed up in two words: viz. the administration by daily dispositions does its best for the exact maintenance of existing laws.

A more useful thing than to dilate on this theme would be to give a recent statistical report, which would give the results obtained by the application of the new system; but this work is not yet published.

There are, however, in course of publication, 1st. Statistical Table of Results of Verification before and during the last few years; 2d. A Table of proceedings taken against contraventions in matters of weights and measures; 3d. A Table of the Industries, Arts, and Trades; which, in virtue of the 14th article of the metric law of July 28, 1861, are subject to periodical inspection, and which are described in the list which each prefecture is bound to publish, in accordance with 35th article of the regulations approved by the royal decree equidated with the law.

As soon as these statistical works shall be finished, I shall be happy to forward a copy of them to you, for transmission to the Royal British Commission.

I trust, however, in the meanwhile, that I have in the preceding paragraphs satisfied the wishes of the Commission as far as possible. If not, I shall be glad to answer any further questions your Excellency may be pleased to address to me.

I avail myself,
&c. &c. &c.
(Signed) Ct. MENABREA.

(Translation).

Session 1861. No. 258.

CHAMBER OF DEPUTIES.

PROJECT OF LAW presentedby the Minister of Agriculture, Industry and Commerce (Pepoli), in the sitting of 9th June 1862.

Unification of the Monetary System.

Gentlemen,—Scarcely were the marvellous events completed which brought into unity the greater part of the provinces of Italy, when the necessity of a monetary reform throughout the entire kingdom became manifest. Money, while it circulates in the hands of all as a sign and equivalent of every kind of value, is likewise the most popular, the most constant and most universal monument that can represent the unity of a nation. It is for this reason that the emancipated peoples look with suspicion upon the old coins, which connect themselves in their thoughts with the humiliations and the slaveries that they have endured, and with one voice ask for a coinage bearing the effigy of the unifying king (Re unificatore). The same provisional governments which guided the first steps of the peoples restored to liberty felt it to be a duty to further their desires by proclaiming the legal circulation of the Italian lira, while those of Tuscany and Emilia, proceeding still further, took in hand the actual coining of decimal monies. At the present time such a reform is more than ever urgent for the entire state, and the Italian government can no longer delay it, without failing in the fulfilment of its duty. It is incumbent that for the various and multiplied monetary systems of the different provinces there should be at once substituted a uniform national system.

With this political view, which dominates all others, there are nevertheless associated economic arguments. The multiplicity and variety of the coins in gold, silver, and copper, which compose the monetary system of each province, the disparity of the very tariffs intended to set forth their value, the abuses and irregularities which they occasion, produce the utmost confusion, impede the formation of price currents and of exact industrial statistics, facilitate frauds, and raise between province and province barriers perhaps not less difficult to surmount than the old ones of the customs. To this cause likewise may be referred the illicit gains and exorbitant speculations on the exchanges, the alterations in the prices of merchandise to the loss of the consumers, the sharp and persistent disputes among all orders of citizens, and above all among our poor soldiers, who, being compelled frequently to change their abode, are more than others obliged to sustain the effects of such a state of things; and finally the loss sustained in the public exchequer.

Added to these considerations special to Italy there must be mentioned others, which in our times nearly affect the interests of all other nations. For several years past the crisis produced by the abundance of gold has occupied the attention of the scientific men and the governments of the whole of Europe with reference to the grave economic problem of monetary reform, and specially as to the adoption of a unique type or double type of legal coin. The effect of this universal crisis has not failed to manifest itself also in Italy, where it has been still more felt on account of the variety and opposition of the monetary systems in force in the different provinces, some of which have for a legal type the silver coin, and others the gold and silver coin at the same time. It was a consequence of this that a recent law, approved by the present Parliament, extended to all the Italian provinces the legal use of the decimal coins in gold as well as of those in silver.

The nations, however, who possessing a double type of legal coin, one in gold and the other in silver, have determined by law, in a fixed and invariable mode, the relation of nominal value between one metal and the other, in every monetary crisis incur the risk of seeing the coined metal exported, of which the value rises, while in its turn there is imported a coined metal, of which the value falls, thus producing no small loss of the national capital, and a grave disturbance of internal and external commerce.

The risk becomes still more grave when a metal is coined which is at a premium relatively to the value of the other. There is an absolute certainty that it is scarcely coined and put into circulation, when it disappears through the agency of speculators, who are interested in purchasing it, in order to gain the benefit that accrues from its greater value.

Wishing, however, to provide for the re-coinage of almost all the money of the kingdom, the government was obliged to put to itself the question whether it should from the present time adopt a single type of legal money, or hold altogether by a provisional system, which might afterwards more easily and with greater security allow the adoption of the unique type.

The system of the unique type is, according to my opinion, the most logical and the most perfect; that which our old Italian writers counselled as a remedy for the evils resulting from the changeable value of gold and silver, and which has been likewise recommended by the greater number of modern economists; but its practical application could not take place suddenly and on the occasion of the present reform.

Without speaking of the discrepancy of opinions among economists, some of whom prefer the silver type and others that of gold, while science or the experience of facts have not yet pronounced a definitive judgment upon the subject, and even granting that the gold type has a great probability of being universally adopted, I consider as I have already on other occasions declared to the chamber, that this question must from its nature be settled by the mutual accord of the principal nations of Europe.

The frequent and important commercial relations which we have with France, with Germany, and the other nations among whom silver is adopted as the legal coin, the special conditions of the Italian credit for which the titles of our public debt are negotiated in the principal markets in which silver money is used, not to mention other motives, would cause such a reform to be inopportune and hurtful at present, which at another time, if effected with the common consent of the principal nations of Europe, would have a perfect success and be fruitful in the best results.

If we should now desire to adopt gold as the unique monetary type, and if France should subsequently withdraw its right to be treated as legal coin, grave difficulties would spring up in the relations of our commerce and of our credit with foreign nations. When we shall have established our public credit, and the principal market of our revenue shall be in Italy, or when in conjunction with foreign governments we shall have become prepared for a solution of the question, then we shall be able to arrive with security at this great and ultimate reform.

Wishing then to adopt a system, which, maintaining at present the double type of legal coinage, may lead our monetary system towards unity, I nourish the confidence that this purpose may be precisely connected with the scheme of law which I submit to your examination. This is set forth in an examination, in the first place, of the fundamental principles upon which the scheme rests, and next of the financial operations and expense involved in its execution.

The old monetary systems, like the new one intended to displace them, comprise coins in gold, coins in silver, and coins in brass mixture.

For the gold coins the reform is easy. You have only to strike new coins of 100, of 20, of 10 and of 5 francs, at the standard of 900 thousandths, and call in the old ones, ordering them to be exchanged for new coins of a corresponding value.

But for the silver coins the case is very different. If the government, while calling in the old coins, should wish to exchange them for new ones coined at the standard of 900 thousandths, it is certain that scarcely would these get into circulation when they would disappear, and prove a source of considerable profit (to certain persons). To make this evident, the most simple calculation will suffice, being exactly the one which speculators would make in such a case.

Fine silver in ingots was worth a few days ago in the Paris market 223 *lire* 70,558 per kilogram. But 4,000 new *scudi*, which weigh 100 kilograms, and contain 90 kilograms of fine silver, while they are worth nominally 20,000 francs, would sell, at the price of fine silver in the market before-mentioned, for 20,133·50 *lire* at a premium namely of 133 50 *lire*, or $\frac{2}{3}$ per cent, or 6,675 per thousand. Now if it is observed that the quantity of old silver coins to be converted into new decimal pieces amounts, according to approximate calculations, to 433 millions of francs, (Appendix No. 1), from which, account of diminution being calculated at $5\frac{1}{5}$ per cent., 410,484,000 *lire* in new coins would be received, it is clear that the speculators, by buying up these new coins fabricated at 900 thousandths, and selling them again, would make a profit of 2,739,980 70 *lire*. Moreover the reflux of silver into Europe from Morocco, from Japan, from China and the East, which has taken place during the last two years, the exportation of a large quantity of gold to America on account of the war that burst forth there and the monetary crisis that was the consequence of it, having for the present diminished the difference that existed between gold and silver, it would not be improbable that the value of silver might again rise to the scale that it had reached a short time ago, and then the profit to be derived from the exportation of the new coins would be still further increased.

If an objection should be taken from the example of the several provinces of Italy, where the silver coins always abound, the answer would be easy that such was the case up to the present time, because the only legal coin was that of silver, whereas now the new coins have already begun to be exported; that if the exportation is not greater, that arises from the old coins being for the most part worn and deficient in weight, thus offering no inducement to speculators to engage in an exportation from which they would derive no profit.

To those who might refer to the example of France, which is always coining new silver pieces of the standard of 900 thousandths, I would answer that it is well known that there is an enormous exportation of coined silver from France to foreign countries; that such exportation amounts to more than a miliard, on account of which they have no longer any but the old worn pieces; and that, in consequence of the universal complaints concerning the deficiency of the silver coins, a commission was appointed to remedy the inconvenience, which concluded its labours by recommending a re-coinage of the divisionary silver coins at a standard and real value below those of the actual type.

If, therefore, the Government should strike new coins of the standard of 900 thousandths, in the quantity that would be required for the wants of the exchanges, it would incur a great expense which would resolve itself into a net loss, because the money would be exported almost as soon as it was coined, while our international commerce, and particularly our petty commerce, would be involved in great straits and embarrassments through the deficiency of silver coins, and especially of minute coins below the scudo.

The remedy for this is shown by the very nature of the case. We must reduce the intrinsic value of the silver coins below the scudo, so far as is necessary to impede their exportation, without, however, holding out a bait for the fabrication of counterfeits. Now this may be done according to two different methods. The first is that of a brass-mixed coin (eroso-mista), containing, that is to say, a large proportion of copper. This method may be briefly disposed of. In those times when it was considered lawful for governments to debase at their pleasure the intrinsic value of the coins, the copper-mixed coins (monete erosomiste) gave rise to easy and unceasing abuses, as well as to immoral gains obtained at the expense of the public. But granting even that the brass-mixed coins (monete erose) might contain an equal value, or one quite close to their nominal value, still they are dangerous, and should be rejected. They readily become subject to oxidation, and thus their colour ae well as their sound are a preventive in ascertaining their composition (lega); and through the defect, in one word, of the qualities peculiar to gold and silver, whether pure or melted with little alloy, they may be counterfeited or adulterated with impurity, whence arises the want of confidence in these coins on the part of the population, and the belief, easily engendered, that the government wishes by their means to obtain, as in former times, illicit gains at a public loss.

The nations that are most advanced in industry and commerce have for a long time abandoned this system. And after the endurance we have had of its evils up to the present time in many provinces we are bound henceforward to abandon it also.

Notwithstanding these reasons, I have thought proper, in order to remove even the last doubts that might remain in the mind of any one, to interrogate public opinion upon the subject through the prefectures, and the answer has always been such as to confirm the arguments put forth as to the necessity of banishing the brass-mixed money.

The second method is that of silver monies coined of a standard and weight but little inferior to the actual, in such a manner that there would be only a slight reduction in their real value.

Thus England, since the year 1816, has reduced the weight of her shillings in such a manner that their nominal value surpasses by more than six per cent. their intrinsic value. Portugal, the United States of America, Brazil, and the various States of South America, have all reduced the weight and value of their small silver coins. Russia, instead, has reduced the standard of her small pieces from 868 to 750 thousandths, and Switzerland from 900 to 800 thousandths. Holland also, which has only silver for legal money, has reduced by 7·20 per cent. the intrinsic value of her small pieces. Belgium is on the point of adopting an analogous provision. Finally, in France, the commission nominated for this purpose has concluded by recommending the reduction of the standard from 900 to 835 thousandths. This is the system to which I most willingly give my adhesion.

The reduction of the standard or the weight which these nations have effected in their small silver coins is equivalent to a diminution of about six or seven per cent.

On the other hand, the diminution which our silver coins have sustained is calculated approximately at from five to six per cent.

The reduction of the standard appears to me to be preferable to that of weight, because it brings fewer perturbations into the economy of the decimal monetary system. Now the standard of 835 thousandths is exactly equivalent to a diminution in value of from six to seven per cent.

With the issue of small silver coins of the standard of 835 thousandths, their exportation would be impeded, there would be no inducements for counterfeiting, and the condition of the actual possessors of the money about to be called in would scarcely be altered. A lower standard, such as that of 800 thousandths in the Swiss coins, causing a difference of 11 per cent. between the intrinsic and the nominal value, appears to be hazardous, as likely to produce counterfeiting. And if possibly that has not been the case in the small issue of the Swiss coins, it certainly could not fail to occur in the great mass of the Italian coins about to be issued.

Such a reduction of standard and value, however slight it may be, invests those coins in some degree with the nature of a liquidation coin (moneta di saldo) fitted for minute payments. Whence it is thought just and opportune to prescribe a limit to the sum for which they may be given in payment to private individuals, declaring the state, however, bound to receive them without limit in its coffers. It appears to me that it would be fitting to fix the

limit at 50 lire, being the same as that established in England.

While in this way the standard and value of the silver coins below the scudo would be changed, the scudo would remain intact. The many and various commercial relations, the particular conditions of our credit, as we have before observed, would make it inopportune to proceed without common accord to the alteration of a coin which serves for the common exchanges, and concerning which the French monetary commission above mentioned thus expresses itself:—

"It is convenient to keep in circulation those coins "which partake of the international character of the "exchanges of which they are the instrument. The coins "of five lire, which have for their basis, not an arbitrary "combination, but elements common to all nations, are of "this character to the highest degree, and could not be "modified without producing a disturbance in our inter-"national relations."

Even Switzerland, in these latter days, has recognized the truth of this view. It has not dared to interfere with the five lire coin, suspecting that any alteration in it might lead to questions and difficulties in its dealings with foreigners.

If France, which certainly has greater power and more solid authority, hesitates to adopt this provision, if Switzerland recognises the inconvenience of it, ought Italy at once carry it into effect? And here I cannot forbear to impress upon you that, if France should adopt the unique silver type, we should experience a severe loss from having destroyed this international coin.

Inasmuch as after the coining of new scudi of the standard of 900 thousandths a serious risk is incurred of seeing them quickly exported, the government should abstain from coining them, leaving, however, to private individuals, the privilege of coining them, and granting a free circulation to the scudi of other nations.

While, however, the quantity of silver coins and of brass-mixed coins in circulation is calculated approximately at the nominal value of 433 millions of francs (Appendix No. 1),* it could not be entirely converted into coins below the scudo, unless these became superfluous, while the coins of greater value would be insufficient in their place. It will be fitting, therefore, to coin about 150 millions of franc silver coinage of two francs, of one franc, of 50 and of 20 centimes, and to convert the remainder into gold coins, thus producing a profit to the treasury. This sum of 150 millions will not appear exhorbitant when we consider that the French commission has proposed to the government to coin 250 millions of divisional money.

Coming now to the brass-mixed coins, it may be said that the reform is almost completed. The government, availing itself of the powers conferred by the law of the 25th April 1859, had already, by Royal Decree of the 20th November of the same year, ordered the coinage of a bronze coin in pieces of one, two, and five centimes, which is now in fact carried on in each of the two mints of Milan and Naples, and had made provision for the calling in of the old copper coins, which, having been recently executed in the provinces of Lombardy, of Emilia, of the Marches, and of Umbria, will as soon as possible be effected in the southern provinces, and possibly be completed in the remaining provinces by the end of the present year. There were, however, in circulation, about 35 millions of lire in copper coin, for which will be substituted 24 millions of new bronze coins. The quantity of these is, however, inferior to the amount of the old ones and to the necessities of the circulation, especially if we reflect upon the development of industry, the extraordinary development of the public works, and the exigencies of the other various governmental services. It will be necessary however, to coin 16 additional millions of bronze lire of 10 centimes, intended principally for the southern provinces, which are now using large copper coins, so that the total issue will amount to 40 millions.

There will thus be constituted in a logical manner, and one conformable to the wants of internal and external commerce, the three series of our national coins in gold, silver, and bronze. We shall have, that is to say, in perfect harmony with the French system, pieces in gold of 100, 50, 20, 10, and 5 lire; in silver, pieces of 5 lire, of 2 lire, and of 1 lira, of 50 centimes and of 20 centimes; and in bronze, pieces of 10, 5, 2, and 1 centimes.

The pieces of 100 and of 50 lire adopted in Italy since 1832, though little used in commerce, are retained in order to complete the series of gold coins. The piece of 5 lire of the same metal is now introduced into our system, as being useful and in a manner necessary to supply the place of the silver scudo.

With respect to the bronze piece of 10 centimes, so ardently longed for in the southern provinces, the notices officially collected assure us that the same would meet with a favourable reception in the other provinces.

Objections are certainly not wanting to this system, but, after having carefully examined them, I do not think they are such as to divert us from the prescribed path.

I shall not speak of the objections which present themselves to the provisionary nature of this scheme of law, that it does not yet proclaim the unique type of legal coin. These I have already confuted.

Recognising the necessity of a provisionary system, which, solely by preserving the double monetary type, should repair every other defect of our coins, it will be said that we are destroying the unit of measure of the money itself; because the law of the 7th germinal, year xi, which constitutes the basis of the French monetary system, with which ours is identical, defines the franc thus:—a piece of 5 grams of silver of the standard of $\frac{9}{10}$ths of fineness. Now the newly coined francs will no longer correspond to this definition. The franc, monetary unit, will no longer be an ideal and abstract type, in contradiction to the reality of things, since the actual francs will be of 5 grams of silver of the standard of 835 thousanths. The anomaly of it would be seen from the fact that a scudo would be in reality worth more than 5 francs in specie. But these objections have been already refuted among the various nations that have reduced the weight or the standard in the silver specie. The Swiss Federal council and the French commission especially made it the object of long and instructive discussions; and the latter, by a majority of eight votes out of nine, was of opinion that the piece of 5 francs of the standard of 900 thousanths ought to be retained, and that the standard of the divisionary coins might be reduced, because the principal objection which the opponents of this system bring into the field is already actually verified. One hundred centimes in bronze money, while representing the nominal value of one lira, are not, however, its real equivalent; and if no inconvenience follows from this, so neither will there in reality arise any mischief from the reduction in value of the small silver coins, the sum which may be given in payment being limited, and the sole result being, if you please, a defect of symmetry in the monetary system. And it must not be forgotten that money fulfils two offices; that is to say, it serves for international commerce and for internal commerce; and hence that the government may, without exposing the country to loss or perturbation, vary the standard of the small coins, which are used only for the latter, and which ought not to cross the frontier. As for the scudo, I have already said that it cannot be altered, being essentially an international coin, but that the government should abstain from coining any new scudi at present.

It will be said that, when the standard of the silver coins is altered in this manner, the possessors of the old gold coins which they shall receive in exchange will thereby sustain a loss. I have already observed that the fall in the old coins has diminished their value by $5\frac{1}{5}$ per cent., whence their condition in this respect will scarcely be altered, while they will afterwards, instead of wretched coins, have received new, perfect, and national ones. Neither is it to be feared that the price of provisions would be increased, or that stock-jobbing or confusion would arise, because, I repeat it, the state of things is scarcely changed, and, moreover, nothing of the kind took place in free England, nor in the vast Russian Empire, nor in Switzerland itself where the reduction was much greater.

Some say that, without meddling with the lira, the unit of our monetary system, the exigencies of our internal commerce might be supplied by the fabrication merely of pieces of 50 and 20 centimes in silver, at a reduced standard; but to this observation I have only to oppose the representations obtained from the chambers of commerce and from the different establishments and branches of the national bank, all of which acknowledged the absolute impossibility of doing without the coins of one and two lire (Appendix No. 2.)*

Others, believing the piece of 20 centimes in silver of the standard of 835 thousandths too small to be conveniently handled, especially by common people, would prefer brass-mixed coins of 20 centimes and even of 50 centimes, struck, for example, at a standard of 500.0000 or even lower. And the ministry in fact had experiments made in the coining of brass-mixed monies of different standards, which are communicated to you. But the reasons already indicated made them reject for the future all kinds of brass-mixed coins.

Next, with respect to the smallness of the coins of 20 centimes in silver, I observe that it is not such as to cause inconvenience, since among other nations similar coins are in circulation, and even smaller than these, as in England

* The Appendices are not printed on account of their bulk.

(Appendix, Nos. 3 and 4).* To the customs of the northern provinces of Italy, which make use of brass-mixed coins and larger, the customs of the other provinces may be opposed. After a brief space of time all will become accustomed to their use, like the inhabitants of other countries which have no brass-mixed money.

Hence, the question being put in this manner, it seems to me impossible to escape from this argument.

Political and economical reasons oblige us to coin new decimal money.

It is impossible to retain in circulation money of the standard of 900 without a reduction of weight.

It is premature to adopt the system of the unique type.

It is therefore necessary to deliberate concerning the coinage of a divisional silver money which offers neither an inducement to exportation nor an encouragement to fraud.

It now only further remains for me to speak of the financial part, or of the expense which the country will incur through this great reform.

It is necessary for me to declare that it is not possible to foresee the amount, except in an approximate manner, no one having it in his power to state precisely the quantities of coin in circulation, nor the diminution or alteration produced by the use of all such coins, without distinction, as should now be withdrawn. The calculations, however, which I submit to the chamber with respect to it in the annexed view (Appendix No. 1.)* are the result of the most diligent researches effected and the most complete information that could be procured by the ministry.

You will gather, gentlemen, from this table, that if in proportion the loss by consumption is little short of one per cent. for the gold coins, it may be fixed at 5·18 per cent. for the silver coins, while for the brass-mixed it amounts to 15·92 per cent.

In the aggregate the entire loss that will result from the calling in and conversion into Italian money of the old non-decimal gold, silver, and brass-mixed coins is calculated, according to the annexed table (Appendix No. 5),* at the sum of 30,550,050*l.*, thus distributed:

Diminution of intrinsic by consumption -	L28,967,550
Expenses of calling in, exchange, &c. - -	1,080,000
Expenses of extraordinary fabrication of specie	502,500
	L30,550,050

The calling in of the copper money at a nominal value of - - -		L11,000,000
Deduction made in the net product of the sale of the material in - - -		4,440,000
Causing a new loss of - - -		L6,560,000
Which, joined to the preceding of - -		30,550,050
Constitutes a tota passive of - - -		L37,110,050
This loss, however, is repaired to a great extent by the gain that will accrue to the state from the following operations:		
1. Coinage of 150 millions of specie in silver at the standard of 835 thousandths instead of 900 in the proportion indicated in the said table (Appendix No. 5)* - -	L9,750,000	
2. Exchange of 318,000,000 in silver against gold -	4,658,700	
3. Fabrication of 16 millions in bronze money of 10 centimes, deducting every expense - - -	9,300,000	
	L23,708,700	23,708,700
Thus the total loss is reduced to -		L13,401,350

To meet which it is necessary for the chamber to grant the corresponding funds distributively asked for in the three projects of law relative to the reform under consideration, and which I have the honour to present for your approval.

Gentlemen, I have arranged that to this statement shall be subjoined all the documents that may elucidate the question. I trust that you will promptly deliberate upon the subject, since the proposed reform is one of urgent necessity. From every province appeals are made to the ministry. A resolution is necessary; the country with one accord invokes it from the Parliament.

This reform is one of the most radical; it is the indispensable complement of the unification of our interests, of our industries, of our commerce, of our public debt, of our financial administration; it is a new triumphal step in the path of the unity of our country, of that unity which we ought to transfuse into all our social institutions, which should mark the irrevocable forms of all our deliberations. This, let me be allowed to say, is a step towards the unity of the type, a reform upon which, as I have stated, the ministry has concentrated all its attention, which, it does not hesitate again to declare, will open up communications with other nations in order to arrive at that result which is the desire and the want of all peoples!—the uniformity of the monetary system in Europe and among all civilized nations!

PROJECT OF LAW.

VICTOR EMANUEL II.,
By the Grace of God and by the Will of the Nation,
King of Italy.

ART. 1.

The mints of the state coin the following monies:—

Gold.		Weight.	Allowance per piece in more or less.
Pieces of lire	100	grams 32·25800	milligrams 32·26
„ „	50	„ 16·12900	„ 16·13
„ „	20	„ 6·45161	„ 12·90
„ „	10	„ 3·22580	„ 6·45
„ „	5	„ 1·61290	„ 4·84
Silver.			
Piece of lire	5	„ 25·00000	„ 75·00
„ „	2	„ 10·00000	„ 50·00
„ „	1	„ 5·00000	„ 25·00
„ „	50	„ 2·50000	„ 17·50
„ „	20	„ 1·00000	„ 10·00
Bronze.			
Piece of centimes	10	„ 10·00000	1 per cent.
„ „	5	„ 5·00000	1 per cent.
„ „	2	„ 2·00000	1½ per. cent.
„ „	1	„ 1·00000	1½ per. cent.

ART. 2.

The gold coins and the silver piece of 5 lire are of the standard of 900 thousandths, with the allowance of two thousandths in more or less.

ART. 3.

The pieces of one and of two lire, of 20 and of 50 centimes, are of the standard of 835 thousandths, with the allowance of three thousandths in more or less.

ART. 4.

The alloy of the coins in bronze is fixed in the proportion of 960 thousandths of copper and 40 thousandths of tin, with an allowance of five thousandths in more or less for each of the two metals.

ART. 5.

The fabrication of the coins contemplated in Articles 3 and 4 cannot take place except within the limits determined by special laws.

ART. 6.

The government establishes by royal decree the impressions and diameter of each description of coins.

ART. 7.

No one is bound to receive in payments a greater sum than 50 lire in divisionary coins of silver, which are received instead without any limit at the public banks.

The bronze coin can only be employed in payments for completing the fractions of a lira.

ART. 8.

The Government can by royal decree admit into legal circulation in the state foreign coins of the kinds contemplated in Art. 2, if coined according to the system established by the present law.

ART. 9.

Those coins that are light beyond the allowance determined by the law, and all those that are clipped, pierced, disfigured, and worn in such a manner that the impression is not recognizable on both sides, or even only on one, are excluded from circulation, and received only as bullion in the exchange offices of the Mints.

ART. 10.

In the contracts and public acts, in the registers of accounts of the public administrations, and in any other book or document that concerns the interests of the public, the values must be calculated and expressed in lire and centimes.

No public or private writing of a date subsequent to 31st December 1862 can be admitted in law as a proof of credit, if the values indicated in the same are not similarly expressed in lire and centimes.

Any infringement committed by any public official on the disposition of this article is punished by a fine of 50 lire.

ART. 11.

The Government is authorized to provide by Royal decree for the calling in and exchange of all coins in gold, silver, brass, and copper of Italian coinage of a system different from that established by the present law, and to stop the legal circulation of all foreign coins, equally belonging to a system different from the national one, which are actually in circulation in the different provinces of the kingdom.

ART. 12.

To provide for the expense of the calling in, exchange, and conversion into decimal money of the coins of gold, silver, and brass-mixed metal of a different system, the sum of 16,141,350 lire is authorized to stand in the passive balance of the Ministry of Agriculture, Industry, and Commerce, for a third part to the charge of the current budget, and for the remainder to that of the budget of 1863, in a suitable chapter under the denomination, *Expenses for the calling in, exchange, and conversion into decimal money of the non-decimal coins of gold, silver, and brass-mixed metal of Italian coinage.*

The expense of the calling in and exchange of the copper coins shall be provided for by the same law that shall order the fabrication of the new pieces in bronze of 10 centimes.

ART. 13.

Any arrangement in force in opposition to the present law is abrogated.

PROJECT OF LAW.

VICTOR EMANUEL II., by the grace of God and by the will of the nation, King of Italy.

ART. 1.

Authority is given for the fabrication and issue of a nominal sum of one hundred and fifty millions of lire in divisionary silver coins, according to the system established by the organic monetary law.

ART. 2.

The Government shall determine by Royal decree the proportional quantity of each kind of such coins.

ART. 3.

For the relative expense provision shall be made with the funds assigned to the Ministry of Agriculture, Industry, and Commerce by the organic law on the Italian monetary system.

PROJECT OF LAW.

VICTOR EMANUEL II., by the grace of God and by the will of the nation, King of Italy.

ART. 1.

Authority is given for the fabrication and issue of bronze coins of 10 centimes, according to the system established by the organic monetary law for a nominal value of 16 millions.

ART. 2.

To meet the relative expense and that for the calling in of the old copper money, the fund set down in chapters 74 and 75 of the passive balance of the Ministry of Agriculture, Industry and Commerce, for the budget of 1862, shall be augmented by 7,100,000 lire, and divided in equal proportion.

(*The appendices alluded to by the Minister in his speech have not been printed on account of their ulk*

(Translation.)

Session of 1861. No. 258 B.

CHAMBER OF DEPUTIES.

REPORT of the Committee, composed of the Deputies Nisco, Martinelli, Allievi, Ricci Giovanni, Broglio, Corsi, Menotti, Silvani, Nelli, on the Project of Law presented by the Minister of Agriculture, Industry, and Commerce, in the sitting of June 9th, 1862.

UNIFICATION OF THE MONETARY SYSTEM.

Sitting of July 25th 1862.

Gentlemen,—Upon various occasions the Parliament has expressed its desire to see taken in hand the reform of the coinage, and to see established likewise in this most important branch of economic life that unity which is the corollary of political unity.

And therefore all the offices have with unanimous vote applauded the presentation of the project of law for the unification of the Italian coinage.

It is useless to repeat here the numerous inconveniences caused by the multiplicity of the coins within the various provinces of the same kingdom. These inconveniences are aggravated, and become so much the more felt, in consequence of those more powerful means of communication by which the interests and the peoples are more bound together. On the line from Milan to Ancona you pass across four monetary zones; those, namely, of Lombardy, Parma, Modena, and the Romagnas; each of which has its coinage, its numerations, unknown on the other side of the frontier, which for any other purpose is already forgotten.

Neither shall we repeat here what was formerly said upon the political importance of placing in the hands of the people, instead of the old local moneys, a new coinage, emblem and pledge of the stability of the new order of things, thus cancelling any vestige, any claim of an irrevocable past.

But the reform of the coinage, urgently required by the political conditions of our country, happens to occur in a moment of crisis of the monetary systems, an effect of the perturbation in value to which the precious metals used for coinage are subjected. Not only has the price of the precious metals become unstable, but as a consequence of it the doctrines themselves fluctuate, and confidence has diminished in some of those principles which a few years ago were considered as inexpugnable axioms.

To be convinced of this, we have only to call to mind the monetary history of the last few years. France had, by the law of *germinal*, year XI, created a system which she looked upon with proud complacency. This system was in harmony with that other system of decimal, metrical measures, and ought in the opinion of many to become the basis of universal coinage. But the discovery of the gold mines in the new world has destroyed in a great measure such a belief. Belgium since the year 1850, under the double pressure of the calling in of the Dutch gold, and of the marvellous gold productions of California, deprived the gold coins of legal value. Switzerland was working at the same time a great reform, sweeping away likewise a few years after the renovation of her political compact a hurtful overgrowth of uncultivated and various coins; but she acted only on the French system, taking as unique basis the silver medal, and for unit the franc, at the standard of 900, with 4½ grams of fineness.

The French Government itself, anxious in these first moments, assembled commissions, studied the subject afresh, examined whether it was not a fit occasion to make new provisions, to make a change. In the meanwhile its advisers were of opinion that the alteration in the value of the precious metals had as yet no character of permanence or importance, and that a reform was not yet urgent.

During the following ten years we have witnessed a great experiment. The economic phenomena, the phenomena of circulation, have been developed, have become interwoven.

The production of gold in California and Australia has gone on diminishing little or nothing from its primitive fruitfulness, except in the quite altered conditions of extraction and labour. At the end of the ten years opinions were profoundly shaken—we almost venture to say totally overturned.

In fact, Belgium, after a long and celebrated discussion, decreed the restoration of the legal circulation to the gold coins. Switzerland even calls for the circulation of the French gold coins, decrees the diminution of the fineness contained in her silver coinage, and thus overthrows the system inaugurated ten years before. France herself, afflicted with a penury of silver, prepares herself for a reform, although with much repugnance and hesitation.

And it is in this moment of transition and uncertainty that Italy is called to the unification of her coinage.

We have diffused throughout all Italy the system of the old provinces modelled upon the French, with the double coinage of gold and silver and the legal ratio of 1 to 15½. We shall expose ourselves, if we persevere in that system, to all the inconveniences suffered by Belgium, France, and Switzerland from the continued scarcity of silver coinage. With the remelting and unification of the coins we are henceforward obliged to study what may be the remedies, what the necessary alterations, in order that our new silver coins may not follow the current of exportation, but may remain in circulation to satisfy the extended and minute wants of the most common transactions.

What is the character, what the result of the reforms until now decreed or proposed?

All feel that the French system with a double type has ceased to be effective; all feel the necessity of a modification; but at the same time they hesitate and do not know how to repudiate at once their own doctrine; they temporize and try to elude the difficulty by having recourse to an expedient.

That is what was done in Switzerland; that is what is proposed to be done in France. The legal equality on the basis of 1 to 15½ between gold and silver is maintained, but this equality is only to take effect between the gold coins and the thicker silver coins of five francs a piece. For all the other silver specie, under five francs, the system is abandoned, the quantity of fine silver which they contain being diminished.

What is the necessary consequence of such a proposition? Its authors do not dare to confess it to themselves. And while the Commission of the Swiss National Council, accepting the proposal not to issue francs any longer at 4½ grams, but at 4 grams of fine silver, declares that it accepts the project because it sees in it a measure of transition, an approach to the unique gold type, the French Commission still protests its confidence in the double type. "We ought to entertain a very natural hesitation," it says, "when called upon to pronounce by an irrevocable "measure on a still uncertain situation; the Commission "does not admit that there is ground for abandoning our "silver coinage, or for subjecting the same to over profound modifications." Your Committee on its part could not share all the scruples, all the perplexities of the French Commission.

It believes that imperative economical reasons impel us towards the absolute preponderance of the gold coin; it believes that gold destined to occupy the superior "strata" of circulation has become for us an instrument much the more indispensable, since that alone is equal to meet the increasing mass of values which are thrown in the great current of trade.

Your Committee believes that the abundant affluence of gold is beneficial, providential, and alone permits the development of riches, of circulation, and of credit, which has taken place from 1852 to this day; and that gold is destined by the very avidity with which it is absorbed by the circulation to keep a stability of price inexplicable when the quantity alone of the production is considered.

The Committee cannot even by hypothesis agree with the doubt manifested in the report of the minister, that France might at a later period revert to silver as an unique coinage. It is impossible that this should happen after the serious transformation which the metallic circulation has undergone even in France; it is impossible that gold should give place to silver without supposing a decline in wealth and exchanges. There are historical ages for coins, which are recognized by the predominance of one metal over the other, as there are in the same society so many degrees and social situations, among which prevail the use of bronze coins, or silver or gold coins. In proportion to the advancement of States in civilization and wealth and the improvements made by the citizens of one and the same State in their fortunes, the more do they value the use of that coinage which comprises under the most convenient form the greatest power of acquisition.

Nevertheless, whatever may be the convictions of the Committee, it cannot dissemble or refute the serious reasons which make it expedient for us to keep an equal pace with the nations around us, and especially with France, to which we are bound by the ties of such numerous interests. Therefore the Committee unanimously consented to accept the system of transition which is laid down in the project of law, reducing the fineness contained in the silver coins below the value of 5 lire.

Like the Commission of the National Council of Switzerland, we consider such a system as being a practical approach to the unique gold coinage. On the one hand we cannot allow the same legal efficacy of payment to the silver coins of 1 and 2 lire, thus reduced in their intrinsic value, that we do to the gold coins and to the silver piece of 5 lire at the normal standard of 900; on the other, we know already that the silver pieces at the standard of 900, assimilated to gold on the basis of 1 to 15½, will become scarcer every day, and that if new ones were coined they would disappear with greater facility.

As a consequence of these premises the Commission has thought it more proper and more true to remove the silver 5 lire pieces from the coins which are struck for the account of the State, and has only granted to the mints the faculty of striking some for the account and upon the demand of private persons.

Without doubt the system of transition accepted by us is not without a certain amount of contradiction. We shall have in circulation an effective coin, the lira, which will not be the legal monetary unit of the same name; we shall have in circulation the lira, a silver coin, which will not be the lira of all the accounts and all the obligations, and which will be in some measure a falsehood and misrepresentation in respect of the name it bears.

But the contradiction, the absurdity, is not and cannot be of importance, except for those who still believe it possible to return to the old equilibrium of value between gold and silver. Since, if this fact, which they foresee, could be accomplished, if truly it should be possible and right to coin new silver lire at the standard of 900 with 4½ grams of fineness, how could the old and new lire circulate side by side, those of 800 or 835 with those of 900? Here then we are obliged to have a general remelting; here then we are compelled to begin again the laborious work of the conversion of the coins.

It would have been more logical for those who hesitate to enter boldly into the system of gold, had they proposed to strike silver coins of an intrinsic value lower than that of the small pieces below the lira. The wants of the small circulation should have been provided for by coins of 80, 50, and 20 centimes, issued in sufficient quantity, with the reservation that they should be replaced afterwards by effective silver lire at the normal standard when that might again become possible.

But this expedient, besides not satisfying the desire commonly expressed by the representations of commerce to have silver coins of one and two lire, cannot have any value for those who feel completely certain of the future, who do not doubt of the supremacy of gold. The same nominal contradiction which is thus met with cannot have serious practical consequences, since it is known that the silver lire have ceased to exist, that the lira will not be legally anything but the twentieth part of gold contained in the piece of 20 lire; and that the silver pieces of five francs will scarcely be able to appear nominally in the tariffs, or be struck at the utmost for the foreign trade, on the supposition that they continue to be in favour in the countries where the silver coinage dominates, as in the case for instance with the Austrian dollar of Maria Theresa, the so-called *Levantini*, and the piastres of Naples.

And here your Committee will say but one word upon those solutions of the monetary problem which differ most from that towards which we are progressing, and will mention only a few among the principal objections made against the adoption of gold as the unique type.

There are many economists, and among them M. Chevalier is one of the most prominent, who prefer silver, as possessing a more steady value, and as being already the true basis of the French system, founded upon the lira of 4½ grams of silver. These not wishing to interfere with the silver coinage, ought necessarily to conclude either by increasing the weight of the gold coins of 20 francs, or by augmenting its fineness, or by diminishing its legal value. In the first two of these hypotheses it would be necessary to coin anew all the gold struck according to the French decimal system; an enormous work, because the French mints have during late years struck many hundreds of millions of gold coins.

The last hypothesis is that already experimented upon by Belgium with a result so deeply calamitous.

Nothing is more vain than to pretend that silver is to give the law to or measure the price of gold, when so much smaller a quantity of the former in proportion to the value is henceforth in circulation.

The metal type cannot be selected by chance; it is created by the facts. The possible alteration of value, or the quality of the commodity, can be applicable only to those kinds of money, which without inconvenience, without perturbation, may be equally accepted or refused; but this cannot be the case with those among them which are the most diffused, the most abundant, and sometimes, it may be said, unique in the circulation.

It is said, also, that gold slowly diminishes in value; that in obligations of a long term, gold coins being subjected to a deterioration, the debtors get an undue gain, being able to refund to the creditors a value below that which they have received.

We cannot believe in a further diminution in the value of gold. That could happen only if the expenses of the production of gold were sensibly to diminish.

Now the conditions of the industry employed in extracting gold or silver are maintained at an equal proportion; both the one and the other avail themselves of the wisest and most fruitful applications of capital. If there is decrease in value, it is that insensible, indefinite decrease which progresses, so to speak, with the ages, and is the proper characteristic of all the productions of human labour.

Nevertheless, the countries which have already most wisely adopted or are about to adopt gold as the unique coinage should seriously take care to secure a reserve of silver, whether for interior circulation or for foreign trade.

England was so well convinced of this, that in 1844 she obliged the bank, the keeper and depository of the metallic reserves of the nation, to maintain in silver a fourth of its metallic fund. This fourth in silver is an important provision intended to meet the wants of the trade with Egypt, the East Indies, and China; and it prevents the sudden and abnormal risings in the exchanges between the market of London and the other markets, which are the depositories of the European silver.

But, setting aside all that properly refers to foreign trade and the institutions of credit, we ought now to occupy ourselves in securing a reserve of silver for the small transactions of the interior, and we should provide for it with a coinage, the legal value of which remains a little under its commercial value, in order that it may not offer any inducement to exportation.

The ministerial project contrasts the Swiss franc at 800, which is worth little more than 88 centimes, with the franc proposed by the French Commission at 835, which will be about 93 of the present centimes, according to the relation of value now ascribed to silver.

To which of these two propositions shall we give the preference?

But, first of all, the minister says to us in his statement, we have renounced the system of a coin with a lower standard weighing more, and containing in proportion a larger amount of copper. We fully approve his not adopting the idea of a brass-mixed coinage, which, even at the standard of 500 or about, is always inferior in beauty, liable to be easily worn out, and which by its appearance and composition conveys to the people the idea of a low coinage, although it may contain perhaps a proportion of fine metal very near the legal standard.

It is true that as we are obliged to withdraw from circulation many copper mixed coins of a very low standard the creation of a new brass-mixed coinage would have given us a certain saving in the cost of refining, but this slight and almost imperceptible advantage would not compensate for the inconvenience of a sinking coinage, and one received with disfavour by the public.

Even Switzerland rejected the proposition of a coinage at the standard of 500 m.

As to the preference of the standard of 800 adopted by Switzerland over that of 835 proposed by the minister, reasons may be adduced on one side or the other, and they were put forward before the Committee.

The difference of value between the standard of 900 and that of 835 implies a difference of about 6·33 per cent. The English shilling coined at a standard of 925 and with the weight of 5,650, and the value of 1·16 has, relatively with the pound sterling of gold a difference of 6·45 per cent. always circulating at the ratio of 1 to 15½.

As for the technical considerations, we believe that no difference whatever exists.

The report of the Swiss Commission would have it implied that the coinage at the standard of 8·10 is not only harder than the alloy of 9·10, but that the impression is clearer and handsomer.

The French Commission itself did not appear quite resolved on the subject. It expressed a desire that experiments should be made on the intermediate alloys between 800 and 850 thousandths, showing a certain predilection for stopping at 835.

Already small silver pieces in circulation are found to have lost through wear, some 2, some 3, and some 6 per cent. of their own weight.

And yet to this sole reason of the wear it is due that at given times the disappearance of silver has not been more intense and more rapid. The loss through wear stopped the work of speculation, fostered by the premium given on the silver ingots. In Belgium it has been found that some kinds of coins were reduced by as much as 10 per cent, so extensive and so active had been the work of recent years in choosing the less deficient coins to be set apart for exportation.

If we consider the comparative price of the two metals, and the oscillation to which it was subjected in recent years, we find that the highest price of silver has been 36 per 1,000, while it at present remains under 1 per cent.

Now from such data it is easy to conclude that the distance from 6 to 7 per cent. in the value is more than sufficient to secure a silver coinage for home circulation. And we have not, on the other hand, reason to think that the relation between the two metals can be subjected to vaster oscillations. Reasons both natural and economic guard us from such fears.

The economic reasons are those through which, in spite of the superabundance of the gold productions, the alterations of value between the two metals were kept within such narrow limits. Gold, invading the markets, absorbed by the development of increasing wealth, set at liberty successively the old masses of silver, which had become an obstruction to the speed and multiplicity of transactions. The relations in the monetary compositions of the circulation are slowly altered. Let us suppose that the monetary stock of a country might be represented in the past by one of gold and two of silver; and that the said stock might double by the increased exchanges, and rise from 3 to 6, but in such way that the gold may enter for 4, the silver still for 2. Let us suppose also the production of gold as being trebled, that of silver as stationary, and every one will figuratively understand by what law the value of metals is not always in proportion to the quantity of the production, and why gold and silver up to a certain point change so little in relation to their respective value.

The natural and industrial reasons are deduced from the geological and economic conditions under which the production of the precious metals in our day presents itself. From a valuable work submitted by M. Laur to the Minister of Public Works in France, and published in the *Moniteur* of February and March last, we gather that the production of gold and that of silver are going on under conditions equally favourable. These are his conclusions:—

"The usufruct of auriferous alluvia may be effected by such powerful and economic means that the deposits considered until now as too poor and without value, are henceforward worked with a large profit, producing as much as 800 francs for each man's daily work, although containing scarcely 1·25 of gold per cubic metre.

"The destiny of the silver mines of the new world is no longer in the hands of the proprietor of a Cinnabar mine. The independence of the rich workings in the Cordilleras of the Andes is assured in our day, and the abundance and low price promise them a brilliant future."

"Gold and silver are then about to abound in the world, produced with the energy of new forces. A large increase in their production appears to us extremely probable; but what would be more difficult to tell is, which of the two metals, gold or silver, compared by their actual relative value, is destined to become the more abundant.'

For these considerations, according to the opinion of your Committee, nothing justifies the fears of a continued and increasing fall in the value of gold relatively to silver. In many circumstances it is precisely the contrary that might happen. If such is the case, how should we dare to create a silver coin which should present a difference of 11 per 100 in the actual value? Should we not over again incur the risk of its being counterfeited? Should we not fall into the vice of the old systems, which gave to coins a fictitious and exaggerated value? Might not the public faith itself perhaps be prejudiced, if the Government were suspected of turning the coinage of money into an instrument of gain?

The Committee, therefore, after mature discussion, abides by the standard of 835 proposed by the minister. This is the same standard which in all probability will be adopted in France. The tariff price of coined silver, which is much the same in England, France, and Italy, cannot but have a useful influence on the stability of the value of silver in ingots, and this is one of the results which will greatly contribute to the security of the circulation.

The silver coin, containing 6½ per cent. less than its actual intrinsic fineness, being thus created, it was not possible to maintain the legal value of the same, the capacity to extinguish obligations in an unlimited manner. In that there would have been an arbitrary and manifest interference of the legislator in the matter of private engagements, a real alteration, or, as they hypocritically said in time past, an augmentation of the coin. Therefore, everywhere, in England, in France, in Switzerland, we find opinions united in favour of the view that, upon commencing the new system, the silver coins should be confined to inferior purposes, and not allowed to be used in payments, except for limited sums. In England it is not allowed to pay more than two pounds in silver, in Switzerland not more than 20 lire, and not more than 20 francs, according to the proposals of the French Commission.

Your Committee has preferred the English system. If there is a country which, by the degree of riches to which it has attained, might be considered as familiar with the gold coin, it is without doubt England. From usage and economic antecedents the silver coin is still reserved in Italy for a large sphere of requirements. The more limited proposals of Switzerland and France are not to be wondered at. They rest upon a supposition with which your Committee is not easily satisfied; on the supposition, namely, that with a silver circulation of pieces at the standard of 835 thousandths there could exist and be

maintained a circulation of silver five-franc pieces at the standard of 900 thousandths.

It was a question of greater importance to know whether the silver coins, which shall also serve as small change in payments among private individuals, should be received without any limit in the public coffers.

It was said on the one side that every favour which is granted to a coin, in respect to specified methods and cases of payment, gives rise to the danger of a variation in value, of stock jobbing, of a course of usage different to the legal one. As there are epochs in which the payments due to the State are greater, the small silver coin will be used in preference, will disappear, will become more sought after, and will increase in some localities through being deficient in others. The right of unlimited payment into the public coffers may become an incentive to counterfeiting, all the more powerful, inasmuch as the coins may be circulated of equal weight and worth by the counterfeiters.

It was answered on the other hand that in order to make sure that a coin, which possesses a value under the commercial value, may not exceed the requirements of currency and yet may not lose in price, there is no other way except to cause it to be received without limit in the public coffers. The constant reflux of the coin to the same coffers will be a sure indication of the excess of issue, and the Government will then operate wisely in moderating the quantity which may be in circulation. Incitements to counterfeiting cannot be great; it is a question of a profit of 6 or 7 per 100, which is reduced to 5, deducting the expenses of the fabrication which on ordinary occasions is made in the mints of the State. Calculating the greater expense of clandestine fabrication, the dangers, &c., there is absolutely no reason for any serious fear. The plan of an unlimited reception in the public coffers prevailed, as being that which seemed the most proper in respect of the public faith, the issue by the State being at the nominal value, and thus every pretext is removed for believing that the Government of to-day, like those of former times, would make a speculation of the coinage of money.

Two doubts sprang up with respect to the small pieces of silver below the lira. Whether the 40 centimes ought to be preferred to the 50, and whether the pieces of 20 centimes ought to be made of an equal standard of 835, which would produce a coin of such small dimensions, that it would be inconvenient in the hands of the people.

The Committee, agreeing with the project of the minister, prefers the piece of 50 to that of 40 centimes, though this latter may better accommodate itself perhaps to the habits of a part of Italy and to a greater multiplicity of combinations. But the piece of 50 centimes assists much more easily in the formation of the unit of the lira; and moreover the piece of 40 centimes would have broken the numerical harmony of the decimal system, by which we have adopted in the bronze coins 1, 2, 5, and 10, in the gold coins 5, 10, 20, 50, in the silver coins 1, 2, 5, and in the small silver pieces 20 and 50 centimes.

For the piece of 20 centimes, however, the Committee has adhered to the standard of 835, although in weight it may amount to only one gram. The goodness of the standard, the resistance of the alloy, and its similarity in composition to the different silver coins, appeared advantages which would sufficiently compensate for the undeniable inconvenience of its minute size. A coin of 20 centimes at the standard of 500, as was proposed by some, would be of a weight and size almost double, but would have easily reminded us of the brass-mixed coins which we have condemned, and, with an exterior by no means good, would, after being used for a short time, have left an unfavourable impression upon the people.

Leaving to the Royal decree to define the diameter of the coins and the particulars of the impressions, the Committee has thought that, with respect to the latter, the law ought to fix some essential conditions, which should have a proper and elevated political significance. We cannot abandon either the tradition or the prerogative of legislative power, and therefore Article 7 decrees that the coins shall have on the impression the *effigy of the King* and the legend *Regno d'Italia*.

A wish had been expressed that, among the particulars of the impressions, the law should make it an injunction to engrave upon the coins the indication of their weight and of their value. The Committee commended the desire, in conformity with the wish of science, but does not desire to make it an express condition in the law, fearing that the abandonment of the existing types might necessitate a delay in the operations.

Article 10 of the project establishes the obligation in every public and private stipulation of expressing the value in the new Italian coinage. A grave condition accompanied the injunction of the law; documents, public and private, in which the sums should not be expressed in the new lire, and centimes were not to be admitted as testimony in law. Such an arrangement appeared dangerous, excessive, such as might confound the dues of public right, and the conveniences of good administration with the sacred and inviolable dues of private right. We have substituted for it a fine, considering the fact as a violation of the prescribed regulation of public order. The habit of reckoning with local coins is ancient, very tenacious in Italy, and one very difficult to conquer; but the decisive fact that may lead us to unity, even in economic language, will be the absolute disappearance of all the old moneys, coined after the rule of the old systems, which refresh by their presence the memory and the manners of the people.

This operation of the calling in of the old coins will be one of the greatest benefits to the country, one of the most significant steps towards our political unification; and therefore it ought not to be considered as a very weighty matter, notwithstanding the stringent condition of the finances, to inscribe on the balance a conspicuous sum devoted to that purpose. Your Commission on the contrary is compelled to propose to you the augmentation of the same by a sum of 2,325,000 lire, so that the total expense will amount to 18,466,350 lire.

The reason of this augmentation lies in the proposal which the Committee makes to you of taking 4 millions from the 16 millions of bronze coins, for which the authorization with a special project of law is solicited. The bronze coin, not having an intrinsic value, which may even approximate to the nominal, ought to be circulated in sufficient quantities to supply the requirement and no more; it is a bad speculation of bad governments to wish to make a profit upon the immoderate issue of a brass-mixed coin.

Twenty-eight millions of bronze coins already by successive arrangements of law are to be coined in Italy, eight millions are now added to form a complete sum of 36 millions. This makes 1·65 lire of brass coin for each inhabitant of the kingdom. In France there were struck some time ago 60 millions of bronze coins; yet now they are preparing to coin another 10 millions. In spite of this example and encouragement from France, your Committee is disposed not to abandon in this first authorization the limits imposed by prudence.

If we consider the quantity of copper which circulates in the northern provinces, a quantity ascertained in the recent calling in and conversion of the bronze coins which was effected in some of the provinces, if we consider that in the southern provinces, among the copper coins in circulation, there are some of 4 and of 5 grains in value beyond 16 and 20 centimes, which perhaps will have their places supplied by new pieces of silver of 20 centimes, we ought to conclude that, according to probable calculations, at present the 36 millions ought to suffice. If the bronze coins in circulation should be absorbed and sought after so as to make the want of a new issue to be really felt, there is nothing to prevent the minister, assisted by the facts, strong in an experience upon which it is impossible at present to make an exact calculation, from asking parliament for powers to carry on a further fabrication. And this will be a legitimate and fortunate opportunity for unburdening the finances to the extent of some millions.

An analogous consideration occurs for the silver coins at the standard of 835, the quantity of which is fixed at 150 millions of lire. Here, however, we ought to await the results of experience, the demonstration of requirements. The sum adopted by the minister, to which the Committee assents, is founded upon certain calculations, by no means to be depended on, of the French Commission, which have been by way of analogy transferred to Italy. But since, on the one hand, the 150 millions constitute a sum certainly not excessive, and on the other the minister will be always free to ask for new powers to extend the operation, so the Committee does not hesitate to advise the authorization for the sum demanded of 150 millions.

In accordance with the preceding observations, a few unimportant modifications are introduced into the project of law, which is thus proposed for your approbation.

ALLIEVI, Reporter.

PROJECT OF THE MINISTRY.

ART. 1.

The mints of the State coin the following moneys:—

Gold.		Weight.	Allowance per piece in more or less.
Piece of lire 100		Grams 32·25800	Milligr. 32·26
„ „ 50		„ 16·12900	„ 16·13
„ „ 20		„ 6·45161	„ 12·90
„ „ 10		„ 3·22580	„ 6·45
„ „ 5		„ 1·61290	„ 4·84
Silver.			
Piece of lire 5		„ 25·00000	„ 75·00
„ „ 2		„ 10·00000	„ 50·00
„ „ 1		„ 5·00000	„ 25·00
„	50	„ 2·50000	„ 17·50
„	20	„ 1·00000	„ 10·00
Bronze.			
Piece of centimes 10		„ 10·00000	1 per 100.
„ „ 5		„ 5·00000	
„ „ 2		„ 2·00000	½ per 100.
„ „ 1		„ 1·00000	

ART. 2.

The gold coins and the silver piece of five lire are of the standard of 900 thousandths, with the allowance of two thousandths in more or less.

ART. 3.

The pieces of one and of two lire, of 20 and of 50 centimes are of the standard of 835 thousandths, with the allowance of 3 thousandths in more or less.

ART. 4.

The alloy of the coins in bronze is fixed at the proportion of 960 thousandths of copper and 40 thousandths of tin, with an allowance of 5 thousandths in more or less for each of the two metals.

ART. 5.

The fabrication of the coins contemplated in Articles 3 and 4 cannot take place except within the limits determined by special laws.

ART. 6.

The Government establishes by Royal decree the impressions and diameter of each description of coins.

ART. 7.

No one is bound to receive in payments a greater sum than fifty lire in divisionary coins of silver, which are received instead without limit at the public banks.

The bronze coin can only be employed in payments for completing the fractions of a lira.

ART. 8.

The Government can by Royal decree admit into legal circulation in the State foreign coins of the kinds contemplated in Art. 2, if coined according to the system established by the present law.

ART. 9.

Those coins that are light beyond the allowance determined by the law, and all those that are clipped, pierced, disfigured, and worn, in such a manner that the impression is not recognizable on both sides, or even only on one, are excluded from circulation, and received only as bullion in the exchange offices of the mints.

ART. 10.

In the contracts and public acts, in the registers of accounts of the public administrations, and in any other book or document that concerns the interests of the public, the values must be calculated and expressed in lire and centimes.

No public or private writing of a date subsequent to 31st Dec. 1862 can be admitted in law as a proof of credit if the values indicated in the same are not similarly expressed in lire and centimes.

Any infringement committed by any public official on the disposition of this article is punished by a fine of 50 lire.

ART. 11.

The Government is authorized to provide by Royal decree for the calling in and exchange of all coins in gold, silver, brass, and copper of Italian coinage of a system different

PROJECT OF THE COMMITTEE.

ART. 1.

The mints of the kingdom coin on account of the state the following moneys, &c., *as on the opposite side.*

The piece of 5 lire is suppressed. The rest of the article as opposite.

As on the opposite side, to Article 5 inclusive.

ART. 6.

The mints of the State shall coin on the account of private persons pieces of 5 lire at the standard of 900 thousandths with the allowance of 2 thousandths in more and less, which shall have legal circulation similar to the gold coins.

ART. 7.

The coins shall have for impression *the effigy of the King* and the legend *Regno d'Italia.*

The other conditions of the impressions and the diameter of the coins shall be settled by the Government with Royal decree.

ART. 8.

The Government can by Royal decree admit into legal circulation in the State foreign coins of the kinds contemplated in Art. 2 and 6, if coined according to the system established by the present law.

ART. 9.

The same as opposite.

ART. 10.

In the contracts and public acts, in the registers of accounts of the public administrations, and in any other book or document that concerns the interests of the public, the values must be calculated and expressed in lire and centimes of the Italian money.

Suppressed.

Any infringement, &c. *as opposite.*

ART. 11.

The Government shall provide by Royal decree for the calling in and exchange of all coins in gold, silver, brass, and copper of Italian coinage of a system different

from that established by the present law, and to stop the legal circulation of all foreign coins, equally belonging to a system different from the national one, which are actually in circulation in the different provinces of the kingdom.

ART. 12.

To provide for the expense of the calling in, exchange, and conversion into decimal money of the coins of gold, silver, and brass-mixed metal of a different system, the snm of 16,141,350 lire is authorized to stand in the passive balance of the Ministry of Agriculture, Industry, and Commerce, for a third part of the charge of the current budget, and for the remainder to that of the budget of 1863, in a suitable chapter under the denomination, *Expenses for the calling in, exchange, and conversion into decimal money of the non-decimal coins of gold, silver, and brass-mixed metal of Italian coinage.*

The expense of the calling in and exchange of the copper coins shall be provided for by the same law that shall order the fabrication of the new pieces in bronze of ten centimes.

ART. 13.

Any arrangement in force in opposition to the present law is abrogated.

PROJECT OF THE MINISTRY.

ART. 1.

Authority is given for the fabrication and issue of a nominal sum of one hundred and fifty millions of lire in divisionary silver coins according to the system established by the organic monetary law.

ART. 2.

The Government shall determine by Royal decree the proportional quantity of each kind of such coins.

ART. 3.

For the relative expense provision shall be made with the funds assigned to the Ministry of Agriculture, Industry, and Commerce by the organic law on the Italian monetary system.

ART. 1.

Authority is given for the fabrication and issue of bronze coins of ten centimes, according to the system established by the organic monetary law, for a nominal value of sixteen millions.

ART. 2.

To meet the relative expense, and that for the calling in of the old copper money, the fund set down in chapters 74 and 75 of the passive balance of the Ministry of Agriculture, Industry, and Commerce, for the budget of 1862, shall be augmented by 7,100,000 lire, and divided in equal proportion.

from that established by the present law, and shall stop the legal circulation of all foreign coins, equally belonging to a system different from the national one, which are actually in circulation in the different provinces of the kingdom.

The calling in of the coins shall be executed at their legal value, with the exception of the light, disfigured, and worn coins, which are contemplated by the same laws that are actually in force.

ART. 12.

To provide for the expense of the calling in, exchange, and conversion into decimal money of the coins of gold, silver, and brass-mixed metal of a different system, the sum of 18,466,350 lire is authorized to stand, &c. *The rest of the article as opposite.*

ART. 13.

The same as opposite.

PROJECT OF THE COMMITTEE.

ART. 1.

Authority is given for the fabrication and issue of a nominal sum of one hundred and fifty millions of lire in divisionary silver coins according to the system established by the monetary law.

ART. 2.

The same as opposite.

ART. 3.

The same as opposite.

ART. 1.

Authority is given for the fabrication and issue of bronze coins, according to the system established by Royal decree of 20th Nov. 1859, number , and by the law of , July 1862, number , for a nominal value of eight millions.

ART. 2.

To meet the relative expense, and that for the calling in of the old copper money, the fund standing in chapters 74 and 75 of the passive balance of the Ministry of Agriculture, Industry, and Commerce, for the budget of 1862, shall be augmented by 5,325,000 lire, and divided in equal proportion.

(Translator, *G. Bullen.*)

APPENDIX No. XX.

CURRENCY BILL introduced into the CANADIAN PARLIAMENT.

No. 37.] BILL. [1868.

AN ACT respecting the Currency.

Preamble. WHEREAS it is expedient to have one currency for the whole dominion of Canada: therefore, Her Majesty, by and with the advice and consent of the Senate and House of Commons of Canada, enacts as follows:

PART FIRST.

Denominations of currency of Canada. 1. The denominations of money in the currency of Canada, shall be pounds, dollars, shillings, pence, cents and mills;—the pound, shilling, and penny, shall have the same proportionate value in respect to each other, as in the currency of the United Kingdom;—the dollar shall be one fourth of a pound currency, the cent shall be one hundredth of a dollar, and the mill one tenth of a cent; and in any statement as to money, or money value in any agreement, indictment, or legal proceeding, or in any instrument, document, or writing whatever, any sum may be mentioned, described, and stated, in pounds, shillings, and pence, or in dollars, cents, and mills, or in any or either of such denominations, as may be considered expedient.

CURRENT COIN.

1. *Gold.*

Value of the £1 currency. 2. The pound currency shall be held to be equivalent to, and to represent one hundred and one grains, and three hundred and twenty-one thousandths of a grain, troy weight, of gold of the standard of fineness prescribed by law for the gold coins of the United Kingdom on the first day of August 1854;—And the dollar currency shall be held to be equivalent to and to represent one fourth part of the weight aforesaid of gold of the said standard;—And any gold coins of the standard of fineness aforesaid, which Her Majesty may direct to be struck, shall, by such names as are assigned to them in any proclamation declaring them lawful

Gold coins may be struck by H. M.'s order.

APPENDIX, No. 20.

Canada.

Currency Bill, 1868.

money of Canada, pass current and be a legal tender for sums to be mentioned in such proclamation, and proportionate to their respective weights, subject to the like allowance for remedy as British gold coins.

Value of the £1 sterling.

3. The pound sterling shall be held to be equal to one pound, four shillings and four pence,—or four dollars, eighty-six cents, and two-thirds of a cent,—currency; and any British sovereign of lawful weight shall pass current, and be a legal tender for that sum; and the other gold coins of the United Kingdom shall, while of lawful weight, pass current and be a legal tender for sums in currency equal, according to the proportion aforesaid, to their sterling value.

Word "sterling" how to be understood.

4. In any law, contract, or agreement, made in Canada, the pound sterling shall be understood to have the value in currency hereby assigned to the British sovereign; unless some other value be clearly expressed to be intended, or can be presumed to be intended from the fact that another value was assigned by law to the word "sterling" at the date of such law, contract, or agreement, in the place where it was made.

2. *Silver.*

Silver coins struck or to be struck by H. M.'s order.

5. Such silver coins as Her Majesty may have directed to be struck for use in the late province of Canada, *or in New Brunswick*, or may hereafter direct to be struck for use in Canada, of the fineness fixed by law for the silver coins of the United Kingdom, on the first day of August 1854, and of weights bearing respectively the same proportion to the value assigned or to be assigned to such coins in Canada, which the weights of the silver coins of the United Kingdom bore on the said day to the value assigned to them in the United Kingdom, shall, by such names as Her Majesty may assign to them in Her Royal Proclamation declaring them lawful money of Canada, pass current and be a legal tender at the rates assigned to them respectively in such proclamation.

Silver coins of the United Kingdom

6. Until it is otherwise ordered by Her Majesty's Royal Proclamation, the silver coins of the United Kingdom, while lawfully current therein, shall pass current in Canada for sums in currency, equal, according to the proportion hereinbefore fixed, to the sums in sterling for which they respectively pass current in the United Kingdom, but after the time to be fixed for that purpose in any such proclamation as aforesaid, they shall cease to be current money in Canada.

Amount in one payment limited.

7. But the silver coins mentioned in either of the two next preceding sections shall not be a legal tender to the amount of more than ten dollars, or two pounds ten shillings currency, in any one payment; and the holder of the notes of any person or persons, or body corporate, to the amount of more than ten dollars, or two pounds ten shillings currency, shall not be bound to receive more than that amount in such silver coins in payment of such notes, if they are presented for payment at one time, although each of any of such notes be for a less sum.

3. *Copper.*

Copper coins of the United Kingdom.

8. The copper coins of the United Kingdom shall while lawfully current therein, pass current, and be a legal tender in Canada to the amount of twenty cents or one shilling currency and no more in any one payment, at the following rates, that is to say: the copper penny for two cents, the copper halfpenny for one cent, and any other subdivisions of the said copper penny for proportionate sums.

Copper coins struck by H. M.'s order.

ii. Any copper coins of like weights with those aforesaid respectively, which Her Majesty may have directed or may direct to be struck for the purpose, shall pass current, and be a legal tender in Canada, at the like rates and to the like amount in any one payment; and if such copper coins are struck, Her Majesty may declare by proclamation that the copper coins of the United Kingdom shall not be lawful money of Canada, after a day to be appointed in such proclamation.

4. *Foreign Gold Coin.*

Gold Eagle of U. S. struck before 1st July 1834.

9. The gold eagle of the United States of America, coined before the first day of July, one thousand eight hundred and thirty-four, and weighing eleven pennyweights, six grains, Troy weight, shall pass current and be a legal tender in Canada for ten dollars and sixty-six cents, and two thirds of a cent, or two pounds thirteen shillings and four pence currency; and the half eagle of like date and proportionate weight, for one half the said sum.

Gold Eagle struck after that date.

ii. And the gold eagle of the said United States of America, coined after the day last mentioned, and before the first day of January, one thousand eight hundred and fifty-two, or after the said day, but while the standard of fineness for gold coins then fixed by the laws of the said United States has remained unchanged, and weighing ten pennyweights, eighteen grains, Troy weight, shall pass current, and be a legal tender in Canada for ten dollars or two pounds ten shillings currency; and the gold coins of the said United States, being multiples or halves of the said eagle, and of like date and proportionate weight, shall pass current and be a legal tender in Canada for proportionate sums.

Other gold coins of U. S.

Other foreign gold coins.

10. Her Majesty may at any time declare, by proclamation, that any or all of any other gold coins of the said United States, or of any other foreign nation or state, shall, when of the weights to be assigned therein, pass current and be a legal tender in Canada, at rates in currency to be assigned to them respectively in such proclamation, such rates being proportionate to the quantity of pure gold in such coins, reckoning ninety-two grains, and eight hundred and seventy-seven thousanths of a grain of pure gold, as equivalent to one pound currency.

When the foregoing provisions shall come into force in Nova Scotia.

11. The foregoing sections of this Act are, as regards the provinces of Quebec, Ontario, and New Brunswick, declaratory of the law in force in those provinces before, and at the time of the passing of this Act; and as regards the province of Nova Scotia, they shall come into force, and take effect in that province, upon, from, and after a day to be appointed for that purpose, by proclamation of the governor; provided always, that any sum of money payable on or after the day last aforesaid, under any act or law of the province of Nova Scotia, passed before the said day, or under any bill, note, or other instrument, contract, or agreement, made before the said day, in the said province, or with reference thereto, or made out of the said province, but with reference thereto, on or after the said day, if from the terms used, or the date and place of making, it is to be presumed that some other currency than that hereby established was intended, shall, on or after the said day, be payable by a sum in the currency of Canada, of equal value with that by which it would have been payable in any other currency, if this Act had not been passed.

Proviso.

Sums mentioned in certain Acts to be currency of Canada.

12. And for the prevention of doubts be it enacted, that all sums mentioned in dollars and cents in the Imperial Act known as the British North America Act 1867, and in all Acts of the Parliament of Canada passed in the present or in any future session, shall, unless it be otherwise expressed, be understood, as well with respect to the province of Nova Scotia, as to the other provinces composing the dominion of Canada, to be in the currency of Canada as hereby established, subject only to the following exception, that is to say:—the duties, penalties, and other sums of money, mentioned in the Act of the Parliament of Canada, passed in the present session, and intituled *An Act respecting the Inland Revenue*, shall as regards all such duties, penalties, or sums of money accrued, incurred, or payable in the province of Nova Scotia, before the day of 1868, be understood to be sums of the then currency of that province, but as regards all such duties, penalties, or sums of money accrued, incurred, or payable on or after the said day, they shall be understood to be sums of the currency of Canada, as hereby established.

Exception.

Duties on Notes and Bills in Nova Scotia.

13. The seventh section of the Act of the Parliament of Canada, passed in the present session, and intituled *An Act to impose duties on Promissory Notes and Bills of Exchange*, shall be repealed as regards promissory notes, drafts, and bills of exchange, made, drawn, or accepted in Nova Scotia, upon or after the said day of 1868, and the amount on which duty is payable under the said Act upon such promissory notes, drafts, or bills of exchange, shall be reckoned in the currency of Canada as hereby established, as shall also any penalty incurred under the said Act in Nova Scotia, on or after the said day.

5. *Foreign silver coin.*

Foreign silver coin may be made current by proclamation.

14. The Governor may, at any time after the day to be appointed by proclamation under the eleventh section, declare by proclamation that all or any of the silver coins of the United States of America or of any other Foreign Nation or State, shall, when of the weights and dates, to be assigned in such proclamation, pass current and be a legal tender in Canada, at rates in currency to be assigned to them respectively in such proclamation, in such sums in any one payment as may be therein declared.

Other matters.

Stamp to be evidence of certain facts.

15. The stamp of the year on any coin made current under this Act shall establish the fact of its having been coined in that year, and the stamp of the country shall establish the fact of its being of the coinage of such country, and all coins made current under this Act shall be deemed to be of the proper standard weight and fineness unless objected to on that account, in which case the standard and weight must be verified.

Part of Cap. 9. Rev. Stat. of N. S. repealed.

16. The first, second, sixth and seventh sections of chapter eighty of the revised statutes of Nova Scotia, third series, and so much of any other part of that chapter or of any other Act or law of the said province as may be inconsistent with this Act, shall be repealed on and after the day to be appointed by proclamation under the eleventh section; but nothing in this section shall alter or impair the effect of the proviso to section eleven of this Act.

Certain Acts of Canada and N. B. repealed.

17. The fifteenth chapter of the consolidated statutes of the late Province of Canada, the Act of the legislature of the Province of New Brunswick, passed in the fifteenth year of Her Majesty's reign, chapter eighty-five, the Act of the said legislature passed in the sixteenth year of Her Majesty's reign, chapter thirty-three, and the Act of the said legislature passed in the twenty-third year of Her Majesty's reign, chapter thirty-three, are hereby repealed.

PART SECOND.

Recital.

18. Provided, that inasmuch as there was held in Paris in the year 1867, an International Monetary Conference, with a view to promote a uniform currency among the nations, at which the United Kingdom and the other principal nations of Europe, and the United States of America, were represented by duly accredited delegates, and at which the great advantages of such uniform currency were demonstrated, and a basis for such currency was agreed upon by the great majority of the delegates, and there is now pending before the congress of the United States a bill founded on the reports and resolutions of the said conference, and by which it is declared that, with a view to promote a uniform currency among the nations, the weight of the gold coin of five dollars, or half eagle, of the United States shall be one hundred and twenty-four and nine-twentieths troy grains, and the fineness thereof shall be nine-tenths, so that it shall agree with a French coin of twenty-five francs, of like weight and fineness; and whereas that it is highly desirable to provide that the currency of Canada shall be in accordance with the basis agreed upon by the said conference, and shall be (as it now is, except in the Province of Nova Scotia) of the same value as the metallic currency of the United States; therefore, it is enacted, that if the Bill hereinabove mentioned be passed by the congress and becomes a law of the United States during the present session of the said congress of the year 1868, then the proclamation mentioned in the 11th, 14th and 16th sections of this Act shall not be issued, but instead thereof the Governor may issue a proclamation reciting the passing of the said Bill, and appointing a day on and after which the following enactments shall come into force and be law, that is to say:—

Special provision if a certain Bill altering the currency of the U. S. becomes law.

Value of the £1 currency.

1. On and after the said day, the pound currency throughout all Canada shall be held to be equivalent to and to represent eighty-nine grains and six hundred and one thousandths of a grain troy weight of pure gold, or ninety-seven grains and seven hundred and forty-seven thousandths of a grain of gold of the standard of fineness prescribed by law for the gold coins of the United Kingdom on the first day of August 1854.

Value of the £1 sterling.

2. The pound sterling or British sovereign of the weight and fineness now established by law, shall be held to be equal to five dollars and four cents and one third of a cent currency, and any British sovereign of the present lawful weight shall pass current and be a legal tender in Canada, for that sum; and any other British gold coins, coined or to be coined while of lawful weight, shall pass current and be a legal tender for sums proportionate to the quantity of fine gold in them, and to be declared by proclamation of the Governor.

Coins struck by order of H. M. to be a legal tender.

3. Any gold or silver or copper coins which Her Majesty may direct to be struck for use in Canada, shall by such names as shall be assigned to them in the Governor's proclamation declaring them lawful money of Canada, pass current and be a legal tender in Canada, at the rate assigned to them respectively by proclamation, which shall be (as nearly as may be,) in the same proportion to their intrinsic values, as the rates at which the gold, silver and copper coins of the United Kingdom pass current there, bear to their intrinsic values respectively.

Currency Bill, 1868.

British silver coins.

4. British silver coins while of lawful weight and current in the United Kingdom, shall pass current and be a legal tender in Canada to the amount of ten dollars in any one payment at the following rates, the crown at one dollar twenty-five cents; the florin at fifty cents; the shilling at twenty-five cents; and the other silver coins at rates bearing the same proportion to their nominal value in sterling.

British copper coins.

5. British copper coins while current in the United Kingdom shall, unless and until it is otherwise ordered by proclamation of the governor, pass current and be a legal tender in Canada, to the amount of one shilling in any one payment, at the rate of two cents for every penny of their nominal sterling value.

Half eagle and 25 franc piece.

6. The half eagle of the United States of America coined after the passing of the Bill above-mentioned, and being of the weight and fineness therein defined, and the twenty-five franc piece of France, of the same weight and fineness, shall, on the conditions to be defined in the proclamation of the governor, pass current and be a legal tender in Canada to any amount, at the rate of five dollars, as shall also the other gold coins of same nations, or of any other nation, coined under the agreement made at the International Monetary Conference, at rates proportional to their intrinsic value and to be mentioned in such proclamation.

Other coins by proclamation. Gold coins mentioned in Sect. 9.

7. The gold coins of the United States mentioned in section nine, shall, until it is otherwise ordered by proclamation of the governor, pass current and be a legal tender in Canada, at rates in the new currency proportional to those in the old currency assigned to them respectively in section nine.

Silver coins of the U. S.

8. The governor may, by proclamation, declare that the silver coins of the United States, coined after the passing of the Bill above-mentioned, and containing in the half dollar not less than one hundred and seventy-nine grains of the fineness of nine tenths, and so in proportion for any coin of greater or less nominal value, shall pass current and be a legal tender in Canada, to the amount of ten dollars in any one payment.

What the proclamation making any coin a legal tend may conta

9. The proclamation declaring any coin a legal tender may fix a specific per-centage of difference between the new currency and the old, and may contain such conditions and limitations as to weight, fineness, stamp, date, remedy or tolerance, as the governor may think proper, and may be revoked or amended by any subsequent proclamation.

Sums due in the old currency to be paid by equivalent sums in the new.

10. Any sum of money payable in Canada on or after the day appointed for the establishment of the new currency in this section mentioned to Her Majesty or to any party, under any Act or law in force in any part of Canada and passed before the said day, or under any bill, note or other instrument, contract or agreement, made before the said day in Canada and with reference thereto, or made out of Canada, but with reference thereto, on or after the said day, if from the terms used or the date and place of making it is to be presumed that some other currency than that hereby established was intended, shall on or after the said day be payable by a sum in the new currency hereby established, of equal value with that by which it would have been payable in any other currency if this section had not been passed; that is to say, if such sum would have been payable in the present currency of Ontario, Quebec or New Brunswick, then for every twenty-two cents and forty mills of such sum, twenty-three cents and twenty-two mills of the new currency shall be paid, or such per-centage of difference in either case as the governor may fix by proclamation as equivalent to the difference in value of the two currencies; and if such sum would have been payable in the present currency of Nova Scotia, then for every one hundred and twenty-cents of such sum one hundred and twenty-one cents of the new currency shall be paid; but except as aforesaid, all sums of money payable in Canada after the day appointed for the coming into force of the enactments contained in this part of the present Act, shall be payable in the new currency, and so much of the first part of this Act as may be inconsistent with those of this second part thereof, that is to say, the second, third, fourth, fifth, sixth, seventh, eighth, ninth, tenth, and fourthteenth sections, shall be superseded by the provisions of this second part, on and after the said day, and the enactments mentioned in section sixteen shall be recaled.

Sect. 15. to apply.

11. The provisions of section fifteen shall apply to coins current under this second part of this Act.

APPENDIX No. XXI.

Appendix, No. 21.

United States.

Coinage Bills, 1868.

Mr. Sherman's Bill.

COINAGE BILLS INTRODUCED INTO THE UNITED STATES CONGRESS by SENATOR SHERMAN and MR. FREYLINGHUYSEN.* Also, REPORTS of SENATOR SHERMAN and SENATOR MORGAN.

S. 217.

In the Senate of the United States.

January 6, 1868.

Mr. Sherman asked, and by unanimous consent obtained, leave to bring in the following Bill; which was read twice, referred to the Committee on Finance, and ordered to be printed.

A BILL in relation to the Coinage of Gold and Silver.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, with a view to promote a uniform currency among the nations, the weight of the gold coin of five dollars shall be one hundred and twenty-four and nine-twentieths troy grains, so that it shall agree with a French coin of twenty-five francs, and with the rate of thirty-one hundred francs to the kilogram; and the other sizes or denominations shall be in due proportion of weight, and the fineness shall be nine-tenths or nine hundred parts fine in one thousand.

SEC. 2. And be it further enacted, That, in order to conform the silver coinage to this rate and to the French valuation, the weight of the half dollar shall be one hundred and seventy-nine grains, equivalent to one hundred and sixteen decigrams; and the lesser coins shall be in due proportion, and the fineness shall be nine-tenths. But the coinage of silver pieces of one dollar, five cents, and three cents shall be discontinued.

SEC. 3. And be it further enacted, That the gold coins to be issued under this Act shall be a legal tender in all payments to any amount; and the silver coins shall be a legal tender to an amount not exceeding ten dollars in any one payment.

SEC. 4. And be it further enacted, That in the assay of the gold coins to be issued under this Act, there shall be no greater deviation allowed from the standard of fineness than one-thousandth part above or below.

SEC. 5. And be it further enacted, That the devices on the coins shall consist of such emblems and inscriptions as are proper to the republic of the United States, but plainly distinct from those now in use; each coin shall express its proper date and value; and the value of the gold coins shall be stated both in dollars and in francs; and whenever it is ascertained that Great Britain has conformed the pound sterling to the value of the piece of five dollars, then the value in British terms shall also be stated; and the devices as well as the diameters of the coins shall be fixed by the director of the mint, under the control of the Secretary of the Treasury.

SEC. 6. And be it further enacted, That foreign gold coins conformed to the basis herein prescribed shall be a legal tender in all payments whatsoever, so long as the standards of weight and fineness are duly maintained; and it shall be the duty of the commissioners of assay, meeting at the mint in the month of February of each year, to try a sufficient number of such foreign coins of the preceding year, to be procured for that purpose by the director of the mint, and if any serious deficiency be found, the Secretary of the Treasury shall have power to suspend the right of legal tender in the particular case.

SEC. 7. And be it further enacted, That when the gold and silver coins of the United States are brought to the mint or its branches for recoinage, such coins shall be received by weight, and those of them which have been issued as nine-tenths fine shall be so received, but all others by assay. And in payments at the mint for both gold and silver coins above specified, the value shall be rendered according to the weights prescribed in the first and second sections of this Act; and there shall be no charge for coinage, seignorage, or internal revenue; and on all other deposits of gold for coinage the charge shall be one-half of one per centum.

SEC. 8. And be it further enacted, That for the uses of the treasury and the custom-houses, the Secretary of the Treasury shall, as soon as this Act takes effect, publicly declare the rates at which the coins of the United States and of foreign countries now current shall be reckoned upon estimates furnished by the director of the mint.

SEC. 9. And be it further enacted, That this Act shall take effect an the first day of January, eighteen hundred and sixty-nine, but, to expedite the recoinage, it shall be lawful for the mint and its branches to receive gold and silver coins of the United States for that purpose on and after the first day of October next, and to give certificates therefor, payable in the order of receipt in the new coins, and to convert the metals thus received into ingots and planchets, to be ready for stamping when this Act takes effect. And in respect to other deposits of gold or purchases of silver, the like certificates may be issued, if demanded, on and after the first day of October next.

SEC. 10. And be it further enacted, That the weights to be used at the mint when this Act goes into operation may be either troy weights or French gram weights, or both, as the Secretary of the Treasury shall direct.

[The above as amended.]

S. 217.

June 9th, 1868.

Reported by Mr. Sherman with amendments, viz.: strike out the parts in [brackets] and insert the parts printed in *italics*. Accompanied by Report No. 117.* Mr. Sherman's Bill as amended.

A BILL in relation to the Coinage of Gold and Silver.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, with a view to promote a uniform currency among the nations, the weight of the gold coin of five dollars shall be one hundred and twenty-four and nine-twentieths troy grains, [so that it shall agree with a French,] *equivalent to a* coin of twenty-five francs, and with the rate of [thirty-one hundred francs] *six hundred and twenty dollars* to the kilogram; and the other sizes or denominations shall be in due proportion of weight, and the fineness shall be nine-tenths or nine hundred parts fine in one thousand.

SEC. 2. And be it further enacted, That, [in order to conform the silver coinage to this rate and to the French valuation,] the weight of the half dollar shall be one hundred and seventy-nine grains, equivalent to one hundred and sixteen decigrams; and the lesser coins shall be in due proportion, and the fineness shall be nine-tenths. But the coinage of silver pieces of one dollar, five cents, and three cents shall be discontinued.

SEC. 3. And be it further enacted, That the gold coins to be issued under this Act shall be a legal tender in all payments to any amount, *except for such existing bonds of the United States as are payable in coin;* and the silver coins shall be a legal tender to an amount not exceeding ten dollars in any one payment.

[SEC. 4. And be it further enacted, That in the assay of the gold coins to be issued under this Act, there shall be no greater deviation allowed from the standard of fineness than one-thousandth part above or below.]

SEC. 5. And be it further enacted, That the devices on the coins shall consist of such emblems and inscriptions as are proper to the republic of the United States, but plainly distinct from those now in use; each coin shall express its proper date and value; [and the value of the gold coins shall be stated both in dollars and in francs; and whenever it is ascertained that Great Britain has conformed the pound sterling to the value of the piece of five dollars, then the value in British terms shall also be stated;] and the devices as well as the diameters of the coins shall be fixed by the director of the mint, under the control of the Secretary of the Treasury.

SEC. 6. And be it further enacted, That *the said* foreign gold coins, conformed to the basis herein prescribed, shall be a legal tender in all payments whatsoever, so long as the standards of weight and fineness are duly maintained; and it shall be the duty of the commissioners of assay, meeting at the mint in the month of February of each year, to try a sufficient number of such foreign coins of the preceding year, to be procured for that purpose by the director of the mint, [and if

* Mr. Freylinghysen's Bill, page 313.

* See page 313.

any serious deficiency be found,] *but if found with greater deviation than is now allowed by law*, the Secretary of the Treasury shall have power to suspend the right of legal tender in the particular case.

SEC. 7. And be it further enacted, That when the gold and silver coins of the United States are brought to the mint or its branches for recoinage, such coins shall be received by weight, and those of them which have been issued as nine-tenths fine shall be so received, but all others by assay. And in payments at the mint for both gold and silver coins above specified the value shall be rendered according to the weights prescribed in the first and second sections of this Act; and there shall be no charge for coinage, *or* seignorage [or internal revenue]; and on all other deposits of gold for coinage the charge shall be one-half of one per centum.

SEC. 8. And be it further enacted, That for the uses of the treasury and the custom houses, the Secretary of the Treasury shall, as soon as this Act takes effect, publicly declare the rates at which the coins of the United States and of foreign countries now current shall be reckoned upon estimates furnished by the director of the mint.

SEC. 9. And be it further enacted, That this Act shall take effect on the first day of January, eighteen hundred and sixty-nine, but to expedite the re-coinage, it shall be lawful for the mint and its branches to receive gold and silver coins of the United States for that purpose on and after the first day of October next, and to give certificates therefor, payable in the order of receipt in the new coins, and to convert the metals thus received into ingots and planchets, to be ready for stamping when this Act takes effect. And in respect to other deposits of gold or purchases of silver, the like certificates may be issued, if demanded, on and after the first day of October next.

SEC. 10. And be it further enacted, That the weights to be used at the mint, when this Act goes into operation, may be either troy weights or French gram weights, or both, as the Secretary of the Treasury shall direct.

COINAGE BILL introduced into CONGRESS by MR. FREYLINGHUYSEN.

S. 412.

In the Senate of the United States.

March 3, 1868.

Mr. Freylinghuysen's Bill.

MR. FREYLINGHUYSEN asked, and by unanimous consent obtained, leave to bring in the following Bill; which was read twice, referred to the Committee on Finance, and ordered to be printed.

A BILL to promote uniformity of coinage between the moneys of the United States and other countries.

WHEREAS the amount of pure gold contained in the English pound sterling, in five dollars, money of the United States, and in twenty-five francs, money of France, according to the regulations of the gold coinage of the said several countries, is very nearly the same, and great international and commercial convenience would be subserved by making the same precisely equal; and whereas the English pound sterling presents the most convenient basis for such equality: Therefore,

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, that the amount of pure gold in a half eagle, or five-dollar piece, shall hereafter be one hundred and thirteen grains troy weight, to correspond with the amount of pure gold contained in an English sovereign or pound sterling; and all the other gold coins of the United States shall contain pure gold in like proportion, namely: at the rate of twenty-two grains and six-tenths of a grain to the dollar; and the gold coins of the United States, heretofore struck and issued, shall be valued and estimated in all accounts and transactions according to their respective weights at the above rate of twenty-two grains and six-tenths of a grain of pure gold to the dollar. And all other gold coins of known standard of fineness, current in the United States by the laws thereof, shall pass and be received at the same rate, according to the amount of pure gold therein contained; and henceforth, in all accounts and transactions in which the government of the United States is concerned, and in which the value of a pound sterling is involved, the same shall be taken and estimated at five dollars. And in order to discourage the fictitious par of exchange of four dollars and forty-four cents, or four dollars and four-ninths of a dollar to the pound sterling, which has heretofore been used among merchants: be it further enacted, That after the first day of January next, an additional tax of one-tenth of one per centum be imposed upon all transactions of exchange, or of a commercial nature, in which such fictitious par of exchange, or any other par of exchange than five dollars to the pound sterling, shall be used, to be returned, levied, and collected in the same manner as other internal taxes and duties are or shall be by law directed to be returned, levied, and collected.

Report, No. 117.

In the Senate of the United States.

June 9, 1868.—Ordered to be printed.

Mr. Sherman made the following Report.

Mr. Sherman's Report.

[To accompany Bill S. No. 217.]

The following documents have been referred to the Committee on Finance:

1st. S. 217, in relation to the coinage of gold and silver.*

2d. S. 412, to promote uniformity of coinage between the moneys of the United States and other countries.†

3d. The proceedings of the International Monetary Conference, held at Paris in June, 1867.‡

4th. The report of Samuel B. Ruggles, Esq., delegate from the United States in the International Monetary Conference at Paris, November 7, 1867.§

5th. Sundry memorials relative to changes in our system of coinage.

These documents present to the Committee of Finance the interesting question of international coinage, and in considering them we necessarily inquired:

1st. Whether the object proposed was of sufficient importance to justify a change in the coinage of the United States.

2d. Whether the plan proposed by the Paris Conference was the best mode to accomplish the end desired.

3d. What legislation was necessary on the part of the United States to adapt our coinage to the plan proposed.

4th. What provision should be made for existing public and private contracts.

Your committee, after a partial consideration of these questions, direct that the bill first named be reported with amendments, supported by the following report, and that Mr. Morgan, of the same committee, be authorized to submit a report adverse to the bill, and that these reports be printed, and that the bill be postponed until the next session, with a view to elicit a fuller discussion by the people of the several questions embraced in the bill.

The importance of a common monetary standard among commercial nations has always been conceded. It has been the hope of philosophers and statesmen, and the demand of writers on political economy, for centuries; but has been as strongly opposed by the jealousies of locality and the interests of rival nations. Commerce and peace have steadily approximated different standards of exchange towards each other, while local interests and war have as steadily diverged them from each other. In all ages, local and generally, despotic authority has endeavoured to make more money out of a given amount of gold and silver by clipping or alloy, while the general laws of trade and commerce have soon after reduced the current value of the money as it was reduced in weight and fineness. Formerly, not only each nation, but each province, duke, bishop, or municipality, made its own separate and distinct coin; often of the same name but different values. The effort to unitize the different moneys of a nation was but a part of the process by which the modern nations of Europe have been formed, and in this process the original money was debased in a remarkable way. The pound sterling of England was, at the time of William the Conqueror, equivalent to a pound weight of silver. It is now 3 oz. 12 dwt. 16 grs. The German florin was originally a gold coin, worth about $2 40. It is now a silver coin, worth about 40 cents. The French livre originally contained a pound of silver, worth about $18 50. It is now worth about 19 cents. The Spanish maravedi in the year 1220 was w o r t h 3 20 o our money. It is now worth

* P. 312. † P. 313. ‡ P. 162. § P. 197.

about a quarter of a cent. The result of these changes has been to secure to all parts of each leading nation a common unit of money—of fixed value. The pound sterling is the unit in Great Britain; the franc in France, Italy, Switzerland, and Belgium; the florin in South Germany; the thaler in North Germany; the dollar in the United States, and various other units in other nations. These units are purely arbitrary, based upon local law, and diverse in weight, value, and alloy. They are in some nations of gold only; in some, of silver only; and in some a compound standard of gold and silver, and differing materially in the amount of alloy, and in the relative value of the two metals.

For local purposes it is not very material which metal is the standard, nor of what weight and fineness the standard may be, if only it is of fixed and invariable value, for the value of property and all internal commerce adapts itself to the intrinsic value of the gold and silver in the prescribed standard.

The inconvenience of different standards of value arises mainly in foreign commerce, in the exchange of commodities among nations. The intercourse between modern Christian nations is now more intimate and exchange more rapid than it was between provinces of the same country two hundred years ago. The annual trade between the United States and Great Britain is now greater in bulk and value than the aggregate annual trade between all the nations of Europe two hundred years ago. The same reasons for adopting an international standard of value now exist, as induced the American colonies less than one hundred years ago to abandon their diversified standards of value, and adopt as a common unit the American dollar. Every advance towards a free exchange of commodities is an advance in civilization. Every obstruction to a free exchange is born of the same narrow despotic spirit which planted castles upon the Rhine to plunder peaceful commerce. Every obstruction to commerce is a tax upon consumption; every facility to a free exchange cheapens commodities, increases trade and production, and promotes civilization. Nothing is worse than sectionalism within a nation, and nothing is better for the peace of nations than unrestricted freedom of intercourse and commerce with each other. No single measure will tend in this direction more than the adoption of a fixed international standard of value by which all products may be measured, and in conformity with which the coin of a country may go with its flag into every sea, and buy the products of every nation, without being disconcerted by the money changes.

This has been the wish of American statesmen since the revolutionary war. The Spanish milled dollar was adopted as the basis of our coinage before the Constitution was framed, and with the hope expressed by Mr. Jefferson, that it would lead to an international unit. Mr. Hamilton and Mr. Gallatin each desired the same result, but the French war postponed all efforts in that direction. Mr. John Q. Adams in his remarkable report to Congress of February 22, 1821, upon the kindred but more comprehensive subject, "the uniformity of weights and measures," says:

"This system approaches to the ideal perfection of *uniformity* applied to weights and measures, and whether destined to succeed or doomed to fail, will shed unfading glory upon the age in which it was conceived, and upon the nation by which its execution was attempted, and has been in part achieved.

"If man upon earth be an improvable being; if that universal peace which was the object of a Saviour's mission, which is the desire of the philosopher, the longing of the philanthropist, the trembling hope of the Christian, is a blessing to which the futurity of mortal man has a claim of more than mortal promise; if the spirit of evil is, before the final consummation of things, to be cast down from his dominion over men, and bound in the chains of a thousand years, the foretaste here of man's eternal felicity, then this system of common instruments to accomplish all the changes of social and friendly commerce will furnish the links of sympathy between the inhabitants of the most distant regions; the metre will surround the globe in use as well as in multiplied extension, and one language of weight and measures will be spoken from the equator to the poles."

Several efforts have been made by negociation to secure uniformity of coinage, especially with Great Britain.

In 1857, in compliance with an Act of Congress, passed upon the report of the Committee of Finance of the Senate, Professor Alexander was sent as a special commissioner to that country, to secure a unity of coinage between the two countries, but, after various conferences, the mission failed from an indisposition of the English government to modify their pound, shilling, and pence.

In his report of December, 1862, Mr. Secretary Chase invited the attention of Congress to the importance of uniform weights, measures, and coins, and recommended that the half-eagle of the United States be made equal to the gold sovereign of Great Britain in weight and fineness.

The Berlin International Statistical Congress, held in 1863, composed of representatives of fourteen countries, and at which the United States was ably represented by Mr. Ruggles, agreed to the following resolutions:

"1st. That the congress recommends that the existing units of money be reduced to a small number; that each unit should be, as far as possible, decimally subdivided; that the coins in use should all be expressed in weights of the metric system, and should all be of the same degree of fineness, namely, nine-tenths fine and one tenth alloy.

"2d. That the different governments be invited to send to a *special congress* delegates, authorized to consider and report what should be the relative weights, in the metrical system, of the gold and silver coins, and to arrange the details by which the monetary system of different countries may be fixed according to the terms of the preceding propositions."

This led to the recent Paris conference, and to the adoption by Congress, in 1866, of several measures for the use of the metric system of weights and measures. At the Paris conference, nineteen nations were represented, governing a population of 320,000,000, European and American, and 190,000,000 Asiatic.

The conference agreed with great unanimity upon the plan hereafter stated, and the delegates from the United States were active and influential in harmonizing conflicting views, and in securing the result arrived at. Upon the first part of their inquiry, your committee therefore conclude that the object proposed is of the highest importance, constantly sought for at every period of the government, and that the United States is fully committed to its support if the plan proposed is practicable and just.

Aside from the general advantages which we will share with the civilized world in attaining a uniform coinage, there are special reasons why the United States should *now* adopt the system.

1. The United States is the great gold-producing country of the world, now producing more than all other nations combined, and with a capacity for future production almost without limit. (See reports of Mr. Ruggles and J. Ross Browne.) Gold with us is like cotton—a raw product. Its production here affects and regulates its value throughout the world. Every obstruction to its free use—such as the necessity of its recoinage when passing from nation to nation—diminishes its value, and that loss falls upon the United States, the country of production.

2. The United States is a new nation, and therefore a debtor nation. By placing ourselves in harmony with the money units of creditor nations, we promote the easy borrowing of money and payment of debts, without the loss of recoinage or exchange, always paid by the debtor. This is necessarily so, where the debt is payable abroad, and if payable here, the creditor discounts the exchange and difference in coinage in advance.

3. The technical rate of exchange between the United States and Great Britain, growing out of the different nominal values of coin, is a standing reproach which can only be got rid of by unifying the coinage of the two countries, when both the real and te hnical rate of exchange will be at par, with only such slight variations as will indicate the course of trade.

4. Gold is now demonetized as a currency, and the great bulk of it in the United States is now held in the treasury, so that it is not possible to select a time when this great international change of coinage could affect the interests of our people less. From enquiries made of the officers of the mint, we find that the cost of reminting the present coin would be less than one twentieth of one per centum. The fineness of the proposed coin being the same as the old, there will be no assay, and the cost of the change would not be perceptible to the holder of the coin, and scarcely so to the government.

The second inquiry of your committee was whether the plan proposed by the Paris conference was the best mode to accomplish the end desired.

It proposes:

1. A single standard, exclusively of gold.
2. Coins of equal weight and diameter.
3. Of equal quality or fineness—nine-tenths fine.
4. The weight of the present five-franc gold piece to be the unit.
5. The coins of each nation to bear the names and emblems prepared by each, but to be legal tenders public and private in all.

1. The single standard of gold is an American idea, yielded reluctantly by France and other countries, where silver is the chief standard of value. The impossible attempt to maintain two standards of value has given rise to nearly all the debasement of coinage, of the last two centuries. The relative market value of silver and gold varied like other commodities, and this led first to the demonetization of the more valuable metal, and second to the debasement or diminution of the quantity of that metal in a given coin. In a short time the cheaper metal would, by a diminished supply, become the dearer metal, and then it would be debased and cheapened in the same way. This process repeatedly occurred in Europe, and has twice occurred in the United States, within the life of the present generation. By the Act of June 28, 1834, our gold coin was reduced from 270 grains of standard gold to 258 grains, or 4.4 per centum, in order to make it correspond with the market value of silver. In consequence of the discovery of gold in California that metal was cheapened, and silver became relatively more valuable, and was hoarded or exported. To avoid this the weight of our silver coin was reduced by the Act of January 21, 1853, from 206 grains of standard silver to 192 grains or 6.7 per centum.

This subject early excited the attention of financiers. Mr. Gorham, in his report of May 4, 1830, as Secretary of the Treasury, forcibly says:

"Amidst all the embarrassments which have surrounded this subject since the adoption of metallic standards of property, it is remarkable that governments have so tenaciously persevered in the effort to maintain standards of different materials, whose relation it is so difficult to ascertain at any one time, and is so constantly changing; and more especially when a simple and certain remedy is within the reach of all. This remedy is to be found in the establishment of one standard measure of property only. The evil of having two or more standards arises, as already observed, from the impossibility of so fixing their relative values by law, that one or the other may not, at times, become of more value in market than estimated by regulation; and when this happens, it will be bought and sold according to its market value, regardless of the law."

"The proposition that there can be but one standard in fact is self-evident. The option of governments charged with this duty is therefore between having property measured sometimes by gold and sometimes by silver, and selecting that metal which is best adapted to the purpose for the only standard. Why the latter course has not been universally adopted it is not easy to explain, unless it may be attributed to that prevalent delusion which seeks to secure the possession of gold and silver by restraining their exportation, and avoiding the payment of debts, rather than improving the public economy by giving every facility to it."

The opportunity is now offered to the United States to secure a common international standard in the metal most valuable of all others; best adapted for coinage, mainly the product of our own country, and in conformity with a policy so constantly urged by our statesmen, and now agreed to by the oldest and wealthiest nations of the world. Surely we should not hesitate for trifling considerations to secure so important an object.

The equal weight and diameter of coins will guard against adulteration and counterfeiting, and will familiarize our people with the metric system of weights and measures. This system is already used in some of our coins, and is permitted by our laws, and will, by gradual means, become adopted as the only international system.

The provision made that each nation shall retain its own emblems will not impair the ready currency of coin, but will induce care in coinage. The fineness proposed is the present standard of the United States, an important consideration in recoinage, as no new assay will be required.

All the provisions of the plan proposed are in harmony with the American system of coinage. They are either already adopted or may be without inconvenience. The only point upon which a diversity of opinion may arise is as to the unit of value, and here the chief difficulty was, not as to what particular quantity of gold was the best unit, but upon what quantity all the nations represented could agree. The unit recommended is the existing five-franc gold piece, 620 of which weigh a kilogram.

For the reasons that induced the adoption of this unit of value, reference is made by your committee to the report of Mr. Ruggles. They may be summed up as follows:—

1. The coin proposed is the smallest gold coin in use, and therefore the most convenient unit of value.
2. It approximates more nearly to existing coinage of the great commercial nations than any other proposed. The dollar, reduced three and and one-half cents at the mint, becomes the unit of value, and its decimal divisions and multiples enable us to retain all our well-known coins, both of gold and silver.

A very slight reduction of the English sovereign makes it conform to the multiple of the dollar and franc, so that five francs are a dollar, and five dollars are a sovereign, or a half eagle. The same unit is easily adapted to existing coinage of other nations.

3. The franc is already in use by 72,000,000 of the most industrious and thrifty people of Europe, France, Belgium, Italy, Switzerland, and Holland.
4. The actual gold coinage in francs from 1793 to 1866 was $1,312,220,814, while the gold coinage in dollars during the same period was $845,536,591, and in sovereigns was $935,341,450, thus showing that in France alone the existing gold coinage on the proposed standard is greater than upon any other that could be adopted.

It must be remembered that the great body of our coin and bullion has been exported, and is now in foreign coin; that a large part of the balance is held in the treasury, and that less gold is in actual circulation in the United States than in any other great commercial nation. It is unreasonable, in view of these facts, for the United States to demand that our dollar, composed of 1671.50 milligrams of gold, should be the standard of value. As the nation most interested in international coinage, we should be ready to yield something to secure that object. By the plan proposed we yield nothing except the very small reduction of the weight of our standard, and without any other change in our coins, multiples, divisions, devices, or alloy.

5. France, whose standard is adopted, makes a new coin similar to our half eagle. She yields to our demand for the sole standard of gold, and during the whole conference evinced the most earnest wish to secure the co-operation of the United States in the great object of unification of coinage. Her metric system is far the best yet devised, and is in general harmony with our own, while Great Britain has refused even to negotiate with us for unity of coinage, and maintains the most complex system of weights, measures, and coinage now in use among Christian nations. The decimal system, the basis of all our computations, she rejects, and adheres to the complex division of pounds, shillings, and pence, which we rejected with our colonial dependence.

These reasons induce your committee to earnestly urge the adoption by the United States of the general plan of the Paris conference.

3d. What legislation is necessary on the part of the United States to adapt our coinage to the plan proposed.

On this point your committee have consulted the Secretary of the Treasury and the Director of the Mint. The bill herewith reported is the result of this conference, and is all that is needed to secure the object proposed. The provisions in regard to silver coinage are urged by the director of the mint to secure harmony between the present market value of gold and silver; but this coinage can be regulated hereafter by the varying values of the two metals, and without disturbing the sole legal standard of value for large sums. The general provisions of existing law relating to coinage are preserved.

4th. What provisions, if any, should be made for existing Contracts. Shall they be discharged in the money made a legal tender at the date of the contracts or in the money provided for by this bill.

In determining this question, a distinction must be made between public and private debts. All private contracts are made in view of the power of Congress to regulate the value of coins. This power has been repeatedly exercised by Congress, and in no case was any provision made for enforcing existing contracts in the old rather than the new standard. All property and contracts may be affected by legislation, but it is

not presumed that in the exercise of its legislative power Congress will be controlled by either the debtor or creditor, but only by the general good. To continue a distinction between the old and the new coin in the payment of private debts would result in great inconvenience, while by making the new coin a legal tender for all debts after a reasonable time would enable our citizens to conform the great body of their contracts to the new standard. Such has been the practice not only in the United States but in other countries, where from time to time the standard of coin has been changed. Such was the principle adopted in the passage of the present legal-tender Act, which if made applicable only to future contracts would have bankrupted a large portion of the active business men of the country, whose business compelled them to contract debts.

It must be remembered that all private debts are now on the basis of legal-tender notes, of far less intrinsic value than the proposed coin. The depreciation of legal tenders had the effect to diminish the value of all debts and the property of all creditors to the extent of the depreciation, and is only justifiable by the highest considerations of national safety. The resulting process of returning to specie-basis will be far more severe on the debtor class. The depreciation of the burden of debt is a loss to a class generally benefited by the increased value of fixed property, and better able to bear the diminution of their capital; but an increase of the burden of the debt to the debtor class, by the payment of coin instead of depreciated paper money, often produces absolute ruin without fault in the debtor. All contracts are now on the legal-tender basis. Every private creditor would now take the new coin, and would be largely benefited by the changed medium of payment. The small relief of the debtor by the slightly diminished standard of coin will tend to that degree to lessen the unavoidable hardship to him of a return to specie payment. This relief would be especially just on the payment of long bonds issued by railroads and other corporations during or since the war, which were almost uniformly sold for depreciated paper money. Your committee therefore conclude, that as to all private debts or contracts, the only provision necessary in this bill is to postpone the operation of its legal-tender clause for a reasonable time after the passage of the Act.

Does not a different principle prevail as to public debts? As to public debts, the contract of loan is the only law that ought to affect the creditor until his debt is fully discharged. Congress, as the authorized agent of the American people, is one party to the contract, and it may no more vary the contract by subsequent acts than any other debtor may vary his contract. As to the public creditor, no legislative power stands between him and the exact performance of his contract. Public faith holds the scales between him and the United States, and the penalties for a breach of this faith are far more severe and disastrous to the nation than courts, constables, and sheriffs can be to the private debtor. These penalties are national dishonor and inability to borrow money in case of war or public distress, and the ultimate result is the sure and speedy decline of national power and prestige. When changes in our coin were made in 1834 and 1853, the United States had no public debt of any significance, and the precedents then made do not apply to the present time. Now the public debt is so large that a change of three and one-half per cent. in the value of our coin is a reduction of the public debt of $90,000,000. So much of this debt as exists in the form of legal-tender notes will be received and disbursed as money, and as its value for some time will be less than the new coin no provision need be made for it, but for so much of the debt as is payable, principal or interest, in coin of a specific weight and value, provision ought to be made for its exact discharge in that coin or its equivalent in the new. Your committee, therefore, propose an amendment to that effect.

Your committee have been led to inquire whether, if the United States adopt the plan of the Paris conference, it will be adopted by other nations so as to accomplish the object proposed, of an international currency, of universal circulation throughout the civilized world. Upon this point we have the most satisfactory assurances. Since the Paris conference it has been adopted by Austria, and will, in all human probability, be adopted by the North German Confederation. A strong party in Great Britain, including many of her ablest statesmen, and the great body of her commercial classes, has urged the adoption of the plan, even in advance of the United States, and they concur in the opinion that, if adopted by the United States, Great Britain will be induced by her interests, to modify her sovereign to the international standard. We have the highest authority for saying that Canada stands ready to adopt the plan the moment it is adopted by the United States. Different representatives of the South American States say those States will readily adopt it; so that upon Congress now rests the fate of a measure that, according to the opinion of eminent American statesmen, will shed unfading glory upon the age of its adoption, that will give to international law an international coinage, and will lead to a vast extension of the objects of international law common to Christian and civilized nations, thus binding the whole family of man by the same ties that are uniting and consolidating neighbouring states. Your committee recommend the adoption of this measure, with certain amendments, with the conviction that it will not only promote the local interests of the United States, but will subserve the general interests of all the nations who have already or may hereafter join in its adoption.

Mr. MORGAN, from the Committee on Finance, submitted the following report.

Mr. Morgan's Report.

[To accompany Bill S. No. 217.]

In June last, while the universal exposition was in progress, an international monetary conference was held in Paris, under the presidency of the French minister for foreign affairs. Delegates from the several European nations were present. Mr. Samuel B. Ruggles represented the United States, and his report on the subject has been communicated to Congress, through the Department of State. From this it appears that a plan of monetary unification was there agreed upon, the general features of which are:

1. A single standard, exclusively of gold.
2. Coins of equal weight and diameter.
3. Of equal quality, nine-tenths fine.
4. The weight of the present five-franc gold piece to be the unit, with its multiples. The issue by France of a new coin of the value and weight of 25 francs was recommended.
5. The coins of each nation to continue to bear the names and emblems preferred by each, but to be legal tenders, public and private, in all.

Senate Bill 217 is designed to carry into effect this plan. Its passage would reduce the weight of our gold coin of $5 so as to agree with a French coin of 25 francs. It determines that other sizes and denominations shall be in due proportion of weight and fineness; and that foreign gold coin, conformed to this basis, shall be a legal tender, so long as the standard of weight and fineness are maintained. It requires that the value of gold coins shall be stated both in dollars and francs, and also in British terms, whenever Great Britain shall conform the pound sterling to the piece of $5.

It conforms our silver coinage to the French valuation, and discontinues the silver pieces of one dollar and five and three cents, and limits silver as a legal tender to payments of $10. The first of January 1869 is fixed as the period for the Act to take effect.

The reduction which this measure would effect in the present legal standard value of the gold coin of the United States would be at the rate of three and a half dollars in the hundred, and the reduction in the legal value of our silver coinage would be still more considerable.

A change in our national coinage so grave as that proposed by the Bill should be made only after the most mature deliberation. The circulating medium is a matter that directly concerns the affairs of every day life, affecting not only the varied, intricate, and multiform interests of the people at home, to the minutest detail, but the relations of the nation with all other countries as well. The United States has a peculiar interest in such a question. It is a principal producer of the precious metals, and its geographical position, most favourable in view of impending commercial changes, renders it wise that we should be in no haste to fetter ourselves by any new international regulation based on an order of things belonging essentially to the past.

Antecedent to any action by Congress on this subject we should carefully consider:

I. The effect which the present abundant production of the precious metals, especially of gold, and the probable great increase in the supply, as mining

facilities are improved and more generally applied, will have upon the purchasing power of these metals.

II. The question of preserving such a relation between gold and silver as will retain the latter metal in free circulation, and continuance of the coinage of such denominations of silver as will serve to encourage American commerce with Mexico and with South American and Asiatic nations.

III. The choice of a standard of unification which, all things considered, shall be least objectionable on account of fractional weights and intricacy of calculations.

IV. Of delaying action until the Paris plan has been adopted by the commercial powers of Europe, and accepted by those nations on the western continent with whom we have commercial relations; or at least until their intentions in this regurd are more fully known.

V. Should not a period when the public mind is calm, more so than now, on the subject of monetary affairs, and when the national debt has become less formidable, be chosen for initiating a change?

VI. The advisability of further popular discussion of the subject, to the end that the business as well as general public shall fully understand on what grounds so important a reduction in the value of our monetary unit, the dollar, is based, and the further advocacy of the merits of our own, so that, should any existing system be accepted, ours shall be more fully considered in that connection.

Uniformity in coinage and also in weights and measures has been the pursuit of ages. Speculative systems have been advanced, only to be given up when subjected to practical tests, but the idea has never been abandoned. Nor was the recent occasion the first in which our government has been recommended, and that, too, with some urgency, three-quarters of a century ago, by the minister of that country, to adopt the French system of weights, measures, and coinage. But Congress, both then and since, has properly exercised great caution on a subject so full of complications. And the question of international unification yet remains an open one, balanced between the facilities it would afford to foreign commerce, and the evils it would introduce into our domestic affairs. The adoption of some satisfactory and comprehensive plan, one to be adopted because it shall best subserve the interests of all, and not because it is or is not an existing one, may become desirable. If so, Congress will then be ready to take part in effecting such a measure. At present, however, there are questions of a very practical nature, relative to [the precious metals, that begin to reveal themselves, and will soon press home upon us, which largely outweigh in importance the more theoretical one of assimilating all metallic circulations. Our situation as a commercial nation makes it prudent that on this, as on every question affecting home interests, we should remain free to mould our policy to meet occasions as they arise, following such course as shall appear best suited to develop our great, almost limitless, natural resources, increasing by "gentle means the stream of commerce, but forcing nothing, rather than to hamper ourselves by international engagements or arbitrary regulations." An error now in fixing the values of gold and silver would injure this nation far more than any other. We may safely trust to the natural laws of commerce for the correction of any evils from which we have suffered. We have paid our seignorage, we have met the demand for foreign exchange, but who shall say that the course of trade in the next ten years may not make an American city, New York or San Francisco, the centre of exchange, and confer upon us the advantages so long enjoyed by European capital? Certainly no other nation can so well afford to wait.

The movement proposed in the Bill appears to be in the wrong direction. The standard value of gold coin should be increased—brought up to our own, rather than lowered. The reason must be obvious. Authorities unite in the conclusion that a fall in the value of the precious metals, in consequence of their rapidly increasing quantity, is inevitable. M. Chevalier recently estimated that the present yield of gold amounts, in 10 years, to about as much as the entire production during the 356 years which intervened between the date of the discovery of America and the year 1846, when the mines of California were found; and Mr. Cobden concluded that unless the cardinal rule of commerce, that quantity governs price, which applies infallibly to all other commodities, loses its force when gold is concerned, this continued and great increase must be followed by a reduction in its value.

Ross Browne, in his recent report, says that the time is not far distant when the price of the precious metals, as compared with other proceeds of human labour, must fall. "They are now increasing more rapidly than is the demand for them, and at the present rate of increase they would soon have to fall perceptibly; but the production will become much greater than it is. The vast improvements that have been made both in gold and silver mining, within the last 20 years, are applied only to a few mines. * * * If all the argentiferous lodes of Mexico, Peru, and Bolivia, known to be rich, were worked with the machinery used at Washoe, their yield would really flood the world. * * * New deposits of silver will be found, and innumerable rich lodes on the Pacific slope of the United States, not yet opened, will be worked with profit."

The present enhanced prices of commodities and labour, the world over, measures, to some extent, the increasing quantity and consequent depreciation in the value of precious metals, and clearly indicates the direction the change is taking.

The creditor, public and private, will be affected by this tendency; and while he must abide a depreciation which proceeds from natural causes, he may properly insist that artificial evils shall not be superadded.

Of the increased production of gold the United States supplies more than half, and when the lines of railway now pushing across the continent shall penetrate the gold-bearing mountains and valleys of California and Oregon, and the western territories, mining improvements will be powerfully supplemented.

The American continent, too, produces four-fifths of the silver of commerce. The mines of Nevada have already taken high rank, and Mexico alone supplies more than half the world's grand total. Our relations with the silver-producing people, geographically most favourable, are otherwise intimate. Manifestly our business intercourse with them can be largely increased; a fact especially true of Mexico, which, for well-known political reasons, seeks the friendliest understanding. This must not be overlooked.

These two streams of the precious metals, poured into the current of commerce in full volume, will produce perturbations marked and important. Other countries will be affected, but the United States will feel the effect first and more directly than any other.

The Pacific railway will open to us the trade of China, Japan, India, and other oriental countries, of whose prepossessions we must not lose sight. For years, silver, for reasons not fully understood, has been the object of unusual demand among these Asiatic nations, and now forms the almost universal medium of circulation, absorbing rapidly the silver of coinage. The erroneous proportion fixed between silver and gold by France, and which we are asked to copy, is denuding that country of the former metal. Our own monetary system, though less faulty, is not suitably adjusted in this respect. The silver dollar, for instance, a favourite coin of the native Indian and distant Asiatic, has well-nigh disappeared from domestic circulation, to reappear among the eastern peoples, with whom we more than ever seek close intimacy. As they prefer this piece, we would do well to increase rather than discontinue its coinage, for we must not deprive ourselves of the advantages which its agency will afford, and "it would be useless to send dollars to Asia inferior in weight and value to its well-known Spanish and Mexican prototype.

Mr. Ruggles says that nearly all the silver coined in the United States prior to 1858 has disappeared. A remedy is not to be found in the adoption of a system that undervalues this metal, for that commodity, like any other, shuns the market where not taken at its full value to find the more favourable one. It is a favourite metal, entering into all transactions of daily life, and deserves proper recognition in any monetary system.

It is said that "to promote the intercourse of nations "with each other, uniformity of weights, coins, and mea- "sures of capacity is among the most efficacious agen- "cies." Our weights, coins, and measures now correspond much more nearly to the English than to the French standard. Our commerce with Great Britain is nine times greater than with France, and if the former does not adopt the Paris system of coinage (and we have no assurance that she will) the United States would certainly commit a serious error in passing this Bill. No argument is needed to enforce this. And

what of the rising communities? A properly adjusted coinage would stimulate commerce with those great parts of the continent lying south and south-west of us, with the West Indies, and the countless millions of trans-Pacific countries. We stand midway on the thoroughfare of traffic between these two widely separated races. Our railways, canals, our natural highways, and merchant marine may be made to control their carrying trade. But here, as everywhere else, a well-adjusted coinage becomes a wand of power in the hand of enterprise. Tokens are not wanting to mark the favour in which the United States are now held by China. The unusual honour recently conferred by that government upon a citizen of this country was not alone because of his fitness as an ambassador at large, but was a mark as well of a friendly disposition towards this country. Future harmony of intercourse is assured, too, by their adoption as a text-book in diplomatic correspondence of a leading American authority on international law. Much might also be said about the growing partiality of Japan towards this country; but it is enough that the recent opening of certain ports indicates an enlightened change in the policies of these two old empires, of which commerce, especially our own, is availing itself. There is nothing, indeed, in our foreign policy to create suspicion in the minds of the cautious statesmen of Asia. We are non-aggressive; our vast domain leaves no motive for conquest; but, on the other hand, our fertile, unpeopled territory invites settlers, and our mines, and the demand for labour on the Pacific slope, are rapidly drawing thitherward from Asia an increasing tide of emigration, aiding not only in peopling that region, but in establishing closer relations, as well between individuals as a more liberal commerce between the nations.

Referring to the third inquiry, it may be asked, should a new standard be adopted, is the French system more suitable for us than our own?

Doubtless the French system "embraces all the "great and important principles of uniformity which "can be applied to weights and measures (and coins "as well), but it is not yet complete. It is susceptible "of many modifications and improvements." And it is not inconsistent with the respect held toward so exalted a power as France briefly for us to examine somewhat more closely certain features of this question. We are producers; France, Belgium, Switzerland, and Italy, (who have adopted the system,) are non-producers of the precious metals, and therefore, while adding little to the common stock of material for metallic currency, are not affected like us by an increase in gold and silver. Nor are they likely to be influenced, as we are to be, by other coming changes. Neither is there anything in the financial or commercial status of France which entitles her monetary scheme to a preference over all others in fixing a common coinage, unless in itself it is superior to all others. This in a practical sense is not the fact. Writers represent it as surrounded with difficulties, and an eminent French author calls it "the worst of all systems." Its basis is arbitrary, and the ratio it observes between gold and silver, one of gold for $15\frac{1}{2}$ of silver by *weight*, but one to $14\frac{88}{100}$ in *value*, is a confession of the erroneousness of the plan. In theory, her coinage is metrical, and yet it is said that France has not, nor never has had, a gold coin containing an even number of grams; or, practically, it is unmetrical.

The Bill proposes 1612.9 milligrams, or $24\frac{89}{100}$ grains, for the gold dollar. If adopted, and we should still give to our silver dollar a weight and value equal to the Mexican dollar, 416 grains, we should establish a ratio of value of gold to silver of $16\frac{7}{10}$ to one, while 15 to one is as high as it would be safe to go, and where indeed our own standard places it. "If we consent to "reduce our gold dollar, as proposed by the Paris con- "ference, to 24.89 grains, we could not possibly coin a "silver dollar that would be of any use to us in com- "merce," for we should increase rather than diminish the weight of the gold dollar.

On the subject of the French monetary unit, Mr. Dunning, superintendent of the United States assay office in New York, a competent authority, says:

"The present weight of the gold five-franc piece is not justified by any scientific reasons better than the mathematical accident that 620 of them weigh exactly a kilogram, a circumstance which has not the slightest practical importance. The fact is, this fractional and inconvenient weight, which the world is invited to adopt, was not fixed upon by the French themselves, by design, but as the unavoidable result of a false theory,"

Further, that after having fixed the ratio of gold as one to $15\frac{1}{2}$, and having adjusted the weight of their silver coins in integral numbers—

"They were compelled to accept for the five-franc gold piece the interminable decimal resulting from the division of 25 grams by 15.5, viz: 1.61290322580645. The awkwardness and inconvenience of this weight," he adds, "can be best shown by giving the weight of a few of the gold coins of France, Great Britain, and the United States, as they will be if the proposed unit is adopted." (See accompanying tables.)

Mr. Dunning recommended for consideration a monetary unit of 1620 milligrams, for which he claims greater facility of making calculations than that proposed by the conference, and that it is also a compromise between the French and English coin weights, and would require a reduction on our own dollar, of half a cent less than by the plan proposed in the Bill. Mr. Dubois, assistant assayer of the Philadelphia mint, concurs in the views of Mr. Dunning.

Other considerations aside, it may be said that until the leading nations represented at the Paris conference shall adopt a plan of unification, Congress may very properly decline to act; for anticipatory legislation, while disturbing relations existing between debtor and creditor, would accomplish no practical end. Mexico would not be partial to the French system, and Canada cannot be expected to accept it until its adoption by England. Unification, to be desirable, must be universal. Unless its advantages are palpable to commercial peoples of Europe, occupying contiguous territories, and whose intercommunication is constant, it cannot be of serious moment to us, to whom the change would be of but comparative usefulness.

It has been urged as a reason for the early passage of a law to unify coinages, that commercial transactions with Europe would be facilitated thereby; and also that citizens of our country in visiting Great Britain and the continent would be spared losses and annoyances if we possessed uniformity. But it should be recollected that, in all large commercial transactions, gold coin is accounted by weight and not by tale, a proceeding more speedy and equally just; and of the moneys used abroad by travellers from this country, probably more than 90 per cent. is carried in bills of exchange, a mode much safer and more convenient to the traveller, and which would be continued even if the Bill became a law. The British delegates at the Paris meeting stated that, "until it should be incon- "testably demonstrated that the adoption of a new "system offered superior advantages, justifying the "abandonment of that which was approved by expe- "rience and rooted in the habits of the people, the "British government could not take the initiative in "assimilating its money with that of the nations of the "continent."

A period of suspension of specie payment like the present, it has been stated, is a favourable one for inaugurating the change proposed by the Bill. But the juncture is one marked by great differences of opinion in respect to the question of circulation, return to specie payments, and the public finances as a whole. A change in the value of coinage would but add to the embarrassments of the situation; and it may be remarked incidentally that the reduction of the legal value of the dollar would inure largely to the benefit of speculators in gold and hoarders of the precious metals a fact that might seriously prejudice the measure in public estimation.

If the nation were comparatively free from debt, Congress might with more propriety consider the question of changing the legal standard of coin; but one effect of reducing it as now proposed would be to deprive the public creditor of nearly a hundred million dollars of his rightful due. In the estimation of the committee such a proposition ought not to be entertained by Congress. It is proper here to say, that the delegate, Mr. Ruggles, who favours unification, has at no time thought it just to lower the value of our coin without making proper allowance to the holder of the several forms of national obligations.

To be acceptable, a change in our coinage must be a thing of clearly obvious advantage, and proceed from the people. There has, however, been no popular expression in favour of the proposed plan, nor, indeed, any voluntary action in that direction whatever on the part of financial men, either in this country or elsewhere. If there has been any complaint in regard to our monetary system, the fact has not come to the knowledge of your committee. On the other hand, certain scientific bodies in our country have already protested

against any ill-considered change in the present American dollar. Our coinage is believed to be the simplest of any in circulation, and every way satisfactory for purposes of domestic commerce; it possesses special merits of every-day value, and should not for light reasons be exchanged where the advantages sought to be gained are mainly theoretical, engaging more properly the attention of the philospher than the practical man. The instincts of our people lead them to believe that we are on the eve of important business changes, and we may therefore safely hold fast for the present to what experience has proven to be good, following only where clear indications may lead, and a future of great prosperity opens to our country. The war gave us self-assertion of character, and removed many impediments to progress; it also proved our ability to originate means to ends. Its expensive lesson will be measurably lost if it fails to impress upon us the fact that we have a distinctive American policy to work out, one sufficiently free from the traditions of Europe to be suited to our peculiar situation and the genius of our enterprising countrymen. The people of the United States have been quick to avail themselves of their natural advantages. The public lands, not only, and the mines of precious metals, but our political institutions, have likewise powerfully operated in our favour, and will continue to do so with increasing force.

Unification of the coinage, like all similar questions, should be taken up without bias, and considered on the broad ground of national interest. At the proper time, when the country is restored to a normal financial condition, and the public ask a change in this regard, it may be well to appoint a commission of experts, carefully to consider the question in its various bearings. Reflection and further observation here and elsewhere may suggest the foundations for a better and more enduring system than the one now proposed, which in the nature of things is but a provisional one. Permanency is equally important with uniformity in our coinage.

John Quincy Adams, who spent several years in studying the question of uniformity in weights and measures, and incidentally in that of coinage—indeed, the latter cannot be separated from the other two—says:

"If there be one conclusion more clear than another, deducible from all the history of mankind, it is the danger of hasty and inconsiderate legislation upon weights and measures. From this conviction, the result of all inquiry is, that, while all the existing systems of metrology are very imperfect and susceptible of improvements, involving in no small degree the virtue and happiness of future ages; while the impression of this truth is profoundly and almost universally felt by the wise and powerful of the most enlightened nations of the globe; while the spirit of improvement is operating with an ardor, perseverance and zeal, honorable to the human character, it is yet certain that, for the successful termination of all these labours, and the final accomplishment of the glorious object, permanent and universal uniformity, legislation is not alone competent. All trifling and partial attempts at change in our existing system, it is hoped, will be steadily discountenanced by Congress."

In this conclusion, which applies with even greater force to coinages, a fact fully recognized by Mr. Adams himself, the committee may safely now unite.

For the reasons herein set forth, it is respectfully recommended that the Bill be not now passed into a law.

APPENDIX TO MR. MORGAN'S REPORT.

Mr. Dunning's Suggestions.

United States Assay Office,
New York, Febuary 8, 1868.

1. The present weight of the gold 5-franc piece is not justified by any scientific reasons better than the mathematical accident that 620 weigh exactly a kilogram, a circumstance which has not the slightest importance. The fact is, this fractional and inconvenient weight, which the world is now invited to adopt, was not fixed upon by the French themselves by design, but as the unavoidable result of a false theory. The famous coinage law of the 7th Germinal, An XI,* attempted to make a double standard, and to fix the ratio of gold to silver as 1 to 15½. Then, having very sensibly adjusted the weights of their silver coins in integral numbers 5 grains for the franc, and 25 grains for the 5-franc piece, they were compelled to accept for the 5-franc gold piece the interminable decimal resulting from the division of 25 grains by 15.5, viz.: 1.61290322580645.

2. The awkwardness and inconvenience of this weight can best be shown by giving the weight of a few of the gold coins of France, Great Britain, and the United States, as they will be if the proposed unit is adopted:

	Existing weight of gold, 900 fine.	Proposed weights, adopting 1612.9 kilograms for monetary unit.	Equivalents in troy weights.
FRENCH COINS.	*Milligrs.*	*Milligrs.*	*Grains.*
Five francs	1612.903	*1612.903	24.8908
Twenty-five francs	8064.516	*8064.516	124.4544
One hundred francs	32258.064	*32258.064	497.8177
BRITISH COINS.			
Four shilling piece	1627.196	†1612.903	24.8908
Sovereign	8135.983	†8064.516	124.4544

Eagle	16718.129	‡16129.032	248.9088
Double eagle	33436.258	‡32258.065	497.8177
	Grams.	*Grams.*	*Grains.*
One thousand francs—French	322.5806	322.5806	4978.1769
One thousaad dollars—United States	1671.8129	1612.9032	24890.884
One thousand pounds sterling	8135.9840	8064.5161	124454.422

*No change. † Reduction 0.88 per cent. ‡ Reduction 3.52 per cent

3. The following table shows the weight of the same denominations of coin, &c., by adopting 1620 milligrams instead of 1612.9 for the monetary unit:

	Existing weights of gold, 900 fine.	Proposed weights, adopting 1,620 milligrams for the monetary unit.	Equivalent in troy weight.
FRENCH COINS.	*Milligrs.*	*Milligrs.*	*Grains.*
Five francs	1612.903	1620*	25
Twenty-five francs	8064.516	8100*	125
One hundred francs	32258.064	32400*	500
BRITISH COINS.			
Four-shilling piece	1627.196	1620†	25
Sovereign	8135.983	8100†	125
Five sovereigns	40679.915	40500†	625
UNITED STATES COINS.			
Dollar	1671.813	1620‡	25
Half eagle	8359.064	8100‡	125
Eagle	16718.129	16200‡	250
Double Eagle	33436.259	32400‡	500
	Grams.	*Grams.*	
One thousand francs	322.580	324	5000
One thousand dollars	1671.813	1620	25000
One thousand pounds sterling	8135.984	8100	125000

*Increase 0.44 per cent. † Reduction 0.44 per cent.
‡ Reduction 3.1 per cent.

NOTE.—The exact equivalent of 1,620 milligrams is in troy grains 25.0004; discarding this fraction of $\frac{4}{10000}$ involves a discrepancy in calculations of only one cent in 600 dols., or $\frac{1}{600}$ in one cent.

4. It will be noticed that the proposed unit of 1620 milligrams has the merit of offering to Great Britain an even compromise of the difference between her present coinage and that of France, instead of a reduction of the British gold coins of $\frac{88}{100}$ per centum to make them equal to the French coins. The unit of 1,620 milligrams exactly splits the difference, requiring an increase of the French coins of $\frac{44}{100}$ per centum, and a diminution of $\frac{44}{100}$ per centum in the British coins. This difference is so slight as hardly to call for any legal adjustments of existing contracts in either country; and while in the United States such an adjustment will doubtless be required, the proposed unit of 1,620 makes the reduction of our coins almost one-half per centum less than would be effected by the unit of 1,612.9. The exact difference as shown by the above tables is $\frac{44}{100}$ of one per centum.

5. There is another very important advantage offered by the unit of 1,620 milligrams, which you and all who have to do with mint calculations will appreciate. I allude to the facility of making calculations. I will not attempt to exhibit the difficulties in calculating value from the standard weight when the relation is expressed in such interminable decimals as must result from the

* See p. 339.

APPENDIX, No. 21.

United States.

Coinage Bills, 1868.

Mr. Morgan's Report.

adoption of the unit 1612.9. But you will see at a glance the facility of dealing with the unit of 1,620.

The weight of 1,000 francs, or $200, or 40*l.*, at 1,620 milligrams to the dollar, would be 324,000 milligrams. These values are readily deduced from the weight, as will be seen by the following examples:

France.	United States.	Great Britain.
Milligrams 324,000	Milligrams 324,000	Milligrams 324,000
÷ 9 = 36,000	÷ 9 = 36,000	÷ 90 = 3,600
÷ 9 = 4,000	÷ 9 = 4,000	÷ 90 = £40
÷ 4 = 1,000 francs.	÷ 20 = 200 dols.	

The above divisions are performed mentally without difficulty, and the rule of calculation is exceedingly simple. It is not at the mint alone, nor chiefly, that this facility of calculation will be appreciated. The transactions in coin and bullion the world over will be simplified by it. The experts at the mint can soon adapt themselves to any system, however complicated; but for the convenience of commerce the relation of weight to value in the coins of the world ought to be simple.

6. If the troy system of weights is to be continued in this country and Great Britain, it will be immensely important that the monetary unit expressed in milligrams should be easily convertible into troy weight. A glance at the tables given above will show the discrepancy between the unit of 1612.9 and the troy system, and also the beautiful and almost marvellous harmony effected by the unit of 1,620 milligrams.

7. I trust, however, that Mr. Sherman's Bill will contain a section making the use of the French system of weights obligatory in all the mints of the United States. This change would seem to be almost a necessary part of the plan of monetary unification of the world's coinage; and it would certainly be a judicious method of partially familiarizing the country with the metrical system, the universal adoption of which, even if not perfect, is so devoutly to be wished.

If you deem these remarks of sufficient importance, I should be glad if you would send them, with your comments, to Governor Morgan of the Senate.

Very respectfully and truly yours,

Mr. Dubois. GEORGE F. DUNNING.

In forwarding this copy, I have only to add my hearty concurrence in the views taken by Mr. Dunning. Whether they would arrest or embarrass the plan of complete and prompt unification, is a point which I must leave to wiser counsels.

With respects of,

WM. E. DUBOIS,

United States Mint, Philadelphia.

February 12, 1868.

APPENDIX, No. 22.

Seignorage.

Opinions of Political Economists.

From "Discourses upon Trade," London, 1691.

APPENDIX No. XXII.

OPINIONS OF POLITICAL ECONOMISTS ON THE SUBJECT OF SEIGNORAGE.

SIR DUDLEY NORTH.

A country which useth Foreign Coyns, hath great disadvantage from it; because they pay Strangers, for what, had they a Mint of their own, they might make themselves. For Coyned Money, as was said, is more worth than Uncoyned Silver of the same weight and alloy; that is, you may buy more Uncoyned Silver, of the same fineness with the money, than the money weighs; which advantage the Stranger hath for the Coynage.

If it be said, That the contrary sometimes happens, and Coyned Money shall be current for less than bullion shall sell for—I answer, That where-ever this happens, the Coyned Money being undervalued, shall be melted down into Bullion, for the immediate Gain that is had from it.

Thus it appears, that if you have no Mint whereby to increase your Money, yet if you are a rich people, and have trade, you cannot want Specifick Coyn, to serve your occasions in dealing.

The next thing to be shewed is, That if your Trade pours in never so much money upon you, you have no more advantage by the being of it Money, than you should have were it in Logs, or Blocks; save only that Money is much better for transportation than Logs are.

For when Money grows up to a greater quantity than Commerce requires, it comes to be of no greater value, than Uncoyned Silver, and will occasionally be melted down again.

Then let not the care of Specifick Money torment us so much; for a People that are rich cannot want it, and if they make none, they will be supplied with the Coyn [of other nations; and if never so much be brought from abroad, or never so much coyned at home, all that is more than what the Commerce of the Nation requires, is but Bullion, and will be treated as such; and Coyned money like Wrought Plate at Second hand, shall sell but for the Intrinsick.

I call to witness the vast Sums that have been coyned in *England*, since the free Coynage was set up; What is become of it all? no body believes it to be in the Nation, and it cannot well be all transported, the penalties for so doing being so great. The case is plain, it being exported, as I verily believe little of it is, the Melting-Pot devours all.

The rather, because that Practice is so easie, profitable, and safe from all possibility of being detected, as every one knows it is. And I know no intelligent Man who doubts, but the New Money goes this way.

Silver and Gold, like other Commodities, have their ebbings and flowings: Upon the arrival of Quantities from *Spain*, the Mint commonly gives the best price; that is, coyned Silver, for uncoyned Silver, weight for weight. Wherefore is it carried into the *Tower* and coyned? not long after there will come a demand for Bullion, to be Exported again: If there is none, but all happens to be in Coyn, what then? Melt it down again; there's no loss in it, for the Coyning cost the Owners nothing.

Thus the Nation hath been abused, and made to pay for the twisting of straw, for Asses to eat. If the Merchant were made to pay the price of the Coynage he would not have sent his Silver to the *Tower* without Consideration; and coyned Money would always keep a value above uncoyned Silver: which is now so far from being the case, that many times it is considerably under, and generally the King of *Spain's* Coyn here is worth one penny *per* ounce more than our New Money.

From the Preface to "Discourse upon Trade."

The free Coynage is a perpetual motion found out, whereby to Melt and Coyn without ceasing, and so to feed Goldsmiths and Coyners at the Publick Charge.

ADAM SMITH.

"Wealth of Nations," McCulloch's Edition of 1853, p. 20.

A small seignorage or duty upon the coinage of both gold and silver would probably increase still more the superiority of those metals in coin above an equal quantity of either of them in bullion. The coinage would, in this case, increase the value of the metal coined in proportion to the extent of this small duty; for the same reason that the fashion increases the value of plate in proportion to the price of that fashion.

The superiority of coin above bullion would prevent the melting down of the coin, and would discourage its exportation. If upon any public exigency it should become necessary to export the coin, the greater part of it would soon return again of its own accord. Abroad it could sell only for its weight in bullion. At home it would buy more than that weight. There would be a profit, therefore, in bringing it home again.

Ibid., p. 246

Were the private people who carry their gold and silver to the Mint to pay themselves for the coinage, it would add to the value of those metals in the same manner as the fashion does to that of plate. Coined gold and silver would be more valuable than uncoined. The seignorage, if it was not exorbitant, would add to the bullion the whole value of the duty; because the Government having everywhere the exclusive privilege of coining, no coin can come to market cheaper than they think proper to afford it. If the duty was exorbitant indeed, that is, if it was very much above the real value of the labour and expense requisite for coinage, false coiners, both at home and abroad, might be encouraged, by the great difference between the value of bullion and that of coin, to pour in so great a quantity of counterfeit money as might reduce the value of the Government money. In France, however, though the seignorage is eight per cent., no sensible inconveniency of this kind is found to arise from it.* The dangers to which a false coiner is everywhere exposed if he lives in the country of which he counterfeits the coin, and to which his agents or correspondence are exposed if he lives in a foreign country,

* It has been previously shown that the seignorage in France was not nearly so great as Dr. Smith had been led to believe. (Editor's Note.)

are by far too great to be incurred for the sake of a profit of six or seven per cent.

The seignorage in France raises the value of the coin higher than in proportion to the quantity of pure gold which it contains. Thus by the edict of January 1726 the* mint price of fine gold of 24 carats was fixed at seven hundred and forty livres nine sous and one denier one-eleventh, the mark of eight Paris ounces. The gold coin of France, making an allowance for the remedy of the mint, contains twenty-one carats and three fourths of fine gold, and two carats one fourth of alloy. The mark of standard gold, therefore, is worth no more than about six hundred and seventy-one livres ten deniers. But in France this mark of standard gold is coined into thirty louis d'ors of twenty-four livres each, or into seven hundred and twenty livres. The coinage, therefore, increases the value of a mark of standard gold bullion by the difference between six hundred and seventy-one livres ten deniers and seven hundred and twenty livres, or by forty-eight livres nineteen sous and two deniers.

A seignorage will, in many cases, take away altogether, and will, in all cases, diminish the profit of melting down the new coin. This profit always arises from the difference between the quantity of bullion which the common currency ought to contain and that which it actually does contain. If this difference is less than the seignorage, there will be loss instead of profit. If it is equal to the seignorage, there will neither be profit nor loss. If it is greater than the seignorage, there will indeed be some profit, but less than if there was no seignorage. If, before the late reformation of the gold coin, for example, there had been a seignorage of five per cent. upon the coinage, there would have been a loss of three per cent. upon the melting down of the gold coin. If the seignorage had been two per cent. there would have been neither profit nor loss. If the seignorage had been one per cent. there would have been a profit, but of one per cent. only, instead of two per cent. Wherever money is received by tale, therefore, and not by weight, a seignorage is the most effectual preventative of the melting down of the coin, and, for the same reason, of its exportation. It is the best and heaviest pieces that are commonly either melted down or exported, because it is upon such that the largest profits are made.

The law for the encouragement of the coinage, by rendering it duty-free, was first enacted during the reign of Charles II., for a limited time; and afterwards continued, by different prolongations, till 1769, when it was rendered perpetual. The Bank of England, in order to replenish their coffers with money, are frequently obliged to carry bullion to the Mint; and it was more for their interest, they probably imagined, that the coinage should be at the expense of the Government than at their own. It was, probably, out of complaisance to this great company that the Government agreed to render this law perpetual. Should the custom of weighing gold, however, come to be disused, as it is very likely to be on account of its inconveniency; should the gold coin of England come to be received by tale, as it was before the late re-coinage, this great company may, perhaps, find that they have upon this, as upon some other occasions, mistaken their own interest not a little.

Before the late re-coinage, when the gold currency of England was two per cent. below its standard weight, as there was no seignorage, it was two per cent. below the value of that quantity of standard gold bullion which it ought to have contained. When this great company, therefore, bought gold bullion in order to have it coined, they were obliged to pay for it two per cent. more than it was worth after the coinage. But if there had been a seignorage of two per cent. upon the coinage, the common gold currency, though two per cent. below its standard weight, would, notwithstanding, have been equal in value to the quantity of standard gold which it ought to have contained; the value of the fashion compensating in this case the diminution of the weight. They would indeed have had the seignorage to pay, which being two per cent., their loss upon the whole transaction would have been two per cent.; exactly the same, but no greater than it actually was.

If the seignorage had been five per cent. and the gold currency only two per cent. below its standard weight, the Bank would in this case have gained three per cent. upon the price of the bullion; but as they would have had a seignorage of five per cent. to pay upon the coinage, their loss upon the whole transaction would, in the same manner, have been exactly two per cent,

If the seignorage had been only one per cent., and the gold currency two per cent. below its standard weight, the Bank would, in this case, have lost only one per cent. upon the price of the bullion; but as they would likewise have had a seignorage of one per cent. to pay, their loss upon the whole transaction would have been exactly two per cent., in the same manner as in all other cases.

If there was a reasonable seignorage, while at the same time the coin contained its full standard weight, as it has done very nearly since the late re-coinage, whatever the Bank might lose by the seignorage they would gain upon the price of the bullion, and whatever they might gain upon the price of the bullion, they would lose by the seignorage. They would neither lose nor gain, therefore, upon the whole transaction, and they would in this, as in all the foregoing cases, be exactly in the same situation as if there was no seignorage.

When the tax upon a commodity is so moderate as not to encourage smuggling, the merchant who deals in it, though he advances, does not properly pay the tax, as he gets it back in the price of the commodity. The tax is finally paid by the last purchaser or consumer. But money is a commodity with regard to which every man is a merchant. Nobody buys it but in order to sell it again; and with regard to it, there is in ordinary cases no last purchaser or consumer. When the tax upon coinage, therefore, is so moderate as not to encourage false coining, though everybody advances the tax, nobody finally pays it; because everybody gets it back in the advanced value of the coin.

A moderate seignorage, therefore, would not, in any case, augment the expense of the Bank, or of any other private persons, who carry their bullion to the Mint in order to be coined, and the want of a moderate seignorage does not, in any case, diminish it. Whether there is or is not a seignorage, if the currency contains its full standard weight, the coinage costs nothing to anybody, and if it is short of that weight, the coinage must always cost the difference between the quantity of bullion which ought to be contained in it and that which actually is contained in it.

The Government, therefore, when it defrays the expense of coinage, not only incurs some small expense, but loses some small revenue, which it might get by a proper duty; and neither the Bank nor any other private persons are in the smallest degree benefited by this useless piece of public generosity.

The directors of the Bank, however, would probably be unwilling to agree to the imposition of a seignorage, upon the authority of a speculation which promises them no gain, but only pretends to insure them from any loss. In the present state of the gold coin, and as long as it continues to be received by weight, they certainly would gain nothing by such a change. But if the custom of weighing the gold coin should ever go into disuse, as it is very likely to do, and if the gold coin should ever fall into the same state of degradation in which it was before the late re-coinage, the gain, or more properly the savings of the Bank, in consequence of the imposition of a seignorage, would probably be very considerable. The Bank of England is the only company which sends any considerable quantity of bullion to the Mint, and the burden of the annual coinage falls entirely or almost entirely upon it. If this annual coinage had nothing to do but to repair the unavoidable losses and necessary wear and tear of the coin, it could seldom exceed fifty thousand or at most a hundred thousand pounds. But when the coin is degraded below its standard weight, the annual coinage must, besides this, fill up the large vacuities which exportation and the melting pot are continually making in the current coin. It was upon this account that during the ten or twelve years immediately preceding the late reformation of the gold coin the annual coinage amounted at an average to more than eight hundred and fifty thousand pounds. But if there had been a seignorage of four or five per cent. upon the gold coin it would probably, even in the state in which things then were, have put an effectual stop to the business both of exportation and of the melting pot. The Bank, instead of losing every year about 2½ per cent upon the bullion which was to be coined into more than eight hundred and fifty thousand pounds, or incurring an annual loss of more than twenty-one thousand two hundred and fifty pounds, would not probably have incurred the tenth part of that loss.

The revenue allotted by Parliament for defraying the expense of the coinage is but fourteen thousand pounds a year, and the real expense which it costs the Government, or the fees of the officers of the Mint, do not, upon ordinary occasions, I am assured, exceed the half of that sum. The saving of so very small a sum, or even the gaining of another, which could not well be much larger, are objects too inconsiderable, it may be thought, to deserve the serious attention of Government. But the saving of eighteen or twenty thousand pounds a year in case of an event which is not improbable, which has frequently happened before, and which is very likely to happen again, is surely an object which well deserves the serious attention even of so great a company as the Bank of England.

Seignorage.

Opinions of Political Economists.

"Reply to Mr. Bosanquet's Practical Observations on the Report of the Bullion Committee," Chap. VI., 1811. From McCulloch's Edition of Mr. Ricardo's Works, 1846, p. 345.

RICARDO.

Observations on the Principles of Seignorage.

Dr. Smith, though favourable to a small seignorage on the coin, was fully aware of the evils which might attend a large one.

The limits beyond which a seignorage cannot be advantageously extended are the actual expenses incurred by the manufacturing of bullion into coin. If a seignorage exceeds these expenses, an advantage will accrue to false coiners by imitating the coins, although they should actually make them of their legal weight and standard; but even in this case, as the addition of money to the circulation beyond the regular demands of commerce will diminish the value of that money, the trade of false coiners must cease when the value of the coin does not exceed the value of bullion more than the actual expenses of fabrication. If the public could be secured from such illegal additions to the circulating medium, there could be no seignorage so high which a government might not advantageously exact; as the coined money would, in the same degree, exceed the value of bullion. If the seignorage amounted to 10 per cent., bullion would necessarily be 10 per cent. under the mint price; and if it were 50 per cent., that also would the value of coin exceed the value of bullion. It appears, then, that although a given weight of bullion can never exceed in value a given weight of coin, a given weight of coin may exceed in value a given weight of bullion by the whole expense of seignorage, however great that seignorage may be, provided that there was effectual security against the increase of money through the imitation of the coins by illegal means. And it appears also, that if no such security could be given, the trade of the false coiner would cease as soon as he had added so much to the amount of the coin as to diminish its value, on a comparison with bullion, to the actual expenses incurred. That these principles are correct may be proved from the consideration of the circumstances which give value to a bank note. A bank note is of no more intrinsic value than the piece of paper on which it is made. It may be considered as a piece of money on which the seignorage is enormous, amounting to all its value; yet if the public is sufficiently protected against the too great increase of such notes, either by the indiscretion of the issuers, or by the practices of false coiners or forgers, they must, in the ordinary operations of trade, retain their value.

Whilst such money is kept within certain limits, any value may be given to it as currency; 3*l.* 17*s.* 10½*d.* may be worth an ounce of gold bullion, the value at which it was originally issued, or it may be reduced to the value of half an ounce; and if the Bank which issued had the exclusive privilege of procuring money to be coined at the Mint, 3*l.* 17*s.* 10½*d.* of their notes might be rendered of equal value to 1, 2, 3, or any number of ounces of gold bullion.

The value of such money must depend wholly upon its quantity; and in the case supposed the Bank would not only have the power of limiting the amount of paper money, but of metallic money also.

I have before endeavoured to show, that, previously to the establishment of banks, the precious metals employed as money were necessarily distributed amongst the different countries of the world in the proportion that their trade and payments required; that, whatever the value of the bullion so employed for the purposes of currency might be, the equal demands and necessities of all countries would prevent the quantity allotted to each from being either increased or diminished, unless the proportions in the trade of countries should undergo some alteration which should make a different division necessary; that England, or any other country, might substitute paper instead of bullion for the uses of money, but that the value of such paper must be regulated by the amount of coin of its bullion value which would have circulated had there been no paper.

Under this point of view the paper currency of any particular country represents a certain weight of bullion which, her commerce and payments continuing the same, could neither be increased nor diminished; 3*l.* 17*s.* 10½*d.* of coin or paper currency might represent an ounce of gold bullion, or 4*l.* 13*s.* might, in consequence of some internal regulation, do the same; but the actual amount of bullion so represented would, under the same circumstances of commerce and payments, be eternally the same.

Suppose that England's share amounted to a million of ounces; if, by a law which could be effectually executed, a million and a half of ounces in coin could be forced or retained in circulation by preventing its being melted or exported; or if, by means of a restriction bill, the Bank should be enabled to maintain an amount of paper which should represent a million and a half of ounces of coined gold in circulation, such million and a half would be of no more value in currency than a million of ounces; and consequently an ounce and a half of coined gold, or bank notes which represented that amount, would purchase no more of any commodity than an ounce of gold bullion. If, on the other hand, Government were to charge a seignorage of 50 per cent., or if the issues of the Bank were to be exceedingly limited, whilst they had also the exclusive right of coining, so that the whole amount of their notes did not exceed what should represent, at the mint price, half a million of ounces of gold, that half million would in currency pass for the same value as the million of ounces in one case, and the million and a half in the other did before.

From these principles it results that there can exist no depreciation of money but from excess. However debased a coinage may become, it will preserve its mint value, that is to say, it will pass in circulation for the intrinsic value of the bullion which it ought to contain, provided it be not in too great abundance. It is a mistaken theory, therefore, to suppose that guineas of 5 dwts. and 8 grains cannot circulate with guineas of 5 dwts. or less. As they might be in such limited quantity that both the one and the other might actually pass in currency for a value equal to 5 dwts. 10 grains, there would be no temptation to withdraw either from circulation; there would be a real profit in retaining them. In practice, indeed, it would seldom occur that the heavier pieces would escape the melting pot, but it would arise wholly from the augmentation of such currency, either by the liberal issues of the Bank, or by the supply of false money which the arts of the false coiner would throw into circulation.

Our silver currency now passes at a value in currency above its bullion value, because, notwithstanding the profit obtained by the counterfeiter, it has not yet been supplied in sufficient abundance to affect its value.

It is on this principle, too, that the fact must be accounted for, that the price of bullion previously to the recoinage in 1696 did not rise so high as might have been expected from the then debased state of the currency; the quantity had not been increased in the same proportion as the quality had been debased.

It also follows from these principles, that in a country where gold is the measure of value, the price of gold bullion (where the law offers no restraint against exportation) can never exceed its mint price; and that it can never fall more below it than the expenses of coinage; and that these variations depend wholly on the supply of coin or paper currency being proportioned to the trade of the country; or, in other words, that nothing can raise the value of bullion even so high as the mint price but an excess of circulation. If, indeed, any power in the state have the privilege of increasing the paper currency at pleasure, and be at the same time protected from the payment of its notes, there is no other limit to the rise of the price of gold than the will of the issuers.

THOMAS TOOKE.

* * * * *

Evidence before the Lords' Committees on resumption of cash payments by the Bank of England, 1819. The portion of the extract marked by inverted commas is part of a written paper delivered in by the witness.

"The gold coin, upon the present footing of the Mint, being issued gratuitously, as to the expense of manufacture, will be upon the resumption of cash payments, as it was previous to the restriction, liable to be exported or melted on every occasion of a casual depression of the exchanges, whether arising from the ordinary fluctuations of trade or from the tendency of the banking system to keep the channel of circulation so full as to be constantly liable to an overflow. The remedy which naturally presents itself is that of a seignorage.

"But seignorage is synonymous with debasement, unless connected with a principle of limitation.

"The rationale of this principle may be thus illustrated: Suppose the circulation of the whole country to be confined to gold, and to consist of twenty millions of sovereigns of the present weight and standard; if by some sudden process each piece were reduced by one-twentieth, or five per cent., but the whole number of pieces strictly confined to the same amount of twenty millions, then, *other circumstances being the same*, the relation of commodities, &c., to the numerical amount of coin being undisturbed, there would not, it is evident, be any disturbance of prices; and if gold bullion in the market was previously at 3*l.* 17*s.* 10½*d.* per ounce, it would, other things remaining the same, continue at that price, or, in other words, 46*l.* 14*s.* 6*d.* in gold coin, weighing $\frac{12}{20}$ of a pound, would purchase in the market a whole pound of uncoined gold of the same standard.

"But if the quantity of gold thus abstracted from each piece were coined into one million of additional pieces, and re-issued into circulation, the twenty-one millions would then exchange for no more than the former twenty millions; all commodities would rise five per cent., and among them gold bullion, which would then be at

4*l.* 1*s.* 9½*d.*; or, in other words, 46*l.* 14*s.* 6*d.* in coin would only purchase $\frac{1}{10}$ of a pound of uncoined gold.

"This is the keystone of all reasoning on the subject of currency; and the application of it is clear enough, as to the power of a State, by the monopoly of issue, to raise the nominal, compared with the intrinsic, value of the coin in a currency wholly metallic. The only limit to the extent of this power is the inducement to counterfeit on the *genuine* metal; and this limit, I am inclined to think, is much wider than is commonly imagined.

"But there is a difficulty in the application of the limiting principle to a seignorage on the coin, as in the case of our gold coin, where it circulates along with paper; for, as is justly remarked by Mr. Ricardo, on the supposition which he makes of a seignorage of five per cent. on the gold coin,* 'the currency by an abundant issue of bank notes might be depreciated five per cent. before it would be the intererst of the holders to demand coin for the purpose of melting it into bullion.' A remedy is suggested by the same high authority, viz.. 'that the holders of bank notes might demand bullion, and not coin, in exchange for them, at the mint price of 3*l.* 17*s.* 10½*d.*'

"In the principle of this remedy I perfectly concur; but it strikes me that the application of it is susceptible of some improvement, by making the Mint, instead of the Bank, the source from whence the bar gold thus required to limit the paper should issue; because, independently of other advantages, the high prerogative of the Crown, as the source from whence everything like metallic money should emanate, would be preserved, as in fact the bar gold thus stamped, and thereby acquiring additional value, would be the simplest and cheapest form of metallic money.

"Consistently with these views I would propose,—

"1. A seignorage of not less than 2½ nor more than 5 per cent., *i. e.* a pound weight of standard gold to be coined into not less than forty-eight nor more than forty-nine sovereigns.

"2. A protection of this seignorage, by obliging the issuers of bank notes to pay to the holders, if required, a quantity of standard bar gold at the rate of 3*l.* 17*s.* 10½*d.* per ounce.

"3. The bar gold so claimed to be paid by the Bank or banks, in an order upon the Mint, which should stamp the gold then issued, and make an adequate charge for the trouble thus thrown upon it."

Query. Do you think that the plan of payment in bullion by the Bank might not, if the Mint continued open to the King's subjects for gold coinage, be combined with the actual circulation of a certain proportion of gold coin, or whether the execution of that plan must absolutely confine the whole of our circulation to paper currency?

Ans. I do not exactly see what would be the inducement to take bullion to the Mint for the purpose of coinage in the case supposed, unless the market price fell below the Mint price, which, on the supposition of the convertibility of bank notes into bullion at that price, it could not do. If the Mint in that case had a reserve or stock of coin in advance to exchange against gold bullion, it would very much increase the inducement to export coin as a more convenient form, for many purposes, than bullion.

Query. Supposing it were the determination of Parliament, either at the present or any future period, to revert to the system by which the Bank was restrained from issuing notes under a certain amount, say 5*l.* or 10*l.*, and that country bankers were under a corresponding restraint, some currency of smaller denomination would in that case obviously be necessary; would it, on that supposition, be practicable to apply to the Bank the system of bullion payments, leaving the Mint open for coining such bullion into gold coin with or without a seignorage?

Ans. Yes, I think it might.

Query. In that case, would it, in your judgment, be necessary that a seignorage should be attached to the gold coin, or such brassage only be taken thereon as would be equivalent to the expense of working, and thereby obviate the loss to arise from the occasional exportation of the coin?

Ans. I would recommend for that purpose a seignorage, probably beyond the mere brassage, such seignorage being protected by the convertibility of bank notes, at the option of the holder, into standard bullion, at 3*l.* 17*s.* 10½*d.* per oz., because, by such protection, the market price of gold cannot rise above 3*l.* 17*s.* 10½*d.*; so that the possessor of gold coin, although reduced in intrinsic value, may be able to purchase with it as great a weight of standard gold as it would have done if no seignorage had been taken out of it.

M'Culloch.

Appendix, No. 22.

Seignorage.

Opinions of Political Economists.

But though it is impracticable, by limiting the supply of metallic money, to raise its value considerably above that of bullion, it must not therefore be supposed that it would be improper to impose a moderate seignorage or duty on the coinage of money. Coins charged with a seignorage equal to the expense of coinage do not pass at a higher value than what naturally belongs to them, but at that precise value; whereas, if the expense of coinage be defrayed by the state, coins pass at less than their real value. A sovereign is of greater utility and value than a piece of pure unfashioned gold bullion of the same weight; because, while it is as well fitted as bullion for being used in the arts, it is, owing to the coinage, better adapted for being used as money, or in the exchange of commodities. On what principle, then, should Government decline to charge a seignorage or duty on coins, equal to the expense of coinage, that is, to the value which it adds to the coins? Those who contend that the state should defray the expense of coining gold and silver, might, with equal cogency of reasoning, contend that it should also defray the cost of manufacturing gold and siver teapots, vases, &c. In both cases the value of the bullion is increased by the cost of the workmanship; and it is only fair and reasonable, that those who carry bullion to the Mint should be obliged, like those who carry it to a jeweller, to pay the expense of its conversion into the desired shape.

Note to Smith's Wealth of Nations, Edition of 1853, p. 483.

It is unnecessary to recapitulate the reasonings by which Dr. Smith has shown that the imposition of a seignorage would both prevent the exportation of coins, on every slight fall of the exchange, and their fusion. Abroad a British coin is only worth so much bullion; but if a seignorage were charged upon it, its value here would be increased by the amount of that seignorage. The exchange would, therefore, have to fall to a greater extent than at present, before it would suit a merchant to export such coins; and though they were exported, they would, under the circumstances supposed, stand a much better chance of being preserved entire, and of being again sent back to us the moment the exchange became favourable.

Down to 1626, a seignorage or duty upon the coinage was usually charged upon the gold and silver coins issued by the [London] Mint; and it may be easily shown that the imposition of such a duty, when it is not carried to an undue height, is advantageous. A coin is more useful than a piece of uncoined bullion of the same weight and purity; the coinage fitting it for being used as money, while it does not unfit it for being used or for any other purpose. When, therefore, a duty or seignorage is laid upon coin equal to the expense of coinage, it circulates at its real value; but when this charge is defrayed by the public it circulates at *less* than its real value, and is consequently either melted down or exported whenever there is any demand for bullion in the arts, or any fall in the exchange. It is, indeed, true that were a seignorage to be laid on gold coins it would be necessary, to prevent an enhancement of the value of the currency, that their weight should be proportionately reduced; and it is on this account better, perhaps, to let them remain on the present footing. But when a seignorage was laid on the silver coins, in 1816, it was not necessary to take the circumstance now alluded to into consideration; for as they were made subordinate to gold, and were intended to serve as change merely, its imposition had no tendency to raise the value of the currency, at the same time that it was calculated effectually to prevent the fusion of the coins, and to yield a small revenue to Government.

McCulloch's Commercial Dictionary. Edition of 1856. Article "Coins," p. 323.

John Stuart Mill.

Of the value of money, as dependent on cost of production.

But money, no more than commodities in general, has its value definitively determined by demand and supply. The ultimate regulator of its value is cost of production.

Principles of Political Economy, Book III., chap. ix. s.

We are supposing, of course, that things are left to themselves. Governments have not always left things to themselves. They have undertaken to prevent the quantity of money from adjusting itself according to spontaneous laws, and have endeavoured to regulate it at their pleasure, generally with a view of keeping a greater quantity of money in the country than would otherwise have remained there. It was, until lately, the policy of all governments to interdict the exportation aud the melting of money; while, by encouraging the exportation and impeding the importation of other things, they endeavoured to have a stream of money constantly flowing in. By this course they gratified two prejudices; they drew, or thought that they drew, more money into the country, which they believed to be

Appendix, No. 22.

Seignorage.

Opinions of Political Economists.

tantamount to more wealth; and they gave, or thought that they gave, to all producers and dealers, high prices, which, though no real advantage, people are always inclined to suppose to be one.

In this attempt to regulate the value of money artificially by means of the supply governments have never succeeded in the degree, or even in the manner, which they intended. Their prohibitions against exporting or melting the coin have never been effectual. A commodity of such small bulk in proportion to its value is so easily smuggled, and still more easily melted, that it has been impossible by the most stringent measures to prevent these operations. All the risk which it was in the power of governments to attach to them was outweighed by a very moderate profit.* In the more indirect mode of aiming at the same purpose, by throwing difficulties in the way of making the returns for exported goods in any other commodity than money, they have not been quite so unsuccessful. They have not indeed succeeding in making money flow continuously into the country; but they have, to a certain extent, been able to keep it at a higher than its natural level, and have, thus far, removed the value of money from exclusive dependence on the causes which fix the values of things not artificially interfered with.

We are, however, to suppose a state, not of artificial regulation, but of freedom. In that state, and assuming no charge to be made for coinage, the value of money will conform to the value of the bullion of which it is made. A pound weight of gold or silver in coin and the same weight in an ingot will precisely exchange for one another. On the supposition of freedom, the metal cannot be worth more in the state of bullion than of coin; for as it can be melted without any loss of time, and with hardly any expense, this would of course be done until the quantity in circulation was so much diminished as to equalize its value with that of the same weight in bullion. It may be thought, however, that the coin, though it cannot be of less, may be, and being a manufactured article will naturally be, of greater value than the bullion contained in it, on the same principle on which linen cloth is of more value than an equal weight of linen yarn. This would be true were it not that Government in this country and in some others coins money gratis for any one who furnishes the metal. The labour and expense of coinage, when not charged to the possessor, do not raise the value of the article. If Government opened an office where, on delivery of a given weight of yarn, it returned the same weight of cloth to any one who asked for it, cloth would be worth no more in the market than the yarn it contained. As soon as coin is worth a fraction more than the value of the bullion it becomes the interest of the holders of bullion to send it to be coined. If Government, however, throws the expense of coinage, as is reasonable, upon the holder, by making a charge to cover the expense, (which is done by giving back rather less in coin than has been received in bullion, and is called levying a seignorage,) the coin will rise to the extent of the seignorage above the value of the bullion. If the Mint kept back one per cent. to pay the expense of coinage, it would be against the interest of the holders of bullion to have it coined until the coin was more valuable than the bullion by at least that fraction. The coin, therefore, would be kept one per cent. higher in value, which could only be by keeping it one per cent. less in quantity, than if its coinage were gratuitous.

* The effect of the prohibition cannot, however, have been so entirely insignificant as it has been supposed to be by writers on the subject. The facts adduced by Mr. Fullarton, in the note to page 7 of his work on the Regulation of Currencies, show that it required a greater per-centage of difference in value between coin and bullion than has commonly been imagined to bring the coin to the melting pot. (Author's note.)

The Government might attempt to obtain a profit by the transaction, and might lay on a seignorage calculated for that purpose, but whatever they took for coinage beyond its expenses would be so much profit on private coining. Coining, though not so easy an operation as melting, is far from a difficult one, and, when the coin produced is of full weight and standard fineness, is very difficult to detect. If, therefore, a profit could be made by coining good money, it would certainly be done; and the attempt to make seignorage a source of revenue would be defeated. Any attempt to keep the value of the coin at an artificial elevation, not by a seignorage, but by refusing to coin, would be frustrated in the same manner.*

Michel Chevalier.

Extracts from the Treatise on Money in his Course of Political Economy, Sect. 9, Chap. i.

Toutes les fois qu'un gouvernement prélèvera un droit sur l'émission de la monnaie, et que le droit excédera les frais de fabrication, on retombera dans le système qui fait de la monnaie un signe arbitraire, au lieu de la traiter comme une marchandise qu'elle est. Ainsi tout seigneuriage doit être supprimé. Mais il y a une raison pour maintenir ce que, dans la vieille langue monétaire, on nommait spécialement le droit de *brassage*, qui consistait dans le recouvrement des frais que la fabrication même des monnaies a imposés. Comme le dit M. MacCulloch†, le métal dont le poids et le titre sont certifiés par le gouvernement, au moyen du monnayage, a, pour la circulation et le service des échanges, une valeur de plus que celui qui est dépourvu de cette garantie. Il est donc tout simple que le certificat soit payé ce qu'il coûte. Ce certificat perd son crédit lorsque la monnaie passe la frontière, puisque la monnaie d'un État circule rarement au dehors, et dès lors l'étranger, dans ses transactions avec les nationaux, ne peut en tenir compte. En vue du commerce extérieur, qui chaque jour prend plus de développement, on a donc pu réclamer, pour la parfaite égalité dans les transactions, que même le droit de brassage ne fût pas perçu, en d'autres termes, que le monnayage fût complétement gratuit, et que les détenteurs de lingots reçussent en espèces, poids pour poids, titre pour titre, tout le métal qu'ils avaient délivré à l'hôtel des monnaies. Necker, qui cependant trouvait naturel de percevoir un seigneuriage, sans doute parce qu'il se préoccupait avant tout du besoin de remplir les coffres de l'Etat, convenait que tout prélèvement fait à l'hôtel des monnaies, tant pour le brassage que pour le seigneuriage, est un impôt établi sur l'exportation des produits de l'industrie nationale,‡ et les taxes de ce genre ont aujourd'hui peu de partisans.

* * * * *

De nos jours, la question de savoir si le gouvernement doit percevoir une rétribution pour le monnayage devient à peu près oiseuse, du moment qu'on écarte le seigneuriage proprement dit. Il est de principe que tout service soit rétribué; ainsi, en principe, il est juste que les frais du monnayage soient remboursés par le particulier qui apporte à l'hôtel des monnaies des matières d'or et d'argent pour les faire frapper. Mais ces frais sont ou peuvent être très-modiques, grâce au progrès des arts mécaniques et métallurgiques, et spécialement à cause de la baisse des acides qui servent à l'élaboration des métaux.

* In England, although there is no seignorage on gold coin (the Mint returning in coin the same weight of pure metal which it receives in bullion), there is a delay of a few weeks after the bullion is deposited before the coin can be obtained, occasioning a loss of interest, which, to the holder, is equivalent to a trifling seignorage. From this cause the value of coin is in general slightly above that of the bullion it contains. An ounce of gold, according to the quantity of metal in a sovereign, should be worth 3*l.* 17*s.* 10½*d.*; but it was usually quoted at 3*l.* 17*s.* 6*d.*, until the Bank Charter Act of 1844 made it imperative on the Bank to give its notes for all bullion offered to it at the rate of 3*l.* 17*s.* 9*d.* (Author's note.)

Appendix, No. 23.

Gold Coinage and Bank Charge on Gold.

Correspondence in 1852.

Apprehends difficulty in satisfying the large demand for gold coin.

APPENDIX No. XXIII.

Correspondence relating to the Expense of Gold Coinage and the Nature of the Bank Charge on Gold purchased under the Act of 1844.

The Master of the Mint to the Treasury.

(Official.) April 30, 1852.

From a correspondence which has taken place with the Bank of England, it appears possible that the arrangements under which the Mint is now working, and which are sufficient to supply 200,000 sovereigns weekly to that establishment, may not prove adequate to meet the present extraordinary demands for gold coin, and I am anxious, therefore, to provide means for a more rapid coinage in the event of its being required.

To proceed more rapidly it will be necessary to increase the number of persons employed in weighing the blanks; and as the number thus employed at present will shortly require to be reduced in consequence of the introduction of the self-acting weighing machines which have been ordered, I am unwilling to increase their number by persons who can only be temporarily engaged. I have therefore to suggest that an arrangement may be made by which about twenty trustworthy clerks may be supplied to the Mint from some of the Revenue Departments immediately on my requiring them, and be paid a small extra allowance while thus employed.

I have also to request authority to give a bonus of 10*s.* each to the three artificers employed in the coining rooms, and to the foreman of the rolling and adjusting rooms, for

every delivery of gold coin after this date, in excess of an average rate of three deliveries per week.

I cannot, however, conclude this communication without directing attention to the circumstance, that in the present commercial state of the country a coinage of gold at the rate of 10,000,000*l.* per annum may possibly be inadequate to meet the demands for coin. There can be no doubt that such a rate of coinage must be far greater than that necessary to provide for the legitimate requirements of Great Britain, and those Colonies which adopt the British coins; and the continual increase in the amount of gold in the Bank of England shows that the average of the foreign exchanges must be in our favour, and that the drain upon our coinage is not the consequence of an adverse foreign exchange. I believe that the conditions under which gold bullion is bought and sold, and the gold coinage is carried on in this country, render it advantageous to merchants to transmit British gold coin to foreign States instead of bar gold, and that they may even have a tendency to divert gold in its distribution to other countries through this country, and to cause it to be coined here, although preparatory only to its being soon after melted and re-coined in another country. The extremely inconvenient result which may arise from such a state of things, even more than the great expense to which the public are unfairly exposed for coinage, appears to demand the immediate attention of the Government.

The demand for gold coin greater than necessary for the legitimate requirements of Great Britain and the Colonies.

Memorandum on the Letter from the Master of the Mint, by Mr. Arbuthnot.

May 4, 1852.

THE Master of the Mint, in his letter to Sir Charles Trevelyan of the 30th April, calls the immediate attention of the Government to the extraordinary demands for gold coin at the Mint, which he appears to attribute to a desire on the part of merchants to obtain these coins for exportation to foreign States, rather than to legitimate requirements for the circulation either of this country or the Colonies.

The desire of merchants to obtain gold coin for exportation, might be checked by the imposition of a small Mint charge.

The most obvious remedy for such an inconvenience (if it really exists) would be the imposition of such a moderate seignorage or Mint charge as would check the demand for coin except for purposes of circulation. The arguments by which such a charge may be justified are obvious. The question as it may affect our mixed circulation of bank notes and coins has not yet obtained general attention, and it is probable that grave objections might be raised to altering the system of free mintage which was established in the reign of Charles II., and from which no inconveniences are alleged to have arisen, apart from those of expense, until now. I will only remark at present on this point, that the only great commercial country, besides ourselves, the circulation of which consists in great part of bank notes payable on demand, has, like ourselves, a free mint, namely, the United States.

But before entering at all into the question of altering our present system, it would be obviously right to ascertain the reality and extent of the inconvenience which it is proposed to obviate.

British gold coin legal tender in certain foreign States.

I understand that in the Brazils, Egypt, and perhaps some other foreign States, British gold coins are a legal tender, and constitute the principal medium of exchange. It is an anomalous state of things that we should bear the expense of coining for other States; but the quantity of sovereigns sent to these countries is probably not very large, and it is no doubt a great convenience to our merchants to be enabled to adjust their transactions in our own coin, even if there were no other consideration than its acknowledged purity.

Sir John Herschel's remarks do not, however, refer to the exportation of coins for the purpose of supplying a currency abroad, but to the alleged fact of gold being brought here to be coined preparatory only to its being remelted and re-coined in another country.

Customs Returns show but small amount of gold coin exported.

It would be very desirable that Sir John Herschel should furnish the data on which he founds this conclusion. The Returns from the Customs state the amount of British gold coin exported in 1851 to have been only 486,000*l.*, and in the four first months of the present year 122,000*l.* Great reliance cannot be placed on these Returns, as they only embrace the coin exported as freight; but even if a large allowance be made for quantities taken away by individuals on their persons or with their baggage, it would be difficult to make up such a sum as would account for the state of things which Sir John Herschel supposes to exist.

From one passage in his letter I should be inclined to form a directly opposite conclusion from that at which he has arrived.

He observes very truly that "the average of the foreign exchanges is in our favour, and that the drain upon our coin is not the consequence of an adverse foreign exchange." But if this be the case for what purpose is it supposed that British coin is exported by the merchants? A state of exchange favourable for this country would, under the ordinary laws of commerce, check the exportation of specie, whether in the shape of bullion or coin, and I can conceive no circumstances which would render it advantageous to merchants to incur the expense of obtaining coin from the Mint merely for the purpose of having it remelted and re-coined abroad, when the state of the exchanges would render the exportation of gold in the shape of bullion an unprofitable transaction.

State of the exchange.

Extraordinary case of New South Wales both importing and exporting gold at the same time.

The only instance that has ever come under my notice of coin and bullion of the same metal flowing in opposite directions, has arisen lately in consequence of the discovery of gold in New South Wales. The nominal exchange in that Colony against England was by the last advices 6 per cent. From the peculiar circumstances in which the Colony is placed from the sudden acquisition of this hidden treasure, which they have no means of converting into money on the spot, their gold dust is very cheap as compared with coin. At one time it was sold in the Colony as low as 56*s.* per oz. Some of the dust lately imported has from its extraordinary purity lately realised in London as much as 4*l.* 3*s.* 4*d.* an ounce. There would be a tendency in this state of things to export coin from England to New South Wales. Sums have recently been transmitted, though not probably to such an extent as to embarrass our Mint, and Sir John Herschel, it may be observed, excepts the Colonies from his observations.

If any permanent inconvenience should arise from this state of the bullion trade with New South Wales, the fitting remedy would be to establish a local Mint, and the Government have already had under consideration this question.

The transmission of coin to New South Wales would, however, cease as soon as a sufficient amount has been sent out to supply their increased requirements for a circulating medium, and the gold which they export would then be paid for by an importation of commodities from this country and other parts of the world.

Memorandum by the Master of the Mint.

May 5, 1852.

Causes of the large demand for coinage.

There are several circumstances which tend to throw a much greater amount of gold coinage on the Government than would simply suffice to maintain the circulation of Great Britain and its Colonies.

These are—

Profit of converting bullion into coin.

1. The direct profit accruing on the act of converting bullion into coin. This arises from the union of several small sources of gain, amounting, when taken together, to a material per-centage on very large transactions.

(*a.*) The difference between the market and Mint prices of standard gold, viz., 1½*d.* per oz. troy on one sovereign in 934½, *i.e.*, 0·00160 of the total value coined. It may, perhaps, be said that this is no more than sufficient to cover loss of interest on the bullion during the process of coining. But, first, the bullion is represented by notes in circulation, and thus forms the substratum of a continuous profit, whether in the Mint or in the Bank coffers; and, secondly, even were this not so, yet so long as an ingot remained unemployed in the Bank coffers there could be no loss on that in the Mint custody *as bullion*, and the moment its conversion into coin is effected it is released.

(*b.*) The assay fraction or allowance in benefit of the purchaser of bullion, of all excess in fineness above the nearest inferior eighth of a carat grain, gives an average profit of one-sixteenth of a carat grain, or of 0·00065 on the whole mass of bullion coined.

(*c.*) The turn of the scale in like manner in the purchase of bullion by the Bank from the public is in favour of the purchaser; and as no weight under 12 grains is used, this, on the average of a very great number of weighings, gives an advantage of 6 grains of gold per ingot weighed. Now as the Mint returns weight for weight, to the extreme of the performance of their scales, this becomes a source of profit to the "importer" of 1*s.* per ingot of 15 lbs., converted into coin, or 0·00007 on the whole.

Uniting these items, we have a profit per 1,000,000*l.* sterling—

	£
On the market price of - - -	1,600
On the assay fraction of - -	650
On the turn of the scale of - -	70
	2,320

Appendix, No. 23.

Gold Coinage and Bank Charge on Gold.

Correspondence in 1852.

Which constitutes, in the absence of a countervailing cause, a very obvious inducement to the passing of gold through the Mint for coinage under the existing conditions.

Were there no export of gold coin, however, and no domestic destruction of it, such countervailing cause would be found in the plethora of circulation induced by over issue. But so long as an active traffic in bullion is going on, and in proportion to that activity, it is obvious that the Bank has a direct interest in encouraging, or, at least, throwing no obstacle in the way of the export of coin.

The Bank has a direct interest in encouraging the export of coin.

II. There exist, however, special reasons why an exporting merchant should prefer coin to bullion for sending abroad.

Special reasons for preference of coin over bullion for exportation.

1st. The precision of our coinage in respect to the fineness of the metal, especially as recently improved, and still advancing to the verge of attainable exactness, dispenses with the necessity of assaying the gold so exported as coin. At all events it must constitute a severe check on the assayer, if it should be thought necessary to employ one.

2ndly. Our standard of the precious metals being superior to that of France, Belgium, Holland, Prussia, Naples, the United States, and some other countries, renders British coin convenient (taken in conjunction with the above considerations) for conversion into foreign, because, being above the foreign standards, it requires no refinement, but can be at once "potted," with a due proportion of alloy on a mere weighing so as to produce that standard, and can, moreover, be used in foreign Mints as an addition to coarse gold to bring the mixture up to standard, thus saving the heavy expense of refining for coinage. There can be no doubt that a large amount of British sovereigns finds its way directly or indirectly into foreign melting-pots. Nor is the action of this cause confined to foreign *Mints* only. The goldsmith, no doubt, both abroad and at home, will avail himself of the advantage so offered for the production of metal of an inferior standard without other cost or trouble than to take a material ready refined to his hand, whose composition is all but mathematically known to him without assay. All these causes, independent of the readiness with which British gold coin is taken in currency in several foreign countries (which of itself favours, and in certain cases, causes its exportation), are in process of increasing activity owing to the unexampled rate of increase in bullion transactions, consequent on the Californian and Australian discoveries, the latter of which being now fully confirmed, and the yield evidently still in its infancy, it is rendered highly probable that under the existing Mint regulations a heavy charge on the public purse will be annually incurred for many years to come in coining money *gratis* for purposes not contemplated in the establishment of those regulations, or contemplated only as a small and subordinate consideration. Should the prospect of increased coinage held out by the Bank continue, a coinage of 10,000,000*l.* per annum instead of the average of 3,000,000*l.* for the last ten years may be contemplated.*

The present activity in bullion operations conducive to the increase of expenditure at the Royal Mint.

It is not the duty of Government to provide fordischarge of commercial balances between their own subjects and foreigners in gold of definite standard.

It certainly cannot be regarded as any part of the duty of a Government to provide for the discharge of commercial balances between their own subjects and foreigners, to whatever amount, in gold of definite standard, guaranteed by the State. In settling such balances on an unfavourable state of exchanges, bullion acts as any other merchandise would do, and those into whose hands it passes must look to its quality. Even were it otherwise it would hardly be maintained that it belongs to the Government of any country to provide the material of exchange in a form convenient for foreign circulation if attended with additional loss or inconvenience.

The demand for gold coin interferes with supply of silver coin for domestic use.

An uninterrupted gold coinage, kept up at nearly a maximum rate of productiveness with a view to meet what may be considered a foreign demand for manufactured gold, must have the effect of throwing into the back ground and indefinitely postponing the full and efficient performance of what may be considered the domestic duty of the Mint in relation to the silver currency, which is at present in such a state as to call strongly for a plentiful supply of new coin, and (to say nothing of the alarming consequences which might arise from the necessary suspension of its proceedings) in the midst of a great demand for gold coin, the expense entailed on the State by such an abnormal demand (as it may fairly be regarded) is a matter of serious importance.

Imposition of a small seignorage suggested; question raised as to whether the cost of its conversion into coin. Such a seignorage actually exists (and in the form of a profit to the Bank), in the fact that 934½ sovereigns of coined standard gold do actually purchase in the market 935½ by weight of uncoined. But in this form its tendency is to encourage coinage beyond due limits, whereas if levied by the State it would have no such tendency, but the reverse. The difference is that between a bonus on coinage paid to the "importer" of bullion into the Mint and a protection afforded to the State against excessive demands for coin tending to private profit. Such a Mint charge, if not exceeding the cost of manufacture, can in no way be considered, and never has by political economists been considered, in the objectionable light of a deterioration of the standard of value. And the nature of the conjuncture is one which may very properly suggest a revision of so much of our monetary legislation as may admit of its imposition.

Bank profit does not already constitute a seignorage.

Addendum.

May 11, 1852.

Since the above was written a memorandum by Mr. Arbuthnot has been communicated to me, in which he very justly observes that before entering into the question of altering our present system it will be obviously right to ascertain the reality and extent of the inconvenience which it is proposed to obviate.

Reality and extent of the inconvenience caused by the large demand for gold coin.

The inconvenience appears under the form of an unrelaxed and increasing pressure on the part of the Bank for gold coin, accompanied with an intimation that in spite of the coinage (to the extent of 7,603,032*l.*) which has been supplied since October 1850 the amount of gold coin in the Bank coffers is actually less by a million than at that epoch, and that a supply of 200,000*l.* per week is desired, with an understanding that provision will be made for a larger if required.

Thus since 1850 (October) the public have been supplied from the Mint and from the reserved stores of the Bank to the extent of 8,603,032*l.* Moreover, it has been the practice of the Bank for many years past to cut light sovereigns when presented, to an average amount of 335,000*l.* per annum (for the four years 1847–50.) This practice, though not disused, is stated to be greatly relaxed, owing to the disuse on the part of the public sending in light gold (knowing it will be cut) to the Bank and its branches, thus retaining in circulation a very large portion of the light coin which used to be withdrawn, and which, therefore, must be reckoned as addition to the supply; a small item, however, as compared with the above total. The increase in the quantity of light gold of late owing to this cause has been already made a matter of complaint by the Bank itself, and it is evident that so long as it circulates at its nominal value at home none of it will be exported (to be valued by weight), new pieces being sure to be those selected for that purpose, so that one of the most immediate objects of coinage, that of keeping up a sound state of the domestic circulation, is defeated or crippled.

Exportation a cause, to a certain extent, of the prevalence of light coin in circulation.

This meets Mr. Arbuthnot's objection on the score of the small amount of exported gold coin apparent in the Custom-house returns. These show only 608,000*l.* since the commencement of 1851; and allowing 81,000*l.* for the months of November and December 1850, we get 689,000*l.* exported only. But the above statement is quite sufficient to show that a vast amount must have been exported otherwise than on freight, or destroyed at home by melting for the use of goldsmiths, which is part and parcel of the system of drains on the currency arising from the absence of a seignorage, and one which increases in proportion to the increasing demand for luxurious ornament.

Customs Return of coin exported.

No inquiry made of the Bank authorities as to the probable extent and continuance of the pressure can be expected to lead to any definite reply. But the fact of the continued increase in the stock of bullion (now amounting to 19,380,000*l.*), in the Bank coffers, the notoriety of the causes which have led to that increase, and the high probability of their continuance (independent of the ordinary fluctuations of exchange), as a consequence of the immense traffic in bullion brought about by the gold discoveries, afford an answer not the less conclusive that it relies on patent facts on the one hand, and on the other on the obvious interest which exists to turn the conjuncture to profit. So long as England is an emporium of gold *in transitu*, and there is a clear advantage in passing it out in a different state from that in which it came in, so long may we confidently reckon on the means of securing that advantage being kept in full activity.

Profit of Bank of England on coinage.

Mr. Arbuthnot asks, "If it be the case that a favourable "state of exchange exists, for what purpose can the British "merchant export gold coin?" The answer is obvious. An active traffic in bullion as merchandise may co-exist

Trade in bullion may co-exist with favourable exchanges.

* See Appendix (A.), page 338.

with the performance of its ordinary office of settling commercial balances on the interchange of other commodities, and disturb, *pro tanto*, our ordinary notions on the subject of favourable and unfavourable exchanges. We have seen, in the end of 1850 and the beginning of 1851, a case which for the moment startled political economists, when, without commercial uneasiness, or any symptom of over-trading or failure of crops, gold flowed out from the Bank coffers with alarming rapidity; an obvious reason existing for its doing so, in a use having been found for it abroad as a metal, consequent on its greater abundance, and not as a simple balance of national credit. So at present the contrary effect is not to be attributed *solely* to an extraordinary amount of commercial prosperity causing an influx of gold as a simple balance of accounts arising out of other transactions (which may be called a passive influx), but to its active introduction as a merchandise *sui generis*, having, as such, a variable *price* in the largest acceptation of the term, and becoming an object of traffic in all the forms it is capable of assuming, among others, that of coin. It is only in times of equilibrium between supply and consumption that gold and silver are so purely measures of value as to be wholly exempt from fluctuation, and consequently from becoming objects of mercantile speculation; and it is only in this quiescent state of the gold market that the terms favourable and unfavourable can with propriety be affixed to the state of the exchanges. Mr. Arbuthnot's memorandum affords a case quite in point, in the low price of pure gold in Australia as compared with coin (*i.e.*, with the conventional measure of value), which is not an accident, but a necessary consequence of general laws.

Perhaps this point may be put in a clearer light by the following consideration:—England at present may be compared to a reservoir, into and out of which streams of gold are flowing. If on the whole, after the lapse of a certain period, we find its contents greater than at the commencement of that period, we say the balance of exchanges during that time has been favourable. But the amount of the difference may be (and in the case supposed, which is that really existing, must be,) only a portion of the whole amount which has flowed through it. The transactions must have been of many times the amount of the accumulation, and it is not merely possible, but morally certain, that in these great transactions, whatever small source of advantage circumstances allow to be realized by exporting gold in one form rather than another have not been and will not in future be neglected. Thus coined gold, at least in part, flowing out, and uncoined only flowing in (for foreign coin, offering no advantage to our melters, must here be treated as uncoined), nothing is easier to conceive than that the Bank stock of bullion (consisting of both) may be on the increase, while the stock of coin, of which it partly consists, may be (though less rapidly) on the decrease. And this may go on, if the causes in action continue to exist, till the circulation is picked of its heavy sovereigns, the Mint all the while doing its utmost to renew them.

Bullion in Bank may increase while coin may decrease.

Mr. Arbuthnot observes, that the question of seignorage, as it may affect our mixed circulation of Bank notes and coin, has not yet obtained general attention, and he anticipates grave objections to arise on that discussion against unsettling the existing system. The nature of these he has, however, not explained. If such exist, it would be highly proper that they should be maturely weighed. Meanwhile, I have only to add, that in the face of a prospect of this description it has appeared to me quite necessary to bring the matter in one form or other under the consideration of Government. If it can be shown that we receive a *quid pro quo* in some form of national advantage in return for an exaggerated Mint outlay, the money may be well spent, and it will then only remain to provide whatever increase of power, personal or mechanical, may be required to keep the supply of coin on a level with a steady demand much exceeding its usual average.

Seignorage as affecting mixed circulation of notes and coin.

Observations on Sir J. Herschel's Memorandum of the 5th of May 1852, by Mr. Arbuthnot.

May 17, 1852.

Abolition of Bank charge and substitution of a seignorage.

If I understand rightly the proposition contained in this memorandum, it is that the Bank charge of 1½*d.* per ounce on bullion deposited there should be abolished, and a seignorage, or Mint charge for coinage, of a like amount, be substituted for it.

The grounds upon which this proposition is urged are:—

1. That the Bank derives a profit from the conversion of bullion into coin, and has therefore an interest in encouraging the export of gold coin in preference to bar gold, whereby the Mint is exposed to a much greater demand for gold coin than would be sufficient for the circulation of the United Kingdom and the Colonies.

2. That, owing to the superiority of our standard of the precious metals over that of France and some other countries, British coin is more convenient than bar gold for conversion into foreign coin, because its fineness being guaranteed by our Mint, no assay is required, and it is reduced to the standard of foreign Mints by the addition of a known proportion of alloy.

I. The profits stated by the Master of the Mint to be derived from the Bank of England on the conversion of bar gold into coin amount, on an average, to the following sums on every 1,000,000*l.* coined, viz.:—

Profits of the Bank on Coinage.

	£
The difference between the Mint price and the market price of gold, *i.e.*, 1½*d.* per oz.	1,600
On the assay fraction - - -	650
On the turn of the scale - - - -	70
	£2,230

He also observes, that the bullion deposited in the Bank, being "represented by notes in circulation, forms the sub-"stratum of a continuous profit, whether in the Mint or "Bank coffers."

The accuracy of the foregoing estimate, as far as the calculation is concerned, is, of course, beyond question; but Sir John Herschel has omitted to refer to the fact that although the price at which the Bank purchases gold bullion is 3*l.* 17*s.* 9*d.* per oz., the price at which it sells it is the Mint price of 3*l.* 17*s.* 10½*d.* The profit, therefore, of 1½*d.* per oz., or 1,600*l.* per 1,000,000*l.*, arises equally whether the gold is withdrawn from the Bank in the shape of ingots or of coin. The real profit of the Bank on the conversion of bullion into coin is therefore reduced to the two latter items, amounting to the small sum of 720*l.* in a million of sovereigns.

It is also incorrect to state that the bullion held in deposit by the Bank is represented by the notes in circulation. The notes held in reserve, which at this time amount to nearly 12,000,000*l.*, being considerably more than half the value of bullion deposited, should be deducted from this estimate of continuous profit.

I think that, for the reasons I have stated, it cannot be held that the Bank has any interest in encouraging the exportation of gold coin in preference to bullion. They would exceed, or rather act in dereliction of, their duty, if they attempted to "throw any obstacle" in the way of such a proceeding. They may facilitate trade by the sale of bar gold, but it is their bounden duty to supply coin on demand in exchange for their promissory notes. It must practically rest with the exporter whether he chooses to send bullion or coin abroad, and he will be governed by his own interests, and not with a view to the profits of the Bank.

II. This leads to the second argument in Sir John Herschel's memorandum, viz., the alleged advantage of sending British coin in preference to bar gold to France and other countries for the purpose of conversion into foreign coin. I do not think that the superiority of our standard of fineness can have influence in this matter. The United States standard is the same as that of France, and when the coin of that country can be "potted" in the French Mint without even the trouble of adding alloy, there seems no reason why the gold which arrived here in United States eagles should be again melted and refined and coined into sovereigns, for the purpose of being remelted, reduced to its former standard, and coined into French money. If the precision of our coinage in respect to the fineness of the metal is superior to that of the United States, the requirements of our Mint in this respect would induce similar care in the refinement and preparation of ingots for coinage, and the gold bars sold by the Bank would acquire equal reputation with our coinage.

Preference by exporters of coin over bullion.

There is, however, one important consideration to which the Master of the Mint has omitted to refer. British sovereigns are by our law legal tender, until they have lost by abrasion more than three-fourths of a grain of their mint weight. A person demanding gold coin at the Bank cannot demand new sovereigns; he must take his chance of what may be given to him, provided the coin is of the weight fixed by Proclamation, viz., 122½ grains. If he took coin for the purpose of exportation and re-coinage in a foreign Mint, he might possibly find that the weight of bullion he obtained was half per cent. less in value than he would have obtained by the purchase of bar gold.

I believe that this circumstance does operate as an effectual check against the exportation of British coin for the purpose of being remelted and recoined abroad, and that in the great majority of cases where coin is exported it is either for the purpose of circulation, or with a view to

APPENDIX, No. 23.

Gold Coinage and Bank Charge on Gold.

Correspondence in 1852.

its retention in the shape of coin, until the most profitable way of employing it is ascertained.

When I wrote my memorandum of the 4th instant, on the letter of the Master of the Mint to the Treasury, I had no information before me regarding the exportation of British coin, except the Returns from the Customs. I find that those Returns are ridiculously imperfect. I have now before me Returns which I have obtained from the Bank of England, in which the disposal of 5,120,050*l.* gold coin, out of the 8,393,899*l.* issued to the public since the 20th September 1850, is accounted for.

Statistics as to export of gold coin.

This 5,120,050*l.* was exported as follows:—

	£
To Australia - - -	937,430
Mediterranean and Egypt -	533,930
Cape of Good Hope - -	538,600
Mauritius - - - -	69,100
France - - -	1,116,030
Holland - - - -	15,440
Africa - - - -	1,100
New Zealand - - -	14,210
Lisbon and Oporto - -	857,760
North and South America -	664,660
Not stated - - -	284,740
India, &c. - - - -	88,050
Total	5,120,050

It will be seen that the greater portion of this sum has been sent either to the Colonies, or to countries in which British money is employed, either immediately as currency, or generally as an available medium of exchange, for the convenience of our merchants. The sum of 1,116,030*l.* sent to France forms a small proportion of the large amount of gold bullion exported from England to that country, and the circumstances under which it has been sent afford a remarkable exemplification of my argument regarding the probable course of the bullion trade with France.

Exportation of gold coin to France;

Reasons for.

Of the whole quantity of coin exported to that country within the period stated, 950,000*l.* was sent in the latter end of 1850 and beginning of 1851, when a committee was sitting in France to decide upon the expediency of abolishing the coinage of gold in France, and adopting silver as the sole standard, in consequence of the apprehended depreciation of the former metal from the influx of Californian gold. While this question was in agitation, the transmission of gold ingots for the purpose of coinage was suspended, and it was a safer transaction to send the gold in the shape of coin, which being received by the Bank of France at a small discount was readily convertible. This export of sovereigns was, therefore, an exception to the general rule. As soon as the French Government decided that no alteration of the Mint law of the country should take place, the bullion trade reverted to its usual course, and the transmission of British coin became inconsiderable.

I may here remark that events have proved the soundness of the views of the French committee when they reported that the high price of silver which then prevailed was attributable to other causes than the influx of gold from California.

Having examined the grounds on which the proposition of the Master of the Mint is based, I will proceed to the proposition itself for the abolition of the Bank charge of 1½*d.*, and the substitution for it of a Mint charge of like amount.

The Master of the Mint looks upon this Bank charge in the light of a seignorage. He says, "Such a seignorage "actually exists (but in the form of a profit to the Bank) "in the fact that 934½ sovereigns of coined standard gold "do actually purchase in the market 935½ by weight of "uncoined." It is not the fact that 934½ sovereigns purchase in the market bullion of the weight of 935½ sovereigns. It is true that if the holder of that amount of bullion wishes to convert it immediately into money he can only obtain from the Bank, or *generally* in the market, 934*l.* 10*s.* for it; but if the holder of 934½ sovereigns wishes to purchase bullion with them, he must pay for it at the rate of 3*l.* 17*s.* 10½*d.* per oz., and will obtain the weight of no more than 934½ new sovereigns, *i. e.*, 240 oz. Hence the sovereign circulates for no more than the equivalent weight in bullion which it contains when issued from the Mint, and no seignorage exists even in the sense contended for by the Master of the Mint.

Bank of England, as dealers in bullion, naturally make a profit on their bullion transactions.

The Bank charge of 1½*d.* is what it professes to be, and nothing more, viz., compensation to the Bank for its advances on the deposit of bullion. Of course the Bank obtains a profit by these transactions. They are dealers in bullion, and there is no pretence for obliging them to carry on the trade without allowing them a profit. If the charge of 1½*d.* is more than equivalent to the loss of interest which would be incurred by the private importer of bullion while his gold would be detained at the Mint, the remedy is in the hands of the public, as the Mint is open to every one; but the State cannot alter the compact made with the Bank in 1844, by which that institution is required to issue notes payable on demand, in exchange for bullion at a fixed rate.

The question of the imposition of a seignorage must therefore be considered on its own merits, apart from this charge by the Bank on the deposit of bullion. This is not, however, what the Master of the Mint proposes; and as the disturbing of our existing Mint laws would involve rather complicated considerations, I shall not, at present, enter into this part of the subject, though I am ready to do so if required.

Some Remarks on Mr. Arbuthnot's Observations of May 17, 1852, on Sir J. Herschel's Statement, by the Master of the Mint.

Amount of Mint charge.

1. Mr. Arbuthnot has not exactly seized my meaning if he considers that I advocate the imposition of a seignorage to the precise amount of the difference of the Bank and Mint prices of gold. The maximum of seignorage justifiable as a Mint charge would be the expense of manufacture of the coin. If less would accomplish the object the whole ought not to be imposed.

The Bank is practically the only importer of bullion.

2. I ought to observe, *in limine*, that "the Bank" is only referred to as personifying the interests of the "importer" of bullion to the Mint for coinage. It is matter of fact that the Mint is exposed to a much greater demand for gold coin than would suffice for the Imperial circulation. The object being to analyse the causes of this fact, with a view to its remedy, it becomes impossible not to look at the mode in which the Mint regulations act in its transactions with, practically speaking, the only "importer."

The stock of bullion waiting for coinage is part of the general stock of gold lying dormant in coffers of the Bank.

3. In reference to my position, that the allowance of 1½*d.* per ounce is not to be regarded as a simple compensation for loss of interest during the time of conversion into coin, Mr. Arbuthnot meets only the first and least important part of my argument—the outwork of it. He leaves the body unassailed, viz., that the portion of the Bank stock of bullion lying for coinage in the Mint is, to all intents and purposes, part and parcel of the general stock of gold dormant (*if* dormant) in their coffers. It is only in a different strong box, the most remote and least readily accessible. Like the gold forming the bottom layer of a chest, it would never be touched till the upper layers were drawn out. If the upper form a substratum for paper, the lower constitute a part of that substratum. If the bullion or any part of it be represented by notes held in reserve, and not by notes in circulation, whatever circumstances repress the circulation of those notes extinguish the profit upon them, and if they make no profit it is to those circumstances, and not to the detention of the bullion at the Mint, that it is attributable. They are ready to step into circulation at a moment's notice, whenever occasion of profit may arise. The bullion itself could do no more were it converted.

4. But farther; this occasion actually arises whenever bullion is purchased. It is paid for in notes, which immediately become active, and perform the part of coin, pending the interval of conversion, *in which act they realize their profit*. This appears to me a complete answer to Mr. Arbuthnot's arguments on this head. It is of no importance to my position whether the bullion be represented by notes in circulation or in reserve. It suffices that it is represented by notes. If these make a profit, the bullion does so as their substratum; if not, the bullion they represent is not more dormant than themselves, and it is not to its detention in the Mint that the dormancy of either is due.

5. Mr. Arbuthnot remarks that I have omitted to refer to the fact that the Bank sell bullion as well as coin at the Mint price. Of course they do so, since they can always convert it into coin of that price. But they cannot always sell it at that price. They cannot do so when they are buying it at 1½*d.* per ounce cheaper in the same market. When bullion is purchased for exportation at 3*l.* 17*s.* 10½*d.*, it may be assumed as morally certain that no appreciable quantity is offered to the Bank at 3*l.* 17*s.* 9*d.* The laws which guarantee them the possibility of realizing the higher price guarantee them that ultimate profit. Coin is always at the higher price; bullion only occasionally so during adverse exchanges. Acting as bullion merchants, the Bank could only realize their profit by waiting their opportunities; acting as "importers" for coinage, they can realize it indifferently at all times.

Bank Returns quoted by Mr. Arbuthnot show that the coin may be exported simultaneously with a much greater import of bullion.

6. That coin may go abroad to an immense amount, while bullion to a much greater amount is flowing in, is rendered a matter of certainty by the Bank Returns cited by Mr. Arbuthnot, coupled with the fact of an increase in the stock of bullion in hand from 14,300,000*l.*, which it was at the date of the last Return of 1850, to upwards of 20,000,000*l.* which it is at present. No doubt, as Mr. Arbuthnot observes, it practically rests with the exporter, and not with the Bank, whether to send bullion or coin abroad; but that he does not send the coin, while he or some one else receives the bullion, is certain, which could not be, except from a combination of causes a profit existed on its export, which is all the point ultimately contended for, and which it is desired to check.

American eagles not equally available for re-coinage abroad with British gold coin.

7. Mr. Arbuthnot's remarks go to show that American eagles would equally well supply foreign melting pots as British sovereigns. Not quite; there would still remain a balance in favour of the latter by their capacity of bringing up coarse gold to the foreign standard. In what he adds respecting the effect of our Mint requirements in giving precision to the standard of bar gold, he appears to be unaware of the fact that no such precision is attempted. The Mint actually receives for coinage ingots differing *inter se* to the occasional extent of two or even three carats in fineness. It suffices, if the total of an "importation" *average* very nearly standard, or if one average, in consecutive importations, exceed standard, as much as another shall have fallen short of it. Standard bars or ingots would be open to great and obvious sources of fraud.

Light sovereigns.

8. If I have not referred to the circulation of light sovereigns within "the remedy," it is not from inadvertence. The exporter of large amounts of gold in sovereigns drawing them from the Bank would necessarily receive them (at least chiefly) in new pieces, not by any preference of the Bank, but by the urgency of the case, the demand being great, and new gold constantly pouring in from the Mint, at the present rate of 210,000*l.* per week to supply it. It is not to be supposed that the exporter would send abroad indiscriminately new and worn pieces; the latter he would retain, and throw back into circulation, either renewing his draft on the Bank, and obtaining thereby a fresh choice on purchasing bullion.

Large quantities of British gold coin actually re-minted in France.

9. I have nowhere said that British coin is exported *for the purpose* of being melted and re-coined abroad, though, being abroad, that among other occasions of turning it to profit assuredly does come to be reckoned. That the 1,116,030*l.* exported to France actually did find its way to the French Mint there can be little doubt. Its transmission to France was understood to have for its immediate cause the payment of French debts in gold at a premium, during the interval (then expected to be a short one) beyond which gold should no longer be a legal tender. That it performed this office in the shape of 20-franc pieces can hardly be matter of doubt; it would not else *be* legal tender. The activity of the French Mint at the time was very great, and the complaint of its not being able to keep pace with the public wants considerable.

10. I have difficulty in understanding how Mr. Arbuthnot can maintain that "it is not a fact that 934½ sovereigns purchase in the market bullion of the weight of 935½," when every 1,000,000 which goes into the Bank coffers is actually purchased on those terms. It is no reply to this to say that small holders may have difficulty, or may find it impossible, owing to the monopoly of the bullion market, to get bullion at the lower price. It is the bulk of transactions which determines market price. But that great dealers, acting on a scale in any degree commensurate with that on which the Bank operates, could *not* obtain bullion by offering for it a small advance on the Bank price, is so contrary to one of the plainest axioms of competition that I must demur to it as a practical conclusion. I am ready to admit, however, that an average struck between *all* the bullion *actually bought* in a series of years at 9*d.*, and actually *sold* in the same series at 10½*d.*, should be considered as the real average price of uncoined gold for that period.

11. I have no objection whatever to considering the question of a seignorage on its own merits. On the contrary, I think it would greatly tend to simplify the subject to look at the question as to the means of protecting the coinage by its intervention, without regarding its incidence elsewhere, and affording the Bank a compensation in some other form, if proved necessary.

Memorandum (by Captain Harness, late Deputy Master of the Mint?).

May 1852.

Conditions under which bullion and coin would be of exactly equal value.

In a country of which gold is the sole standard of value, its own gold coin the only legal tender, its Mint free, and no delay whatever (assuming this to be practicable) attending the conversion of bullion into coin, nor any circumstances whatever existing to cause a preference to be given to either coin or bullion for remittances to foreign countries, no difference of price could exist between bullion and coin, and the standard of value in that country would remain as uniform as a standard dependent on a single commodity, and that commodity gold, could be rendered.

But if there were any circumstances whatever tending to create a difference in value between bullion and coin, such as either a direct Mint charge, a delay in the conversion of bullion into coin, arbitrary rules in the practice of the assayers or in the customs of the bullion market, advantages or disadvantages attached to coin in comparison with bullion for foreign remittances, then the nominal price of bullion, or the relative values of coin and bullion, might be liable to fluctuation, and the standard of value of that country might vary to an extent dependent on the possible effects of those disturbing causes.

It would be useless to attempt to trace all the combinations of circumstances of the description referred to that could occur; it is only necessary to consider those which may best assist the present inquiry.

Suppose the only causes affecting the market price of bullion to be a trifling delay at the Mint, and an advantage possessed by bullion of average fineness over coin in some foreign market. When gold was not required for export to that market, and there was no probability that it would soon be required for that purpose, the Mint delay would be the circumstance principally affecting the price of bullion, which would remain nearly at the value of an equal quantity of gold in coin, less the interest for the period of delay; but when gold was required for export to the foreign market alluded to bullion would become more valuable than its coined equivalent by an amount equal to the advantage it might possess in that market. In this case, in spite of what might be termed a free Mint, the standard of value would be liable to fluctuation.

Next, suppose that there is a small charge for coinage at the Mint, but that the advantage possessed by the coin over bullion for export exceeds the expense of conversion. In this case it is clear that all bullion would be coined, and that the relative prices of coin and bullion would remain the same in all states of the exchanges, the cost of conversion alone determining the difference, and this country with a Mint charge would not have its standard of value affected by the two disturbing causes under consideration.

If the cost of converting bullion into coin were exactly equal to the advantage of coin for exportation, the relative prices would be equally uniform, but there would no longer be any inducement during an unfavourable exchange to convert bullion into coin previously to exportation.

If the cost of conversion exceeded the advantage possessed by the coin in the foreign market, the relative prices would be liable to change, and the standard of value to fluctuation, from this cause; during a continuance of favourable exchanges the expense of coinage would principally determine the price of bullion; but when the exchanges were unfavourable the relative values of coin and bullion in the foreign market would determine it.

It appears, then, that the relative prices of bullion and coin, and consequently the standard of value, might be liable to or free from fluctuation, whether there be or be not a Mint charge, but that a Mint charge may cause such fluctuation when imposed without reference to all the circumstances affecting the particular currency, and its omission may be the cause of great unnecessary expense to the community for coinage.

Banks of issue as affecting the question of Mint charge.

It should next be seen how the existence of banks of issue may affect the question.

First, suppose that there is no Mint charge, but that the time occupied by the Mint in coining would in the case of a very extraordinary demand be varied with the extent of such demand, and that this delay is the only circumstance affecting the relative prices of coin and bullion.

When bullion was flowing into the country in consequence of a favourable exchange, the receivers of it would always find ready purchasers in the banks at its equivalent in coin less the interest for the period of detention at the Mint. Bullion in the Mint would be the best description of banking security; the application of his available deposits to its purchase would be the same to a banker as discounting an indisputable safe bill for the same value for the period of the Mint detention; but if the flow of bullion to the country were extraordinarily great, the Mint would increase the period of detention, and thereby cause an alteration in the price at which the bankers would purchase it, or a fall in the value of bullion relatively with coin.

If the circulation consisted partly of notes issued by the different banks without any guarantee or privilege on the part of the Government, the bankers would use their notes to the extent to which they could obtain a circulation in

the same way as their deposits in the purchase of bullion and other banking securities, but they would have no claim to any extraordinary exertions of the Mint in their behalf, and if in want of coin sooner than under the working rules of that establishment they could obtain it, they would cease to purchase bullion, and would part with such as they might possess either in or out of the Mint at the proper market price at the time just as they would with any transferable securities which they might hold under similar circumstances.

But if either of the banks issued its notes under the guarantee of the Government of the country, that bank could make, by urging the consequences of a failure in its coin, a powerful claim upon the Mint for extraordinary and even unreasonable exertions for the coinage of the bullion held by it; and the certainty of all its demands for coinage being attended to on this account would enable it to offer the highest price for bullion, and thereby obtain the monopoly of the bullion market, and to refuse to part with bullion except for the full profit which it could realize upon it through the Mint. If coin were more valuable than bullion for exportation, the interest of this bank would increase the unnecessary consumption of coin which that circumstance is likely to produce; for retaining the monopoly of the bullion market, and never parting with it but at the price of coin, the latter would invariably be preferred for exportation.

The existence, then, of a bank of which the notes are guaranteed by the Government, has a tendency to extend the limits within which the relative prices of coin and bullion can fluctuate, and also to expose the community to unnecessary expenditure for coinage. The only remedy for the latter evil appears to be to require such payment for coinage as will make it the interest of the privileged bank to sell bullion at a less price than coin; and if the charge be just equal to the advantages which coin possesses over bullion in foreign markets, the fluctuation in the relative prices of coin and bullion might also be diminished by its imposition.

Mr. Arbuthnot to Captain Harness.

May 28, 1852.

Amount of bullion exported at the same period as that which the Returns from the Bank of coin exported embrace.

I promised, when I last saw you, that I would make inquiry at the Bank regarding the export of bullion during the period to which the Returns lately furnished of the export of gold coin referred. I find that the export of bullion has been inconsiderable—that is, the amount of bullion withdrawn from the Bank for exportation. If I had reflected a moment I might have saved myself the trouble of the inquiry, for the result could hardly have been otherwise. When gold was flowing into this country from America, and at the same time flowing out to the continent of Europe, the greater part of that portion which was destined for export would have gone out at once without going through the Bank of England. While Paris afforded the best market, the holder of bullion would send it thither direct. I apprehend that this was the case during a great part of the year 1851. The coinage of gold at the French Mint in that year exceeded 10,000,000*l.*; part of this gold was obtained from Holland, but not probably more than 2,000,000*l.*; some came to France direct from the United States; but I believe the greater part was sent from England, and, if so, the quantity sent in coin in the early part of the year (about 900,000*l.*) formed no great proportion of the gold which we exported to France last year.

I believe that this export of coin formed an exception to the general rule, and that I assigned the right or at any rate a sufficient cause for it. I do not, however, care to contend for this point. This export may have been, as you suppose, occasioned by some great "operation" of the Bank. Such operations with the view of regulating the exchanges are occasionally undertaken. I do not agree with your view as to the motives with which they may be undertaken by the Bank, neither do I think that they are of frequent occurrence. I am quite sure that, when they are undertaken, their effect can only be temporary, and that they cannot counteract for any length of time the effect of the mercantile exchanges. There was in the state of the exchanges during the past year quite sufficient to account for the state of things which occurred, extraordinary as they were. Our exports to the United States had been unprecedented, while the imports of commodities had been rather less than the imports of some previous years. Our imports from France, including a very large quantity of corn and flour, had been unprecedented, without any corresponding increase of our exports to that country. The natural consequences were an import of the superabundant gold of the United States into this country, and an export of a greater proportion of it to France. There were other circumstances attending the bullion trade itself which contributed to the same result. When the causes of great results are patent and indisputable, it is not worth inquiring what "operations" of great capitalists may have given, for a time, a turn to the course of the market.

In all discussions of this nature, parties who view the questions from opposite sides are apt to argue from a misapprehension of each other's opinions. From an expression in a memorandum I lately received from Sir John Herschel, I am led to conclude that this has been the case with myself. He states that "He has nowhere said that British coin is exported for the purpose of being melted and re-coined abroad." I had certainly been under the impression that the point he was contending for was that the Bank had an inducement to encourage the exportation of coin in preference to bullion, and that British gold coin was received in foreign Mints in preference to or afforded advantages to the importer over bar gold. If this were the case, it would seem to follow as a matter of course that coin would be exported for the purpose of being melted and re-coined abroad. If, however, I have misunderstood Sir John Herschel's argument, we are nearer agreement than I thought, for I never intended to deny that sovereigns are frequently melted and re-coined. All I contend for is that when there is a demand on the continent of Europe for gold for coinage, it is generally exported from this country in the shape of bar gold, and that no inducement exists for the export of sovereigns except when they are wanted primarily for the purposes of coin. All the evidence I have read tends to this view, and facts in such matters are, after all, more to be relied upon than abstract arguments.

Bank charge to be distinguished from Mint charge.

I think it an erroneous view of the case to confound the Bank charge of 1½*d.* on bullion with a Mint charge for coinage. As a general rule it may be said that bullion would never be brought to the Mint for coinage unless the importer derived profit from the transaction. A bank of issue may indeed be obliged (as the Bank of England has in past times been obliged) to incur heavy expense for the purpose of procuring coin, but in these cases the profit had been anticipated by the issue of notes. Bullion is attracted to this country only when, from the state of the exchanges, our Mint price affords a better return than can be obtained for it abroad. Before it is sent every cost attending its transmission is calculated; the cost of freight, insurance, and interest. If it passes through several hands, each party obtains a share of the profit to be ultimately realised. The transit through the Bank is the last stage of the transaction. The fixed price given by the Bank has merely the effect of giving certainty to the ultimate return. Before that fixed price was adopted, the market value of bullion was subject to considerable fluctuations, and the price was not unfrequently as low as 3*l.* 17*s.* 6*d.* per oz. It will hardly be contended that in that case the profit of 4½*d.* per oz. realised by the "importer" bore the character of a seignorage, and yet in what respect does it differ in principle from the Bank charge of 1½*d.*?

I will proceed to consider the question of a seignorage on its own merits.

Question of seignorage examined.

It is unnecessary to enter into an explanation of the grounds on which a Mint charge of this nature may be justified. They are well understood, and as an abstract proposition admit of little question. But there are various points to be considered when it is proposed to introduce such a measure in a great commercial country, in which a different system has long prevailed.

The theory may be shortly stated as follows:—Coin, being a manufactured article, is worth more by the cost of the manufacture than the material of which it is made; and if the party who owns the bullion (the raw material) is required to pay that cost, he will not part with the coin except at a price which will remunerate him for it. Hence, if the charge for coinage be 1 per cent., 99 sovereigns would purchase in the market the same quantity of commodities, which, with a free mint, would cost 100 sovereigns: 99 sovereigns ought ordinarily to purchase the weight of bullion contained in 100 new sovereigns.

It is obvious that the change from free mintage to a system of imposing a charge on the importer for coinage could not be effected without in some degree disturbing the relation of the circulating medium to the commodities interchanged by it.

Modes of imposition.

The charge may be levied in two ways: either, 1st, by maintaining the existing quantity of precious metal in the coins, and retaining one out of every hundred after the manufacture; or, 2ndly, by coining the quantity of gold which is now contained in 100 sovereigns into 101 sovereigns, retaining the odd one.

By the first course the existing coinage would be

maintained in its integrity, but as 99 sovereigns would thereafter perform the functions at present requiring 100 sovereigns, the currency would be appreciated 1 per cent.

By the second course, contracts would be maintained at their present nominal rate; but the holder of old sovereigns of full weight would be in possession of coins intrinsically worth more than the new ones, and there would be a tendency to melt or export them for the sake of the profit. In either case, there might be a difficulty in maintaining the integrity of the currency. By our Mint laws we throw upon the public the charge of protecting the currency from deterioration by the circulation of coins which have lost weight by abrasion. It is not easy to enforce the regulations for this purpose. I recollect that in 1842, when, in consequence of much light gold being in circulation, measures were taken for withdrawing it, the publication of the proclamation led to much imposition upon poor people, and great discontent. This discontent would be aggravated if, in addition to the loss by wear, the cost of seignorage fell on the holder of a light coin. I do not know how they settle these matters in countries in which a mintage charge is exacted, but from the state of the silver coins circulating in France it would seem to be attended with difficulty in this respect.

Considerations presented in cases of mixed circulation.

These considerations apply to the case of a country in which the currency is principally metallic. Other considerations present themselves when the circulation consists in great part of promissory notes.

In the case of a seignorage of 1 per cent., the maintenance of the value in exchange of 99 sovereigns at the value now represented by 100 sovereigns would clearly depend on the limitation of the quantity of coins put into circulation. This seems to me to be beyond controversy. If banks have the power of exercising a discretion as to the amount of notes they may put into circulation, it would be their interest to fill up by additional issues the void which would be occasioned by a limitation on the amount of coins. They could safely do so, because the exchanges against this country must fall to a point, equal to the charge for mintage, below the nominal value for which the coins circulate, *i.e.*, to a point below their intrinsic value as bullion, before it would be profitable to export them. It appears to me that unless the factitious value given to the coin by a Mint charge can be maintained, there would be a disinclination to take bullion to the Mint for coinage even for domestic circulation, and that there would be risk of the currency being degraded to the character of a token circulation.

Our peculiar system which allows the issue of notes on the deposit of bullion at the Bank would still further complicate the question.

The Mint price of bullion generally governs the import and export of the precious metals. I remember that we had once some discussion on this point with reference to the quotations of the exchange at Paris. I believe you must admit that, whatever ought in theory to be the correct method of computation, the calculations of cambists are in practice based on the tariff prices of the French Mint. The imposition of a Mint charge for coinage would reduce the Mint price of gold by the amount of such charge, and, unless a corresponding reduction were made in the regulated price paid by the Bank for bullion, bar gold would still be maintained at its present price, notwithstanding the Mint charge. The Mint price would not, therefore, govern the exchanges; the whole charge of coinage would be thrown on the Bank, and the notes issued by it would be valued, not according to the sums in coin which they represent, but according to the amount of bullion they would command.

Amount of Mint charge.

I have, for the sake of illustrating the argument, assumed a Mint charge of one per cent. I believe that less than half such a charge would cover the expense of coining gold, exclusive of the expenses of establishments. Of course the smaller the charge the less weighty would be the practical objections to it; but I have thought over the question in every way, and I am satisfied that any charge which would be sufficient to check the demand for coins from the Mint would have a tendency to interfere with the simplicity and integrity of our system of currency.

which would check exportation of coin, would interfere with the integrity of our system of currency.

But, even if the object could be effected, I doubt the policy of attempting to check the demand for coin at the Mint. I am not insensible to the evil of the Mint being subjected to the expense of coining gold when the ultimate destination of the coins may be the melting-pot of the jeweller or foreign Mints; but there is danger lest in applying a remedy to this evil we may deprive our merchants abroad of advantages which are, I am inclined to think, cheaply purchased by the expenses entailed on our Government for coinage. Although it is certainly no part of our duty to provide coins for foreign governments, the facilities afforded to our commerce by the diffusion of a sound circulating medium throughout the world may justify a voluntary burthen for that purpose; and although the present and expected influx of gold may occasion an inconvenient pressure on our Mint, the inconveniences of another character which may arise from the disturbance of prices resulting from the increased supply of that metal would be best met by promoting its use as a medium of exchange in other quarters.

Advantages of free Mint.

Mr. Arbuthnot to Captain Harness.

May 31, 1852.

Bank notes as distinct from Mint notes.

I omitted to refer, in my letter of the 28th, to a question which you raised when I last saw you. You said that Bank of England notes differ in no respect from Mint notes. I do not think that you are correct in this position. The proper function of the Mint is to receive gold ingots and return them in the shape of coin; their notes would be guarantees for the delivery of so much coin on demand. The Bank of England are not coiners but dealers in bullion; their notes guarantee the payment of so much coin, but they are also securities for the return of the bullion in the shape of bar gold if it should be preferred. Bank notes differ, therefore, in this latter respect from Mint notes.

In my opinion the Mint could not, with advantage to the public, undertake the functions performed by the Bank as dealers in bullion. The intermediate body fulfils an important part in our currency system, and the general tendency of that system is to economize the use of coin. At the present time it may appear to fail in this particular respect, but I believe that it is as near perfection as it is possible to attain, and I should be sorry to see it tampered with for the sake of a doubtful remedy for a partial evil.

The clause in the Act of 1844 which gives the Bank the power to issue notes against silver bullion to the extent of one fourth of the amount of the bullion retained shows the mercantile character which is still mixed up with their functions in the management of the Issue Department. Issues upon silver bullion could alone be reconciled with our system of a single standard of gold by leaving it to an independent and interested body to purchase or sell the silver according to the market prices of the day. The regulation answers the purpose admirably, and gives us all the advantage with none of the inconvenience of a double standard.

Captain Harness to Mr. Arbuthnot.

June 4, 1852.

The first page of your letter of May 28 appears to me to conclude the subject under discussion.

It was stated that the regulations under which gold is bought and sold in this country have a tendency to make coin a preferable export to bullion, and perhaps even to divert gold in its progress of distribution through this country, and to cause it to be uselessly coined here.

The two Returns you have obtained show that the result which it was supposed these regulations must produce has been produced, and it appears unnecessary to look for any other cause when that alluded to is so evidently sufficient that the result was considered a necessary consequence before the facts were ascertained.

I do not say that the Bank either have or have not adopted any steps to divert gold through this country for the sake of the profit likely to be derived by them on all gold passing through it; but the large amount of profit to be thus derived at the present time, in consequence of the large amount of gold now distributing over the world, may induce them to take such steps, and may probably have already induced them to do so.

I think the Bank have an inducement to encourage the exportation of coin instead of bar gold, for they derive a greater profit from the coinage of bullion than from its sale.

Under the present constitution of the Bank of England there appears to me to be very little difference between their charge of 1½*d.* per oz. on bullion and a Mint charge; or between their notes in excess of their fixed issue, or issued against gold and Mint notes. In fact, the duties of the Issue Department might probably be advantageously performed by the Mint, though the union of the Mint with the Banking Department of the Bank of England would be a very dangerous measure. If a mercantile establishment, not being issuers of notes, made the purchase of gold bullion a part of their regular transactions, they would of course include, in calculating the price they could afford to give, interest on the same to be paid for the bullion for the

Appendix, No. 23.

Gold Coinage and Bank Charge on Gold.

Correspondence in 1852.

period required for converting it into coin. This period would vary with the extent of the demands upon the Mint, and the price of bullion in an open market would accordingly vary with the demands upon the Mint, and also with the rate of interest at the time for the best description of securities. For ordinary bankers, whether issuers or not issuers of notes, the purchase of bullion would be the same thing as discounting a first-rate commercial bill for the same period as that required for converting the bullion into coin; but in the event of an unexpected drain upon their deposits, they would part with their bullion as with other securities, at the proper market price at the time, to meet the demands upon them, having no claim upon the Mint to deviate from its rules for their advantage. But the notes of the Bank of England being issued under regulations made by the Legislature, and being a legal tender in payment of the notes of other banks, enable that establishment to say, we will not part with gold bullion except at a price at which coin will be preferred. However great the pressure upon us for gold may be, we will not sacrifice the profit to be derived by us from its coinage; the Government are responsible for the convertibility of our notes, and we can transfer the pressure upon us to the Mint.

Under the existing circumstances the purchase of gold bullion by the Bank of England only differs in character by the profit they derive from it from receiving the same amount of sovereigns in exchange for notes. In neither case is the reserve of the Banking Department diminished by the transaction. The charge of $1\frac{1}{2}d.$ per oz. is not then an allowance for loss of interest. With all other mercantile firms, including other banks of issue, of which the amount of issue (as with all other English banks) is limited, interest would be a legitimate charge, but with the Bank of England it is an admitted premium on exchanging current money for gold bullion; and, except that it is received by different persons, and is not available for the expense of conversion, I do not see in what respect it differs from a Mint charge. If the Issue Department of the Bank were united to the Mint, the notes issued by the Mint in exchange for bullion brought to it would be Mint notes, and the difference between the quantity of standard gold represented by them and that delivered to the Mint would be called a Mint charge. Now, this operation would be the same as that performed by the Bank of England in purchasing bullion. The large profits derived by the Bank previous to 1844 from the purchase of bullion may perhaps be considered practically of the same character; and one advantage of the Act of 1844 is, that it diminished the fluctuations in the value of bullion, but by that Act the unrepresented paper circulation of the country has been limited, making an important difference in the theoretical consideration of the question. It is only necessary to consider it as it now exists.

Would the imposition of a seignorage increase the tendency to fluctuation in the value of a currency?

Your arguments on the question of seignorage appear to me inapplicable to such a seignorage as would be required to meet the evil under discussion. It is admitted that a seignorage, if high in comparison with the fluctuations to which the value of the currency of a country would be liable if there were no such seignorage, increases the range within which such fluctuations of value may occur, and that if the currency consists partly of an ill-regulated paper circulation, these fluctuations may be more frequent and sudden than they would otherwise be. But in a country with a free Mint and a metallic currency, or with a currency in which the amount of the circulating paper unrepresented by gold is strictly limited, as with us, the value of the currency is liable to certain fluctuations, and under some circumstances the imposition of a small seignorage has no tendency whatever to increase the amount of such fluctuations.

The reasons for preferring that one of the precious metals, if a single commodity be adopted as the standard of value, are applicable to them as bullion, not as coin; and fluctuations in the price of the bullion must therefore be considered as fluctuations in the value of the currency. In proportion as the difference in value of bullion and coin continues uniform may the currency of a country be considered uniform in its value, so far as the standard selected will permit.

If the Mint were perfectly free, if there were no delay whatever attending the conversion of bullion into coin, and if coin and bullion were equally advantageous for exportation, there would be no reason why any difference in price should at any time exist between them. But even with a free Mint there may be delay in the conversion, there may be arbitrary rules observed by the assayers, and either coin or bullion may have some advantage with respect to each other for exportation. During an influx of bullion the expected delay of the Mint, combined with the rules observed by the assayers, would determine the relative value of bullion and coin. During an efflux of the precious metal, the relative advantage of coin and bullion for export would determine their relative value. The difference between the prices of bullion at those two periods would measure the fluctuation in the value of the currency. If the price to be obtained for bullion during its influx were *3l.* 17*s.* 9*d.*, and that during its efflux *3l.* 17*s.* $10\frac{1}{2}d.$ per oz., the currency might be considered to vary in value between those two periods by nearly 1-6th per cent.

Suppose the only circumstance affecting the price of bullion to be a small charge for coinage, and an advantage rather exceeding the above charge attending the exportation of coin instead of bullion. In this case it is nearly certain that all bullion would be coined, and that the relative prices of coin and bullion would remain the same in all states of the exchanges, the Mint charge producing no fluctuation in the value of the currency.

It is hardly necessary to pursue the general question further. If there be advantages attending the present state of things which can more than counterbalance the expense to which the country is likely to be exposed, and the possibility of such an event as an insufficiency of coined gold to meet the demands upon the Bank, of course alteration is unnecessary.

But may we not attach too much importance to the idea hat this country will become the great emporium for gold? Would it not be better that it should be a great emporium for those important commodities for which we are dependent on other countries, and to exchange for which the gold is only valuable, and which in time of need we might find it difficult to obtain with our gold? May we not also attach too much importance to the general use of our coins abroad? Those of Spain formed the only currency of our West Indian Islands twenty-five years ago, yet the Spanish merchants derived no advantage from that circumstance. Is it certain that its dissemination in the shape of British coin will in any degree advance its use as a medium of exchange, and thereby check disturbance of prices? Will it not flow into the currencies of other countries without any assistance of this kind as soon as it is advantageous in those countries to use it? As a nation owing a debt of gold we have, moreover, much to gain from the depreciation of gold.

Mr. Arbuthnot to Captain Harness.

June 5, 1852.

I have received your letter of the 4th. I will make but one observation in reply to it.

Error in Captain Harness' argument.

A capital error pervades your whole argument. It is contained in the following sentence of your letter:—

"(In the case of ordinary bankers.) In the event of an unexpected drain upon their deposits they would part with their bullion as with other securities at the proper market price at the time, to meet the demands upon them, having no claim upon the Mint to deviate from its rules for their advantage. But the notes of the Bank of England being issued under regulations made by the Legislature, and being a legal tender in payment of the notes of other banks, enable that establishment to say, we will not part with gold bullion except at a price at which coin will be preferred; however great the pressure upon us for gold may be, we will not sacrifice the profit to be derived by us from its coinage; the Government are responsible for the convertibility of our notes, and we can transfer the pressure upon us to the Mint."

I pass by that part of your supposed case which is founded on the mistaken assumption that ordinary bankers are traders in bullion, also the remark put into the mouth of the Bank, "We will not part with gold bullion except at a price at which coin will be preferred," which begs the whole question; also the subsequent remark, "The Government are responsible for the convertibility of our notes," which is only in a partial sense correct, and with reference to which I may refer you to Sir C. Wood's speech in 1847 on "Commercial Distress" with regard to the responsibility of the Bank in the management of their reserve.

I will take the sentence in its obvious meaning, that if the notes of the Bank of England were not (to a certain extent, as I admit, they are) guaranteed by the Government they would part with their bullion at a lower rate than the Mint price in times of pressure, in order to meet the demands upon them,

Now, apart from *runs* arising from distrust in the stability of the Bank, to which, I apprehend, you do not refer, "drains upon deposits" arise when the foreign exchanges are unfavourable to us, and our dealers have difficulty in meeting their engagements. On such occasions the price of gold is higher in foreign countries than the price which

it bears in the circulation of this country; it is then profitable to purchase bullion at the Mint price at 3*l.* 17*s.* 10½*d.* per ounce, and after incurring the expenses of transport, &c. to sell it in a foreign country.

Yet you suppose that it might be necessary for the Bank of England (if its notes were not guaranteed), when there was a demand upon them for bullion at the Mint price, to sell it at a still lower price, and thus stimulate the drain. You imagine a state of things which could by no possibility occur.

Captain Harness to Mr. Arbuthnot.

June 7, 1852.

The construction you have given (as the obvious one) to the paragraph to which you have replied is quite correct, but I feel sure that very soon after despatching that reply you must have perceived that my letter contains no such error as you supposed when writing. If it were more advantageous to export coin than bullion by ¼*d.* per oz., and both coin and bullion were being sold at 3*l.* 17*s.* 10½*d.* per. oz., when the exchange was at such a state as just to move the coin, it would not move the bullion; and if the price of the bullion were then reduced to 3*l.* 17*s.* 10¼*d.* per oz., the drain of gold would not be stimulated, but an exporter would have no reason to prefer coin to bullion. I think you will find this meaning clearly expressed by my letter.

Captain Harness to Mr. Arbuthnot.

June 10, 1852.

I am sorry to find that you cannot adopt my views of the subject we have so long discussed. I do not doubt that it would not answer the purposes of the Bank under existing circumstances to sell bullion for less than the Mint price; and before speaking of bullion as a banking security I showed that it might be looked upon in the same light as the best descriptions of securities for the employment of bankers' deposits under the circumstances assumed by me.

I wish we could have met at the Mint before I left town. Perhaps we should then have agreed upon the neeessity for a Mint charge of one-eighth per cent. It should be now imposed by a compromise with the Bank, the country paying the Corporation a fixed annual sum for the remaining time of their Charter for the right to impose it on their gold, as it would be in spirit certainly an infraction of the conditions of their Charter.

Memorandum on Seignorage by Mr. Pennington.

July 1852.

Adam Smith's views on the imposition of a seignorage.

According to Adam Smith, a small seignorage or duty upon the coinage of gold and silver would increase the superiority of those metals in coin above an equal quantity of them in bullion. He observes, that were the private people who carry their gold and silver to the Mint themselves to pay for the coinage it would add to the value of those metals in the same manner as the fashion does to that of plate; coined gold and silver would be more valuable than uncoined.

If, however, the coins in circulation were debased by abrasion and wear, this superiority in the value of coined over uncoined gold might be altogether extinguished.

Consequences of deterioration previous to re-coinage in 1774.

Before the recoinage of the gold coins in 1774 the market price of gold, in consequence of the deterioration of the coins in circulation, was two per cent. higher than the Mint price. The current price of gold at market, instead of being the same as the Mint price (there being no seignorage nor Mint charge for brassage), or 46*l.* 14*s.* 6*d.* per lb., was at that time about 47*l.* 14*s.*, and sometimes about 48*l.*, per lb.

When the greater part of the coin was in this degenerate condition, 44½ guineas fresh from the Mint would purchase no more goods in the market than any other guineas, because when they came into the the coffers of the merchant, being confounded with other money, they could not afterwards be distinguished without more trouble than the difference was worth. Like other guineas, they were worth no more than 46*l.* 14*s.* 6*d.* If thrown into the melting-pot, however, they produced, without any sensible loss, a pound weight of standard gold, which could at any time be sold for between 47*l.* 14*s.* and 48*l.* There was an evident profit, therefore, in melting down the new-coined money, and it was done so instantaneously that no precaution of Government could prevent it. The operations of the Mint were upon this account somewhat like the web of Penelope; the work that was done in the day was undone in the night. The Mint was employed, not so much in making daily additions to the coin, as in replacing the very best part of it which was daily melted down.

In consequence of this state of things the Bank of England, previous to the recoinage, was exposed to the loss of 2 per cent. in purchasing gold bullion in the market at a higher rate than the Mint price, and sending that bullion to the Mint for coinage.

Adam Smith was of opinion that a seignorage or brassage, by taking away altogether, in many cases, and in all cases diminishing, the profit of melting down the coins, would, in a great degree, prevent this inconvenience. This profit would have been taken away, or diminished, because, unless the excess of the market price of gold over the Mint price should be equal to the seignorage, no motive would exist for melting down the coins. If, for example, 1 lb. of gold sent to the Mint were coined into 46·475*l.*, of which 2 per cent., or 0·9845*l*, were retained by the Mint for seignorage, and 45·7905*l.* in coin delivered to the importer, the Mint price of gold would be 45·7905*l.* per pound weight; and if the currency were in a sound and perfect state, the market price of gold would likewise be 45·7905*l.* per pound weight.

Now to melt down coin amounting to 45·7905*l.* would produce only $\frac{98}{100}$ of a pound weight of bullion. Unless, therefore, in consequence of a deterioration in the state of the coins in circulation, or from some other cause, the market price of gold should rise to upwards of 46·725*l.*, no profit would be derived from the conversion.

Adam Smith observes that the Bank of England, in order to replenish their coffers with money, are frequently obliged to carry bullion to the Mint, and it was more for their interest, they probably imagined, that the coinage should be at the expense of Government than at their own. Should the custom of weighing gold come to be disused, as it is very likely to be on account of its inconveniency, should the gold coin of England come to be received by tale, as it was before the late recoinage, this great Company may perhaps find they have upon this, as upon some other occasions, mistaken their own interest not a little.

Mr. Ricardo's views.

Mr. Ricardo's views on the subject were the same as those of Adam Smith. He thought, moreover, that the superiority in the value of coined over that of uncoined gold and silver can be maintained only by limiting the quantity of coined money put into circulation; and that although the value of coined relatively to that of uncoined gold and silver may occasionally vary, yet where the currency is wholly and exclusively metallic the fluctuation will be confined within the range or compass of the seignorage or Mint charge.

" But," he observes, " after the establishment of banks, " the State has not the sole [power?]* of coining or issuing " money. The currency may as effectually be increased by " paper as by coin; so that if a State were to debase its " money, and limit its quantity, it could not support its " value, because the banks would have an equal power to " add to the whole quantity of circulation." " In a " country where paper currency is established, although " the issuers should be liable to pay it in specie on the " demand of the holder, still both their paper and the coin " might be depreciated to the full amount of the seignorage " on that coin, which is alone the legal tender, before the " check which limits the circulation of paper would operate. " If the seignorage of gold coin were 5 per cent., for instance, " the currency by an abundant issue of Bank notes might " really be depreciated 5 per cent. before it would be the " interest of the holders to demand coin for the purpose of " melting it into bullion; a depreciation to which we should " never be exposed, if either there was no seignorage on the " gold coin, or, if a seignorage were allowed, the holders of " Bank notes might demand bullion, and not coin, in " exchange for them at the Mint price of 3*l.* 17*s.* 10½*d.*"

In the late communication from the officers of the Royal Mint to the Treasury, these doctrines of Adam Smith and Mr. Ricardo are hardly impugned, much less controverted.

In a memorandum by Sir John Herschel (No. 3), it is said that in this country a small seignorage or Mint charge already exists (and in the form of a profit to the Bank) in the fact that 934½ sovereigns of coined standard gold do actually purchase in the market 935½ (—936) by weight of uncoined. But in this form its tendency is to encourage coinage beyond due limits; whereas if levied by the State it would have no such tendency but the reverse. The difference is that between a bonus on coinage paid to the " importer of bullion into the Mint, and a protection " afforded to the State against excessive demands for coin " tending to private profit."

APPENDIX, No. 23.

Gold Coinage and Bank Charge on Gold.

Correspondnce in 1852.

Operations of the Bank in reference to the price of bullion.

The distinction thus drawn by Sir John Herschel is not very clear. The facts of the case I apprehend to be as follows:—

Before the year 1828 the Bank of England bought a large quantity of standard gold at 3*l.* 17*s.* 6*d.* per ounce. In Wettenhall's List gold is quoted at this price from about the middle of 1822 to the spring of 1824. In 1822 and 1823 the foreign exchanges were in favour of this country, and gold was imported from abroad. In 1824 and 1825 the exchanges became adverse, and the price of gold rose to 3*l.* 17*s.* 8*d.*, 3*l.* 17*s.* 9*d.*, and 3*l.* 17*s.* 10½*d.* In 1826 the price again fell to 3*l.* 17*s.* 6*d.*, and continued at that price until the autumn of 1828. In that year a large quantity of gold was brought to the Mint by certain individuals, and coined into sovereigns. In consequence of this coinage the Bank raised its buying price to 3*l.* 17*s.* 9*d.*, at which it has since continued. At this price the holders of bullion deemed it better to sell it to the Bank than carry it to the Mint for coinage.

It may here be observed that if in 1828 the Bank had persisted in its determination not to give more than 3*l.* 17*s.* 6*d.* per oz. for standard gold, it is probable that, rather than sell to the Bank their bullion at that price, individuals would have carried it to the Mint for coinage, the difference of 4½*d.* per oz. being more than a sufficient compensation for loss of interest during the time required for coinage. The market price in that case, when the foreign exchanges were favourable, would probably have fluctuated between 3*l.* 17*s.* 6*d.* and 3*l.* 17*s.* 9*d.*; when the exchanges were adverse, the market price would probably have risen to 3*l.* 17*s.* 10½*d.* or 3*l.* 18*s.* per oz.

of 1844.

In 1844 it was enacted that all persons may demand from the Bank notes in exchange for gold bullion at the rate of 3*l.* 17*s.* 9*d.* per oz. of standard gold.

In consequence of this enactment, the market price cannot be less than 3*l.* 17*s.* 9*d.*; and whether the difference of 1½*d.* between the market and the Mint price be called profit, interest, or a bonus, is surely a matter of no practical importance. The difference, whether accruing to individuals or to the Bank of England, does and must exist.

It is now apprehended that in consequence of the late discoveries in California and Australia gold will flow into this country in great abundance, in the shape of bullion, and a large portion of it will afterwards be exported in the shape of coin; and it is supposed that, as an advantage of 1½*d.* per oz. accrues to the Bank of England on the bullion sent to the Mint for coinage, the Bank, if it does not encourage the export of coin rather than that of bullion, will not, it is probable, take any steps to prevent or lessen the preference; the consequence, it is apprehended, will be a heavy and expensive pressure on the Mint for coinage.

With the view of remedying, at least of lessening, this inconvenience and expense, it is suggested that a seignorage or Mint charge shall be levied on the coinage. This measure, Sir John Herschel thinks, "would strike at the root "of the practice of exporting coin for purposes which "simple bullion would equally well perform, and would "diminish the inducement to do so."

Now, without going into any examination of the grounds on which the apprehensions above mentioned are founded, or of the reasonableness of them, let it be admitted, for the sake of the argument, that those grounds are sufficient, and that the reasoning by which it is attempted to defend them is in every respect correct, and let us consider the remedy which has been suggested, and its probable efficacy.

As long as the Act of 1844 remains in force, any charge for seignorage would fall upon the Bank of England, to the relief of the Mint.

Suppose that hereafter a charge is levied at the Mint for coinage of 1½*d.* per oz. of standard gold, 3*s.* 2½*d.* per 100*l.* This charge, as long as the *Bank is obliged by law to purchase uncoined gold at* 3*l.* 17*s.* 9*d. per oz.*, must, as is correctly observed by Mr. Arbuthnot in the Memorandum No. 7, fall wholly upon the Bank of England, and not the slightest step would be made towards the object aimed at. The owner of bullion would still as before get from the Bank, in notes payable in coin on the demand of the holder, 3*l.* 17*s.* 9*d.* per oz. for that bullion; and if the merchants found it more advantageous to export coined than uncoined gold they would do so still. Their preference in this respect would not in the slightest degree be interfered with, nor the pressure on the Mint for coinage be at all lessened. Everything, in so far as the practice of the merchants, the domestic trade, and the foreign commerce of the country, are concerned, would remain precisely the same as before. The only effect produced would be a charge upon the Bank, and a relief to the expenses of the Mint to a corresponding extent.

If the Bank of England make no objection to this arrangement, if the Bank is willing to pay 1½*d.* per oz. (3½*d.* per cent.), or any other charge that may be determined on, on all the gold which the Bank sends to the Mint for coinage, well and good; the charges of the Government will be lightened at the expense of the Bank of England.

It may perhaps be said that if the Bank were saddled with a Mint charge for coinage, the Bank might be induced to sell the bullion which it had bought at 3*l.* 17*s.* 9*d.* per oz. at a small advance on that price, say 3*l.* 17*s.* 9½*d.* or 3*l.* 17*s.* 10*d.*, and that the difference between the selling price and the coinage price might lead to an exportation of bullion in preference to an exportation of coin.

I can only say that if such be the expectation I think it would be disappointed. When the foreign exchanges were unfavourable, and a demand upon the Bank arose for gold for exportation, the Bank would not sell bar gold at less than 3*l.* 17*s.* 10½*d.* When the exchanges were favourable or quiescent, but at the same time there arose a demand for coin for export, it is not likely that the Bank would be able to stop that demand by offering to sell bar gold at a price a trifle lower than the Mint price.

Bank notes and Mint notes. Captain Harness' views.

The Deputy Master of the Mint can perceive very little difference between the notes of the Bank of England issued on gold in excess of their fixed issue, and Mint notes. His meaning, I apprehend, is this, namely:

If the Bank of England were empowered by law to issue notes to the extent of 14,000,000*l.*, and if it were at the same time ordained that the Mint only shall issue notes against the deposit of bullion at 3*l.* 17*s.* 9*d.* per oz., and be obliged to pay not only the notes so issued, but likewise the 14,000,000*l.* of notes issued by the Bank, in the legal coin of the realm, on the demand of the holder, the Mint, instead of the Bank, would get the difference between the buying price 3*l.* 17*s.* 9*d.* and the coinage price of 3*l.* 17*s.* 10½*d.*

All this may be admitted. The Deputy Master of the Mint might have gone a step further. He might have said that if the privilege of issuing 14,000,000*l.* of notes on securities were taken away from the Bank, and that that amount of notes were issued by Government beyond the amount issued by the Mint upon the deposit of bullion, Government would get the interest upon the 14,000,000*l.*, which interest now accrues to the Bank of England.

If it should be deemed proper to repeal that section of the 7th and 8th Victoria, cap. 32, by which the Bank is obliged to give its notes in exchange for standard gold at the rate of 3*l.* 17*s.* 9*d.* per oz., it is not improbable that in consequence of the delays and difficulties at the Mint the Bank might frequently be able to purchase standard gold in the market at less than 3*l.* 17*s.* 9*d.* per oz.

As the matter at present stands, it appears to me that the question as to a small seignorage or Mint charge is a question solely between the Mint and the Bank of England, a question in which the commercial public is not at all interested.

Memorandum by Capt. Harness.

Mint.—Coinage of Gold.

WHEN the recent changes in the Mint Establishment were to be commenced the coinage of gold was in progress, and could only be temporarily suspended. Shortly after the working plant of the Mint had been received from the moneyers, gold was again brought in by the Bank of England, and its coinage was proceeded with at the rate which had for many years been considered the ordinary rate of working of the Mint.

Increasing demand for Gold Coin.

From that period to the present time the Mint has been constantly at work, and the demands for gold coin have been continually increasing. To comply with them the out-turn of the Mint has been continually increased, until it has become three times the amount considered as the ordinary out-turn of the former establishment, and double the amount of which that establishment was considered capable by extraordinary but continuous exertion; and it now considerably exceeds the out-turn obtained by an extraordinary effort during eleven days, at the time of the commercial panic in December 1825. The gold coinage of the present year will be nearly equal to that of 1821, which was carried on during the whole year after arrangements previously made to facilitate it, and with the object of enabling the Bank to resume cash payments in the spring of 1822; and the present rate of work of the Mint, if continued for a year, would give more than double the amount of gold coin then manufactured. The out-turn during a year so employed would not now be less than 20,000,000*l.*

Charge and inconvenience arising therefrom.

As the English Mint is free for the coinage of gold these extraordinary demands for gold coin cause a heavy charge upon the public revenue, and the necessity of attending to these demands in preference to those for silver coin prolongs the inconvenience which the present scarcity of silver is said to occasion, and which might be entirely

removed by the steady work of the Mint on silver only for a few weeks.

Concurrently with this extraordinary demand for gold coin, money has been abundant, a great influx of gold into the country has taken place, and the treasure in the Bank of England has increased; but when, in April last, the Master of the Mint alluded to the inconvenient result which might attend the extraordinary demand then commencing for gold coin, and which since that period has gradually increased, it appeared, by returns obtained from the Bank of England, that large exportations of gold were then making, and that they were, so far as was known at that Establishment, wholly of gold coin. From which it must be inferred that nearly the whole of that portion of the large quantity of gold now distributing over the world, which in the course of distribution may pass through this country, is coined in this country before leaving it, whatever its destination when exported may be; and that it is therefore, from some cause or other, more advantageous in all cases to those making such shipments, to export British coin than bar gold.

Large exportation of British Gold Coin.

It does not appear that this is a necessary consequence of a free Mint. The delay which must occur at a Mint between the receipt of bullion and its delivery as coin is equivalent to a small seignorage, varying in amount with the demands upon the Mint, and has the same tendency to occasion a difference of price between bullion and coin. The English Mint has been free since the reign of Charles II., and about 20 years ago coined largely for private individuals; but from returns published in 1825, it appears that at that period bar gold was exported to a considerable extent. Since 1837, the Bank of England has been the only applicant to the Mint for coinage; and while, in 1771 and 1783, we find the Bank of England appealing to the Government to check, by legal means, the exportation of gold coin, we find no complaint from that body against its far greater exportation at present.

No complaint from Bank.

It might almost be inferred from these facts that the Bank of England has acquired the monopoly of the gold bullion market of this country, and that it derives a profit from the conversion of gold bullion into coin. It is not difficult to prove that the latter is the case.

Profit of Bank from Gold Coinage.

If the delay attending the conversion of bullion into coin at the Mint were nearly uniform, and the expenses attending the transactions of the public with the Mint not liable to alteration, the purchase of gold from persons receiving it from abroad, by bankers and capitalists, would be exactly equivalent to discounting an indisputably good bill for the same amount as the value of the bullion, and payable at the expiration of a period equal to the expected detention of the bullion by the Mint. The purchase of bullion would be as legitimate an employment for banking deposits as the discount of commercial bills; and during an influx of bullion, the interest of money, or the rate of discount at the time, would determine the difference between the price of bullion and its value when coined. During an efflux of bullion, if the exportation were to a foreign country where our coin would only be received as bullion, the holders of bullion here would be able to obtain a higher price for it than during an influx, but they would willingly sell it at a price just so much lower than its value if coined as would induce exporters to seek for it, as this would be more profitable to them than to wait for its conversion into coin. It appears probable that the above description was formerly applicable to the bullion market of this country. Before 1828 the price of gold bullion was liable to fluctuation; and between 1822, when cash payments were resumed, and 1828, was often quoted as low as 3*l.* 17*s.* 6*d.* per ounce standard.

In 1828 the Bank of England undertook to purchase all gold bullion tendered to them at 3*l.* 17*s.* 9*d.* per ounce standard, 1½*d.* per ounce being considered apparently a fair average equivalent for the loss of interest during the delay which the owners of bullion would experience in passing it through the Mint. This appears a perfectly fair transaction on the part of the Bank. They determined to employ their available deposits and circulation in this manner, deriving no greater profit than they could have obtained by the discount of commercial bills, for which the resources so employed by them were equally available. It was calculated, however, to give them the monopoly of the gold bullion market of this country; and since no gold coinage has been executed in the Mint for any other parties than the Bank of England since 1837, it may be assumed that it did do so; and since the price then fixed by the Bank (probably unwisely for its own interests at that time) for the sale of gold bullion was equal to its value when coined, it is likely that much coin was then exported where bar gold would formerly have been sent, and that the expense of the Mint was thereby increased to the public; but the influence of the Bank, and the interests of many of the principal officers of the Mint, which were advantageously affected to a very great extent by an increase of coinage, were calculated to prevent attention being directed to this circumstance.

But since 1844 the position of the Bank with respect both to the Mint and the bullion market has been altered. By the Bank of England Act of that year (7 & 8 Vict. c. 32.) the Bank is placed in an intermediate position between the Mint and the public, for it is made compulsory on the Bank to receive all gold bullion tendered to it at the price of 3*l.* 17*s.* 9*d.* per ounce; and while the amount of paper circulation at the disposal of the Bank is strictly limited, and the claim of the public to the profits of any increase of circulation is recognized, payment is authorized to be made for the gold bullion in notes, which may be issued in excess of the limitation alluded to; and the amount of notes thus issued, therefore, being available only for the purchase of bullion, may be considered to approach in character to Mint notes.

Now it appears clear that from a transaction carried on by notes thus issued, and of which the employment is thus restricted, no interest is due; if a small profit attend the transaction, it is a clear gain to the Bank in addition to that which it may be deriving from the employment of its capital and deposits.

Let it be supposed that the Bank of England being restricted to an issue of 14,000,000*l.*, the Mint was allowed to issue notes in exchange for the bullion tendered to it, as the Bank now does, and that it was also allowed to sell bullion at some price intermediate between 3*l.* 17*s.* 9*d.* per ounce and its value as coin. The Mint would have on an average the command of a circulation of 5,000,000*l.*, affording ample time for the coinage of the bullion lying in it. The difference of 1½*d.* per ounce accruing from the coinage would cover all the expenses of manufacture of the portion coined, and the price it was enabled to obtain above 3*l.* 19*s.* 9*d.* per ounce for such bullion as it sold unmanufactured would be a gain to the public revenue. The Mint, although practically as free as at present, would probably under these circumstances yield a revenue to the public.

If the foregoing observations be correct, the Bank of England must be regarded as deriving a profit of rather more than 2,000*l.* (taking into account the fractions of assay, &c.) on every million of sovereigns coined; and as deriving a portion of that profit, that is, as much thereof as would be lost to them if they parted with bullion at a price at which it would be preferred to coin for exportation, at an expense to the public of about 1,700*l.*, the cost of coining a million of sovereigns.

Between the 1st and 24th inclusive of the present month the Bank will have received one million and a half in gold coin; and if this be continued during the influx of gold from Australia it will be equivalent to a transfer of between 30,000*l.* and 40,000*l.* per annum from the public revenue to the Bank of England, for no useful service rendered, but at great inconvenience to the public generally, from the exclusive occupation of the Mint on gold.

It appears a natural inference from these observations, that a Department which issues a national note ought to to be in immediate connexion with a Mint. It would be out of place to say more upon this subject, but I must guard against a further inference that the English Mint ought therefore to be connected with the Bank of England. It appears to me that among those to whom it would be possible for the Government to grant a contract for working the Mint, none could be so objectionable as the Bank of England.

Small charge for coinage should be made.

The remedy for the present evil, assuming that no general or more extensive change of arrangement is to be made, appears to me to be the imposition of a small charge on the coinage of gold. Whatever the difference may be which would just induce the exporters of gold to foreign States to prefer bar gold to British coin, is the charge that should now be imposed on coinage, and this would render it as advantageous to the Bank to sell bar gold at the price at which it would be preferred as to coin it.

This charge, under the present circumstances, would not be liable to the objections which may generally be urged against the imposition of a seignorage, since it would not affect the difference now existing between the prices of bar gold and coin during an influx of the former. On the contrary, it must be looked upon as the corrective of a seignorage at present received by the Bank of England instead of by the Mint; for it would diminish the fluctuations in the price of gold bullion, and consequently narrow the limits within which the value of the currency can

Appendix No. 23.

Gold Coinage and Bank Charge on Gold.

Correspondence in 1852.

fluctuate, which the imposition of a seignorage has a tendency to widen.

H. D. Harness.

Royal Mint,
December 22, 1852.

Memorandum by Mr. Pennington, dated January 10, 1853.

Prices of gold at various periods.

Previously to the 7 & 8 Vict. cap. 32. the Bank of England was at perfect liberty to purchase in the market gold bullion and foreign coins of gold upon the most advantageous terms that could be obtained. In the first two and a half years after the renewal of specie payments in 1820, the price paid by the Bank for gold of standard fineness was 3*l.* 17*s.* 10½*d.* per ounce. During these two and a half years the foreign exchanges were in favour of this country; and the treasure in the Bank increased from about 4,000,000*l.* to upwards of 10,000,000*l.* In June 1822 the Bank reduced its buying price to 3*l.* 17*s.* 6*d.* per ounce, and continued to purchase standard gold at that price until about the middle of 1824. In that year the foreign exchanges become adverse, and the Bank raised its buying price to 3*l.* 17*s.* 9*d.*, and in the following year to 3*l.* 17*s.* 10½*d.* In 1826, the exchanges having become favourable, the buying price of the Bank was again reduced to 3*l.* 17*s.* 6*d.* per ounce, and so continued until the autumn of 1828. In that year Mr. Rothschild brought a large quantity of gold to the Mint to be coined into sovereigns, for which sovereigns he obtained notes from the Bank of England, or, which is the some thing, he obtained credit in the books of the Bank for the amount. In consequence (it is supposed) of this operation, the Bank raised its buying price to 3*l.* 17*s.* 9*d.* per ounce of standard gold, below which price the Bank has not since purchased any gold bullion in the London market.

Variation between market and mint prices of gold.

The foregoing statement suggests the inquiry, What is the reason why the market price of gold is frequently lower than the Mint price, why that price varies, and what are the natural limits of the oscillation?

In replying to that inquiry it may be convenient, first, to consider the question with reference to the issue of notes, and other pecuniary obligations payable on demand by the Bank of England; and, second, to examine the bearing and effect of that issue upon the question.

Effect of delay in delivery of coin for bullion on the price of gold.

1st. It is correctly observed in the Essays on Coin and Money (published in 1752) that "whether the coinage be "free or otherwise, if the Mint be always ready to make "its returns in coin, gold cannot fall in our market below "the Mint price. That the Mint should be always ready "to make its returns in coin is, however, a necessary con-"dition of this argument; for a delay might oblige a "merchant to sell his bullion at an undervalue to those "who could better wait to have it coined."

In this country the Mint is open to the public for the coinage of gold without charge, that is to say, whoever sends a pound weight of gold, $\frac{11}{12}$ fine, to the Mint, is entitled to receive in return a pound weight of coin, of which the legally current rate is 46*l.* 14*s.* 6*d.*

Some time, however, is required for the coinage, and that time is variable. Assuming the delay to be always the same, then the market price of gold in this country, expressed in terms of these coins, will generally be lower than the Mint price by a sum equal to the value of that delay—which value will depend upon the prevailing rate of interest at the time the bullion is sent to the Mint for coinage; the market price will be *generally*, but not *necessarily*, lower than the Mint price, for there may be a greater amount of coins in circulation than is necessary for the purpose of domestic interchange. In that case the market price of gold may rise to the Mint price, and until the plethora is subdued no gold will be sent to the Mint for coinage.

Effect of light coin on same.

Another cause may occasionally raise the market price as high as, or even higher than the Mint price. In the Essay on Coins and Money above referred to, it is correctly observed that if the coins pass by tale, and are by wear, or otherwise, become sensibly lighter than their just standard at their first coming from the Mint, this, when there is a demand for exportation, will naturally raise bullion above the Mint price. But the difference between coin and bullion on this account cannot exceed the average of the whole deficiency upon the coins; and it will fall something short of that average, because the heaviest coins will be first sent abroad, and, being sent, keep down the price of bullion; and when the demand for exportation is satisfied, bullion will again fall to the Mint price.

It thus appears that when the demands for coin and the operations of the Mint are not affected by the issues of paper money, and of other money obligations payable on demand, the market price of bullion, even when the Mint is free, may fall lower than the Mint price by a sum equal to the value of the time required by the Mint for coinage; and that that value will depend upon the prevailing rate of interest at the time the bullion is sent to the Mint. It further appears that when the exportation of the coins is not prohibited by law, the market price of bullion cannot rise above the Mint price higher than by a sum equal to the loss which the coins have sustained by abrasion and wear.

As to monopoly by the Bank of the bullion market.

2nd. The Bank of England, on account of the great extent of its issues of promissory notes, and of other obligations payable on demand, is necessarily the principal buyer in the market of bullion for coinage.

Now, without going into the question as to the mode in which an increase or diminution of the issues of the Bank of England may affect general prices and the rate of interest, and, through them, the foreign exchanges, it may be observed that when the exchanges are what is called favourable to this country, that is to say, when there is a large importation of bullion from abroad, the importing merchants, if they cannot sell their bullion in the market at the Mint price, less the value of the time required for coinage, will send that bullion to the Mint. If the market price be higher than this, they will dispose of their bullion in the market.

In the year 1828 the Bank of England was willing to purchase all the gold that was offered to them at 3*l.* 17*s.* 6*d.* per ounce. The difference between that and the Mint price (4½*d.* per ounce) was much more than sufficient to compensate the loss of time required for coinage. Under these circumstances Mr. Rothschild was induced to send his bullion to the Mint rather than sell it to the Bank. If the Bank had persisted in its determination not to give more than 3*l.* 17*s.* 6*d.* per ounce for standard gold, it is probable that the gold coinage at the Mint would have been almost entirely executed for individuals, and that the imported gold would have afterwards flowed into the Bank in the shape of coin. Such a state of things, it may be presumed, was not agreeable to the Bank, and its buying price was therefore raised to 3*l.* 17*s.* 9*d.*, the difference between which price and the Mint price is not sufficient to compensate the loss of time required for coinage. The importers of bullion now sell it to the Bank rather than send it to the Mint.

The Bank has thus a monopoly of the bullion market, that is, they are the sole buyers upon a large scale.

They have a monopoly because they offer better terms than individuals could obtain, if those individuals had no other means of turning their bullion into money than by sending it to the Mint for coinage.

By the 7 & 8 Vict. cap. 32. it was made compulsory on the Bank to give their notes, payable on demand in coin, for gold bullion at the rate of 3*l.* 17*s.* 9*d.* per ounce. Under this obligation the Bank is the sole importer of gold into the Mint.

As to profit of Bank.

It is now contended that the Bank derives a profit of 1½*d.* per ounce on the coinage of all the gold which it has purchased at 3*l.* 17*s.* 9*d.* per ounce, to which profit it is alleged that corporation is not fully entitled; and it is imagined that if a seignorage or brassage were put upon the coinage, then, although the Bank would still get the alleged profit of 1½*d.* per ounce, yet not only would the expenses of the Mint be lightened, but an inducement be given to the Bank to sell bullion at a lower price than 3*l.* 17*s.* 10½*d.* rather than send it to the Mint for coinage.

If, for example, the Mint charge were 1½*d.* per ounce, the Bank, after paying the charge, would get from the Mint 3*l.* 17*s.* 10½*d.* in coin for an ounce of bullion, for which ounce of bullion it had given 3*l.* 17*s.* 9*d.* in the market.

Now, the Bank, by selling bullion at a price between 3*l.* 17*s.* 9*d.* and 3*l.* 17*s.* 10½*d.*, say at 3*l.* 17*s.* 9½*d.*, would induce an exporting merchant to take bullion rather than coin to send abroad, and would thus avoid the brassage.

Effect of a charge for coinage.

This question, *so long as the Bank is compelled by law to give its notes for standard gold at the rate of* 3*l.* 17*s.* 9*d.* *per ounce*, is one in which the commercial community is no way interested. The charge would fall wholly upon the Bank; and if the Bank is willing to bear it, the Mint will get the benefit, and there will be an end of the question. The importers of bullion will still, as at present, be able to sell their bullion to the Bank for notes at 3*l.* 17*s.* 9*d.* per ounce, and still, as at present, be able to demand coin for those notes whenever it suits their pleasure and convenience to do so.

But will the Bank patiently acquiesce in the proposed change? Will they not, on the contrary, strenuously resist it? At any rate it may not be altogether useless to

consider beforehand what objections may possibly be made to it.

It will perhaps be said, on the part of the Bank, that the resources of the Bank are occasionally employed in the purchase of bullion in the market, and sending that bullion to the Mint for coinage, and that the profit of 1½*d.* per ounce is not more than a just compensation to the Bank for unavoidable delay at the Mint; that the resources of the Bank are necessarily limited, and if a part of those resources was not occasionally employed in that way, it would be employed in some other equally if not more advantageous to the Bank; that when it is said that the bullion belonging to the Bank in process of coinage at the Mint would, if not sent thither, have remained unproductive in the vaults of the Bank, and that the delay at the Mint does not, therefore, occasion any loss or inconvenience to the Bank, that when this is said the argument proves too much; for, if correctly founded, it would justify the Bank in making over on loan to a merchant or cambist a part of the bullion in the vaults of the Bank, which is absurd.

When it is said that by the 7 & 8 Vict. the amount of paper circulation at the disposal of the Bank is strictly limited, and that, from a transaction (the exchange of notes for gold) carried on for the sole purpose of that transaction, no interest is due,—when this is said it will perhaps be observed, on the part of the Bank, that the 14 millions of notes at the disposal of the Bank by the 7 & 8 Vict. are payable in coin on the demand of the holder, and that the Bank does not derive profit from the whole of that sum, but is under the necessity of holding in reserve against it such an amount of coin as is deemed sufficient to ensure the prompt convertibility of the notes; that as Bank notes are a more convenient instrument of circulation than coin, the public requires a much larger amount of notes than 14 millions, and that to ensure the ready payment in coin (if coin be demanded) of all the notes issued by the Bank, a large reserve of coin is necessary; and that it would be hard upon the Bank if they were not allowed to provide that reserve in the way that is least burthensome to their interests; that if, as has been hypothetically put, the Bank were restricted to an issue of 14 millions, and the Mint allowed to issue notes in exchange for bullion, the Mint would be subject to an immediate demand for payment of those notes in coin; and as it is probable that payment in coin would be demanded immediately on their issue, the Mint would not derive any disposable funds from this source.

It is probable that it would be further urged on the part of the Bank that if a Mint charge were made for coinage it would be unjust to continue on the Bank the obligation to give their notes in exchange for standard gold at 3*l.* 17*s.* 9*d.* per ounce; and it would be observed—correctly, I think, observed—that if they were at perfect liberty in this respect, the Bank would frequently be able to purchase standard gold at 3*l.* 17*s.* 6*d.* or 3*l.* 17*s.* 7*d.* per ounce, and that consequently the risk of fluctuation in the value of the currency would be materially increased and its occurrence more frequent.

It seems to be imagined that in consequence of the recently discovered sources of supply in California and Australia, a constant stream of gold will set in to this country; that the Bank of England will be constantly fed with gold at 3*l.* 17*s.* 9*d.* per ounce; and that the exchanges between England and the continent of Europe will continue in such a state as to occasion a corresponding efflux, leaving the treasure in the Bank at a nearly uniform amount. This expectation, I am afraid, will not be exactly realized, and the demand upon the Bank for gold will sometimes exceed the supply, and occasionally raise the market price of standard gold to 3*l.* 17*s.* 10½*d.* and very possibly to 3*l.* 18*s.* per ounce.

(Signed) J. PENNINGTON.

January 10, 1853.

Remarks by Mr. Hubbard, Deputy Governor of the Bank, upon a Correspondence between the Mint Authorities and the Treasury in 1852.

February 23, 1853.

I have read the communications made to the Treasury by Sir J. Herschel and Captain Harness, and the remarks of Mr. Arbuthnot in reply.

I collect from these papers that Sir John Herschel opines—

1. That the conditions under which the coinage of gold now takes place induces—

(1.) The export of gold rather than of bar from this country.

(2.) The coinage here of gold destined for ultimate transfer to and recoinage in other countries.

2. That the Bank are interested in promoting and do promote the export of coin rather than of bar, to the injury of the country by the expense of coinage.

Mr. Arbuthnot ably refutes these propositions, and little need be added to the evidence and argument which he adduces; but Mr. Arbuthnot appears to me to be wrong in his statement of the effect which would attend a mintage charge of 1½*d.* per oz., on gold. (See letter of May 28, 1852, pages 26 and 27.)*

Mr. Arbuthnot conceives that if a mintage charge were imposed, the importer of the bullion "will not part with "the coin (received in exchange) except at a price which "will remunerate him for it. That if the charge for "coinage were one per cent. 99 sovereigns would purchase "in the market the same quantity of commodities which "with a free Mint would cost 100, and hence the charge "for coinage imposed on the importer would disturb the "relation of the circulating medium to the commodities "interchanged by it."

Effects of a Mint charge.

I apprehend that no such effect upon prices would result from the imposition of a coinage or Mintage charge. The antecedent range of prices determined by the relation to commodities of the precious metals, and their representatives in the form of currency, cannot be affected in any appreciable degree by the charge for coinage being thrown upon the importer of gold. If an importer of 26 ozs. of gold sends it to the Mint to be coined into 100*l.*, and the Mint give him 99*l.* only, reserving 1*l.* for the expense of coinage, he will have realized upon his importation 3*l.* 17*s.* 1*d.* per oz., instead of 3*l.* 17*s.* 10½*d.*; and if 1 per cent. were the established charge, gold would be imported only when it yielded a profit to the importer at 3*l.* 17*s.* 1*d.* per oz.

And thus we arrive at the only (and the practical) consequence of the imposition of a coinage charge. It adds to the expenses incurred by the importer. In the case of Australian importers, who send it here as one of the products of their country, the deduction would fall upon, firstly, the merchant, and ultimately and virtually upon the diggers, and would not check or diminish the importation. With regard to importers of gold from countries sending it as a temporary medium for the settlement of debts incurred by an unfavourable balance of trade, the effect of the charge would be to raise so much the higher the exchanges in favour of this country before it became profitable to send gold as a remittance. The charge at the Mint would have the same effect as an addition of equal amount to the premium of insurance or the rate of freight.

Jonathan at New York may now prefer giving 10 per cent. premium, or 110 dollars, for a bill of 22*l.* 10*s.* on London, rather than ship eagles; but if the produce of eagles be diminished 1 per cent. by an additional charge either for coinage, for freight, or for insurance, he would give 11 per cent. premium, or 111 dollars, for the bill of 22*l.* 10*s.*, rather than ship gold. The point in the rate of exchange at which gold would be returned to New York would remain unaffected, for our national standard of value would still be the sovereign of 123¼ grains of gold at 3*l.* 17*s.* 10½*d.* per oz. At present New York imports gold when the exchange is under 7½ premium, and exports gold when it is above 10 premium.

As the intermediate rates of exchange are practically at par, *i.e.*, the variations from the real par of exchange are less than the expense of transmitting gold. If a coinage charge of 1 per cent. were imposed, the intermediate rates now ranging from 7½ to 10 would range from 7½ to 11.

The proposition of the Master of the Mint examined.

And now, leaving the theory of the question as illustrated by Mr. Arbuthnot, I will advert to the actual proposition of the Mint authorities, that a charge (covering the cost of coinage) of $\frac{1}{6}$th per cent., or rather of 1½*d.* per oz., be made to the importer. It will be at once remarked how insignificantly this charge would affect the exchanges, the present effective range of par would be increased by $\frac{1}{6}$th per cent., *i.e.* it would reach from 7½ to 10$\frac{1}{6}$, and the table-land, as it may be called, would be 2·66 instead of 2·50. And to this result, inappreciable almost in a commercial view, would be confined the disturbing influence of the charge. On the other hand, in favour of the charge it may be urged:—

1. That it would harmonize with the sound and rational principle of charging for labour done, for an advantage conferred, for the conversion in fine of a raw commodity into a manufactured article.

2. That it would terminate the needless anomaly of the

APPENDIX, No. 23.

Gold Coinage and Bank Charge on Gold.

Correspondence in 1852.

Government carrying on an expensive operation for the benefit of foreign traders or gold producers.

The remedy might be very easily applied; it is only required that a short Bill be passed, enacting "That the Mint charge 1½*d.* per oz. for coinage of gold," or, in other words, buy gold at 3*l.* 17*s.* 9*d.*, and "that the Bank buy gold at 3*l.* 17*s.* 7½*d.*," instead of at 3*l.* 17*s.* 9*d.* as at present.

I am not clear that it would be desirable to make it *imperative*, under *all circumstances*, that the Bank should sell bar gold at 77*s.* 9*d.*, but ordinarily it would sell at that price, and so prevent the export of coin for any purposes but those of currency.

And the habitual sale of bar gold by the Bank at 3*l.* 17*s.* 9*d.* would restore to its former limits the range of the effective par of exchange, only it would move between points slightly different. The par between New York and London, for instance, would be from 7·66 to 10·16, instead of from 7·50 to 10.

Action of the Bank in dealing in foreign coin.

The practice of late years pursued by the Bank of dealing largely in foreign coin prevents the action of the balance of trade taking effect upon British coin and bar gold. The foreign coin purchased by the Bank at a period of favourable exchange is available for export when the balance of payments is against us, and the Bank so adjusts these prices as to make it desirable for Russia, France, or America to take back their own coin rather than British coin or bars. The large export of British coin which so startled the officers of the Mint, and excited their suspicions of the interested action on the part of the Bank, has been occasioned purely by a demand from Australia (for a currency indispensable to them), and would have been averted by no efforts or sacrifices on the part of the Bank. Had the Bank offered to the exporters of coin to Melbourne bar gold at 3*l.* 17*s.* 9*d.* they would have laughed at the offer, and declined taking back at any price the raw gold they had themselves just brought home to convert into coin. It is possible that the very large amount of gold coin sent to Australia may not be wholly wanted there as currency, and it may have been sent in payment for the dust, to remain there until it is expended in commodities.

The large amount of the coinage atributable to the Australian demand.

A Mint in Australia, had it been established two years since, would have supplied this need, and the diggers would have realized larger gains by converting their dust into money at 3*l.* 17*s.* 9*d.* per oz., instead of selling it to merchants at 3*l.* or 3*l.* 10*s.* What they have, however, omitted to gain by this means, has not been wholly lost, for the difference between the 3*l.* 10*s.* and 3*l.* 17*s.*, has been divided between the Australian merchants, the ship owner, and the insurance offices.

Whether, however, the non-establishment of a Mint in Australia in 1850 is or is not to be regretted, its establishment now would be a step of very questionable policy; but I make no further allusion to the subject here, as I have treated it separately in reference to the correspondence and papers communicated to the Bank by the Treasury.

Mr. Thomson Hankey, Governor of the Bank of England, to Sir C. Trevelyan.

February 24, 1853.

I have carefully read over the several papers relating to the Mint which you were kind enough to send for the perusal of the Deputy-Governor and myself, and which I now return; I also send his remarks thereon, inclosed.*

The objections raised by Sir John Herschel and Captain Harness to the existing arrangement created by the present Bank Charter with regard to the price of purchase of bullion, and the inducement thereby afforded to the Bank of creating an unnecessary amount of gold coinage, have been so fully answered by Mr. Arbuthnot that I really scarcely know how to add a word to convey my own ideas more strongly on the subject.

Profit of Bank.

The only point, however, which occurs to me to which Mr. Arbuthnot has not alluded is, that the Bank, by their present habit of buying foreign gold coin (when they can do it at a rate which will enable them to hold it at the purchasing price of bullion, viz., 3*l.* 17*s.* 9*d.* per ounce standard), has a far greater inducement to supply themselves in bullion in that way than by purchasing gold with the sole object of coinage, since in one case they can, when any demand for export of the foreign coin arises, make a profit of about 6*d.* per ounce; in the other their profit is limited to 1½*d.* per ounce, and the small additional profit specially alluded to by Sir J. Herschel, which, however, he has overstated by about 30 per cent.

As to Mint Notes.

The question whether it might be desirable to remove the power of issue on bullion from the Bank of England to the Mint by issuing Mint notes will become a very serious question for the consideration of the Legislature, if they should ever be inclined to adopt Sir John Herschel's and Captain Harness' views. As they have not even alluded to the expense of the issue of the notes, it is needless at present to enter into any discussion as to the profit or loss which might be incurred by any Government Department undertaking such a duty.

On behalf of the Bank of England, I should be very happy to discuss the subject whenever it might be the wish of the Government to entertain the question, and I think there would be little difficulty in showing that it would not only be an unprofitable but a very hazardous experiment.

I think the great point of reform to which it would be well to direct the attention of Sir J. Herschel and Captain Harness is to render the Mint really efficient to carry out its professed object of affording the opportunity of a free coinage to everybody who desires to make use of the establishment for the coinage of gold, and to enable the Government to renew the coinage of silver and copper whenever circumstances may appear to render it desirable to do so. At present the Bank are considered to have the monopoly of the Mint, and by their demands to render it impossible to make this branch of the Government efficient for other public demands. Surely this is not the fault of the Bank, but it does appear to me to be a great fault or deficiency in the existing arrangements, and which I firmly believe is capable of being remedied.

APPENDIX (A.) referred to at page 59.

Gold Moneys coined at the Royal Mint from January 1, 1842, to December 31, 1861.*

Gold Moneys coined 1852 to 1861.

	£
1842	5,977,051
1843	6,607,849
1844	3,563,949
1845	4,244,608
1846	4,334,911
1847	5,158,440
1848	2,451,999
1849	2,177,955

APPENDIX No. XXIV.

Appendix, No. 24.

Baron de Hock on Uniformity of Coinage.

Translation of a Memorandum communicated to Mr. Mallet by Baron de Hock.

Among the many advantages resulting from a uniform monetary system for all nations carrying on a great trade, there are two which above all others deserve attention, viz.:—

1st. The minimum of exchange becomes extremely small, and in consequence the exchange is, generally speaking, reduced.

This minimum at present consists in the expense incurred by transmitting, in the proper kind of coin, the sum of money which is to be paid at the place where the letter of exchange is due, from the domicile of the bill-of-exchange debtor to the latter place; and again this expense comprises the cost of transport, of exchange, and of recoining. Now, these latter will be in the case of monetary uniformity entirely saved, the coin of one country being accepted in the other; and the first-named expenses will be also considerably diminished, by following the example of Great Britain, and adopting *gold* as the general standard.

2nd. By a general monetary uniformity every excess as well as scarcity of coin that may arise at any particular place, to the detriment of trade, will be adjusted in the shortest time and at the smallest cost, for the coin of all united nations can flow in to make up the deficiency, and on the other hand the surplus can go into the cash-boxes of all nations. The time as well as the cost of recoining are saved.

It is obvious that that nation will obtain these advantages in the greatest degree which carries on the largest and most extensive commerce.

The Monetary Conference at Paris has shown that the monetary unity would be accomplished to the desired extent the *moment* Great Britain joined it. France, Italy, Belgium, and Switzerland are already monetarily united; Austria, Greece, the Danubian Principalities, and Turkey are ready to accede to the union; the United States are disposed to do the same; the majority of the South American States already possess a monetary system which may be considered as a preparatory step towards accession; Spain, Portugal, Sweden, Denmark, Prussia, and the German Zollverein, as well as the Hanse Towns, desire and wait for the example of Great Britain before taking their resolution, and there can be no doubt that in this they will be even preceded by Russia. Finally, the Netherlands, however reluctant, will be compelled to bow to the necessities of commerce.

The gold mint system which up to the present time has been taken as the basis of the monetary agreement is the *French*, not because of its intrinsic excellence, which is indeed very open to doubt, but on account of two external circumstances:

(*a.*) Because it has been already adopted by a greater number of states; and especially

(*b.*) Because its mint unity (even should 5 francs instead of 1 franc be adopted as such) is so small that the account moneys of all other nations differ but very little from one of the multiples of the French. The pound sterling is very nearly 25 francs, the American dollar 5 francs, the Prussian thaler 4 francs, the Austrian two-florin piece 5 francs. The piece of 25, 20, 10, and 5 francs may, therefore, easily circulate at the same value under the most diverse denominations according to the account systems hitherto used.

England will, for the greater facility of local trade, continue to count in pounds sterling, Prussia in thalers, North America in dollars, Austria in florins; although it is true these coins will no longer have the old value, but the value respectively of 25, 4, 5, and 2½ francs, without in the least disturbing the money agreement (unity).

To maintain the monetary unity, nothing is necessary but that in all countries of the union the money of the same value be also of the same standard and the same size, consequently of the same weight, and that the Governments come to an agreement on these points, as well as to a very high degree of accuracy in the coinage, and the measures to be taken for the maintenance of this accuracy in the traffic, the withdrawal of worn-out coins, and the punishment of offences (against money).

Provision must also be made in the monetary agreement for the exclusiveness of the *gold standard*, that is to say, that silver and copper be only coined as "billon," and certain restrictions established in the coinage and circulation of "billon," so as to prevent the gold standard being supplanted by the latter. Besides it is not at all necessary, and would, indeed, only impede the progress of monetary unity if the "billon" were to be included in it. Only the *gold coins* coined according to treaty can be raised to the dignity of union money.

The distinction between the words often used here of agreement (einigung) and union (verein) is to be well marked; for it is only by way of treaty, and by the fact of one state investing within its boundaries the coin of another state with the permanent character of a legal tender, at the same time in return securing to itself the necessary influence on the mode of coinage and the maintenance of the alloy of these coins, that the great advantage of an universal coin can be attained. If the several states proceed separately, and coin their money by means of internal legislation, however completely or nearly these coins may equal those of other states, you may obtain *equal* money, but not money to be *equally used* elsewhere, *i.e.*, no universal money.

It is not to be denied that every state in joining the monetary agreement, in exchange for the advantages it gains, will experience some inconvenience and incur some cost; but as to the latter it is often much overrated.

As regards the inconvenience, it consists in the circumstance that all legal engagements entered into in the old money must be converted into the new. For instance, it would be contrary to all justice to permit a debtor to repay a sum of money paid to him at the rate of 25.25 francs per pound sterling, at the rate of 25 francs; but he will have to pay about 1 per cent. above the stipulated sum.

The expense consists in the recoining of the existing coin. This expense will probably be very considerable for those states (as Prussia for instance) which had up to the present time adhered to the silver standard, which, in consequence of a faulty bank system, necessitated a large quantity of coin. On the other hand, for those states which already possess the gold standard, and whose gold coins, moreover, are of a higher alloy ($\frac{11}{12}$) than those to be introduced ($\frac{9}{10}$), this expense will be quite insignificant, provided the precaution be taken to redeem the circulating and already worn-out coins, not at their full nominal value, but only at the value corresponding to their real average metallic alloy, as, for instance, a sovereign not at 25.25 francs, but at 25.10 francs. In Great Britain especially, the quantity of the circulating gold coins is, in consequence of the highly developed banking system, but very small. As for the silver coins used for small change, they need, if I am not mistaken, no recoining at all.

(Signed) Hock (M.P.)

Vienna, 16 April 1868.

APPENDIX No. XXV.

Appendix, No. 25.

Law of the 7 Germinal, an XI. which regulates the French monetary system.

Loi sur la Fabrication et la Verification des Monnaies.

Du 7 Germinal, an XI. (27 March 1803.)

Au nom du Peuple Français, Bonaparte, premier Consul, proclame loi de la République le décret suivant, rendu par le Corps Législatif le 7 germinal an XI, conformément à la proposition faite par le Gouvernement le 19 ventôse, communiquée au Tribunat le lendemain.

Décret.

Disposition Générale

Cinq grammes d'argent, au titre de neuf dixièmes de fin, constituent l'unité monétaire, qui conserve le nom de franc.

APPENDIX, No. 25.

Law of the 7 Germinal, an XI, which regulates the French monetary system.

TITRE Ier.

De la Fabrication des Monnaies.

Art 1er. Les pièces de monnaie d'argent seront d'un quart de franc, d'un demi-franc, de trois quarts de franc, d'un franc, de deux francs et de cinq francs.

II. Leur titre est fixé à neuf dixièmes de fin, et un dixième d'alliage.

III. Le poids de la pièce d'un quart de franc sera d'un gramme vingt-cinq centigrammes.

Celui de la pièce d'un demi-franc, de deux grammes cinq décigrammes;

Celui de la pièce de trois quarts de franc, de trois grammes soixante-quinze centigrammes;

Celui de la pièce d'un franc, de cinq grammes;

Celui de la pièce de deux francs, de dix grammes;

Et celui de la pièce de cinq francs, de vingt-cinq grammes.

IV. La tolérance du titre sera, pour la monnaie d'argent, de trois millièmes en dehors, autant en dedans.

V. La tolérance de poids sera, pour les pièces d'un quart de franc, de dix millièmes en dehors autant en dedans; pour les pièces d'un demi-franc et de trois quarts de franc, de sept millièmes en dehors autant en dedans; pour les pièces d'un franc et de deux francs, de cinq millièmes en dehors autant en dedans; et pour les pièces de cinq francs, de trois millièmes en dehors autant en dedans.

VI. Il sera fabriqué des pièces d'or de vingt francs et de quarante francs.

VII. Leur titre est fixé à neuf dixièmes de fin, et un dixième d'alliage.

VIII. Les pièces de vingt francs seront à la taille de cent cinquante-cinq pièces au kilogramme, et les pièces de quarante francs à celle de soixante-dix-sept et demie.

IX. La tolérance du titre de la monnaie d'or est fixée à deux millièmes en dehors, autant en dedans.

X. La tolérance de poids est fixée à deux millièmes en dehors autant en dedans.

XI. Il ne pourra être exigé de ceux qui porteront les matières d'or ou d'argent à la monnaie, que les frais de fabrication. Ces frais sont fixés à neuf francs par kilogramme d'or, et à trois francs par kilogramme d'argent.

XII. Lorsque les matières seront au-dessous du titre monétaire, elles supporteront les frais d'affinage ou de départ.

Le montant de ces frais sera calculé sur la portion desdites matières qui doit être purifée, pour élever la totalité au titre monétaire.

XIII. Il sera fabriqué des pièces de cuivre pur, de deux centièmes, de trois centièmes, et de cinq centièmes de franc.

XIV. Le poids des pièces de deux centièmes sera de quatre grammes; celui des pièces de trois centièmes, de six grammes.

Et celui des pièces de cinq centièmes, de dix grammes.

XV. La tolérance de poids sera, pour les pièces de cuivre, d'un cinquantième en dehors.

XVI. Le type des pièces de monnaie est réglé comme il suit:

Sur une des surfaces des pièces d'or, d'argent, et de cuivre la tête du premier Consul, avec la légende: *Bonaparte, premier Consul:*

Sur le revers, deux branches d'olivier, au milieu desquelles on placera la valeur de la pièce; et en dehors la légende: *République française,* avec l'année de la fabrication:

Sur les pièces d'or et de cuivre, le tête regardera la gauche au spectateur; et sur les pièces d'argent, elle regardera la droite.

La tranche des pièces de cinq francs portera cette légende; *Dieu protège la France.*

XVII. Le diamètre de chaque pièce sera déterminé par un réglement d'administration publique.

TITRE II.

De la Vérification des Monnaies.

XVIII. Les monnaies fabriquées aux termes de la présente, ne seront mises en circulation qu'après vérification de leur titre et de leur poids; cette vérification se fera sous les yeux de l'administration des monnaies immédiatement après l'arrivée des échantillons.

XIX. Les directeurs de fabrication pourront assister en personne aux verifications, ou se faire représenter par un fondé de pouvoir.

XX. L'administration dressera procès-verbal des opérations relatives á la verification du monnayage; elle enverra ce procès-verbal aux ministres des finances et du tresor public avec sa décision.

XXI. Les pièces qui auront servi à constater l'état de la fabrication, resteront déposées aux archives de l'administration des monnaies pendant cinq ans; elles seront ensuite passées en recette au caissier, qui les enverra á la refonte.

XXII. En cas de fraude dans le choix des échantillons les auteurs, fauteurs et complices de ce délit seront punis comme faux monnayeurs.

Collationné à l'original par nous président et secrétaires du Corps legislatif. A Paris, le 7 Germinal, an XI de la Republique française. Signé GIROD (de l'Ain) *president*; LATOUR MAUBOUG, LEFRANC, HTE. MONSEIGNAT, BAZOCHE, *Secretaires.*

Soit la présente loi revêtue du sceau de l'Etat, insérée au Bulletin des lois, inscrite dans les registres des autorités judiciaires et administratives, et le grand-juge, ministre de la justice, chargé d'en surveiller la publication. A Paris le 17 Germinal, an XI de la République.

Signé, BONAPARTE, *premier consul,* Contre-signé, *le secretaire d'état,* HUGHES B. MARET. Et scellé du sceau de l'Etat.

Vu, *le grand juge ministre de la justice,* signé REGNIER.

APPENDIX, No. 26.

Silver. Prices of 1856 to 1865.

APPENDIX No. XXVI.

STATEMENT showing the PRICE OF SILVER in London in the years 1856 to 1865, and the relative value of French five-franc pieces to English money at the average value of silver during those ten years.

	Price of silver per oz. std. Lowest.	Highest.
	d.	*d.*
1856	60½	62¼
1857	61⅜	62⅝
1858	60¾	61⅞
1859	61¾	62⅜
1860	61¼	62⅜
1861	60⅛	61⅜
1862	61	62⅛
1863	61	61¾
1864	61	62½
1865	60½	61⅞
	609¼	620⅞

Average medium price 61½*d.*

Five 5-franc pieces containing 125 grammes of silver $\frac{9}{10}$ fine weigh 4·019 English ounces, and are equal to 3·910 ounces of English standard silver $\frac{222}{240}$ fine.

				d.			*s.*	*d.*
Oz.	3·910	std.	at	61⅜	pr. oz.	=	19	11·97625

Appendix No. 34.

Gold Coinages and Mint Regulations.

APPENDIX No. XXXIV.

(The following Returns of Gold Coinages and Mint Regulations of Foreign Countries, being a Continuation of Appendix XII., arrived too late for insertion in their proper place.)

Costa Rica.

COSTA RICA.

To Question 1 and 2.

The denominations and weights of the gold coins are as follows:

The ten dollar piece weighing 294 grains Spanish.
The five „ „ 147 do. do.
The two „ „ 59 do. do.
The dollar „ „ 29 do. do.

To Question 3.

The fineness is 21 carats.

To Question 4.

The diameters of the coins are the following:

The ten dollar piece - - - 27 millimetres.
Five do. - - - - 21 do.
Two do. - - - - 18 do.
The dollar - - - - 13 do.

To Question 5.

The "tolerance" in weight allowed in the manufacture of the coins is as follows:—

	Under weight.	Over weight.
In the ounce -	2 grains.	- 1 grain.
half do. -	1½ do.	- ¾ do.
quarter do.	- 1 do.	- ½ do.
one-eighth do.	- ¾ do.	- ¼ do.
one-sixteenth do.	½ do.	- ¼ do.

No "tolerance" is allowed in the fineness.

To Question 6.

There is no law that determines the amount of "wear" allowed.

To Question 7.

The Mint buys bullion at the rate of 90 cents the "carat;" there being no charge made for "coining" or "assaying."

To Question 8.

The Bullion Exchange Office buys the bullion with drafts on the Treasury at 15 days' sight.

To Question 9.

The coinage is executed by the state.

To Question 10.

The Mint is free to all who are willing to sell their bullion on the terms expressed in answer No. 8.

To Question 11.

The Mint does not give bullion for coins.

Peru.

PERU.

(Translation.)

Excellency,

The report requested by you at my hands with regard to the weight, diameter, as well as the "tolerance" in weight, and coinage laws of gold and silver, are clearly set forth in the law now in force, and given on the 14th February, 1863, published in No. 21, first half-year of the "Peruano." Nothing is charged for coinage, because all the gold ever coined in this mint has been property of the state, and sent for from Europe on account of same; with regard to silver coinage, it is conceded to private individuals furnishing the metal without charge, because all expenses of manufacture are paid by the state, and they receive 10 sols 224 millesimos for every mark fine. The manufacture does not exceed 14 days, as coining is constantly and uninterruptedly going on; and never has bullion been returned as yet on account of insufficiency of apparatus for coining. It is set forth that the coinage at present is done by the state, and only in the years 1864 to begining of January 1867 it was in private hands, in virtue of a contract entered into with Messieurs D. José Vicente Oyague and Graham, Rowe, and Co. The workshop is open to the public; and there remains only to be added with reference to this subject, that the laws now in force are the same as those of the French empire thereon. The directors do not transmit a copy of the regulations, as previously given in 1830, and still in force at present, because they have no copies thereof, but it was re-published in "El Peruano," No. 28, of the second half-year of 1841. This is all I can report with regard to these matters.

Lima, 3d July, 1868.

(Signed) Manuel Antonio Chavez.

A true copy.

(Signed) M. Salazar,
Chief Clerk.

Miguel San Roman,

President of the Republic.

Inasmuch as the Congress has issued the following law, to wit:

The Congress of the Republic of Peru

Whereas good coins being necessarily required for transactions of whatsoever kind, has by virtue of attribution 9, Article 59 of the Constitution, promulgated the following law:

Article 1. The recognized coin is to be called "sol," and is divided in 100 cents: its weight to be 25 grammes, and its diameter 37 millimetres. The "half-sol-piece" to be worth 50 cents, weight 12 grammes and 500 milligrammes, and diameter 30 millimetres.

The "fifth of a sol" to be worth 20 cents, with five grammes in weight, and 23 millimetres in diameter. The "tenth of a sol," to be called "dinero," and to be worth 10 cents, to be 18 millimetres in diameter, with two grammes and 500 milligrammes in weight. The "half-dinero" to be worth five cents, with one gramme 250 milligrammes weight, and 15 millimetres diameter.

Art. 2. The standard of silver coin to be nine-tenths fine; the "tolerance" in weight to be three milligrammes in the "sol," five milligrammes in the half sol piece, six milligrammes in the fifth of a sol, seven milligrammes in the "dinero," and ten milligrammes in the "half dinero."

The tolerance in alloy to be three millesimos.

Art. 3. Of gold coins there are to be five. The largest to be worth 20 sols, with weight of 32 grammes 258 milli-

grammes, and the diameter to be 35 millimetres. The next in value to be worth 10 sols, with 16 grammes 129 milligrammes weight, and 28 millimetres in circumference. The third to be worth five sols, with the weight eight grammes and 64 milligrammes, and 23 milimetres in diameter. The fourth to be worth two sols, three grammes and 226 milligrammes in weight, and 19 millimetres of diameter. The fifth to be worth ten "dineros," and to have in weight one gramme and 613 milligrammes, and 17 millimetres in diameter.

Art. 4. The alloy of gold coins shall be nine-tenths fine ness, the tolerance in alloy two millesimos, and in weight one and a fifth milligramme in the twenty sol gold piece, of two milligrammes in the ten sol piece, of two and a fourth milligramme in that of five sols, of two and seven-eighths milligrammes in that of two sols, and four milligrammes in the gold coin worth ten dineros.

Art. 5. The type of all gold and silver coins shall continue to be the same as that set forth in the National regulations, with the designation of their respective value.

Art. 6. There shall be two copper coins of the value of two cents of sol the one, and the other of the value of one cent.

Art. 7. The copper coins shall bear a sun on the obverse side, and on the inverse side the inscription "Republica Peruana," and the date on the upper part on the reverse the words "two" or one cent (s.), surrounded by a wreath formed by two cornucopias.

Art. 8. The quantity of copper to be emitted shall not exceed in value amount of three hundred thousand sols.

Art. 9. Nobody is obliged to receive copper coin for other than small amounts up to five cents.

Art. 10. The legal relation of the decimal coin with the depreciated at present in circulation is 100 to 80 cents of "sol," which latter is the value of a "dollar" (peso) of the depreciated ("feble.")

Art. 11. All former laws not agreeing with the present one on this subject are herewith abrogated.

To be communicated to the Executive in order to ensure the necessary fulfilment.

Given in Lima, the thirty-first day of January, one thousand eight hundred and sixty-three.

JOSÉ SILVA SANTISTEVAN,
Vice President of the Senate.
JOSÉ MARIA PEREZ,
President of the Chamber of Representatives.
FRANCISCO CHAVEZ,
Secretary to the Senate.
BENIGNO LA TORRE,
Secretary to the E. of R.

To the President of the Republic.

Therefore I order that the foregoing be printed, published, and circulated, and duly complied with. Given at Government House in Lima, 14th February, 1863.

(Signed) MIGUEL SAN ROMAN.
(Countersigned) JOSÉ SANTOS CASTAÑEDA.

A true copy.

Of the double condor, 34 millimetres diameter; of the condor, 26; of the half condor, 21; of the fifth of a condor, 16; of the tenth of a condor, 13.

5. The "tolerance" or "remedy" permitted in their manufacture is:

As regards weight - 2 millièmes.
„ fineness - 2 „

6. Gold coins are withdrawn from circulation when the effigy or coat of arms is effaced, or when they have been cut or holes bored through them. When so worn or defaced the Treasurer General of the Republic separates them, and sends them to the Mint to be recoined.

7. The charge for coining is 2½ per cent., and is levied in cash.

8. On an average, 15 days elapse before the coin is delivered in exchange for the bullion. No period is fixed by law for such delivery, but within three days after the introduction of bullion at the Mint a draft for its full value is given to the person introducing it; and this draft is received as cash by the treasury of the republic, and is also readily negotiated in the market.

9. The coining is executed by the State.

10. The Mint is open to the public for the purpose of coining.

11. The Mint does not give bullion in exchange for coins.

12. A copy of the regulations for the administration of the Colombian Mint is herewith annexed.*

AUSTRIA.

(Translation.)

1. Denominations of the gold coins:—

According to the Currency Treaty of January 24, 1857 Art. 1, 6, 19, and 20, and the Imperial Austrian Patent of September 19, 1857, Art. 2, 13, 14, 15, 16, 17, there are in Austria:

(*a*) gold coins of the Commercial Union, namely, crowns, half crowns; also,

(*b*) Imperial Austrian ducats, coined according to the Vienna mark (0·561288 münzpfund), which are coined in pieces of four ducats and one ducat.

Since, however, as shown in the Reichsgesetz-blatt of the year 1867, a treaty was signed in Berlin on the 13th of June, 1867, respecting the separation of the Austrian Empire and the Principality of Liechtenstein from the German Currency Union, of the 24th January, 1857, and the accession of Austria to the contemplated French currency treaty of July 31, 1867, has not yet come into force; therefore, subsequently to June 13, 1867, there have been manufactured in Austrian gold currency four and one ducat pieces, but no more German gold crowns and half crowns.

2. Weight:—

The gold crown weighs $22\frac{2}{9}$ thousandths of a münzpfund =500 French grammes; one half gold crown weighs $11\frac{1}{9}$ thousandths of a münzpfund, according to their fineness of $\frac{900}{1000}$ths; 50 whole crowns and 100 half crowns go to make up one münzpfund of fine gold.

One four ducat piece weighs according to the Vienna mark, which is divided into 65536 richtpfennigs in its fineness, at 23 carats 8 grains (or $\frac{986\frac{2}{3}}{1000}$ths = 3260 $\frac{100}{201}$ richtpfennigs, and one single ducat piece of equal fineness 815 $\frac{25}{201}$ richtpfennigs of the Vienna mark.

3. Fineness:—

The whole and half crowns are manufactured of the fineness of $\frac{900}{1000}$ths, the four and one ducat pieces of the fineness of 23 carats 8 grains, or $\frac{986\frac{2}{3}}{1000}$ths.

4. Dimensions:—

The diameter of a gold crown is 24 millimetres, of the half crown 20.

The diameter of a four ducat piece 39·6 millimetres.
Do. one do 19·8 do.

5. "Tolerance" or "remedy" permitted in the manufacture:—

(*a*) weight.

(*b*) fineness.

There is no so-called remedy as regards fineness or weight, but only, inasmuch as absolute accuracy cannot be maintained in the single pieces, a very small deviation of more or less is allowed, which,

(*a*) in the whole and half crowns must not amount in each piece to more than $2\frac{1}{2}$ thousandths in weight, and $\frac{3}{1000}$ in fineness; and,

(*b*) in the Austrian ducats to $\frac{1}{16}$ or at the most $\frac{1}{8}$ of a piece in 100 pieces in weight, but in fineness at the most to ½ grain=1,736,111 thousandths.

6. Limit of wear (frai) beyond which they cease to be current:—

Crowns and Imperial Austrian ducats are only received as current gold coins into the state exchequer at their full value, so long as they contain the weight of the above stated limits of wear (Passivgewicht); as soon as they no longer possess the same they are reckoned only at their actual weight and received after the deduction of ½ °/₀ for cost of coining.

This is enforced as regards crowns and half-crowns according to Art. 17 of the annexed Imperial Patent of 19th September 1857, when their decrease in weight exceeds the $2\frac{1}{2}$ thousandths passive weight and with regard to

* These regulations are not printed on account of their bulk.

Imperial ducats of which one single ducat piece weighs 60 ducat grains, when more than $\frac{3}{40}$ of a ducat grain is wanting to its weight.

7. Mint charge for coining, &c :—

For the manufacture of gold coins a seignorage of $\frac{1}{2}$ per cent is levied when the gold is delivered in fine gold bars, or at least in the fineness of the gold coins demanded. If the gold delivered is inferior to the coins demanded in exchange one gulden Austrian refined currency will be levied as a tax for refining per lb. gross weight, as follows :—

(*a*) the amount of fine gold in the coin remains entirely undiminished ; and,

(*b*) the payment is made by the person who presents the bullion to be coined by deducting the tax from the value of the gold presented.

If the state manufactures the coins it vouches to the mint for the proportionate account of the charges, and coins the coins in the legal fineness and weight, whence it arises that on the coin itself no seignorage is levied, and that it is issued with no diminution of its legal fineness and weight.

Question 8.

The coin demanded in exchange for the bullion presented is delivered according to the amount lying in the mint either on the second or third day, or in the case of large deliveries according to the time required for refining (goldscheidung) and coining the bullion.

A period for paying for the gold delivered is not fixed by law, but is limited to the shortest possible time, and the parties will be informed of this date so as to enable them to adjust their calculations.

Question 9.

The coining is executed by the State.

Question 10.

The Imperial Mint is open to the public for the purpose of coining.

Question 11.

Every deliverer of gold is at liberty to demand for gold broken up or melted down, instead of reimbursement in gold coin, refined gold in quality of at the least $\frac{997}{1000}$ fineness on payment of the charge for refining of one gulden Austrian currency for every unrefined münzpfund of the gold delivered, as is to be seen at the end of the redemption tariff of October 8, 1858, No. $\frac{5100036}{1031}$ herewith enclosed.

Question 12.

The mint regulations are contained in the four enclosures transmitted herewith.

Imperial Mint, July 14, 1868. (Signed) JOHNAN V. SCHILLER, Director.

The enclosures were as follows :—

1. German Monetary Convention of the 24th January, 1857. (A translation of this will be found at page 253.)
2. Imperial Austrian Patent of the 19th September, 1857.*
3. Convention of 13th June, 1867, by which Austria withdrew from the German Monetary Convention of the 24th January, 1867. (The Convention and French translation will be found at pp. 224, 225.)
4. Redemption tariff of 28th October 1858.*

* These documents arrived too late for translation and insertion.

PERSIA.

My Lord, Gulabek, July 29, 1868.

The information required by the International Coinage Commission, according to your Lordship's circular of the 13th of April last, is not, I apprehend, applicable to Persia, where minting is so unsatisfactorily and imperfectly executed.

The following, however, is the result of the information which I have been enabled to procure on the subject through Mr. Dickson.

1. The gold coins of this country consist of tomans, half tomans, or five keran pieces, and two keran pieces.

2. The toman should weigh 18 nokhods, or 16½ carats ; the other pieces proportionately.

3. Their fineness cannot be correctly stated ; minters pretend that the alloy does not exceed one per cent., but this assertion cannot be depended upon.

4. Persian coins are not equally shaped.

5. There is no fixed limit of wear, and even clipped coins pass according to their weight.

6. The Persian mint charges nothing for coining beyond giving for bullion an equal weight of coins.

7. There is no established rule defining the time for the delivery of coins after the receipt of the bullion. The Tehran mint could hardly coin more than 5,000 tomans a day.

8. Coining is executed by contract, and the stipulated amount is paid by the contractor to the Shah in bullion.

9. The mint is open to the public for the purpose of coinage.

10. Neither the mint nor the Government are bound to give to the public bullion in exchange for coins.

11. There are no regulations published for the administration of the mint.

In conclusion, I beg to observe that gold coins are hardly at present in circulation, the Persian currency consisting almost entirely of silver kerans and half keran pieces, and of copper pieces called "pool."

I have, &c.,

The Right Honourable The Lord Stanley, &c. &c. &c. (Signed) C. ALISON.

ARGENTINE CONFEDERATION.

Buenos Ayres, July 23, 1868.

My Lord,

In reply to your Lordship's despatch, marked "Commc.," of the 13th April last, instructing me to obtain information with regard to the gold coinage and mint regulations of this country, I have the honour to state that the Argentine Confederation has no metallic currency of its own.

A mint existed 30 or 40 years ago in the province of La Rioja, but the gold ounces coined were of such inferior quality that in all contracts a clause used to be inserted, stipulating that the payment should not be made in the gold ounces of the La Rioja mint, and they have long since disappeared from circulation.

I have, &c.,

The Lord Stanley, M.P., &c. &c. &c. (Signed) G. F. GOULD.

APPENDIX No. XXXV.

SUGGESTIONS OF POINTS FOR DISCUSSION BY THE ROYAL COMMISSIONERS ON INTERNATIONAL COINAGE.

In order to establish either—

1. A common international coinage;

Or if that should be impossible,—

2. That, at any rate, one or more coins, of universally recognized fineness and weight, should be struck in different countries, forming part of the currency of each country, and being a legal tender and common standard and measure of value in such countries:

It must be determined,—

1. Of what metal such coin should be made.
2. What proportion of alloy it should contain.
3. What weight and dimensions should be assigned to any such coin or coins.
4. What security could be afforded that the actual value of the coins struck in each country should always correspond with their denominational value.
5. What deficiency in weight should exclude a coin from circulation.
6. What authority it is necessary to establish in each country for withdrawing light coins from circulation.
7. Whether any limit should be imposed on the amount of such coins to be struck in each country.
8. Whether it would be necessary that in each country some one coin should be struck identic in fineness, weight, and dimensions, and if so, what coin would be the best common coin to adopt for the principal nations of Europe and America, regard being had to the coins already existing in the different countries.
9. Whether any and what mintage, or charge for the manufacture of the coin, should be taken.
10. Whether any and what regulations as to the subsidiary coins in each country are necessary.

If the above questions can be answered satisfactorily, it will remain to consider with reference to this country,—

1. What change would be necessary in our existing coins.
2. What effect such change would have,—
   - *a.* On the public revenue.
   - *b.* On existing contracts and engagements, public and private.
   - *c.* On current commercial transactions.
   - *d.* On the ordinary operations of trade, and the interchange of commodities.
   - *e.* On the general convenience of the public.
3. In what time a change of the existing standard coin could be effected.
4. The cost of such change if no mintage is charged.
5. What provision should be made as to the existing coins during the change.

Finally, whether the advantage of a common international coin overbalances the inconvenience of the change.

HALIFAX.

INDEX.

NOTE.—The figures in the following Index refer to the numbers of the questions in the evidence, except when a "p." precedes, in which case reference is made to the number of the page. The figures referring to the Report are in the Roman type.

ACCOUNTS:
Uniformity in the system of keeping, would be promoted by unification of coinages by tending to the introduction of the decimal system. *Lloyd*, 44–46, 62–64. *Behrens*, 214.

ACCOUNT, MONEY OF:
Uniformity of, would be very advantageous, but is not feasible, as it would involve the abandonment of the £ sterling, which would not be accepted by this country. *Behrens*, 255–264.
Uniformity of, would be afforded by an international coinage on the basis of a 10-franc unit, but not by the pound and mil system. *Levi*, 390–394.
Great importance of obtaining identity of money of account, which would eventually be secured by taking the 25-franc piece as the universal unit of account, *Bagehot*, 1982, 1988–1993, 2163–2167.
Assimilation of, must eventually take place. *Mallet*, 2531.
See also SUBSIDIARY COINS.

ALLOY:
The proportion of, in the gold coins of England, Russia, and Portugal, is $\frac{1}{12}$th. In the United States and the countries of the Convention it is $\frac{1}{10}$th. No advantage in the proportion of $\frac{1}{10}$th over $\frac{1}{12}$th. Rep. p. x.
The proportion of $\frac{1}{10}$th recommended for the international gold coins instead of the proportion of $\frac{1}{12}$th observed in the English mint. *Behrens*, 190. *Hendriks*, 305. *Field* 705, 794. *Bowring*, 2473–2476.
It has been erroneously inferred that the experiments of Mr. Hatchett are in favour of the $\frac{1}{12}$th over $\frac{1}{10}$th, but the advantage is the other way, *Hill*, 1731.

AMERICA: *See* UNITED STATES, ARGENTINE REPUBLIC, COSTA RICA, &c.

Gold coinage, &c. of, p. 345.
Is about to join the Convention of 1865. *Hendriks*, 307, 327.
Intends to coin a 10-florin piece, identical with 25 francs. *Muspratt*, 659. *Brown*, 2183; with a florin equal to 2½ francs as the unit, *ib.* 2184–2185.

BADEN:
No gold coinage, p. 243.

BAGEHOT, WALTER:
Analysis of his evidence:—A director of Stuckey's Bank in the West of England, and chief editor of the Economist newspaper, 1973, 1973*a*. This country should be forward in promoting a proper international coinage, which has become a want of the age. A proper currency should be based upon three conditions, viz., a high gold unit, a decimal division, and a single standard. None of the existing currencies satisfy all these conditions, 1974–1976. International coinage, though it would not simplify exchange transactions so much as some persons suppose, would render more intelligible quotations of prices, creating a uniform language of value, 1977, 1978. It would enable bankers to follow the course of trade. At present English bankers will not take the trouble to watch the returns of the Bank of France as they would do if there was a similarity of coin, 1979–1981. The object of most importance is to secure uniformity of money of account, and that should be obtained by adopting the 25-franc piece, decimalizing our coinage upon that basis, and proposing that other countries should do the same, 1980–1987. It is doubtful whether it would be worth while to adopt the 25-franc piece by itself, but it should be taken as the universal unit of account, with the view of founding upon it ultimately a general uniformity of money of account, whether framed upon the decimal system or not, 1988–1993. It would be a retrograde movement to adopt the French system having so low a unit as the franc as the basis for an universal currency. This country should take the lead in a movement for a monetary system, having a high gold unit which might be established by common consent in course of time, 1994–1996. The sovereign is more suitable than the franc to the large transactions of the present period, 1997–1999. The same objection would be applicable to the 5-franc piece as a unit as to the franc, 2000–2002. It is essential to act with the utmost caution in making any alteration, and to determine accurately what is the end proposed, 2003.
A unit of 25-francs would afford an opportunity for introducing the pound and mil system, which would afford a sufficient number of subsidiary coins without introducing more vulgar fractions than would enter into any other system, 2004–2012. The higher the unit, the smaller must be, as a rule, the number of figures, rendering the expression more simple and intelligible, 2013–2020. The 25-franc piece should only be adopted upon condition of its establishment as the unit of an international money of account, 2021–2023. The inconvenience of altering the sovereign would be great, and ought not to be encountered unless the 25-franc piece was made the foundation of an universal money of account, or was, at all events, adopted by France and America, 2024–2031. It would not be expedient to designate the new coin a sovereign, 2032. The old and new sovereigns could not circulate together without great confusion, 2033–2036. The existing money must be called in, and existing contracts adjusted, which could only be warranted by a great object to be gained, 2037, 2038. The old bank notes must also be called in, and new notes issued, 2039–2044. The new coin should be made legal tender throughout the countries of the Convention, 2045. The inconvenience of adopting 25 francs as the unit would no doubt be great to other countries, but when they found it was the natural language of large mercantile transactions they would recognize its advantages; nor would the people of this country be willing to change the sovereign unless for some great idea, 2046–2050. The adoption of the 25-franc piece as a unit would not make much difference to the working classes accustomed to a decimal division. It does not much matter to them what the system is, and the proposed system does not involve vulgar fractions to any great extent. The decimal system is most advantageous for calculations upon paper, but not otherwise, 2051–2065. The adoption of the proposed gold unit as a preliminary measure would be sufficient, without identity of subsidiary coins, 2066–2068. Identity of weights and measures, however desirable, is not essential

to uniformity in the modes of keeping accounts, 2069–2071. The proposal to introduce the 25-franc piece into this country should not be entertained unless it is adopted as the common unit of account, leaving the subsidiary coins to be settled afterwards, 2072, 2073.

In the event of a diminution in the amount of fine gold in a sovereign the full amount of fine gold must be made up to debtors on debts incurred before the change, subject to any mintage which the Government may impose, 2074, 2075. It is conceivable that a sovereign of less would have the same purchasing power as one of greater intrinsic value if a seignorage equivalent to the difference were charged, 2076–2078; and the same principles would apply to bushels of corn if they were the standard of value and were duly authenticated by Government, a charge being made for authenticating them, 2079–2088. This result would, of course, not be obtained in other countries where the coin circulates only as bullion, and the holder of it would lose, 2089, 2090. A seignorage or charge for verification would not increase the value of the coin as bullion, but would in exchange cause it to possess a greater value equivalent to the charge, 2091–2096. The Government are entitled to charge for the authentication if they think proper, 2097. If a seignorage is imposed fewer sovereigns would be coined, thereby giving them a greater exchangeable value. If a person pays a mintage he must receive compensation, which can only be afforded by the sovereign being able to purchase more commodities, 2098, 2099. The coinage being at present gratuitously performed by the Government, does not affect the value of the coins, 2100–2103. The loss of interest during the process of coining is at present equivalent to a small mintage, 2104. As the international coins should be made legal tender throughout the countries of the Convention, there must be a common system of coinage, involving a charge for coinage in all, 2105, 2106; but this would not occasion insuperable inconvenience, 2107–2109. In England no mintage is charged. In France, where a charge is made, fewer coins would probably be made, and they would, therefore, be more valuable, 2110–2112. The witness does not express any opinion as to the expediency of charging a mintage, 2113, 2114, 2128. So long as the Government forbid the circulation of any coin which does not bear their stamp, and make a charge for that stamp, no one would apply to have gold coined unless it was advantageous for him to do so, nor would apply for an amount which would not yield a profit to him, 2116–2120. The coin upon which a mintage has been paid would be more valuable within the country than bullion, 2121. If the sovereign is reduced from 113 to 112 grains, the latter having paid a mintage would be as valuable as the former after the old sovereign had been called in, which should be done as soon as possible, 2122–2128. The material point is whether the mintage is paid by the individual bringing the bullion to the mint; if so, it raises the value of the coin, 2129–2131. Theoretically there is no limit to the mintage which might be charged without depreciating the value of the coin, making the coin merely a token; but practically, if the charge was too high, it would promote private coining, and it would be impolitic to create a theoretical value in that manner, 2132–2136. The power of melting and exporting coin affords the best means of maintaining the value of the currency, 2137. When it is worth while to export coin, the value of the coin is only that of bullion, and, if it is worth while to incur the expense of melting it, it would be less valuable than bullion by the amount of the expense incurred in the operation, 2138–2142.

In the event of the £ being reduced to 25 francs, transactions with France would still be liable to fluctuations in the exchanges, but the calculations would be simplified, 2143–2145. It is essential to the proposed arrangement that the French and American Governments should adopt the 25-franc piece as their principal unit of account. Uniformity of subdivision is of secondary but nearly as great importance, and would no doubt follow, 2146–2149. In the event of an issue of new notes consequent upon the proposed change, no re-issue of stamps would be required, as the bankers compound for them, 2150–2151a. The manufacturers who consider that development of trade will result from assimilation of coin do not distinguish always between identity of money of account and identity of coin. The former would enable persons to understand at a glance foreign prices as expressed in newspapers, &c., and would lead to larger transactions. Simplification of coin merely would not make much difference, as the invoices would still be made out in different monies. It would only be convenient to travellers, and would simplify essentially the computation of the exchanges, 2152–2160. The 25-franc piece is recommendable as the unit, on account of its present popularity abroad, 2161, 2162. The 10-franc piece should be accepted as the unit by this country if all the other countries agreed upon it as the basis of a uniform money of account, but the 25-franc piece being a higher unit would be far preferable, 2163–2167. The change would necessitate a general re-arrangement of currencies with the same attendant inconveniences in each country, 2168–2172.

BAKER, Mr. R.
Inspector of factories, has for many years strongly urged the coining of a 4*s.*-gold piece, believing that it would promote economy and saving among the working classes. *Field*, 732.

BANK OF ENGLAND:
Correspondence in 1852 relative to the Bank charge on gold, p. 324.
The 1½*d.* per ounce charged by the, in exchanging bullion for sovereigns, is equivalent to a mint charge of 1·6 per mil. *Behrens*, 223. *Smith*, 853, 1110–1113. *Jourdan*, 1693–1697.
Explanation of the mode by which the Bank would continue to receive this 1½*d.* per oz. in the event of the proposal being adopted of reducing the £ to 25 francs, and imposing a seignorage. *Hendriks*, 305.
Immediate delivery of coin in exchange for bullion by the Bank of England, contrasted with the delay at the Paris mint. *Hendriks*, 305.
In practice individuals do not carry gold to the mint to be coined, but sell it to the Bank. *Smith*, 848–849.
It is part of the scheme for maintaining by the imposition of a seignorage the value of the sovereign when reduced to the equivalent of 25 francs that the Bank should give gold for sovereigns at the rate of 3*l.* 17*s.* 10½*d.*, as at present, and should be compensated for any loss incurred in taking worn coins out of the seignorage fund. *Smith*, 965–972, 1045–1052, 1083. *Brown*, 2238–2245, 2250, 2258–2259.
Average payments and receipts of, amount to ten millions sterling daily. *Bowring*, 2443.
Holds habitually a certain quantity of foreign coin. *Jevons*, 1781. *Mallet*, 2514.
Makes a profit by the purchase and sale of foreign coin. *Mallet*, 2544.

BANK OF FRANCE:
Accounts of, are not studied by English bankers in consequence of the difference in the monies of the two countries. *Bagehot*, 1979–1981.

BANK OF IRELAND:
Issued guinea and five-guinea notes until the close of last century. *Culley*, 1896.
Had the management, with the commissariat department, of the change of the Irish coinage in 1826. *Culley*, 1920.
Mode in which the change was effected by the Bank of Ireland upon the assimilation of English and Irish currencies. *Culley*, 1904, 1920 et seq.
Had a great circulation at that time, amounting to upwards of 6,000,000*l.* of notes, the whole of which had to be cancelled. *Culley*, 1933.
The alteration in the books, and adjustment of accounts, was a work of considerable labour, but there was no insuperable difficulty. It was not necessary to perform the alteration of all the accounts in one day, certain accounts being balanced beforehand. *Culley*, 1904–1905, 1962–1963.

BANK NOTES:
In the event of a change in the value of the currency, to prevent confusion, every bank of issue should alter the form of its notes, and should not be allowed to issue the old notes, as was done at the time of the change in the Irish coinage. *Culley*, 1921–1941.
The old bank notes must be called in, and new notes issued. *Bagehot*, 2039–2044.

BAVARIA:
Gold coinage and mint regulations of, p. 263.

BEHRENS, JACOB:
Analysis of his evidence:—Is a merchant at Bradford and Manchester, and connected with the Associated Chambers of Commerce, 83–87. Is impressed with the advantages of international coinage, 88, 89. These consist in establishing equality of communication with other countries, and in enabling prices to be stated in a manner more

generally intelligible, advantages which are more essential in consequence of the competition created by free trade. If excluded from a participation in them England would be isolated, 90, 91. The effect of the French treaty would have been much greater under an international system of coinage, 92, 93. The differences of coinages in making out invoices occasion loss by exchanges, 94. To prevent these losses it is usual to have a margin in the calculations, which is an additional hindrance to trade, 95. Under the present severe competition the slight additional per-centage thus created, equivalent to about three per cent., gives an advantage to foreigners, 96, 103–105. That loss would, by an international coinage, probably be reduced to about one and a half per cent., which would be the fluctuation of the exchanges, 106, 107. Bradford and Roubaix are competitors in the Italian market, but the former suffers a disadvantage in consequence of not participating in the uniformity of coinage which exists between France and Italy, 97–102, 163–165. Uniformity of coinage would facilitate international transactions by presenting to a foreign merchant the prices of goods in foreign countries in his own currency. He would consequently prefer sending orders to that country which offers this advantage. Competition has so much increased as to have already considerably reduced the export of manufactured to unmanufactured goods. If the slightest impediment be caused even the export of yarns will cease, 108, 163–165. The convention of 1865 is believed to have already had satisfactory results in the cases of France, Belgium, and Switzerland, 109–113. It is not likely that an international coinage would effect a saving of clerical labour, 114, 124–127. English manufacturers sometimes make up their goods in French measures to suit their customers, 115, 116.

Under an international system of coinage, loss by fluctuation of the exchanges would be diminished, and the expenses of purchasing a bill for remittance abroad might be evaded by the alternative of transmitting the coin in payment for goods supplied, 117–123. The saving thus effected would enable the merchant to sell at a cheaper rate, inasmuch as the exchange is an element in the cost, and the exchange would be limited to the expense of transmitting the coin, 128–135. This advantage of remitting coin would accrue only when the balance of trade is adverse; if the balance of trade is favourable, it would, of course, be more advantageous to buy bills, 144–146. A remittance to Luxembourg instanced where a loss would have been avoided by an international coinage, 136, 137, 139–141. International coins should be legal tender, 142. The advantages of international coinage would be obtained without an assimilation of subsidiary coinage, but would be enhanced by it, 143, 179. Commerce is mainly carried on by bills and drafts. These would not be affected by the change of the coin, but the calculation of the exchanges would be within narrower limits, the fluctuation still existing, but being confined to the cost of transmitting coin, 147–159. Facilities for remittance are much greater now than formerly, 160–161.

Witness is in favour of a multiple of the five-franc piece as the international coin, and the retention of the £ reduced by 2*d.*, 166. He formerly advocated a measure for making the sovereign a legal tender in the states forming the convention for 25 francs 25 cents, and the napoleon legal tender here for 15*s.* 10*d.*, but has abandoned that opinion in consequence of the unanimity of public opinion in favour of the 25-franc piece, 167–171. All gold coins of other countries of proper weight and fineness should be made legal tender in England. The £ should be legal tender in France for 25 francs, and the napoleon here for 16*s.*, 172–178. Small gold coins should also be made a legal tender, 179. An eight-shilling piece should be coined equivalent to 10 francs or 4 florins, to supersede the half sovereign, 180–189, 196, 197. The fact of the wear and tear of the coin being greater in one country than another would not constitute an objection to its being received as legal tender, as it would, after a certain amount of wear and tear, become legally uncurrent, 190–195.

No advantage in retaining the $\frac{1}{12}$th alloy in preference to the $\frac{1}{10}$th, 190. Objection to the 5-franc piece being coined in England on account of its inconvenient size, but it might be received in payment, though probably it would not be sent in large quantities, 196–202. The witness advocates the introduction of the decimal system of account, and subsidiary coins founded upon the mil (equivalent to about a farthing), 203–213. England should not join an international convention which extended to the subsidiary coins, 214.

A certain amount of inconvenience would be occasioned by the change, but contracts need not be disturbed. All old contracts would be fulfilled by payment either in the old coinage, or in the new coinage with 2*d.* in the £ added, 216–217. This arrangement, however, could not extend to payments below 5*s.*; and in the case of sailors' or soldiers' wages it could only be applied by monthly or quarterly accounts. 218, 219, 243. The diminution of the sovereign to equalize it to 25 francs would be more than 2*d.*, 220.

In any international arrangement England must charge a mintage, 221. Erroneous opinion that no mintage is charged in England, whereas the charge of 1½*d.* per oz. made by the Bank of England for exchanging bullion for sovereigns is tantamount to a mint charge of 1·6 per mil, which is only $\frac{8}{1000}$ths below the charge of 2 per mil made by the French mint, 222, 223. The 1½*d.* is paid to the Bank for the convenience of immediately obtaining coin in exchange for bullion. If (as is stated) in addition to the charge made by the French mint there is a delay there in the delivery of coin, such delay is equivalent to an additional charge, and that would be an important item in the negotiation between England and France, 224–239.

The trade of the country would soon accommodate itself to the change, 240. Salaries would be affected, but only in the same way as other contracts, while the receivers of wages would be benefited by the impetus given to trade, thereby creating a greater demand for labour, and a rise in wages, 241, 242. Advantage of international coin to travellers, 244–246. The old sovereign would pass, as long as it is of full weight, at 20*s.* 2*d.*, 247. There would be no necessity for a compulsory calling in of the old coinage; a permissive measure would suffice, and in five years the old sovereign might be called in without disturbance, 248–251. The name of the coin should not be altered, 252. The sovereign and the napoleon would circulate in the two countries reciprocally without confusion, 253, 254. An alteration which would afford uniformity of money of account would be preferable, but any scheme involving the abandonment of the £ would not be accepted by the country, and would, therefore, be impracticable, 255–264.

Great advantages to England from the introduction of a gold currency in foreign countries, and expediency of extending it, 265.

His scheme for an international coinage, p. 140.

BELGIUM:

Gold coinage and mint regulations of, p. 230.

The convention of 1865 has operated to the advantage of, *Behrens*, 109–112.

BOMBAY:

Prices of sovereigns in, p. 343.

BOWRING, Sir JOHN:

Analysis of his evidence:—Was chief superintendent of trade in China for several years, and is chairman of the Metric Committee of the British Association; has given considerable attention to the question of national currencies, 2434–2437. Differs altogether from views of the Paris Conference which led to the recommendation of an international coin of 25 francs, and which would have the effect of displacing the pound. Importance and value of the pound; it is universally known; its advantage in this respect over other coins. General popularity of the pound and the penny in various countries of the world, 2438–2442. Groundlessness of the objection to the pound as being too large an integer. The £ sterling represents a far greater interest in the general world of commerce than any other monetary value. Our foreign trade amounting to five hundred millions a year is paid in pounds sterling. Estimate showing that the payments and receipts in London alone amount to ten thousand millions sterling a year, the average of the daily transactions of the Bank of England and of the Clearing House respectively amounting to ten millions sterling. The introduction of the FRANC would require a 25 fold multiplication of these figures. Its introduction is impracticable. A decimalization of the £ sterling is, however, a sine quâ non for the improvement of our currency and accountancy, 2443. The franc is almost wholly unknown in China. Spanish dollars form the currency of the ports, and are reduced into Sycee silver for distribution in the interior, but the pound sterling is the money of account in transactions with foreigners, and is indispensable for that purpose, 2444—2450. In any country commodities must be purchased in the national coins, but the pound sterling is the final instrument of settlement in the great mass of commercial transactions, 2451–2456. Almost all the payments made by the American houses in China are by bills upon London; bills for large amounts on the United States would not be negotiable. The same thing occurs in Siam. When a new market is opened in the East, English merchants take

about two-thirds and Americans about one-third of the trade. The commercial interests of all theother nations are comparatively very small, 2457, 2458.

The substitution of a ten-franc piece or ducat for the £ would occasion insurmountable difficulties in the negotiation of bills on England in the East and elsewhere, 2459, 2460. Looking to the antiquity, popularity, and wide-spread influence of the pound sterling, any interference with it would be most injurious, 2461. No doubt experienced houses abroad like that of Messrs. Rothschild would purchase bills drawn in ducats instead of pounds sterling, but others would fail to appreciate the value of the new coin, which would accordingly be depreciated, 2462–2467. No new coin would have the same hold upon public opinion and confidence as the £ which is the representative of English commercial knowledge, experience, and integrity, 2468. It is not likely that foreign countries will adopt the sovereign as an international coin, and the system of the franc is inapplicable to England; at the same time the merits of international coinage are undeniable, and the decimalization of the £ would be a step in that direction. It is a matter for consideration whether any division of the £ might be so stamped as to give it a continental currency, 2469–2472. There is no objection to coin sovereigns of $\frac{9}{10}$ fineness, which should be adopted as the uniform proportion everywhere, 2473–2476. Great confusion would be caused if the £, which is the cosmopolitan standard of value, was changed, 2477–2479. Great influence of England in the discussion of these matters, 2480.

The other countries which agree to join the convention have not to encounter the same difficulties as England. American commerce is less extensive than English commerce, nor is there the same nationality attaching to the dollar as attaches to the pound sterling. The dollar, moreover, is of different value in different parts of the world, 2481–2487. Example of the different value of the Spanish and of the Mexican dollar, 2446, 2486. The desire expressed by Canada to adopt the French system of coinage is no doubt partly the result of the associations of the French Canadians, 2488. The United States dollar was first coined in 1772, prior to which period the Spanish dollar was current, but there were subsequently, and are still, different currencies in different States, 2489, 2490. The pound sterling could not be maintained at its present value if a grain of gold were abstracted from it; objection to such a proposition, 2491.

BRADFORD:
Competition of Roubaix with. *Behrens*, 97, 167. *Wrigley*, 1188, 1277.

BRAZIL:
English gold coins legal tender in, *Goschen*, 2377.

BREMEN:
No gold coinage, p. 229.

BRITISH COINAGE:
Memorandum respecting the, by the Master of the Mint, p. 228.

BROKERS:
Need no longer be employed in remission of specie abroad in the event of an international coinage, *Field*, 809–810.
The change would not make it advantageous for merchants to dispense with the intervention of bill brokers, *Jourdan*, 1621–1628.
It would not afford any material facility to bill brokers, *ib.* 1623.

BROWN, SAMUEL:
Analysis of his evidence:—Is President of the Institute of Actuaries and a Member of long standing of the International Decimal Association, 2173, 2174. Is of opinion that there should be an international coinage with a common unit, 2175–2177. Objection to the proposal of the Paris Conference to introduce international coins being multiples of 5 francs as involving the introduction of too many systems, 2178–2180. Objection to the 25-franc piece as an international coin. Advantage of a uniform coin of 10 francs as a unit of value. It would represent the same figures of account as are now used by all the nations that have joined the convention of 1865, merely requiring an alteration in the decimal point. Austria, in agreeing to coin a 25-franc piece, does not agree to make it a unit, and the nations of the convention do not profess to alter their unit of the franc, the same figures would be used by nations having either the 1 franc or the 10 francs money of account, requiring no calculation but only the removal of the decimal point. England should strike a 10-franc piece as the unit of account; it would represent an 8*s.* piece, 2181–2197. It should be introduced at first as a token, as legal tender to a limited amount, and should be divided into 100 pence. The difference between the 10-franc piece and 8*s.* would be in the same ratio as that between the 1*l.* and 25 francs, 2198–2204. The advantage of the 10-franc over the 25-franc piece is that 70,000,000 of people already use it as their unit without any change of figures, 2205. Together with a 10-franc piece, a 20-franc piece and 50-franc piece should eventually be struck as international coins, 2206, 2207. The adoption of a common unit of 10 francs should be discussed at a new conference, 2208. It should be adopted both as a coin and as the money of account, 2209. The reason for selecting 10 francs is that the nations who have the franc with a decimal subdivision could not be asked to make another change. It is a practical proposal, although in theory, if a universal system were to be for the first time constructed, it would be better to base it on a unit of 10 grammes of fine gold without alloy. M. Chevalier recommends 10 or 5 grammes nine tenths fine, 2210–2215. The adoption of the 10 franc unit would necessitate an alteration in the coinage of the United States and of all the countries not parties to the convention. It would produce the greatest results with no more inconvenience than that attending the 25-franc plan or any other, 2216–2218. England is the only country which would have to lower the unit, 2219. The scheme suggested would, in addition to the 10-franc unit, allow of a unit of 100 francs for large transactions, a coin of that amount to be called a "royal" or "imperial," 2220, 2221. Some inconvenience is inseparable from any change of this kind; the chief difficulty would be in the adjustment of accounts whilst the two systems are in existence together. All the existing coins could be used for the new unit if a certain amount is agreed to be allowed for the value of the sovereign, 2222, 2223.

Colonel Smith's plan of charging a seignorage equivalent to the reduction required to assimilate the £ to 25 francs, thereby retaining the original value of the £, would obviate the necessity for a tariff of conversion, 2224. The seignorage raises the value of the sovereign by the amount of the charge in the country where it circulates, but not in the country parties to the arrangement, where it would be only equivalent to 25 francs instead of 25 francs and 2*d.*, 2225–2227. 2*d.* in the £ is nearly one per cent., which is about equal to the average seignorage now practically charged in other countries, 2228. All the countries forming a convention should charge the same seignorage. If other countries have been hitherto charging seignorage, and we charge it for the future, both will be on the same footing. The old sovereign and the new sovereign will be of the same value, both requiring the same amount of gold, but a certain part would be retained from the latter to pay for the coining, 2229, 2230. With the limitations proposed by Colonel Smith, a half-sovereign might by the imposition of an equivalent seignorage be made equal to a sovereign, but it is not proposed that the charge should exceed the cost of coining, 2231. An old sovereign of 113 grains and a new sovereign of 112 grains would be of equal value in this country, should be equally accepted, and would have equal purchasing power, 2232–2235. Abroad, the old sovereign would be the more valuable, 2236, 2237. But it would be more convenient to remit abroad in bullion, which would be purchased at the price originally paid for the sovereigns, and which should be made compulsory on the Bank of England. In the absence of bullion, sovereigns must be melted, and any loss would be made good by Government out of the seignorage fund, 2238–2245, 2250. But there would be no loss after all the old sovereigns were melted down, when every nation has the same coin, 2246. This scheme of Colonel Smith would avoid the difficulties of effecting the change of accounts by means of a tariff, 2247. If the system of seignorage was introduced a certain amount of gold would purchase the same number of sovereigns after the change as before, but they would be lighter, although passing for the same value in this country, 2248, 2249. In France a mintage is charged, and there is no necessity for any arrangement for recovering the bar gold, 2250–2254. The proposal that the value of the new sovereigns should be kept up by making it compulsory upon the Bank to give the original weight of bullion for them would not make it necessary for the Bank to keep a greater store of bullion than at present. Whenever bullion was required for foreign transactions and the supply was insufficient, they would melt down sovereigns, and the loss would be made up out of the seignorage fund, 2251–2269. It would not be advisable that the Bank should pay bullion for the foreign international coins, and the adoption of a similar arrangement in other countries must be a matter for the convenience of each nation, 2270–2274. This would not drive the sovereigns out of circulation, 2275–

2277. Within the convention the export of the international coins would supersede that of bullion, 2278–2283.
The convenience of a decimal subdivision of the 10-franc piece equal to 8*s.*, and which might be called a "victoria," would soon reconcile people to it as a unit, and prove its advantages over the present system of £ *s. d.*, 2284–2286. The "victoria" should not be made legal tender until it had worked its way into popular estimation, 2287, 2288. The witness hands in a scheme explaining how the coinage founded upon the 10-franc piece would be interchangeable with the existing coinage, 2289, 2290.

CALCULATIONS:
Difficulty and errors caused by the calculations requisite in international transactions owing to diversity of coins, weights, and measures. *Levi*, 366. *Field*, 752–756. *Wrigley*, 1275–1276.
Calculations would be facilitated by uniformity of coinage. *Manby*, 439. *Muspratt*, 542–575. *Field*, 701. *Mallet*, 2518. And even by the creation of a harmony or analogy between the coinages. *Field*, 718–719.
To avoid loss arising from errors in calculation, merchants add a margin to their prices, which is a loss to the customer and an impediment to trade. *Behrens*, 95. *Field*, 756. *Jeffery, J. R.*, 1176. *Wrigley*, 1276.
So far as international coinage facilitates calculations, it would lessen the cost of our imports. *Muspratt*, 623.
The perfection of calculation produced by uniformity of coinage will enable merchants more easily to ascertain the cheapest and the dearest markets. *Muspratt*, 631–634.
Calculations would not be simplified to mercantile men by the mere adoption of the 25-franc piece. *Manby*, 470, 519–520.

CALCUTTA:
Prices of sovereigns in, p. 343.

CANADA:
Bill for regulation of the currency of, p. 309.
Instance of the amount of labour required for computing the value of articles imported into, where the Halifax currency although legally abolished is still used as the money of account in the retail trade. *Field*, 754–756.

CANDY, CHARLES:
Analysis of his evidence:—A merchant dealing principally in silks, and having extensive transaction with France, 1588, 1592. Experiences no inconvenience from the want of an international coinage, as he employs a number of specially qualified clerks, but thinks that uniformity would be advantageous to others. It would, therefore, operate to his disadvantage, by facilitating competition, and the public would gain accordingly, 1593–1599. Believes that the recommendations of the Paris Conference have not been discussed by the Lyons Chamber of Commerce, 1600–1602. The proposed change would benefit retail but not wholesale dealers, 1603–1606. If it were combined with the decimal calculation and with French measures and weights it would be advantageous to the country, 1607–1610.

CENTIME:
The term has not been universally adopted in France. *Bowring*, 2442.

CHAMBERS OF COMMERCE:
Are in favour of international coinage. *Lloyd*, 3–4.
The consideration of the subject by, arose not from inconveniences experienced, but in consequence of the Paris Conference. *Wrigley*, 1239–1242.

CHANGERS, MONEY:
Would, in the case of the smaller dealers, lose by the introduction of international coinage. *Muspratt*, 551. *Field*, 801.
The number of money changers and their employés in Europe, calculated, according to Mr. Ruggles, at 5,000. If only 2,000 of these earn 1,000 dollars a year, a loss, in commission money, falls upon the public of 400,000*l.* a year. *Lloyd*, 7.

CHEVALIER, M. MICHEL:
Recommends a monetary system founded upon a gold unit of 10 or 5 grammes $\frac{9}{10}$ fine. *Brown*, 2215.
Opinion of, upon seignorage, p. 324.

CHINA:
Was not represented at the Paris Conference. *Levi*, 420–421.
Statement of Mr. Ruggles that China proposes to coin gold money according to the French system, *ib.* 423–424.
The franc is almost unknown in China. Spanish dollars form the currency of the ports, and are reduced into sycee silver for distribution in the interior, but the pound sterling, although it has been found impossible to introduce it into circulation, is the money of account in transactions with foreign countries, and is indispensable for that purpose. *Bowring*, 2444–2450.
Almost all the payments made by the American houses in China are by bills upon London; bills for large amounts on the United States would not be negotiable, *ib.* 2457.
The national currency of China is the ounce of pure silver; the ounce is generally known as the *tael*, and is divided into 1,000 parts, *ib.* 2446. Facility of calculation by Chinese accountants, *ib.* 2446. The French have scarcely any trade in China, *ib.* 2449.

CLERKS:
Possessing special knowledge are at present employed upon the calculations arising out of the difference of coinages. *Manby*, 438, 504.
At Liverpool foreign clerks are so employed. *Muspratt*, 543, 596–600.
The diminution of labour resulting from international coinage would not be sufficient to allow of a reduction in the number of clerks employed by manufacturers. *Behrens*, 114, 126.
Clerical labour will be saved by international coinage, but not to a considerable extent. *Muspratt*, 624.
International coinage will enable merchants to turn a large part of their clerks' labour to other objects. *Field*, 701. And to dispense with some, *ib.* 756.

COIN:
1. Exportation of.
2. Effect of seignorage upon the value of.

1. *Exportation of Coin.*
Convenience and saving would be caused in making payments abroad by the direct transmission of the international coins. *Behrens*, 121. *Field*, 809–810, *Jevons*, 1759–1762.
Transmission of gold coin abroad does already take place in large quantities. Statement of British and foreign gold coin exported in 1866. *Jevons*, 1781.
English gold coin is exported as coin to some few countries, such as Egypt and Brazil, but generally speaking its exportable value is only that of bullion. *Goschen*, 2342–2344.

2. *Effect of seignorage upon the value of coin.*
The value of a coin is enhanced by the amount of the mint charge. *Hendriks*, 307, 355. *Smith*, 855, 890 et seq. *Jourdan*, 1689–1692. *Bagehot*, 2076–2078. *Brown*, 2224 et. seq. But this enhancement of value is confined to the country or countries where it circulates as legal tender. *Hendriks*, 307. *Smith*, 892 et seq. *Jourdan*, 1701–1704. *Bagehot*, 2089–2090.
The value of a coin in exchange in this country might be raised by a mint charge, but the witness is not prepared to assert that such would be the case. *Newmarch*, 1461–1480.
A seignorage may add to the value of a coin at the moment it is coined, but not permanently. *Goschen*, 2331.
See also SEIGNORAGE.

COINAGE:
The British, memorandum respecting, p. 228.
Statement of Mr. Ruggles as to the total amount of gold coinage in Great Britain, France, and the United States. *Muspratt*, 678.
A considerable per-centage of the gold coinage at present is light. *Newmarch*, 1405–1407. *Jevons*, 1738–1740, 1796, 1797.
Amount of gold coinage at the royal mint for ten years. *Hill*, 1731.
Expense of gold coinage in England, *ib.* 1731.

COINS:
Table of the principal gold, p. 227.

COLOMBIA, UNITED STATES OF:
Gold coinage, &c. of, p. 345.

COMPENSATION:
To creditors must be made in the event of a reduction of the pound sterling to the value of 25 francs. 2*d.* in

COMPENSATION—*cont.*
the £ should be added to all payments in the new currency of obligations contracted in the old currency. —Rep. xiii. xiv. *Lloyd*, 13. *Behrens*, 216. *Field*, 706–708. *Wrigley*, 1324–1325. *Jevons*, 1743–1744.
It would be difficult to give compensation in the case of small payments, such as bridge tolls or payments below 5*s*. *Lloyd*, 14. *Field*, 709. *Newmarch*, 1365.
No injustice would be done if full compensation was given, but the labour would be very great, *ib*. 1438.
The adjustment of obligations might be settled by Act of Parliament. *Lloyd*, 13. *Mallet*, 2519. *Jevons*, 1787–1789.
It is worthy of consideration whether a tariff might not be entirely dispensed with. There are precedents for the two courses of making or dispensing with compensation. The cases of Holland, Prussia, and Spain, in which changes in the coinage were made without a tariff of conversion. Cases of France and Greece in which tariffs of conversion were provided. *Hendriks*, 350–352. —Rep. xiv. xv.
Could be given to railway companies for any loss by a reduction of the passengers duty. *Swarbrick*, 2303. But the companies would be unwilling to compensate themselves by raising their fares, *ib*. 2306, 2311–2312
The necessity for compensation would be avoided if the value of the reduced coin is restored by the imposition of a mintage. *Smith*, 934, 1027. *Brown*, 2247.
See also CONTRACTS.

COMPETITION:
Has been so stimulated by free trade, that if England does not obtain the same facilities as those acquired by the countries that have joined the monetary union English manufacturers will be beaten in neutral markets. *Behrens*, 90. *Wrigley*, 1243–1246. Severity of the competition to which English trade is at present exposed, *ib*. 96, 97, 108, 163. The English export trade is losing as compared with other countries. *Field*, 706, 739–742.
The increase of competition makes it hazardous to allow any advantage to competitors. Competition of Belgium, Germany, and France with England. *Wrigley*, 1188–1191, 1278–1279.
Tends to bring the consumer and producer into more immediate relations, *ib*. 1191.
Of Roubaix with Bradford. *Behrens*, 97, 167. *Wrigley*, 1188, 1277.

CONFERENCE, INTERNATIONAL MONETARY:

CREDITORS: *See* COMPENSATION. CONTRACTS.

CULLEY, ROBERT:
Analysis of his evidence:—A director and formerly an officer of the Bank of Ireland, 1886, 1887. Previously to the assimilation of the English and Irish currencies, the pound, shilling, and 1*d*. were different in the two countries. The difference originated in 1725 upon the occasion of a new copper coinage for Ireland which was made deficient in value, viz., 13*d*. to the shilling, the Irish pound being equal to 18*s*. 5½*d*. English, a difference of 8⅓ per cent. This was reckoned the par, but other causes led to fluctuation of the Exchanges, so that the Exchange against Ireland has been as high as 18⅓ premium 1887–1895. The Bank of Ireland issued guinea and five-guinea notes until the close of last century, when one pound (Irish) notes became the chief currency. There were few shillings, but 10*d*. and 5*d*. bank tokens were issued 1896, 1897. The pound notes were preferred to English sovereigns, 1898.
As a first step towards assimilation, the Act. 57 Geo. III. c. 48. enabled mutual transfer of Government funds to be made at the fixed rate of 100*l*. English to 108*l*. 6*s*. 8*d*. Irish, and soon after the Bank of Ireland contracted its circulation, and undertook to discount English bills and to draw on London at short dates, 1899–1901. At that time the relations in regard to currency between England and Ireland were equivalent to the present relations between London and Vienna, 1902, 1903. Mode in which the change was effected. The alteration of books, accounts, &c., was laborious, but there was no insuperable difficulty, 1904, 1905. Some hardship did fall upon labourers, artizans, and persons with small fixed incomes, but inconvenience ceased to be felt after a twelvemonth, and bankers felt the advantage of the change after a month, 1906–1908, 1962; The high premium on the exchange between 1812 and 1815 was mainly owing to the excessive issue and consequent depreciation of Irish bank notes, partly sometimes to the balance of trade. Instance of the exchange against Ireland being 19 per cent., 1909–1918. Bills were never drawn at a shorter date than seven days, 1919. The Bank of Ireland, aided by the Commissariat Department, had the management of the change; the old Irish pound note was paid by 18*s*. 5½*d*. which before was paid in 20*s*. Irish, 1920–1926. The only inconvenience was that bank clerks and tellers lost money, which was, however, made up to them by the bank, 1927. The new bank notes were distinguishable from the old notes by being issued in a new form, and the same course should be pursued in England if the sovereign is reduced by 2*d*., 1928–1939. Bankers should not, after a certain day, be allowed to re-issue the old notes, 1940.
The proposed alteration in England would be on a larger scale than that in Ireland as regards the number of transactions, but not as regards the alteration in value, 1941. Abstractedly, the standard of value before 1826 was the same in Ireland as in England, viz., the English pound, but accounts were kept in Irish pounds of 18*s*. 5½*d* English each. The guinea circulated in Ireland prior to 1797, passing for 1*l*. 2*s*. 9*d*. Sir R. Griffiths' statement as to the confusion caused by the mixed currency in Ireland before 1826. Until the 10*d*. and 5*d*. pieces were struck, shopkeepers issued notes for sums less than 1*l*. which were legal tender. There were no Irish shillings (10*d*. pieces being used as change) and no Irish gold coin, 1942–1958, 1964, 1965. The effect of the change was similar on a smaller scale to that which the suggested alteration in the £ would occasion as the pound was completely changed, 1955. The change in Ireland necessitated the alteration of all contracts, 1959–1961. The management of the change caused considerable labour to the Bank of Ireland, but it was not necessary to perform the alteration of all the balances in one day, certain accounts were balanced beforehand, 1962, 1963. Accounts of every description were altered, 1967, 1968. Ample notice was given of the period after which the old coins were to become illegal tender, 1969. The amount of new coin required was nearly 1,000,000*l*. in silver, which was distributed through the country, with the aid of the Commissariat Department; a

much longer time would of course be required to provide new sovereigns in the case of a change in this country, 1970–1972.

Currencies:
A great general improvement in the correctness of the, would result from an international coinage, which is an object of much importance. *Jevons*, 1735, 1765–1766.

Decimal System:
The introduction of the, into England, would be facilitated by the adoption of the 25-franc piece. *Lloyd*, 46, 54. *Jevons*, 1735. Opinion in favour of a decimal coinage, *ib.* 63. *Behrens*, 203–214. *Hendriks*, 309. *Muspratt*, 579, 681. *Bagehot*, 1976.
The recognition of the advantage of a decimal system of accounts is growing very much among the commercial community. *Lloyd*, 54. Liverpool merchants strongly in favour of. *Muspratt*, 582–583.
Instance of the facility with which engineering workmen have learned to work by decimals. *Manby*, 442–445.
The United States have a decimal coinage, but some of their quotaions of prices are in vulgar fractions. *Levi*, 402–404. *Muspratt*, 683, 692.
The English coinage should not be decimalized until we can see what unit really proves the most convenient. *Jevons*, 1839–1843.
Superiority of decimals for calculations upon paper; but they are not of so much importance to the working classes, who calculate in their heads. *Bagehot*, 2054–2065.
Advantage of a decimal system of weights and measures, *ib.* 1844.
Resolutions of the International Decimal Association, of the Metric Committee of the British Association, and of the Conference at the Palais d'Industrie, in favour of the decimal system. *Levi*, 427.

Denmark:
Gold coinage and mint regulations of, p. 234.

Dime:
The expression has never been popularized in America. *Bowring*, 2442.

Dollar:
Advantage of international coins of the value of a dollar or its multiples. *Manby*, 528–529.
Convenience of the gold dollar of America. *Field*, 732.
General currency of the Spanish, in the East. It even circulated for a time in this country. *Jevons*, 1735.
The amount of commercial transactions represented by the, much less than that represented by the pound sterling. *Bowring* 2482.
Is not surrounded by the same spirit of nationality as the pound sterling, *ib.* 2483.
Difference in the value of the, in different parts of the world, *ib.* 2446, 2485–2486.
The Spanish, was current in the United States down to 1772, when the national dollar was coined, *ib.* 2489.

Education:
Time would be economized in, by uniformity of coinage. *Hendriks*, 299. *Levi*, 366.
Superior education of the working classes abroad. *Wrigley*, 1249, 1258–1259.
System of, at Roubaix and in Germany, *ib.*, 1282–1284.

Eight-Shilling Piece:
Introduction of an, advocated, equivalent to 10 francs. *Behrens*, 180–187, 196–197.

Engineers:
Difficulty in converting specifications of foreign, into English denominations, and vice versâ. *Manby*, 435–438.
Facility with which working, have learned to work by decimals, *ib.* 442.

Exchanges:
Would be facilitated by international coinage, calculations being simplified by the reduction of the par of exchange to a simple amount, and the elimination of the fraction, e.g., the £=25 francs, instead of 25 francs 20 cents. *Lloyd*, 7, 41, 47, 48. *Behrens*, 94–95, 135, 156–158. *Hendriks*, 272–274. *Muspratt*, 538, 547–549, 573, 590, 664. *Field*, 717, 786–787. *Jourdan*, 1617–1619, 1653. *Jevons*, 1735. *Bagehot*, 2158. *Mallet*, 2518.
Fluctuations of the exchanges would still remain, but would be limited to the cost of transmitting coin. *Lloyd*, 42. *Behrens*, 122, 135, 156. *Field*, 701, 717, 720–722, 788. *Jourdan*, 1639, 1653, 1661–1664. *Jevons*, 1762.
The calculation of the rates of exchange would not be materially facilitated. *Jourdan*, 1620. Exchange transactions would not be simplified to the degree which many people suppose. *Bagehot*, 1977.
The exchange in the case of three months' bills is calculated to include interest until maturity, as well as the expense of transmitting the coin. The interchange between one coin and another would be represented by a sight exchange. The difference between a sight exchange and a three months, exchange represents the interest only, so that similarity of coins would limit the difference of exchange to the expense of transmitting the coin. The length of the bill is an important element in the calculation of the exchange. *Jourdan*, 1635–1646.
The exchange with France ranges at present from 25 francs to 25 francs 35 centimes, but when silver was the principal metal in circulation in France it was never below 25·40, and was often at 25·60, *ib.* 1654. Accurate information on the subject of exchange is pretty general, except in the case of places not frequently drawn upon, *ib.* 1686.
Limits of variation in the course of exchange, p. 344.

Exhibition:
Report of the International Committee of the Universal Exhibition of 1867 respecting uniformity of coinage, p. 205.
Inconvenience experienced in the case of international Exhibitions from the want of an uniform coinage. *Levi*, 366.
The desire for uniformity of weights, measures, and monies originated in the International Exhibition of 1851. *Newmarch*, 1518–1520.

Farthing:
Is in practical disuse in commercial accountancy. *Bowring*, 2443.

Field, Alfred:
Analysis of his evidence:—A merchant, trading chiefly with the United States and Canada, and Chairman of the Birmingham Chamber of Commerce, 696–698. Has a decided opinion in favour of international coinage, 699, 700. Advantage to travellers, which is the least consideration. Facility and economy in making remittances. Great saving of clerical labour. Calculation of prices facilitated. Instance of an invoice sent to New York, comprising numerous items requiring an equal number of complicated calculations before the customer can commit himself to order the goods. If the dollar were assimilated to 4*s.*, making the 1*s.* equal to a ¼-dollar, prices would be easily apprehended. The obstacle which at present exists in understanding prices is equivalent to a considerable customs duty, and countries in convention with each other would have an advantage over this country if England holds aloof. From practical knowledge, the witness affirms that an assimilation of the dollar and 4*s.* would cause more goods to be ordered between England and America, 701, 702. The reduction of the £ and the American half-eagle to 25-francs advocated as the best arrangement, all conditions considered; but a second international gold coin should also be struck, viz., a 4*s.* piece, and the gold coins of the respective countries should be legal tender throughout the countries of the convention. All the international coins should be of the same fineness, viz., with $\frac{1}{10}$th alloy, and should be marked as being international money, 703–705, 795. Objection consists in the trouble of settling previous contracts, but the advantages of the change outweigh the temporary disadvantages, and the result will be a large pecuniary gain. England, as exporter of manufactures, is losing ground as compared with other countries, and to maintain her position must not decline the facilities of the proposed system, 706.
When the change occurs, it must be enacted that old contracts are to be satisfied in the new coin with an addition of 2*d.* in the £. In the adjustment of business transactions the difficulties will be trivial. They will be greater in the case of settlements and mortgages, &c., but trifling compared to the advantages derived by the country generally, 707. In small transactions the 2*d.* in the £ will probably not be exacted. Prices will regulate themselves. A temporary injustice may occur in the matter of wages which will soon be corrected by the operation of supply and demand, 708–711. Weekly wages are paid in gold to a great extent, but the

reduction in the value of the £ would affect its fractional parts, 713, 714. The constant fluctuation of prices will prevent the reduction being felt in future transactions, so that the new system will adjust itself without any injustice 709, 712, 715, 716. Advantage of the system in respect of remittances, the variation of the exchange being limited to the cost of conveying coin. The charge made by dealers in bills of exchange as compensation for the complication of accounts and calculations would be avoided, 717.

By creating an analogy or harmony between the coinages, i. e., £ = 25 francs, and 4*s.* = 5 francs, calculations would be simplified, 718, 719. The same difficulty and loss of time which exist now in calculating the cost of transmission and other incidental charges on the transmission of goods would remain, but these can be estimated by experience at a per-centage, while the principal difficulty of computing prices would be removed. The exchange calculations between the United States and England are complicated and difficult, affecting a vast number of small transactions, 720–722. The measures and weights between the United States and England are mainly the same. The lb. is identical in both countries; a more complete assimilation of weights and measures would afford similar advantages to those expected from uniform coinage, 723–727. There are no longer any state coinages in the United States, or any but the government coinage, 728–730. The only difficulty which a traveller in the United States might experience would be the different phraseology in different states as regards coins, 731.

Advantages of a 4*s.* gold piece; its extreme convenience. It obviates the necessity of keeping a large quantity of change. The popular objection as to its smallness existed in the United States when first the gold dollar was introduced, but it soon acquired a general preference. In order to arrive at a practical result, the decimal question should be kept separate from that of international coinage; but the adoption of the 25 and 5 franc pieces would facilitate the future introduction of a decimal currency. A further advantage of the small gold piece is that it will promote economy and saving on the part of the working classes, who never break a gold piece if they can help it. Strong opinion upon this point of Mr. R. Baker, Inspector of Factories. The 4*s.* piece, like the sovereign, should be made legal tender throughout the countries joining the convention, 732. The witness is unwilling to express an opinion as to other gold coins being struck, except the 25 and 5 franc pieces, or as to the retention of the half-sovereign and quarter dollar, 733–736.

If other countries joined in a monetary union to the exclusion of England the existing tendency to loss of trade would increase; on the other hand, England joining in the union would participate in the advantages to a greater extent than the other countries, inasmuch as her trade is larger, 737, 776–778. It would probably be found that the convention of 1865 has actually operated to the prejudice of England, 738. At the present time other manufacturing countries are progressing more than England. Instance of Prussia, the United States, and, probably, France, 739, 740. English exports are more of raw material and half-manufactured articles, and less of complete manufactured articles, than formerly, 741. Progress of other countries is attributable to the greater intelligence and better education of their workmen, and not to the difference in the rate of wages, which, although lower in Prussia, are much higher in the United States than in England, 742–745. The United States would benefit by international coinage even with the present depreciated paper currency. Prices are largely calculated in gold, and can be readily converted into greenbacks, 746, 747. Great increase of demand for English goods in the United States anticipated if the coinages are assimilated, 748, 749. Saving of time to merchants, 750, 751. The advantage of simplifying the calculation of prices insisted on. Effect on the numerous detail transactions in the trade in manufactured articles instanced, 752, 753. Time and labour bestowed upon calculations add largely to the cost of goods. Instance of the amount of labour required for computing the value of articles imported into Canada, where the Halifax currency of 16*s.* to the £, although legally abolished, is still used as the money of account in the retail trade, and the American currency in the wholesale trade. Instance of a customer at Montreal who keeps additional clerks in consequence of the complexity of the calculations, and to prevent loss by mistakes adds a margin to the price, all of which must be paid for by the purchaser, 754–756, 764–766. A merchant prefers to purchase commodities quoted in his own currency, 467, 468.

The diminution of the £ by 2*d.* would easily be met in he case of the national expenditure by a pro rata increase o the taxation. But the increase would only be denominational, not real, and the gradual growth of the revenue, and the constant alteration of prices, would soon remove the deficiency, 757–763. A charge for mintage, which would probably be made by reducing the amount of fine gold in the coin, would pro tanto diminish the purchasing value of the sovereign, 769. It would not be material that the French should coin a 25-franc piece largely, 770. Advantage of the 4-shilling piece as the basis for a decimal currency by altering 96 halfpence into 100 halfpence = 4*s.*; then the florin would = a ½ dollar, and the shilling = a ¼ dollar, and eventually the 4*s.* or dollar might be accepted as the unit, 771. The old sovereign should be withdrawn upon the introduction of the new one, as soon as possible, 772. The change need involve no inconvenience as regards the silver coinage, 773–775.

Unless an English house has a branch house in New York, to do the business of getting goods out and selling them in dollars and cents, it is the practice for orders to be taken in England in sterling money, and not in American currency, 779–785. Assimilation of coinage would limit the variation of the exchanges to the cost of transmitting coin plus the interest, and would render them more intelligible, 786–789. Clever clerks are employed at high salaries to perform the calculations; but, apart from the expense of employing them, the trouble entailed is in itself an impediment to trade, 790, 791. Reason for adopting the 25-franc scheme in preference to a perfect decimal currency, viz., the possibility of its being carried out at once, 792, 793. Opinion in favour of an uniform mintage and $\frac{1}{10}$th alloy, 794. Advantage of making the international coins legal tender, 795–800. The money exchange offices abroad would not then be required, and the large exchange houses would turn their capital and labour into more productive channels, 801. Whenever it was not advantageous to purchase bills, merchants would remit the international coins direct, only employing exchange dealers when the price of the exchange remained within the limit of the expense of transmitting coin. Personal experience of the witness quoted as to remittance of coin from New York to Liverpool, only having to pay brokerage for its purchase; with international coins not even this charge would be incurred, 802–810.

Belief that one or two international coins alone would afford the main advantages sought for, 811, 812. Reasons why, although an entire assimilation of coinage is very desirable, as well as uniformity of weights and measures, the proposed change should not be mixed up with those considerations; an entire change is not practicable at present, however beneficial. The present scheme, which in itself is greatly worth attaining, may be adopted at once, and would be a step towards the attainment of the other objects, 813–839.

FIFTEEN-FRANC PIECE:
Consideration of, as an international coin, by the Paris Conference, pp. 182, 192.

FIVE-FRANC PIECE, gold:
Recommended as the common unit by the Paris Conference, pp. 180, 181, 191.
Is objectionable on account of its size. *Behrens*, 198–201.
Advantage of having international coins of the value of five francs or multiples of that sum. *Manby*, 528–529.

FLORIN:
Austria proposes to take the, equal to 2½ francs, as unit. *Brown*, 2183.

FOUR-SHILLING PIECE:
Advantages of a, on account of its convenience; opinion of Mr. Baker that it would promote habits of thrift among the working classes. *Field*, 732.
It should be adopted as the unit, with a decimal subdivision, *ib.* 771.

FRANC:
The, was substituted for the livre by the French Republic; a tariff was constructed in consequence of the new *franc* being more valuable than the *livre*, the former being converted at the rate of one livre and three deniers, and the livre into the franc at the rate of ·99 for one livre. *Hendriks*, 350.
The, is too low a unit for commercial purposes; it would be a monetary misfortune if it were universally adopted. *Bagehot*, 1994. It is older than the sovereign, but the latter, being a high gold unit, is much more convenient, *ib.* 1997. Its abandonment as a unit recommended by the Paris Conference, *ib.* 2001.

Is unknown in a great part of the world. Upon the occasion of the French expedition to China they brought credits on Paris, but could do nothing with the franc on any Chinese exchange. The expression *franc* is even now not universally employed in France, the term *livre* being retained. *Bowring*, 2443.
Has made great progress in Europe, *ib.* 2443.
Is almost unknown in eastern countries, *ib.* 2444.
As integer for English accounts, is far too small, *ib.* 2470.

Standard recommended by the Paris conference, Rep. x. and pp. 169–172, 191.
Tables of imports and exports of, in United Kingdom, N.S. Wales, Victoria, France, United States, and Russia, pp. 341, 342.
Great advantages to England from the introduction of a gold currency in foreign countries, and expedience of extending it. *Behrens*, 265.
Advantages of a gold standard for India, which has been recommended by Sir W. Mansfield's commission. *Hendriks*, 292–298.
Coinage in England, France, and the United States, Statement of Mr. Ruggles as to the amount of. *Muspratt*, 678.
Amount of diminution in the fine gold in the sovereign required to assimilate the pound to 25 francs. *Hendriks*, 305. *Smith*, 865–872.
Coinage for ten years in England. *Hill*, 1731. *See also* p. 338.
A high gold unit is one of the conditions of a proper currency. *Bagehot*, 1976.
Is applicable to other purposes besides for coinage, and one of its advantages as a standard of value is that it has an intrinsic value beyond its value as coin. *Goschen*, 2415–2421.
Whether a depreciation in the value of gold has already taken place is a matter of discussion, but of exceeding probability. *Mallet*, 2520, 2525.
See also Alloy, Coinage, Coins, Light Sovereigns, Recoinage, Seignorage, Unit, &c.

Goschen, Right Hon. George Joachim:
Analysis of his evidence:—Has considered the proposal for reducing the £ to the value of 25 francs, and also the effect of seignorage upon the value of the coin, 2321–2327—does not think that a seignorage charge equivalent to the reduction in the intrinsic value of the sovereign would maintain the original value of the coin, 2328. A debt of 1*l.* of the old currency must be discharged by 1*l.* 0*s.* 2*d.* in the new currency; the imposition of a seignorage of 2*d.* would not justly obviate the necessity for making the compensation to the creditor, 2329, 2330. A seignorage may add to the value of the coin at the moment when the bar gold, for the purposes of the holder, is coined, but it is an error to suppose that it gives a permanently increased value. The fact that coin is melted down into bullion proves that bullion is at certain times more valuable than coin; thus the value given to the coin by minting varies according to the demand for coin, 2331, 2332. The melting of coin is generally caused by a demand for bullion for exportation. Bullion is in many cases preferable to coin for export, and it is doubtful whether an extension of the circulation of the sovereign would lead to a system of exporting coin instead of bar gold. An extension of the system of bank notes and clearing houses in other countries, by lessening the demand for coin, would create a redundancy of it, and the additional value given to it arbitrarily by seignorage would be lost, 2334. The same principle would equally apply in a modified degree to a seignorage merely covering the cost of manufacture, 2335. Bar gold is not always procurable for export in sufficient quantities, and it is an advantage of a coin representing an intrinsic value that the holder need not consider whether for payment of a foreign debt he is able to buy gold bar or not, for he is able to melt his coin down, or to tender it as so much gold. If any arrangement is attempted by which a certain amount of gold in bar can be purchased with a smaller amount of gold in coin, the principle of the absolute convertibility of the coin is shaken, and the result is a depreciated coin, 2336–2338. A redundancy of coin is created by individuals carrying their bullion to be coined upon an over calculation of the demand for coin, and is reduced by the export of the superfluous quantity, 2339–2341. Coin is exported as coin to some countries, such as Egypt and Brazil, where the sovereign is current, but generally speaking its exportable value is only that of bullion, 2342–2344. In the event of a redundancy of international coins, the superabundant coins must either be melted or exported to countries outside the convention, where their value would only be that of bullion, otherwise there would be a general rise of prices; but this rise would not necessarily vary the relation between coined and uncoined gold, which ought to be one of convertibility from one into the other, 2345, 2346. The result of these opinions is that a creditor could not justly be paid a debt incurred in the old currency in coins of a reduced intrinsic value under the proposed new currency. Their value would obviously be lessened, because the new coin when melted will not produce to the holder the same amount of gold as the old coin, and he must either submit to the loss or buy bar gold, which he may not be able to obtain at all, or only at a higher price, 2347. A redundancy of coin destroys the artificial or arbitrary additional value caused by seignorage, which makes it pro tanto a token, 2348–2352. This redundancy, which may proceed from various causes, would be more likely to arise in the wider area of the convention. The extension of the banking system in England renders a less amount of coin necessary than in other countries in proportion to transactions, and if the circulation of English sovereigns is extended abroad, there will probably be greater fluctuations in the amount of coin in circulation in this country as well as abroad than at present, 2354.

Objection to the proposal that the gold coin of lesser value shall within the convention compulsorily purchase the same amount of bullion as the present gold coin. The system of the present circulation, which makes sovereigns as well as bar gold a commodity, would be entirely changed, 2355, 2356. The $\frac{1}{8}$th per cent. deducted by the Bank is a seignorage, and no doubt has pro tanto the effects of a seignorage. It is however so small as to be almost inappreciable, 2357. An artificial value given to gold coin by a seignorage within the convention would lead to its export beyond the convention, 2358. Seignorage may be levied by a direct charge on the individual, or by distributing the charge over the coins, making them of a smaller value. The above opinions are expressed upon the latter supposition. If the charge is made direct upon the individual, the coin has its full value where it circulates, and the objections to a coin which is not convertible into bar gold for the full amount are removed, 2359. The English Mint is a free mint, the 1$\frac{1}{2}$*d.* per ounce charged by the Bank being only a practical measure to counterbalance the interest which would be lost by any person taking his gold to the Mint to have it turned into coin, 2360–2365. There is a great deal to be said on both sides as to the reasons for maintaining the system of free mintage, 2366. The constant liability to coin gold, which may be at once exported and melted, entails an expense upon the country, and the Royal Mint coins for some foreign countries free of charge. In the case of an international coinage, if this country alone coined gratis, we should have to coin for all the other countries. It would therefore be necessary to make arrangements as to the terms upon which the various governments should coin, 2367–2373. There does not seem to be any great disadvantage at present in coining for such countries as choose to use English coin, 2374. The wider the area over which a coinage circulates the more must the wear and tear be increased; and the fact of English gold coin being legal tender in Portugal and Brazil tends to increase our expenditure in coining, 2375–2379. International coinage would not prevent the melting of coin into bar gold, because gold would still have other uses besides its use as coin, and these uses would increase or decrease according to the fluctuation of the amount of coin in circulation, 2380–2384.

Either a coin must be simply a piece of gold, identical in value to the same amount of gold in another shape, or gold

ceases practically to be the circulation. If the circulation is to be represented by the gold plus a certain arbitrary amount, then the whole system of a convertible currency is changed, and gold is no longer the standard of value, 2385. It would not be necessary to convert the international coins into bar for interchange between the countries of the convention, 2386, 2387. The argument that an equal seignorage levied throughout the world would not diminish the gold value of our coin is not correct; for even, on the hypothesis of an universal coin and identical seignorage, gold would still remain a commodity which could not be procured at the same price, 2388. The supposition of a universal coinage would simply remove the objection founded on the injustice which is done to a man by diminishing his ability to discharge his debts beyond the area of the convention by bullion. Of course the wider the area the less will be the practical inconveniences to the holders of the coin, 2389. If the convertibility of the coin is destroyed by the addition to it of a value beyond that of the gold unit, it becomes a token attended with all the disadvantages of tokens; and the reason which led to the adoption of gold as the standard of value no longer exists, viz., that it is a commodity as well as a token of value, 2390, 2391. The additional quantity of gold imported from Australia and California diminishes pro tanto the relative value of gold, and in the same way, if less gold is coined into an equal quantity of coin, thereby releasing the remainder which would also be converted into coin, the relative value of the £ would be diminished, 2392–2406. The fact of no seignorage being charged tends to increase the amount of gold coined at the Mint, 2407. The existence of a coinage half gold and half token has the disadvantage of making a person dependent upon the governments instead of having the gold in his possession, 2407. If a creditor instead of receiving the full amount of gold to which he is entitled receives a less amount, although by an artificial law it may purchase the same amount of commodities, he is no longer in the same position as before, and the particular characteristic of the sovereign, viz., its convertibility, is lessened, 2407.

The proposal that the value of the reduced sovereign should be maintained by making it exchangeable for bullion at the same price as at present, the loss being sustained by the State, removes to a certain extent the objections to the scheme on the ground of inconvertibility; but how would the coins of other states of the convention be treated? If the government undertook to exchange them also for a greater amount of bullion than they contain, an enormous loss would be incurred, but, if not, there would be a difference in value between the coins of different countries. The effect would be that the national coins would all be exchanged for bar gold, so that they would be superseded in circulation by the coins of other nations. The proposal seems impossible, 2408, 2409. The sovereign would become a convertible token, and as it would only be convertible in London, it would, in other places, lose a portion of the additional value proceeding from its convertibility, 2410–2414. It does not follow that, in the event of an universal coinage, bar gold would only fetch what the different mints would give for it. There would still be other buyers for the gold than the mints, viz., the persons requiring gold as an article of manufacture. If there were no other use for gold except as coin, it would lose one of its chief advantages as a standard of value, *i.e.* that it has an intrinsic value besides its value as coin; and its value as a medium of exchange would be diminished, 2415–2421. So long as coin is convertible into bar gold without loss its value is maintained, 2422–2424. A common gold coinage might be extremely advantageous, but the proposed mode of attaining it by the imposition of a seignorage different in different countries is objectionable, 2425–2427. A diminution in the value of the £ would be similar in effect, though different in degree, whether it was 2*d.* or 10 shillings, 2428–2431.

The foregoing evidence is confined mainly to the question of seignorage, and the proposal for making it the mode of joining the convention; but it does not dispose of the question of an international coinage, upon which and the means of obtaining it the witness reserves his opinion, 2432. The word "value" may not have been always correctly applied by the witness in his evidence, in consequence of the difficulty arising from the suggestion that gold is not in itself the standard of value, but gold plus a certain arbitrary addition called seignorage, 2433.

GREECE:
Gold coinage and mint regulations of, p. 263.
Has joined the monetary convention of 1865. *Hendriks*, 307, and in doing so has established a tariff for the conversion of existing obligations from old into new currency, *ib.* 350.

GRIFFITH, Sir RICHARD:
His evidence before the Decimal Coinage Commission respecting the Irish currency prior to 1826. *Culley*, 1947.

GUATEMALA:
Gold coinage, &c., p. 268.

HALF SOVEREIGNS:
Not being multiples of the 5-franc unit, could not be international coins if England joined the Convention. *Lloyd*, 33.
Could not conveniently circulate together with eight-shilling or ten-franc pieces, *Behrens*, 180–187.

HALIFAX CURRENCY:
Although legally abolished, is still used as the money of account in the retail trade in Canada. *Field*, 754, 764–766.

HAMBURG:
Return relating to gold coinage of, p. 229.

On the subject of imposing a charge for coinage, pp. 329, 331, 333, 334.

HERSCHEL, Sir J.:
Relative to seignorage, &c., pp. 324, 325, 326, 328.

HENDRIKS, FREDERICK:
Analysis of his evidence:—An actuary, 266. Has written upon international coinage, and is in favour of it, 267–270. Its advantages are scientific and educational as well as practical, 271. Disadvantages of the present system, and losses owing to the general ignorance as to the operation of the exchanges, 272, 273. Instance of cashing a Treasury bill on Calcutta, 274, 275. Present loss in paying railway fares and transmitting bullion between London and Paris, in consequence of the £ being calculated at 25 francs; similar loss in the case of the money order office at the Paris exhibition of 1867, and in the case of passage money on steamers. General complication at present in converting foreign money into English currency. Settlement of insurance transactions between England and India instanced. Further loss by difference of mint regulations in different countries, 275. The difficulties are aggravated in the case of transactions between England and India by the difference of standard, 276–284. International coinage would not remove the necessity of employing and remunerating bankers for the transmission of coin, but probably the loss is greater in transmitting coin to and from India, where there is a difference of coinage, than in the case of Australia, where the coinage is the same, 285–288. The holders of drafts upon the Calcutta treasury sell at a disadvantage in England, owing to the fluctuations in the value of the rupee. A common coinage would obviate this, 289–292. The rise in the price of the rupee caused by the demand for cotton during the American war would not have occurred if a gold standard had existed in India, and had the cotton been paid for in that coin, 293–297. A commission presided over by Sir W. Mansfield has recommended the introduction of a gold currency into India. Objection to their recommendation to coin a piece of 10 rupees and a fraction as the equivalent of the sovereign, 298.

The study of statistics facilitated by an international coinage, and time saved in education, 299, 324. Multiples of the gold 5-franc piece recommended for an international coinage, 300. Calculation showing that the sovereign must be reduced by a little more than 2*d.* to equalize it to a 25-franc piece, 301. Sovereigns thus reduced should be coined, and should be legal tender in the countries of the convention, 302, 303. The international coins should be pieces of 100 francs, 50 francs, 25 francs, 12 francs 50 centimes, 10 francs, and 5 francs, to which would be assimilated as far as possible the coins already existing in other countries.

Explanation (with calculation) of the mode by which the sovereign could be reduced to the value of 25 francs by altering the existing proportion of alloy from $\frac{1}{12}$th to $\frac{1}{10}$th, and diminishing the amount of fine gold by about $8\frac{1}{3}$ per mille, or, as a sufficiently near approximation, 2*d.* in the £. The arrangements by which the Bank of England gives coin in exchange for bullion at $1\frac{1}{2}$*d.* an oz. less than the mint rate need not be disturbed; a reduction of $8\frac{1}{4}$ instead of $8\frac{1}{3}$ per mille in the sovereign would be sufficient; the mint price for gold being fixed at 3*l.* 17*s.* $1\frac{1}{2}$*d.* per oz., and the Bank being bound to give its notes at 3*l.* 17*s.* per oz. To enable Great Britain to join the convention, the imposition of a mint charge would be desirable, which

should be identical in all the mints. Particulars of the system observed at the Paris mint as regards the delivery of coin in exchange for bullion. The delay may be stated as equal to two months interest at five per cent., as contrasted with the immediate delivery of coin by the Bank of England, 304, 305. Mintage charges and delay for coining (as compared with the English system) in France, the United States, Australia, and India, 306. The comparison shows that England would in an international monetary convention be exposed to the constant risk of coining for other countries. McCulloch quoted as to the effect of a seignorage in enhancing the value of the currency, and as to the consequent necessity of reducing the weight of coinage in proportion. But as the enhancement of value would be local, while the effects of the diminution of weight would be universal, there must be one common rule of action in this respect among all nations joining the convention. A common seignorage of one per cent. recommended. This amount approximates to the regulations already in force in various mints, and, as regards England, a charge of 2*d.* in the £ + the 1½*d.* per oz. retained by the Bank of England = 0·9938 or nearly one per cent. Explanation of the mode by which, with this seignorage, and the corresponding reduction of weight in the fine gold of the sovereign, the present mint rate of 3*l.* 17*s.* 10½*d.* per oz. can be maintained. Instead of reducing the sovereign to the standard of French gold coin, the latter might be increased to the English standard; reasons for objecting to this proposition. Statement of gold coinage of seven denominations applicable to an international coinage, and of the countries in which they are now in use respectively, 307.

These coins should be made internationally legal tender, 308. It is not advisable to include subsidiary coins in an international arrangement, 309, 310, 315, 322, 323. Plan suggested, founded upon the £, and mil scheme, for decimalizing the coinage, which would be in harmony with the international scheme, and would tend to great simplification of accounts, 309. The advantages of the convention would be obtained, if only the sovereign and half-sovereign were accepted as international coins; but there would be no objection to a dollar or 4-shilling piece. Other states, parties to the convention, have acted liberally, in admitting their respective coins. Instance of the Papal States and France, 311. Roman coins said to be in circulation in England, 316. The withdrawal of light coin is sufficiently provided for by the convention, 312, 313. Even without their being generally legal tender, the obligatory reception of the international coins at the national treasuries would inspire confidence, and would have sufficient effect, 314, 317. Statement of the exact weight of the napoleon, 318–321.

The establishment of an universal money of account did not come within the spirit of the convention, and the difficulties of adopting a common unit are too great; the introduction of a 10-franc piece as a unit is therefore objectionable, 325, 326. The sovereign would be easily convertible into the monies of the countries of the convention, which would all have coins multiples of five francs, 327, 328. The sovereign could be assimilated to 25 francs without altering its value, by coining it of the exact weight of a 25-franc piece, and imposing a seignorage, 329. The English gold coinage should retain its present denomination with its high unit, which presents various conveniences, for instance, commercial transactions which are the most important are more conveniently expressed in £s than in francs, 330, 331. And in small transactions the assimilation of the £ to 25 francs would, without identity of money of account, tend to an entire simplification. Instance of book trade between England and France, 332. The £ without the adoption of the system of account by francs, would ensure similarity of accounts between England and India, and between England and Austria, if they join the convention and adopt a gold standard, 333–337. Convenience of the assimilation of the £ to 25 francs to retail trade by facilities of remittance by post office orders abroad, 338. The insurance companies in favour of the proposed change which would be to their advantage, and could be adopted without inconvenience to them, 339–347.

The change would cause no inconvenience in commercial or other transactions, 348. As to the question of adjusting obligations contracted before the proposed change, there are precedents for the two courses of making or dispensing with compensation. The cases of Holland, Prussia, Spain, in which a depreciation of coinage took place, without a tariff of conversion, case of France in which an appreciation, and that of Greece in which a depreciation of the coinage was effected, accompanied by a tariff of conversion, 350–352. The bill introduced into the Congress of the United States for joining the convention provides inadvertently no compensation, although the proposed reduction is 3·53 per cent., but England may properly reduce the £ without a tariff, provided a seignorage be charged, 353. In that case the increased value caused by the seignorage would compensate for the reduction of weight, and the new would have the same value as the old coins, 354–360. In order, however, that the reduced sovereign should be of precisely the same value as the international coin of 25 francs, the mint regulations in the countries joining the convention must be identical, 361.

The International Coinage Question from an English point of view, &c., by Mr. Hendriks, p. 142.

HILL, ROBERT ANDERSON:
Analysis of his evidence:—An officer of the Mint, 1729. Hands in papers (1730) showing:—
1. Cost of the production of a sovereign based on the coinage of sovereigns in 11 weeks.
2. Weight of sovereigns as issued and as found in circulation.
3. Estimated expense of the recoinage of one hundred millions of sovereigns, and average cost of coining sovereigns for 10 years.
4. Memoranda on coining.

HOCK, BARON DE:
Mem. by, on uniformity of coinage, p. 339.

HOLLAND:
Gold coinage and mint regulations of, p. 252.
Alteration in the coinage of, in 1839, upon which occasion no tariff of conversion was framed. *Hendriks*, 350.

HUBBARD, Mr.:
Remarks by, relative to the correspondence as to a mint charge, &c., p. 329–334.

"IMPERIAL:"
Proposed new coin of 100 francs to be named an. *Levi*, 372. *Brown*, 2220.

INCOME TAX:
Analogy between the trouble caused by an alteration in the Income Tax and that which would be caused by a reduction of the pound, in the adjustment of accounts. *Newmarch*, 1548–1550. *Jevons*, 1855.

INDIA:
Prices of sovereigns in, p. 343.
Difficulty occasioned in the settlement of transactions between England and India owing to the differences of currency and of standard. *Hendriks*, 275–283.
Fluctuations in the value of the rupee, especially in connection with the demand for cotton, *ib.* 288–290, 293–294.
If England and India had a common coinage the holders of unfaced rupee paper in England would draw their interest at a greater advantage than at present, *ib.* 291.
India has an exclusiveiy silver standard, but Sir William Mansfield's commission has recommended the introduction of a gold currency, *ib.* 297–298.
The seignorage on gold coined at the Indian mints appears to be one per cent., with a delay in delivery of 20 days, being at the rate of 13.3*l.* on 1,000*l.*, and in the case of silver 2 per cent., with a similar delay, *Hendriks*, 306–307. *Smith*, 882–884.
The high seignorage on silver in India does not lead to unusual forgery. *Smith*, 884–885.

INSURANCE:
Companies are in favour of the proposed change, which would be to their advantage, and could be adopted without inconvenience to them. *Hendriks*, 339–347.

INTERNATIONAL COINAGE:
A. General advantages.
B. Specific advantages.

A. General advantages of international coinge, and disadvantages to England if excluded from any general arrangement. *Lloyd*, 4, 6, 65–66, 82. *Behrens*, 89–93. *Hendriks*, 271–272, 275. *Levi*, 365. *Manby*, 434. *Muspratt*, 538–539, 543, 545, 568, 590, 619–621, 630. *Field*, 700, 706–707, 777–779. *Smith*, 844. *Jeffery, W. S.*, 1137. *Jeffery, J. R.*, 1175–1176, 1182. *Wrigley*, 1188, 1191, 1195–1197, 1213, 1235, 1301–1302. *Newmarch*, 1360, 1383, 1445, 1451, 1521, 1551–1553, 1576. *Candy*, 1605–1607. *Jevons*, 1734–1735, 1768–1771, 1841, 1866. *Bagehot*, 1976–1978, 1985. *Brown*, 2175-2176. *Bowring*, 2472. *Mallet*, 2494, 2529.

INTERNATIONAL COINAGE—*cont.*
B. Specific advantages.
1. The facility which would be afforded to different classes for readily apprehending statements of
a. Statistical information. *Hendriks*, 299. *Levi*, 366.
b. Commercial transactions. *Hendriks*, 275. *Bagehot* 1979.
c. Prices and price lists. *Lloyd*, 55. *Behrens*, 90, 108. *Hendriks*, 275. *Manby*, 435. *Muspratt*, 542-543, 574-575, 587. *Field*, 701, 721, 752-753. *Jeffery, W.S.*, 1122, 1130, 1133. *Jeffery, J. R.*, 1175. *Wrigley*, 1275-1276. *Bagehot*, 1977-1978.

II. Time would be saved and the expense of clerks *Manby*, 438, 523. *Field*, 701, 750-752, 756, 791.

III. English merchants would not be placed at a disadvantage in the competition to which they are subjected, and which is so severe as to render important the removal of every obstacle. *Lloyd*, 7. *Behrens*, 96-97, 108, 163. *Field*, 706, 737-741. *Wrigley*, 1188-1201. *Mallet*, 2495.
An exclusion from any general scheme of international coinage would be prejudicial to the interests of England. *Lloyd*, 6-7. *Behrens*, 91. *Field*, 777. *Wrigley*, 1188, 1197-1199. *Mallet*, 2529.
While the advantages to be derived by this country would be greater than in the case of other countries in proportion as English commerce is greater than that of other countries. *Field*, 737.

IV. Facility of exchanges:
Exchanges would be facilitated, calculations being simplified by the reduction of the par of exchange to a simple amount, and the elimination of the fraction, *e.g.*, the £ = 25 francs instead of 25 francs 20 centimes, *Lloyd*, 7, 41, 47-48. *Behrens*, 94-95, 135, 156-158. *Hendriks*, 272-274. *Muspratt*, 538, 547, 549, 573. 590, 664. *Field*, 717, 786-787. *Jourdan*, 1617-1619, 1653, 1747-1748. *Jevons*, 1735. *Mallet*, 2518.
The fluctuations of the exchanges which would still remain being limited—
a. To the cost of transmitting coin. *Lloyd*, 42. *Behrens*, 122, 135, 156. *Field*, 701, 717, 720-722, 788. *Jourdan*, 1639, 1653, 1662. *Jevons*, 1762.
b. The calculation of the different rates of interest in different countries. *Field*, 789. *Jevons*, 1643-1644.
c. And by the balance of trade. *Behrens*, 144. *Jourdan*, 1662.

V. Facility of Remittance:
Coin which is legal tender in another country might be remitted, and would answer its purpose at once, whereas if bullion is sent delay and expense are incurred in coining it. *Lloyd*, 7. *Behrens*, 120-121, 128-129, 144-146. *Manby*, 470, 520. *Field*, 807-809. *Jevons*, 1762, 1781-1783. *Mallet*, 2511, 2542.
At the same time, traffic in bills and the employment of bill brokers would continue even in small transactions. *Behrens*, 147-150. *Field*, 802. *Jourdan*, 1621-1622.

VI. Convenience to travellers:
In avoiding loss in changing money, and in enabling them to understand foreign prices, &c. *Lloyd*, 80. *Behrens*, 244. *Levi*, 366. *Muspratt*, 546, 664. *Field*, 701, 801. *Jeffery, W.S.* 1122-1128, 1152-1153. *Jeffery, J.R.*, 1175. *Wrigley*, 1191. *Jevons*, 1735. *Mallet*, 2536.

VII. A practice prevails of calculating the pound sterling at 25 francs in some branches of trade, on railways and on steam packets, and in the calculation of postage, whereby a loss of 2*d.* in the pound is occasioned to individuals, which would be avoided. *Hendriks*, 275. *Muspratt*, 543, 601-602. *Mallet*, 2502. The same course was pursued in framing the tariff of duties in connection with the French commercial treaty. *Mallet*, 2503, 2526.

VIII. Facility would be afforded for an extension of the money-order system to foreign countries. *Lloyd*, 13. *Hendriks*, 338.

IX. A general improvement and greater correctness would be obtained in the national currencies. *Jevons*, 1735, 1766.

INTERNATIONAL DECIMAL ASSOCIATION:
Resolutions of, in favor of international coinage. *Levi*, 427.

IRELAND:
Advantage of uniformity of coinage between England and Ireland. *Wrigley*, 1252. *Jevons*, 1867. The change in the Irish coinage was, as compared with a change in the English coinage, rather a retail transaction. It was not attended with any great inconvenience. *Newmarch*, 1386-1393. Origin of the difference between the English and Irish currencies, the difference being a penny in the shilling, or 1*s.* 8*d.* in the pound = 8⅓ per cent. *Culley*, 1888-1895. Account of the Irish currency prior to 1826, *ib.* 1896-1898, 1942-1958, 1964-1965. Measures taken in, for effecting the assimilation, *ib.* 1899-1905, 1920-1930. Effect of the change, *ib.* 1906-1908, 1959-1961. High rate of exchange against, before the change, *ib.* 1893, 1909-1918.
The proposed change in England would be on a larger scale than that in, as regards the number of transactions, but not as regards the alteration in value, *ib.* 1941.
In, a charge is made by bankers for light sovereigns. *Jevons*, 1810.
See also BANK OF IRELAND. CULLEY.

ITALY:
Gold coinage and mint regulations of p. 234.
Account of change in the coinage of, p. 299.
Facility with which the new system of coins, weights and measures, was introduced throughout. *Levi*, 412-415.
In the north of, the lira was already equivalent to the franc, and in the south a decimal system existed, so that the change was not so great as might be imagined, *ib.* 419.

JAPAN:
Statement as to resemblance of coinage of, to that of France. *Levi*, 424.

JEFFERY, JAMES REDDICLIFFE:
Analysis of his evidence:—Partner in the firm of Messrs. Howell and James, confirms evidence of Mr. W. S. Jeffery, 1172-1174. Buyers prefer to go to those countries where facility of purchase exists, 1175. International coinage would have a considerable effect in increasing trade, and lowering the price of foreign goods. At present, in converting foreign into English money, it is necessary to leave a margin for safety, 1176-1178. Generally anything that facilitates intercourse between different countries promotes trade, 1179. Advantage of international coins in the case of shopmen, 1180-1181. Expediency of ultimate assimilation of weights and measures, 1182.

JEFFERY, WILLIAM SAMUEL:
Analysis of his evidence:—A partner in the house of Messrs. Howell and James, 1118-1120. Disadvantages from want of an international currency. English buyers on the continent do not understand the coinage, and must rely upon printed tables, 1121-1123. Loss and difficulty in computing their travelling expenses, 1124, 1125, 1161-1164; and in converting foreign prices in purchase and sale of goods, 1126-1134; consequent indisposition of buyers to go where the difficulty encounters them, 1140. International coinage would facilitate and probably increase dealings with foreign countries, 1135-1138, 1147-1150; and would facilitate reckonings in books, 1139. The reduction of the £ by 2*d.* would not lead to inconvenience. Salaries and prices would soon adjust themselves, 1141-1146, 1154-1156. Difficulty in explaining prices, &c., to foreigners in London, 1151, 1152; and facility in transactions if the 25-franc or 20-franc piece were received here at an established value, 1153. Messrs. Howell and James receive napoleons at 15*s.* 10*d.*, 1157-1160. They are never found to be light or bad, 1165. French gold is generally received in other houses, and in hotels, 1170, 1171. The international coins would probably pass in trade, without being made legal tender, 1166-1168.

JEVONS, WILLIAM STANLEY:
Analysis of his evidence:—Professor of Political Economy at Owens College, Manchester, 1732. International coinage would be attended with great advantages. Travellers would be benefited. Exchanges would be more easily and accurately adjusted. General improvement and greater correctness of currencies would be attained. Prices could be more accurately estimated. Hope expressed that the 25-franc piece will become the universal currency, and that its adoption by this country will tend to a decimalization of the coinage, although it should be undertaken independently of that consideration. Importance of England joining in this movement, 1733-1737. The expense of recoinage would not be an obstacle to the change, as it is required on account of the present lightness of the

sovereign, about 1 in 3 being below the legal limit of weight, 1738–1741, 1756. There would not be much inconvenience during the change, under proper arrangements, 1742. A per-centage allowance must be made to creditors, but the calculations for this purpose are not more difficult than arise on an alteration in the income tax, 1743, 1744; and would cause but slight inconvenience, 1746. It would not be practicable or necessary to add the per-centage on sums below 2*s.* 6*d.* or 5*s.*, 1745.

An international coin would simplify the calculation of the exchanges by rendering the par of exchange more evident, 1747, 1748. The fractional currencies would still remain as a complication, but an uniform unit would afford considerable simplification, 1749–1751. The calculation of the exchanges is almost a science on account of their complication, 1752, 1753. Wear and tear and consequent recoinage would be incidental to coins whatever their intrinsic value may be, 1754–1757. Uniform currency would promote the cheap transmission of gold coin between different countries, thereby leading to a more easy and exact adjustment of the exchanges, which are limited in their variation by the cost of transmitting gold, 1758–1762. It is not likely that coin in transmission loses in weight, 1763, 1764. The general improvement of all the currencies is an object of greater importance than the convenience to travellers or mere uniformity of expression, 1765, 1766. The general admission of English coins into foreign countries would open up further communication, thereby promoting trade, 1767–1769. The advantages of a general currency for the whole world are similar to those of an uniform currency within this country, 1770. The advantages to foreign trade would be very considerable, though the precise extent cannot be estimated, 1771–1773. Uncertainty as to the value of foreign currencies occurs less in trade with the continent where they are generally pretty correct, than with some countries such as the States of South America, where their value is very doubtful, although accurate information as to the present state of the currencies would limit this uncertainty, 1774–1776. The introduction of paper money would not interfere with the proposed currency as it would always be estimated in gold coin, 1777–1780. Transmission of coin takes place to a large amount. 4,000,000*l.* British gold coin and 3,452,000*l.* of foreign coin were exported in 1866. In this country the Bank of England holding large quantities of foreign as well as British coin afford special facilities for procuring either, but the same facilities do not exist abroad where consequently the advantage of international coinage would, in this respect, be more felt than in England; and advantages accruing to other countries act beneficially on this country, 1781–1785.

The per-centage allowance to creditors if the £ is altered should be made compulsory by law, but it would be a nominal alteration not really involving a payment of a larger amount, 1786–1791. It could not by law be exacted from foreign debtors, but they would be bound morally and in honour to pay the additional 2*d.* in the £, just as they are bound to pay the original debt; and all countries joining the convention would no doubt uphold the principles of it. In the case of a country outside the convention, it would be a question of international law, 1792–1795. If England joined the convention, her example would be followed by other nations, 1794.

Account of experiments to test the amount of light sovereigns in circulation, showing a result of 32·7 per cent., 1796, 1797. A new recoinage must shortly take place, 1798. There is always a difficulty in driving out a light coinage, 1799. There is no practical inconvenience at present from the lightness of the sovereigns, except in the case of country bankers, who, when they have accumulated to a certain number, find a difficulty in getting rid of them, but the evil will eventually be severely felt if allowed to increase, 1800–1808, 1828–1830. In Ireland a charge is made by bankers for light sovereigns, but none in this country, 1809–1811. To enable faith to be kept in making payments, the gold coin should be kept up to its legal weight, 1812–1816. In the event of the light sovereigns being called in, they should be taken by the Mint at their full nominal value, 1817, 1818. In that case, to prevent intentional wearing down, a limit might be fixed beyond which they should be refused, 1819, 1820. But, in fact, there is an equal inducement to do that now, in consequence of the facility with which light coin is passed, but it is not done, 1821–1826. It is not the practice for banks to refuse light sovereigns, unless they appear to have been picked out, 1827. No harm occurs, so long as the light sovereign passes for its full value in this country, but, if exported, a loss falls upon the exporter. Evil consequences must eventually follow, 1831; and it is upon poor people that the losses will chiefly fall, 1832–1836.

The reduction of the £ to 25 francs recommended, 1837, 1838, leaving the decimal division for future adoption, as soon as experience shall have indicated the best general unit. A decimal system of weights and measures is also extremely desirable. In the meantime, the assimilation of the £ and 25-franc piece would simplify the conversion of one money into another, and would be a step to an ultimate complete unification of currencies, 1839–1854. The adoption of the 25-franc piece will require the addition of 2*d.* in the £ to all debts in the old currency, but this is not more difficult than an alteration of the income tax, 1855. No recoinage of the silver would be necessary, 1856, 1857. The measure is easy, and would be a safe though small step towards a general decimalization, and towards the attainment of great future advantages, 1858–1862. This is the only proposal for accomplishing a uniform expression of value which is likely to be adopted, 1863–1865. Advantage of uniformity of currency in the case of different countries, of Ireland and England, and of the Roman Empire, 1866–1868.

In the event of an international agreement, countries might attempt to pass upon each other light coin, but this is not likely, and the objection is no greater than that which might arise in the case of any international treaty. A general obligation to maintain good coinage would no doubt be of value as tending to do away with the practice of depreciating coinage, 1869–1873. Certainly there is no danger to this country at present from the introduction of a degraded foreign coinage; the only danger would come from the Australian coinage, which is as good as our own, 1874, 1875. In the event of a convention (but equally so now), the government would be under an obligation to maintain the legal weight of their coins, 1876–1882. Precautions would be necessary as regards the weight of the international coins before making them legal tender, but it is an essential part of the scheme that they should be practically current in the different countries, 1883, 1884. They would soon be accepted without suspicion as has been the case with the Australian sovereigns in England, 1885.

Jourdan, Francis:

Analysis of his evidence:—Is a bill broker, 1611, 1612. The advantage of assimilating the £ to 25 francs would be confined to substituting, in the reduction of French into English money, a simple divisor, viz., 25 fr. for 25 fr. 20 centimes, 1613–1619. The calculation of the rate of exchange would not be facilitated, 1620. The change would not make it advantageous for merchants, &c. to dispense with the intervention of bill brokers by remitting coin instead of bills, nor would it facilitate the calculations of the bill brokers, 1621–1628. There is no difficulty in procuring small bills for payments abroad, 1625, 1626, 1629–1632. Bills on France are usually drawn at three months in the manufacturing districts, but in London mostly at short dates, 1633–1634. In the case of three months bills the exchange is calculated to include interest until maturity, as well as the expense of transmitting the coin; the interchange between one coin and another would be represented by a sight exchange. The difference between a sight exchange and a three months exchange represents the interest only so that similarity of coins would limit the difference of exchange to the expense of transmitting the coin. The length of the bill is an important element in the calculation of the exchange. The expense of transmitting gold to France is only ¼ per cent., but three months interest, even at the present low rate, would increase the exchange by ½ per cent., 1635–1646. Bills are often drawn at sight upon Holland and Belgium as well as France, but, very unfrequently, upon distant places, in which cases the dates are 60 or 90 days, 1645. ¼ per cent is the cost of sending gold to France in easy times, and when interest is low, but in times of pressure it is more. The expense in ordinary times may be stated at 7½ centimes. 25 francs 20 centimes is par. The ordinary range is from 15 to 20 cents, but, in times of pressure, 35 to 40 cents. Bullion would be remitted to France when the exchange is down at 25·10 or 25, and from France when it is up to 25·30. The remittances are almost always made through the agency of bullion dealers, who issue short sight bills to the parties making the remittances, 1647–1652. The fluctuations would be limited if international coins were introduced, as they could be remitted instead of bullion, thereby avoiding the delay incidental to coining of the latter, 1653. The present range is from 25 fr. to 25 fr. 35 cents, but when silver was the principal metal in circulation in France, in 1844–5, the exchange was never below 25·40, and was often at 25·60, 1654. French bills are frequently made payable in the town in which the person resides who has to pay them, a practice not

attended with inconvenience, as the Bank of France has branches in most of the important places, bills on which sell nearly as well as bills on Paris. It would not be an advantage for the French to centralise their system by making their bills payable in Paris, 1655–1660. Fluctuation of the sight exchange would be affected by a uniform coin, but would be limited to the expense of sending gold, 1661, 1662. Bullion, if sent, would have to be melted and coined with delay, which, in times of pressure, would be important, whereas the uniform coin would at once go into circulation, 1663–1666. The bullion sent is not necessarily coined. The silver remitted from England, when that metal was chiefly in circulation in France, was in bar. Little gold coin is remitted to France. The Bank of France buys bar gold at present, but, if they do not wish to do so, the exporter takes it to the Mint, incurring loss by delay and seignorage, which, with the cost of transmission, forms the limit of the fluctuation of the Exchange, 1667–1673. By reason of the losses thus incidental to the transmission of bullion, international coins being more available may be said to be more valuable than bullion, 1674–1679. It cannot be said that when coin is remitted to France the expense of coining and interest on the coin so sent has been incurred in England, 1680–1684. Few complaints are ever made as to exchanges at which brokers negociate bills, 1685. Accurate information on the subject of the exchanges is pretty general, though occasionally some misunderstanding occurs between drawer and drawee in the cases of places not so frequently drawn upon, such as Sweden and Norway. It is the generally recognised practice of manufacturers to draw their bills in pounds sterling, 1686. A wish has been expressed that the custom of handing over bills on one post day and not receiving the money for them until the post day following should be altered, 1687, 1688.

Seignorage adds to the value of a coin, 1689–1692. The Bank charge of 1½*d.* adds to the value of the gold coin to that extent (meaning its value in circulation as a tender), and if the charge were doubled it would proportionately increase the value, 1693–1697. The 10 per cent. seignorage on silver, however, does not raise the value of the silver coin 10 per cent. If its circulation, as legal tender, were not limited, it would at once be counterfeited. Gold could not support a seignorage of 10 per cent., 1700. Its value beyond the convention depends like that of silver on the amount of pure metal contained in it, and a seignorage would not raise its value beyond the limits of an international convention, 1701–1704. It would, however, raise the value within the convention, or wherever coin happened to be preferred to bar gold, 1705, 1706, 1696. But this additional value is not imparted upon the principle which raises the value of a token coinage circulating in a country at a rate beyond its intrinsic value, because, in the latter case, the amount of legal tender is limited, 1707–1709. Although the sovereigns bearing a seignorage would not possess the additional value thus given to them outside the convention, and would not consequently be exported there, they would exchange for bar gold, which would be purchased as at present, and would be remitted instead, the only difference being that instead of paying the Bank of England 1½*d.* per oz. the additional charge for mintage must be paid, 1710–1719. A coin in which the amount of fine gold is reduced, and on which an equivalent mintage is charged, would retain its exchangeable value within the convention, estimated not in bullion but in opinion, 1720–1722. The value of the gold coin must not be measured against gold itself, because it is manufactured, and thereby increased in value. It must be measured by comparison with other commodities in respect of which its exchangeable value is increased by a seignorage, 1723–1728.

Legal Tender:

The international coins should be legal tender in the countries forming the Convention. Rep. x. *Lloyd*, 27, 37–39, 76. *Behrens*, 142, 172–179. *Hendriks*, 308. *Field*, 795–800, *Wrigley*, 1354–1356. *Bagehot*, 2045.

They would probably pass in trade without a compulsory law. *Jeffery, W. S.*, 1167. It is an essential part of the scheme that they should be practically current throughout the Convention. *Jevons*, 1884. They are not legal tender under the present Convention; it is only the Governments which agree to receive them in payments to the public Treasuries, *ib.* 1883.

Levi Leone:

Analysis of his evidence:—Professor at King's College, London, and connected with the Metric Committee of the British Association, and the International Association for obtaining a uniform decimal system of measures, weights, and coins, 362, 363. Has a strong opinion of the advantages of international coinage, 364, 365. Accounts and calculations would be simplified, travellers would be benefited transmission of goods by railway would be facilitated and the trouble to railway companies diminished, international exhibitions would be more useful, and international statistics rendered more easy. (Opinion of the International Statistical Congress on this subject.) Time would be economized in education, 366.

Proceedings of the Paris Exhibition Conference on International Coinage, and recommendation by the conference of the 5-franc piece as a basis; objection to the 25-franc piece as a unit. It could not circulate together with the existing sovereign. It would not advance the decimal question, as the £ and mil scheme has been pronounced inadmissible by Lord Overstone's commission, and in international calculations division and multiplication by 5 or 25 would still be necessary. The suggestion for allowing the present £ worth 25 francs 20 cents to circulate for 25 francs is untenable, and the change, if made, would be incomplete; preference for a 10-franc unit. It is a multiple of the coinage of the convention, and would render easy a mutual conversion of accounts. It affords a perfect decimal system, and would give only two decimal fractions instead of three, as would be the case in the £ and mil scheme. The 10-franc piece (or ducat) would be divided into pence and centimes, the two former only monies of account. The 25-franc scheme would only give international equality of the integral unit; the 10-franc scheme would give more complete uniformity by assimilating both the integral and subsidiary units; a 10-penny piece should accompany the 10-franc piece, 367–369, 411. France will probably never coin a 25-franc piece except to accommodate England, but will retain as her unit the silver franc. Advantage to France of adopting a gold 10-franc unit. Recommendation by M. Wallenberg to this effect. The 10-franc piece would equal, in the present money, 96 pence, *i.e.* 8*s.*, but it might be made a unit of 100 pence with a silver coin of ten pence, 370, 371. The half-sovereign, shilling, and eventually the sovereign, would be withdrawn, leaving the florin (=to 25 new pence). The 10-franc piece (Victoria or ducat) would be the unit of account, with an alternative higher unit, if thought desirable for large transactions, of the 100 francs (a Royal or an Imperial). Advantage of this over the £ and mil scheme. In both cases the penny must be reduced, but this can be done much more easily when dealing with an entirely new coin than in the case of the sovereign; 372. This plan would introduce the whole of the French money, 373. The sovereign should be withdrawn, and the new 10-franc piece issued as soon as possible 374, 375. The penny would be retained at its present intrinsic value, but its relative or current value would be reduced 4 per cent., 376—388. Other suggestions which have been made, such as to take the present half sovereign, penny, or farthing as leading coins were advanced without reference to an international system. In the latter point of view there is no alternative but the 25 francs or the 10 francs, 389.

The scheme propounded by the witness would afford uniformity of money of account; whereas the £ and mil scheme would involve calculations in dealing with other countries, 390–394. Present time specially favourable for introduction of the scheme. 270 millions already recognize one common unit of weights and measures, either in an obligatory, partial, or permissive manner. The monetary convention has received the adhesion of several countries. Therefore it cannot be contended that these ideas are impracticable, nor can it be said that the English are less intelligent than the people who have joined in this movement, 395, 396. The United States have introduced the metric system of weights and measures in a permissive manner, and are taking steps for making the proposed change in their coinage, 397. The conference of Paris did not recommend the 25-franc piece as a unit, except for England, nor will Austria take the 10 florin coin as her unit. The coinage of the 25 francs was proposed to conciliate England, 398, 399. The conference, taking the 5-franc piece as a basis, offered the 25-franc and 10-franc pieces as modes of entering the convention, 425. The other countries represented at the conference would probably adopt the 10-franc piece as their unit. The 25-franc and 5-franc were recommended to suit England and America respectively, 400. The increase in the value of commodities would render the 10-franc unit more suitable to America as being higher than the dollar, 401. An imperfect decimal coinage exists in America; for, having no subdivision of the cent, vulgar fractions are used below the cent. The 10-franc scheme would remove this imperfection, 402–405. Equal inconvenience would be caused by the adoption either of the 25-franc or the 10-franc scheme, and it would be best to introduce as perfect a system as possible. For this reason, the reform should include that of weights and measures, 406, 407.

Opinion of the decimal coinage commission, that simplification of the coinage should not be attempted apart from that of weights and measures, 408. Tendency in favour of the metric system. It is already permissive in England, and the standards commission are now enquiring as to introduction of metric standards, 409, 410. Testimony as to facility with which change in weights, measures, and coins have been introduced into Italy, and as to its convenience, 412–419. As to adoption of decimal coinage by China, 420–424. Resolutions of the International Decimal Association and of the Metric Committee of the British Association in favour of the principles of the convention of December 1865, and of the decimal system. Resolutions of the Paris Exhibition Conference of 1867, stating the conditions requisite for an international coinage, 426, 427.

Light Sovereigns:
The present circulation of sovereigns is becoming very light, *Jevons*, 1738–1739. The proportion of, estimated at almost one in three, *ib.* 1740. Difficulty of driving, out of a country; tendency of bankers and others to retain, in circulation, *ib.* 1741, 1799. Account of experiments to test the amount of, in circulation, showing a result of 32·7 per cent., *ib.* 1797. There is no great practical inconvenience at present from, but the evil will eventually be severely felt if allowed to increase, *ib.* 1800–1808, 1828–1830. In Ireland a charge is made by bankers for, but none in this country, *ib.* 1809–1811. To enable faith to be kept in making payments, the gold coin should be kept up to its legal weight, *ib.* 1812–1816. In the event of their being called in, they should be taken by the mint at their full nominal value, *ib.* 1817–1818. In that case, to prevent intentional wearing down, a limit might be fixed beyond which they should be refused, *ib.* 1819–1820. But in fact there is an equal inducement to do that now, in consequence of the facility with which they are passed, but it is not done, *ib.* 1821–1826. It is not the practice for banks to refuse, unless they appear to have been picked out, *ib.* 1827. No harm occurs so long as they pass for their full value in this country, but if exported a loss falls upon the exporter. Evil consequences must eventually follow, *ib.* 1831; and it is upon poor people that the losses will chiefly fall, *ib.* 1832–1836.
There would be an obligation to maintain the legal weight of international coins in case of a Convention, *ib.* 1876–1884.
See also Wear and Tear.

Liverpool:
Chamber of commerce is extremely in favor of international coinage, *Muspratt*, 537–541; and is unanimously of opinion that the pound should be the unit, *ib.* 545. Its opinion as to the importance of the movement chiefly based upon the disposition evidenced by the United States to enter the Convention, provided England does so, *ib.* 552. It has not much considered the question of giving a tariff of conversion, *ib.* 556.
The largest commercial relations of, are with America; but those with Europe are becoming quite as important since the French treaty of commerce, *ib.* 569–570. Opinion of, strongly in favor of the decimal system, the merchants of, having already adopted the cental (100 lbs.) in the sale of corn, *ib.* 579–583.

Lloyd, Sampson Samuel:
Analysis of his evidence:—A banker at Birmingham and Chairman of the Association of Chambers of Commerce, 1, 2. The Chambers of Commerce are in favour of international coinage, 3, 4. England would be placed at a disadvantage if excluded from any general international system of coinage, 5, 6. Advantages of international coinage consist in the establishment of more intimate commercial relations among different nations, in the saving of the cost of commission, brokerage, &c., in the remittance of coin, in avoiding loss in the exchange of coins, and in the saving of loss upon melting foreign coin, 7. Witness is not connected with foreign trade, 8, 9. Is in favour of an international gold coin equivalent to 25 francs, and prefers this to an alternative plan, suggested among the Chambers of Commerce, of making existing coins a legal tender for their metallic value among the different nations reciprocally, 10–12. Existing debts might be adjusted to the new currency without injury, and with but slight inconvenience, by the addition of a per-centage of about 2*d.* in the £, except in cases of fixed payments in small coin, such as penny bridge tolls, penny postage and receipt stamps, but the loss to the general public would probably be very small, and in the case of the post office would be made up by increased revenue, while an important advantage might be gained by the extension of the money order system to foreign countries. Considering the national gain any moderate loss should be made up by taxation, 13–18. A certain cost for recoinage would be incurred. At ½ per cent., assuming the gold circulation to be 100,000,000*l.*, which is, probably, an exaggerated estimate, the cost would be only 200,000*l.* once for all, 19, 20.
Subsidiary coins need not at present enter into the plan of uniform coinage based upon the 25-franc piece. The contemplated advantages could be obtained by merely altering the £ to 25 francs, and, eventually, the smaller coinage should be assimilated by the introduction of coins representing aliquot parts of 25 francs; the material reform would be in the introduction of the international 25-franc piece, 21–24, 28–30, 34–36, 67–71. The international coins should be legal tender in the countries joining in the convention, 25, 27, 37, 38, 76. In order to insure the withdrawal from circulation of the old coins, a period should be fixed after which they should only pass at the value of the new coins, 30–31. The old coins of small denomination, not international, and not being aliquot parts of 25 francs, such as the half sovereign, should cease to be coined, 32. In the meantime their circulation, together with the new coin, would lead to some, but not to great inconvenience, 33. Any aliquot parts of the 25-franc piece (such as the napoleon), current in the different countries, might be accepted reciprocally as legal tender, 39.
Exchanges would be facilitated and simplified by the establishment of uniform coinage, 40–43, 47–48. International coinage would facilitate the adoption of the decimal system in England, and thereby of uniformity in the system of accounts, 44–46, 51–64. No states should be admitted into the convention except those of whose good faith, in maintaining the value of the international coins, coined by their respective mints, there can be no doubt, but the governments would find it contrary to their interests to depreciate their international coinages, 49, 50. Advantage of a system which would bring England into uniformity with the numerous populations of Europe and America, 65–66. Expediency of uniformity of weights in addition to uniformity of coinage instanced by the case of the post office, 72–75. International coin should be clearly marked as such, 79. Advantages of international coins in making purchases in foreign countries, 77, 78, 80, 81. It is impossible exactly to estimate the advantages of international coinage, or to state precisely the present disadvantages. As before free trade the disadvantages of the existing system were not always felt, but as in that case great benefits resulted, so no doubt great advantages would be derived from the proposed new system of coinage, 82.

Lubeck:
No gold coinage, p, 229.

Luxembourg:
Instance of a remittance to, where a loss would have been avoided by an international coinage. *Behrens*, 136–137, 139–141.

Mallet, Louis:
Analysis of his evidence:—Has had experience in the negotiation of foreign treaties, and has been in communication with persons connected with foreign trade and commerce, 2492. Assimilation of coinage is indispensable towards the development of international trade, which is a matter of vital importance to this country, 2493–2494. It is the opinion of manufacturers that the keen competition at present existing causes this country to be placed at a disadvantage in its trade with other countries which have assimilation of coinage in which it does not share, 2495, 2496. Foreign trade, particularly that between France and England, is assuming more the character of a retail trade, but small traders and manufacturers are deterred by very slight obstacles from embarking in a new trade, and will not do so if they meet with trouble about a tariff or calculations, 2497. The matter is less important to large merchants who are accustomed to great international transactions, but it is extremely desirable to extend the area of competition by facilitating exchanges and intercourse in every way, 2498. This opinion is the result of observation from intercourse with manufacturers of different countries, but especially with English manufacturers, 2499. In the negotiation of the French Commercial Treaty the difference of weights, measures, and coins was a source of constant delay and difficulty—the existence of only one international coin would have been an advantage and a facility, 2500. The commercial classes of foreign countries are anxious for uniformity of coinage, 2501. The sovereign is generally taken in France at 25 francs, thereby occasioning an appreciable loss, 2502. It was taken at 25 francs in the arrangement of the tariff under the Commercial

Treaty with France, as it was found impossible to state the fractions in the case of small duties, and the English merchants and manufacturers, who must recoup themselves by adding to their prices, are placed at a disadvantage, 2503-2510. Although the large merchants do not appear to have a feeling as to the advantage of international coinage, it would probably be a convenience to them, for a very considerable proportion of coin, of which British coin is the largest portion, is at present exported as compared with bullion, and if that coin was international coin it would be an advantage, 2511, 2512. Foreign coin can always be obtained at the Bank of England for payments abroad, but a loss arises from the necessity of keeping this foreign coin at the Bank for the purpose, 2513, 2514. International coinage would bring retail dealers in direct communication with foreign manufacturers, and an extension of the area of competition diminishes the cost to the consumer, 2515, 2516. The adoption of the 25-franc piece alone would be a very decided practical advantage, 2517, 2518.

Any loss upon existing obligations resulting from an alteration in the English standard of value might be provided for by an Act of Parliament, 2519. It might be difficult to secure the full payment in the new currency of a foreign debt contracted in the old currency, but, even assuming that there is a loss, it would involve no very great amount, and should not be too much dwelt upon in the consideration of so important a change, especially when the probable depreciation of the value of gold at the present time is borne in mind, 2520. The witness is unable to state what loss would be sustained by a diminution of 1 per cent. on the debts payable in this country, 2521. In the event of England making a convention with other countries stipulations would naturally be made on this point, 2522–2524. There are differences of opinion as to the depreciation of gold, but it is an exceedingly probable contingency, 2525. The calculation of the £ at 25 francs in settling the tariff arose from the indisposition to waste time in calculating, and the impossibility of going below a farthing in fixing the duties, 2526. In like manner if the sovereign is lowered in value there will be difficulty in adjusting transactions, 2527. Whatever loss results from the absence of an international coinage is shared in a larger proportion by England than by other countries, on account of her larger trade, 2528.

The wide area over which the £ circulates, and which is a strong argument in favour of retaining it, at all events nominally, makes it a question whether it may not ultimately be adopted by foreign countries. It is of great importance that England, the great teacher and champion of free trade, should be forward in promoting the movement in favour of international coinage, especially considering that the present tendency to protection in the United States and elsewhere is injurious to our trade; and if England stands aloof from this movement it will have the worst possible moral effect upon the progress of free trade principles, 2529. The proposed depreciation of the sovereign does not imply necessarily the abandonment of our system, 2530. There will no doubt be eventually complete uniformity of currencies, including money of account, but the change now suggested would give an important moral adhesion to the movement, and in itself it is desirable, 2531. Importance of obtaining the adhesion of America, which must depend to a great extent upon the action of this country, 2532. Allusion to the suggestion that America should adopt the English system, 2533. England can never have the full advantage of a free trade policy until it is adopted equally by other countries, 2534.

The alteration of the £ to 25 francs would promote trade, 2535—and would be a convenience to travellers, 2536, 2537. It is difficult to state precisely how loss is caused under the present system, but it must necessarily place obstacles in the way of certain transactions, and must render others more expensive by the necessity, for instance, of making payments abroad in British coin, which has to be melted and re-coined, thereby causing a loss, 2538–2541. The substitution of international coins for foreign coins for payments abroad must cause a saving, 2542. It does not follow because the Bank of England makes a profit by dealing in foreign coin that there is any profit to the country, 2543, 2544. The difficulties of adjusting obligations ought not to be considered insuperable, looking to the importance of the object aimed at, 2545. The alteration in the value of gold during the last 10 years has probably been greater than that involved in the reduction of the £ to 25 francs, 2546, 2547. But the fact of such depreciation is matter of speculation, 2548. It is part of the policy of this country to remove obstructions to trade such as are caused by want of uniformity of money, 2549, 2550. Explanation of previous answers as to the effect of free trade—strong opinion of its advantages; the question of obtaining reciprocity in free trade has not, however, attracted sufficient attention in this country, 2551–2553. Assimilation of weights and measures, as well as of coins, is a great advantage to those countries which possess it and places this country at a disadvantage, and competition is no doubt much increasing; for these reasons a complete assimilation would certainly be most desirable, but it would be very difficult to effect; it would therefore be desirable to adopt the 25-franc piece by itself at first as a step towards perfect assimilation hereafter, 2554–2569. In the event of an alteration of the £ sterling an equivalent could no doubt be found for the payment of debts contracted in pounds sterling, 2570–2572. The £ has a very extensive circulation either as legal tender or commercially, but no doubt any other coin, especially if it bore the same name, would circulate with equal facility, 2573–2580. The English measure of calculation is better known than the Continental measure of calculation in the East, in Australia, the Spanish colonies, Egypt, and along the southern shores of the Mediterranean, 2581, 2582. Both the English and the Continental manufacturers lose in their mutual transactions by the obstructions caused by the present system—the loss on one side is not compensated by a gain on the other; but there would be no such loss between the countries where the convention exists, 2583–2587.

M'Culloch:
Opinion of upon seignorage, p. 323.
Quoted as to the effect of a seignorage in enhancing the value of the currency, and as to the consequent necessity of reducing the weight of coinage in proportion. *Hendriks*, 307–355.

Manby, Charles:
Analysis of his evidence:—Honorary Secretary of the Institution of Civil Engineers, and representative of Messrs. Robert Stephenson and Co., connected with engineering matters on the continent, 429–432. Inconvenience of not having an universal monetary language, in conversion of accounts, and in translation of engineers' specifications from foreign countries, 433–436. Clerks with special knowledge must be employed on these calculations, 438. Identity of coinage would facilitate calculations to mercantile men, 439.

The most convenient coin would be the £, and next to that the napoleon, 440. An alteration in the value of the £ would require a tariff to which, in a short time, arrangements would conform themselves, 441. The inconvenience of the change would not be great, and would not last long. Instance of the facility with which engineering workmen have learned to work by decimals, 442, 444, 445. The permanent advantages would outweigh the temporary inconveniences, 443. Necessity for a tariff of conversion, 446–448. The inconvenience of the present system would not be materially diminished, and the advantages would be inconsiderable, if the assimilation were confined to one coin, and did not comprehend a general uniform system of coinage. It would not be worth while making a change which did not secure an uniform currency, 449–462. The adoption of an international 25-franc piece by itself would be useful to travellers, and in ordinary usage, but would not simplify calculations to mercantile men, 470, 519, 520.

A general measure affecting weights, measures, and coinage is required, and would be the most advantageous, 463–478. At the same time the movement must be progressive on account of the difficulty of interfering with established habits, 479, 480. A change in the £ would be without importance if unaccompanied by a change in the subsidiary coins, 481–483. Advantage of a high unit, 484–487. The assimilation of the £ with 25-francs, by affording a common measure of value in account, would simplify calculations in large but not in small transactions, 488–499. Unless an identical and universal money of account is afforded, calculations are necessary in transactions with every country, 500–502. The special clerks employed upon foreign calculations do not entail much expense, but errors frequently occur, and there is a loss of time under the present system, 503–509, 521. No inconvenience in converting pounds into francs, or vice versâ, if the £ and 25 francs are equalized, 510–512, and no practical difficulty in the adoption of the 25-franc piece with a decimal subdivision, 513, 514. A unit of 25 francs preferable to a 10-franc unit, 515–518.

Although the present difficulties may not have occasioned loss of trade, uniformity of coinage would occasion gain of time, which is equivalent to money, an advantage which would put all nations on the same footing, 521–526. An assimilation of coinage to the extent of the adoption by each country of the 5-franc piece or one of its multiples as a unit would, without waiting for uniformity of weights and

measures, facilitate transactions so far as accounts are concerned, 527–532. The expense of recoining the gold money in the event of a change involves the question of the balance of advantages and disadvantages, 533, 534.

MUSPRATT, EDMUND KNOWLES:
Analysis of his evidence:—A chemical manufacturer, and Member of Council of the Liverpool Chamber of Commerce, 535, 536. Represents the opinion of the Liverpool Chamber of Commerce, which is extremely in favour of international coinage, 537–541. Quotations of prices could be more easily understood if the proposed alteration of the £ and the American dollar were effected. The advantages would be increased, and only fully obtained, if the decimal system were adopted, and weights and measures assimilated. Only objection to the movement is that it will ruin the trade of foreign clerks, employed in this country on account of their familiarity with the currency and weights and measures of other countries. Trade is limited by the present system, under which quotations in English money are not understood abroad; and another disadvantage arises from the practice of calculating the sovereign in exchange as equivalent to 25 francs, creating a loss of 2*d.* in the £, 542, 543.
The reduction of the £ to 25 francs should be looked upon as part of a general scheme of assimilation of coins, weights, and measures, but in itself would be a great step, obviating the present inconveniences to a great extent, and affording great advantages. It is important that the £ should be the unit. Unanimity of opinion in the Liverpool Chamber of Commerce on this point, 544, 545, 574–578, 586.
Advantage and gain to travellers from international coinage, 546. Facility in calculating the exchange, though it probably would not affect the exchanges themselves, 547–550, 572, 573, 586. Loss would be caused to the small money changers, but the community would gain, and the business of the larger exchange merchants would be increased by the impetus afforded to trade, 551. The opinion of the United States is in favour of a reduction in their gold coinage corresponding to that proposed in the case of the £, but the Americans would be greatly influenced by the action of England. Statements to this effect by Messrs. Kasson, Sherman, and Ruggles, 552, 553. The change should be effected by a reduction of the sovereign to the value of 25 francs, and of the dollar to the value of 4*s.*, 554.
The effect of the reduction of the £ upon pre-existing contracts could be remedied without difficulty by a tariff (although salaries of clerks and wages would adjust themselves without the application of a tariff), or by the charge of a seignorage, 555–564. The change will necessitate a recoinage, 565. Decided advantages of the change, even without an assimilation of the subsidiary coins, which will ultimately, no doubt, be decimalized. There must be progressive advance in all great reforms. The advantages would quite outweigh all attendant inconveniences, 566–568, 586. Transactions would be equally facilitated with the United States and with the countries of Europe, parties to the convention. The largest commercial relations of Liverpool are with America; but those with Europe are becoming quite as important, since the French Treaty of Commerce, 569, 570. The reduction of the American dollar would be about 3 per cent., but the present is a particularly favourable moment for its being effected. The change would be more difficult after the United States return to a gold currency, 571. In the case of England the change would be so much smaller than in America, that it may well be made notwithstanding that England, unlike America, has a convertible gold currency, 594, 595.
Assimilation of coinage will make prices more even by rendering them more intelligible, enabling each merchant to form his own judgment in the selection of his market. At present one merchant follows the example of another in the shipment of goods without making his own calculation, on account of the difficulty in doing so, 574–578. Opinion of Liverpool strongly in favour of a decimal division, notwithstanding that the practice is retained of quoting cotton by the 8th of a penny. The Liverpool merchants have already adopted the cental (100 lbs.) in the sale of corn, 579–583. General advantages of a decimal subdivision, 584, 585. By rendering price lists more intelligible uniformity of coinage will create an increased demand for commodities, and thereby benefit commerce, 587–589. It is difficult to predict the exact advantages of the reduction of the £ to 25 francs, which would be principally in the exchanges, and would lead to increased trade by faciliting the comprehension of accounts current, 590–593. At present large merchants who can afford to employ foreign clerks conversant with foreign weights, measures, and coins have an advantage over smaller operators, 596–600. The witness adheres to his statement as to the practice of calculating the £ at 25 francs. In order to prevent the loss which this would entail, an addition to the price is made, and an obstacle to trade is thereby created, 601–608. The facility of calculating exchanges in international coin insisted upon, although the full advantage of uniformity would not be attained without comprising weights and measures, 609–616. Emigrants take coin with them, but not in any quantities, 617, 618. The difficulty of understanding the quotations of prices is an obstacle to trade, which, like a customs' duty, if removed will facilitate trade. How much it will do so cannot easily be estimated. Instance of the results of the French Treaty unexpected by many people, and increase of trade in articles when relieved from duty. The removal of obstacles by creating a mental want leads to increased consumption, 619–622. For assimilation of coinage would cheapen the price of imports by facilitating calculations and exchanges, the cost of which must be added to the price of the articles, 623. The saving of clerical labour is an element of saving, but not to a considerable extent, 624. The trade with Australia is greater than if there had been no assimilation of coins, weights, and measures, 625–629. Disadvantage if there was diversity of coinage with Australia, Ireland, Scotland, or among the various counties of England, 630. The perfection of calculation produced by uniformity of coinage will enable merchants more easily to ascertain the cheapest and the dearest markets, 631–634.
Advantage of retaining the £ as a unit, and objections to a 10-franc unit. America unfavourable to the latter scheme, and in the event of a change would prefer a higher unit, 100 francs perhaps. Both the French and American units are too low, 635–643. There would be great resistance, especially among the commercial classes, to a 10-franc piece, unless accompanied by the sovereign or 25-franc piece, 644. Proposal for the decimal subdivision of the £, viz., into 1,000 mils, 40 mils=10*d.* or 1 franc, 645–649. This would still involve calculations in dealing with foreign money, but the change for obtaining perfect assimilation should be made by two steps. There would be great objection to a disturbance of the whole monetary system of the country at once, 650–653. Having once obtained the 5-franc and 25-franc pieces as international coins, it does not follow that England should adopt the rest of the French system, or that France should not rather embrace the English system, 654; especially as the sovereign is better known than the napoleon. It is more current in Russia and Por-

tugal and the German trading ports, and equally so in Germany. The Austrians intend to coin a 10-florin, i.e., a 25-franc piece, 655–663.

Travellers at present lose in exchanging sovereigns, 664. Question whether identity of coin might not be obtained by adopting the existing sovereign, and assimilating 25 francs to it, instead of reducing the £ to 25 francs. Objection to this course on the ground of the large amount of gold in circulation in the countries of the convention, although possibly there may be more sovereigns in circulation in the world generally, 665–671. This proposal however, was not, considered at the conferences, which were unanimous in favour of the French system, 672–674. The large coinage of gold in France during recent years, which is probably now complete, is owing to silver having gone out of circulation, 675–677. Calculation by Mr. Ruggles as to relative amounts of gold coinage in England, France, and the United States since 1792, 678. Advantage of decimal quotation for calculations, but no great practical inconvenience is caused by the use of vulgar fractions, in which quotations of cotton are at present made, 679–693. There has not been time for an investigation at Liverpool into the advantages of the proposed change of coinage, but the witness believes he has enumerated the principal points, 694, 695.

NEWMARCH, WILLIAM:
Analysis of his evidence:—His opinion is generally in favor of an assimilation of coins, weights, and measures, but the propositions of the Paris Conference would be more usefully applied to the countries of the convention of 1865 than to England, 1357–1360, inasmuch as no change would be necessary in their coinage, whereas the assimilation of the £ to 25 francs would not assimilate the English subsidiary coinage to that of the Convention, 1361. There is much exaggeration as to the advantages anticipated from the change. It would not advance the larger interests of commerce. Calculations are made just as readily at a par of exchange of 25 francs 20 cents as at 25 francs. Nor would the conversion of prices be facilitated, as the difficulties connected with the shillings and pence would remain. The argument as to the convenience of travellers is not worth serious consideration. Circular notes would still be used in preference to coin, and a charge must still be made for changing them, 1362. The alleged advantages of an international coin should not be highly estimated, 1363. The difficulties and inconveniences of the change would be great, 1364. All pre-existing contracts must be modified if the value of the sovereign is reduced, and this would entail great inconvenience. Accounts must be re-adjusted in the books of all bankers and mercantile establishments, causing enormous labour. Loss for which it would be very difficult to give compensation would fall upon revenue derived from tolls. Waterloo Bridge Company instanced. At 8*l.* per 1000*l.* (the exact fraction being 8·25) the loss on a revenue of 50,000*l.* would be 400*l.* per annum. In like manner loss would be entailed on railway companies and on the public revenue, estimating the latter at 70,000,000*l.* the loss would be 600,000*l.* per annum, 1365. The addition of a halfpenny to all payments amounting to 5*s.* would no doubt afford compensation, but in the case of railway companies, the tolls must be re-adjusted by law, 1366–1369. Below 5*s.* loss must be sustained, as compensation could not be given in the case of very small sums, 1370, 1371. Unless corresponding alteration were made in the tolls of a railway company, the nominal revenue would remain the same while the expenditure would increase by 2*d.* in the £. In the adjustment of their accounts, bankers must not only credit all their customers on the day of the change with 8 per mil, but they must receive a like addition from all their debtors. Every bill must be adjusted, 1372. The labour which would be required for the alteration of all accounts by ·825 per cent., *i.e.* 16*s.* 6*d.* in the 100*l.*, would be very formidable, although means might be devised by tables and otherwise to lessen the difficulty, 1373–1380. The substitution of the sovereign for the guinea was not an an analogous operation, 1381, 1382. Uniformity of coinage in itself is very desirable and worth some inconvenience, but it is not worth while adopting the present plan, 1383, 1384. The change in the Irish coinage is not a case in point being rather a retail transaction, and the circumstances of other countries are so different from those of England that changes made elsewhere afford no comparison to a similar change in this country as regards its extent and attendant difficulties, 1385–1387. By "retail" transaction is meant the comparatively small population and transactions affected in the case of the Irish change, 1388–1393. Small as well as large contracts would be affected by the change, and should be readjusted, 1394–1397. Prices would soon adapt themselves to the value of the new currency, 1398. To preserve the public faith, if the intrinsic value of the coin is reduced, all pre-existing contracts, great or small, must be modified, 1399–1404.

A considerable per-centage of the gold coinage at present is light, 1405–1407. But this has not affected prices as the sovereign passes by tale. If the coins were very much worn they would cease to pass at their full value, but practically the English gold coinage is nearer its intrinsic value than that of any other country, and no one is bound to take light sovereigns, although practically no doubt they do pass for full value, and railway companies, for convenience, accept them, and suffer loss accordingly. The accidental wear and tear of the coinage is, however, very different to a proposal to issue a new coinage one per cent. worse than the old coinage, and public faith requires that all contracts shall be settled in coin of the same value as that in which they were made, 1408–1431. There was no occasion to adjust contracts in 1819, and due regard was paid to existing interests, 1432–1437. No injustice would be done if, in carrying out the proposed change, the full compensation of 8·25 per mil was made, but the labour involved would be very great, 1438.

The expected advantages of the change are very much exaggerated, for it would not assimilate the English subsidiary coins to those of other countries. In the case of America, however, where the dollar is divided into cents, the advantage would be substantial, as it is in the case of the four countries of the convention. A mere adoption of five international gold coins would not facilitate the conversion of francs and centimes into shillings and pence, 1439–1444. Admitting all approximation of weights, measures, and monies to be desirable, the advantages of this particular scheme would not counterbalance its disadvantages, 1445. No scheme would afford real benefit unless it secured assimilation of the modes of account, 1446–1448. The best thing for this country, from a selfish point of view, would be that assimilation of coinage should be established between the four countries of the Convention and the United States, whereby our own calculations would be much simplified, 1449. For the great operations of commerce, this assimilation is not required at all, as merchants make it their business to understand, readily, the calculations of exchanges. An assimilation, to be really useful for popular purposes, must facilitate the conversion of prices. This will be the case in the United States, and in the countries of the Convention under the suggested arrangement, but not in England. We should wait to see how the system works in other countries, 1450, 1451. The convenience of travellers is not of permanent importance, and would not be much promoted by the change, as they generally carry letters of credit or circular notes, 1452–1456. The gold coinage in this country is in a state of great integrity, 1457.

The imposition of a mintage would be a departure from the successful policy pursued during the last 50 years, as regards the adoption of a single gold standard, and having no mintage, a policy which is being imitated by other countries, 1458–60, 1464–8. It might probably be expected that a mintage would raise the value of the coin, 1461. Which would render necessary the readjustment of all contracts, 1462, 1469–1472. If the fine gold in a sovereign is reduced one per cent., and, on the other hand, a countervailing mintage of one per cent. is imposed, it cannot be held that the value remains the same, so as to discharge existing obligations which are contracted upon the faith of a coin of a certain weight and fineness. The contract is for a commodity, and can only be discharged by payment of the stipulated quantity, 1473, 1474. Nor is the coin, as a commodity, affected by the question as to who paid the mintage, 1475–1478. Sovereigns can only be exported at their intrinsic value, which is a thing to be measured by weight, not by nomenclature, 1479. The witness is not prepared to say that a mintage would increase the exchangeable value of the sovereign in this country, 1480. The question was fully debated before 1816, when the present system of exempting gold coinage from mintage, and making a heavy charge on the subsidiary coinage, was adopted as the true policy, 1481. Prices would soon determine the exchangeable value of the coin, which would be equal to that of the metal contained in it; and its value abroad would regulate its value at home. A mintage would not raise its value, and the reduction of the fine gold would degrade it, 1482, 1483. A person, if he found it advantageous to turn his bullion into coin, will pay a mintage, but the material is not thereby increased in

value, 1484–1490. Coin is not always more valuable than uncoined gold, and the latter is generally preferred for large commercial operations, 1491–1494. In Paris a mintage is charged, but it adds nothing to the value of the gold coins when brought here, regard being had only to the quantity of fine gold in them, 1495–1498.

The full fares authorized by law are not generally charged by railway companies, 1499, 1500. But that is a matter for the discretion of the companies, and would not affect the necessity for altering the maximum tolls, if the sovereign is altered, 1501, 1502. In the case of tolls, whether the effect might be to increase the revenue derived from them or not, compensation must be made by the Legislature without regard to other consideration, 1503, 1504. No doubt any damages incurred might be estimated by a Commission and paid, but it is questionable whether it would be worth the trouble and cost, 1505, 1506. If, in the event of an international coinage, the system of free mintage in England is maintained, no doubt we shall have to coin for other countries, as is now done for Portugal, Brazil, and Egypt, but that might not be a disadvantage, 1507–1510. The fact insisted upon is that trade and contracts will be affected by a deterioration of the intrinsic value of the sovereign, because debts can only be discharged by the precise quantity of the commodity, viz., gold, stipulated for, 1511–1515. Although, no doubt, transactions in transitu at the time of the change could be arranged without loss, 1516, 1517. The general desire for uniformity of weights, measures, and monies originated in the Exhibition of 1851, 1518–1520. Uniformity of monies is very desirable, but it would not be worth while merely to adopt the 25-fr. piece; the inconveniences of a change would not be worth undergoing unless it comprised the subsidiary coinage, 1521–1530. Merchants are not at all interested in the proposed change. They make it their business to understand comparison and conversion of prices and employing clerks. It is a matter of education. Assimilation of monies of account would alone remove the difficulties of converting prices, 1531–1543. The excessive difficulty and labour of altering all books, accounts, &c., might be worth incurring, if an assimilation of money of account were to be secured, but not otherwise, 1544–1546. The equivalence of the sovereign to 25 francs would not be an important step towards such assimilation, 1547. The addition of 2*d.* in the £ would be analogous to the calculations for income tax, but these are very troublesome, 1548–1550. Admitting the advantages of uniformity, the adoption of the 25-franc piece would be of no value, while the inconvenience of the change would be extreme, 1551–1557. No conception can be formed of the labour which would be caused by the alteration of books, accounts, &c., 1558–1561. The Legislature must provide that every existing operation of debt and credit should be readjusted, but it could only enforce this in the case of internal transactions, and not in that of the settlement of foreign accounts, 1562–1564. The proposed depreciation of the £ would entail a loss of 8 per mil. upon the holders of foreign debt in this country, who would be unable to recover the difference upon payment of their coupons, although the loss thus sustained by England would be compensated by corresponding gain if the convention extended to the whole world, 1565–1570. The proposal is not objected to because of the smallness of the change, but on accouut of the preponderance of inconvenience and cost over the advantages which it presents. A proposal for a simultaneous introduction of uniformity of monies, weights, and measures, would justify considerable sacrifices, 1571–1577. It is true that it is the habit of this country to introduce reform by gradual steps, 1578, 1579. England, being the great creditor of the world, would suffer the chief loss upon the payment of coupons of foreign debts, as foreign governments would decline to recognise any enactment of this country, having stipulated to pay in sovereigns they would pay in the new sovereigns, 1580–1585. The proposal for substituting a 10-franc piece for the £ is debateable, 1586. The condition of the present coinage has no bearing upon the subject of the enquiry, 1587.

Loss to the English, in consequence of absence of uniformity in weights. *Lloyd*, 74.
Extension of money-order system to foreign couutries would be facilitated by an international coinage, by which any loss to the post-office revenue, through a reduction of the pound, would be made good. *Lloyd*, 13, 40. *Hendriks*, 338.

Pound Sterling, The:
Any scheme involving the abandonment of, would not be accepted by this country, and would therefore be impracticable. *Behrens*, 257, 262. The par of exchange being 25·221 francs, the diminution in the pound required to assimilate it to 25 francs would amount to 2*d.* and $\frac{1}{5}$ of a penny, or $8\frac{1}{3}$ per mil. *Hendriks*, 301.
Convenience to this country of, as an international coin. *Manby*, 440.
Importance of retaining, as the unit. *Muspratt*, 545 Is more suitable than the franc to the large transactions of the present period. *Bagehot*, 1997–1999. Disagreement with the views of the Paris Conference as tending to displace the; importance and value of; it is universally known; its advantage in this respect over other coins. Its general popularity in various countries of the world. *Bowring*, 2438–2442. Groundlessness of the objection that it is too large an integer. It represents a far greater interest in the commercial world than any other monetary value. It should, however, be decimalized, *ib.* 2443. Is not current in China, but is the money of account there in transactions with foreign countries, for which it is indispensable, *ib.* 2444–2450. Is the final instrument of settlement in the great mass of commercial transactions, *ib.* 2451–2456. Looking to its antiquity, popularity, and wide-spread influence, any interference with it would be most injurious, *ib.* 2461.
No new coin would have the same hold upon public opinion and confidence as the pound, *ib.* 2468. Is not likely to be adopted by foreign countries as an international coin, *ib.* 2470. Great confusion would be caused if the pound, which is the cosmopolitan standard of value, was changed, *ib.* 2477–2479. Is surrounded by a greater feeling of nationality than the dollar, *ib.* 2483.
Could not be maintained at its present value if a grain of gold were subtracted from it, *ib.* 2491. Is frequently calculated at 25 francs, whereby a loss to individuals of 2*d.* in the pound is occasioned. *Hendriks*, 275, *Muspratt*, 543, 601–602. *Mallet*, 2502. The same practice was followed in framing the tariff under the commercial treaty with France. *Mallet*, 2503, 2526. The wide area over which it circulates, and which is a strong argument in favour of retaining it, at all events nominally, makes it a question whether it may not ultimately be adoped by foreign countries, *ib.* 2529. Has a very extensive circulation, but no doubt any other coin, especially if it bore the same name, would circulate with equal facility, *ib.* 2573–2580.
See also Bowring. Twenty-five-franc Piece.

Pound and Mil Scheme:
Plan suggested founded upon the, for decimalizing the coinage, which would be in harmony with the international scheme, and would tend to great simplification of accounts. *Hendriks*, 309.

POUND AND MIL SCHEME—*cont.*
The adoption of the, condemned by Lord Overstone's commission. *Levi*, 367.
Would involve calculations, and therefore not so advantageous for an international system as the 10-franc scheme, *ib.* 390–394,
Should be considered separately from the question of international coinage. *Wrigley*, 1350–1353.

PRICES:
Quotations of, would be more readily understood, and calculations more readily made, under a system of international coinage. *Behrens*, 90–94, 108. *Hendriks*, 275. *Manby*, 433–435. *Muspratt*, 542–543, 574–575, 587. *Field*, 701, 721, 752, 753. *Jeffery, W.S.*, 1122–1124. *Jeffery, J. R.*, 1175. *Wrigley*, 1275–1276. *Bagehot*, 1977–1978.
Would soon adapt themselves to the value of the new currency. *Field*, 709. *Newmarch*, 1398.
The change might perhaps slightly raise the value of articles. *Jeffery, W. S.*, 1143.

PRUSSIA:
Gold coinage and mint regulations of, p. 252.
By the general adoption of the French system, four thalers of, would be equal to 15 francs. *Lloyd*, 12, 67.
The frederic d'or the only gold coin of, *ib.* 68.
Altered the weight of the thaler without finding the necessity for a tariff. *Hendriks*, 350.

RAILWAYS:
Present loss in paying fares, and in transmitting bullion by, between England and France, in consequence of the pound being calculated at 25 francs. *Hendriks*, 275. Trouble and difficulty occasioned by the calculations involved in transmission of parcels over different lines of, owing to difference of coinages. *Levi*, 366.
Loss which would be sustained by railway companies if the pound is reduced by 2*d.* *Newmarch*, 1366. It could only be adjusted by legislative authority to increase the statuary tolls, *ib.*, 1368–1369. Otherwise the nominal revenue would remain the same, while the expenditure would increase by 2*d.* in the £, *ib.* 1372.
Injurious effect upon railway companies of a reduction in the value of the pound, in consequence of the loss on small fares. *Swarbrick*, 2295–2300.
More than half the receipts of the Great Eastern Railway are in sums under 5*s.*; no compensation could be made in such cases except by a reduction of the passenger duty, *ib.*, 2301–2304.
The full fares allowed by Parliament not always charged. *Newmarch*, 1500. *Swarbrick*, 2305–2306. But rather than raise the fares, which might prejudice the revenue, the companies would prefer to put up with the loss. Practical difficulty of adding an extra farthing or halfpenny to the fares, *ib.* 2306–2311. Necessity for readjustment by parliamentary enactments, *ib.* 2312. It would require more than a charge of one per cent. to affect passenger traffic, *ib.* 2318.
See SWARBRICK.

RECOINAGE:
A certain cost for, would be incurred in the event of the reduction of the sovereign to the value of 25 francs. At ⅕ per cent. on a coinage of 100,000,000*l.*, the cost would be 200,000*l.* once for all. *Lloyd*, 19–20.
Necessity for a, if the pound is reduced. Rep. xii. *Muspratt*, 565.
Of one hundred million sovereigns, estimated expense of, 559,950*l.* *Hill*, 1731.
The expense of, would not be an obstacle to the proposed change, as it is required and must shortly take place, on account of the present lightness of the sovereigns. *Jevons*, 1738–1741, 1756, 1798.
No, required, if a compensating seignorage be imposed upon the pound when reduced to the value of 25 francs. *Smith*, 981, 1027, 1029.
No, of the silver would be necessary in the event of the adoption of the 25-franc piece, *ib.* 1856–1857.

REMEDY:

SALARIES:
Would be affected by the change, but only in the same way as other contracts, while the receivers of wages would be benefited by the impetus given to trade and increased demand for labour. *Behrens*, 241–242. Would soon adjust themselves. *Jeffery, W.S.*, 1145.

SEIGNORAGE:
I. *Expediency or inexpediency of charging.*
II. *Necessity of, in case of an international coinage.*
III. *Amount charged in different countries.*
IV. *Effect of, upon the value of coin.*
V. *Proposal for restoring the value of the pound if reduced to the value of 25 francs, by means of.*

I. *General expediency or inexpediency of charging seignorage.*
See opinions of political economists on seignorage, p. 320.
Also, see correspondence in 1852 relating to the expense of gold coinage and the nature of the Bank charge on gold purchased under the Act of 1844, p. 324.
Opinion of Mr. M'Culloch that the imposition of such a duty, when it is not carried to an undue height, is advantageous. *Hendriks*, 307.
England should adopt the same mintage as other countries. *Field*, 794. The imposition of a mintage in England would be a departure from the policy pursued during the last 50 years. The discussion of such a change is a very grave and serious matter. *Newmarch*, 1461, 1464.
The stamp of authentication given to bullion by coining is something for which the Government are entitled to charge if they choose. *Bagehot*, 2097. The witness is not prepared to express any opinion as to the expediency of charging a mintage, *ib.*, 2114.
There is a great deal to be said on both sides as to the reasons for maintaining the system of free mintage. *Goschen*, 2366.

II. *Necessity for imposing a seignorage in case of an international coinage. Behrens*, 221. *Hendriks*, 305. *Field*, 794. *Brown*, 2229.
A common seignorage of one per cent. recommended. *Hendriks*, 307. *Smith*, 880, 1028. *Brown*, 2228. As being a fair compromise for other countries, and suitable to England, because after the proposed reduction in the intrinsic value of the sovereign it will restore the coin to its present value. *Smith*, 981, 1029.

III. *Amount of seignorage charged in different countries.*
In England no mintage is charged. Rep. xi. *Behrens*, 223. *Hendriks*, 306. *Newmarch*, 1458. *Bagehot*, 2111. *Goschen*, 2363. But the charge of 1½*d.* an oz. made by the Bank of England is equivalent to a mintage. *Behrens*, 223. *Smith*, 854. *Jourdan*, 1693–1694. *Goschen*, 2357. Statement as to mintage, and delay for coining, *a.* In France, *Hendriks*, 306–307. *Smith*, 856–864. *b.* In the United States; in India; in Australia; in Prussia. *Hendriks*, 306–307. *Smith*, 882.
The average charge is about one per cent. *Smith*, 1031. *Brown*, 2228.
See also Returns in Appendices XII. and XXXIV.

IV. *Effect of seignorage upon the value of coin.*
See opinions of political economists on seignorage, p. .
The current value of a coin is enhanced in the country or countries where it circulates by the amount of seignorage imposed upon it. See paper by Mr. Hendriks, p. 142, and mem. by Col. Smith in elucidation of his evidence, p. 148. *Hendriks*, 307. *Smith*, 886–892, 962–964, 982–983, 1066–1070. *Jourdan*, 1689–1695. *Bagehot*, 2121. *Brown*, 2225–2227. It might probably be expected that a mintage would raise the value of a coin. *Newmarch*, 1461.
It is conceivable that a sovereign of less would have the same purchasing power as one of greater intrinsic value if a seignorage equivalent to the difference were charged. *Bagehot*, 2076–2078. A seignorage would not increase the value of the coin as bullion, but would in exchange cause it to possess a greater value equivalent to the charge, *ib.* 2091–2096. Theoretically there is no limit to the mintage which might be charged without depreciating the value of the coin, but practically, if the charge was too high, it would promote private coining, *ib.* 2132–2136.
A seignorage may add to the value of the coin, at the moment when the bar gold, for the purposes of the holder, is coined, but it is an error to suppose that it gives it a permanently increased value. *Goschen*, 2331–2332.

V. *Proposal for restoring the value of the pound sterling if reduced to the value of 25 francs, by imposing a seignorage.*
See paper by Mr. Hendriks, "International Coinage from an English Point of View," p. 142, and Col. Smith's Mem. in elucidation of his evidence, p. 148.
The reduction of the pound to 25 francs would require a diminution of nearly one per cent. in the amount of fine gold in the sovereign. The two coins would then be of the same intrinsic value; and if an equal seignorage of one per cent. is imposed, their current value will be the same; and as the seignorage will restore to the sovereign its original current value, no compensation need be given, and no contracts need be re-adjusted. *Hendriks*, 307. *Smith*, 865–881, 886, 887, 934, 973–986, 1027, 1029, 1043–1044. *Brown*, 2224, 2231–2235, 2247.
It is an element of this scheme that the new sovereigns should be made exchangeable for bullion at the present price of 3*l.* 17*s.* 10½*d.* an oz., any loss accruing to the Bank being made good out of the seignorage fund. *Smith*, 888–889, 898–899, 908–910, 934, 965–972, 1045–1052, 1083. *Brown*, 2238–2250.
The Commissioners are unable to concur in these views. Rep. xiii.
If the fine gold in a sovereign is reduced one per cent., and, on the other hand, a countervailing mintage of one per cent. is imposed, it cannot be held that the value remains the same, so as to discharge existing obligations which are contracted upon the faith of a coin of a certain weight and fineness. The contract is for a commodity, and can only be discharged by payment of the stipulated quantity. *Newmarch*, 1473–1474, 1511–1515.
A seignorage charge equivalent to the reduction in the intrinsic value of the sovereign would not maintain the original value of the coin. *Goschen*, 2328. A debt of 1*l.* of the old currency must be discharged by 1*l.* 0*s.* 2*d.* in the new currency. *ib.* 2329–2330, 2347. By the proposed scheme the convertibility of the sovereign would be lessened. *ib.* 2407.
Objection to the proposal for maintaining the value of the reduced sovereign by making it exchangeable for bullion at the present price. *ib.* 2408, 2409.

SMITH, ADAM:
Opinion of, upon seignorage, p. 320. Rep. xix.

SMITH, Col. JOHN THOMAS:
Analysis of his evidence:—Has been master of the mint at Calcutta, and previously at Madras. Was actuary to the Madras Military Fund, 840–842. Is in favour of international coinage, 843, 844. The mint delivers coin in exchange for bullion at the rate of 3*l.* 17*s.* 10½*d.* per oz., within a delay of about 20 days, the only loss incurred by the holder of the bullion being in the interest during the coinage, 845–847. But in practice all the gold is taken to the Bank, who purchase it at 3*l.* 17*s.* 9*d.* per oz., which is an economy for the possessor of the bullion, as the difference of 1½*d.* is less than the interest of the money during coinage if the gold were taken to the mint, and being in point of fact a charge for mintage and interest, it increases to the extent of the charge the current value of the coin, 848–855. There is a mint charge in France on the coinage of gold of about ¼ per cent., and a delay in delivery of the coin causing a loss of interest from ½ to ¾ per cent., making a total charge equivalent to from ¾ to 1 per cent., 856–863. This statement made upon the authority of M. Dumas, Director of the Paris mint, 864.
The reduction of the £ to 25 francs would require a diminution of ·87842, or about ⅞ths per cent. in the amount of fine gold in the sovereign, 865–872. The two coins would then be of the same intrinsic value, and if an equal seignorage were charged, their current value would be the same. They must contain the same quantity of alloy, and fulfilling these conditions, they would afford a perfect system of international coinage, 873–878. This applies equally to all countries joining the convention, 875, 893–897. The seignorage must be calculated as equivalent to a mintage and the interest for delay, and should be 1 1/24th per cent., or in round numbers 1 per cent., 879–881. The charge for mintage of gold and loss by delay together amount in Prussia, the United States, and India to about 1¼ per cent., 882. In India the seignorage on silver is as high as 2 per cent., without leading to unusual forgery, 883–885.
By the imposition of a seignorage of 1 per cent., if the intrinsic value of the sovereign is at the same time reduced 1 per cent., its current value will remain the same as before, and there would be no disturbance of pre-existing contracts, 886, 887. But this is conditional on the new sovereign being exchangeable for gold bullion at the present price of 3*l.* 17*s.* 10½*d.* per oz., 888, 889. The new sovereign will only retain its original current value in the countries of the convention. Beyond them, it will pass merely for its intrinsic value, 890–892. It would be desirable that the conversion of the coins into bullion at 3*l.* 17*s.* 10½*d.* per oz. should be generally adopted, to prevent any over-issue, 898, 899. 100 of the new sovereigns would purchase from the Bank the same amount of gold as before, and without involving any loss to the Bank, 900–904. The new standard gold would be coined into a greater number of sovereigns than before, 905–907. The object of making the sovereign convertible being to cause the £ of less intrinsic value to retain the same current value as the present £; the conversion should not extend to French coins unless the rule were made general, 908–910. The sovereign, when reduced to 25 francs, by a diminution of its intrinsic value, will nevertheless retain the same purchasing value in France as at present, if there is an international currency; it will be of less value only when used as bullion, 911–919. It would, however, be reduced in purchasing value in countries outside the convention, and bullion must be sent instead, 920–921. It would not be more advantageous to send bullion abroad to the countries of the convention instead of coin, because when converted into coin it would be subject to the same seignorage as in England; nor would bullion outside the convention exchange for more than at present, only the new sovereigns outside the convention would exchange for less, 922–933, 992.
No compensation to the holders would be required, because gold bullion would be the standard, and being procurable at its present value would always be exported to countries outside the conventions 934. A sovereign

in exchange is now intrinsically worth 25 francs 4 sous; hereafter it will only exchange for 25 francs, but these will be worth 4 sous more in current value beyond their bullion value by the imposition of a mintage, 935–939. The increase in the value of the francs would not be injurious to the French nation; and, practically, the present delay in delivering coin at the Paris mint is equivalent to a seignorage, so that there would not be any material increase in their value, 940, 941. Immediate delivery of coin by a mint might be difficult, but the Bank of England gives at sight, with a profit of 1½*d.* per oz., which is hardly equal to the interest for delay, 942–946. The proposed uniform seignorage will leave the napoleon at about its present currency value, for against the increased seignorage should be set the present system of delay, 947, 948. It is true that the reduced sovereign will only exchange for 25 francs instead of 25 francs 20 centimes, but its current value will remain as at present, 949–955. There would be a loss of 20 centimes in intrinsic value, but that could be met by sending bullion to France instead of coin, 956–960. If the other countries charged mintage, and England charged none, England would have to coin for the adjacent nations, 961, 1088. Effect of mintage in increasing the current value of coin, 962–964. The Bank should give gold for sovereigns at the rate of 3*l.* 17*s.* 10½*d.*, and would be compensated for the loss incurred in taking worn coins out of the seignorage fund, which, assuming a total coinage of 100,000,000*l.*, and a mintage of 1 per cent., would amount to 1,000,000*l.*, 965–972. The reason for recommending a uniform seignorage of 1 per cent. is, that it is a fair compromise for other nations, and would suit England, because the proposed reduction of intrinsic value will bring the sovereign up to its present value, saving the necessity for a tariff and for recoinage, 973–981. The diminution of the intrinsic value of the sovereign by 1 per cent., and the imposition of a seignorage of 1 per cent., will not deteriorate the currency by 2 per cent. The one compensates for the other, 982–985. The exact deterioration in intrinsic value = 0·878 per cent., 986. Different regulations in England and France in delivery of gold coin, 986–991. Under the proposed arrangement, everywhere inside the convention the new sovereign (enhanced in value by a seignorage) would purchase the same amount of bullion as the old sovereign; outside the convention it would purchase less, and therefore would not be exported. But bullion would not therefore be dearer outside the convention. It would exchange for the same amount of the old sovereigns as at present, which when brought home would be only worth as much as the new coins. It would exchange for a larger amount of the new sovereigns, if they could be procured, but no one would send the new coins outside the convention, as a loss of 1 per cent. would be incurred by doing so, 992–1026. The object of imposing a seignorage is to prevent the necessity for a tariff and recoinage, and to establish uniformity with other countries, 1027. The charge of 1 per cent. is proposed as being about the average charge for mintage, including delay in other countries, and at the same time as representing the exact difference between the present and future intrinsic value of the sovereign. By the addition of this charge the value of the sovereign will be restored, and a recoinage will be avoided, 1028–1031. A common coinage will necessitate identical seignorage arrangements, 1032–1036. It would, probably, be expedient that the foreign international coins should not be exchangeable for bullion at the Bank of England at 3*l.* 17*s.* 10½*d.* per oz., 1037–1042, 1084–1087, 1093–1097. The sovereigns reduced in intrinsic value, but with an equivalent seignorage would have the same purchasing power both in England and France, 1043, 1044. It is part of the proposal that the Bank of England shall be required to deliver, at the rate of 3*l.* 17*s.* 10½*d.* per oz., bar gold in exchange for the new sovereigns, which would be equal in current (though not in intrinsic) value to the old sovereigns, 1045–1052, 1083. If there was a want of bullion, and the Bank was called on to exchange sovereigns for bar gold, they must melt them, and find the difference, 1053, 1054. It is reasonable to exact a mint charge. It is willingly paid in France and in India (where it is 2 per cent.), 1055–1065. By whatever amount the intrinsic value of the sovereign may have been reduced, its current value will be restored by the imposition of a seignorage of the same amount, provided the issue of the coins is limited, and that would be effected by arranging that the currency shall be of such a value that 3*l.* 17*s.* 10½*d.* of that currency will always purchase an oz. of the present standard gold, 1066–1083. Necessity for a tariff if the value of the sovereign is increased by a seignorage, without an equivalent diminution in the amount of gold contained in it, 1089–1092. The expense of coinage adds to the current, but not, properly speaking, to the intrinsic value of a coin, 1098–1109. Even the 1½*d.* an oz. charged by the Bank adds to the value of the sovereign, by a penny at least, as compared with bar gold, which, for the last 27 years, has been quoted, liable to small fluctuations, not at 3*l.* 17*s.* 10½*d.*, but at 3*l.* 17*s.* 9*d.* per oz., 1110–1113. A double seignorage imposed on the sovereign without a corresponding increase to that or the napoleon would not alter the relative value of the two coins for exchanges in countries foreign to the convention, 1114–1117.

SWARBRICK, SAMUEL:

Analysis of his evidence:—Is general manager of the Great Eastern Railway, 2291–2294. A reduction in the value of the £ would injuriously affect railway companies in consequence of the loss on small fares, which form a large proportion of the total receipts, and to which a corresponding addition could not be made. Fully one half of the passenger fares would be thus affected, 2295–2300. More than half the receipts from passengers by the Great Eastern Railway are in sums under 5*s.*; no compensation could be made for the loss in such cases except by a reduction of the passenger duty, 2301–2304. In many cases the full fares allowed by Act of Parliament are not charged by railway companies, but rather than raise the fares, which might prejudice the revenue, the companies would prefer to put up with the loss caused by the reduction of the £. Passengers prefer to pay in round sums, and it would not be practicable to ask for an extra farthing on 2*s.* 6*d.* or a ½*d.* on 5*s.*, 2305–2311. The companies could not compensate themselves by rearranging the fares within the parliamentary limits, nor without special legislative enactments, 2312. The companies adjust their fares upon a balance of considerations with a view to their profit; a small increase or decrease would not probably affect the number of passengers. It would require much more than a charge of one per cent. to affect passenger traffic, 2313–2319. The full fares authorized by Parliament are not always levied even where there is no fear of competition, 2320.

The results of the convention of 1865 have been advantageous to. *Behrens*, 109–113.

TARIFF: *See* COMPENSATION. CONTRACTS.

TEN-FRANC PIECE:

The introduction of an eight-shilling piece, concurrently with the 25-franc piece, advocated, equivalent to a, *Behrens*, 180–187, 196–197.

Recommended as the common unit for an international coinage in preference to the 25-franc piece. *Levi*, 369 et seq. *Brown*, 2181 et seq. Scheme showing how the coinage founded upon the, would be interchangeable with the existing coinage, *ib.* p. 121.
Should be accepted as the unit by this country, if all the other countries agree upon it, as the basis of an uniform money of account, but the 25-franc piece would be far preferable. *Bagehot*, 2163–2167.
Opinion of the Commissioners adverse to the, Rep. xvii.
Objections to the, as an international unit. *Hendriks*, 325–326.
America, at the Paris Exhibition Conference, opposed to the, as the unit. *Muspratt*, 639.
The subtitution of, for the pound would occasion insurmountable difficulties in the negotiation of bills abroad. *Bowring*, 2459–2460.
The Swedish government propose to coin a, Rep. vii. p. 292.

TEN-PENNY PIECES:
Were issued by the Bank of Ireland before 1826. *Culley*, 1947–1949, 1969.

TEN-SHILLING PIECES. *See* HALF SOVEREIGNS.

TOLERANCE. *See* REMEDY.

TOOKE, THOS.:
Opinion of, upon seignorage, p. 322.

TRAVELLERS:
Advantage of international coinage to. *Behrens*, 244–246. *Levi*, 366. *Manby*, 470, 520. *Muspratt*, 546, 664. *Field*, 701. *Jevons*, 1735. *Bagehot*, 2536. And to commercial travellers. *Jeffery, W. S.*, 1122–1128, 1147–1150. *Jeffery, J. R.*, 1175. But the advantage to travellers is not the most important consideration. *Field*, 701. *Jevons*, 1735. *Bagehot*, 2536.
The convenience to, is not of much importance, and would not be much promoted by the change, as they generally carry letters of credit or circular notes. *Newmarch*, 1452–1456.

TREATY, FRENCH:
Would have had greater results under an international system of coinage. *Behrens*, 92–93.
Results of, unexpected by many people. *Muspratt*, 621.

TREATY:
Monetary Convention of December 1865, p. 158.
Preliminary monetary, between France and Austria, p. 220–225. Rep. vi.
Vienna coinage treaty of 24th January 1857, p. 253.

TURKEY:
Gold coinage and mint regulations of, p. 262.

TWENTY-FIVE-FRANC PIECE:
Recommended as an international coin by the Conference of Paris, Rep. vi. Opinions in favour of the reduction of the sovereign to the value of 25 francs as a change advantageous in itself. *Lloyd*, 10–12, 21–24, 28–30, 34–36, 67–71. *Behrens*, 166–171. *Hendriks*, 302–305, 333–337. *Muspratt*, 545, 654. *Wrigley*, 1205–1206, 1306–1307. *Jevons*, 1734–1737, 1837–1843. *Bagehot*, 1985. *Mallet*, 2517–2518,
Objections to the adhesion of this country to a scheme of international coinage upon the basis of the. *Levi*, 367–368. *Newmarch*, 1361–1362, 1383–1384, 1445, 1575. *Brown*, 2180–2181. *Bowring*, 2440–2442.
The adoption of, by this country, should be accompanied by that of a 4-shilling piece. *Field*, 703–704.
It would not be material that the French should largely coin the, *ib.* 770.
The extent of the advantage to this country of adopting the, would be confined to the elimination of the fraction in converting English into French money. *Jourdan*, 1617–1619.
Should be adopted as an international unit of account. It is doubtful whether it would be worth while for this country to adopt it merely as an international coin. *Bagehot*, 1986–1989, 2021–2023, 2072–2073.
Austria intends to coin a 10-florin piece equivalent to a. *Muspratt*, 659. But has not agreed to make it the unit. *Brown*, 2183.
The government of Sweden propose to coin 25-franc pieces as soon as France does so. p. 270–293. Rep. vii.
See also INTERNATIONAL COINAGE, POUND, &c.

TWENTY-FRANC PIECE:
Under the proposed change would pass in this country as 16*s*. *Behrens*, 173, 253. It would be an international coin also under the 10-franc scheme. *Brown*, 2207.
Statement of the exact weight of the. *Hendriks*, 318–321.
Has always been current in Italy. *Levi*, 416.
Is received at Messrs. Howell and James's at a fixed value. *Jeffery, W. S.*, 1157–1165. And in other commercial houses, *ib.* 1170–1171.

UNIT:
A common, not essential to the establishment of a system of easily commensurable coins. *Hendriks*, 326.
Advantage of the pound and disadvantage of the dollar or 5-franc piece as the. *Muspratt*, 635.
A high gold, one of the conditions of a proper currency. *Bagehot*, 1976, 1994; the pound advocated for this reason, *ib.* 1996–1997.
The higher the unit the smaller must be, as a rule, the number of figures, rendering the expression more simple and intelligible, *ib.* 2012–2020.
The 25-franc piece recommended as the common unit of account, *ib.* 1989, 2004–2012.
The 10-franc piece proposed as the common unit. *Brown*, 2181–2197, 2208.
See also FIVE-FRANC PIECE, POUND, TWENTY-FIVE-FRANC PIECE, TEN-FRANC PIECE.

UNITED KINGDOM:
Imports and exports of gold coin, p. 340.

UNITED STATES, THE
Gold coinage and mint regulations of, p. 275.
Laws relating to the Mint of, p. 280.
Report of delegate of, to the Conference, p. 197.
Annual report of the director of the mint of, for the year ending 30th June 1867, p. 207.

WEIGHTS AND MEASURES:
Expediency of uniformity of weights instanced by the case of the Post Office. *Lloyd*, 72–75.
Metric system of, introduced in the United States in a permissive manner. *Levi*, 397.

Weights and Measures—*cont.*
The reform should include that of, *ib.* 406–407.
Opinion of the Decimal Coinage Commission that simplification of the coinage should not be attempted apart from that of, *ib.* 408.
Facility with which the change in the, was introduced into Italy, *ib.* 414.
The full advantage of uniformity would not be attained without comprising. *Muspratt*, 609–616.
Between England and the United States are mainly the same. *Field*, 723–726.
Expediency of not mixing the question of with that of coinage. *ib.* 832, 836. *Wrigley*, 1229.
Expediency of ultimate assimilation of. *Jeffery, J. R.*, 1182.
The difficulties arising from different, are less than those proceeding from difference of coins. *Wrigley*, 1231.
Advantage of a decimal system of. *Newmarch*, 1844.
Assimilation of, not essential to international coinage. *Bagehot*, 2069–2071.
The difference of, a source of delay and difficulty in the negotiation of the French treaty. *Mallet*, 2500.

Wrigley, Joseph:
Analysis of his evidence:—A manufacturer at Huddersfield, 1183. The Chamber of Commerce there has discussed the question of international coinage, 1184–1187. If other countries join the Convention of 1865, and England refuses to do so, this country will be in a position of isolation. The increase of competition makes it hazardous to allow any advantage to competitors. Severe competition of Belgium, Germany, and France against England. Competition of Roubaix with Bradford, and of Solingen with Sheffield, 1188, 1189, 1197–1199. Competition tends to bring the producer and consumer into more immediate relations, and it would be advantageous for the English manufacturer to send commercial travellers abroad to sell to the retail traders, a proceeding which would be much facilitated by an assimilation of currencies, 1190–1196, 1224. The increase of competition at present does not proceed from a want of uniform coinage, but is mentioned as indicating what English manufacturers have to contend with, 1200–1202.

It would probably be impracticable at present to secure the great advantage of an entirely uniform coinage, but it would be an important step to obtain a point of contact between different coinages by the adoption of the proposal for assimilating the sovereign to the French gold coinage, 1203–1204. The assimilation of the £ to 25 francs is the most advantageous plan, 1205, 1206. The reduction in the value of the sovereign would be attended with some inconveniences, but the present is a peculiarly favourable moment for the change. The value of the £ would be reduced about ⅛ths per cent., but there would be little difficulty in the adjustment of salaries and wages, 1207–1212; and the advantages of an international coinage would outweigh the difficulties of the change, 1213. The old and new sovereigns might circulate together during the time of transition, but not permanently, and the former should be called in. Both coins should retain the name of sovereign, but the new sovereign should be made distinguishable from the old coin, 1214–1220. To facilitate the withdrawal of the old sovereigns from circulation they might by law be made receivable at the same value as the new soverigns after a stated time, 1221, 1222. The withdrawal of the old copper coin was easily effected, 1223.

With the present tendency of the manufacturer to come more directly into communication with the retailer, the development of foreign trade would be facilitated by a uniform coinage, 1224–1228. Uniformity in weights and measures is desirable, but should be considered separately, 1229. The difficulties arising from different weights and measures are less than those proceeding from difference of coins, the former being invariable; the latter variable, owing to fluctuations of the exchanges, and these fluctuations would be reduced by uniform coinage, 1230–1234. It is a new subject, but public feeling is generally in favour of the change, 1235–1238. The consideration of the subject by Chambers of Commerce arose, not from inconveniences experienced, but in consequence of the Paris Conference, 1239–1242. Competition, which is already severe in the home market, would be still more so in a neutral market in case of an international coinage, 1343–1346. There is a movement in foreign countries towards assimilation of weights and measures, 1247, 1248. The superior education of the working classes, and of managers of mills and manufactories abroad, gives an advantage to foreign over English manufacturers, but it is difficult to estimate the relative advantages of international coinage and improved education as affecting competition. As regards the advantages of assimilation of coinage, an instance is afforded in the case of England and Ireland, where the advantages are obvious, 1249–1253. Uniform coinage would no doubt intensify competition in the home market, but the English manufacturer only asks for a fair field and no favour, 1254–1256, 1287. Better education tends to improve the taste of designs, and to promote the cheaper production of manufactures, though the latter question depends partly upon the rate of wages, 1257–1260. Free trade has provoked no discontent among English manufacturers by admitting foreign goods better and cheaper than those produced here, but they are under a disadvantage by heavy duties still levied in other countries, 1261–1266, 1287. Strikes are detrimental to the English manufacturing interests, 1267. International coinage is a new subject. If the Commission report in favour of a change, the public mind should be directed to the question, 1268–1272. If the value of the currency is reduced ⅛ths per cent., some inconvenience must be felt by the whole community, 1269–1271; but the extent of the inconvenience would depend upon the nature of the change, 1286, 1287. Disadvantage to England in neutral markets if keeping aloof from the convention. An Italian merchant purchases at Roubaix in preference to going on to Bradford, where the weights, measures, and coins are different. Prices are easily known, and he would only go on to Bradford if there was a considerable advantage in doing so; if the difference of price was small, he would purchase at Roubaix; and similar competition exists in other cases, 1273–1278, 1288–1293. It is true that there are many complaints from French manufacturers as to the effects of free trade, but they are not supported by figures or proofs, and are in reality the result of a general stagnation of trade, 1279–1281, arising among other causes, probably from over-production, 1285. As to the excellent system of education at Roubaix, 1282–1284. The competition of foreign goods in the home market exists, though it is limited, and a removal of adverse tariffs would not enable the English manufacturer to export profitably those articles in which foreign competition is already successful in this country, for it is the principle of free trade that countries should mutually exchange their best and cheapest productions, 1294–1299. Foreign competition in the home market acts as a spur to manufacturers, 1300.

Identity of coinage is desirable, but at present impracticable. The proposed change would be an important step towards it. Successive changes would be attended with less inconvenience than a complete assimilation at once, 1301–1305. The adoption of the 25-franc piece would afford a point of contact with the coinages of other countries. The subsidiary coinage would remain the same with a depreciation of ⅛ths per cent., still involving a calculation, but a step, though imperfect, would have been taken towards a complete assimilation, and an advantage to the extent of assimilating the gold coins would actually be attained, 1306–1322. A perfect assimilation of the coins of England, France, and the United States is desirable if possible, 1323. If the coinage is altered, perfect faith should be kept, and compensation given to creditors, 1324, 1325. As to the convenience for international purposes of a coinage comprising five gold pieces, viz., of 20*s.*, 16*s.*, 12*s.*, 8*s.*, 4*s.*; and five silver pieces of 4*s.*, 2*s.*, 1*s.*, 6*d.* and 3*d.*, 1326–1340. The advantages of having some coins of common standard value at a common medium of exchange would outweigh the inconveniences of the proposed change, 1341. Identity of coinage is desirable, but similarity of denomination is not material, 1348, 1349. The pound and mil scheme, and decimalization of the coinage are to be considered separately from the question of uniform currency, 1350–1353. Opinion in favour of foreign coins being made legal tender, in the event of an assimilation of coinage, to be confined first to international coins, and afterwards extended to other foreign coins, 1354–1356.

REPORT.

National Gallery,
1 January 1868.

My Lords,

I HAVE the honour to submit to your Lordships the Annual Report on the National Gallery for the year ending 31st December 1867.

The present list of Trustees, in the order of their nomination, is as follows:—

The Lord Overstone.	The Marquis of Northampton.
William Russell, Esq.	Austen Henry Layard, Esq.
Thomas Baring, Esq.	William Henry Gregory, Esq.

The subjects of the present Report are classed in the following order:—

I. Pictures purchased during the year 1867.

II. Bequests and Donations.

III. Details relating to the Gallery and Establishment.

I.—PICTURES purchased during the year 1867.

A PORTRAIT by Gainsborough was purchased in May, at the sale of the collection of Mr. J. Wiltshire, of Shockerwick, near Bath.

In the month of August the following 10 pictures were, in conformity with the regulations, purchased from Lady Eastlake:—

Two Heads of Monks, by Domenico Veneziano.
"Two Saints," by Antonio Vivarini.
"St. Michael," by Fra Carnovale.
A Portrait, by Giovanni Oriolo.
"St. Jerome," by Bono Ferrarese.
Part of an Altar-piece, by Cosimo Tura.
"St. Jerome," by the same.
"A Madonna enthroned," by Vander Goes.
The Portrait of an Old Woman, by Rembrandt.

During a journey on the Continent, undertaken in the autumn, with the concurrence of the Trustees, and the sanction of the Treasury, the following pictures were purchased:—

An Altar-piece, by Pellegrino de San Daniele.
"A Madonna and Child," by Paolo Morando.

"Raphael and Tobias," by Antonio Pollajuolo.
"A Madonna and Child," by Botticelli.
Two Pictures of Portraits, by Ambrogio Borgognone.

Details relating to the above-mentioned pictures will be found in the Appendix, No. 1; the statement of account relating to their purchase in the Appendix, No. 6.

II.—Bequests and Donations.

Donations.

I. *Robert Smirke,* R.A. (b. 1752, d. 1845).—British School. Twelve illustrations of "Don Quixote," painted in oil, in brown and white; all, with one exception, engraved for Cadell and Davies' edition of the work, published in four volumes quarto, in London, in 1818.

1. The Funeral of Chrysostom.
2. Camilla's Artifice.
3. The Captive's Interview with Zoraida.
4. Don Quixote and his Squire mounted on Clavelino.
5. Sancho as Governor of Barataria.
6. The Duenna Rodriguez solicits the aid of Don Quixote.
7. Tereza Panza receiving the Messenger of the Duchess.
8. Sancho returning from his Government.
9. The Shepherdesses of the Wood.
10. Don Quixote vanquished by the Knight of the Moon.
11. The Disenchantment of Dulcinea.
12. The Death of Don Quixote.

On wood; each picture 9½ in. high by 8 in. wide. Presented, in the mon th of June, by Captain Thomas Lambert and Mrs. Lambert, the painter's granddaughter. Framed together, and protected with glass; hung in the Gallery at South Kensington in November, and numbered 761.

II. *Robert Smirke,* R.A.—"The Order of Knighthood conferred on Don Quixote by the Innkeeper." Painted in oil on canvas; 1 ft. 9½ in. high by 1 ft. 6 in. wide. Presented in June, by Captain and Mrs. Lambert; hung in the Gallery at South Kensington in November; numbered 762.

III. *Robert Smirke,* R.A.—"Don Quixote at Home after the termination of his second Sally." Painted in oil, on canvas, in brown and white; 1 ft. 9½ in. high, by 1 ft. 6 in. wide. Presented, in June, by Captain and Mrs. Lambert; hung in the Gallery at South Kensington in November; numbered 763.

IV. *Robert Smirke,* R.A.—"The Curate and the Barber visit Don Quixote at Home." Painted in oil, on canvas; 1 ft. 9½ in. high by 1 ft. 6 in. wide. Presented, in June, by Captain and Mrs. Lambert; hung in the Gallery at South Kensington in November; numbered 764.

V. *Robert Smirke,* R.A.—"Mawworm, Dr. Cantwell, and old Lady Lambert." Mawworm standing, with upturned eyes, before Lady Lambert, seated; Dr. Cantwell seated behind Lady Lambert. From Scene I, Act II, of Bickerstaffe's Play of the "Hypocrite." Painted in oil, on canvas; 1 ft. 7½ in high by 1 ft. 5½ in. wide. Presented by Captain and Mrs. Lambert in June; hung in the Gallery in November; numbered 765.

VI. *Pisano of Verona,* commonly called *Vittore Pisanello* (d. about 1451), Veronese School.—"St. Anthony and St. George, with a Vision of the Virgin and Child, in a Glory, in the Sky;" landscape background. On the spectator's left stands St. Anthony with his staff and bell, his pig reposing at his feet; on the opposite side stands St. George, in armour, his head being protected by a large straw hat; at his feet lies the vanquished dragon; behind him are seen the heads of two horses; in the background is a pine wood. Inscribed *Pisanus Pi.* Painted in tempera, on wood; 18 in. high by 11½ in. wide. Formerly in the Costabili Gallery, at Ferrara. Presented by Lady Eastlake in the month of August; hung in the Gallery in September, and numbered 776: protected with glass.

III.—Details relating to the Gallery and Establishment.

Pictures protected with Glass.

During the year 1866, 41 pictures have been protected with glass, including eight recently acquired. A list of the works so protected will be found in the Appendix, No. 2.

Pictures repaired, or cleaned, and varnished.

1. No. 669. "St. Sebastian, St. Rock, and St. Demetrius," by L'Ortolano. Some blisters put down and repaired, and the picture re-varnished.

2. No. 249. "The Marriage of St. Catherine," by Lorenzo di San Severino. Some blisters repaired, and the picture re-varnished.

3. No. 111. "Portrait of Lord Heathfield," by Sir Joshua Reynolds. Was very much cracked; some re-paintings have been removed from the background, and the picture repaired and varnished. Exhibited of late years at South Kensington, but now restored to the Gallery in Trafalgar Square, and protected with glass.

4. No. 109. "The Watering Place," by Gainsborough, has been re-lined, has had much of the dirty varnish removed, and been re-varnished. Hitherto at South Kensington, now hung in the Gallery at Trafalgar Square, and protected with glass.

5. No. 362. "Christ appearing to Mary Magdalen, after his Resurrection," by Etty. Some blisters have been repaired, and the picture re-varnished.

6. No. 389. "The Burning Fiery Furnace," by G. Jones, R.A., was much cracked; has been repaired and varnished, and is now protected with glass.

7. "Manto and Tiresias," by Singleton, has had some cracks repaired, and the picture has been varnished. Not exhibited.

8. "Troilus and Cressida," by Opie, has had some cracks repaired, and the picture has been varnished. Not exhibited.

9. No. 262. "The Crucifixion," of the School of the Meister Von Liesborn; some blisters have been put down. Lent to the South Kensington Museum.

Number of Visitors to the National Gallery, &c.

The Gallery has been visited by 1,469,942 persons on the public days during the year 1867; 823,426 at Trafalgar-square, and 646,516 at South Kensington.

The particulars relating to this subject, respecting copying in the Galleries, and the number of catalogues sold, will be found in the Appendix, Nos. 3, 4, and 5.

Details relating to the Establishment.

On the 4th of March 1867, William Henry Gregory, Esq., was appointed a trustee of the National Gallery.

On the 14th of May 1867, John Dixon was appointed assistant porter and stoker, in the room of Benjamin Debbage, deceased.

The general account relating to the establishment is, by the direction of the Treasury, submitted monthly and yearly to the Audit Office.

I have, &c.
(signed) *W. Boxall.*

To the Lords Commissioners of
Her Majesty's Treasury.

APPENDIX.

Appendix, No. 1.

DETAILS respecting PICTURES purchased for the NATIONAL GALLERY during the Year ending 31st December 1867.

I. *Gainsborough* (b. 1727, d. 1788).—"Portrait of Orpin, parish clerk of Bradford, Wiltshire," seated near a window, reading the Bible." Half length, life-size. Painted in oil, on canvas, 3 ft. 11½ in. high by 3 ft. 1½ in. wide. Purchased in May, at the sale of the Collection of Mr. J. Wiltshire, of Shockerwick, for 325 *l.* 10 *s.* Placed in the Gallery at South Kensington, in the month of August; numbered 760, and protected with glass.

II. III. *Domenico Veneziano* (painting 1438, d. 1461) of the Venetian school. Two heads of monks, with saints' glories round their heads. II. A monk in a black dress, with shaven head and without beard. Painted in fresco; 17 in. high by 13 in. wide. III. A monk in a black dress, with a long gray beard, and looking down upon a closed book. Painted in fresco; 16 in. high by 13 in. wide. Two portions of a fresco, originally painted in a tabernacle on the wall of a house at the Canto de' Carnesecchi, Florence; the principal part, representing the Madonna and child enthroned, has been transferred to canvas, and is now in the possession of Prince Pio at Florence. Purchased from the Collection of the late Sir Charles L. Eastlake in August, for 55 *l.*; hung in the Gallery in October, numbered 766 and 767; protected with glass.

IV. *Antonio Vivarini* (painted 1444–1451).—Venetian School. "Saint Peter and Jerome," entire figures about half the scale of life; inscribed SANCTUS PETRUS SANCTUS GERONIMUS. St. Peter holds a book and the two keys embossed and gilt; St. Jerome with his Cardinal's hat on his head, holds a partly open book, from which rays are proceeding. Painted in tempera, on wood, 4 ft. 6 in. high by 1 ft. 5½ in. wide. Formerly in the Zambeccari Gallery in Bologna. Purchased in August, for 40 *l.*, from the Collection of Sir Charles Eastlake. Placed in the Gallery in October, and numbered 768.

V. *Fra Carnovale*, ascribed to (living 1488) Umbrian School. "St. Michael and the Dragon." The winged Archangel, clothed in blue and gold armour stands on the slain

beast, holding a bloody sword in his right hand, and the head of the beast in his left. Inscribed ANGELUS POTENTIA DEI LUCHA. Painted in oil on wood, 4 ft. 4½ in. high by 1 ft. 11 in. wide. Formerly in the possession of Signor Fidanza at Milan. Purchased in August, for 50 *l.*, from the Collection of Sir Charles Eastlake. Placed in the Gallery in October, and numbered 769.

VI. Giovanni Oriolo (living about 1450), probably of the Ferrarese School. "Portrait of Leonello Da Este, Marquis of Ferrara, &c.," who died in 1450. Bust profile, life-size, dressed in a red coat and over it a black gown, without sleeves, edged with gold. Inscribed LEONELLUS + MARCHIO + ESTÊSIS, and signed OPUS JOHÂNIS ORIOLI +. Painted in tempera on wood, 1 ft. 9½ in. high by 1 ft. 3 in. wide. Formerly in the Costabili Gallery at Ferrara. Purchased from the Collection of Sir Charles Eastlake, in August, for 25 *l.* Placed in the Gallery in September, and numbered 770.

VII. *Bono Ferrarese*, or Bono of Ferrara (living 1461).—Ferrarese School. "St. Jerome in the Desert." The Saint is seated on a rock, holding in his left hand a rosary; his lion reposing by his side. In the background, among the rocks, is seen a small church: a bright sunset. Painted in tempera on wood, 1 ft. 8 in. high by 1 ft. 3 in. wide. Signed BONUS FERARIENSIS PISANI DISIPULUS. Formerly in the Costabili Gallery, at Ferrara. Purchased, in August, from the Collection of Sir Charles Eastlake, for 55 *l.* Placed in the Gallery in September, and numbered 771: protected with glass.

VIII. *Cosimo Tura* (about 1418–1481).—Ferrarese School. "The Madonna and Child enthroned, with Angels playing Musical Instruments." Two are playing violins, two others have guitars in their hands, and two in the foreground are engaged with a regal or portable keyed organ, one playing the keys, and the other blowing the bellows. Painted in oil on wood, 7 ft. 10 in. high by 3 ft. 4 in. wide. The centre portion of an altar-piece, of which the Lunette is in the Campana Collection, in the Louvre. Recently in the Frizzoni Collection, at Bergamo. Purchased in August from the Collection of Sir Charles Eastlake, for 160 *l.* Placed in the Gallery in October, and numbered 772.

IX. *Cosimo Tura.*—"St. Jerome in the Wilderness, beating his breast with a stone." Painted in tempera on wood, 3 ft. 3½ in. high by 1 ft. 10½ in. wide. Formerly in the Costabili Gallery, at Ferrara, originally in the Certosa there. Purchased from the Collection of Sir Charles Eastlake, in August, for 75 *l.* Placed in the Gallery in October, and numbered 773.

X. *H. Vander Goes* (painted 1467–1479).—Flemish School. "The Madonna and Child, enthroned;" on the right of the picture kneels St. Peter, holding an open book on which the Virgin has placed her hand; on the left kneels St. Paul, offering a pink to the Infant Christ. Gothic architecture, and a landscape in the background. Painted in oil, on wood, 2 ft. 3½ in. high by 1 ft. 8½ in. wide. Formerly in the Zambeccari Gallery, at Bologna. Purchased from the Collection of Sir Charles Eastlake, for 225 *l.*, in August; hung in the Gallery in September, numbered 774, and protected with glass.

XI. *Rembrandt* (1607–1669).—Dutch School. "Portrait of an Old Lady," in black, with white cap and ruff. Full face bust. Signed *Æ. SVE* 83. *Rembrandt ft.* 1634. Painted in oil, on wood; an oval, 2 ft. 3 in. high by 1 ft. 9 in. wide. Formerly in the Erard Collection, subsequently in that of Mr. William Wells, of Redleaf. Purchased in August, from the Collection of Sir Charles Eastlake, for 1,200 *l.* Placed in the Gallery in September, numbered 775; protected with glass.

XII. *Pellegrino da San Daniele*, or *Pellegrino da Udine* (painted 1497–1529).—Venetian School. An altar-piece, representing "The Madonna and Child, enthroned, with Saints." On the right of the throne is St. James, with his right hand touching the shoulder of the donor, kneeling in the foreground; on the left is St. George, on horseback, with the dead dragon at the horse's feet. Painted in oil, on wood, 8 ft. 2 in. high by 4 ft. 9 in. wide, circular top. Formerly in the possession of Count Ugo Valentinis, of San Daniele. Purchased in Venice, in October, from Signor Vincenzo Azzola, for 112 *l.* Not yet arrived in England.

XIII. *Paolo Morando* (b. 1484, d. 1522).—Venetian School. "The Madonna and Child, St. John the Baptist, and an Angel." Painted in oil, on canvas, 2 ft. 6 in. high by 2 ft. 2 in. wide. Signed, PAULUS V. P. (Veronensis Pinxit). Purchased in October, at Verona, from the Count Lodovico Portalupi, for 900 *l.* Not yet arrived in England.

XIV. *Antonio Pollajuolo* (b. 1430, d. 1498).—Tuscan School. "The Archangel Raphael and Tobias." Painted in oil, on wood, 2 ft. 10 in. high by 2 ft. 1½ in. wide. Purchased at Florence with the picture next described.

XV. *Sandro Botticelli* (b. 1447, d. 1515).—Tuscan School. "The Madonna and Child." Painted in oil, on wood, 2 ft. 10 in. high by 2 ft. 3½ in. wide. Both pictures purchased at Florence, in November, from Signor Giuseppe Baslini, for the sum of 1,000 *l.* the two. They were previously in the Collection of the late Count Galli Tassi, of Florence. Not yet arrived in England.

XVI. *Ambrogio Borgognone* (painted 1490–1522).—Milanese School. "Family Portraits," two fragments of a Standard formerly preserved at the Certosa of Pavia. Painted in oil, on silk, each 2 ft. 1 in. high by 1 ft. 4 in. wide.

No. 16 represents nine men kneeling in adoration by the side of a tomb, and with a hand extended over them: portions of the heads only of some are seen; those kneeling in front hold their caps in their hands, before them. Half-length figures, chiefly profiles, and all without beards: about half the scale of life.

The corresponding fragment, No. 17, represents a numerous group of women kneeling on the opposite side of the same tomb; the five in front extending their hands joined in prayer. Chiefly profiles, and only small portions of the heads of the back figures being visible.

A third fragment of the same standard, representing God the Father, is in the possession of the Cavaliere Bertini, in Milan; all three portions were formerly in the collection of the late Cavaliere Molteni, at Milan, and they are the only parts of the standard preserved. Purchased in November, in Milan, from Signor Giuseppe Baslini, for 160 *l.* the pair. Not yet arrived in England.

Appendix, No. 2.

ELEVENTH REPORT

OF THE

TRUSTEES

OF

THE NATIONAL PORTRAIT GALLERY

TO THE LORDS OF HER MAJESTY'S TREASURY.

1868.

The Trustees of the National Portrait Gallery have the honour to submit herewith their Eleventh Annual Report.

The Board of Trustees is now composed as follows :—

The Earl Stanhope (Chairman).
William Smith, Esq. (Deputy Chairman).
The Lord President of the Council (for the time being).
The Marquess of Salisbury.
The Earl Somers.
The Lord Stanley, M.P.
The Lord Bishop of Oxford.
The Right Honourable William Ewart Gladstone, M.P.
The Right Honourable Benjamin Disraeli, M.P.
Sir William Stirling Maxwell, Bart., M.P.
Sir Coutts Lindsay, Bart.
The Very Rev. the Dean of Westminster.
Sir Francis Grant, P.R.A.
Thomas Carlyle, Esq.
Alexander Beresford Hope, Esq., M.P.

Since the day of the last Report (2nd May 1867) up to the present day (inclusive), the number of meetings held by the Trustees is eight, and from the 9th of February 1867, when the Trustees commenced their duties, 92.

The list of 72 donations, as given in their former Reports, may now be continued, as follows :—

73. Sir Walter Scott, Bart. 1771—1832.
Painted by the late J. Graham Gilbert. Presented, June 1867, by Mrs. Graham Gilbert.

74. The Very Rev. Wm. Buckland, D.D., Dean of Westminster, 1784—1856.
A Bust, modelled from the life, by H. Weekes, Esq, R. A. Presented, by the Sculptor, March 1868.

The purchases made were stated by the Trustees in their former Report as amounting to 163. They are now increased, as the following list will show, to 178 :—

164. Sir Thomas Lawrence, P.R.A., 1769—1830.
A Marble Bust, sculptured by Baily. Purchased May 1867. Price 20*l.*

165. Anne Hyde, Duchess of York, Mother of Queen Mary and Queen Anne, 1637—1671.
Painted by Sir Peter Lely. Purchased June 1867. Price 52*l.* 10*s.*

166. J. Jewell, Bishop of Salisbury, 1522—1571.
Painter unknown. Purchased June 1867. Price 8*l.*

167. Rev. William Whiston, 1667—1752.
Painted by Mrs. Hoadly. Purchased June 1867. Price 18 *l.*

168. Caroline, Princess of Wales, 1768—1821.
Painted by Sir Thomas Lawrence, P.R.A. Purchased July 1867. Price 21 *l.*

169. Cardinal Howard, 1629—1694.
A Miniature in oil colours. Artist unknown. Purchased July 1867. Price 2 *l.* 10 *s.*

170. Anne Chambers, Countess Temple. Died 1777.
A crayon drawing, by Hamilton, formerly in the Strawberry Hill Collection. Purchased July 1867. Price 2 *l.* 10 *s.*

171. Henry Grey, Duke of Suffolk, K.G., Father of Lady Jane Grey. Beheaded 1554.
Painter unknown. Purchased July 1867. Price 84 *l.*

172. Samuel Butler, Author of "Hudibras," 1612—1680.
A crayon drawing, on wood, by E. Lutterel. Purchased July 1867. Price 52 *l.* 10 *s.*

173. Lord Chancellor Thurlow, 1732—1806.
Painted, by T. Phillips, in 1805. The last portrait painted from him. Purchased November 1867. Price 80 *l.*

174. Charles Sackville, Earl of Dorset, K.G., 1637—1706.
Painted by Sir Godfrey Kneller. Purchased November 1867. Price 63*l.*

175. The Rev. William Dodd, D.D., 1729—1777.
Painted by J. Russell. Purchased November 1867. Price 31 *l.* 10 *s.*

176. Major General Lambert, 1620—1694.
Painted by Walker. Purchased November 1867. Price 7 *l.* 7 *s.*

177. Mary Davis, Grandmother of the Earl of Derwentwater, a popular actress during the reign of Charles II.
Painted by Sir Peter Lely. Purchased December 1867. Price 30 *l.*

178. Bulstrode Whitelock, 1605—1676.
Painter unknown. Purchased December 1867. Price 5 *l.*

In accordance with the desire expressed by the Committee of Management of the National Portrait Exhibition, the following portraits, 21 in number, belonging to this Gallery, were removed, on loan, to South Kensington, on the 6th of March last:—

William Blake.
Thomas Campbell.
Queen Charlotte.
S. T. Coleridge.
The Marquess of Dalhousie.
Thomas De Quincey.
Charles Dibdin.
Dunning, Lord Ashburton.
King George III.
John Gibson.
Theodore Hook.
John Keats.
Admiral Viscount Keppel.
Joseph Lancaster.
W. Savage Landor.
Sir James Mackintosh.
John O'Keeffe.
William Sharp.
T. Stothard.
Rev. Wm. Whiston.
Sir Ralph Winwood.

During the previous years, 28 portraits were contributed from this Gallery, making altogether a loan of 49 portraits to the National Portrait Exhibition at South Kensington.

In accordance with the sanction conveyed by a letter from the Treasury, dated March 6th 1868, the portrait of John Flaxman, painted by Romney, has been lent by the Trustees to the Committee of Management for the National Exhibition of Works of Art at Leeds. The picture was removed from this Gallery by Messrs. Criswick and Dolman, the appointed agents, on March 24th.

The total number of visitors to the Gallery during the year 1867 was 24,649, being 17 less than in the year 1866.

In consequence of the gloom and dense fog which prevailed thoughout London on December 26th, only 225 persons visited the Gallery. On the same day, in the previous year, the number of visitors amounted to 860, and in the year before to 557.

The Trustees desire to add to this Report one, upon the Easter visitors, which they

they have themselves received from the Secretary and Keeper, Mr. Scharf, of whose valuable services they are glad to take this opportunity of expressing their high appreciation.

"I have the honour to report that the number of visitors during the first three days of the Easter week exceeded that of the same holidays in any preceding year. On Easter Monday they amounted to 1,670, against 1,406 of last year, and 1453 in 1866. On Easter Tuesday the numbers were 1,084, against 695 of the year before, and 870 in 1866.

"On Easter Wednesday 445, against 426 of last year, and 450 of the year before.

"The total number of visitors during this Easter week, when the Gallery was open four days, from 10 to 6, amounted to 3,416.

"As on previous occasions, an alphabetical list of all the Portraits contained in the Gallery was distributed gratuitously among the holiday visitors, and seemed to afford considerable satisfaction.

"Although, during several times of the day, the rooms became very inconveniently crowded, the utmost quiet and order prevailed.

"The additional police constables on duty were chiefly occupied in facilitating the passage of visitors through contracted doorways, and the narrow galleries of the staircase.

"The inscriptions on the frames and pedestals, affording names and dates, together with a few distinguishing facts concerning the persons represented, were read with avidity, and the demeanour of those visitors who went carefully through the collection, clearly proved the truth of the observation, that objects of art connected with history become more and more interesting in proportion to the amount of knowledge brought to bear upon them.

"The intelligent observations made by some who were mere children, and by many working lads, apparently from factories and printing establishments, struck me very forcibly, and confirmed the impressions which I had received on previous occasions.

"Some of the younger visitors warned one another that nothing was to be touched; and the police reported that no attempt to finger anything had been observed.

"The fine portrait of the Prince Consort commanded a large share of public admiration; and the portrait of Bruce, the Abyssinian traveller, was eagerly inquired for.

"During the last few months, it was found imperatively necessary to place screens in the front room, for the display of some of the more delicate pictures. They have been so placed as to occupy as little space as possible, and to avoid exclusion of light from any portion of the apartment, or interfering with the convenience of the visitors for general circulation.

"Every available space, even on the staircase and landings, has been utilized by the construction of framework and screens for the display of the larger pictures; and nothing now remains for the accommodation of future acquisitions but the dark and very limited wall-space of the hall, on the ground floor, immediately connected with the street-door."

Signed, by Order of the Board,

George Scharf,
Secretary and Keeper.

29, Great George Street, Westminster,
30 April 1868.

SECOND REPORT

OF THE

WARDEN OF THE STANDARDS

ON THE

PROCEEDINGS AND BUSINESS OF THE STANDARD WEIGHTS AND MEASURES DEPARTMENT.

FOR 1867-68.

(*To be laid before Parliament, in pursuance of s.* 6 *of the Act* 29 *&* 30 *Vict. c.* 82, *the Standards of Weights, Measures, and Coinage Act,* 1866.)

TO THE BOARD OF TRADE.

Reference to First Report.

IN my First Report for 1866-7, the circumstances were stated under which the Standards Department had been constituted, in pursuance of the Standards Act of 1866, and the whole subject of the duties of the Department and their proposed extension, in relation both to the internal business of the Department, and to the duties locally performed by the inspectors of weights and measures throughout the kingdom, had been referred to a Royal Commission appointed for that purpose.

Twofold character of business of Standards Department.

During the past year, the duties of the officers of the Department have consequently been of a twofold character; first, in transacting what has hitherto been the ordinary business of the Standard Weights and Measures Department, and, secondly, in executing the new work imposed upon the Department in connection with the Standards Commission.

Ordinary business: Verification of local standards.

The ordinary business of the Department consists chiefly in the verification of Local Standards of Weights and Measures, and their periodical reverification. Under the Act of 1859, their periodical reverification was first made compulsory by law, and the following tabular summary of the number of Local Standards officially verified and reverified since that period, being in continuation of the table given in the Report for 1866-7, shows the amount and progress of such work done in the Department.

TABLE of Number of Local Standards of Weights and Measures officially verified and reverified in each Year since 31st March 1859.

In the Year ending 31st March.	Number of Standards verified for the First Time.								Number reverified.

Of which there were substituted to replace old standards worn out or lost.	3,668	77	42	15	–	3,902	–	–								

The greater number, both verified and reverified, necessarily appears in 1860, when nearly all the outstanding standards required reverification, under the provisions of the law of 1859. In reverifying a set of avoirdupois standards, it is generally customary to replace the eight smaller weights (from 10 oz. downwards) with new weights.

Improvements during this period.

During this period two important improvements connected with official comparisons of standards have been carried into effect.

1. Numbering and registering each standard verified.

1. The Regulation of 1865–6, for stamping every standard officially verified, with a number corresponding to that of the indenture of verification, and thus proving its identity, and for registering each standard so identified.

The number of Local Standards thus stamped in the last three years, which corresponds with the number of standards both verified and reverified, is as follows:

In 1865–6 - - - - - - - -	1,712.
1866–7 - - - - - - - -	1,943.
1867–8 - - - - - - - -	2,964.

2. Recording errors of rejected standards and notifying them for adjustment.

2. The Regulation of 1867–8, for recording the exact errors of rejected standards, and notifying these errors to the makers or agents, who deliver the Local Standards for reverification at the office, in order to facilitate their adjustment. The number so rejected during the last two months of 1867–8, during which the new regula-

tion has been in operation, as compared with the number verified, has been as follows:

	WEIGHTS.				MEASURES.			
	Avoirdupois.	Troy.	Bullion.	Total.	Capacity.	Length.	Gas.	Total.
Number verified in February and March 1868.	205	–	–	205	80	8	–	88
Number rejected in February and March 1868.	43	–	–	43	3	2	1	6

Satisfactory increase in the number of local standards officially reverified.

The very satisfactory result of the large increase in the number of local standards officially verified and reverified during the past year, may be noticed, as evidence of greater accuracy and legality in these standards. The increase on the average annual number verified and reverified during the previous seven years is 23 per cent. and 82 per cent. respectively. Its cause may be assigned, partly to the publicity given by my first report, to the fact of a large proportion of standards throughout the country being illegal for want of the due periodical reverification, and partly to the attention of the local authorities having been drawn to the subject by the returns relating to these standards, called for by the Standards Commission.

New duties of the Standards Department, as connected with the Standards Commission.

The appointment of the Standards Commission has materially affected the proceedings and business of the department during the past year. Not only has much of the time of the officers been occupied in obtaining and preparing information required for the Commission, but many new duties have already been imposed upon the department under the sanction of the Commission, and have been carried out under their superintendence.

Transfer and custody of additional standards.

A large number of additional standards, with scientific apparatus connected with them, has been transferred from the Royal Observatory, Greenwich, and other places, to my custody. Some of these standards are of an historical character, for instance, the bronze Troy pound of 1758, from which the lost standard was made; others are surplus copies of the existing imperial standards, and available for the use of the department; and many of them are auxiliary standards, which have been used in the construction of the primary standards, and are still serviceable, and indeed have been found requisite, for the reverification of the official standards. Full details of these standards appear amongst the papers laid before the Standards Commission, and which will probably be appended to their Reports.

All these additional standards, as well as those previously in the department, and not required for current business, have been deposited in the larger room of the old Norman Jewel Tower, immediately behind and communicating with the Standards Office, and which has been assigned for the use of the department, and is well adapted

for the security of the standards, being nearly, if not quite, fireproof The standards are arranged for inspection in glazed cases, constructed for the purpose.

The Imperial Standards of length and weight, the primary yard and pound, are not included in this collection. They are deposited in the strong room in the basement of the building, and are kept in an iron chest, made by Messrs. Chubb to hold them.

Completion of new subdivided standard yard and metre.

The new sub-divided standard yard, with feet and inches and their sub-divisions marked upon it, extending to 40 inches, and having also the length of a metre with its sub-divisions defined upon the bar of Baily's metal, is now completed and deposited in the Standards Office. The construction of this new standard of length was mentioned in my first report. It is made by Messrs. Troughton & Simms. The verification of the numerous measures of length defined upon this standard bar is not yet effected. The length of the metre has been laid down upon it from the platinum line standard metre of the Royal Society, constructed in pursuance of a resolution of the House of Commons of 15th March 1816, and verified by M. Arago by comparison with the primary standard metre at Paris. This platinum metre has been lent by the Royal Society for this purpose, and will be used for verifying the new standard metre.

This new standard measure of length, with its sub-divisions, will be serviceable in the department as a scientific standard, and will be used for official comparisons by means of the new microscopical apparatus. The defining lines are very finely cut upon gold studs let into the upper surface of the bar.

Charge and use of new scientific apparatus.

There has also been a considerable addition during the past year to the scientific apparatus of the department, which has been required for the more accurate comparison and verification of standard weights and measures. The new microscopical apparatus for comparing measures of length has been much enlarged and improved by Messrs. Troughton & Simms, and is placed ready for use in the Tower-room, where double windows and other arrangements for equalising the temperature have been added.

Microscopical apparatus for comparing measures of length.

This comparing apparatus now consists of four microscopes, fitted with micrometers, spirit levels, &c., and resting upon a stone shelf 20 feet long. Two of the microscopes are temporarily fixed at the distance of the yard from each other, and two are moveable; the carriage for the standard bars under comparison, which moves under the microscopes upon parallel iron rails, is very elaborately constructed, and is fitted with screws to adjust it in every direction. With this apparatus, comparisons can be made of measures of length from 20 feet down to the fraction of an inch, and the exact difference ascertained within less than ·00001 inch by a single direct measurement, and much more closely by a computation of the mean of many measurements.

New and improved balances.

The balance used by Professor Miller for all the weighings during the construction of the imperial standard pound, and constructed by Barrow, has been transferred to the Standards Department. It has

been put into complete order by Mr. Oertling, and fitted, under Professor Miller's directions, with two small microscopes for the more accurate observation of the index scale, by which the difference of compared weights is shown, as well as with an apparatus for transferring the weights from one end of the beam to the other, without opening the glass case in which the balance is enclosed.

The large balance, presented in 1843 by the Government of the United States to the British Government, and which formed part of the apparatus transferred from the Royal Observatory, has also been put into complete order by Mr. Oertling, and is now placed in the Standards Department, ready for use.

Captain Kater's large balance, constructed under his directions, and used by him for the original verification of the imperial standard bushel, has been entirely reconstructed with all the most recent improvements by Mr. Oertling, and is placed ready for use in the department; it carries 300 lbs. weight in each pan, when it shows any difference of weight within less than a single grain.

The other balances of precision made by Mr. Oertling, and supplied to the department under the directions of the late Standards Commission, have been fitted with new index scales with finer divisions, to be viewed through magnifying glasses. One of these balances will show any difference in two standard pounds under comparison, within about ·0001 grain in a single weighing, and a much more minute difference when the mean of several weighings is taken.

Other apparatus for scientific comparisons.

Other apparatus required for scientific comparisons of standards has been added to the equipment of the department during the past year, such as new standard barometers, thermometers graduated to ·01° Fahrenheit; and steps have been taken for providing a stereometer, or instrument for ascertaining the density of the metal of which standard weights are composed. A large air pump, which has been used for weighings of standard weights in a vacuum, has also been transferred from the Royal Observatory.

Scientific and other books and papers added to the library of the department.

Under the sanction of the Standards Commission, a number of scientific and other books, having reference to the construction or verification of standards, have been added to the library of the department; and many official papers and documents from foreign countries relating to their standard weights and measures have also been received. For this object I have been in communication with the heads of the Standards Departments at Paris, Berlin, Washington, &c.

Reverification of official standards.

But one of the most important duties referred to the Standards Commission, and executed under their immediate superintendence by the officers of the Standards Department, is the reverification of the official standards, in pursuance of sec. 4 of the Standards Act of 1866, which has been continued during the past year.

The results of the preliminary comparisons in 1866-7, of the official standards of avoirdupois and troy weight, have been already stated in my First Report.

Correction of official standards of avoirdupois weight.

The exact errors of the standard avoirdupois weights having been thus ascertained, the necessary steps have been taken, with the sanction and approval of the Standards Commission and of the Board

App. No. 1. Minute for correction of official avoirdupois standards.

of Trade, for their temporary correction, by constructing small supplemental weights to make up their deficiency in standard weight. Due public notice was given of this correction of the official avoirdupois standards, as may be seen by an appended copy of the Minute of 15th October 1867, which recites also the amount of error corrected in each standard weight. Since the date of the Minute, all comparisons and verifications of the local standards have been made with the official standards so corrected.

And of troy weight.

The final verification of the official standards of troy weight was necessarily delayed until the reverification of the units of bullion weight was completed, the comparison of the troy standards having been based on the relation of the official standard troy pound to the weight of the two bullion standards of 10 oz. and 2 oz. The reverification of the units of the bullion standards has now been effected, the result being that the weight of the two bullion standards of 10 oz. and 2 oz. (which were originally verified in 1855, and then declared to be together = ·00011 grain less than standard weight), is now found to be ·02234 grain less than the standard, or = 5759·97766 grains. The exact standard weight of the official standards of troy weight will consequently be as shown in the following Table, in which their weight, as stated in the Report for 1866–7, is also stated, and the difference in their weight as now determined.

Exact Relations of the Official Standards of Troy Weight to the Imperial Standard.

Denominations of Official Standards of Troy Weight.	Standard Weight provisionally determined in 1866–7, as stated in the First Report.	Standard Weight now Determined.	Difference of weight now determined, compared with that in 1866–7.
	Grains.	*Grains.* *Grains.*	*Grains.*
1 lb. Troy -	5,760·13171	5,760·10586 or ·10586 too heavy -	— ·02585
6 oz. - -	2,879 99425	2,879·98132 or ·01868 too light -	— ·01293
3 oz. - -	1,440·00063	1,439 99416 or ·00584 too light -	— ·00647
2 oz. - -	959·99812	959·99381 or ·00619 too light -	— ·00431
1 oz. - -	479 99727	479·99511 or ·00489 too light -	— ·00216
10 dwts. - -	239·99340	239·99232 or ·00768 too light -	— ·00108
5 dwts. - -	119 99833	119·99778 or ·00222 too light -	— ·00055
3 dwts. -	71·99754	71·99721 or ·00279 too light -	— ·00033
2 dwts. -	47·99801	47·99779 or ·00221 too light -	— ·00022
1 dwt. - -	24 00150	24 00139 or ·00139 too heavy -	— ·00011
12 grs. - -	12·00019	12·00013 or ·00013 too heavy -	— ·00006
6 grs. - -	5·99722	5·99719 or ·00281 too light -	— ·00003
3 grs. - -	2 99627	2·99626 or ·00374 too light -	— ·00001
2 grs. - -	1·99653	1·99652 or ·00348 too light -	— ·00001
1 gr. - -	·99965	·99965 or ·00035 too light -	—

Under the sanction of the Standards Commission and of the Board of Trade, the necessary steps will be at once taken for correcting each of the official troy standards, by noting the very small amount of its ascertained error, and making allowance for it in all official comparisons, as well as for giving due public notice of the corrections made.

Scientific comparisons of primary platinum standards.

The reverification of the units of bullion weight has been based on the primary platinum standards, and it has involved the necessity of carrying out the principles and practice of scientific comparisons of standard weights differing in their densities, according to the methods used by the late Standards Commission in the construction of the restored imperial standard pound. When weighed in air, the apparent weight of a platinum standard pound is about ·645 gr. heavier than a brass or bronze standard pound, the true weight, that is to say, their weight in a vacuum, being exactly equal; and no just comparison of such standard pounds can be made by weighing them in air, without deducting the weight of air displaced by each. All the details of these official comparisons and reductions have been laid in a printed form before the Standards Commission.

Satisfactory results of these comparisons.

It is a highly satisfactory result of the numerous weighings and reductions of the primary platinum standards which have been thus made that the relative weight of the Imperial Standard pound, which is an avoirdupois pound, and of the primary troy pound, from which, with the aid of auxiliary platinum weights, the Imperial Standard was constructed, has been conclusively shown to be unaltered since 1845. It follows that the absolute weight of each of these platinum standards is also unchanged.

Reverification of the official standard yard.

Some comparisons of the official standard yard have been made by means of the new microscopical apparatus. This yard was constructed in 1825 as a commercial standard, and being a brass bar with upright steel terminations, between which the measure of a yard is obtained, it does not admit of so minutely accurate a comparison as the scientific standards of length. The results of the comparisons show the official standard yard to be about ·0015 inch less than the standard length. This small amount of deficiency is considerably within the allowance of error in the official comparison of local standard yards, now provisionally sanctioned by the Standards Commission (as will be presently shown), and it is itself of no practical importance as regards the rude method hitherto practised in the department for their comparison and verification. The subject of the construction of a new secondary standard measure of length, with sub-divisions, as a commercial standard, and of a suitable apparatus for the better comparison in the department of copies of this standard, which are to be used for testing commercial measures of length, is now under the consideration of the Standards Commission.

Comparison of other official standards in progress.

The comparison and verification of the remaining official standards will be proceeded with as soon as possible. They have been delayed partly from the time of the officers of the department

having been entirely occupied in the numerous comparisons of the standard weights, and by the press of other official business, and partly from the requisite apparatus not having been as yet provided.

Provisional scale of errors in official comparisons.

App. No. 2.

A provisional scale of errors to be allowed in the official comparisons of the local standards and other weights and measures, has been sanctioned by the Standards Commission, and is appended. The scale of errors thus sanctioned is merely that which had in practice been found indispensably necessary to be allowed in the departmental comparisons, as the apparatus now used is so finely constructed that the slightest error in local standard weights and measures can be detected and ascertained, and perfect accuracy in these standards is impossible. The question will be further considered by the Commission, and they will probably require more information before recommending a definite scale. Under Section 5 of the Standards Act of 1866, it rests with Her Majesty in Council from time to time to define the amount of error to be tolerated in the official comparisons of local standards.

Relation of Standards Department to local inspectors and their duties.

The labours of the officers of the Standards Department have been largely increased during the past year, from having been brought into more direct communication with the local authorities, and local inspectors of weights and measures, particularly with the object of obtaining information to be laid before the Standards Commission, in relation to these inspecting officers and the duties performed by them.

Information obtained and laid before the Standards Commission.

Hitherto little information has been furnished, either to the Government, to Parliament, or the public, upon the system of the local inspection of weights and measures in this country, since its establishment under the Act of 1835; and comprehending the mode of appointment of inspectors, their number and qualifications, the duties performed by them, the extent of each district of inspection, the receipts and expenses of this service, &c. In order to obtain such information, a series of printed forms has been prepared by the Standards Department, and circulated throughout the United Kingdom, to be filled up by the local officers. Nearly all these returns have been completed and sent back to the department, and abstracts are now being prepared, to which explanatory remarks of the Warden of the Standards will be appended, and which will be laid in a printed form before the Commission.

Returns from local inspectors, and preparation of abstracts.

These abstracts are now in a forward state. They show under each district of inspection for the year 1866, as well as the total for the whole kingdom:

1. The number of standards, (and of sub-standards, in Ireland,) in use by inspectors, and when last verified;
2. The number of balances used by inspectors, when adjusted, and the smallest amount of error detected by each balance;
3. The number of false and defective weights, measures, and balances, seized, &c., by inspectors; and of convictions; amount of penalties, and of costs, and to whom paid.

4. The number of weights and measures stamped by inspectors, distinguishing the several denominations;

5. The amount of receipts, and of expenditure, connected with the local inspection of weights and measures;

6. The number, salaries, &c., of local inspectors of weights and measures.

Objects to be attained by such information.

I have reason to believe that the information thus obtained, together with other information furnished to the department from other sources, and laid before the Standards Commission, will demonstrate the existence of many imperfections in the present system of inspection, and the necessity of introducing material changes and improvements in this system, and in the laws by which it is regulated.

The metric system.

It was stated in my Report for 1866–7, that one important question which the Standards Commission would have to consider, was that of the introduction of the Metric System into this country. During the present Session, a Bill for this object has been brought into the House of Commons, and read a second time, no opposition having been offered by the Government, upon the understanding that the Bill would not be proceeded with, until the Standards Commission had made their report. This understanding was agreed to by Mr. Ewart, who moved the second reading of the Bill. It was at the same time stated by the Vice-President of the Board of Trade, on the part of the Government, that the fullest information upon the whole subject of the metric system was being collected for the purpose of being laid before the Commission, but that they would not be in a position to report upon the subject during the present Session.

The information which, as yet, I have been enabled to lay before the Commission, has been obtained principally from the head of the French Department of Weights and Measures, who has transmitted copies of the laws, ordinances, and official instructions relating to the metric system and its establishment in France. Further information is now being collected, particularly as regards the introduction of the French metric system into other countries.

Standards Department,
16 July 1868.

H. W. Chisholm,
Warden.

APPENDIX.

App. No. 1.

App. No. 1.

COPY OF OFFICIAL MINUTE, 15th October 1867, for CORRECTION of AVOIRDUPOIS STANDARD WEIGHTS.

Standards Department, Board of Trade,
15 October 1867.

Sir,

I BEG to transmit for your information a copy of an official Minute relating to the adjustment of the Board of Trade standards of avoirdupois weight to the Imperial Standard, and the consequent comparison and verification of local standards of avoirdupois weights.

I am, &c.,
(signed) *H. W. Chisholm,*
Warden of the Standards.

To the Inspector of Weights and Measures,

MINUTE, 15th October 1867.

THE attention of the Warden of the Standards has been drawn to the fact that amongst the numerous sets of local standards lately submitted for verification in this Department, many of the avoirdupois weights have been found to be sensibly heavier than the official standards, although not deviating to a greater extent than the errors in deficiency of the official standards in relation to the Imperial Standard, as shown at page 9 of the "First Report of the Warden of the Standards" laid before Parliament last Session.

These errors are as follows:—

			Grains.		
Board of Trade standard	56 lbs.	=	11·85648,	less than	imperial standard.
"	" 28	" =	1·38216,	"	"
"	" 14	" =	1·05412,	"	"
"	" 7	" =	·63472,	"	"
"	" 4	" =	·57834,	"	"
"	" 2	" =	·40434,	"	"
"	" 1	" =	·85009,	"	"
"	" 8 oz.	=	·37612,	"	"
"	" 4	" =	·23878,	"	"
"	" 2	" =	·15554,	"	"
"	" 1	" =	·14153,	"	"
"	" 8 drams	=	·12247,	"	"
"	" 4	" =	·10401,	"	"
"	" 2	" =	·04777,	"	"
"	" 1	" =	·03620,	"	"
"	" ½	" =	·01575,	"	"

App. No. 1.

As no allowance of error in the comparison of standards has been hitherto sanctioned by Order in Council, in pursuance of sec. 5 of the Standards Act, 1866, it has been the practice in this Department up to the present time to reject, or require to be adjusted, all weights and measures found on comparison to be *sensibly* lighter or heavier, and greater or smaller than the official standards.

With the sanction and approval of the Chairman of the Standards Commission, and of the Board of Trade, the Warden of the Standards directs that the official standards of avoirdupois weights be now corrected by supplemental weights to make up their ascertained deficiency in relation to the Imperial Standard, and that in all future comparisons of local standards with the official Standards of avoirdupois weight so corrected and agreeing with the imperial standard, the established practice of requiring that no sensible difference of weight exists between them be adhered to.

This regulation of the Department is necessarily of a temporary character, until the whole subject of the adjustment or renewal of the official standards, and the amount of error in the comparison of standards, shall have been fully considered by the Standards Commission, and duly dealt with.

In order that due notice may be given of this regulation, a copy of this minute will be sent to each of the principal manufacturing firms of standard weights and measures, as well as to each local inspector of weights and measures, for their information.

(signed) *H. W. Chisholm*,
Warden of the Standards.

App. No. 2.

App. No. 2.

Provisional Scale of Remedies or Allowances for Error in the Official Comparison of Standards.

Remedy for Weights.

As the question of remedies for weights is essentially one of balances, the following remedies have been adapted to the balances, of four different sizes, made by Oertling, and used in the Department for scientific weighings of standards, and for comparing copies of the bullion standards, from 500 oz. downwards, being designated as Balance No. 1, No. 2, No. 3, and No. 4, the largest being No. 1; as well as to the four balances constructed in 1824 by De Grave & Co., and used for comparing the local standard weights, from 56 lbs. downwards, and designated as Balance A, B, C, and D. It may appear disproportionate to allow the same remedy on the pound that is allowed on the ounce, but the remedy is practically applicable only to the balance whether used with a pound or an ounce, as will be seen from the following table. *The remedies are proposed to be used either in excess or deficiency.*

Commercial or Local Standards.

Balance used.	Denomination of Standard.	Remedy Proposed.		
		In Grains + or −	In Parts of the Whole Quantity Weighed.	In Effect upon the Official Balances.
Balance C.	Troy, 1 lb.	·1	$\frac{1}{57600}$	Pointer inclines about 6 degrees.*
	„ 6 oz.	—	$\frac{1}{28800}$	
	„ 3 „	—	$\frac{1}{14100}$	
	„ 2 „	—	$\frac{1}{9600}$	
	„ 1 „	—	$\frac{1}{4800}$	
Balance D.	„ 10 dwts.	·05	$\frac{1}{4800}$	Pointer inclines about 5 degrees.
	„ 5 „	—	$\frac{1}{2400}$	
	„ 3 „	—	$\frac{1}{1440}$	
	„ 2 „	—	$\frac{1}{960}$	
	„ 1 „	—	$\frac{1}{480}$	
	„ 12 grains	·025	$\frac{1}{480}$	Pointer inclines about 5 degrees.
	„ 6 „	—	$\frac{1}{240}$	
	„ 3 „	—	$\frac{1}{120}$	
	„ 2 „	—	$\frac{1}{80}$	
	„ 1 „	—	$\frac{1}{40}$	
Balance, No. 1	Bullion, 500 oz.	1	$\frac{1}{240000}$	Resting point differs about 20 divisions.*
	„ 400 „	—	$\frac{1}{192000}$	
	„ 300 „	—	$\frac{1}{144000}$	
	„ 200 „	—	$\frac{1}{96000}$	

* When the balances (A., B., C., D.) used for comparing commercial or local standards are *in equilibrio*, the pointer is at right angles to the beam; and when one pan is over-weighted, the pointer is inclined about 20 degrees. In the balances (1, 2, 3, 4) used for bullion and scientific weights, when the balances are *in equilibrio*, the pointer rests at the middle number of the index, viz., 50, and when one pan is over-weighted, the pointer rests at the extreme reading of 100, or of 0.

The value of one degree or division of these balances, or the exact weight represented by it, varies from time to time according to the condition of the balances, the state of the atmosphere, and the weights placed in the pans. An approximate average value may be found by taking the proportion between the proposed remedy, and the stated effect upon the balance. Thus an inclination of 1 degree in the pointer of Balance C. is equivalent to $\cdot\frac{1}{6}$ or ·016 grain; and 1 division of Balance No. 1 $= \frac{1}{20}$ or ·05 grain.

Balance used.	Denomination of Standard.	Remedy Proposed.		
		In Grains + or −	In Parts of the Whole Quantity Weighed.	In Effect upon the Official Balances.
Balance, No. 2	Bullion, 100 oz. - -	·25	$\frac{1}{192000}$	Resting point differs about 10 divisions.
	„ 50 „ - -	—	$\frac{1}{96000}$

Report of the International Conference on Weights, Measures, and Coins, held in Paris, June 1867; communicated to Lord Stanley by Professor Leone Levi:

AND

Report of the Master of the Mint and Mr. Rivers Wilson on the International Monetary Conference held in Paris, June 1867.

CONFERENCE ON WEIGHTS, MEASURES, AND COINS.

Memorandum.

THE Metric Committee of the British Association for the Advancement of Science and the Council of the British Branch of the International Association for promoting a Uniform Decimal System of Measures, Weights, and Coins, having suggested to the Imperial Commissioners for the Paris Universal Exhibition the expediency of organizing a Special Exhibition of Weights, Measures, and Coins, and the holding of a Conference with a view of promoting the uniformity of such instruments of exchange, M. Le Play, the Commissioner-General, summoned a meeting of Commissioners and others to consider the subject.

The question having been before the Commissioners in 1855, the meeting decided that it was desirable to revive it in 1867, and consequently, on the 7th June, 1866, an Ordinance was issued by M. Rouher, Minister of State and Vice-President of the Imperial Commission, appointing a Committee of members of the Scientific Commission in connection with the Universal Exhibition to carry out the proposal, M. Mathieu, Member of the Institute, being elected President.

This Committee sent circulars to the Commissioners of all States taking part in the Exhibition, asking their adhesion to the object, and requesting them severally to nominate a Representative in the Committee, and when the adhesion of upwards of twenty States was obtained, the Committee was completed, by the issue of other Ordinances of the 14th February and 10th April, 1867, appointing the members nominated by such Commissions.

Thus organized, the Committee divided itself into three Sub-Commissions—

1. On Weights and Measures, under the presidency of M. De Jacobi, Privy Counsellor of Russia, Member of the Imperial Academy of St. Petersburg.

2. On Coinage, under the presidency of M. le Baron de Hock, Intimate Councillor of His Majesty the Emperor of Austria, and Member of the House of Lords.

3. On Areometry, presided over by M. de Baumhauer, Member of the Academy of Sciences and of the Royal Commission for the Netherlands.

These Sub-Commissions submitted to a general meeting of the Committee the results of their deliberations on the respective subjects, and, after discussion, these results were formally drawn up in the form of propositions, and the Sub-Commissions were requested to prepare Reports in support of the same, to be submitted to the International Conference.

The Exhibition of Weights, Measures, and Coins was meanwhile proceeded with. In a pavilion erected in the centre of the Garden of the Palace of the Exhibition there were exhibited the Weights, Measures, and Coins of France, the Netherlands, Belgium, Prussia, the Northern German States, the Southern German States, Austria, Switzerland, Spain, Denmark, Sweden and Norway, Russia, Italy, Turkey, Egypt, China, Japan, Morocco, several African States, several Asiatic States, several South American States, Brazil, the United States, and Great Britain.

The International Conference was held on the 21st, 25th, 27th, and 29th June, and 9th July, 1867. It was attended by persons of eminence in science, industry, and commerce, many of them being official representatives of different States, and it was presided over first by M. Mathieu, and afterwards by His Imperial Highness Prince Napoleon. The resolutions and Reports of the Committee were submitted to the Conference for discussion, and they were adopted almost unanimously.

The principal recommendations of the Conference were:—

1. As regards Weights and Measures—
   The general adoption of the metric decimal system.
2. As regards coins—
   The gold piece of 5-francs to be taken as the basis of the monetary system of all nations; other units being, by small changes, rendered exact multiples of that unit. Gold to be the sole monetary standard of value for international purposes; and the degree of fineness to be nine-tenths. And a decimal numeration.
3. As regards areometry—
   A common system of areometric gradation with a decimal scale based on the specific gravity; the centigrade thermometer; and the metric scale of the barometer.

(Signed) LEONE LEVI.

Conférence Préparatoire

Relative à l'Etablissement d'un Système Uniforme des Poids et Mesures et des Monnaies, reunie à Paris, au Palais de l'Industrie.

Première Séance.—*Mercredi*, 2 *Mai*, 1866.

La séance est ouverte à deux heures.

Sont présents :—MM. Arlès-Dufour, Beckwith, Van den Brœck, de Chancourtois, Michel Chevalier, Choiecki, Cumenge, Donnat, Ducuing, Du Pré, de la Guéronnière, Max Gunther, De Haxthausen, Hüffer, Capitaine Krak, le Marquis de Laborde, Le Play, le Baron de Lesseps, Hervé-Mangon, Rhoth, de Scholten, de Thal, Thomsen.

Proposition d'une Exposition spéciale des Mesures, des Poids, et des Monnaies.

M. le Play ouvre la Conférence en rappelant le motif de la réunion, indiqué par la Lettre de Convocation : Lors de l'Exposition Universelle de 1855, une Commission Spéciale, dont faisaient partie plusieurs des personnes présentes, s'est occupée des moyens de simplifier, par l'adoption d'un système commun de poids et mesures, les opérations du commerce international. Les Conférences ont entraîné la formation en divers pays, notamment en Angleterre, de sociétés spécialement occupées à poursuivre ce but. Plusieurs d'entre elles ont témoigné le désir que la question fût reprise à l'occasion de l'Exposition Universelle de 1867, et M. Leone Levi, accrédité par lettres des Présidents de la Section Britannique de la Société Décimale Internationale et du Comité Métrique de l'Association Britannique pour l'Avancement des Sciences, a annoncé qu'il se rendait à Paris pour lui faire différentes communications sur cet objet.

La Conférence a été réunie pour entendre ces communications ; mais, par suite d'un malentendu, M. Leone Levi n'a pu arriver à Paris pour la séance, et M. le Play propose d'utiliser la réunion en délibérant sur les quatre questions suivantes :—

1. Y a-t-il lieu de rentrer, à l'occasion de l'Exposition Universelle de 1867, dans la voie ouverte en 1855 ?
2. Quel serait le mode d'action le plus efficace ?
3. Conviendrait-il de faire une exposition spéciale de poids, de mesures, et de monnaies ?
4. Est-il opportun de s'occuper des échelles de mesure et des conventions figuratives employées dans les arts et dans les sciences en dehors des poids et mesures proprement dits ?

Après quelques observations de *MM. le Marquis de Laborde, Choiecki, le Baron de Lesseps, Ducuing*, la première question est résolue affirmativement.

Après quelques observations de *MM. Arlès-Dufour, Max Gunther, de Haxthausen*, il est reconnu, quant au mode d'action, que l'on doit d'abord constituer un Comité peu nombreux où seraient représentés les principaux groupes de nationalités, et les membres de la réunion sont invités à faire connaître les personnes qui pourraient et voudraient apporter un concours suivi à cette œuvre.

M. le Play pense que la Commission Impériale accorderait volontiers son patronage à un Comité qui fonctionnerait d'ailleurs d'une manière indépendante.

La proposition d'une exposition spéciale des mesures, des poids, et des monnaies, est approuvée. Les frais de cette exposition seraient faits respectivement par chaque nation qui y prendrait part.

MM. le Marquis de Laborde et Michel Chevalier insistent sur la convenance et la portée de cette exposition, qui montrera le système métrique adopté jusque dans l'extrême Asie.

La question de l'extension du programme au-delà des mesures, des poids, et des monnaies, est réservée.

M. de Chancourtois se charge de recevoir les communications des Membres de

la Conférence relatives à la constitution du Comité, et de convoquer une prochaine réunion où l'organisation définitive pourra être mise en délibération.

La séance est levée à trois heures.

Deuxième Séance.—*Lundi*, 14 *Mai*, 1866.

La séance est ouverte à quatre heures.

Sont présents :—MM. Baudrillart, Ed. Becquerel, Beckwith, Calon, Cumenge, Donnat, José de Echeverria, de la Guéronnière, Hervé-Mangon, Huffer, Gunlogsen, Max Gunther, de Haxthausen, le Play, Leone Levi, le Marquis de Laborde, Mathieu, Peligot.

Progrès de la question depuis 1851.

Le procès-verbal de la Conférence du 2 Mai est lu et adopté.

M. le Play, Commissaire Général de l'Exposition Universelle, présente M. Leone Levi, Professeur au King's College, délégué du Comité Métrique de l'Association Britannique pour l'Avancement des Sciences, et de l'Association Internationale pour obtenir un système décimal uniforme des mesures, poids et monnaies.

M. Leone Levi donne lecture de la note suivante :— .

"Les Expositions Universelles ont montrés qu'il y a encore bien à faire pour faciliter les relations internationales, et parmi les lacunes il faut d'abord citer le manque d'un système commun de mesures, poids, et monnaies.

"A l'Exposition Internationale de 1851, ce besoin fut clairement aperçu, et à sa clôture la Société pour l'Encouragement des Arts, de l'Industrie, et du Commerce de Londres représenta au Gouvernement qu'il conviendrait d'examiner si, par des arrangements avec les nations voisines, il ne serait pas possible de prendre des mesures propres à hâter l'adoption d'un système uniforme dans le monde entier.

"A l'Exposition Universelle de Paris, en 1855, les Membres du Jury et les Commissaires des différents pays, au nombre de 200 environ, signèrent une déclaration portante que l'un des meilleurs moyens pour procurer l'avancement de l'industrie serait d'adopter un système universel de poids et mesures.

"A l'Exposition de Londres, en 1862, le même besoin fut signalé dans les rapports des Membres des Jurys de diverses classes, notamment de celle de la chimie.

"D'autres assemblées internationales et scientifiques, tenues récemment, ont exprimé le même vœu. Le Congrès International de Statistique, lors des réunions de Bruxelles en 1853, de Paris en 1855, de Vienne en 1857, de Londres en 1860, de Berlin en 1863, a trouvé des grandes difficultés dans la diversité des unités par lesquelles les statistiques constatent les faits dans les différents pays.

"Des Sociétés, telles que l'Association Britannique pour l'Avancement des Sciences, et l'Académie de St. Pétersbourg, ont manifesté leur opinion sur les avantages qui résulteraient, pour la science, de l'uniformité dans les communications scientifiques.

"Enfin, une association internationale spéciale se fonda, à l'issue de l'Exposition de Paris, pour obtenir l'adoption universelle d'un système décimal pour les mesures, poids, et monnaies.

"Certaines mesures législatives d'une importance considérable ont été prises dans le même but. Un Comité de la Chambre des Communes se constitua en Angleterre, en 1862, pour examiner la possibilité de mettre en pratique un système simple et uniforme de poids et de mesures, en considérant non-seulement l'avantage qu'en retirerait le commerce intérieur, mais encore les facilités qu'il apporterait aux relations et au commerce étrangers. Sur son avis unanime, la législature déclara le système métrique légal. La décimalisation de la monnaie a été aussi l'objet, de la part de la législature, d'un examen sérieux et a fait quelques progrès.

"Les Etats Allemands n'ont pas moins éprouvé le besoin d'unité dans leurs poids et mesures, et, après deux Conférences officielles, tenues à Francfort, en 1862 et 1865, ils ont conclu en faveur du système métrique.

"Plusieurs autres Etats, tels que l'Espagne, le Portugal, l'Italie, ont pris des mesures analogues, et par une Convention Monétaire, récemment conclu entre la France, la Belgique, la Suisse, l'Italie, ces Etats ont formé une Union Monétaire. Tout récemment, les Etats-Unis sont entrés dans la même voie. Elles ont institués une enquête, et un Bill a été présenté au Congrès pour l'adoption du système métrique.

"Cependant il reste beaucoup à faire pour atteindre l'uniformité générale des poids et mesures, et il ne faut pas oublier que la différence n'est pas limitée aux systèmes legales, mais qu'une grande quantité de poids et de mesures locales et

coutumières viennent embarrasser le commerce et apporter les plus grands troubles dans les calculs internationaux.

"On reconnaît universellement que la question principale elle-même rencontre dans la pratique de nombreuses difficultés, et l'on a suggéré l'idée qu'une exposition des mesures, des poids, et des monnaies en usage dans les divers pays, faite à l'occasion de l'Exposition Universelle de 1867, avec des Conférences dans lesquelles ces questions seraient traitées, serait le meilleur moyen de surmonter ces obstacles.

"Par ces considérations, l'Association Internationale, pour obtenir un système décimal uniforme des mesures, poids, et monnaies, et le Comité Métrique de l'Association Britannique pour l'avancement des Sciences, m'ont chargé de m'entendre avec M. le Commissaire Général sur les moyens de réaliser, sous les auspices de la Commission de l'Exposition Universelle de 1867, une Exposition comprenant—

"1. Une collection de poids et mesures, de leurs multiples et de leurs sous-multiples, ainsi que de tout poids légal et de toute mesure légale employés pour un objet quelconque :

Projet d'une Exposition Spéciale et des Conférences Internationales.

"2. Deux collections, pour montrer la face et le revers, de toutes les monnaies courantes émises par chaque Gouvernement dans la dernière émission, avec les indications relatives à la quantité d'or pur, d'argent ou de cuivre qu'elles contiennent, à leurs poids, à leurs dimensions, &c.;

"3. Enfin tout document ayant rapport à ce sujet et revêtu d'un caractère officiel ; en particulier, tout rapport de Commissions ou de Comités nommés par la législature et ayant trait à un changement ou à une réforme soit dans les poids, soit dans les mesures, soit dans les monnaies de tous les pays.

"Les deux Associations souhaitent en outre, qu'il soit avisé aux moyens de réunir lors de l'Exposition de 1867, une Conférence Internationale de personnes compétentes au point de vue scientifique industriel et commercial pour étudier les séries d'objets et de documents exposés dans le but d'obtenir le plus promptement possible l'adoption, par tous les pays, d'un système décimal uniforme. Ces Conférences pourraient aussi s'occuper des autres questions analogues d'un caractère plus scientifique dont la solution intéresse le progrès de la civilisation."

M. Leone Levi ajoute que l'Association pour obtenir un système uniforme de poids et mesures, instituée à Londres à la suite de l'Exposition de 1855, a décidé, après plusieurs enquêtes, qu'il y avait lieu de chercher à propager l'usage du système métrique parce que ce système, fondé sur la nature, était à la fois le plus scientifique et le plus généralement répandu.

M. Mathieu rappelle que le Bureau des Longitudes, dont il fait partie, s'est empressé d'imprimer le Bill en Anglais, avec la traduction et le tableau comparatif des poids et mesures. L'embarras éprouvé par les savants de tous les pays pour s'entendre dans les questions scientifiques, la gêne que les différences d'unités d'un pays à un autre et souvent d'une région à une autre du même pays, apportent aux relations commerciales, disparaîtraient par l'adoption du système décimal métrique comme système international des poids et mesures. Le Bill rendu par la Chambre des Communes, auquel M. Mathieu a applaudi pour sa part, est un heureux acheminement vers ce résultat.

M. le Play montre que le point de départ ainsi que l'a indiqué M. Leone Levi, consiste, pour le moment, à organiser une Exposition Internationale des Mesures, des Poids et des Monnaies, et croit pouvoir faire espérer à cet égard l'appui de la Commission Impériale.

Les collections des divers pays resteraient distinctes, mais seraient groupées dans un terrain neutre où l'on réaliserait une disposition systématique empruntée au plan général de l'Exposition, de manière à rendre facile la comparaison des objets analogues. Chaque nation contribuerait pour sa part proportionnelle aux frais, peu élevés d'ailleurs, qu'entraînerait l'installation.

Afin de ne pas perdre de temps, on instituerait un Comité peu nombreux, dont les membres Français seraient nommés par arrêté du Président de la Commission Impériale, et dont ferait partie M. Leone Levi, qui garantit, au nom de l'Association dont il est délégué, l'envoie de plusieurs collections importantes.

Ce Comité, complété par l'adjonction de personnes étrangères nommées sur la présentation des Commissions des divers pays, s'occuperait d'abord d'organiser l'Exposition des Mesures, Poids et Monnaies, et des documents y relatifs, et préparerait ensuite pour l'époque de l'Exposition les bases d'une grande Conférence. Cette Conférence, convoquée lors de l'Exposition et réunissant dans son sein de hautes notabilités de diverses contrées, aurait pour but d'étendre l'action de l'Association qui s'est formée en Angleterre pour la propagation du système métrique.

M. le Marquis de Laborde témoigne le désir de voir ce Comité s'occuper tout d'abord de la notice qui accompagnera l'Exposition et dont il faudrait réunir au plus tôt les éléments.

Le projet de la formation d'un Comité est adopté par la Conférence.

Sur la proposition de *M. Rhoth*, il est convenu qu'une expédition du procès-verbal sera mise à la disposition des membres de la Conférence qui voudront bien donner leur concours pour obtenir de leurs Gouvernements, soit la participation matérielle à l'Exposition projétée, soit la nomination de membres étrangers à adjoindre au premier Comité, soit la nomination ultérieure de Délégués devant prendre part aux Conférences Générales, dont le principe est approuvé à l'unanimité.

La séance est levée à cinq heures un quart.

Les procès-verbaux qui précèdent sont adoptés par les membres du Comité institué par arrêté du Ministre d'Etat, Vice-Président de la Commission Impériale, en date du 7 Juin, 1866.

Paris, le 15 *Juin*, 1866.

Ont signé : L. MATHIEU, *Président.*
H. BAUDRILLART, *Secrétaire.*
ED. BECQUEREL, *Secrétaire.*
LEONE LEVI.
EUG. PELIGOT.

A la suite de ces Conférences Préparatoires, l'Arrêté suivant, en date du 7 Juin, 1866, attribuait un emplacement, dans le vestibule du Palais du Champ de Mars, à une Exposition Internationale des Poids et Mesures et des Monnaies de tous les pays.

Un Comité Spécial dit "des Poids et Mesures et des Monnaies" était institué dans la Commission Scientifique pour présider à la formation de cette Exposition.

Ce Comité était en outre appelé à rechercher les moyens les plus efficaces d'utiliser le concours universel de 1867, pour l'adoption et la propagation d'un système uniforme de poids, de mesures, et de monnaies.

Exposition Universelle de 1867, *à Paris.*

COMMISSION IMPÉRIALE.

Second Arrêté nommant des Membres de la Commission Scientifique.

Arrêté instituant un Comité des Mesures, Poids, et Monnaies.

Le Ministre d'Etat, Vice-Président de la Commission Impériale :

Vu l'Article 63 du Règlement Général, délibéré par la Commission Impériale le 7 Juillet, 1865, et approuvé par Décret Impérial en date du 12 Juillet, 1865 ;

Vu l'Arrêté en date du 20 Septembre, 1865, qui institue la Commission Scientifique et la charge notamment de concourir à propager l'usage des découvertes utiles et de provoquer les réformes d'intérêt international, telles que l'adoption des mêmes poids et mesures, de communes unités scientifiques ;

Vu les propositions émanant de deux Sociétés scientifiques d'Angleterre,* propositions qui comprennent : 1. Le projet d'une Exposition Internationale des Mesures, Poids et Monnaies. 2. Le projet de Conférence à instituer en 1867, pour l'adoption et la propagation d'un système uniforme de mesures ;

Vu l'adhésion donnée aux propositions susmentionnées par la Conférence libre,† qui s'est réunie les 2 et 14 Mai, 1866, pour aviser aux moyens de reprendre les travaux de la Commission spéciale formée à l'Exposition Universelle de 1855 ;

Arrête :

Article 1. Un emplacement spécial est attribué dans le vestibule du Palais du Champ de Mars à une Exposition Internationale des Mesures, Poids et Monnaies de tous les pays.

Art. 2. Un Comité spécial, dit "des Mesures, Poids et Monnaies," est institué dans la Commission Scientifique pour présider à la formation de cette Exposition.

* Metric Committee of the British Association for the Advancement of Science ; International Association for obtaining one Uniform Decimal System of Measures, Weights, and Coins.

† Ont pris part à cette Conférence plusieurs membres de la Commission de 1855 et les delégués accrédités auprès de la Commission Impériale par les Commission Etrangères de l'Exposition.

Art. 3. Ce Comité est, en outre, appelé à rechercher les moyens les plus efficaces d'utiliser le concours universel de 1867, pour l'adoption et la propagation d'un système uniforme de mesures, poids, et monnaies.

Pour atteindre ce but, il se concertera avec les personnes qui ont déjà pris part aux Conférences de 1855 et de 1866, et les notabilités de tous les pays dont le concours paraîtrait désirable.

Art. 4. Sont nommés Membres de ce Comité :—

M. Baudrillart, membre de l'Institut, Professeur au Collége de France ;

M. Edmond Becquerel, membre de l'Institut, Professeur au Conservatoire Impérial des Arts et Métiers ;

M. Leone Levi, Professeur de Droit Commercial à l'Etablissement dit King's College, à Londres, Docteur en Economie Politique, et Délégué des deux Sociétés Scientifiques ci-dessus mentionnées ;

M. Mathieu, membre de l'Institut et du Bureau des Longitudes ;

M. Peligot, membre de l'Institut, Professeur au Conservatoire Impérial des Arts et Métiers, et Vérificateur des Essais à la Monnaie.

Art. 5. Seront nommées ultérieurement membres du même Comité les personnes désignés par les Commissions Etrangères des Etats qui contribueront à l'installation de l'Exposition Spéciale des Mesures, Poids, et Monnaies.

Art. 6. Le Conseiller d'Etat, Commissaire Général, est chargé de l'exécution du présent Arrêté.

Fait à Paris, le 7 Juin, 1866.

Le Ministre d'Etat, Vice-Président de la Commission Impériale,
(Signé) E. ROUHER.

Pour ampliation :
Le Conseiller d'Etat, Commissaire-Général,
(Signé) F. LE PLAY.

Adhésions des Commissions Etrangères.

Le Comité fit immédiatement appel aux Commissions Etrangères qui avaient pour mission de préparer l'Exposition Universelle de 1867, demanda leurs concours pour l'exposition collective qu'il devait préparer, et les pria de désigner dans leur pays des Membres pour les représenter.

Cet appel fut entendu, et bientôt le Comité reçut les adhésions des Commissions des Pays-Bas, de la Belgique, de la Prusse et des Etats de l'Allemagne du Nord, des Etats de l'Allemagne du Sud, de l'Autriche, de la Suisse, de l'Espagne, du Danemark, de la Suède et de la Norwége, de la Russie, de l'Italie, de l'Empire Ottoman, de l'Egypte, du Japon et de la Chine, du Maroc et de Tunis, du Brésil, des Etats Unis d'Amérique, et du Royaume Uni de la Grande Bretagne et d'Irlande. Le choix des Représentants désignés par ces différentes Commissions montre l'importance qu'elles attribuaient dès l'origine aux travaux du Comité. Ces choix furent ratifiés par deux nouveaux Arrêtés, en date du 14 Février et du 10 Avril, 1867, et la liste définitive des Membres du Comité fut fixée ainsi qu'il suit :—

Mathieu, Membre de l'Institut et du Bureau des Longitudes, Président.

Edmond Becquerel, Membre de l'Institut, Professeur au Conservatoire Impérial des Arts et Métiers, Secrétaire.

Baudrillart, Membre de l'Institut, Professeur au Collége de France, Secrétaire.

B. de Chancourtois, Ingénieur en chef et Professeur à l'Ecole Impériale des Mines, Secrétaire de la Commission Inpériale.

Julien, Directeur de Commerce Intérieur au Ministère de l'Agriculture, du Commerce, et des Travaux Publics.

Peligot, Membre de l'Institut, Vérificateur des Essais à la Monnaie de Paris.

E. H. von Baumhauer, Membre de l'Académie des Sciences et de la Commission Royale des Pays-Bas.

Du Pré Ingénieur en chef des Ponts et Chaussées, Commissaire de la Belgique.

G. Magnus, Membre de l'Académie Royale des Sciences et Professeur à l'Université de Berlin, Membre du Comité Central de la Prusse et des Etats de l'Allemagne du Nord.

Varrentrapp, Professeur à l'Ecole Polytechnique, à Brunswick.

Max Günther, Ingénieur, pour la Hesse, Bade, le Wurtemberg, et la Bavière.

Le Baron de Burg, pour l'Autriche.

Le Baron de Hock, Conseiller Intime de Sa Majesté l'Empereur d'Autriche, Membre de la Chambre des Seigneurs, pour l'Autriche.
Le Chevalier de Parmentier, pour l'Autriche.
Feer-Herzog, Conseiller National à Aarau, Commissaire de la Suisse.
Ramon de la Sagra, pour l'Espagne.
Guerrero, Intendant Honoraire des Finances, pour l'Espagne.
Le Comte d'Avila, Président de la Commission Royale de Portugal.
Le Maire, Commissaire Adjoint, du Danemark.
De Fahnehjelm, Commissaire de la Suède.
Christiensen, Commissaire de la Norwége.
B. de Jacobi, Conseiller d'Etat actuel, Membre de l'Académie des Sciences de St. Pétersbourg.
Le Général Major Gloukoff, pour la Russie.
Faustin Malaguti, Recteur de l'Académie de Rennes, pour l'Italie.
Giordano, Inspecteur des Mines, Commissaire d'Italie.
Le Colonel Essad Bey, Directeur de l'Ecole Militaire Ottomane à Paris.
Joseph Claude, Négociant, Membre de la Commission Egyptienne.
Le Caïd Nyssim Samama, pour le Maroc.
Valensi, Commissaire pour Tunis.
De Porto-Alegre, pour le Brésil.
Samuel B. Ruggles, Esq., pour les Etats Unis d'Amérique.
Leone Levi, Professeur de Droit Commercial au King's College à Londres, Docteur en Economie Politique.
Le Colonel Younghusband, pour la Grande Bretagne.
Ch. de Billy, Auditeur à la Cour des Comptes, Secrétaire Adjoint.
De Lapparent, Ingénieur Ordinaire des Mines, ,,
Peigné, Lieutenant d'Artillerie, ,,
D'Ussel, Ingénieur Ordinaire des Ponts et Chaussées, ,,

Conférences Internationales

Pour l'Adoption d'un Système Uniforme de Poids et Mesures et de Monnaies.

Première Séance.—*Vendredi*, 21 *Juin*, 1867.

Présidence de M. Mathieu, Président du Comité des Poids et Mesures et des Monnaies.

Ouverture des Conférences Internationales.

Ont pris place au bureau :
MM. de Jacobi, Président de la Sous-Commission des Poids et Mesures; le Baron de Hock, Président de la Sous-Commission des Monnaies; Becquerel, Secrétaire; Baudrillart, Leone Levi; de Billy, de Lapparent, Peigné, d'Ussel, Secrétaires adjoints.

Ont signé la feuille de présence :
MM. le Comte d'Avila, Barnard, Von Baumhauer, de Chancourtois, de Fahnehjelm, Giordano, Guerrero, Kennedy, Mannequin, de Parmentier, Peligot, de Porto-Alegre, Ruggles, membres et membres adjoints du Comité des Poids et Mesures et des Monnaies.

Et MM. d'Abaza, de Arago, Beckwith, Belloco, Bertera, Bowles, Broch, Van de Broeck, de Cabral, S. Brown, L. Casella,* Desenne, Dietz, Ducuing, Général Elorza, Florès, Fortamps, Gadoline, Pablo Gil, Hagemeister, V. Herran, Hulot, Huyot, Jacqmin, Lalanne, Lechatelier, Martin, Mees, Comte de Moriana, Muspratt, W. Blood,† Palha de Lacerda, de Ponton, Rivas, de Santos, Schwab, le Révérend Père Secchi, J. Sherman, Stas, de Steinbeis, Surell, Taché, Thirion, Toppan, Tresca, de Villa-Major, Vrolik, Wallenberg, Wolowski.

Le Président, après avoir déclaré la séance ouverte, expose l'objet des Conférences et les résultats des travaux préliminaires du Comité :

"Messieurs,—Permettez-moi de vous faire connaître les circonstances qui ont amené l'organisation du Comité des Poids et Mesures et des Monnaies, et l'ordre qu'il a suivi dans les travaux dont il a été chargé.

* Pour la Société Internationale de Poids, Mesures, et Monnaies.
† Pour la Chambre de Commerce de Liverpool.

"La variété infinie des mesures de tout genre dans chaque pays, et d'un pays à un autre, rend très-difficiles les relations commerciales.

"L'établissement des chemins de fer et des télégraphes électriques, ces grands instruments de progrès et de civilisation, a, pour ainsi dire, changé la face du monde. Les communications sont maintenant si faciles et si rapides que les pays se trouvent aujourd'hui dans l'état où étaient naguère les provinces d un même Empire. On ne peut plus se borner à quelques essais de simplification: nous sommes amenés par la force des choses à des réformes étendues. C'est le seul moyen d'assurer toutes les garanties désirables aux transactions sociales et aux opérations du commerce dans le monde entier.

"Deux associations scientifiques de Londres se sont beaucoup occupées de cette grande question d'économie politique. Elles ont fait depuis une douzaine d'années de fréquentes publications qui ont eu un grand retentissement.

"M. Leone Levi, délégué de ces Associations, a été chargé, en 1866, de proposer l'exposition d'une collection de poids et mesures et de monnaies, et de former une Conférence Internationale, lors de l'Exposition Universelle de 1867.

"Cette proposition a été acceptée par la Commission Impériale, qui a procédé à la formation d'un Comité spécial.

"Dès l'origine de ses travaux, le Comité a reconnu la nécessité de séparer deux questions bien distinctes: celles des poids et mesures et celle des monnaies, la dernière devant donner lieu à plus de difficultés que la première. Le Comité a donc nommé dans son sein deux Sous-Commissions, dont chacune a formulé ses conclusions dans un rapport: ces rapports ont été imprimés et distribués, et c'est leur discussion qui doit faire l'objet des Conférences pour lesquels nous sommes ici réunis."

Rapport concernant l'Uniformité des Poids et Mesures.

Rapport concernant l'uniformité des poids et mesures.

La Sous-Commission des Poids et Mesures résume dans le Rapport suivant les résultats de ses études et les conclusions de ses travaux.

Les bases de ce Rapport sont les quatre propositions fondamentales présentées par son rapporteur et unanimement adoptées en séance général du Comité.

Ces propositions sont les suivantes:—

Propositions Fondamentales.

Propositions Fondamentales.—I. Le système décimal ou décadique, conforme au système de numération universellement employé, est le plus propre à exprimer les multiples et les sous-multiples des poids et mesures et des monnaies.

II. Le système décimal métrique* est parfaitement propre à être, en raison des principes scientifiques sur lesquels il est établi, de l'homogénéité qui règne dans les rapports de toutes ses parties, de sa simplicité, et de la facilité de ses applications dans les sciences et dans les arts, dans l'industrie, et le commerce.

III. Les instruments de précision et les méthodes employées pour obtenir des copies des poids et mesures prototypes ont atteint une perfection telle que l'exactitude de ces copies répond aux besoins de l'industrie et du commerce, et même aux exigences de la science dans son état actuel.

IV. Comme toute économie de travail, tant matériel qu'intellectuel, équivaut à une véritable augmentation de richesse, l'adoption du système métrique, qui se range dans le même ordre d'idées que les machines et outils, les voies ferrées, les télégraphes, les tables logarithmiques, se recommande particulièrement sous le point de vue économique.

Ces quatre propositions fondamentales renferment les principes posés par le Comité, sous la forme la plus générale qu'il ait donnée à l'expression unanime de son opinion.

En les prenant pour base de ses travaux, la Sous-Commission a cru devoir entrer dans une étude plus approfondie des avantages du système métrique dans les différentes branches de l'activité humaine, et des moyens pratiques d'en étendre l'application.

* Il est bon de rappeler que le système métrique est l'œuvre d'une Commission de savants Français et étrangers. Les savants étrangers avaient reçu l'invitation de se rendre à Paris dans les premiers jours de l'an VII (1798), pour prendre une connaissance intime des opérations exécutées, et pour contribuer, de leur travail et de leurs lumières, à tirer les conséquences qui devaient fixer de la manière la plus authentique l'unité fondamentale du système de mesures. Les savants étrangers étaient: MM. Aenoœ et Van Swinden, députés Bataves; M. Vassali Eandi, député du Piémont; M. Bugge, député du Roi de Danemark; M. Ciscar et Pédrayes, députés du Roi d'Espagne; M. Fabroni, député de Toscane; M. Franchini, député de la République Romaine; M. Mascheroni, député de la République Cisalpine; M. Multedo, député de la République Ligurienne; M. Trallès, député de la République Helvétique. ("Base du Systéme Metrique," tome i, page 92.)

Situation des divers Pays au point de vue de l'Adoption du Système Métrique.

Situation des divers Pays au point de vue de l'Adoption du Système Métrique.—Il lui a paru toutefois nécessaire de se rendre, dès le début, un compte exact de la situation actuelle des divers pays considérés au point de vue de l'adoption du système métrique. On peut ainsi mesurer la distance qui sépare chacun d'eux de la pleine possession des avantages inhérents à l'usage de ce système. La composition du Comité, qui renferme les délégués de presque toutes les nations, a permis à la Sous-Commission de recueillir dans son sein même, sur ce sujet, les renseignements nécessaires.

Les nations, considérées à ce point de vue, se trouvent dans des situations très-diverses. Parmi celles qui ont adopté le système métrique, toutes ne l'ont pas fait de la même manière, ni au même degré. L'adoption a pu être complète ou partielle, avec ou sans modifications, obligatoire ou facultative. Parmi celles qui ne l'ont pas adopté, il faut distinguer celles qui sont en possession d'un système de poids et mesures unique et bien réglé dans toute l'étendue du pays, et celles qui sont encore sous le régime de la multiplicité des systèmes variant avec les lieux et la nature des substances à mesurer.

Etats qui ont adopté le Système Métrique.

Etats qui ont adopté le Système Métrique.—On compte parmi les Etats qui ont complétement adopté et rendu obligatoire l'usage du système métrique tel qu'il est pratiqué en France :—

La France.
La Belgique.
Les Pays-Bas.
L'Italie.
Les Etats Pontificaux.
L'Espagne.
Le Portugal.
La Grèce.
Le Mexique.
Le Chili.
Le Brésil.
La Nouvelle Grenade.
Les Républiques du Sud de l'Amérique Méridionale.

Dans les derniers Etats de cette liste, l'introduction du système métrique est très récente, et la réforme encore loin d'être achevée. Au Brésil même, la loi qui la prescrit ne sera exécutoire qu'en 1873. Ailleurs, l'usage illégal des anciennes mesures a souvent subsisté par suite d'une surveillance administrative insuffisante, soit que les Gouvernements aient moins énergiquement agi, soit que les populations aient plus obstinément résisté.

A la suite de cette première catégorie de pays viennent se ranger les nations qui ont légalement admis l'usage du système métrique, mais d'une manière purement facultative.

L'Angleterre, par exemple, depuis 1864, a admis son usage facultatif. Il existe dans ce pays une très grande multiplicité de systèmes. On y compte dix systèmes de poids autorisés par les lois, et en usage suivant la nature des substances à poser ; quelques-uns d'entre eux ont des divisions décimales. Il arrive même que dans certaines villes, sur un même marché, il y a deux poids différents pour une même marchandise, comme à Belfast, en Irlande, pour la vente du lin. Le système des mesures de longueur est basé sur le yard de 0·914 mètres, qui vaut 3 pieds, chaque pied se subdivisant en 12 pouces et chaque pouce en 12 lignes, et quelquefois en 10 lignes. Mais le commerce emploie des aunes de longueurs différentes, la marine des toises de longueurs différentes suivant leur destination, l'agriculture des acres de différentes dimensions. On compte environ vingt espèces de bushels employés comme mesures de capacité. Le manque de simplicité et d'uniformité dans le système des poids et mesures de la Grande Bretagne est donc des plus manifestes, et le besoin d'une réforme des plus urgents. C'est ce qu'atteste l'enquête Parlementaire ouverte en 1862, à l'occasion de l'introduction facultative du système métrique.

Les Etats-Unis d'Amérique ont les mêmes systèmes que la Grande Bretagne, mais en moins grand nombre. Comme mesure de longueur, le même pied et le même pouce et les multiples, dont la série s'obtient en multipliant le pouce par celle des facteurs 12, 3, 5, 44, 8. On s'y sert de trois principales séries de poids : avoirdupois, troy, et de pharmacie. Le grain de 0·064 grammes est la base commune des trois systèmes. Pour donner une idée des rapports qui existent entre les divers termes d'une de ces séries, pour la première, par exemple, l'échelle de ces rapports, en partant du grain, est formée par la suite des nombres $27\frac{11}{32}$, 16, 16, 25, ou 28, 4, 20. En fait de mesures de capacité, il existe des relations simples entre les termes respectifs de la série employée pour les liquides, comme aussi entre ceux de la série en usage pour les matières séches et de la série cubique. Mais il n'y a aucun rapport simple entre ces diverses séries comparées les uues avec les autres.

Toutefois, aux Etats-Unis, l'opinion publique est très-favorable à l'introduction

du système métrique, et dans un pays où cette opinion est si éminemment active, les réformes ont déjà commencé. Une loi de 1866 a décidé que :

1. Le Secrétaire de la Trésorerie était autorisé et invité à fournir à chaque Etat de l'Union et à délivrer au Gouverneur une série-étalon de poids et mesures du système métrique pour l'usage des Etats.

2. Le Directeur Général des Postes était autorisé et invité à fournir aux bureaux de poste en relation de service avec l'étranger, et à tous ceux qu'il jugerait bon, des balances postales graduées en grammes métriques : que, jusqu'à nouvelle disposition de la loi, la demi-once, avoirdupois, serait considérée comme équivalente à 15 grammes métriques dans le service des postes et ainsi de suite en progression, et que les Tarifs seraient appliqués conformément à ces échelles de poids.

Ces prescriptions de la loi sont aujourd'hui en pleine exécution, et tout porte à croire que le jour d'une adoption complète du système métrique par les Etats-Unis n'est pas éloigné.

Etats qui ont fait des Emprunts au Système Métrique

Etats qui ont fait des Emprunts au Système Métrique.—Viennent ensuite les Etats qui ont fait au système métrique des emprunts plus ou moins complets.

La Suisse est, depuis le 31 Décembre, 1856, en possession d'un système unique de poids et mesures. L'unité de longueur est le pied de 30 centimètres. Les multiples et les sous-multiples en sont décimaux. L'unité de poids est la livre de 500 grammes, avec deux systèmes de multiples et de sous-multiples, dont l'un est décimal et l'autre suivant l'ancienne échelle.

En Suède, une loi de 1855, rendue obligatoire le 1 Janvier, 1858, a introduit un système de poids et mesures complétement décimal quant aux rapports ; mais l'unité de longueur est le pied de 0·297 mètres, et l'unité de poids la livre de 0·42 kilogrammes, Ce système a remplacé un ancien système ayant les mêmes unités, mais sans les rapports décimaux des multiples, et admettant plusieurs séries de mesure de capacité suivant leur nature des substances à mesurer. Les traces de cet ancien système n'ont pas encore disparu dans l'usage.

En Prusse, une loi du 17 Mai, 1856, a admis la livre de 500 grammes divisée en 30 loths. Les subdivisions du loth sont décimales. Un système décimal de mesures de longueur est autorisé par la loi pour l'usage des arpenteurs. La base est la ruthe (perche), qui contient 12 pieds, mais qui est divisée en dixièmes, centièmes, &c. Dans le système duodécimal, la perche contient aussi 12 pieds, le pied 12 pouces, le pouce 12 lignes ; il est employé par les architectes, les ingénieurs, et les commerçants. Le pied Prussien a une longueur de 0·3139 metres. L'application générale du système décimal pour toutes les mesures parait devoir être prochaine dans ce pays.

Dans le Grand Duché de Bade, le pied Badois de 0·30 mètres est subdivisé décimalement. Les mesures de capacité forment des séries dont les termes représentent des volumes dix fois plus grands, en passant de l'un à l'autre. La livre est de 500 grammes.

Le pied Hessois est de 0·25 mètres ; les multiples et les sous-multiples sont décimaux ; les rapports de mesure de surface le sont également. La livre est de 500 grammes.

La Bavière, le Wurtemburg, le Danemark n'ont pris du système métrique que la valeur de la livre de 500 grammes ; mais la Bavière ne l'a admise que pour la douane. En Danemark même, la livre est divisée en 100 quint, chaque quint en 10 orts, et depuis 1863 l'usage de la plus grande partie des multiples de la livre non conformes aux divisions décimales a été défendu. On ne tolère que les fractions $\frac{1}{4}$, $\frac{1}{8}$, $\frac{1}{16}$, &c. ; encore les nouveaux poids de ce genre ne sont-ils même plus poinçonnés. Quant aux mesures de longueur, l'unité est le pied divisé en 12 pouces et le pouce en 12 lignes. On trouve dans ces pays des séries différentes de capacité, dont les termes ont dans une même série des rapports simples les uns avec les autres, mais les séries n'ont entre elles aucune relation simple. Il n'y a donc à ce point de vue aucun rapport avec le système métrique.

L'Autriche a pour unité de longueur un pied de 0·316 mètres, et pour unité de poids dans le commerce une livre de 560 grammes. Les rapports ne sont ni décimaux ni simples entre les diverses séries d'une même nature de mesures, mais dans les droits fiscaux et les douanes le Gouvernement a adopté, en 1853, une livre de 500 grammes avec divisions décimales.

En Allemagne, du reste, d'après les renseignements fournis par les membres Allemands du Comité, l'état des esprits paraît fortement incliner vers l'unification des systèmes de poids et mesures, par le moyen de l'introduction du système métrique. L'opinion des hommes les plus éclairés s'est manifestée dans les Conférences tenues à Francfort, et a laissé dans les Protocoles de ces Conférences une

preuve et un témoignage de ses aspirations. En Autriche, des dispositions sont déjà prises pour effectuer la transformation; un projet de loi sur l'introduction du système métrique sera présenté sous peu à la décision du Reichsrath.

Etats dont les Systèmes n'ont rien de commun avec le Système Métrique.

Etats dont les Systèmes n'ont rien de commun avec le Système Métrique.—En dehors de l'Allemagne, et dans la catégorie des nations qui ont des systèmes complètement en désaccord avec le système métrique, on rencontre la Norvège, qui n'a ni les unités ni les rapports décimaux du système métrique.

La Russie est en possession d'un système unique, uniforme, exclusivement en usage dans tout l'Empire, où l'on n'en connaît point d'autre, à peu d'exceptions près. Les mesures de longueur sont en correspondance exacte avec le système Anglais; l'unite de longueur, le sagène, ayant été choisi égal à la longueur de 7 pieds Anglais. Le sagène se divise en 3 archines, l'archine en 16 verchocks, &c. Mais le sagène aussi par définition se divise exactement en 7 pieds et chaque pied en 12 pouces, &c. Les mesures de capacité et de volume sont exprimées par les carrés et les cubes de mesures de longueur. Dans la pratique, on distingue les mesures de volume pour les liquides et pour les matières sèches, ce qui forme deux séries distinctes. L'unité de poids, la livre de 0·40952 kilogramme, est le poids de 25,019 pouces cubes d'eau pure pesée dans le vide à la température de $16\frac{2}{3}$ degrés centigrades. Les multiples et sous-multiples se déduisent de ces unités par des multiplicateurs simples, mais non décimaux.

Avec un pareil système formant un ensemble bien réglé, mais fort différent du système métrique, la réforme devrait être radicale. Elle compte en Russie beaucoup de partisans. Il a été lu au Comité un Rapport de M. Kupffer, et différents rapports de l'Académie des Sciences de St. Pétersbourg, en faveur de cette introduction. Il semble que la Russie attende encore, pour changer son système, l'exemple des pays avec lesquels elle a des relations de commerce, et de l'Angleterre, dont l'étalon a déjà servi de base au choix de son unité de longueur.

Les nations riverains de la Méditerranée, la Turquie, l'Egypte, le Maroc, Tunis, ont des mesures et des poids sans rapport avec le système métrique. L'unité de longueur Turque est cependant de 0·75 mètre exactement, c'est-à-dire, en relation simple avec le mètre. Si les autres nations acceptaient l'usage du système métrique, son emploi serait général sur les côtes de la Méditerranée et le commerce de cette partie du monde en retirerait incontestablement de grands avantages.

La Sous-Commission est ensuite entrée dans l'étude détaillée des avantages résultant de l'emploi du système métrique appliqué aux différentes branches du travail.

Enseignement du Système Métrique dans les Ecoles Primaires.

Enseignement du Système Métrique dans les Ecoles Primaires.—Il est incontestable que la substitution du système métrique décimal à tout autre système de poids et mesures doit entraîner, dans l'étude de l'arithmétique, de grandes simplifications. Cette étude occupe dans l'instruction primaire qui est donnée à la masse des habitants d'un pays une place très importante. Le résultat des études arithmétiques faits sur des nombres abstraits doit être d'amener à pouvoir effectuer facilement les opérations usuelles sur les nombres concrets, qui, dans la pratique, expriment presque toujours des poids, des mesures ou des monnaies. Si donc le système des poids et mesures est tel que son usage exige le secours des règles les plus compliquées de l'arithmétique au lieu des règles les plus simples, comme le fait le système métrique, il faudra que les élèves soient, dans les écoles, familiarisés avec des opérations arithmétiques compliquées, au lieu de l'être avec des opérations simples. Cette connaissance et cette habitude ne peuvent s'acquérir que par un surcroit de travail et un sacrifice de temps. Beaucoup d'hommes éclairés estiment à un tiers, pour l'éducation, l'économie de temps qui résulterait de l'introduction du système métrique dans les pays qui ne l'ont point encore adopté. Le temps perdu stérilement pourrait être employé à des études beaucoup plus utiles. Toutefois, cette regrettable situation n'a pas seulement pour inconvénient d'occasionner des pertes de temps. Les esprits moins tenaces ou plus bornés fatigués par la difficulté, la confusion, la complication des règles qu'on leur présente, se lassent et quelquefois abandonnent une étude qui les rebute. Ce qui est certain, c'est que dans les pays ou les deux systèmes sont provisoirement en présence et simultanément enseignés, la préférence des élèves se porte décidément sur celui qui leur offre les solutions les plus simples.

La connaissance du système métrique est du reste si facile à acquérir, que les voyageurs, les ouvriers et les commerçants des pays où il n'est point pratiqué, obligés souvent, pour leurs affaires avec des nations étrangères, d'apprendre à s'en servir, en prennent l'habitude en beaucoup moins de temps qu'ils n'en ont mis à

acquérir celle de leur système national, à l'usage duquel d'ailleurs ils ne reviennent jamais.

Un autre avantage du système métrique, c'est qu'il permet d'effectuer immédiatement sur les nombres concrets qui représentent, en mesures métriques, une longueur, ou un poids, ou une valeur, toutes les opérations possibles au moyen de tables, règles et procédés mécaniques de calcul fondés sur le principe des divisions décimales. De cette manière, le principe même de l'utilité inhérente à l'emploi du système métrique, c'est-à-dire, l'économie de temps dans les opérations pratiques, reçoit une extension plus grande par l'usage rendu possible de procédés qui abrégent encore la durée des calculs.

Mentionnons ici qu'aux Etats-Unis d'Amérique, pour faciliter l'introduction du système métrique dans l'éducation populaire, le Congrès, par une loi de 1866, a ordonné l'émission d'une pièce de 5 cents en alliage de nickel et de cuivre, aux poids exact de 5 grammes et au diamètre de 2 centimètres, en sorte que 5 pièces donnent la longueur de 1 décimètre.

La Commission conclut donc que le système métrique doit être enseigné dans toutes les maisons d'éducation avec l'arithmétique, et en même temps que le système en usage dans le pays.

Avantages de l'emploi du Système Métrique dans les Sciences.

Avantages de l'emploi du Système Métrique dans les Sciences.—Le système métrique employé dans les sciences pour exprimer les données des expériences ou des observations, et les transformer par le calcul de manière à en rendre les résultats évidents, présente au savant qui s'en sert la même simplicité, la même économie de temps dans le mécanisme des opérations que nous venons de signaler.

Aussi la plupart des savants l'emploient exclusivement, lors même qu'ils appartiennent à des nations habituées à d'autres systèmes. La science a toujours, non moins que l'économie politique, contribué à en favoriser la vulgarisation. Toutefois il est à désirer que son usage devienne général dans toutes les publications scientifiques. Aujourd'hui encore, malgré les efforts tentés par les Congrès et les Associations diverses en vue de l'unification, il y a beaucoup d'ouvrages dont l'utilité est absolument localisée et en partie perdue, parce que leur lecture est impossible aux étrangers même versés dans la connaissance des langues. Leur transformation coute aux Gouvernements des dépenses auxquelles ils ne sont pas généralement disposés à se prêter, et celui qui veut l'entreprendre lui-même se voit arrêté par la difficulté de l'œuvre et le prix du temps. L'usage général des poids et mesures métriques aurait pour effet de supprimer tout ce pénible travail intermédiaire de transformation d'échelles. Cette tâche est absolument stérile, mais son accomplissement est la condition nécessaire de l'intelligence de ces ouvrages, et de leur publicité. Plus qu'à aucune autre époque, on est convaincu de nos jours des immenses avantages que l'industrie, le commerce et le bien-être des nations retirent du progrès des sciences. Tout ce qui peut entraver leur développement ou la manifestation de leurs résultats crée indirectement, dans le domaine des applications, un obstacle au perfectionnement des méthodes de travail et empêche une production de richesse. A défaut d'une langue universelle, le remède à cette situation existe dans l'unification des systèmes des poids et mesures, et l'adoption universelle du système métrique, dont l'effet sera de rendre les données de la science partout intelligibles, partout comprises, et partout applicables.

Ce qui est vrai de la science en général s'applique d'une manière plus éclatante encore à certaines sciences particulières, qui, par leur nature spéciale, ne peuvent atteindre leur développement, à moins qu'elles n'aient à leur disposition des ressources très-étendues. Telle est, par exemple, la statistique. Cette science ne peut évidemment s'élever à un certain degré de généralité et d'utilité, qu'en recueillant et comparant des éléments de provenances très-diverses, exprimés actuellement en mesures appartenant aux systèmes les plus différents. Depuis longtemps, des Congrès spéciaux tenus à Bruxelles en 1853, à Paris en 1855, à Londres en 1860, à Berlin en 1863, ont émis le vœu que les renseignements fournis par la statistique fussent désormais exprimés en mesures métriques. Dans les pays où le système métrique n'était pas encore adopté, il devait être joint à chaque colonne de nombres en mesures du pays, une colonne indiquant les équivalents en mesures métriques. Les sociétés statistiques de diverses nations, notamment d'Angleterre, d'Autriche, de Suède, ont déjà adopté et appliqué le principe de cette mesure éminemment utile. De cette manière seulement, les renseignements fournis par la statistique peuvent avoir le degré de publicité que comporte le caractère international de cette science.

Nous devons remarquer que, dans la présente Exposition, le manque d'uniformité des poids et mesures a beaucoup gêné les travaux des membres du jury des récompenses, en les exposant aux pénibles calculs de réduction d'é elles, nécessaires à la comparaison des industries des divers pays.

Il serait donc de la plus haute utilité générale que toutes les sociétés scientifiques ayant pour objet la science pure ou ses applications s'engageassent formellement à n'employer, dans leurs publications, que le système métrique. Telle est la déclaration unanime de la Commission.

Avantages du Système Métrique dans les Transactions Commerciales.

Avantages du Système Métrique dans les Transactions Commerciales.—Examinons d'abord l'influence du système métrique sur les transactions commerciales, qui ont lieu dans l'intérieur même d'un pays. Il est incontestable que la simplification introduite dans les calculs par l'adoption de ce système permet aux commerçants en gros de réduire le personnel qui, sans son secours, leur serait nécessaire pour la tenue de leurs comptes. Le système métrique fonctionnant comme une machine à épargner du travail (*labour-saving machinery*), il y aura économie non-seulement dans le nombre des agents employés à ce travail, mais encore réduction dans les conditions de leurs aptitudes. Il résulte en effet de l'expérience et du témoignage que, dans certains pays à systèmes de mesures trés-compliqués, les commis préposés aux comptes de commerce doivent avoir des facultés toutes spéciales pour les calculs. Ces calculs deviennent par le système métrique possibles à une classe beaucoup plus étendue de sujets ; les individus les mieux doués restent ainsi réservés à des fonctions plus élevées et plus utiles. De toutes ces considérations, on peut conclure que la simplification des opérations, conséquence de l'introduction du système métrique, se traduit, aux frais généraux, pour chaque tonne de marchandises, en une certaine économie réalisée. En somme, et sur la masse énorme de marchandises que le commerce moderne met en mouvement, il y a une économie de dépense et de travail difficile à évaluer, mais assurément très-considérable.

D'un autre côté, les chances de fraude dans les transactions commerciales iront en diminuant. A mesure, en effet, que les moyens d'échange reposent sur des bases plus mathématiques et plus simples, chacun peut plus facilement vérifier soi-même si ses droits sont sauvegardés et si le marchand avec lequel il traite lui fournit avec exactitude le poids, le longueur, la surface, ou le volume de matière demandé par lui. Le contrôle de l'intéressé devient plus facile et l'équité est mieux respectée.

Le commerce international, à côté des avantages précédemment énumérés, en acquiert de nouveaux, dus à la suppression des transformations de mesures auparavant nécessaires dans les relations commerciales entre deux pays. De là, simplification, diminution de personnel, rapidité augmentée par la disparition d'un travail intermédiaire inutile, chances d'erreurs évitées. Le commerçant pourra, d'une manière rapide et commode, se tenir au courant du cours des marchés étrangers, et s'en servir pour régler la direction de ses propres affaires. Le bénéfice de l'usage du système métrique est d'autant plus grand que les peuples ont entre eux des relations commerciales plus fréquentes : c'est donc à celles des nations qui font avec l'étranger le commerce le plus étendu qu'il importe surtout de se préoccuper de l'unification.

La Commission conclut donc, que le commerce intérieur et extérieur de chaque nation ne peut que gagner beaucoup à l'adoption, soit seulement spéciale au pays, soit, plus encore, universelle pour tous les Etats, du système métrique des poids et mesures.

Application Facile du Système dans l'Industrie, la Mécanique, les Constructions.

Application Facile du Système dans l'Industrie, la Mécanique, les Constructions.—Les considérations précédemment développées sont applicables à la confection de toutes les œuvres matérielles dont la production constitue l'ensemble des industries.

Toutefois, une considération nouvelle prend place ici : elle concerne la mécanique, les constructions navales, et dans bien des cas les travaux publics, depuis que l'emploi du fer est venu changer leurs conditions primitives, et se substituer dans beaucoup d'ouvrages à celui de la pierre et du bois. Les anciennes mesures et leurs subdivisions étaient seulement adaptées aux besoins des époques où elles furent établies. Aujourd'hui, dans les ouvrages métalliques de mécanique ou de construction, une précision plus grande est devenue nécessaire. Les différentes pièces d'une machine—par exemple, l'épaisseur des lames de tôle d'une poutre en fer—sont évaluées en millimètres, ou en unités équivalentes. Or, la plupart des anciennes mesures n'ont pas de subdivisions aussi petites. Il a fallu en créer. En Russie on ne descend qu'au quart ou au huitième de verchock—c'est-à-dire, 0·0055 mètres ; mais dans ces derniers temps on a dû diviser le sagène en mille

parties de 2 millimètres environ. En Angleterre on a divisé le pouce en huitièmes, en seizièmes, et en trente-deuxièmes—échelles auxquelles l'expérience pratique des mécaniciens fait préférer de beaucoup les subdivisions décimales du mètre.

Dans les travaux il y a en outre un grand avantage à pouvoir déduire facilement le poids des corps de leur volume au moyen de leur poids spécifique. Prenons un exemple. La densité du cuivre étant 8·59, le poids de 1 centimètre cube de ce métal, exprimé en kilogrammes dans le système métrique, est de 0·00859 kilogramme, qui se déduit du poids spécifique par un simple déplacement de virgule, sans le moindre calcul. Avec le système Russe, où le pied cube contient 1,728 pouces cubes, la livre 96 zolotniks, et où le poids d'un pied cube d'eau distillée est de 69 livres et $6\frac{1}{2}$ zolotniks, l'ensemble des opérations nécessaire pour obtenir le poids en zolotniks d'un pouce cube de cuivre est représenté par la formule suivante :

$$\frac{8{\cdot}59 \times 69}{1728 \times 96}$$

qui est simplement approximative, mais qui n'en exige pas moins deux multiplications et une division, avec des chiffres très-compliqués.

Il en serait de même avec tout autre système que le système métrique.

La Commission reconnaît donc et déclare qu'il y a une grande utilité pour l'industrie à accepter le système métrique. Il lui paraît désirable, en outre, que les Gouvernements qui, dans la plupart des pays, font exécuter les travaux publics et les constructions navales prescrivent pour tous ces travaux son usage exclusif dans les devis, séries de prix, cahiers des charges, et autres pièces analogues. La Commission verrait dans cette mesure non-seulement une grande utilité pour la rapidité des opérations arithmétiques et une grande facilité pour leur contrôle, mais encore un moyen efficace de répandre dans les populations la connaissance et l'habitude de ce système. La masse naturellement mobile et incessamment renouvelée des ouvriers et agents en contact avec l'administration rapporterait au sein de la population les habitudes prises au service des entrepreneurs de l'Etat, et exercerait ainsi sur le reste du peuple une influence comparable à celle que pourra produire l'enseignement du système métrique dans les écoles primaires.

Il s'est élevé des objections à propos de la difficulté qu'il y aurait à faire accepter à des ouvriers et à des marchands en détail la substitution de mesures nouvelles à celles dont ils ont coutume de se servir dès l'enfance. La lenteur avec laquelle s'opère, dans les pays qui ont l'accepté, le système métrique, la transformation des usages locaux paraît devoir donner raison à cette objection. Toutefois, il faut remarquer que, chez les peuples qui ont commencé les premiers, et même au sein des populations les moins éclairées, l'assimilation des nouvelles mesures est devenue avec le temps assez complète. Si quelques uns des anciens noms sont parfois restés en usage, les idées n'en sont pas moins bien fixées sur les valeurs des mesures nouvelles ; il n'y a point de confusion produite par le souvenir des mesures aujourd'hui interdites. La multiplicité des degrés de l'échelle métrique n'est pas de nature à apporter du trouble et de la confusion dans son emploi. Comme ces degrés se transforment les uns dans les autres, avec un admirable facilité, l'usage en réduit le nombre. Ainsi, en France, dans la pratique, on mesure toujours les longueurs en mètres et centimètres, et l'hectomètre et le décimètre sont fort peu employés. Du reste, il paraît au Comité qu'en se plaçant au point de vue d'une intelligence d'un ordre quelconque, l'idée d'une mesure de longueur, exprimée en mètres et centimètres, comme on le fait d'habitude, est beaucoup plus claire et plus facile à saisir que celle de la même longueur exprimée en yards, pieds et pouces—trois unités de longueurs et de noms différents, et de rapports différents les unes avec les autres. En présentant donc à un esprit habitué aux anciennes divisions une simplification aussi avantageuse, il n'y a pas lieu de craindre de sa part une objection sérieuse, autre que celle des habitudes.

Or, l'expérience de plusieurs nations a montré que ces dernières ne résistent guère à l'évidence de l'utilité pratique manifeste et à la double action de l'éducation et de la loi.

Utilité du Système dans la Tarification Postale.

Utilité du Système dans la Tarification Postale.—Certaines branches de l'administration publique, qui ont avec l'étranger des relations plus spéciales, comme les postes, sont très-intéressées à l'adoption du système métrique. Dans les postes, en effet, les prix de transport des dépêches sont proportionnels à leur poids, sauf quelques prescriptions relatifs aux volumes ; il existe donc pour chaque pays une échelle de Tarifs formée d'une série de poids et à côté d'une série de prix de transport correspondants : or, les échelles de deux nations qui n'ont pas les mêmes

systèmes de poids sont nécessairement différentes. Leurs degrés sont rendus aussi rapprochés que possible, mais ne peuvent se correspondre complétement, car chacune d'elles ne renferme que les subdivisions usuelles et pratiques du système en usage qui ne coïncident pas avec celles de la nation voisine, comme nous le supposons. Par conséquent, les lettres dont le poids est compris entre les deux degrés de même ordre de chaque échelle se trouvent dans une situation incertaine. Ces lettres sont soumises à l'un ou l'autre des Tarifs, suivant le lieu où se fait le paiement, suivant que la lettre va d'un pays dans l'autre, ou réciproquement, suivant qu'elle est affranchie ou payée à destination. Il arrive même que, dans certains Etats, et pour des cas douteux d'affranchissement, l'administration consulte le Tarif de la nation où la lettre est adressée et fait la pesée avec les poids de cette nation : ce qui revient, pour de cas très-particuliers, à admettre quelquefois en fait l'usage d'une échelle commune.

Il est évident que toutes ces incertitudes, ces anomalies, ainsi que les pertes de temps et les chances d'erreur inséparables d'une pareille complication, disparaissent absolument par l'emploi général du système métrique. Les postes sont partout une branche de l'administration. On ne peut objecter à leur réforme l'inertie des habitudes individuelles de la masse d'une nation, puisque le service en est fait par des agents spéciaux et complétement en dehors de la participation des particuliers. La Commission pense que l'introduction du système métrique dans la tarification postale est urgente et facile, et elle croit devoir inviter les Gouvernements à suivre l'exemple donné par les Etats-Unis d'Amérique, afin d'en hâter l'adoption dans le plus grand intérêt du public et de l'administration.

Télégraphes.

Télégraphes.—Les télégraphes, par la nature des services rendus à la société, ont beaucoup d'analogie avec les postes et sont comme elles une branche de l'administration. Ils gagneraient beaucoup à l'adoption des mesures métriques pour la désignation des distances et pour toutes les questions relatives aux travaux d'établissement et d'exploitation des réseaux.

Droits Fiscaux sur les Marchandises. Douanes.

Droits Fiscaux sur les Marchandises.—Douanes.—L'adoption d'une système métrique faciliterait singulièrement aux agents des Gouvernements la perception des droits fiscaux prélevés sur les matières commerciales, et en général toutes les opérations de ce genre qui se font d'après des tableaux de Tarifs. Le système métrique peut seul donner à ces tableaux la simplicité désirable et rendre ainsi leur application facile et la contrôle commode.

Le service des douanes a des rapports exclusivement internationaux. Plus qu'aucun autre, par conséquent, il a un grand intérêt à l'unification des poids et mesures. Chaque acte de son exercice, entre deux nations, doit être accompagné d'une transformation d'échelle, dont la nécessité et les inconvénients disparaissent avec l'introduction du système métrique.

Si, du côté de l'administration, il y a simplification et économie de travail, les particuliers soumis aux prescriptions de la douane peuvent se rendre plus aisément compte des Tarifs. Les déclarations sont simplifiées, et, par la diminution des chances d'erreur, les commerçants et les voyageurs se trouvent moins exposés à ces pénalités, relativement élevées, dont la loi frappe souvent d'involontaires méprises.

Les Gouvernements sont donc invités à donner cours, dès à présent, au système métrique, placé à côté des systèmes nationaux, dans le service de l'Administration tout internationale des douanes.

Vérification des Poids et Mesures.

Vérification des Poids et Mesures.—Le service de la vérification des poids et mesures est devenu un besoin de toute nation civilisée. Quels que soient le système ou les systèmes employés dans un pays ou dans une fraction de pays, ils présentent une série de types fixes et invariables, que tout le monde est censé connaître et auxquels chacun est supposé se rapporter; or, pratiquement, dans les échanges, les particuliers n'ont ni le temps ni les moyens de se transformer eux-mêmes en vérificateurs des mesures qu'ils emploient. Les Gouvernements doivent donc avoir des agents chargés de vérifier ces mesures courantes et de les comparer à des étalons fixes.

L'importance de cette vérification est très grande à tous les points de vue. La simplicité des systèmes, les ressources qu'ils offrent pour le calcul, la précision théorique de leurs bases, sont choses vaines et inutiles, si les opérations pratiques sont entachées d'erreurs sur les quantités.

Il est évident qu'avec un système simple et unique comme est le système métrique, à égalité de dépense, le service administratif de la vérification doit se faire avec une plus grande perfection. Ou bien, en conservant le degré de perfection correspondant à l'ancien régime d'un pays, si on le juge suffisant, la vérification

de mesures métriques est de nature à entrainer moins de dépense. La Commission voit dans l'usage de ce système, la garantie et la condition d'une vérification administrative plus facile et meilleure.

Nomenclature.—Il a été agité devant la Commission la question de savoir s'il convenait d'adopter, en même temps que le système métrique, les dénominations Grecques et Latines qui généralement servent à en désigner les multiples et sous-multiples. En Hollande, par exemple, on a donné aux mesures métriques les noms des anciennes mesures qui s'en rapprochaient le plus, dans le but de faciliter la vulgarisation du nouveau système. Aujourd'hui, beaucoup d'hommes compétents, en Hollande, regrettent cette disposition. Les préfixes Grecs et Latins servent, en effet, de définition à la mesure qu'ils désignent. Quoique le peuple ne puisse aussi facilement que les classes instruites comprendre la logique qui a présidé à leur adoption, cependant l'instruction primaire a bien peu à faire pour répandre dans la masse d'une nation l'intelligence de ces quelques termes, définissant des rapports décimaux. Le langage usuel les raccourcit quelquefois ; ainsi, du kilogramme il fait le " kilo." Du reste, par leur origine Grecque ou Latine, ils n'appartiennent à aucune nation moderne ; ils sont parfaitement propres à servir de formules internationales et à donner de la généralité à l'unification, en permettant de supprimer les commentaires nécessaires pour traduire d'une langue dans l'autre les divers noms d'une même chose. Nomenclature.

D'ailleurs, il paraît que, pendant la période de transition qui s'écoule entre la disparition complète d'un ancien système encore temporairement en usage et l'assimilation du système métrique nouvellement introduit, il peut être dangereux, en pratique, de conserver aux mesures métriques des noms empruntés à la série des anciennes mesures, une même dénomination servant à désigner deux objets différents : il ne peut pratiquement en résulter que de la confusion.

Inconvénients d'un Système Mixte de Transition.—C'est par la même raison que la Commission croit devoir se prononcer aussi contre l'adoption de tout système provisoire de transition, formé en partie du système national, en partie du système métrique, combinés dans le but de faciliter l'introduction définitive de ce dernier. Telle serait, par exemple, la création d'un pied métrique légal, qui serait exactement le tiers du mètre. Au lieu de deux unités de longueur en présence, on en aurait ainsi trois, l'ancien pied, le nouveau pied, le mètre,—ce qui augmenterait les chances de confusion et donnerait aux populations une habitude qu'il faudrait plus tard faire disparaître. La France, qui, en 1812, avait essayé de cette méthode, a dû y renoncer, et revenir en 1837, par une Loi rendue obligatoire à partir de 1840, à l'adoption du système métrique dans toute sa pureté et avec son échelle logique de dénominations. Inconvénients d'un Système Mixte de Transition.

En résumé, la Commission pense que les Gouvernements doivent se proposer pour but : la substitution, aussi prompte qu'il sera possible, mais intégrale, du système métrique, tel qu'il est pratiqué dans l'ouest de l'Europe et dans plusieurs autres pays, à la place des anciens systèmes de poids et mesures.

Ce système immédiatement introduit et rendu légal, mais à titre facultatif, ne peut être rendu aussitôt obligatoire à l'exclusion de tout autre. Un certain délai est nécessaire à la transformation des habitudes et du matériel. Il est variable avec l'état des différents peuples, leur degré d'instruction, et il appartient aux Gouvernements seuls d'en apprécier la durée. Faisons observer cependant que l'expérience faite chez plusieurs peuples a démontré qu'un trop long délai n'avait pas eu pour résultat de faciliter d'une manière sensible aux Gouvernements l'accomplissement de leur tâche. Dans tous les cas, il est désirable que les Gouvernements prennent dès à présent quelques mesures nécessaires, qui sont :

1. Prescrire l'étude du système métrique dans toutes les écoles et exiger sa connaissance dans tous les concours publics.

2. Introduire son usage exclusif dans les publications scientifiques, dans les statistiques publiques, dans les postes, dans les douanes, dans les travaux publics, et dans telles autres branches de l'administration que les Gouvernements jugeront convenable.

La Commission ne considère pas comme appartenant à sa mission d'avoir à s'occuper de la confection des étalons, copies exactes des prototypes de Paris, dont la possession est, au point de vue pratique, le préliminaire indispensable de toute réforme métrique. La troisième proposition générale exprime l'opinion du Comité à ce sujet. L'administration de chaque pays appréciera le degré d'exactitude convenable aux différentes destinations de ces étalons.

La Commission déclare : que le présent Rapport renferme l'expression de sa

pensée et le résumé de ses conclusions. Elle fait des vœux pour que les pouvoirs compétents des différents nations veuillent bien se rendre aux sollicitations de la science et aux manifestations de l'opinion.

Discussion sur le Rapport concernant les Poids et Mesures.

La lecture du Rapport est achevée par le Secrétaire et la discussion est renvoyée à la prochaine séance.

Le Président annonce que pour l'ordre des délibérations, il convient que les membres qui veulent prendre la parole se fassent inscrire d'avance au bureau.

M. Leone Levi expose quelle est, en Angleterre, la disposition de l'esprit public à l'égard du système métrique: la masse du peuple, accoutumée au système national, manifeste peu d'empressement pour une réforme qui heurte les tendances nécessairement conservatrices du peuple et du Gouvernement; mais les gens éclairés, les Chambres de Commerce, l'Association Britannique et l'Association Décimale secondent de tous leurs efforts l'adoption du système métrique.

M. Leone Levi rend hommage à la libéralité avec laquelle la Commission Impériale a accueilli la proposition d'une Exposition Spéciale des Poids et Mesures et d'une réunion de Conférences Internationales, et, après avoir rappelé les services éminents rendus par M. James Yates à la cause du système métrique, il félicite la France d'être si souvent dans la voie du progrès à la tête des nations civilisées.

Le Président se plaît à reconnaître que c'est à l'initiative Anglaise que sont dues à la fois l'Exposition des Poids et Mesures et les Conférences proposées par M. Leone Levi, au nom des deux Associations qui l'avaient délégué. M. Mathieu constate les progrès rapides faits par cette question en Angleterre; en 1851 on ne parlait que du système décimal, en 1855 on se préoccupait déjà du mètre, et en 1862 le système métrique tout entier était proposé à l'adoption du Gouvernement.

Le Président fixe au Mardi 25 Juin à 1 heure le jour de la prochaine séance.

M. Wolowski pense que la discussion ne se prolongera pas longtemps sur l'excellent rapport de M. de Jacobi, mais qu'elle s'étendra davantage sur la monnaie.

M. Wolowski annonce en même temps qu'il s'inscrit d'avance contre les conclusions du Comité.

La séance est levée à 2 heures et demie.

Deuxième Séance.—*Mardi, 25 Juin,* 1867.

Présidence de M. Mathieu.

Ont pris place au bureau :

MM. de Jacobi, le Baron de Hock, Becquerel, Baudrillart, Leone Levi.

MM. de Billy, de Lapparent, Peigné, d'Ussel, Secrétaires-adjoints.

Le procès-verbal de la séance du 21 Juin est adopté.

Le Secrétaire donne lecture des lettres d'excuses adressées par MM. de Lavenay, du Pré, Bidermann, Malaguti, Fellows, Lord Fortescue, Sir J. Bowring.

Le Président annonce que le Comité des Poids et Mesures et des Monnaies a résolu, à l'unanimité, d'offrir la présidence de la Conférence à Son Altesse Impériale Monseigneur le Prince Napoléon. Cette offre a été acceptée par Son Altesse, qui viendra prendre possession du fauteuil dès la prochaine séance.

L'ordre du jour appelle la discussion du Rapport relatif aux poids et mesures.

M. Wolowski est heureux de se rallier complétement aux propositions adoptées par le Comité.

M. Leone Levi reconnaît que le Rapport est aussi clair que possible et qu'il épuise la question; cependant il est d'avis que plusieurs des observations consignées dans le Rapport gagneraient à être publiées sous la forme de résolutions, afin que toutes les questions importantes abordées dans ce travail fussent ainsi nettement mises en évidence. M. Leone Levi donne alors lecture d'une série de propositions qu'il a rédigées pour réaliser cette pensée.

M. le Président expose que le Comité s'est contenté de poser les principes, et qu'il n'a pas voulu entrer dans des détails d'un caractère administratif.

M. le Baron de Hock estime que le Comité a sagement fait de ne pas accentuer, sous la forme de résolutions, des questions secondaires capables de donner lieu à des difficultés.

M. de Jacobi ajoute qu'on a évité soigneusement tout ce qui pouvait exciter la susceptibilité des Gouvernements à l'appréciation desquels il convient de laisser les matières de détail.

M. Péligot profite de la présence de M. le Général Morin et de M. Tresca pour provoquer de leur part quelques explications sur l'état de conservation des étalons des mesures Françaises, afin de répondre à une des préoccupations le plus souvent manifestées par différentes personnes aux séances du Comité.

M. le Général Morin expose que l'étalon du mètre déposé au Conservatoire a été fabriqué exactement dans les mêmes conditions que celui des Archives qu'on a voulu ainsi ménager, en ne l'exposant pas à des comparaisons trop fréquentes.

M. Tresca fournit des détails circonstanciés sur les comparaisons récemment exécutées par les soins de l'Administration entre les étalons des Archives et ceux du Conservatoire; les différences observées sont tout à fait négligeables pour le mètre et extrêmement minimes pour le kilogramme.

Le Président confirme ces résultats et annonce que le Comité des Poids et Mesures a formé dans son sein une Commission spéciale, chargée de s'assurer directement de l'état de conservation des étalons. Cette Commission rédigera un rapport qui sera publié plus tard.

Le Président, répondant ensuite à l'objection souvent formulée, qui met en doute l'exactitude du calcul du mètre primitif, expose que, vu l'irrégularité du sphéroïde terrestre, deux méridiens différents ne donneraient pas le même résultat, et qu'il convient par conséquent de s'en tenir à ce qui a été fait.

M. Leone Levi ayant proposé d'émettre un vœu pour la correction du kilogramme d'après les données actuelles de la science, MM. Mathieu, Peligot et Wolowski combattent cette proposition comme n'ayant aucune importance dans la pratique.

M. Tresca fait alors connaître les limites de précision imposées aux vérificateurs des poids et mesures du commerce. Il établit que la tolérance accordée pour les poids du commerce est cinq cents fois plus grande que l'erreur qui pourrait résulter de l'emploi des moyens de vérification que la science fournit. La pratique est donc tout à fait désintéressée dans la question.

Après ces explications, le rapport du Comité des Poids et Mesures est adopté à l'unanimité, et la discussion sur les monnaies est renvoyée à la prochaine séance, fixée au Jeudi, 27 Juin, à 2 heures.

La séance est levée.

Troisième Séance.—*Jeudi, 27 Juin,* 1867.

Présidence de Son Altesse Impériale Monseigneur le Prince Napoleon.

Ont pris place au bureau :

MM. Mathieu, de Jacobi, le Baron de Hock, de Baumhauer, Baudrillart, Leone Levi; M. Becquerel, Secrétaire; de Billy, de Lapparent, Peigné, d'Ussel, Secrétaires-adjoints.

Allocution de Son Altesse Impériale le Prince Napoléon

A l'ouverture de la séance, Son Altesse Impériale prononce l'allocution suivante :—

" Messieurs,

" Recevez mes remerciments pour l'honneur que vous m'avez fait de me mettre à votre tête. Je suis particulièrement sensible à ce témoignage spontané que vous m'avez donné par votre élection.

" Permettez-moi d'espérer que ce n'est pas seulement pour ma personne, qui, certes, ne pourra pas apporter une grande somme de lumières, dans cette réunion de savants, d'économistes, d'hommes si capables; mais vous avez voulu peut-être compter sur ma volonté et mon énergie pour obtenir un système général et aussi unifié que possible de poids, de mesures et de monnaies dans les principaux Etats de l'Europe et de l'Amérique.

" Le choix que vous avez bien voulu faire, en me nommant votre Président, me montre que même les défauts d'un homme peuvent avoir du bon quand on sait les utiliser. Certes, l'entêtement n'est pas mon moindre défaut, et en le mettant complétement à votre service pour atteindre le but que nous poursuivons, il pourra vous être utile.

" Je ne veux pas, afin de ménager votre temps, vous rappeler les avantages d'une monnaie internationale, votre conviction est formée à cet égard; je serais du

reste moins apte à le faire que chacun de vous. Nous venons ici pour aboutir à un résultat avec un certain nombre de principes communs, et nous avons pour objet, surtout, je crois, non de discuter les principes, mais de trouver les meilleurs moyens de les faire triompher.

" En même temps que vous procédiez à mon élection, Sa Majesté l'Empereur a bien voulu me désigner pour présider la Conférence Internationale Diplomatique. Il est utile, non pas pour vous, mais pour le public, de bien préciser les caractères de ces deux réunions ; cela nous servira à jalonner les conduites différentes que nous y devons tenir.

" La Conférence Internationale Diplomatique pour l'Unification des Monnaies est composée des Représentants de tous les Gouvernements qui ont bien voulu répondre à l'appel du Gouvernement Français. Là, évidemment, il faut agir avec circonspection, avec un grand sentiment de conciliation. Tout en se rapprochant du but autant que possible, il ne faut pas trop demander, dans la crainte de ne rien obtenir, et, plus que jamais, il faut se rappeler que dans une réunion diplomatique on fait ce qu'on peut et non ce qu'on veut.

" Votre réunion, au contraire, que j'ai l'honneur de présider aujourd'hui, est une association libre, qui a plus à se préoccuper des principes à faire prévaloir et du but général, que des moyens d'exécution de détail qui ne dépendent pas d'elle. Elle peut procéder plus par des conseils que par des décisions. De ce caractère de notre association libre découlent nos moyens d'action et la conduite à tenir. C'est surtout sur l'opinion publique qu'il faut agir, c'est notre véritable, et je dirai notre unique point d'appui. Ce n'est pas auprès des représentants distingués des pays qui sont en possession de tous leurs droits que j'ai à insister sur les moyens d'action à employer, et qui se résument en une agitation modérée, mais incessante, pour obtenir ce que nous voulons.

" Nous avons à éclairer et à entrainer l'opinion publique, cette véritable souveraine du monde moderne, pour qu'elle pèse sur vos Gouvernements respectifs et leur donne la volonté nécessaire pour surmonter les difficultés d'appréciation pour obtenir un meilleur système de monnaies.

" Si, ainsi que je l'ai fait ressortir, les conduites des deux Conférences doivent être différentes, et si la vôtre ne peut espérer qu'un résultat plus éloigné, c'est vous dire qu'il faut avant tout de la persévérance. Je ne crois pas que vous ayez à craindre d'être trop radicaux ; soyez certains que dans l'application, quelles que soient vos exigences, appuyées même par l'opinion publique, vous n'obtiendrez pas tout ce que vous demanderez. Ne craignez donc pas de demander beaucoup pour obtenir peu. Je sais que les vues du Gouvernement Français sont très-larges et très-libérales ainsi que celle de quelques autres Gouvernements ; un petit nombre, quoique inspirés de sentiments aussi loyaux et aussi sympathiques à l'unification des monnaies, sont plus craintifs et hésitent à s'engager dans cette voie sans y être poussés fortement par l'opinion publique.

" Eh bien ! Messieurs, à vous d'appliquer cette parole célèbre : 'Frappez, frappez longtemps et fort, et l'on vous ouvrira.'

" Nous allons maintenant délibérer sur les propositions qui ont été rédigées par le Comité."

Après cette allocution le procès-verbal de la séance précédente est lu et adopté.

M. Michel Chevalier donne lecture d'une lettre de M. Benjamin Smith, qui, en s'excusant de ne pouvoir assister aux Conférences, annonce que le Comité organisé aux Indes Anglaises pour étudier la question des poids et mesures s'est prononcé à l'unanimité en faveur du système métrique. On ne doute pas que ce vote n'obtienne l'adhésion du Vice-Roi.

Son Altesse Impériale remercie l'orateur de cette bonne nouvelle et l'on décide qu'il en sera fait mention dans le Rapport du Comité des Poids et Mesures.

Le Secrétaire donne lecture des propositions du Comité sur les monnaies :—

Rapport concernant l'Uniformité des Monnaies.

Rapport concernant l'Uniformité des Monnaies.

Les inconvénients qui résultent de la diversité des systèmes monétaires sont encore plus grands que ceux qui proviennent de la diversité des systèmes de poids et de mesures. Ceux-ci se bornent à la peine et à la perte de temps occasionnées par les longs calculs nécessaires pour passer d'un système à un autre ; mais les choses qu'on doit peser ou mesurer restent pourtant les mêmes, et on peut en faire usage

partout. Pour les monnaies, au contraire, outre les mêmes calculs de réduction qu'on doit faire, les choses mêmes, c'est-à-dire les monnaies, perdent une partie de leur utilité en passant d'un pays à l'autre.

Les causes qui rendent la diversité des monnaies plus fâcheuse que celles des poids et des mesures ont pour conséquence qu'il est plus difficile d'arriver à l'unification des monnaies qu'à celle des poids et mesures ; car elle exige qu'on change non-seulement la mesure des monnaies, mais aussi les monnaies elles-mêmes. Ainsi, le changement occasionnera des frais bien plus considérables et devra heurter bien plus les habitudes et les préjugés des populations.

Par la raison même que nous venons développer, les efforts pour l'unification de la monnaie ont commencé plus tard et ont procédé avec plus de timidité que ceux qui ont été tentés pour l'unification des poids et des mesures. Ce furent pourtant les mêmes assemblées, les Congrès Statistiques, les Associations Internationales, les Commissaires et les Jurés des Expositions Universelles, qui ont marché dans cette double voie, et ils ont obtenu des résultats assez satisfaisants, surtout si l'on tient compte des grandes difficultés qu'ils avaient à vaincre. Le 23 Décembre, 1865, la France, l'Italie, la Belgique, et la Suisse ont signé un Traité établissant une Convention Monétaire dans toute l'étendue de leur territoire. Déjà les Etats Pontificaux et la Grèce sont entrés en négociations pour se joindre à cette Convention. L'Autriche, aussi bien que l'Espagne, le Portugal, la Roumanie, et même les Etats Unis d'Amérique, sont sur le point d'en faire autant, et au moment de la rédaction du présent Rapport une Commission Monétaire Internationale, convoquée par l'initiative du Gouvernement Impérial, et présidée par Son Altesse le Prince Napoléon, qui a aussi daigné accepter la présidence de nos conférences libres, a terminé ses travaux en établissant les bases sur lesquelles devrait s'élever l'unification universelle des monnaies.

Le Comité pour l'Unification des Poids et Mesures et des Monnaies, institué par la Commission Impériale de l'Exposition Universelle, avait commencé ses travaux longtemps avant la Commission Internationale, et il les terminait en se prononçant également pour l'unification au moment où cette Commission prenait ses premières résolutions. Ces deux réunions ont fonctionné d'une manière parfaitement indépendante l'une de l'autre : à l'exception de trois ou quatre personnes, elles étaient composées chacune de membres différents ; et cependant elles sont arrivées toutes deux aux mêmes conclusions, avec une simple différence de rédaction. C'est certainement le témoignage le plus éloquent de la vérité et de la puissance des idées émises, et de l'influence qu'elles ont déjà exercé sur les hommes de science, de finance, et d'administration de toutes les nations.

Certainement, l'unification universelle des monnaies, en créant une monnaie commune, est un des moyens les plus efficaces pour le développement du commerce universel. Une telle monnaie acceptée par tout Etat et par tout particulier épargne les pertes de temps et la peine occasionnées par la transformation qu'il faut faire continuellement pour préciser la valeur des monnaies différentes ; elle réduit à un minimum le cours du change, ce pénible fardeau du commerce ; elle fait disparaître les pertes résultant pour l'industriel, et non moins pour le voyageur, du change des monnaies ; elle augmente l'utilité de la monnaie, et par cela même sa valeur ; elle diminue les besoins de la circulation, et permet enfin de faire disparaître de suite et radicalement les crises qui surgissent dans la commerce par l'accumulation de la monnaie sur un point et son absence sur un autre.

L'idée d'une unification des monnaies est si élevée et si utile que, dès qu'une situation favorable le rendra possible, aucun peuple en progrès et désireux d'entrer dans la grande et féconde voie du commerce universel ne pourra y rester indifférent, ni la refuser, à moins de motifs de la dernière importance.

Dans le but de l'unification des monnaies, le Comité a formulé neuf propositions qui ont été soumises à la discussion des Conférences libres. La rédaction suivante en a été arrêtée à la presque unanimité des Membres présents à ces Conférences :—

Le Comité,—

Propositions sur l'Uniformité des Monnaies.

Considérant que l'adoption d'un système uniforme pour les monnaies présente des avantages tellement évidents, tant au point de vue de la commodité qu'à celui de l'économie dans le règlement des échanges internationaux, qu'elle se recommande d'elle-même auprès de tout Gouvernement éclairé ;

Considérant, d'autre part, que cette mesure ne peut être réalisée sans qu'un grand nombre de peuples fassent le sacrifice de leurs instruments de trafic anciens et les plus habituels ; qu'il importe, dans leur intérêt, que ce changement puisse se

faire graduellement et d'une manière continue, et que, dèslors, les premières bases de cette transformation doivent être aussi simples que possible et débarrassées de toute complication incidente ;

Propositions sur l'Uniformité des Monnaies.

Emet les propositions suivantes :—

1. La première condition à remplir est l'adoption, par les divers Gouvernements intéressés dans cette question, d'une même unité dans l'émission de leurs monnaies d'or.

2. Il est à désirer que ces monnaies soient partout frappées au titre de neuf dixièmes.

3. Il est à désirer que chaque Gouvernement introduise, parmi ses monnaies d'or, au moins une pièce d'une valeur égale à celle des pièces en usage parmi les autres Gouvernements intéressés, afin qu'il y ait ainsi, entre tous les systèmes, un point de contact commun ; partant de là, chaque nation travaillerait à assimiler graduellement son système de monnaies à celui qui pourrait être choisi comme base uniforme.

4. La série de monnaies d'or actuellement en usage en France se trouvant adoptée par une grande partie de la population de l'Europe se recommande comme base du système uniforme cherché.

5. Considérant que, par suite d'une circonstance accidentelle et heureuse, les unités monétaires les plus importantes peuvent s'adapter à la pièce d'or Française de 5 francs, moyennant des changements peu sensibles, cette pièce serait la plus convenable pour servir de base au système monétaire, et les monnaies frappées sur cette base deviendraient, aussitôt que la convenance des nations intéressées le permettrait, des multiples de cette unité.

6. Il est à désirer que les différents Gouvernements décident que les monnaies frappées par chaque nation, en conformité avec le système uniforme proposé et convenu, aient cours légal dans tous ces pays.

7. Il serait extrêmement désirable que le système du double étalon monétaire fut abandonné là où il existe encore.

8. Il serait extrêmement désirable que le système de numération décimale fût universellement adopté, et que les monnaies de toutes les nations eussent le même titre et la même forme.

9. Il est à désirer que les Gouvernements s'entendent pour adopter des mesures communes de contrôle, afin de garantir l'intégrité des monnaies, tant pour leur fabrication que pendant leur cours.

Nous nous permettons d'ajouter à ces propositions quelques éclaircissements.

Discussion des différentes méthodes pour l'Unification des Monnaies.

Propositions 1, 2, *et* 3.—Pour arriver à l'unification des monnaies, on peut suivre différentes méthodes, qui toutes, il est vrai, n'ont pas le même mérite, surtout au point de vue de leur valeur pratique.

Ainsi on pourrait se borner à créer partout une monnaie de la même valeur intrinsèque, c'est-à-dire, du même poids d'or ou d'argent fin, sans avoir égard à l'unité de poids employée, ni au titre de la pièce, ni à sa forme.

On aurait ainsi certainement une égalité théorique, mais nullement pratique. C'est le poids et la forme qui, dans la circulation, décident de l'acceptation ou du refus d'une monnaie. Il serait presque impossible de faire accepter, pour la même valeur, des pièces tout à fait différentes de poids et de forme ; de plus si les piéces n'avaient ni la même unité de poids ni le même titre, il y aurait toujours des différences entre elles, surtout à cause du rapport irrationnel entre les diverses unités de poids brut. Ces différences seraient petites, sans doute, mais toujours assez considérables pour que les limites de tolérance fixées pour l'admission des monnaies qui n'auraient pas le poids ou le titre plein ne fussent plus les mêmes, et qu'ainsi des monnaies encore bonnes dans un pays risquassent de ne plus l'être dans un autre, circonstance qui empêcherait, à coup sûr, la circulation internationale de monnaies.

Un autre système consisterait à créer dans les pays qui adhéreraient à l'union monétaire des monnaies basées sur la même unité de poids et de titre, et cependant entièrement différentes de valeur ; par exemple, des pièces de 5, 10, et 20 francs dans un pays et dans un autre des pièces de 4, 8, et 16 francs. Certainement, alors, la circulation internationale serait plus facile qu'elle ne l'est aujourd'hui ; mais l'unité de la monnaie n'existerait pas encore. En outre, la peine et la dépense d'une refonte restant la même, si l'on voulait arriver à une coïncidence plus parfaite, il ne saurait être mis en doute qu'il vaudrait mieux arriver de suite à la plus parfaite.

Enfin on peut admettre une unification absolue, c'est-à-dire, l'identité de toutes les monnaies tant courantes que divisionnaires. Mais personne ne peut contester

que cette unification est encore impossible de nos jours ; les intérêts, les habitudes, et les préjugés des nations s'y opposent trop.

L'unification des monnaies à surtout pour but de faciliter et d'augmenter le commerce international, qui n'exige que des monnaies non fractionnaires. C'est d'après ces monnaies que se calculent les prix des marchandises et le cours des effets de commerce. Des monnaies divisionnaires n'ont réellement qu'une utilité locale.

Les pays limitrophes seuls ont un intérêt à avoir des monnaies d'appoint identiques ; mais alors cette identité pourra se réaliser par des Conventions spéciales, sans que l'unification universelle ait à s'en préoccuper. Aussi si les diverses nations ont, pour leurs monnaies, le même étalon de titre et de poids, et que par cela même la comparaison d'une monnaie à l'autre soit facile, il suffira qu'entre deux pays il n'y ait qu'une ou deux pièces identiques. L'assimilation complète des systèmes pourra être réservée pour l'avenir.

Tel est le sens des trois premières propositions.

Choix de la monnaie d'or pour servir de monnaie internationale.

Propositions 4 et 5.—Ce ne sont du reste que les monnaies d'or qui pourront servir de monnaie internationale. L'or en effet est plus portatif que l'argent, et les frais de monnayage en sont peu considérables. Grâce à ces qualités, l'or se prête mieux que l'argent aux transactions et aux transports d'un pays à l'autre ; il remédie par cela même aux crises monétaires et permet de réduire le cours du change à un minimum.

Entre les monnaies d'or des différentes nations, les monnaies d'or Françaises seules pourront être prises pour base du système uniforme désiré. En effet, elles sont déjà acceptées par plus de 70,000,000 d'hommes et elles le seront peut-être encore cette année par 100,000,000 d'autres ; enfin tant à cause de leur titre décimal que de la relation, quoique un peu compliquée, qui existe entre elles et les unités métriques (il y a en effet 155 pièces de 20 francs dans 1 kilogramme), elles correspondent au système des poids et mesures recommandé par tant d'autorités à l'acceptation universelle.

Tant au Comité qu'aux Conférences libres, il y eut, il est vrai, des voix qui proposèrent l'adoption d'un système monétaire tout nouveau, rétablissant pour les monnaies d'or le rapport immédiat et simple avec les unités métriques que les lois organiques avaient établi pour les monnaies d'argent. D'après cette idée, la monnaie d'or du poids de 5 grammes et au titre de 9 dixièmes devrait être l'unité monétaire.

Sans méconnaître les quelques mérites scientifiques qu'aurait un tel système, le Comité et la Conférence n'ont pas hésité un moment à ne pas y adhérer. Ce n'est qu'un système déjà adopté par une grande partie du monde, qui puisse avoir des chances d'être adopté généralement ; la preuve en est dans la Convention Monétaire du 23 Décembre, 1865, dans les adhésions récentes ou prochaines à cette Convention, et dans le vote de la Conférence Monétaire Internationale. Un système tout à fait nouveau ne pourrait être admis par les nations ayant le système Français, sans avoir plus de chance que celui-ci de rallier les autres nations. En outre, le système Français, contenant des unités petites, comme 5 et 10 francs, se substituera facilement aux unités monétaires des autres Etats, tels que le sovereign Anglais, le dollar des Etats Unis, le florin d'Autriche, &c., ne différant pas beaucoup de l'une ou de l'autre de ces unités Françaises. Cet avantage n'existerait pas avec la monnaie proposée de 5 grammes d'or au titre de 9 dixièmes. Cette pièce, en effet, aurait une valeur de 15 francs 50 centimes, qui n'a aucun rapport avec les valeurs des monnaies existantes, et qui serait un facteur commun trop grand pour arriver à une équation.

La même raison a aussi amené le Comité et la Conférence à choisir pour facteur commun la pièce de 5 francs, ce qui signifie que tous les Gouvernements adhérants ne devront frapper des pièces d'or que de 5 francs ou de multiples de 5 francs. Pour éviter les malentendus, on doit ajouter que le Comité n'a jamais voulu imposer aux Gouvernements l'obligation de frapper des pièces de 5 francs plutôt que des pièces de 10 francs ou d'un autre multiple de 5 francs.

Le Comité pense que ces observations peuvent servir d'explication aux propositions 4 et 5.

La monnaie internationale devrait avoir cours légal chez toutes les nations de l'Union.

Proposition 6.—Cependant lors même que les propositions précédentes seraient partout adoptées, la communauté complète des monnaies entre les diverses nations n'existerait pas encore. Pour arriver à ce but de l'unification, il faut encore que les monnaies frappées par une nation, d'après le système uniforme, aient cours légal chez toutes les autres nations de l'Union ; c'est ce que renferme la proposition 6 Peut-être, au commencement, ne faudrait-il pas reconnaitre comme monnaies

communes toutes les monnaies frappées par les différentes nations, mais seulement quelques-unes d'elles ; peut-être aussi pourrait-on se contenter de leur admission dans les caisses publiques, sans imposer le cours légal et forcé. Le Comité a cru toutefois devoir proposer ce qui serait le plus favorable au développement du commerce international.

La question du double étalon.

Proposition 7.—La communauté et l'identité que le Comité cherche à établir sont restreintes aux monnaies d'or. On pourrait en tirer la conclusion que, d'après l'opinion du Comité, les Etats de l'Union auront le droit de maintenir, à côté des monnaies d'or et au même cours légal qu'elles, des monnaies d'argent ; en d'autres termes, qu'ils pourront conserver ou introduire le double étalon. C'est ce que la proposition 7 a pour objet d'éviter.

Le but de l'union monétaire n'est pas seulement de faire frapper par les diverses nations des monnaies identiques ; il faut encore que ces monnaies entrent partout en circulation et s'y maintiennent, et que leur valeur intrinsèque sont scrupuleusement conservée ; c'est ce qui ne saurait arriver sous le régime de double étalon d'or et d'argent, c'est-à-dire, en donnant le même cours légal illimités aux monnaies tant d'or que d'argent.

Ces deux étalons peuvent être admis sans difficulté, quand une de ces deux espèces de monnaies est la monnaie principale ayant seule cours légal illimité, tandis que l'autre est simplement une monnaie d'appoint, n'ayant cours legal que pour des payements minimes, ou lorsqu'elle est une monnaie facultative, acceptée seulement au gré de la partie et au prix fixé par le cours des marchés. Dans ce cas, les deux espèces de monnaies ne se font point concurrence l'une à l'autre ; elles peuvent au contraire exister à la fois, à l'avantage même de la circulation.

Mais, en donnant cours légal et aux monnaies d'or et aux monnaies d'argent, on devrait craindre continuellement un déplacement, soit des unes, soit des autres.

Ce qui est encore moins admissible, c'est d'établir un rapport permanent et invariable de l'étalon d'or à l'étalon d'argent, comme cela a eu lieu en France, aux Etats Unis, et dans quelques Républiques de Amérique Méridionale.

La relation de la valeur de l'or à celle de l'argent est variable, et varie d'un marché à l'autre dans le rapport de l'offre à la demande. Tantôt l'un, tantôt l'autre de ces deux métaux, celui dont le prix est supérieur au taux légal, disparaît donc forcément de la circulation, pour être exporté ou refondu, et les monnaies du métal déprécié restent seules en circulation. Il en résulte, en outre, que les monnaies de meilleur aloi, celles qui ont la plus grande valeur intrinsèque, disparaissent les premières, en sorte que ce ne sont que les monnaies au-dessous du titre ou du poids légal qui restent en circulation.

Ce ne sont point là des craintes gratuites et théoriques : l'expérience faite en France et dans tous les Etats à double étalon en montre la réalité jusqu'à l'évidence. Avant la découverte des riches mines de la Californie, de l'Australie, du nord-ouest des Etats Unis et des possessions Américaines de la Grande Bretagne, l'or ayant un prix supérieur au taux légal, ce furent les monnaies d'or qui sortirent de la circulation, et on ne put s'en procurer qu'en payant une prime. Après ces découvertes, au contraire, l'or ayant baissé au-dessous du taux légal, ce fut l'argent qui disparut. Toutes les masses d'argent que la Banque de France chercha à réunir à grands frais, pour obvier au manque d'argent, furent épuisées en peu de temps : le commerce en détail en souffrit beaucoup, et l'on ne trouva à la fin d'autre remède que de faire frapper des monnaies d'or de 5 francs et des monnaies d'argent d'appoint au titre de 835 millièmes.

Dans les Républiques de l'Amérique du Sud, qui avaient gardé le double étalon du système Espagnol, le malaise que l'abondance de l'or y occasionna fut encore plus grand ; l'argent disparut avec rapidité, et ne fut remplacé que par des monnaies de mauvais aloi ou par du papier déprécié.

L'union monétaire ne subsisterait qu'en apparence, si chaque nation était à même de remplacer à tout moment les monnaies de l'Union par d'autres, ou d'en diminuer le poids convenue par l'Union, et c'est cela même qui aurait lieu sous le système du double étalon. En outre la spéculation sur les monnaies, que l'unification des monnaies veut abolir pour jamais, ne cesserait pas et augmenterait même en proportion de l'étendue de l'union.

C'est pourquoi la proposition 7 déclare que le système du double étalon monétaire devrait être abandonné là où il existe.

Les monnaies doivent avoir la même forme et le même titre.

Proposition 8.—La proposition 8 demande de nouveau que les monnaies de toutes les nations aient le même titre ; mais elle y ajoute qu'elles doivent avoir aussi la même forme. La forme est donnée par les dimensions et par l'empreinte.

Comme toutes les monnaies actuelles sont rondes, et comme, d'après les propositions antérieures, les monnaies de la même valeur doivent avoir le même poids, l'identité de dimension est donnée par l'identité de diamètre.

Quant à l'empreinte, les divers Gouvernements auront toujours la liberté de frapper leurs monnaies avec les effigies, les emblèmes, et les dénominations qu'il leur plaira: mais il serait utile d'ajouter sur la pièce la relation entre sa valeur et celle de la pièce de 5 francs admise comme base du système. Peut-être pourrait-on encore y placer la dénomination de monnaie de l'Union. La Proposition 8 recommande aussi la numération décimale, par les mêmes motifs qui l'ont fait proposer pour les poids et mesures.

Mesures de contrôle afin de garantir l'intégrité des monnaies.

Proposition 9.—Cependant l'union monétairene serait point un bienfait, ce serait plutôt un malheur, si, par des procédés vicieux ou par insouciance dans la fabrication ou dans la circulation, on pouvait introduire dans le commerce des monnaies n'ayant pas le titre ou le poids exact. Il s'ensuivrait une spéculation active sur les monnaies et la corruption de tout le système. Pour prévenir un tel malheur, il faut que les Gouvernements s'entendent sur des mesures communes de contrôle et de conservation, afin de garantir l'intégrité des monnaies. C'est ce que veut établir la 9me et dernière proposition du Comité.

Si le Comité n'est pas entré dans de plus grands détails sur ces mesures de contrôle, c'est qu'il a voulu soigneusement éviter de s'occuper des dispositions réglementaires qui devront intervenir entre les Gouvernements qui adhéreraient à l'union monétaire.

Le Comité, en parfait accord avec la Conférence, à laquelle il a soumis ses propositions, croit avoir suffisamment précisé l'utilité et la nécessité de l'union universelle des monnaies et avoir établi les principes sur lesquels elle devrait être basée.

Sur la proposition de Son Altesse Impériale, il est décidé qu'il n'y aura pas de discussion générale.

La Conférence adopte ensuite les considérants ainsi que la première proposition du Rapport.

M. Leone Levi propose de préciser la deuxième proposition en fixant le titre uniforme à $\frac{9}{10}$ de fin. Cet amendement est ratifié par la Conférence, qui adopte la proposition ainsi modifiée: "Il est à désirer que ces monnaies soient partout frappées au titre de $\frac{9}{10}$ de fin."

La troisième proposition est ensuite adoptée.

Proposition d'adopter pour unité un poids d'or de 5 ou 10 grammes

M. Michel Chevalier désire présenter quelques observations sur l'ensemble des propositions 4 et 5.

L'orateur établit que l'unité monétaire ne doit être qu'un détail dans le système général des poids et mesures, qui est le système métrique, et dont l'essence est de tout subordonner au mètre. La monnaie ne doit pas en être indépendante, et malgré la circonstance accidentelle et heureuse mentionnée dans la proposition 5, M. Michel Chevalier estime qu'il serait préférable de changer radicalement tout le système monétaire et d'adopter partout pour unité un poids d'or de 5 ou 10 grammes à $\frac{9}{10}$ fin.

L'orateur est convaincu d'ailleurs que les Anglais, fidèles gardiens à toutes les époques du titre de leurs monnaies, refuseront toujours d'abaisser la livre sterling à 25 francs, et qu'il ne leur coûterait pas moins de calculs pour ce changement minime que pour un autre plus radical.

M. le Comte d'Avila estime que c'est demander l'impossible que d'exiger une refonte générale; la Convention conclue entre la France, l'Italie, la Belgique et la Suisse fournit une base solide sur laquelle il convient de s'appuyer; il ne faut pas négliger de profiter des rapprochements qu'un heureux hasard permet d'opérer entre les monnaies existantes et dont l'orateur cite de nombreux exemples.

M. Feer Herzog accepterait la pièce d'or de 5 ou de 10 grammes s'il avait l'espoir qu'elle pût devenir l'unité monétaire universelle, mais l'expérience a montré que les unités monétaires ne se créent pas artificiellement; le franc a dû sa facile adoption à sa similitude avec l'ancienne livre Tournois, et les essais entrepris en Allemagne, en 1857, pour créer une monnaie d'or commune d'un poids métrique, ont abouti à un échec complet.

M. Michel Chevalier pense que ce serait faire injure à l'esprit humain que de le croire incapable de renoncer à d'anciennes habitudes; d'ailleurs on reviendrait en réalité à l'esprit du passé, en rendant à la monnaie sa vraie signification qui est celle d'un poids exact, comme le prouvent les mots de livre et de marc. L'orateur compare la transaction proposée par l'Article 5 à ce qui eût été fait si l'on avait

cherché à composer une mesure de longueur universelle avec les pieds, en nombre infini, employés dans les divers pays.

Proposition d'adopter la pièce de 10 francs comme unité de la monnaie.

M. Leone Levi est d'avis d'adopter les propositions 4 et 5, en remplaçant 5 francs par 10 francs, la pièce de 5 francs étant trop facile à perdre et trop petite pour les transactions; celle de 10 aurait l'avantage de valoir 100 pence et d'entrer dans les habitudes du peuple Anglais.

Son Altesse Impériale fait observer que ce changement est inutile, l'unité de 5 francs s'adaptant aussi bien à la pièce de 10 francs qu'à celle de 25.

M. le Baron de Hock croit qu'il convient de garder l'unité de 5 francs parce qu'elle est assez petite pour que tous les Etats puissent s'y rallier.

M. Wolowski, revenant au débat primitif, établit que tout ce dont on a besoin dans la monnaie, c'est la fixité, qui se rencontre aussi bien dans un nombre fractionnaire que dans un nombre entier.

Le Général Favé ayant dit que l'adoption des pièces de 20 francs est déjà une dérogation au système métrique, Son Altesse Impériale justifie les auteurs de ce système en établissant qu'au commencement de ce siècle il n'y avait de monnaie réelle que l'argent, et qu'en fixant l'unité monétaire à 5 francs on était, en toute rigueur, conséquent avec le système métrique.

Suivant le Général Favé, l'avantage essentiel du système métrique consiste dans l'invariablilité de la mesure primitive, et les nombres ronds n'ont aucune importance; d'ailleurs il ne convient pas de changer brusquement les habitudes des peuples; on en peut juger par la difficulté que les mesures agraires métriques éprouvent à se généraliser dans les campagnes. L'orateur approuve complétement les propositions 4 et 5, en émettant le vœu qu'à toutes les pièces d'or modifiées on applique des noms nouveaux.

M. Ruggles déclare que les Etats-Unis veulent l'unité de 5 francs, parce qu'elle est destinée à devenir l'unité monétaire universelle, grâce à l'immense circulation du dollar Américain. Suivant l'orateur, toute la résistance opposée par l'Angleterre à cette mesure vient de son éloignement pour un résultat qui substituerait à l'influence de la livre sterling celle du dollar uni fraternellement à la pièce de 5 francs.

M. de Jacobi croit qu'il n'y a pas de connection nécessaire entre le système métrique et la monnaie, et que l'avantage de simplifier quelques calculs ne mérite pas qu'on fasse le sacrifice d'intérêts beaucoup plus graves.

M. Mathieu défend les propositions du Comité, en exposant qu'il est nécessaire de tenir compte des conditions actuelles des échanges internationaux.

M. Mannequin reconnaît qu'il est difficile de faire accepter des changements aux habitudes reçues; il convient de ne pas s'exposer à changer souvent; il faut donc adopter un système d'une perfection relative suffisante pour faire espérer qu'il deviendra universel. Le projet du Comité ne réalise pas cette condition; il ne supprime pas le change; c'est une base trop étroite pour le large édifice qu'on veut y asseoir.

M. de Baumhauer déclare que les Pays Bas n'adhéreront pas aux propositions du Comité; chez eux, la monnaie d'argent, la seule légale, a un poids métrique, et ce serait retourner en arrière que de s'écarter de cette condition.

Après cette discussion la proposition 4 est adoptée.

Sur la proposition 5, *M. Leone Levi* déclare ne pouvoir adopter la pièce de 5 francs comme unité.

M. Emile Pereire fait observer au contraire qu'il est d'autant plus important de la conserver qu'elle correspond à la piastre, qui a été la monnaie universelle des temps anciens.

Après une discussion à laquelle prennent part *MM. Leone Levi, Feer-Herzog*, le *Général Favé*,

On décide que les mots "l'unité de valeur" seront supprimés, et la proposition 5, ainsie modifiée, est mise aux voix et adoptée.

La Conférence adopte ensuite les Articles 6 et 8, et la discussion sur l'Article 7 est renvoyée à la prochaine séance, qui aura lieu le Samedi, 29 Juin, à 2 heures et demi.

La séance est levée à 5 heures et quart.

Quatrième Séance.—*Samedi*, 29 *Juin*, 1867.

Présidence de Son Altesse Impériale Monseigneur le Prince Napoleon.

La séance est ouverte à 2 heures et trois-quarts.

Ont pris place au bureau :

MM. Mathieu, de Jacobi, le Baron de Hock, de Baumhauer, Baudrillart, Leone Levi.

M. Becquerel, Secrétaire.

MM. de Billy, de Lapparent, Peigné, d'Ussel, Secrétaires-adjoints.

Discussion de la question du double étalon.

Le procès-verbal de la séance précédente est lu et adopté.

L'ordre du jour appelle la discussion sur les dernières propositions relatives aux monnaies.

L'Article 7 est divisé en deux parties : la première, ayant trait au système décimal, est adopté.

La discussion est ouverte sur la seconde partie concernant l'abandon du double étalon.

M. Wolowski demande la suppression de cette proposition comme ne rentrant point dans la question purement pratique dans laquelle la Conférence a entendu se maintenir. Les délibérations de la Conférence ont déterminé les conditions d'une monnaie d'or internationale ; le but est donc atteint, sans qu'il soit nécessaire de soulever un problème qui divise encore les esprits et que chaque nation peut résoudre, pour son propre compte, à sa convenance.

Abordant ensuite le fond de la question, M. Wolowski établit qu'il ne saurait y avoir d'étalon pour la valeur, parce que la mesure qu'elle admet varie nécessairement. Tout se réduit à savoir si la valeur intrinsèque de la monnaie varie moins avec un seul métal qu'avec deux métaux. L'orateur préfère la seconde solution à cause des changements inévitables qui affectent la production des métaux. En outre, il est d'avis que la loi de Germinal, an XI, en établissant la faculté légale de payer en or ou en argent, a été fidèle à l'esprit du Code Napoléon, qui proclame que toute Convention doit être interprétée en faveur de l'obligé ; la sage prévision de la loi donne à tous les contrats une fixité relative et permet de mieux asseoir les calculs d'avenir.

M. Wolowksi croit d'ailleurs le moment mal choisi pour enlever à l'argent la qualité de monnaie légale, alors que la production annuelle de l'or diminue d'une manière sensible depuis dix ans, tandis que la production de l'argent suit une marche ascendante prononcée.

De plus, en retirant la monnaie d'argent, on diminuerait de moitié la masse des métaux précieux qui oppose aux nouveaux arrivages une force d'autant plus grande que cette masse est plus considérable.

Enfin, la circulation forcée du papier doit cesser un jour en Autriche, en Russie, en Amérique, et cet événement déterminera une nouvelle demande de métal pour l'outillage monétaire, devant laquelle il ne faut pas être pris au dépourvu ; autrement, la valeur du métal seul doté du cours légal augmenterait de façon à bouleverser tous les contrats aux dépens des débiteurs.

Dans quelque mesure que cette hausse se produisît elle serait inévitable et aggraverait d'autant la dette des Etats et celle des particuliers.

M. Mannequin, dans un discours écrit, constate qu'aucune voix dans le sein du Comité n'a plaidé la cause du double étalon, et que l'Angleterre, aussi bien que l'Amérique, se prononce pour l'étalon unique d'or. Après avoir dit que la commodité est une des conditions essentielles de la monnaie, et qu'elle n'est réalisée que dans la monnaie d'or, M. Mannequin cherche à démontrer que la valeur de l'or est plus stable que celle de l'argent, et que le balancement opéré par le double étalon n'a pas les avantages qui lui prête M. Wolowski. L'orateur trace le tableau des calamités financières de l'Amérique du Sud, dont il rejette toute la responsabilité sur le sytème de l'étalon double ; enfin, il déclare que ce système porte atteinte au droit de propriété en donnant la faculté de s'acquitter toujours avec le métal déprécié.

M. le Baron de Hock est d'avis que la loi de Germinal, an XI, a cherché à réaliser une œuvre contre nature en établissant une relation légale entre la valeur de l'or et celle de l'argent ; le système du double étalon n'empêche jamais un des deux métaux d'être exporté à un moment donné, et c'est une théorie surannée que de croire que l'Etat puisse être juge de la valeur et de la monnaie. D'ailleurs, les pays soumis au double étalon sont ceux qui souffrent le plus des crises financières.

M. Baudrillart déclare que le système de l'étalon double consacre une injustice en donnant aux deux métaux le faculté libératoire ; il livre le créancier à l'arbitraire du débiteur, et sacrifie entièrement le petit rentier, le fonctionnaire, et l'ouvrier.

La compensation alléguée entre les deux métaux n'est qu'une illusion, car on ne peut calculer à son gré les variations de l'un pour contrebalancer celles de l'autre ; et si l'immense afflux d'or de ces dernières années n'a pas produit une crise plus forte, ce n'est pas au double étalon qu'on le doit, c'est à l'énorme mouvement d'affaires qui se produisait alors et qui a fourni un débouché monétaire exceptionnel.

L'emploi unique de l'or comme monnaie légale favorisera tantôt le créancier, tantôt le débiteur, et le capital ne sera plus investi de l'injuste privilége de payer toujours en monnaie dépréciée.

Enfin, l'adoption du double étalon aurait l'immense inconvénient de rendre impossible une entente avec l'Angleterre et l'Amérique.

M. Wolowski ne veut pas prolonger le débat et se borne à repousser le reproche d'injustice adressé à son système, qu'il croit aussi favorable que l'autre au sort du petit rentier et de l'ouvrier.

Il soutient que la loi de Germinal, an XI, a détruit l'alea et qu'elle crée entre les deux métaux une sorte d'assurance mutuelle ; la facilité des arrivages équilibre les conditions ; si le prix d'un métal a baissé l'augmentation de la demande fait contre-poids à celle de l'offre et l'écart est faible, au grand avantage et des créanciers et des débiteurs. L'autre système ne fait que déplacer l'injustice sans la détruire.

M. Feer-Herzog reconnaît qu'il n'y a pas d'étalon proprement dit pour la valeur, mais une mesure qui se compose d'un poids et de la designation d'une certaine espèce de métal ; or, il est impossible d'établir un rapport fixe entre deux métaux différents.

Quant à l'outillage monétaire, M. Feer-Herzog admet qu'il est bon et utile d'avoir deux métaux en circulation, mais qu'il n'est pas nécessaire de leur donner à tous deux la fonction monétaire légale.

Fixer par la loi le rapport de la valeur entre deux métaux, c'est établir, par une mesure législative, la légitimité des spéculations qui s'exercent sur la prime du métal rare et qui ne profitent qu'aux grands financiers.

Après cette discussion, la proposition est mise aux voix et adoptée à une grande majorité.

La séance est lévee.

Cinquième et dernière Séance.—*Mardi, 9 Juillet*, 1867.

Présidence de M. Mathieu.

Ont pris place au bureau :

MM. de Jacobi, le Baron de Hock, Von Baumhauer.

M. Becquerel, Secrétaire.

MM. de Lapparent et d'Ussel, Secrétaires-Adjoints.

Le procès-verbal de la dernière séance est lu et adopté, après quelques observations de MM. Wolowski, Mannequin, et le Baron de Hock.

Le Secrétaire donne lecture du Rapport rédigé par le Baron de Hock au nom de la Sous-Commission des Monnaies.

M. de Jacobi présente les observations suivantes :—

Caractère sacré du titre des monnaies.

" M. le Baron de Hock a donné, dans le Rapport que nous venons d'entendre, des explications tellement concluantes sur les neuf propositions du Comité qu'il paraît téméraire d'y vouloir encore ajouter quelque chose. Cependant, pendant tout le cours des discussions dans le Comité et dans les Conférences, j'étais préoccupé par une circonstance sur laquelle je n'ai réussi à m'éclairer que depuis peu. Cette circonstance se rapporte à la 9e proposition et pourrait bien être pasée, il est vrai, sous silence, en laissant aux Conventions futures le soin de la prendre en considération ; mais, par acquit de conscience, je me sens obligé de la relever des à prèsent.

" Il s'agit (1) de se prononcer énergiquement sur le caractère sacré du titre des monnaies, et d'insister pour qu'une mesure fiscale, quelle qu'elle soit, ne soit jamais prise pour en justifier l'altération. J'insiste sur ce point d'autant plus que, aucun article qui se rapporte au principe de l'intégrité la plus rigoureuse du titre des monnaies ne se trouvant dans la Convention Monétaire de 1865, il est du devoir de

la Conférence de signaler ce principe à l'attention des Commissaires d'une Convention future.

" Un second point dont je veux parler concerne la tolérance. La tolérance n'est pas une stipulation arbitraire, elle est la limite des erreurs que comportent toute pesée, toute analyse chimique, toute composition d'alliage ; comme telle, elle dépend de la précision des balances et des méthodes employées dans la fabrication monétaire ; elle se laisse déterminer rigoureusement en y appliquant le calcul des probabilités. Pour rendre peu avantageux le triage ou la refonte des monnaies à titre et poids droits ou forts, ou l'emploi de la tolérance pour couvrir les pertes inévitables et les frais de monnayage, il faut que les différents Etats s'arrangent comme ils veulent pour couvrir leurs frais et leurs pertes, mais qu'ils laissent intacts le poids et le titre des monnaies. Il va sans dire que les progrès de la science et de l'industrie monétaire contribueront bien à resserrer les limites de cette tolérance, mais jamais à les étendre."

M. de Baumhauer donne ensuite lecture du Rapport et des propositions relatives à l'aréométrie :—

Rapport concernant l'Aréométrie.

Rapport concernant l'Aréométrie.

Le Comité des Poids et Mesures et des Monnaies a l'honneur d'appeler l'attention de la Conférence sur la nécessité d'employer pour les aréomètres une échelle également en harmonie avec les principes du système decimal.

L'aréomètre a d'autant plus de droits à ne pas être négligé, quand on s'occupe de poids et de mesures, que destiné à indiquer le volume que les liquides présentent sous l'unité de poids, ou, réciproquement, le poids qu'ils possèdent sous l'unité de volume, c'est un appareil réunissant, pour ainsi dire, la balance et les poids dans le même instrument. C'est d'ailleurs un des instruments les plus usuels ; la commodité de son emploi en fait un auxiliaire utile dans les recherches scientifiques ; et dans les relations commerciales il est devenu tout à fait indispensable, soit pour ses indications propres, soit pour les notions qu'on peut déduire relativement à la quantité de certaines matières solides, liquides ou gazeuses, que les mélanges tiennent en dissolution.

La variété des usages auxquels on l'applique et, en partie aussi, l'arbitraire et les prédilections nationales ont fait proposer et adopter successivement un grand nombre de modifications, sinon dans la forme de l'appareil, qui est à peu près toujours la même, au moins dans la division de l'échelle qu'on y adapte. Il en résulte dans les données aréométriques une complication telle qu'il est souvent difficile de s'y reconnaître, et que leur comparaison devient pénible même aux personnes le mieux au courant des principes qui ont présidé aux différentes graduations.

Cette complication et la multiplicité des échelles aréométriques ne répondent nullement à un besoin et doivent être signalées par le Comité comme un inconvénient réel.

En effet, dans la nombreuse famille de ces instruments, la graduation de la plupart est combinée de manière à faire connaître immédiatement, dans les liquides, la proportion des matières qui font la base de leur valeur commerciale : alcoomètres, pèse-esprits, œnomètres, pèse-sirops, pèse-acides, pèse-sels, et une foules d'autres ayant chacun une échelle particulière.

On allègue en faveur de ces instruments la commodité de leur emploi, qui permet, dit-on, aux personnes les plus étrangères à toute connaissance aréométrique de trouver de suite ce qu'elles ont intérêt à savoir, par une simple lecture, sans avoir de calculs à exécuter, ni même de table à consulter.

Cet avantage serait sans doute d'un grand poids s'il était réel ; mais, dans la pratique, il devient, le plus souvent, tout à fait illusoire. L'échelle de chacun de ces instruments a dû être établie pour une température déterminée, et ce n'est que pour cette température qu'il fournit des indications exactes. Dès qu'on s'écarte de ces conditions, la densité du liquide change et une correction devient nécessaire. Or, comme il est impossible dans les opérations du commerce et de l'industrie de ramener chaque fois le liquide à la température normale, on voit que l'usage des tables de réduction s'impose forcément, et qu'ainsi disparaît l'avantage qu'on attribue ordinairement à ces aréomètres. Si maintenant on considère qu'il n'y a aucun mélange dont la densité soit en proportion directe avec ses parties constituantes, on conçoit que les échelles de ces aréomètres spéciaux doivent présenter des divisions très inégales, même irrégulières, et partant très-difficiles à construire.

En outre ces échelles ne sont que difficilement comparables entre elles, et leur multiplicité des plus gênantes, autant sous le rapport de la science que de la pratique. Il est donc à souhaiter qu'une échelle unique vienne remplacer toutes ces échelles spéciales.

L'aréomètre normal, muni d'une pareille échelle, devant convenir à des liquides quelconques, le principe de sa division doit se rapporter à la mesure directe du volume spécifique ou de la densité de ces liquides. C'est donc entre les volumètres et les densimètres qu'on a à choisir. Chez les premiers, la tige, supposée exactement cylindrique ou prismatique, porte des divisions égales entre elles ; chez les seconds, au contraire, les divisions de l'échelle deviennent d'autant plus grandes qu'elles se rapportent à des liquides plus légers.

La grande facilité que la division en parties égales offre, tant dans l'exécution que dans l'observation, recommande particulièrement l'emploi des volumètres ; cependant le Comité ne peut passer sous silence que, d'un autre côté, la division densimétrique présente le grand avantage de pouvoir, par une simple multiplication, donner immédiatement le poids absolu d'un certain volume donné de liquide, cas qui se présente le plus souvent dans la pratique.

En tout cas, soit que la Conférence se décide pour la division volumétrique, soit pour la division densimétrique, la diversité des échelles doit être rejetée catégoriquement.

La détermination des mélanges liquides, quels qu'ils soient, ne doit plus se faire ni d'après l'échelle de Baumé ou de Cartier ni d'après d'autres échelles arbitraires, déterminées pour la plupart par des prédilections nationales.

Pour que l'aréomètre normal puisse s'adapter à tous les cas, sans qu'il soit nécessaire de donner à sa tige une longueur excessive, on devra avoir recours à plusieurs instruments ne comprenant chacun qu'une partie de l'échelle totale, et dont les degrés pourront d'ailleurs être subdivisés suivant le plus ou moins d'exactitude qu'on voudra atteindre.

Mais tous ces appareils reposant sur le même principe ne pourront être considérés que comme des parties d'un même instrument fractionné pour la commodité de l'usage.

Il est clair, d'ailleurs, que pour que l'aréomètre normal puisse se substituer dans la pratique aux divers instruments employés jusqu'ici dans l'alcoométrie, l'acidimétrie, l'alcalimétrie, &c., il sera nécessaire de construire, pour chacune de ces applications spéciales, des tables particulières permettant de passer facilement des indications de l'aréomètre à celles qu'on a en vue dans l'emploi déterminé qu'on en fait.

Dans la plupart des cas, une petite table joint à l'instrument offrira aux opérateurs toutes les facilités qu'ont pu donner les aréomètres avec des échelles spéciales.

Tels sont les principes généraux qui, de l'avis du Comité, devront servir de point de départ, lorsqu'on voudra soumettre, de commun accord, l'aréomètre à une règle uniforme.

Le Comité désirerait voir prononcer en même temps par la Conférenee la nécessité de l'emploi unique de la division centigrade du thermomètre et de la division de l'échelle barométrique en parties décimales du mètre.

Comme résumé de ce qui précède, le Comité a adopté les trois propositions suivantes :—

1. Il est à désirer que, pour les transactions internationales concernant les liquides, les mêmes systèmes de graduation aréométrique soient adoptés dans les divers pays.

2. Il est à désirer que les échelles particulières employées pour les différents liquides soient décimales et basées sur les densités ou sur les volumes spécifiques.

3. Le Comité émet le vœu que le thermomètre centigrade soit généralement adopté. ainsi qne l'échelle métrique du baromètre.

M. Tresca fait connaître la situation fâcheuse de la France au point de vue de la mesure des liquides.

L'incertitude qui pèse et qui pèsera toujours sur la véritable graduation de l'aréomètre Baumé donnent lieu, dans le commerce, à des contestations sans nombre qui rendent d'autant plus nécessaire le retour à la division décimale.

M. Peligot ajoute que la graduation de l'aréomètre Baumé est sciemment faussée et appropriée aux besoins de telle ou telle branche de commerce.

Après quelques observations échangées entre MM. Tresca, de Jacobi, et de Baumhauer, les propositions sont adoptées.

Le *Président* annonce que le Comité des Poids et Mesures et des Monnaies se réunira prochainement pour rassembler la série des documents résumant les travaux du Comité et de la Conférence, et qu'on l'adressera à la Commission Impériale pour en proposer l'impression.

Le *Président* annonce également qu'il a remercié, au nom de la Conférence, Son Altesse Impériale Monseigneur le Prince Napoléon pour la part qu'il a bien voulu prendre à ses travaux.

Enfin, *M. Mathieu* prononce l'allocution suivante :—

"Messieurs,—Nous voici parvenus au terme de nos travaux : nous avons soumis successivement à vos délibérations les résultats des travaux préparatoires du Comité sur les Poids et Mesures et les Monnaies.

"Après des discussions intéressantes dont vous conservez le souvenir, et auxquelles la présence de Son Altesse Impériale Monseigneur le Prince Napoléon est venue ajouter un éclat nouveau, vous avez adopté une série de résolutions qui sont l'expression fidèle des vœux de la majorité, je dirais presque de l'unanimité de cette assemblée.

"Il vous reste maintenant à appeler sur ces résolutions l'attention de l'opinion publique, car c'est par elle seule que nous pouvons conquérir l'adhésion des Gouvernements.

"Déjà la publicité donnée aux documents préparés par vos soins y aidera puissamment. Pour concourir à ce résultat d'une manière encore plus efficace, il a paru à Son Altesse Impériale Monseigneur le Prince Napoléon qu'il conviendrait de provoquer dans le mois d'Octobre, vers la clôture de l'Exposition, une nouvelle session de la Conférence ; d'ici là, on s'efforcerait d'obtenir, pour cette époque, la présence à Paris d'hommes politiques éminents, surtout d'Angleterre, qui, par leur influence personnelle, pourraient activer beaucoup la solution des problèmes qui nous occupent. En vous donnant rendez-vous pour cette seconde session, dont l'époque précise sera fixée plus tard, il nous reste à vous remercier, Messieurs, du concours que vous nous avez prêté, et grâce auquel les efforts dûs à l'initiative de la Commission Impériale ne resteront certainement pas stériles."

La Conférence se sépare ensuite, après avoir voté des remercîments à M. le Président et à MM. les Secrétaires.

Procès-Verbal de la Visite faite aux Archives de l'Empire par les Délégués du Comité des Poids et Mesures et des Monnaies.

Condition des prototypes étalons du mètre et du kilogramme.

Le Mardi, 2 Juillet, 1867, une délégation du Comité International des Poids et Mesures et des Monnaies s'est rendue à l'Hôtel des Archives pour visiter les prototypes du mètre et du kilogramme, et de là au Conservatoire Impérial des Arts et Métiers, pour examiner les copies de ces prototypes, exécutées à la même époque et dans les mêmes conditions par les mêmes constructeurs.

La délégation était composée de MM. Mathieu, Président du Comité ; de Jacobi, Président de la Sous-Commission des Poids et Mesures ; Barnard, Leone Levi, le Chevalier de Parmentier, et d'Ussel, Secrétaire-Adjoint.

S'y étaient associés, MM. le Docteur O. J. Broch, délégué de la Norwége à la Conférence Monétaire Internationale ; L. P. Casella, attaché à la Députation de l'Association Décimale de Londres à la Conférence Internationale des Poids et Mesures et des Monnaies ; et le Professeur Pisko, de Vienne.

Les délégués sont arrivés à deux heures à l'Hôtel des Archives. Ils ont été reçus par M. le Marquis de Laborde, Directeur des Archives, qui a fait ouvrir la quadruple enceinte de l'armoire de fer où sont déposés et conservés les prototypes.

Les délégués ont pu constater les faits suivants :

L'étalon prototype du mètre est une règle en platine sans aucune inscription ni marque quelconque. Sa largeur est de 25 millimètres et son épaisseur de 3·5 millimètres. Elle est terminée à ses extrémités par des faces perpendiculaires à sa longueur, dont la distance prise sur l'axe de la règle donne la longueur du mètre. L'étalon prototype est donc un mètre à bout.

Les faces qui le terminent quand on les examine à la loupe, présentent quelques légères rayures, dirigées dans divers sens.

Cet étalon est enfermé dans une boîte en acajou, avec gaîne en velours rouge, et la boîte porte, sur une plaque rectangulaire, cette inscription : "Mètre conforme

à la Loi du 18 Germinal, an III, présenté le 4 Messidor, an VII," et à côté "fait par Lenoir."

Le kilogramme prototype est formé d'un cylindre en palatine dont les bords sont légèrement arrondis ; il ne porte aucune marque ni inscription. La surface est en bon état.

Il est renfermé dans une boîte octagonale en chagrin, avec gaîne en velours. Une plaque d'argent en dessus de la boîte porte cette inscription : "Kilogramme conforme à la Loi du 18 Germinal, an III, présenté le 4 Messidor, an VII," et à côté le nom du constructeur "Fortin F."

La députation s'est ensuite rendue au Conservatoire Impérial des Arts et Métiers, où elle a été reçue par M. le Général Morin, Directeur, et M. Tresca, Sous-Directeur. Ces messieurs ont montré aux délégues les copies des prototypes des Archives, exécutées à la même époque, dans la même forme, avec du platine pris dans la même masse de métal, et par les mêmes constructeurs.

Une face du mètre porte à trois centimètres de chaque extrémité une empreinte ovale dont le fond est sillonné en partie de hachures. Sur la même face deux traits fins allant d'un bout à l'autre indiquent l'axe du mètre.

Les délégués ont examiné soigneusement, avec une loupe, les faces extrêmes de ce mètre ; elles paraissaient plus unies et plus parfaitement conservées que celles du prototype des Archives. Pour expliquer ce fait, il a été dit aux délégués que, au début, le prototype avait servi à quelques comparaisons, tandis que la copie était toujours restée sans usage. Mais les étalons des Archives et du Conservatoire construits en même temps il y a 70 ans, par les mêmes artistes et ramenés autant que possible à l'identité, ont été comparés aux Archives en 1864 ; il résulte de ses comparaisons que la différence est seulement de trois-millièmes de millimètre entre les deux mètres, et de sept-dixièmes de milligramme entre les deux kilogrammes. Ces résultats sont consignés dans un rapport officiel du 5 Mars, 1864, adressé au Ministre de l'Agriculture, du Commerce, et des Travaux Publics, par une Commission composée de MM. le Général Morin, Président, le Marquis de Laborde, Tresca, Silbermann, et Froment. Le Ministre en chargeant la Commission de la comparaison de ces étalons a voulu assurer la conservation des prototypes des Archives en destinant plus particulièrement ceux du Conservatoire aux comparaisons à faire avec les étalons des divers Gouvernements qui adoptent le système métrique.

Après avoir pris connaissance de ces travaux et examiné les appareils de comparaison, les délégues ont déclaré que les rayures aperçues à la loupe sur les extrémités du mètre prototype des Archives étaient complètement sans influence sur la longueur du mètre, et que l'état de conservation de ces prototypes, déposés aux Archives, tant pour le mètre que pour le kilogramme, était parfaitement satisfaisant.

Les délégues ont, en outre, émis le vœu que, dès à présent, deux copies du mètre prototype, sous forme de règles à traits, soient construites en platine, et déposées, l'une aux Archives, et l'autre au Conservatoire, pour servir aux comparaisons des mètres à traits.

Ils ont ensuite visité, au Conservatoire, les appareils servant à la comparaison des étalons de vérification courante, destinés au service de la vérification administrative, dans les arrondissements de l'Empire Français. Ils ont témoigné leur satisfaction du degré de perfection apporté à ces opérations, dont la précision dépasse les limites de la tolérance légale.

Les Délégués se sont séparés à 6 heures du soir.

Le Président,
(Signé) L. MATHIEU.

Le Secrétaire-adjoint,
(Signé) D'USSEL.

PREPARATORY CONFERENCE

For the Establishment of a Uniform System of Weights, Measures, and Coins, held in Paris at the Palais de l'Industrie.

First Sitting.—*Wednesday, May* 2, 1866.

The meeting commenced at 2 P.M.

Present—Messrs. Arlès-Dufour, Beckwith, Van den Brœck, De Chancourtois, Michel Chevalier, Choiecki, Cumenge, Donnat, Ducuing, Du Pré, De la Guéronnière, Max Gunther, de Haxthausen, Hüffer, Captain Krak, the Marquis de Laborde, Le Play, Baron de Lesseps, Hervé-Mangon, Rhoth, de Scholten, de Thal, Thomsen.

M. Le Play opened the Conference by stating the object of the meeting as follows :— At the time of the Universal Exhibition of 1855, a Special Commission, of which several persons present formed part, were engaged in endeavouring to simplify, by the adoption of a common system of weights and measures, the operations of international commerce. The discussion led to the formation in different countries, especially in England, of societies engaged to prosecute the object. Several among them have expressed the desire that the question should be taken up again on the occasion of the Universal Exhibition of 1867, and M. Leone Levi, accredited by letter of the President of the British Branch of the International Decimal Association, has announced that he would come to Paris to make a communication on the subject. The Conference has been called to hear these communications, but in consequence of a misunderstanding, M. Leone Levi has not been able to arrive at Paris for the meeting, and M. Le Play proposed to utilize the meeting by considering the following four propositions :—

Proposal of a Special Exhibition of Weights, Measures, and Coins.

1. Is it expedient to resume on the occasion of the Universal Exhibition of 1867 what has been commenced in 1855 ?

2. What would be the best means for so doing ?

3. Would it be expedient to have a special Exhibition of Weights, Measures, and Coins ?

4. Is it desirable to embrace in such Exhibition the scales of measures and conventional figures used in the arts and sciences, besides weights and measures properly so called ?

After some observations by the *Marquis de Laborde, Choiecki, the Baron de Lesseps,* and *Ducuing,* the first question was resolved affirmatively.

After some observations by *MM. Arlès-Dufour, Max Gunther,* and *de Haxthausen,* it was agreed, as respects the mode of action, that the first thing to be done should be the formation of a small Committee, in which the principal groups of nationalities should be represented, and that the members present should be invited to name such persons as could and would bestow on it a continued attention.

M. Le Play thought that the Imperial Commission would willingly grant its support to a Committee, but that it should act in an independent manner.

The proposal of a special Exhibition of Measures, Weights, and Coins was then approved, and it was decided that the expense of such Exhibition should be borne respectively by each nation taking part in it.

MM. the Marquis de Laborde and Michel Chevalier dilated on the utility and bearings of such an Exhibition, by which it would be seen that the metric system was adopted as far as the extreme point in Asia.

The question of extending the programme beyond measures, weights, and coins, was reserved.

The meeting adjourned at 3 P.M.

Second Sitting.—*Monday, May* 14, 1866.

The meeting opened at 4 P.M.

Present—MM. Baudrillart, Ed. Becquerel, Beckwith, Calon, Cumenge, Donnat, José de Echeverria, de la Guéronnière, Hervé-Mangon, Hüffer, Gunlogsen, Max Gunther, de Haxthausen, Le Play, Leone Levi, the Marquis de Laborde, Mathieu, Peligot.

The minutes of the Conference of the 2nd of May were read and adopted.

M. Le Play, Commissaire-Général of the Universal Exhibition, introduced M. Leone Levi, Professor of King's College. Delegate of the Metric Committee of the British

Association for the Advancement of Science, and of the International Association for obtaining a Uniform Decimal System of Measures, Weights, and Coins.

Professor Leone Levi read the following note :—

Progress of the question since 1851.

"The Universal Exhibitions have shown that much remains yet to be done to facilitate international relations, and that amongst the great desiderata none is more wanting than one common system of weights, measures, and coins.

"At the International Exhibition in 1851 this want was clearly visible, and at its close, the Society for the Encouragement of Arts, Manufactures and Commerce of London, represented to the Government that 'it may be of use to inquire whether, by arrangement with neighbouring nations, some steps may not be taken which may tend eventually to an adoption of a uniform system throughout the world.'

"At the Universal Exhibition held in Paris in 1855, the Jurymen and Commissioners of different countries, about 200 in number, signed a declaration to the effect that one of the best methods for advancing industry would be the adoption of one universal system of weights and measures.

"At the International Exhibition in London in 1862, the same want was expressed in the Reports of the Jurymen of different classes, more especially the Chemical.

"Other international and scientific assemblies recently held have expressed the same want. The International Statistical Congress at its meetings in Brussels in 1853 Paris 1855, Vienna 1857, London 1860, and Berlin 1863, found great difficulty in the, diversity of units by which various social and economical facts are stated in the statistics of different countries.

"Scientific Societies, like the British Association for the Advancement of Science and the Academy of Sciences in St. Petersburg, have expressed their opinion that great advantage would accrue to science from uniformity in scientific communications.

"Lastly, a Special International Association was formed at the close of the Paris Exhibition, with a view to obtain the universal adoption of one decimal system of measures, weights, and coins.

"Certain legislative steps of considerable importance have also been taken for the same purpose. In England, a Committee of the House of Commons was formed in 1862 to consider the practicability of adopting a simple and uniform system of weights and measures, with a view not only to the benefit of our internal trade, but to facilitate our trade and intercourse with foreign countries. On their unanimous Report, the Legislature passed an Act rendering the metric system legal. The question of decimalizing the coins has also undergone a serious examination on the part of the Legislature, and some progress has already been made with it.

"The German States have experienced the need of uniformity in their weights and measures; and after two official Conferences, held in Frankfort in 1862 and 1865, they have come to the conclusion of recommending the adoption of the metric system.

"Many other States—such as Spain, Portugal, Italy—have taken the same steps; and by a Treaty recently concluded, as regards coins, between France, Belgium, Switzerland, and Italy, these States have formed a Monetary Union. The United States have pursued the same path. They have instituted an inquiry on the subject, and a Bill has been presented to Congress for the adoption of the metric system.

"Still much remains to be done for attaining a general uniformity, and it must be remembered that, over and above the difference in the systems of weights and measures prevailing among nations, there is a large number of local and customary weights and measures which embarrass trade, and introduce great perplexity in international calculations. It is universally acknowledged that the question exhibits numerous practical difficulties; and it has been suggested that an exhibition of all the weights, measures, and coins in use in all countries, on the occasion of the Universal Exhibition of 1867, would be of great aid towards the surmounting of them.

Suggestion for a special Exhibition of, and Conferences on Weights, Measures, and Coins.

"In furtherance of this object, the Metric Committee of the British Association for the Advancement of Science, and the International Association for obtaining a Uniform Decimal System of Measures, Weights, and Coins, have instructed me to confer with M. the Commissaire-Général as to the means for realizing, under the auspices of the Commission for the Universal Exhibition of 1867, an Exhibition, including—

"1. A collection of the principal weights and measures, their multiples and submultiples, as well as of every other legal weight and measure in use for any object whatever in all countries;

"2. Two collections, to show the face and the reverse, of all the current coins last issued by each Government, with indications relative to the quantity of pure gold, silver, or copper, contained in them, their weights, dimensions, &c.;

"3. Lastly, a copy of every document having relation to this subject of an official

character, and, in particular, of every Report of Commissions or Committees nominated by the Legislature for the purpose of any change or reform, whether in weights, measures, or coins of all countries.

"The two Associations hope, moreover, that steps may be taken for obtaining, at the time of the Exhibition of 1867, an International Conference, consisting of persons eminent in science, industry, and commerce, to study the series of objects and documents exhibited, with a view of suggesting means for realizing as soon as possible the adoption by all countries of a uniform decimal system. This Conference might also consider kindred questions of a more scientific character, the solution of which affects the progress of civilization."

Professor Leone Levi added that both the Metric Committee and the International Association for obtaining a Uniform System of Weights and Measures, established after the Exhibition of 1855, have decided that it would be better to propagate the use of the Metric System, since that system is founded on nature, and is at once the most scientific and most generally in use.

M. Mathieu stated that the Bureau des Longitudes, to which he belonged, had printed in their Annuaire the Permissive Bill passed in England in English, with the translation and comparative table of weights and measures. The trouble experienced by men of science of all countries to understand each other in scientific questions, and the inconvenience that the difference of units between different countries, and often between one portion and another of the same country, produce in commercial relations, will disappear by the adoption of the Metric System as an international system of weights and measures. The Bill to which M. Mathieu referred, and which became law in England, was a happy advance towards this result.

M. Le Play showed that the point of departure, as it was indicated by M. Leone Levi, consisted for the moment in organizing an International Exhibition of Measures, Weights, and Coins, and he could promise in this respect the support of the Imperial Commission.

The collections of different countries would remain distinct, but they would be grouped on a neutral ground, and would be disposed in a systematic method, in accordance with the general plan of the Exhibition, in order to facilitate the comparison of analogous subjects. Each nation would contribute her proportional share of the expenses—not large, however—which might be necessary.

To lose no time, a small Committee would be appointed, the French members of which would be nominated by the President of the Imperial Commission, of which M. Leone Levi would form part, who, in the name of the Associations of which he was delegate, promised for such an exhibition several important collections.

This Committee, completed by the addition of foreign members nominated on the recommendation of the Commissions constituted in different countries, would first organize the exhibition of measures, weights, and coins, and the relative documents, and afterwards lay down the basis of a great Conference. This Conference, called at the time of the Exhibition, would include persons of distinction in all countries, and would have for its object the extension of the action of the Association which had been formed for the propagation of the Metric System.

M. the Marquis de Laborde expressed the wish that this Committee would occupy itself at once in issuing the notice of the Exhibition, in order to secure the transmission of the necessary objects and documents.

The proposal of the formation of the Committee was then adopted by the Conference.

On the proposition of *M. Rhoth*, it was agreed that a copy of the minutes should be put at the disposal of the members of the Conference, who would use their endeavours to obtain from their respective Governments either their material participation in the projected Exhibition, or the nomination of foreign members to be added to the present Committee, or the subsequent nomination of delegates to take part in the general Conference; and the same was unanimously adopted.

The meeting adjourned at half-past 5 o'clock.

The above minutes are adopted by the members of the Committee instituted by decree of the Minister of State, Vice-President of the Imperial Commission, under date 7th June, 1866.

ED. BECQUEREL, *Secretary.*
LEONE LEVI.
EUG. PELIGOT.

Paris, June 15, 1866.

In consequence of the preparatory Conferences, the following Ordinance, dated 7th June, 1866, appropriated a place in the vestibule of the Palais du Champs de Mars to an International Exhibition of Weights, Measures, and Coins of all countries. A special Committee "of Weights, Measures, and Coins" of the Scientific Commission was formed to preside over the formation of this Exhibition.

The Committee was, moreover, instructed to seek the best means for taking advantage of the universal concurrence of people in 1867 for promoting the adoption and propagation of a uniform system of weights, measures, and coins.

Universal Exhibition of 1867, *Paris.*

IMPERIAL COMMISSION.

Second Arrêté, naming the Members of the Scientific Commission.

The Minister of State, Vice-President of the Imperial Commission,

Ordinance nominating a Committee on Weights, Measures, and Coins, of Members of the Scientific Commission.

Having seen the 63rd Article of the General Regulations, deliberated by the Imperial Commission on the 7th July, 1865, and approved by Imperial Decree dated 12th July, 1865;

Having seen the Ordinance, dated 20th September, 1865, which constituted the Scientific Commission charged especially to assist in extending the use of useful discoveries, and promote reforms of international importance, such as the adoption of the same weights and measures, and common scientific units;

Having seen the propositions of the two scientific societies in England,* which include, 1, the project of an International Exhibition of Measures, Weights, and Coins; 2, the project of a Conference, to take place in 1867, for the adoption and propagation of an uniform system of measures;

Having seen the adhesion given to the above propositions by a free Conference,† held on the 2nd and 14th May, 1866, to consult as to the means for resuming the labours of the Special Commission formed at the Universal Exhibition of 1855:

Decrees:

Article 1. A special place is appropriated in the vestibule of the Palace in the Champs de Mars to an International Exhibition of Measures, Weights, and Coins of all countries.

Article 2. A Special Committee on Weights, Measures, and Coins is established in the Scientific Commission to preside over the formation of this Exhibition.

Article 3. The Committee is besides called upon to use the most efficacious means for taking advantage of the universal gathering of 1867, for the adoption and extension of a uniform system of measures, weights, and coins.

To attain this object the Committee will place themselves in correspondence with the persons who have already taken part in the Conferences of 1855 and 1866, and with the principal persons of all countries whose assistance may be deemed desirable.

Article 4. The following are nominated members of this Committee:

M. Baudrillart, Member of the Institute, Professor at the College of France;

M. Edmond Becquerel, Member of the Institute, Professor at the Conservatoire Impérial des Arts et Métiers;

M. Leone Levi, Professor of Commercial Law at King's College, London, Doctor of Political Economy, and Delegate of the two Scientific Societies above mentioned;

M. Mathieu, Member of the Institute and of the Bureau des Longitudes;

M. Peligot, Member of the Institute, Professor at the Conservatoire Impérial des Arts et Métiers, and Verifier of Assays at the Mint.

Article 5. Persons designated by the foreign Commissions of the States which will contribute to the special Exhibition of Measures, Weights, and Coins, will afterwards be nominated members of the same Committee.

Article 6. The Councillor of State, Commissaire-Général, is charged with the execution of the present Ordinance.

The Minister of State, Vice-President of the Imperial Commission,

(Signed) E. ROUHER.

The Councillor of State, Commissaire-Général,

F. LE PLAY.

Done at Paris, June 7, 1866.

---

* Metric Committee of the British Association for the Advancement of Science; International Association for obtaining one uniform Decimal System of Measures, Weights, and Coins.

† To this Conference several members of the Commission of 1855, and delegates accredited to the Imperial Commissions by foreign Commissions for the Exhibition, have taken part.

The Committee thus constituted, invited the co-operation of foreign Commissions for the Universal Exhibition, and desired them to nominate persons to represent the different countries. The appeal was well received, and the adherence was thereafter obtained from the Commissions of the Netherlands, Belgium, Prussia, the Northern German States, the States of Southern Germany, Austria, Switzerland, Spain, Denmark, Sweden and Norway, Russia, Italy, the Ottoman Empire, Egypt, Japan, China, Morocco, Tunis, Brazil, the United States of America, and the United Kingdom. The choice of Representatives, which indicated the importance ascribed to the labours of the Committee, was afterwards ratified by two other Ordinances, dated 14th of February and 10th of April, 1867, and the complete list of the Committee was thus fixed as follows : -

Adhesion of foreign Commissioners.

Mathieu, Member of the Institute and of the Bureau des Longitudes, President.

Edmond Becquerel, Member of the Institute, Professor at the Imperial Conservatoire des Arts et Métiers, Secretary.

Baudrillart, Member of the Institute, Professor at the College of France, Secretary.

B. de Chancourtois, Chief Engineer and Professor at the Imperial School of Mines, Secretary of the Imperial Commission.

Julien, Director of Internal Commerce at the Ministry of Agriculture, Commerce, and Public Works.

Peligot, Member of the Institute, Verifier at the Mint, Paris.

E. H. von Baumhauer, Member of the Academy of Sciences and of the Royal Commission of the Netherlands.

Du Pré, Chief Engineer of Ponts et Chaussées, Commissioner of Belgium.

G. Magnus, Member of the Royal Academy of Sciences and Professor at the University of Berlin, Member of the Central Committee of Prussia and the States of Northern Germany.

Varrentrapp, Professor at the Polytechnic School, Brunswick.

Max Günther, Engineer, for Hesse, Baden, Wurtemberg, and Bavaria.

The Baron de Burg, for Austria.

The Baron de Hock, Intimate Councillor of His Majesty the Emperor of Austria, Member of the House of Lords, for Austria.

The Chevalier de Parmentier, for Austria.

Feer-Herzog, National Councillor at Aarau, Commissioner for Switzerland.

Ramon de la Sagra, for Spain.

Guerrero, Honorary Intendant of Finance, for Spain.

The Count d'Avila, President of the Royal Commission of Portugal.

Le Maire, Assistant Commissioner of Denmark.

De Fahnehjelm, Commissioner of Sweden.

Christiensen, Commissioner of Norway.

B. de Jacobi, Councillor of State, Member of the Academy of Sciences at St. Petersburg.

The General Major Gloukoff, for Russia.

Faustin Malaguti, Rector of the Academy of Rennes, for Italy.

Giordano, Inspector of Mines, Commissioner of Italy.

The Colonel Essad Bey, Director of the Ottoman Military School at Paris.

Joseph Claude, Merchant, Member of the Egyptian Commission.

The Caïd Nyssim Samama, for Morocco.

Valensi, Commissioner for Tunis.

De Porto-Alegre, for Brazil.

Samuel B. Ruggles, Esq., for the United States of America.

Leone Levi, Professor of Commercial Law in King's College, London, Doctor of Political Economy.

Colonel Younghusband, for Great Britain.

Ch. de Billy, Auditor at the Audit Office, Assistant Secretary.

De Lapparent, Mining Engineer, ,,

Peigné, Lieutenant of Artillery, ,,

D'Ussel, Engineer of Ponts et Chaussées, ,,

International Conference

For the adoption of a Uniform System of Weights, Measures, and Coins.

First Sitting.—*Friday, June* 21, 1867.

President, M. Mathieu, President of the Committee of Weights, Measures, and Coins.

There were on the platform :—

MM. de Jacobi, the Baron de Hock, Becquerel, Baudrillart, Leone Levi; and de Billy, de Lapparent, Peigné, and d'Ussel, Assistant Secretaries.

There were also present :—

Opening of the International Conference.

The Comte d'Avila, Barnard, Von Baumhauer, de Chancourtois, de Fahnehjelm, Giordano, Guerrero, Kennedy, Mannequin, de Parmentier, Peligot, de Porto-Alegre, Ruggles, and MM. d'Abaza, de Arago, Beckwith, Belloco, Bertera, W. Blood, Bowles, Broch, Van de Broeck, Samuel Brown, de Cabral, Louis Casella, Desenne, Dietz, Ducuing, General Elorza, Florès, Fortamps, Gadoline, Pablo Gil, Hagemeister, Von Herran, Hulot, Huvot, Jacqmin, Lalanne, Lechatelier, Martin, Mees, Comte de Moriana, Muspratt, Palha de Lacerda, de Ponton, Rivas, de Santos, Schwab, the Reverend Padre Secchi, J. Sherman, Stas, de Steinheis, Surell, Taché, Thirion, Topper, Tresca, de Villa-Major, Vrolik, Wallenberg, Wolowski.

The President after having declared the Conference open, delivered the following address :—

"Gentlemen,—Allow me to inform you the circumstances which have led to the formation of the Committee of Weights, Measures, and Coins, and the order followed in the work with which it has been entrusted.

"The infinite variety of measures of all kinds in each country, and between different countries, has rendered commercial relations very difficult. The establishment of railways and electric telegraphs, those great instruments of progress and civilization, has, so to say, changed the face of the world. Communications are now so easy and so rapid that the different countries are now in a condition in which they were not before, of being rather provinces of the same empire. We cannot now limit ourselves to attempting some simplification: we are led by the force of circumstances to extended reforms. This is the only mode for facilitating social transactions and commercial operations in the entire world. Two scientific associations have been much engaged in this great question of political economy, and they have issued within the last twelve years frequent publications of great value.

"M. Leone Levi, delegate of these Associations, has been instructed in 1866 to propose the exhibition of a collection of weights, measures, and coins, and the summoning of an International Conference at the time of the Universal Exhibition in 1867.

"The proposition has been accepted by the Imperial Commission, which has proceeded to the formation of a special Committee.

"From the commencement of its labours, the Committee has seen the necessity of separating two questions which are quite distinct, viz., that of weights and measures, and that of coinage, the last of which presents greater difficulties than the former. The Committee has therefore nominated two Sub-Commissions, each of which has drawn up its conclusions in a report; these reports have been printed and distributed, and it is for the discussion of such that the Conference has been summoned and for which we are here united."

The following Report by M. de Jacobi, Privy Councillor of Russia, Member of the Imperial Academy of Science of St. Petersburgh, was then read :—

Report on the Uniformity of Weights and Measures.

Report on Weights and Measures.

The Sub-Commission of Weights and Measures embodies in the following Report the results of their studies and the conclusions of their labours.

The bases of the Report are the few fundamental propositions presented by the Reporter, and unanimously adopted at the general meeting of the Committee.

These propositions are as follows :—

Fundamental propositions.

1. The decimal system, in accordance with the system of numeration universally employed, is best adapted to express multiples and sub-multiples of weights, measures, and coins.

2. The metric* decimal system is best adapted for that purpose in consequence of the scientific principles on which it is founded, the homogeneity which exists in the relation of all its parts, and the simplicity and facility of its application, in science, art, industry, and commerce.

3. The instruments of precision and the method employed to obtain copies of prototype weights and measures have attained such a perfection that the exactitude of these copies answers to the wants of industry and commerce, and also to the exigencies of science in its present state.

4. As every economy of labour, whether material or intellectual, is equivalent to a real increase of wealth, the adoption of the metric system, which ranges itself in the same order of ideas as machines and tools, railways and telegraphs, and tables of logarithms, recommends itself particularly in an economic point of view.

These four fundamental propositions comprise the principles laid down by the Committee, and express its unanimous opinion in the most general form.

Taking them as a basis of their labour, the Sub-Commission deemed it desirable to enter into a deeper study of the advantages which might be derived by the use of the metric system in the different branches of human activity, and into the practical means which should be adopted for extending the application of the same.

State of different Countries as regards the adoption of the Metric System.

State of the different Countries as regards the adoption of the Metric System.—It seems, however, necessary at the commencement of this Report to give an exact account of the actual state of different countries, as regards the adoption of the metric system, in order that we may be able to measure the distance which separates each of them from the full possession of the advantages connected with its use. The composition of the Committee, including as it does delegates from almost all nations, has enabled the Sub-Commission to obtain from its own members the necessary information on the subject.

Nations, considered from this point of view, are now very differently placed. Not all the nations which have adopted the metric system have done it in the same manner or to the same extent. The adoption has been complete or partial, with or without modification, obligatory or permissive. And among those which have not adopted it, we must distinguish those which have one and the same system of weights and measures well extended all over the country, and those which have yet a multiplicity of systems varying with the place, and the nature of substances to be weighed or measured.

Countries which have adopted the Metric System.

Countries which have adopted the Metric System.—The States which have adopted the metric system in a complete manner, and have rendered the use of it obligatory, are—

France.	Greece.
Belgium.	Mexico.
Netherlands.	Chile.
Italy.	Brazil.
Papal States.	New Grenada.
Spain.	Other South American Republics.
Portugal.	

In the last States in this list, the introduction of the metric system is quite recent, and the reform has yet to be completed. In Brazil, the law does not make it executory till 1873; on the other hand, the illegal usage of old measures has often subsisted in consequence of insufficient administrative inspection, either because the Governments have acted with less energy, or because the population have offered greater resistance.

After this category come those countries which have introduced the metric system in a permissive manner only.

England, for example, has, since 1864, admitted the permissive use of the same. There exists in this country a great multiplicity of systems. As many as ten systems of weights are authorized by law, and are used according to the nature of the substance to be weighed; some of them having a decimal subdivision. It often happens that in certain towns, in the same market, two different weights are used for the same merchandize, as in Belfast, in Ireland, for the sale of flax. The system of measures of length is based on the yard of 0·914 metre, equivalent to three feet, each foot divided

* It is well to state that the metric system is the work of a Commission of men of science belonging to France and other countries. The men of science who received the invitation to go to Paris in the first days of the year VII (1798) to take cognizance of the operations already executed, and to contribute by their labour and their knowledge to draw the consequences which should fix in the most authentic manner the fundamental unit of the system of measures, were MM. Aenoœ and Van Swinden, Batavian Deputies; Vassali Eandi, Deputy of Piedmont; Bugge, Deputy of the King of Denmark; Ciscar and Pedrayes, Deputies of the Roman Republic; Mascheroni, Deputy of the Cisalpine Republic; Multedo, Deputy of the Ligurean Republic; and Tralles, Deputy of the Helvetic Republic. ("Base of the Metric System," tome i, p. 92.)

into twelve inches, and each inch into twelve lines, and sometimes into ten lines. But the aune of different length is also used in trade; in shipping, different lengths are used according to their destination; in agriculture, acres of different dimensions. There are about twenty kinds of bushels used as measures of capacity. The want of simplicity and uniformity in the system of weights and measures in Great Britain is, therefore, most manifest, and the want of reform is most urgent. This is shown in the Report of the Committee of the House of Commons in 1862, on the occasion of the permissive introduction of the metric system.

The United States of America have the same systems as Great Britain, but fewer in number. As measures of length, they have the same foot and the same inch and their multiples, the series being obtained by multiplying the inch by the factors 12, 3, 5, 44, 8. There are principally three series of weights, viz., avoirdupois, troy, and for pharmacy. The grain of 0·064 grams is the common basis of the three systems. To give an idea of the relation which exists between the different terms of this series—in the first case, the scale of relations, departing from the grain, is formed by the numbers $27\frac{11}{32}$, 16, 16, 25 or 28, 4, 20. In measures of capacity there exists a simple relation between the respective terms in the series employed for liquids, and in those in use for dry materials in the cubic series; but there is no simple relation by which the different series may be comparable among themselves. Nevertheless, in the United States public opinion is very favourable to the introduction of the metric system; and in a country where public opinion is so eminently active, reform has already commenced. A law of 1866 has decided—1. That the Secretary of the Treasury be authorized and invited to furnish to each State of the Union, and to deliver to the Governors of such, a series of standards of weights and measures of the metric system, for the use of the States: 2. That the Director-General of the Post Office be authorized and invited to furnish to the post-offices in relation with foreign countries, and to all those whom he may consider it desirable, postal balances graduated in metric grams; that, until further change is made, the half-ounce avoirdupois should be considered as equivalent to 15 metric grams in the postal service, and so on in progression, and that the tariff should be made out in conformity with this scale of weights. These requirements of the law have been fully carried out; and there is reason to hope that the day is not far distant for the complete adoption of the metric system in the United States.

Countries which have adopted parts only of the Metric System.

Countries which have adopted parts only of the Metric System.—After these come those countries which have adopted parts only, more or less complete, of the metric system.

Switzerland has, since the 31st December, 1856, one system of weights and measures. The unit of length is the foot of 30 centimetres, the multiples and submultiples of which are decimal. The unit of weight is the pound of 500 grams, with two systems of multiples and submultiples, one decimal and the other according to the old scale.

In Sweden, a law of 1855, introduced in an obligatory manner from the 1st January, 1858, a system of weights and measures, completely decimal as to its relations; but the unit of length is the foot of 0·297 metre, and the unit of weight is the pound of 0·42 kilogram. This has been substituted for the old system, with the same unit, but without the decimal relation of the multiples, and allowing several series of measures of capacity, according to the nature of the substances to be measured. Traces of this old system have not yet disappeared.

In Prussia, a law of the 17th May, 1856, has introduced the pound of 500 grams, divided into 30 loths. The subdivisions of loths are decimal. A decimal system of measures of length is authorized by law for the use of land measurers, the basis of which is the ruthe ("perche") which contains 12 feet, but divided into tenths, hundreds, &c. In the duodecimal system the perch contains also 12 feet, the foot 12 inches, the inch 12 lines. This is used by architects, engineers, and merchants. The Prussian foot is 0·3139 metre long. The general application of the decimal system for all measures appears very near.

In the Grand Duchy of Baden, the Baden foot of 0·30 metre is divided decimally. The measures of capacity form a series, the terms of which represent volumes increased by ten. The pound is of 500 grams. The Hessian foot is of 0·25 metre, and its multiples and submultiples are decimal. The relations of measures of surface are also decimal. The pound is of 500 grams.

Bavaria, Wurtemberg, and Denmark have adopted of the metric system the pound of 500 grams; but Bavaria has only introduced it in the Custom-house. In Denmark, also, the pound is divided into 100 quintals; each quintal into 10 orts; and since 1863 the use of multiples of the pound not agreeing with the decimal division

has been prohibited. The only fractions allowed are $\frac{1}{4}$, $\frac{1}{8}$, $\frac{1}{10}$; as the new weights of this kind are not arranged. As regards measures of length, the unit is the foot divided into 12 inches, and the inch into 12 lines. There are in these countries different series of measures of capacity which have simple relations with one another in the same series, but the different series have no simple relation among themselves. There is therefore no relation between them and the metric system.

Austria has for unit of length a foot of 0·316 metre, and for unit of weight in trade a pound of 500 grams. The relations between the different series of the same kind of measure are neither decimal or simple, but for fiscal duties and the Customs, the Government has adopted, in 1853, a pound of 500 grams, with decimal divisions.

In Germany, according to information given by the German members in the Committee, public opinion is strongly inclined towards the unification of the system of weights and measures, by the introduction of the metric system. The opinion of the most enlightened men has been manifested at the Conferences held at Frankfort, and they have left in the Protocols of these Conferences a proof and testimony of these aspirations. In Austria means have been already taken to effect the change; a project of law on the introduction of the metric system will be soon introduced in the Reichsrath.

Countries whose systems have nothing in common with the Metric System.

Countries whose systems have nothing in common with the Metric System.—Out of Germany, and among nations which have systems completely at variance with the metric system, we find Norway, which has neither the units or the decimal relations of the metric system.

Russia has one uniform system in use in all the Empire, and no other is known, with few exceptions. The measures of length are in exact correspondence with the English system, the unit of length, the sagene, having been chosen equal to the length of 7 English feet. The sagene is divided into 3 archines, the archine into 16 verchocks, &c. But the sagene is also divided exactly into 7 feet, and each foot into 12 inches, &c. The measures of capacity and volume are expressed by squares and cubes of measures of length. In practice, the measures of volume are distinguished as between liquids and dry materials, which form two distinct series. The unit of weight, the pound of 0·40952 kilograms is the weight of 25·019 cubic inches of pure water, weighed in a vacuum at the temperature of $16\frac{2}{3}$ degrees centigrades. The multiples and sub-multiples are deduced from these units by simple multipliers, but not decimals.

With such a system well regulated, but very different from the metric, the reform must be radical. It has, consequently, but few partizans in Russia. The Committee read a Report of M. Kupffer and different Reports of the Academy of Science of St. Petersburg in favour of the introduction of the metric system. It appears, however, that Russia will wait before changing its system to see what is done by those countries with which she has relations of commerce, and England especially, whose standards have served as the basis in the choice of her unit of length.

The nations on the coast of the Mediterranean, such as Turkey, Egypt, Morocco, and Tunis, have measures and weights having no relation to the metric system. The Turkish unit of length is nevertheless of 0·75 metres exactly, that is to say, has a simple relation to the metre. If the other nations should accept the use of the metric system, its adoption would be general on the coasts of the Mediterranean, and the commerce of that part of the world would derive great advantages from it.

The Sub-Commission afterwards entered into a detailed study of the advantages which would result from the use of the metric system applied to the different branches of labour.

Teaching of the Metric System in Primary Schools.

Teaching of the Metric System in Primary Schools.—It is incontrovertible that the substitution of the metric decimal system to all other kinds of weights and measures would produce great simplification in the study of arithmetic. This study now occupies in the primary instruction given to the mass of inhabitants a very important place. The object of arithmetical studies in abstract numbers is to facilitate the usual operations on concrete numbers which in practice are expressed, almost always, by weights, measures, and coins. If, therefore, the system of weights and measures is such as to demand the help of the most complicated instead of the simplest rules of arithmetic, it follows that the students are in the schools familiarized with complicated arithmetical operations instead of very simple ones. But such knowledge and habit cannot be acquired without excessive labour and great sacrifice of time. And many enlightened men have estimated that a third of the time would be saved by the introduction of the metric system in those countries which have not yet adopted it. The time thus lost might be employed in more useful studies. But the

evil is not confined to the great loss of time. Those who possess less perseverance or strength, annoyed by the difficulties, confusion, and complication of rules, presented to them, get tired, and sometimes abandon a study which is disagreeable. As a matter of fact, wherever the two systems are provisionally present, and simultaneously taught, the preference of the students is always given to that which offers the simplest solution.

The knowledge of the metric system is so easy to acquire, that when travellers, workmen, and merchants of the countries where it is not in use, are obliged to learn it for their business with foreign nations, they acquire the habit in much less time than they employed in learning their national system, to the use of which, however, they never return.

Another advantage of the metric system is, that it enables one to make immediately on the concrete numbers which represent in metric measures a length, a weight, or a value, all possible operations by means of tables, rules, and mechanical processes of calculation, founded on the principle of decimal divisions. And thus economy of time in practical operations is still further promoted by the use of processes which abridge also the duration of calculations.

We may mention here that in the United States, in order to facilitate the introduction of the metric system in popular education, the Congress by a law of 1866, has ordered the issue of a piece of 5 cents, in nickel and copper, of the exact weight of 5 grams and of the diameter of 2 centimetres, so that five pieces give the length of one decimetre.

The Commission concludes, therefore, that the metric system should be taught in all educational institutions in connection with arithmetic, and simultaneously with the system in use in the country.

Advantage of the use of the Metric System in Science.

Advantage of the use of the Metric System in Science.—The metric system employed in science to express the data of experiences or observations, and to convert them by calculation so as to render their results evident, presents to the learned who uses it, the same simplicity and economy of time in the mechanism of those operations as we have already described. Already a great number of men of science use it exclusively, even though belonging to nations accustomed to other systems. Science has always, not less than political economy, contributed to favour the extension of the system. Yet it is much to be desired that its usage should become general in all scientific publications. Even now, notwithstanding the efforts made by the Congresses and different Associations with a view to unification, there are many works, the utility of which is absolutely localised, and in part lost, because the reading of them is impossible to foreigners, even where they are acquainted with the language in which they are written. The conversion of them costs the Governments large sums, which they are not always disposed to give, and those who wish to undertake it themselves are hindered by the difficulty of the work and the value of time. The general usage of metric weights and measures would have the effect of avoiding all unnecessary labour of converting the scales. This labour is absolutely of no use, yet its accomplishment is the necessary condition to the understanding of these works and to their publicity. More than at any other time we are now convinced of the immense advantage that industry, commerce, and the welfare of nations derive from the progress of science. Whatever checks the development of science, or the manifestation of its results, produces, indirectly, an obstacle to the improvement of the methods of labour, and hinders the production of wealth. In the absence of an universal language, the remedy to this evil can only be found in the unification of the systems of weights and measures, and the universal adoption of the metric system, the effect of which will be to render the data of science everywhere intelligible, understood, and applicable.

What is true of science in general, is so in a special manner as regards certain sciences, such as statistics, which by their nature cannot attain their proper development unless they have at their disposal extended resources. Statistical science can only rise to a degree of certainty and utility by gathering and comparing elements from different sources, stated in measures belonging to most different systems. The Statistical Congress held at Brussels in 1853, in Paris in 1855, in London in 1860, in Berlin in 1863, have expressed the hope that the information given by statistics should be expressed in metric measures. In the countries where the metric system has not yet been adopted, there should be added to the column of figures in the measures of the country a column indicating the equivalent in metric measures. The Statistical Societies of different nations, especially of England, Austria, and Sweden, have already adopted and put in practice the principle of this measure, eminently useful. And by this means only, the information given by statistics

can obtain the degree of publicity which properly belongs to the international character of this science. We may note that at the present Exhibition the want of uniformity of weights and measures has hindered much the work of the members of the Jury, necessitating them to make arduous calculations for reducing the scales necessary for the comparison of the industry of different countries. It would therefore be of the highest general utility that all scientific societies having for their object the advancement of pure science or its applications should use in their publications no other than the metric system. Such is the unanimous conclusion of the Commission.

Advantage of the Metric System of Weights aud Measures in commercial transactions.

Advantage of the Metric System of Weights and Measures in Commercial Transactions.—Let us examine first the influence that the metric system would have on those commercial transactions which take place in the interior of a State. It is incontestable that the simplification introduced in calculations by the adoption of this system permits wholesale merchants to reduce the number of clerks required to keep their accounts. The metric system operates in the same manner as a machine in saving labour; it is a labour-saving machine, it produces economy not only in the number of clerks employed, but also in the conditions of their aptitude. It is seen, in fact, from experience and testimony that in countries which have systems of measures of a complicated character, the clerks employed in commercial offices require a special knowledge for calculation. But, by means of the metric system, these calculations become easy to a more extended class of persons, and those better instructed are reserved for higher and more useful duties. From all these considerations we may conclude that the simplification of operations produced by the introduction of the metric system does in fact reduce the general expenditure on every ton of merchandize, and causes a certain realized economy. Altogether, in the enormous mass of merchandize that modern commerce puts in motion, there is an economy of expense and work which it is difficult to estimate, but assuredly it is very considerable.

On the other hand, the chances of fraud in commercial transactions are thereby diminished. Just in proportion, in fact, as the means of exchange rest on mathematical and simple bases, so every one may easily see for himself if his rights are duly protected, and if the merchant with whom he deals gives him the exact weight, length, or volume of the article demanded. The party interested has greater control over the transaction, and equity itself is better respected.

International commerce, besides the advantages enumerated, benefits from the diminution of the conversions of measures which were previously necessary in the commercial relations between the two countries. Hence, simplification, diminution of clerks, augmented rapidity by the removal of useless intermediary work, and avoidance of the chance of errors. The merchant is able in a more rapid and convenient manner to keep himself informed of the current prices in foreign markets, and to use them to regulate his own business. The advantage of the use of the metric system augments in proportion as international commercial relations increase; it is therefore those nations which have the largest foreign commerce that are most interested in this unification.

The Committee, therefore, come to the conclusion that trade both inland and foreign will gain much by the adoption within the country, and still more universally among all States, of the metric system of weights and measures.

Easy application of the system in industry, mechanics, and construction.

Easy Application of the System in Industry, Mechanics, and Construction.—The preceding considerations developed are applicable to the preparation of all material works, the production of which constitutes the total of national industries. Nevertheless, a new consideration may be introduced here concerning mechanics, naval construction, and in many cases public works, since the substitution of iron for many works for stone or timber has greatly changed the condition of labour. The old measures and their subdivisions were adapted to the wants of the times when they were established. But now in metallic works of mechanics or construction, a much greater precision has become necessary.

In the different parts of a machine, for example, the thickness of a bar of iron is valued in millimetres, or in equivalent units, yet the greater part of old measures have no sub-divisions so small. It has been found necessary to create them. In Russia the measure only descends to $\frac{1}{4}$ or $\frac{1}{8}$ of a verchock, that is, 0·0055 millimetre; but recently it became necessary to divide the sagene into thousand parts of about 2 millimetres. In England, the inch must be divided into eighth, sixteenth, and thirty-second, scales which the practical experience of mechanicians prefers to the decimal sub-divisions of the metre. In public works great advantage is, moreover, derived from the facility of arriving at the weight of a body by its volume, by means of its specific weight. As an example: The density of copper being 8·59, the weight of 1 cubic centimeter of the metal expressed in kilogrammes in the metric system is 0·00859 kilogram, which

is deduced from the specific weight by a simple displacement of the comma without any calculation. With the Russian system, where the cubic foot contains 1,728 cubic inches, the pound 96 zolotniks, and the weight of a cubic foot of distilled water is of 69 lbs. and $6\frac{1}{2}$ zolotniks, the necessary operation for obtaining the weight in zolotniks of a cubic inch of copper is represented by the following formula:—

$$\frac{8{\cdot}59 \times 69}{1728 \times 96}$$

which is only approximative, though requiring not less than two multiplications and one division, with very complicated numbers. It would be the same with any other system than the metric. The Commission finds, therefore, and declares that great utility would result to industry by accepting the metric system. It appears, moreover, desirable that the Governments which in most countries have public works and naval constructions, should prescribe in all those works the sole use of the system in lists of prices, notes of charges, and other documents. The Commission consider this measure very useful, not only on account of the rapidity of arithmetical calculations, but of the great facility of their control which would result from it, whilst it would prove a very efficacious mode for spreading among the people the knowledge and practical use of the system. The number of workpeople, always changing, who come in contact with the Administration, would carry in the heart of the population the habits formed in the service of the State, and would exercise over the rest of the people an influence equal to that produced by the teaching of the system in the primary schools.

It has been objected that it is difficult to induce workmen and merchants to substitute new measures for those which they have been accustomed to use from their infancy. The slow manner with which the change has been made in countries which have accepted the metric system, seems to justify such objection. Still it must be remarked that, among the nations which have been the first to introduce it, and even among the least enlightened people, the assimilation of new measures has become in time quite complete. If some of the old names are still left in use, the value of the new measures is not less fixed in the mind; no confusion is produced by the remembrance of the prohibited measures. The multiplicity of degrees in the metric scale is not of a nature to give any trouble or to produce any confusion. As these degrees merge the one in the other with great facility, custom reduces the number of them in general use. Thus, in France, in practice, the measure of length is calculated by metres and centimetres; the hectometre and decimetre are little used. Still it seems to the Commission that, when regarded from a general point of view, the idea of a measure of length expressed in metres and centimetres, as is usually done, is much more clear and more easily understood than that of the same length expressed in yards, feet, and inches, which are, in effect, three units of lengths, with different names, and having different relation with one another. When we present, therefore, to a mind accustomed to old divisions, a simplification so beneficial, we have no reason to fear any serious objection other than that of custom. Now, the experience of many nations has shown that custom does not resist the evidence of practical utility, and the double action of education and law.

Utility of the system in the Postal Tariff.

Utility of the System in the Postal Tariff.—Certain branches of public administration which have special relations with foreign countries, such as the Post Office, are much interested in the adoption of the metric system. In the Post Office the price of transport of letters and despatches bears a proportion to their weight, except in some cases where there are regulations regarding their volume. There exists, therefore, in each country a tariff, formed upon a series of weights, side by side with a corresponding series of prices of transport. Now, the scales of two nations which have not the same systems of weights are necessarily different. They may approach very near to each other, but they cannot correspond altogether, because each of them includes only the usual and practical subdivisions of the system in use, which do not coincide with those of the neighbouring nation. Consequently, letters, the weight of which is found to be between the two degrees of the same order in each scale, are in an uncertain position. Such letters are subjected to one or other of these tariffs, according to the place where the payment is made, or according as the letter goes from one country to the other, and according as it is prepaid or not. It also happens that, in certain States, and in doubtful cases of prepaid letters, the Administration consults the tariff of the nation to which the letter is sent, and causes the letter to be weighed by the weight of that nation; which amounts, in certain cases, to the adoption of a common scale.

It is evident that all these uncertainties, anomalies, loss of time and chance of error inseparable from such a complication, would disappear absolutely by the general

adoption of the metric system. The Post Office is everywhere a branch of the Administration. No one can object to a reform in the Post Office, the inertia of individual habits of the mass of a nation, since the service is conducted by special agents, and in no manner with the participation of private individuals. The Commission thinks that the introduction of the metric system in the postal tariff is urgent and easy, and that we should invite the Governments to follow the example given by the United States of America, in order to hasten the adoption of the same plan, for public benefit and for the benefit of the Administration.

Telegraphs.

Telegraphs.—The telegraph is, from the nature of its service to society, akin to the Post Office, and, like it, is subject to a branch of the Administration. The telegraph would gain much by the adoption of metric measures for the designation of distances and for all questions relative to the works of the establishment and the preparation of the lines.

Custom Duties.

Custom Duties.—The adoption of the metric system would greatly facilitate the collection of fiscal duties charged on articles of trade, and in general all the operations connected with the Tariff. The metric system can alone give to these tables the desired simplicity, and render their application easy and the control convenient.

The service of the Custom-house has relations exclusively international. It is, consequently, more than any other, greatly interested in the unification of weights and measures. Each act of its exercise between two nations must be accompanied by a conversion of the scales, the necessity and inconvenience of which would disappear with the introduction of the metric system.

While those connected with the Administration would find in it great simplification and economy of labour, all those submitted to the regulations of the Custom-house would more easily understand the working of the Tariff. The declarations would be simplified, and by the diminution of the chance of error merchants and travellers would be less exposed to the penalties, relatively high, which the law often imposes to involuntary breaches.

The Governments are therefore invited to place at once the metric system side by side with the national system in the use of an administration so altogether international as the Custom-house.

Verification of Weights and Measures.

Verification of Weights and Measures.—The verification of weights and measures has become a want of every civilized nation. Whatever be the system or systems employed in a country or in any portion of the same, they exhibit a series of types fixed and invariable, which all the world is supposed to know, and to which every one is supposed to refer: but as a matter of fact, individuals have neither the time nor the means of becoming themselves the verifiers of the measures which they employ. The Governments must, therefore, have agents charged to verify the measures in use and compare them with fixed standards.

The importance of this verification is very great in every point of view. The simplicity of the system, the resources which it offers for calculations, the theoretic precision of its basis, are vain and useless if the practical operations are affected by error in the quantities.

It is evident that with a system simple and unique as is the metric system, the administrative service of verification may be done with greater perfection at an equal expense, or with the same degree of perfection as under the old régime of the country, if found sufficient, at much less expense. The Commission sees in the usage of this system the guarantee and condition of an administrative verification easier and better.

Nomenclature.

Nomenclature.—The Commission have considered whether it is well to adopt with the metric system the Greek and Latin nomenclature which serve to designate the multiples and sub-multiples. In Holland, for example, the metric measures are used with the names of the old measures which come nearest to them, with a view to facilitate the popular reception of the new system. But most competent men in Holland regret this arrangement. The Greek and Latin prefixes serve as definitions of the measures which they designate. Though the people cannot as easily as the intelligent classes see the logic which led to their adoption, still primary instruction has spread among the masses an intelligent knowledge of their terms, which define the decimal relations. In practice the words are shortened, as the kilogram is called a kilo. On the other hand these terms, having a Greek and Latin origin, and not belonging to any modern nation, are best adapted to serve as international formula, and to extend the unification, without the necessity of any book for translating from one language to another the different names of the same thing.

It seems, besides, that during the period of transition from the complete disappear-

ance of the old system, and the practical adaptation of the new metric system, it would be dangerous in practice to give to metric measures names borrowed from the series of old measures, since in that case the same denomination would designate different objects; nothing but confusion would result from it.

Inconvenience of a Mixed System of Transition.

Inconvenience of a Mixed System of Transition.—For the same reason the Commission is against the adoption of every provisional transitory system formed in part of the national system and in part of the metric system, combined with a view to facilitate the definite introduction of the latter; such, for example, as the creation of a legal metric foot, which would be exactly the third of the metre. Instead of two units of length, there would thus be three, viz., the old foot, the new foot, and the metre, and this would increase the chance of confusion, and would make the people acquire a custom which they would have afterwards to abandon. France, which in 1812 tried this method, was compelled to abandon it, and to return, in 1837, to a law which rendered obligatory the adoption of the metric system in all its purity, and with its logical scale of denomination.

In conclusion, the Commission thinks that the Governments should endeavour to bring about the substitution, as soon as possible, of the metric system, but as it is in use in the West of Europe in its integrity, and in several other countries, in lieu of other old systems of weights and measures.

When this system is first introduced and rendered legal, but in a permissive manner only, it cannot at once be rendered obligatory to the exclusion of every other. A certain time is necessary for the change of habits and materials. This time is different according to the state of different countries and their degree of instruction, and it belongs to the Governments alone to appreciate the duration to be given to it. We may observe, however, that the experience of several nations has shown that too long a delay would not facilitate in a sensible manner the accomplishment of the object. In all cases it is desirable that the Government should take at once the necessary measures:

1. To prescribe the study of the metric system in all the schools, and to exact the knowledge of it in all public competition.

2. To introduce its exclusive use in scientific publications, in public statistics, in the Post-office, in the Custom-house, in public works, and in such other branches of the administration as the Government may think desirable.

The Commission does not think that it is its duty to enter into the preparation of the standards, and into the means of obtaining exact copies of the prototypes in Paris, the possession of which is the indispensable preliminary of all metric reform. The third general proposition expresses the opinion of the Committee on this subject. The administration of each country will see the degrees of exactitude which these standards should possess.

The Commission declare that the present Report embodies the expression of their thoughts and the substance of their conclusions. It hopes that the competent authorities of different nations may give heed to the wishes of science and the manifestation of public opinion.

Discussion of the Report on Weights and Measures.

After the reading of the Report the President announced that any one who wished to address the Conference should send his name to the platform.

M. Leone Levi stated that in England the mass of the people, accustomed to the national system, manifested but little interest in a reform which was opposed to the tendencies, necessarily conservative, of the people and the Government, but that with enlightened men it was different. The Chambers of Commerce, the British Association, and the International Decimal Association, seconded with all their efforts the adoption of the metric system.

M. Leone Levi gave his testimony to the liberality with which the Imperial Commission received the proposal of a special Exhibition of Weights and Measures, and the assembling of an International Conference, and after having recalled the services rendered by Mr. James Yates to the cause of the metric system, congratulated France on her having been so often, in the path of progress, at the head of civilized nations.

The President was glad that it was to English initiation that both the Exhibition of Weights and Measures, and the Conference proposed by M. Leone Levi, in the name of the two Associations of which he was delegate, were due. M. Mathieu stated the rapid progress made by this question in England: in 1851 no one spoke of the decimal

system; in 1855 the question of the metre began to be discussed; and in 1862 the metric system was proposed for the adoption of the Government.

The President fixed Tuesday, June 25, for the next meeting, and the Conference adjourned.

M. Wolowski thought that the discussion should not be much prolonged on the excellent Report of M. Jacobi, but that it should rather dwell on the coinage.

M. Wolowski announced at the same time that he wished to speak against the conclusions of the Committee.

The meeting adjourned at half-past 2.

Second Sitting.—*Tuesday, June 25, 1867.*

Presidence of M. Mathieu.

There were on the platform Messrs. de Jacobi, the Baron de Hock, Becquerel, Baudrillart, and Leone Levi.

MM. de Billy, de Lapparent, Peigné and d'Ussel, Secretaries.

The Minutes of last meeting were read and adopted.

Letters of apology were read from MM. de Lavernay, du Pré, Bidermann, Malaguti, Fellows, Lord Fortescue, Sir John Bowring.

The President announced that the Committee of Weights, Measures, and Money, resolved unanimously to offer the presidence of the Conference to His Imperial Highness Prince Napoleon. This offer has been accepted by His Highness, and he would take the chair at the next meeting.

The discussion of the Report on Weights and Measures then commenced.

Discussion of the Report on Weights and Measures.

M. Wolowski was happy in giving his entire adhesion to the propositions adopted by the Committee.

M. Leone Levi admitted that the Report was very clear and exhausted the question, yet he was of opinion that some observations made throughout the Report would gain much by being drawn up in the form of resolutions, so that all the important questions therein treated might have due prominence and clearness. M. Leone Levi read a series of propositions which he thought would realize the suggestion.

The President said that the Committee contented itself in putting forth general principles, and would not enter into details of an administrative character.

The Baron de Hock thought that the Committee had acted wisely in not putting in the form of resolutions secondary questions likely to give rise to difficulties.

M. de Jacobi added that all that could excite the susceptibility of Governments had been carefully avoided, and that to its appreciation all matters of detail must be left.

M. Peligot took advantage of the presence of General Morin and M. Tresca to ask some explanations on the state of preservation of the standards of French measures, in answer to the observations made by several members at the meetings of the Committee.

General Morin stated, that the standard of the metre deposited at the Conservatory was exactly the same as that at the Archives, which is better preserved by not being exposed to too frequent comparisons.

M. Tresca gave details respecting the comparisons recently made by the Administration between the standards at the Archives and those at the Conservatory, the difference observed being trifling for the metre, and extremely small for the kilogramme.

The President confirmed these results, and announced that the Committee of Weights and Measures had formed a Special Commission, charged to ascertain the state of preservation of these standards. This Commission will make a Report which shall be published presently. The President, answering afterwards to objections often made as to the exactitude of the calculations of the primitive metre, stated that in consequence of the irregularity of the terrestrial sphere, different meridians would not give the same result, and we must, therefore, accept what has been done.

State of Metric Standards.

M. Leone Levi having proposed that a wish should be expressed that the kilogramme should be placed more in harmony with the present state of science, MM. Mathieu, Peligot, and Wolowski said that such a question was not important in practice.

M. Tresca stated the limits of precision imposed to verifiers of weights and measures of commerce. He showed that the tolerance for weights of commerce is five hundred times greater than the error which may result from the use of the means

of verification which science supplies. In practice, therefore, the question had no interest.

After these explanations the Report of the Committee of Weights and Measures was adopted unanimously, and the discussion on coinage was postponed to Thursday, 27th June.

The meeting then adjourned.

Third Sitting.—*Thursday, June* 27, 1867.

Presidence of His Imperial Highness Prince Napoleon.

There was on the platform:

MM. Mathieu, de Jacobi, Baron de Hock, de Baumhauer, Baudrillart, Leone Levi; M. Becquerel, Secretary. De Billy, de Lapparent, Peigné, and d'Ussel, Assistant Secretaries.

At the opening of the meeting His Imperial Highness made the following address:—

Speech of His Imperial Highness Prince Napoleon.

"Gentlemen,

"I thank you for the honour you have done me in placing me in the chair. I am very sensible of the spontaneous proof of kindness manifested by your election.

"Let me hope that it is not only for my person, since I cannot certainly pretend to bring much light into this meeting of men of science and economists; but you have been so good as to count upon my goodwill and energy in order to obtain a general system, and as uniform as possible, of weights, measures, and coins in the principal States of Europe and America.

"The choice which you have made in naming me as your President shows that even one's faults may be advantageous when we know how to utilize them. Certainly stubbornness is a defect, yet in putting it altogether at your service, in order to attain the object which we prosecute, it may be useful to you.

"To save time I do not wish to enter into the advantages of an international coinage; your conviction is formed in this respect, and I would be less able to do it than any of you. We have come here to arrive at a result from a certain number of general principles, yet we have not to discuss principles, but to find out the best means to make them triumph.

"At the same time that you were proceeding with my election, His Majesty the Emperor was so good as to designate me as President of the Diplomatic International Conference. It may be useful, not for you, but for the public, to distinguish well the character of these two meetings, so that it may serve as a guide to the different conduct which we may take in them.

"The International Diplomatic Conference for the Unification of Money is composed of representatives of all the Governments who have answered to the appeal of the French Government. There, evidently, one must act with circumspection, and with a great sentiment of conciliation. Whilst endeavouring to come as near the object as possible, we must not ask too much lest we obtain nothing, and especially we must remember that in a Diplomatic Conference we do what we can and not what we wish.

"Your meeting here, on the contrary, over which I have the honour to preside, is a free association which should seek more to advance certain principles and to promote the general object in view than to enter into the means of execution, which do not belong to it. This meeting can proceed better in the way of counsel than of decisions. From this character of our free association there result the modes of action and the conduct we should pursue. It is above all on public opinion that we must act, that is our true, and I may say, our only support. It is not necessary that with distinguished representatives of countries which are in possession of all their rights I should insist upon the means of action which should be used, and which resolve themselves in a moderate but incessant agitation for obtaining what we wish.

"We have to enlighten and draw public opinion, this true Sovereign of the modern world, so that it may influence your respective Governments and give them the necessary will to surmount the difficulties for obtaining a better system of coinage.

"If, as I have stated, the proceedings of the two Conferences must be different and yours can only look to a more distant result, it is evident that you require above all perseverance. I do not think that you have anything to fear by being too radical; be sure that, in practice, whatever be your requests, even though they be supported by public opinion, you will not obtain all you ask. Do not fear, therefore, to ask much to obtain little. I know that the views of the French Government, as well as those

of some other Governments, are very large and very liberal. A small number of them, though inspired by sentiments as loyal and as sympathetic for the unification of money, are more afraid and hesitating to enter into this path unless greatly stimulated by public opinion. Well, gentlemen, it rests with you to act upon the celebrated words 'Knock, knock, a long time, and loudly, and it will be opened to you.'"

We are now proceeding to deliberate on the propositions which have been drawn up by the Committee.

The President then called on Baron de Hock, Presiding Councillor of His Majesty the Emperor of Austria, Member of the House of Lords, to read the resolutions on coinage.*

Report on the Uniformity of Coinage.

Report on coinage

The inconveniences which result from the diversities of the monetary systems are greater than those which arise from the diversities in the systems of weights and measures. The latter are limited to the trouble and loss of time occasioned by the long calculations necessary to pass from one system to another, the things which are to be weighed or measured remaining the same and may be used everywhere. In the case of money, on the contrary, besides the necessity of making the same calculations of conversion, the things themselves, that is the coins, lose a part of their utility in passing from one country to the other.

The causes which render the diversity of money more troublesome than that of weights and measures make it more difficult to arrive at the unification of money than of weights and measures, since in so doing it becomes necessary to change not only the measures of money but the money themselves. Thus the change does not only produce greater expense, but is more directly against the habits and prejudices of the people.

For these reasons the efforts for the unification of money have commenced later and have proceeded with greater timidity than those for the assimilation of weights and measures. Still they were the same Statistical Congresses, International Associations, Commissioners and Juries of Universal Exhibitions that have proceeded on this double road; and they have obtained results sufficiently satisfactory if we take into account the great difficulties that are to be conquered. On the 23rd December, 1865, France, Italy, Belgium, and Switzerland signed a Treaty establishing a Monetary Convention in all the extent of their territories. Already the Papal States and Greece have entered into negotiations for giving their adhesion to this Convention. Austria, as well as Spain, Portugal, Roumania, and even the United States of America, are on the point of doing the same, and at this moment, when the present Report is being prepared, an International Monetary Conference, summoned by the Imperial Government, and presided over by his Highness the Prince Napoleon, who has deigned to accept the presidence of our Free Conference, has terminated its labours, establishing the basis on which we should raise the universal unification of money.

The Committee for the unification of weights, measures, and coins, instituted by the Imperial Commission of the Universal Exhibition, commenced its labours a long time before the International Conference, and terminated them, by deciding in favour of the unification at the same moment as this Conference began to consider its first resolution. These two Conferences have worked in a manner perfectly independent one of another; with the exception of three or four persons, they were composed of different men, and yet they arrived both to the same conclusions, differing only in the mode they are drawn out. This is certainly a most eloquent testimony to the truth and power of the views thereby put forth, and of the influence which they have already exercised on men of science, finance, and administration in all countries.

Certainly, a common system of money would provide one of the best means for the development of universal commerce. Such money, accepted by every State, and by every particular, would save the loss of time and trouble occasioned by the conversion necessary for obtaining the precise value of different coins; would reduce to the minimum the course of exchange, that troublesome burden of commerce; would put an end to the loss resulting to industry and to travellers from money changing; would diminish the wants of circulation, and have even the effect of diminishing the crises which arise in trade by the accumulation of money in any place and its absence in another.

The idea of a unification of money is so elevated and useful that as soon as it will become happily possible no people of progress and desirous to enter in the great and fruitful path of universal commerce will be able to be indifferent or resist it, except for motives of the greatest importance.

* This Report was prepared after the Conference, and after the resolutions submitted had been adopted in a somewhat modified manner.

With a view to the unification of money, the Committee prepared nine propositions, which have been submitted for discussion to the Free Conference. The following has been decided upon almost unanimously by the members present at the Conference :—

Propositions.

"Whereas the adoption of a uniform system of coinage presents evident advantages as regards convenience and economy in the settlement of international exchanges, and recommends itself to the attention of all enlightened Governments :

"Whereas, on the other hand, such a desideratum cannot be realized unless several nations are prepared to sacrifice their old and habitual instruments of traffic, whilst it is important that the change may be effected in a gradual and continuous manner, and that the mode of effecting this change should be as simple as possible and free from all incidental complication :

"1. The first condition to be attained is the adoption by the different Governments interested in this question of a similar unit in the issue of their gold coins.

"2. It is desirable that these coins be everywhere coined of the same fineness of nine-tenths fine.*

"3. It is desirable that each Government should introduce among its gold coins one piece at least of a value equal to that of one of the coins in use among the other nations interested, so that there may be among all the systems a point of common contact; from that each nation will afterwards labour to assimilate gradually its system of coinage to that which may be chosen as a uniform basis.

"4. The series of gold coins now in use in France, being adopted by a great part of the population of Europe, the same is recommended as a basis of the uniform system.

"5. Whereas, in consequence of accidental and happy circumstances, the most important monetary units may be adapted to the piece of five francs in gold by means of very small changes, this piece seems the most convenient to serve as a basis of the monetary system; and the coins issued upon such a basis might become, as soon as the convenience of the nations interested permit, multiples of this unit.†

"6. It is desirable that the different Governments should decide that the coins issued by each nation in conformity with the uniform system proposed and agreed upon, should have legal currency in all such countries.

"7. It is very desirable that the system of double monetary standards be abandoned wherever it yet exists.

"8. It is very desirable that the system of decimal numeration be universally adopted, and that the coins of all nations be of the same fineness and the same form.

"9. It is desirable that the Governments should come to an understanding for adopting common measures of control, so as to guarantee the integrity of the coinage both when issued and whilst in circulation."

We take the liberty to add some explanations to these propositions.

Reasons for the method suggested. Comparative merits of different plans.

Propositions 1, 2, *and* 3.—To arrive at the unification of money there are different methods, all of which have not the same merit, above all from a practical aspect.

Thus we might be content with creating everywhere a coin of the same intrinsic value that is of the same weight of gold or of silver fine, without any regard to the unit of weight employed, or to the fineness of the piece, or to its form. We should have certainly in this manner a theoretic equality, but not a practical one. It is the weight and form which, in circulation, decide the acceptance or refusal of a coin. It would be almost impossible to try to make people accept, for the same value, pieces different in weight and form; moreover, if the pieces have not the same unit of weight or the same fineness there would always be some difference among themselves, especially in consequence of the irrational relations between the different units of weight. These differences may be small, but they are sufficiently considerable, to cause that the limits of tolerance fixed for the admission of money not of proper weight or fineness, would not be the same, and thus coins good in one country would stand in danger of not being so in another, a circumstance which might hinder certainly the international circulation of coins.

Another system might be to create in the countries which adhere to the monetary union, a coin based on the same unit of weight and fineness, and yet entirely different in value; for example, pieces of 5, 10, and 20 francs in one country, and in another, pieces of 4, 8, and 16 francs. Certainly, in that case the international circulation would be easier than it is now, but no uniformity of coins would then

* This proposition, as submitted to the Conference, did not state what degree of fineness should be adopted.

† The proposition, as submitted, was as follows: —"Whereas, in consequence of accidental and happy circumstances, the most important monetary units may be adapted to the piece of five francs in gold by means of very small changes. This piece seems the most convenient *unit of value* to serve as a basis of the monetary system; and the coins issued upon such a basis might become, as soon as the convenience of the nations interested will permit, multiples of this unit."

exist. Besides, the trouble and expense of recoinage being the same, if we wish to arrive at a more perfect coincidence, it will doubtless be better to arrive at once at the most perfect.

Lastly, we might suppose an absolute unification, that is an identity in all the coins, both current and divisional. But it is impossible to deny that such unification is as yet impossible; the interests, habits, and prejudices of the people are too strong against it.

The object of uniformity in coinage is to facilitate and increase international commerce, which demands coins without fractions. It is by such coins that the price of merchandize and the rate of bills are calculated. Fractional coins have only a local value.

Neighbouring countries only have an interest in having even token coins identical, but in such cases their identity may be realized by special conventions, without the need of universal unification. Therefore, provided the different nations have for their coins the same standard of fineness and weight, whereby the comparison of a coin with another may easily be made, it is sufficient that between any two countries there are only one or two identical pieces. The complete assimilation of the system may be reserved for the future.

Such is the sense of the three first propositions.

Gold preferable to silver for international coinage.

Propositions 4 *and* 5.—It is only gold coins that can serve as international coins. Gold in effect is more easy of transport than silver, and the expense of coinage of the same, is less considerable. Thanks to these requisites, gold is more convenient than silver for transactions and transport from one country to another; it acts in this mode as a remedy to monetary crisis, and by it the exchanges are reduced to a minimum.

Among all the gold coins of different countries the French gold coins alone can be taken as a basis of the desired uniform system. In effect they have already been accepted by more than 70,000,000 of persons, and they will be by 100,000,000 more this year. Lastly, both on account of their decimal division, and the relation, though a little complicated, which exists between them and the metric units, (there are in effect 155 pieces of 20 francs in 1 kilogramme) they correspond to the system of weights and measures recommended by so many authorities to universal acceptance.

Both in the Committee and in the free Conference it has been proposed to adopt a monetary system altogether new, re-establishing for gold coins an immediate and simple relation with the metric unit, which the organic law had established for silver coins. According to this idea, a gold coin should be of the weight of 5 grams $\frac{9}{10}$ths fine the monetary unit. Without ignoring some scientific merits possessed by this system, the Committee and the Conference have not hesitated one moment to refuse their adhesion to it. It is only a system already adopted by a great part of the world, that could have any chance of being generally adopted; the evidence of this may be found in the Monetary Convention of the 25th December, 1865, in the recent and proximate adhesions to this Convention, and in the vote of the International Monetary Conference. A system altogether new could not be admitted by the nations having the French system, unless it had a better chance than that of rallying round it other nations. Besides the French system, containing small units, such as 5 and 10 francs, can be easily exchanged with the monetary units of other states, such as the English sovereign, the United States' dollar, the Austrian florin, there being not much difference between them and the French units. This advantage would not exist with the proposed coin of 5 grams of gold $\frac{9}{10}$ths fine. This piece would in effect be worth 15 francs 50 cents., having no relation whatever to the existing coin, and would be a common factor, too large to arrive at an equation.

The same reason also led the Committee and Conference to choose for common factor the piece of 5 francs, which signifies that all the Governments adhering to it will be bound not to issue any gold pieces except of 5 francs or a multiple of 5 francs. To avoid misunderstanding, we should add that the Committee never meant to impose on the Governments the obligation of issuing pieces of 5 francs, rather than pieces of 10 francs, or of any other multiple of 5 francs.

The Committee think these observations will serve for explanation of propositions 4 and 5.

International coins to have legal currency.

Proposition 6.—But, even should the preceding propositions be adopted, a complete community of coins between different countries would not yet exist. To obtain this object, the coins issued by a nation according to the uniform system, must have legal course amongst all the nations of the Union; this is provided in proposition 6.

Perhaps at the commencement it would not be necessary to recognise all the coins

issued by the different nations, but only some of them, perhaps also we might remain content with their reception by the public offices, without giving them a legal and forced currency. The Committee have thought nevertheless it their duty to propose what would be more favourable to the development of international commerce.

Objections to double standards.

Proposition 7.—The community and identity which the Committee seek to establish are restricted to gold coins. From this it might be supposed that the States of the Union would have still the right to maintain their silver coins together with their gold coins and with the same legal course; in other terms, that they might preserve or introduce the double standard. This is what proposition 7 seeks to prevent.

The object of the monetary union is not only to have identical coins issued by different nations; it is also necessary that these coins be everywhere maintained in circulation, and that their value be scrupulously maintained. This would not be the case with a double standard of gold and silver, that is, were money of gold and silver to have the same legal course.

Gold and silver may be admitted without difficulty when one metal only is the principal money, having alone legal and unlimited course, and the other is simply a token having legal course only for small payments, or permissive only and to be accepted or not at the pleasure of the party and at the market price. In this case, the two kinds of money would not come in competition with one another, and they may on the contrary exist together even to the advantage of circulation.

But were we to give legal course both to gold and silver coins we should always fear a displacement of one or the other.

What is still less admissible is to establish a permanent and invariable relation between the gold and silver standard as is the case in France and in the United States, and in some republics of South America.

The relative value of gold to silver is variable, and varies from one market to the other according to supply and demand. Sometimes one, sometimes the other of these metals, according as the price is above the legal rate, disappears therefore forcibly from circulation; it is exported or melted, and the depreciated metal alone remains in circulation. It follows, morever, that the coin having greater intrinsic value, disappears first, and the coin of less fineness or legal weight remains in circulation.

These fears are not gratuitous and theoretic; the experience of France and of all the States having a double standard, shows the reality of this. Before the discovery of the rich mines of California, Australia, the North-west of the United States, and the American possessions of Great Britain, gold coins having a price higher than the legal rate, were the first to go out of circulation, and could only be procured at a premium. After these discoveries the contrary was the case; gold having become lower than the legal rate, silver disappeared. All the mass of silver that the Bank of France sought to gather together at great expense, to obviate a want of silver, was exhausted in a little time; the retail trade suffered much, and there was no other remedy at last but to coin gold pieces of 5 francs, and silver token coins of 0·835 fineness.

In the Republics of South America, which preserved the double standard of the Spanish system, the inconvenience produced by the abundance of gold was still greater; the silver disappeared with rapidity and was only replaced by coins of bad alloy, or by depreciated paper money.

The monetary union would exist only in appearance, if each nation were able to replace, at any time, the coin of the union by other coins, or to diminish the weight agreed by the union; and this would take place under the system of the double standard; besides, speculations in coins, which the unification of coinage wishes to abolish, would not cease, and would augment in proportion to the extent of the union.

It is for these reasons that proposition 7 declares that the system of double monetary standard should be abandoned wherever it exists.

Form and fineness of international coins.

Proposition 8.—Proposition 8 demands, again, that the coin of all countries should be of the same fineness, but it adds that they should be of the same form. As all present coins are round, and as, according to the preceding propositions, the coin of the same value should have the same weight, the identity of dimensions is given by the identity of diameter. As regards the inscription, the different Governments should have always the liberty to issue coin with the effigy, emblem, and denomination they please; but it would be well to add on the piece, the relation between its value and that of the piece of 5 francs, admitted as a basis of the system. They might also add the denomination of "Coin of the Union." Proposition 8 recommends also the decimal numeration, for the same motives as in the case of weights and measures.

Proposition 9.—Yet with all this, the monetary union would not be a blessing, but

rather a misfortune, if by vicious process, by carelessness in the fabrication or circulation, there should be introduced in commerce coins not of the exact fineness or weight. This would cause an active speculation on the coinage, and the whole system would be spoiled. To avoid this mischief, it is necessary that the Governments should understand each other on the measures of control and preservation to be taken in common, in order to guarantee the integrity of the coinage. This is what is proposed to establish by the last proposition of the Committee.

If the Committee has not entered into greater detail upon these measures of control, it is because it wished scrupulously to avoid entering into those arrangements which must be made between the Governments entering in the monetary union. The Committee, in perfect accord with the Conference to which it has submitted these propositions, think that they have sufficiently defined the utility and necessity of the universal union of money, and that they have established the principles on which it should be based.

Discussion of the propositions.

On the proposition of his Imperial Highness, it was decided that there should not be any general discussion.

The Conference adopted the "considérants," as well as the first proposition of the Report.

M. Leone Levi proposed to give precision to the second proposition, by fixing the uniform fineness at $\frac{9}{10}$ths fine. The amendment was confirmed by the Conference, which adopted the proposition thus modified: "It is to be desired, that these coins should everywhere be coined of the fineness of $\frac{9}{10}$ths fine."

The third proposition was afterwards adopted.

M. Michel Chevalier's plan of adopting 5 or 10 grams of gold as a universal unit.

M. Michel Chevalier wished to offer some observations on propositions 4 and 5.

The speaker was of opinion that the monetary unit should only be a branch of the general system of weights and measures which is the metric system, the essence of which was to have the whole subordinate to the meter. The coinage ought not to stand on an independent basis; and notwithstanding the accidental and happy circumstances mentioned in proposition 5, M. Michel Chevalier considered that it would be preferable to change radically all the monetary system, and to adopt everywhere as a unit a weight of gold of 5 or 10 grams at $\frac{9}{10}$ths fine. The speaker was convinced that the English, faithful guardians at all times of the fineness of their coins, would refuse to lower the pound sterling to 25 francs; nor would it give them less trouble in calculation to make this small change, than to make one of a still more radical character.

M. the Count d'Avila considered that it was asking what is impossible to exact—a general recoinage. The Convention agreed between France, Italy, Belgium, and Switzerland furnished a solid basis on which it was desirable to rest; we must not neglect to profit of any approach which a happy circumstance permits to operate between the existing coins, of which he mentioned many examples.

M. Feer Herzog would accept the piece of 5 or of 10 grams, if he had any hope that it would become the universal coin; but experience has shown that monetary units are not artificially created. The franc owes its easy adoption to its similitude to the ancient livre tournois, and the attempt made in Germany, in 1857, to create a common gold coin of a metric weight has proved a complete failure.

M. Michel Chevalier said that it was doing injustice to human intelligence to think that it was incapable to abandon old habits, but, in reality, we would return to the old practice by giving back to money its true significance, an exact weight, as the words pound and marc prove. The speaker compared the agreement, proposed by Article V, with what we should have to do were we to try to find a universal measure of length in the numberless kinds of feet employed in the different countries.

Professor Levi's proposal to adopt 10 francs as the unit.

M. Leone Levi was in favour of adopting propositions 4 and 5, by substituting 10 francs for 5 francs, the piece of 5 francs being too easily lost, and too small for transactions, whilst that of 10 francs would have the advantage of being worth 100*d*., and of entering into the habits of the English people (see his speech, page 65).

His Imperial Highness observed that this change was needless, since the unit of 5 francs would adapt itself to the piece of 10 francs, as well as to that of 25 francs.

Baron de Hock thought that it would be well to keep the unit of 5 francs, because it is sufficiently small to allow all States to rally round it.

M. Wolowski, returning to the original debate, showed that what was wanted in money was fixity, which may be found as well in a fractional number, as in an entire number.

General Fare' having said that the adoption of the piece of 20 francs was already a derogation of the metric system, his Imperial Highness justified the authors of the system by showing that at the commencement of this century the only money in circu-

lation was of silver, and that, in fixing the monetary unit at 5 francs, we were following the metric system.

According to General Favé the essential advantage of the metric system consists in the invariability of the primitive measure, and round numbers have no importance; otherwise it was not desirable to change roughly the habits of the people. We may be convinced of this when we see what difficulty the metric system still finds as regards land measure. The speaker approved altogether of propositions 4 and 5, and expressed the hope that all the gold pieces modified would have new names.

M. Ruggles declared that the United States wished the unit of 5 francs, because it was destined to become the universal monetary unit, thanks to the immense circulation of the American dollars. According to the speaker, the resistance opposed by England to this measure came from fear lest the dollar fraternally united to the piece of 5 francs should take the place of the pound sterling.

M. de Jacobi thought that there was no necessary connection between the metric system and the coinage, and that the advantage of simplifying some calculation was scarcely sufficient to justify the sacrifice of more grave interests.

M. Matthieu defended the propositions of the Committee, showing that it was necessary to take account of the present condition of international exchanges.

M. Mannequin admitted that it was difficult to make changes upon settled habits and that it was not well to make frequent changes; it was, therefore, the more necessary to adopt a system sufficiently perfect to give us the hope that it may become universal. The proposals of the Committee did not realize this condition, it did not suppress the exchange, it had too narrow a basis for the large edifice built upon it.

M. de Baumhauer declared that the Netherlands would not adhere to the propositions of the Committee, the silver coinage being their only legal coin based upon a metric weight, and it would be going back were they to depart from this condition.

After this discussion the 4th proposition was adopted.

On proposition 5, M. Leone Levi declared that he could not approve of taking the piece of 5 francs as unit.

M. Emile Pereire observed that, on the contrary, it was most important to preserve it, since it corresponded to the piastre, which was the universal coin of ancient times.

After a discussion in which MM. Leone Levi, Feer Herzog, and General Favé took part, it was decided that the words "the unit of value" should be removed from proposition 5, and thus modified it was put to the vote and adopted.

The Conference afterwards adopted Articles 6 and 8 and the discussion on Article 7 was remitted to the next meeting, which would take place on Saturday, 29th June, at half-past 2.

The meeting adjourned at 5·15 P.M.

Fourth Sitting.—*Saturday, June* 29, 1867.

Presidence of His Imperial Highness PRINCE NAPOLEON.

The Conference is opened at 2·35.

There were on the platform MM. Mathieu, De Jacobi, the Baron de Hock, De Baumhauer, Baudrillart, Leone Levi.

M. Becquerel Secretary.

MM. de Billy, De Lapparent, Peigné, D'Ussel, Under-Secretaries.

The Minutes of last meeting were read and adopted.

The order of the day called the discussion on the last propositions relating to coinage.

Discussion of the question of the double standard.

Article 7 was divided into two parts; the first having regard to the decimal system was adopted; and the discussion was opened on the second part concerning the abandonment of the double standard.

M. Wolowski demanded the suppression of the proposition since the question did not belong to the purely practical subject before the Conference. The Conference determined on the condition of an international gold coinage; the object was, therefore, attained without any necessity of raising a problem on which public opinion was still divided, and which each nation should resolve for herself and according to her own convenience. Entering into the question, M. Wolowski showed that there cannot properly be a standard of value because the measure which it admits is necessarily variable. The only point is whether the intrinsic value of money is likely to change less with one metal than with two metals. The Speaker preferred the second solution

on account of the inevitable changes which affect the production of metals. Besides he was of opinion that the Law of Germinal An XI, which gave authority to pay in gold or in silver, had been faithful to the spirit of the Code Napoleon, which proclaimed that every Convention must be interpreted in favour of the obligor; this wise provision of the law gave to all contracts a relative fixity, and upon it calculations for the future could best be founded. M. Wolowski thought, on the other hand, that it was inexpedient to take from silver the quality of legal tender at a time when the annual production of gold had been diminishing in a sensible manner for the last ten years, whilst that of silver was in an ascending ratio. Moreover, by withdrawing the silver coin we would diminish the half of the mass of precious metals in circulation which placed against new arrivals a force so much greater as this mass is more considerable. Lastly, the forced circulation of paper money must cease one day in Austria, Russia, and America, and when that takes place a new demand of metal for coinage would take place which it would be necessary to meet; otherwise the value of the only metal having alone legal course would increase so much as to turn all contracts against the debtors. In whatever degree this rise should take place it would be inevitable, and would increase in proportion the debt of the State and of individuals.

M. Mannequin in a written speech showed that no person on the Committee had advocated the cause of the double standard, and that England as well as America were in favour of gold as the sole standard. After having said that convenience was one of the essential conditions of coinage, and that it was realized only in gold coinage, M. Mannequin endeavoured to prove that the value of gold was more steady than that of silver, and that the balancing effects of the double standard had not the advantages that M. Wolowski attached to them. The speaker gave a picture of the financial calamities of South America, the responsibility of which he threw on the system of double standard; lastly, he declared that such a system touched the right of property by giving power to the debtor to choose to pay always in the depreciated metal.

Baron de Hock was of opinion that the Law of Germinal An XI sought to realize a work against nature in establishing a legal relation between the value of gold and silver; the system of double standard does not hinder one of the two metals to be exported at a given time, and it was a strange theory to think that the State could be judge of value and of coinage. As a matter of fact the countries submitted to the double standard are those which suffered most from a financial crisis.

M. Baudrillart stated that the system of double standard legalized an injustice, by making it optional to use either of the two metals; it put the creditor in the arbitrary power of the debtor, and sacrificed entirely the small fundholder, the professional man, and the workman. The alleged compensation between the two metals was an illusion, because one cannot calculate at pleasure whether the variations of the one counterbalanced those of the other, and if the immense influx of gold of the last years had not produced a greater crisis, it was not to the double standard that we owed it, but it was to the enormous movement of business which had taken place, and which supplied an unusual outlet to coinage. Lastly, the adoption of a double standard would have the immense inconvenience of rendering impossible any arrangement with England and America.

M. Wolowski did not wish to prolong the debate, and would limit himself to answer the reproach of injustice addressed to his system which he thought as favourable as the other to the small fundholder and to the workman. He maintained that the Law of Germinal An XI had destroyed the *alea* and created between the two metals a kind of mutual insurance, whilst the facility of arrivals balanced the conditions; if the price of a metal was lower, the increased demand counterpoised that of the supply, and the difference is small, to the great benefit of creditors and debtors. The other systems only displaced the injustice, it did not destroy it.

M. Feer Herzog admitted that there is not properly a standard of value, but a measure composed of a weight, and of the designation of a certain kind of metal. Now it was impossible to establish a fixed relation between two different metals. As regards the manufacture of coinage, M. Feer Herzog admitted that it is useful to have two metals in circulation, but it is not necessary that both of them should be legal tender. To fix by law the relative value of these two metals, was to establish by a legislative measure the lawfulness of speculations carried on on the premium of the more scarce metal, and which benefited only great financiers.

After this discussion the proposition was put to the vote and adopted by a great majority.

The meeting then adjourned.

Fifth and last Sitting.—Tuesday, July 9, 1867.

There were on the platform—

MM. de Jacobi, Baron de Hock, Von Baumhauer.

M. Becquerel, Secretary; MM. de Lapparent and d'Ussel, Assistant-Secretaries.

The Minutes of last meeting were read and adopted after some observations by MM. Wolowski, Mannequin, and Baron de Hock.

The Secretary read the Report drawn up by Baron de Hock in the name of the Sub-Committee on Money.

M. de Jacobi made the following observations:—

Declaration as to the scrupulous adherence to the fineness of the coins.

"M. the Baron de Hock gave in the Report which we have heard, explanations so conclusive on the propositions agreed upon by the Committee that it seem bold to add any word. Nevertheless, in course of the discussions in the Committee and Conferences I was anxious about something which only recently cleared itself in my mind. This refers to the 9th proposition, and could well be passed over in silence, leaving to future Conventions the care of taking it under consideration, but to satisfy the conscience I am obliged to state it at present.

"It refers first to the need of declaring energetically the sacred character of the fineness of money, and to the necessity of insisting that no fiscal measure whatever should be taken to justify the alteration. I insist on this point the more especially as no Article referring to the principle of preserving with the most rigorous integrity the fineness of money, was inserted in the monetary Convention of 1865, and it was the duty of this Conference to bring this principle to the attention of the Commissioners of a future Convention.

"A second point of which I wish to speak concerns the tolerance. The tolerance is not an arbitrary stipulation, it is the limit of errors which belongs to every thought, to every chemical analysis, to every composition of alloy, and as such it depends on the precision of the balances, and the methods employed in the fabrication of money; it may be determined rigorously by applying the calculus of probabilities.

"To render unprofitable the picking or melting of coins of right fineness and weight, or the use of the tolerance to cover the inevitable loss and expense of coinage, it is necessary that the different States should arrange as they like to cover their expenses and other losses, but let them leave intact the weight and fineness of coins. It is needless to say that the progress of science and the manufacture of coinage will contribute to reduce the limits of this tolerance but never to extend them.

M. Baumhauer, Member of the Academy of Science and of the Royal Commissioners of the Netherlands, then read the following Report and propositions concerning areometry:—

Report concerning Areometry.

Report on areometry.

The Committee of weights, measures, and coins has the honour to call the attention of the Conference to the necessity of using for areometers a scale in harmony with the principles of the decimal system.

The areometer ought not to be neglected when we speak of weights and measures since, destined to indicate the volume which liquids exhibit under the unit of weight, or reciprocally the weight which they possess under the unit of volume, it is an instrument uniting, so to say, the balance and the weight at the same time. It is, moreover, one of the most common instruments; the convenience of its use makes it an useful auxiliary in scientific researches, and in commercial relations it has become altogether indispensable both on account of its indications and of what can be deduced from it relatively to the quantity of certain matter, whether liquid or gaseous, which the mixtures keep in dissolution. The variety of uses for which it is employed and in part, also arbitrary and national predilections, have suggested many modifications, if not in the form of the instrument which is pretty much the same, at least in the division of the scale. The result is such a complication of areometric data that it is often difficult to ascertain them, and their comparison becomes difficult even to persons best acquainted with the principles which have guided the different graduations. This complication and multiplicity of the areometric scale are not produced by any want and must be admitted by the Committee as a real inconvenience. In effect in the numerous family of such instruments, the gradation of most of them is so combined as to show immediately in liquids the proportion of matters which form the basis of their commercial value, viz., alcoometers, spirit weight, ænometers, syrup weight, acid weight, salt weight, and many more, each having a special scale. It is alleged in favour of these instruments that they are convenient in use, and that they enable one to find what one wishes

to know by a simple reading, without any calculations to execute or even tables to consult.

This advantage would be doubtless great if it was real, but in practice it becomes often altogether illusory. The scale of each of these instruments had to be established by a determined temperature, so it is only for that temperature that it furnishes exact indications. As soon as we depart from these conditions the gravity of the liquid changes and a correction become necessary. Now as it is impossible in operations of commerce or industry to bring back each time this liquid to the normal temperature, it is easily seen that the use of tables of reduction is forcibly imposed, and thus disappear all the advantages that such areometers are supposed to possess. If, now, we consider that there is no mixture, the gravity of which is in direct proportion with its constituent parts, it is seen that the scales of these special areometers must present very unequal and very irregular divisions, and that they are very difficult of construction. Besides these scales are difficult of comparison among themselves and their multiplicity is still more troublesome both in science and in practice. It is, therefore, to be desired that one only scale should replace all these special scales.

The normal areometer, with a similar scale, having to suit any liquid, the principle of its division should have reference to the direct measure of the specific volume or gravity of these liquids. It is, therefore, between the volume-meter and the gravity-meter that we have to choose. In the first, the stem, supposing it to be exactly cylindrical or prismatic, the divisions are equal, in the latter, the divisions of the scale become larger as they refer to lighter liquids.

The great facility that the division in equal parts offers both for execution and observation recommends particularly the use of the volume-meter. Nevertheless, the Committee cannot pass under silence that the gravity-metric division has the great advantage of enabling one, by a simple multiplication, to give immediately the absolute weight of a given volume of liquid—a case which presents itself very often in practice.

In any case, whether the Conference decide for the volume-metric or for the gravity-metric division, the diversity of scales ought to be rejected at once.

The determination of liquid mixtures, whatever they be, should no longer be made either by the Baumé or Cartier or by any other arbitrary scale generally determined by national predilections.

That the normal areometer may be adapted to all cases, without the necessity of giving to the stem an excessive length, recourse may be had to several instruments, neither including more than one-part of the total scale, the gradations of which may otherwise be subdivided with more or less exactness as one may wish to attain.

But all these instruments resting on the same principle should be considered only as parts of the same instrument divided for convenience of use.

It is otherwise clear that, in order that the normal areometer may be substituted in practice to the different instruments hitherto used in alco-metrie, acidi-metrie, alcali-metrie, &c., it is necessary to make for each of these special applications, tables which may facilitate the easy application of the indications of the areometer to those in view for the determined use.

In most cases a small table united to the instrument will give to the workers all the facilities that the areometers with special scales have ever given.

Such are the general principles, in the opinion of the Committee, which should serve for a point of departure when we wish to submit the areometer to a uniform rule.

The Committee would be glad were the Conference to pronounce an opinion at the same time in favour of the sole use of the centigrade division of the thermometer, and the division of the barometric scale in decimal parts of the metre.

As the result of what precedes, the Committee adopted the following three propositions:— Recommendations.

1. It is to be desired that for international transactions concerning liquids, the same system of areometric graduation should be employed in every country.

2. It is to be desired that the special scales employed for different liquids should be decimal, and based on the gravity or on the specific volume.

3. The Committee express the wish that the centigrade thermometer be generally adopted, as well as the metric scale of the barometer.

M. Tresca showed the bad condition in which liquid measures are now in France.

The uncertainty which exists, and which will always exist, in the true graduation of the Baumé areometer causes in commerce disputes without number, so that it is very necessary to return to the decimal division.

M. Peligot added that the graduation of the Baumé areometer is wilfully falsificated, and appropriated to the wants of this or that branch of commerce.

After some observations of MM. Tresca, de Jacobi, and de Baumhauer, the propositions were adopted.

The President announced that the Committee of Weights, Measures, and Coins would assemble soon for uniting the series of documents, and for resuming the work of the Committee and Conference, and that these would be addressed to the Imperial Commission, with a proposal for their publication.

The President announced also that he had thanked his Imperial Highness Prince Napoleon, in the name of the Conference, for the part he had taken in the work.

Lastly, *M. Mathieu* spoke as follows :—

" Gentlemen,

" We have arrived at the end of our work. We have submitted in succession to your deliberations the results of the preparatory work of the Committee on Weights, Measures, and Money.

" After interesting discussions, of which you preserve the recollection, and to which the presence of his Imperial Highness Prince Napoleon has given greater *éclat*, you have adopted a series of resolutions which are the faithful expression of the views of the majority, I should say of almost the unanimity, of this Assembly.

" It remains now for you to call public attention to these resolutions, because it is by that only that we can gain the adhesion of the Governments.

" Already the publicity given to the documents prepared by your care, will aid it powerfully. To help this result in a still greater manner, it seems to his Imperial Highness that it would be well to have in the month of October, towards the close of the Exhibition, a new session of the Conference; by that time we hope we shall obtain the presence at Paris of eminent men, above all from England, who, by their personal influence, will aid much the solution of the problems which interest us. In adjourning till this second session, the precise time of which will be fixed later, it remains to me only to thank you for the assistance you have given, and through which the efforts due to the initiation of the Imperial Commission will not remain without effect."

The Conference then separated, after having passed a vote of thanks to the President and Secretaries.

Report of a Visit made to the Archives of the Empire by the Delegates of the Committee of Weights, Measures, and Coins.

Examination of prototypes at the Archives and Conservatoire.

Tuesday, 2nd July, 1867, a deputation of the International Committee of Weights, Measures, and Coins, went to the Hotel des Archives, to visit the prototypes of the metre and kilogramme, and then to the Conservatoire Impérial des Arts et Métiers, to examine the copies of these prototypes, executed at the same time, and in the same conditions by the same constructors.

The deputation consisted of MM. Mathieu, President of the Committee, De Jacobi, President of the Sub-Commission on Weights and Measures; Barnard, Leone Levi, Chevalier de Parmentier, and D'Ussel, Under Secretary.

There were associated with them Dr. O. J. Broch, Delegate of Norway to the International Monetary Conference; L. P. Casella; and Professor Pisko, of Vienna.

The Delegates arrived at 2 o'clock at the Hotel des Archives. They were received by the Marquis de Laborde, Director of the Archives, who caused the four-walled iron armoury, where are deposited and kept the prototypes, to be opened.

The Delegates have established the following facts :—

State of the standard metre.

The prototype standard of the metre is a bar of platinum without any inscription or mark whatever. Its breadth is 25 millimetres, and its thickness 3·5 millimetres. It terminates at its extremities by sides perpendicular to its length, the distance of which taken on the axis of the bar, gives the length of the metre. The prototype standard is therefore a metre about.

The side when examined with a magnifier, present some slight scratches, directed in different ways.

This standard is closed in an acajo case, with red velvet lining; and the case has, in a rectangular plate, this inscription: " Mètre conforme à la Loi du 18 Germinal, An III, présenté le 4 Messidor, An VII," and at the side, " Fait par Lenoir."

State of the standard kilogramme.

The prototype kilogram is formed of a cylinder in platinum, the corners of which are slightly rounded; it bears no mark or inscription. The surface is in good condition.

It is closed in an octangular leather case with velvet lining. A silver plate above the case has this inscription: " Kilogramme conforme à la Loi du 18 Germinal, An III, presenté le 4 Messidor, An VII," and at the side the name of the maker, " Fortin, F."

The deputation afterwards went to the Conservatoire Imperial des Arts et Métiers, where they were received by General Morin, Director, and M. Tresca, sub-Director. These gentlemen showed to the delegates the copies of the prototypes of the Archives executed at the same time, in the same form, with platinum taken from the same mass of metal, and by the same makers.

A front of the metre has, at three centimètres of each extremity, an oval stamp, the end of which is marked in part by lines. On the same side, two slender clash from one end to the other, indicates the axis of the metre.

The delegates carefully examined with a magnifier the sides of this metre; they seemed more united and in better preservation than those of the prototypes of the Archives. To explain this fact, the delegates were told that at the beginning the prototypes were used for some comparisons, whilst the copy was not used. But the standards of the Archives and the Conservatoire made at the same time seventy years ago by the same artists, and restored as much as possible to their identity, have been compared by the Archives in 1864; and it resulted from these comparisons that the difference was only of 3,000 of millimètres between the two metres, and of seven-tenths of the milligramme between the two kilogrammes. These results are shown in an official report of the 5th March, 1864, addressed to the Minister of Agriculture, Commerce, and Public Works, by a Commission composed of General Morin, President, the Marquis de Laborde, MM. Tresca, Silbermann, and Froment. The Minister in entrusting the Commission with the comparison of these standards wished to secure the preservation of the prototypes of the Archives by destining those at the Conservatoire for comparison to be made with the standards of different Governments which might adopt the metre system.

After having taken cognisance of these works, and examined the instruments of comparison, the delegates declared that the scratches perceived by the magnifier on the extremities of the prototype metre at the Archives, had no influence whatever on the length of the metre, and that the state of preservation of these prototypes deposited at the Archives, both for the metre and kilogramme, was quite satisfactory.

The delegates have besides expressed the hope that two copies of the prototype metre in the form of metre à trait be constructed in platinum and deposited, one at the Archives, and the other at the Conservatoire, to serve for comparison with metres à trait.

They afterwards visited at the Conservatoire the instruments used for the comparison of standards for current verification destined for the service of the administration in the departments of the French Empire. They expressed their satisfaction at the degree of perfection introduced in these operations, the precision of which exceeded the limit of legal tolerance.

The delegates retired at 6 o'clock.

The President,

The Assistant Secretary,
(Signed) D'USSEL.

EXPOSITION UNIVERSELLE DE 1867, A PARIS.

Comité des Poids, et Mesures, et des Monnaies.

Communication faite à la Séance du 24 Mai, 1867.

Letter from Samuel B. Ruggles, Vice-President of the United States' Commission at the Universal Exposition at Paris, 1867, and specially designated as Member of Committee on Weights, Measures, and Coins, to Hon. John Sherman, Chairman of the Finance Committee of the Senate of the United States of America.

My dear Sir, *Paris, May 17, 1867.*

You are of course aware that there is a Special International "Committee," now in session at Paris, organized by the Imperial

Lettre de M. Samuel B. Ruggles, Vice-Président de la Commission des Etats Unis à l'Exposition Universelle de 1867, et spécialement désigné pour faire partie du Comité des Poids et Mesures et des Monnaies, à M. John Sherman, Président du Comité des Finances au Sénat des Etats Unis d'Amérique.

Cher Monsieur, *Paris, 17 Mai, 1867.*

Vous savez sans doute qu'un "Comité" International Spécial, siégeant actuellement à Paris, est organisé par la Commission

Commission of France, to sit simultaneously with the "Universal Exposition," and composed of delegates from most of the nations therein represented. Its object, among others, is to agree, if possible, on a common unit of money for the use of the civilized world.

It is not improper to mention, that the opinions of the Committee appear to be running strongly in favour of adopting as the unit the existing French 5 franc piece of gold.

May I ask what, in your opinion, is the probability that the Congress of the United States of America would agree at an early period, to reduce the weight and value of our American dollar, to correspond with the present weight and value of the gold 5 franc piece in France, and how far such a change would commend itself to your own judgment.

I also ask the privilege of submitting your answer to the consideration of the Committee.

With high, &c.

(Signed) SAMUEL B. RUGGLES.

Impériale de France, pour coïncider avec l'Exposition Universelle. Ce Comité, composé de délégués de la plupart des Etats représentés à l'Exposition, a pour objet, entre autres, d'amener, s'il est possible, un accord sur l'adoption d'une commune unité pour les monnaies à l'usage du monde civilisé.

Il convient d'observer que l'opinion des membres du Comité paraît tendre fortement à l'adoption de la pièce d'or Française de 5 francs comme unité.

Puis-je vous demander quelle est, selon vous, la probabilité qu'il y aurait de voir le Congrès des Etats Unis d'Amérique consentir, dans un avenir prochain, à réduire le poids et la valeur de notre dollar Américain de manière qu'il corresponde au poids et à la valeur actuels de la pièce d'or Française de 5 francs, et à quel point un pareil changement vous paraîtrait, à vous-même, justifié ?

Je vous demande aussi la permission de soumettre votre réponse aux réflexions du Comité.

Je suis, &c.

(Signé) SAMUEL B. RUGGLES.

Answer from Hon. J. Sherman to Samuel B. Ruggles, Esq.

Hotel Jardin des Tuileries,
May 18, 1867.

My dear Sir,

Your note of yesterday inquiring whether Congress would probably, in future coinage, make our gold dollar conform in value to the gold 5-franc piece, has been received.

There has been so little discussion in Congress upon the subject, that I cannot base my opinion upon any thing said or done there.

The subject has however excited the attention of several important commercial bodies in the United States, and the time is now so favourable, that I feel quite sure, that Congress will adopt any practical measure that will secure to the commercial world a uniform standard of value and exchange.

The only question will be how this can be accomplished?

The Treaty of December 23, 1865, between France, Italy, Belgium, and Switzerland, and the probable acquiescence in that Treaty by Prussia, has laid the foundation for such a standard. If Great Britain will reduce the value of her sovereign twopence, and the United States will reduce the value of her dollar something over 3 cents, we then have a coinage in the

Réponse de M. J. Sherman à M. Samuel B. Ruggles.

Hôtel du Jardin des Tuileries,
18 *Mai*, 1867.

Cher Monsieur,

J'ai reçu votre lettre d'hier par laquelle vous me demandez s'il est probable que le Congrès consentirait, dans l'avenir, à donner à notre dollar d'or une valeur équivalente à celle de la pièce d'or de 5 francs.

Il y a eu si peu de délibérations à cet égard dans le sein du Congrès que je ne puis prendre pour base de mon opinion rien qui ait été fait ou dit dans son enceinte. Cependant ce sujet a fixé l'attention de plusieurs sociétés commerciales importantes aux Etats Unis, et le temps est aujourd'hui si favorable que je crois être tout à fait certain que le Congrès adopterait toute mesure pratique ayant pour but d'assurer la circulation dans tout le monde commercial d'un étalon uniforme de valeur et d'échange.

La seule question à poser, c'est comment ce résultat peut être obtenu.

Le Traité du 23 Décembre, 1865, entre la France, l'Italie, la Belgique, et la Suisse, et l'acquiescement probable de la Prusse à ce Traité, ont fourni les bases qui doivent servir à la fixation de l'étalon. Si la Grande Bretagne veut faire subir au souverain une réduction de deux pence, et si les Etats Unis réduisent d'un peu plus de 3 cents la valeur de leur dollar, on aura une valeur facile à

franc, dollar, and sovereign, easily computed, and which will readily pass in all countries; the dollar as 5 francs, and the sovereign as 25 francs.

This will put an end to the loss and intricacies of exchange and discount.

Our gold dollar is certainly as good a unit of value as the franc; and so the English think of their pound sterling. These coins are now exchangeable only at a considerable loss, and this exchange is a profit only to brokers and bankers. Surely each commercial nation should be willing to yield a little, to secure a gold coin of equal value, weight, and diameter, from whatever mint it may have been issued.

As the gold 5-franc piece is now in use by over 60,000,000 people of several different nationalities, and is of convenient form and size, it may well be adopted by other nations as the common standard of value; leaving to each nation to regulate the divisions of this unit in silver coin or tokens.

If this is done, France will surely abandon the impossible effort of making two standards of value. Gold coins will answer all the purposes of European commerce. A common gold standard will regulate silver coinage, of which the United States will furnish the greater part, especially for the Chinese trade.

I have thought a good deal of how the object you propose, may be most readily accomplished. It is clear that the United States cannot become a party to the Treaty referred to. They could not agree upon the silver standard; nor could we limit the amount of our coinage, as proposed by the Treaty. The United States is so large in extent, is so sparsely populated, and the price of labour is so much higher than in Europe, that we require more currency *per capita*. We now produce the larger part of the gold and silver of the world, and cannot limit our coinage, except by the wants of our people and the demands of commerce.

Congress alone can change the value of our coin. I see no object in negotiating with other Powers on the subject. As coin is not now in general circulation with us, we can readily fix by law the size, weight, and measure of future issues. It is not worth while to negotiate about that which we can do without negotiation, and we do not wish to limit ourselves by Treaty restrictions.

évaluer en francs, dollars et souverains, et qui passera facilement par tous pays, le dollar étant pris pour 5 francs, et le souverain pour 25 francs.

Cela mettra fin aux pertes et aux embarras qui résultent du change et de l'escompte.

Notre dollar d'or est certainement une unité de valeur aussi bonne que le franc, et les Anglais ont la même opinion de leur livre sterling. Toutefois ces monnaies ne peuvent s'échanger que moyennant une perte considérable, et cet échange ne profite qu'aux courtiers et aux banquiers. Toute nation commerçante consentirait sûrement à faire quelque concession pour obtenir la circulation d'une monnaie d'or ayant une valeur, un poids, et un diamètre constants, par quelque monnaie qu'elle ait été fabriquée.

La pièce d'or de 5 francs est maintenant en usage chez plus de 60,000,000 d'hommes appartenant à des nationalités diverses; sa forme et sa dimension sont convenables; elle peut donc bien être adoptée par d'autres nations comme étalon commun de valeur, en laissant à chaque peuple la faculté de régler les subdivisions de cette unité en monnaie d'argent ou de billon.

Si ce résultat est atteint, la France renoncera certainement à l'effort impossible de maintenir deux étalons monétaires. La monnaie d'or répondra à tous les besoins du commerce Européen. L'existence d'un étalon d'or régularisera le monnayage de l'argent, dont les Etats Unis fourniront la plus grande partie, principalement pour le commerce avec la Chine.

J'ai beaucoup réfléchi aux moyens d'accomplir le plus aisément possible ce que vous proposez. Il est clair que les Etats Unis ne peuvent accéder au Traité que j'ai déjà mentionné; ils ne sauraient accepter l'étalon d'argent ni limiter leur monnayage comme le Traité l'impose. Les Etats Unis ont une entendue si considérable, une population si disséminée, le prix de la main-d'œuvre y est si fort au-dessus de ce qu'il est en Europe, qu'il nous faut beacoup plus de monnaie par tête d'habitant. En outre, nous produisons la plus grande partie de l'or et de l'argent employés dans le monde, et nous ne pouvons fixer à notre monnayage d'autres limites que les besoins de notre peuple et les demandes du commerce.

Le Congrès seul peut changer la valeur de notre monnaie. Je ne vois pas qu'il y ait lieu d'entamer à ce sujet des négociations avec les autres Puissances. Comme il n'y a pas de monnaie de circulation générale qui nous soit commune avec d'autres peuples, nous pouvons aisément fixer par une loi la dimension, le poids, et la valeur des futures émissions. Il est inutile de négocier sur ce que nous pouvons faire sans négociations, et nous ne

In England, many persons of influence and different Chambers of Commerce are earnestly in favour of the proposed change in their coinage. The change is so slight with them, that an enlightened self-interest will soon induce them to make it; especially if we make the greater change in our coinage. We will have some difficulty in adjusting existing contracts with the new dollar; but as contracts are now based upon the fluctuating value of paper money, even the reduced dollar in coin will be of more purchaseable value than our currency.

We can easily adjust the reduction with the public creditors in the payment or conversion of their securities, while private creditors might be authorized to recover upon the old standard. All these are matters of detail to which I hope the Commission will direct their attention.

And now, my dear Sir, allow me to say in conclusion, that I heartily sympathise with you and others, in your efforts to secure the adoption of the metrical system of weights and measures.

The tendency of the age is to break down all needless restrictions upon social and commercial intercourse, Nations are now as much akin to each other, as provinces were of old. Prejudices disappear by contact. People of different nations learn to respect each other as they find that their differences are the effect of social and local custom not founded upon good reasons. I trust that the Industrial Commission will enable the world to compute the value of all productions by the same standard, to measure by the same yard or metre, and weigh by the same scales.

Such a result would be of greater value than the usual employments of diplomatists and statesmen.

I am, &c.
(Signed) JOHN SHERMAN.

désirons pas nous soumettre aux restrictions des Traités.

En Angleterre, plusieurs personnes influentes et différentes Chambres de Commerce sont très-favorables au changement qu'on propose d'apporter à leur monnaie. Ce changement est si faible chez eux que l'intérêt bien entendu amènera bientôt à l'adopter, surtout si nous faisons le changement plus considérable qu'on nous demande. Nous aurons quelques difficultés à adapter au nouveau dollar les contrats déjà existants; mais les contrats étant basés actuellement sur la valeur variable du papier-monnaie, même le dollar d'or sera d'un usage plus commode que notre monnaie fiduciaire.

Nous pouvons aisément faire accepter la réduction aux créanciers publics par le remboursement ou la conversion de leurs titres, tandis que les créanciers privés pourront être autorisés à opérer leurs recouvrements sur le pied de l'ancien étalon. Tout cela ce sont des points de détail sur lesquels je pense que la Commission arrêtera toute son attention.

Et maintenant, cher Monsieur, permettez-moi de dire en terminant, que je sympathise de grand cœur avec vous et vos collègues dans les efforts que vous faites pour assurer l'adoption du système métrique des poids et mesures.

La tendance de notre époque est de faire tomber toutes les restrictions inutiles apportées aux relations sociales et commerciales. Les nations sont aujourd'hui aussi voisines les unes des autres que l'étaient autrefois les provinces d'un meme pays. Le contact fait disparaître les préjugés. Les peuples des contrées diverses apprennent à se respecter les uns les autres, parce qu'ils reconnaissent que les barrières qui les séparent sont le résultat de coutumes sociales et locales, et n'ont pas de bonnes raisons pour base. J'ai la confiance que le Comité organisé à l'Exposition de l'Industrie mettra le monde en état de rapporter au même étalon la valeur de tous les produits, et d'évaluer toutes les mesures par le même yard ou le même mètre, tous les poids par les mêmes unités.

Un pareil résultat aurait une plus haute valeur que tous les objets auxquels s'emploient d'ordinaire les diplomates et les hommes d'Etat.

Votre, &c.,
(Signé) JOHN SHERMAN.

Note read by Mr. Ruggles.

The Delegates of the United States of America at the Sub-Commission of Money of the International Committee of Weights and Measures and Coins have proposed the

issue in France of a piece of gold of 25 francs. It may be remarked that France has never had a gold piece containing an exact number of grams. The relation of value between gold and silver having been fixed by law at $15\frac{1}{2}$, it became impossible to establish any decimal relation between the two metals, or in other words, between the number of francs representing silver only, and the number of grams in the gold coin. This legal relation of $15\frac{1}{2}$ is itself fractional, and must be doubled and brought to $\frac{31}{2}$ to obtain a round number.

The franc is only a word which expresses 5 grams of silver at $\frac{9}{10}$ths fine. This is the French unit of money. Gold having a value fifteen times and a-half greater than silver, it requires $15\frac{1}{2}$ francs of 5 grams each, or $5 \times 15\frac{1}{2} = 77\frac{1}{2}$ grams, to buy 5 grams of gold, or 155 grams of silver to buy 10 grams of gold.

As 31 is the smallest exact multiple of this relation, 31 is the smallest number of francs contained in a piece of gold of a weight containing an exact number of grams. But no Government in its senses would limit its gold coin to pieces of 31 francs and its multiples. It is clear, therefore, that France has set aside altogether the metric weight in its gold coin.

			Grains.
The piece of	5 francs	weighs	1·6125
„	10	„	3·3250
„	20	„	6·4500
„	50	„	16·1250
„	100	„	32·2500

The piece of 25 francs would weigh 8 grams 0625, and in effect it would be nearer a metric weight than any other French gold piece.

The French law has fixed that 155 (5×31) pieces of 20 francs should weigh 1 kilogram, but 124 (4×31) gold pieces of 25 francs would equally weigh 1 kilogram.

The United States have never tried to fix a decimal weight for their gold coin, although they were the first to possess a decimal coinage. The gold dollar weighs 25·8 troy grains, nearly equal to 1 gram 670, and exceeds the metric weight of the piece of 5 francs by $57\frac{1}{2}$ milligrams.

A gram of gold $\frac{9}{10}$ths fine is equal, in round numbers, to 30 English pence, or 60 cents of the United States. Consequently, if we take off $57\frac{1}{2}$ milligrams from the dollar, it will produce a reduction of 3 per cent., or, if we take off $287\frac{1}{2}$ milligrams from the half-eagle of 5 dollars, it will produce a reduction of $17\frac{1}{2}$ cents, equivalent to a reduction of 3 per cent.

It is needless to enter at length on the merits of a decimal, duodecimal, or binary system, because in a great part of the civilized world the decimal system has become an accomplished fact, and cannot be changed in practice. In the same manner, the unification of the coinage of the world has become a question of a character much more practical than scientific, and falling principally within the domain of commerce and banking. The International Committee, charged with the labour of instituting an inquiry and preliminary study of the question, should take into consideration not only what is theoretically and abstractly possible, but what is practicable from the point of view of commerce and banking. To fix afterwards a common coinage or a monetary union, it will be necessary to have an international convention with representatives of each nation possessing diplomatic powers.

If the present Committee is, by its labours, to pave the way for a diplomatic conference, it should remember that so great a diminution as 3 per cent. in the gold coin of the United States will seriously affect the existing contracts, and even alter them in part. Such a change would not be sanctioned by the Government of the United States, except to secure the greater and more important benefit of a common coin in the whole world.

Since the expense of coinage will be very great, and will increase in proportion with the production of gold in the United States, it would be well to make the change without delay, if we have to make it. The International Committee should remember that the population of the United States, which is already nearly 40,000,000, will exceed probably in the short period of 34 years—that is, at the end of the century—to 100,000,000 souls.

Long before that time the annual production of gold and silver in the United States will be greatly facilitated and increased by the completion of the continental lines of railways, which will give an outlet on the two oceans to the great metallic territory still difficult of access, and the works of which are now pushed forward with great activity.

This production, which is now about 100,000,000 dollars per annum may reach

300,000,000 or 400,000,000. If the gold coin of the world is to be made uniform, it should be now or never.

It is fortunate that the gold sovereign of Great Britain, around which are naturally attached the prejudices of the English people, only requires, in order to reduce it to the value of 25 francs, a diminution in weight of 64 milligrames of gold fine, or, in value of 2 English pence, or 4 cents of the United States. The reduction to be made by Great Britain will not exceed one-fourth that to be made by the United States.

The very great inconvenience which must result from any delay in unification, at a time when the production of gold, and gold coin, increases rapidly, will appear very clearly by the Statistics of gold in the three States which coin the largest amount of money:—

1. The United States of America, in the fifty-seven years passed from 1792 to 1849, that is, preceding the discovery of gold in California, coined, in gold, only 85,588,038 dollars, which, estimating the dollar at 5 francs, gives 427,940,190 francs. From the 30th of June, 1849, to the 30th of June, 1851, that is, in the two first years of the auriferous period, the issue was 94,596,230 dollars, or 472,981,150 francs. In the fifteen years following, ending 30th June, 1866, the issue was 665,352,323 dollars, or 3,326,761,615 francs. Total gold coins of the United States, 845,536,591 dollars, or 4,227,682,955 francs; of which 146,923,622 dollars have been subjected to the assay and issued in lingots.

2. The present gold coin in Great Britain was established in 1816; from 1816 to 1851 there were issued 96,021,151*l.* sterling, or, in dollars, at 5 dollars per £., 480,105,755 dollars, or 2,400,528,775 francs. In the fifteen years, from 1851 to 1865 inclusive, 91,047,139*l.* sterling, or 455,235,695 dollars, or 2,276,178,475 francs, making the total issue of gold coin of Great Britain 935,341,450 dollars, or 4,676,707,250 francs.

3. In the fifty-eight years from 1793 to 1851 inclusive, France issued in gold coins 324,492,516 dollars, or 1,622,462,580 francs (of this sum 107,604,088 dollars, or 538,024,440 francs, were issued by Napoleon I). In the last fifteen years, from 1851 to 1866, there were issued by Napoleon III, 987,728,298 dollars, or 4,938,641,490 francs, making the total issue of France in gold coin at 1,312,220,814 dollars, or 6,561,104,070 francs.

TOTAL FOR THE THREE NATIONS.

	Dollars.	Francs.
France	1,312,220,814	6,561,104,070
Great Britain	935,341,450	4,676,707,250
United States of America	845,536,591	4,227,682,955
Total	3,093,098,855	15,465,494,275

If we add to this enormous amount the large quantities of gold coins issued by Prussia, Russia, Austria, and other important States of Europe, we may conceive the importance of a monetary unification, which would give the same course, character, and value to the total of this prodigious mass, and the amount which might be saved, which is now expended uselessly in recoinage, breakage, and change.

In the money of the three nations above stated, France, as we see, furnishes 1,312,220,814 dollars, which need not be recoined, whilst Great Britain and the United States furnish the rest, that is 1,780,870,041 dollars, a part of which mus tbe recoined again to obtain the unification of the civilized world.

We must deduct from this—

1st. What may have been coined again in France, after deduction of the French coins which may have been recoined in Great Britain or the United States.

2ndly. What may be lost or employed in the arts.

3rdly. The coins which have been sufficiently used to be reduced to the weight of the number of francs which they should represent. This applies almost exclusively to the coin of Great Britain, which approaches the reduction proposed by at least 1 per cent., whilst that of the United States must be reduced rather more than 3 per cent.

On the other side, it should be remarked that the United States and Great Britain will continue for several periods of fifteen years to add to their issue the gold produced in America and Australia, which will amount probably for each period to little less than 655,352,323 dollars for the United States, and 455,235,695 dollars for Great Britain, a quantity attained, as we have seen, in the last period. To say nothing of

what should not be forgotten—the possibility of an increased production still more rapid which may result from discoveries more extended in the vast auriferous field of the interior of the United States, which has as yet been only partially explored.

Without attempting to calculate this gigantic monetary future which time reserves for the world, we shall only say that the work of unification cannot be commenced too soon.*

It is not the fault of France, but her good fortune, that the burden of this change both for the recoinage and for the modifications necessary in contracts, is to be almost exclusively borne by the United States and Great Britain, whilst France, with her six milliards of gold in circulation, will participate entirely, and without expense, not only of the general benefit, but in the just honour of having unified the money of the world.

In these circumstances it is demanded in the name of the United States, that France in a spirit of wise liberality, should contribute, as she may easily do, to the great work of practical unification, by adding to her existing coins the piece of 25 francs.

This piece will circulate side by side, and in all places in a perfect equality with the half eagle and the sovereign of Great Britain.

These three gold coins, types of three great commercial nations, fraternally united, and different only by their emblems, will, hand in hand, make the tour of the world, having currency in both hemispheres without recoinage or other hindrance. This opportune concession of France to the spirit of unity will complete the work of civilization which she has so much at heart, and will inaugurate that new monetary era which is the most elevated object of the International Committee, and a noble object for the concurrence of nations without precedent in the history of the world.

Professor Levi's Speech on the proposition of taking the Five-franc as a basis of International Coinage.

The gold 5-franc piece too small as a unit.

WITH great deference to the proposal of the Committee, and much as I agree in the principle therein embodied, I must be allowed to express that it seems to me quite inexpedient and impracticable to take the piece of 5 francs in gold as the unit of the monetary system for all countries, because it is too small as a gold coin, very easily lost, too costly to produce, much more subject to wear and tear and diminution in value, and too small for large transactions of commerce and finance. In England, the introduction of this piece as a unit would be impossible. But it may be taken as a sub-multiple. It has been suggested that the 5-franc piece in gold is very nearly the fifth of the pound sterling, and that it might be made identical. But the value of the pound is 25·20 and not 25 francs. To reduce the value of the pound to 25 francs, we should have to reduce its weight of gold from 7·322 grams to 7·258 grams; whilst, according to the proposition which we have just passed, to make the gold coinage nine-tenths fine, the pound would become heavier in weight by 0·0166. We have now some 80,000,000 to 100,000,000 sovereigns in circulation. From 1856 to 1866 only, there were issued 49,200,000 sovereigns. If a new pound were coined of 25 francs exactly, the same would have to circulate together with the old pound of 25·20, but the difference between the two would be so slight that we should constantly mistake the one for the other. It was said that Government might declare the value of the pound now in circulation at 25 francs, because in effect it is somewhat lighter in weight, and if necessary a seigniorage might be charged. But allowing all this, such difference would not reach 20 centimes on each pound; and if the Government should declare the pound 25 francs, which is worth more, the bullion merchants would soon buy it for exportation. And how would old debts and old transactions be affected by such a change? Two pence per pound would have to be given in each case where contracts are pending

The multiple, or 25 francs, does not correspond to the pound.

* The following figures will show the effect produced by the immense differences of gold in the money of the world in altering the established legal relation between gold and silver, from 1851 to 1865 inclusive:—

	Gold.	Silver.
		Francs.
The United States issued	658,000,000	49 000,000
France	987,000,000	43,000,000
Great Britain	455,000,000	25,000 000
	2,100,000,000	117,000,000

That is in the relation of 19 to 1.

on the old coinage, and the labour of altering all the books and accounts for that difference would be still more inconvenient, as it is small and in a manner indefinite. If, therefore, I cannot see my way to approve of the suggestion of reducing the pound to 25 francs, it would be useless for England, and from an international point of view that France should coin a piece of that sum, which otherwise would not be required in France. Nor does it seem that the maintenance of the pound is likely to lead to the decimalization of the British coinage. The only scheme proposed for that based on the pound sterling is, that which contemplates the division of the pound into 1,000 mils instead of 960 farthings, but serious obstacles attend the carrying out of the scheme. The first is the necessity of altering seriously all the copper coinage, including the penny, which is an old unit in the kingdom, and some of the silver coins also. Change the penny, and what shall be its equivalent for penny postage, penny toll, and all the taxes and all the wages regulated by that coin? Four mils would be too little, five mils too much. Any change in the name of the copper coinage is necessarily attended with great difficulty. A still greater defect of the pound and mil scheme is, that many of the coins which this new system would introduce have no distinct equivalent in the coins already in existence. They would stand alone and unchangeable, except with a sacrifice of fractions in every transaction. Another defect is the undeniable fact, that with three decimals, counting always by thousands, no great facility of calculation, no great economy of time, no great conciseness of expression, would in fact be attained. The number of figures required in the present system to express all the sums from 1*d.* to 10*s.* is 250; in the pound and mil scheme it is 335. It would be easier, moreover, especially as it is more familiar to us in England, to conceive the idea embraced in 17*s.* 11*d.* than in 895 mils. Possibly the liability to errors also is even less in the present system than in the other. The only recommendation of that scheme is the maintenance of the pound. But though bankers and merchants confine their attention to that unit, dealing as they do with large transactions, the Government could not overlook the penny, and could not ignore the interests of the millions whose daily transactions might be seriously deranged by such a change. A better mode of arriving at a decimal and international system of coinage, it seems to me, is that England should take the 10-franc piece as a unit, and divide it into 100 pence of the current coin; especially since, in reality, the penny is, intrinsically, if not nominally, equal in value to the 10-centime piece.* What would be the difficulty of her issuing such a coin, which, as suggested, might be called a ducat, and a tenpenny piece as the tenth part of it? Being altogether a new coin, it will be easy to issue it of the new alloy, and nearly all the existing coins would continue untouched. It would certainly be better that the shilling and the half-sovereign should be withdrawn, because they would be too like the 10 pence and the 100 pence; but otherwise no change would be caused in any of the coins in use. Should the 10-franc piece be found too small as a unit, we may easily have a larger unit in a piece of 100 francs, or of the value of nearly four pounds sterling. For France, the unit of 10 francs in gold would be very convenient, as it would perfect her decimal system, and would improve her money of accounts by taking a unit ten times larger than the franc. The United States would have to double their dollar, but the value of everything is now greater than it was some time ago. We find in England that the halfpenny and the farthing are but little used, since we have to pay a penny now for what we paid a halfpenny before, and the experience of the United States will be the same. What we should aim at is, the adoption of one and the same unit by all nations; a unit with subsidiary coins alike everywhere. We must remember that all questions of prices, wages, fares, &c., are generally by such subsidiary coins as the franc, the pence, &c. Unless we attain uniformity in these, we effect no real reform. Now, by adopting the 10 francs, we have all this absolutely, and therefore I commend it to the earnest attention of the Conference. I have much pleasure in announcing that the Chambers of Commerce, the International Decimal Association, and the Metric Committee of the British Association, have all decided that great advantage would result by the adhesion of Great Britain to the principles of the Monetary Convention concluded December 23, 1865, between France, Italy, Switzerland, and Belgium, by Article 12 of which Convention the right of accession is, under certain conditions, reserved for other States. I apprehend that the British Government could not

The pound not convenient for decimalization, or international purposes.

Proposal of a 10-francs unit.

* If issued, in the first instance, as a subsidiary coin or token, the gold ducat might be declared by law to be of the value of 100 pence, notwithstanding the slight difference in relation to their nominal value. Should, however, the coin, and the decimal system founded upon it, find favour with the public so as to justify the Government in declaring it a primary unit, then its relation to the sovereign would be regulated by Tariff according to its intrinsic value.

authorize her Representatives at the Monetary Conference held at the Ministry of Foreign Affairs to make any engagement on this question, because it has not yet been discussed by the nation; but I do not doubt that the resolutions of this and the other Conference will have a great influence on public opinion in England, and that, animated by the most sincere friendship for France and for the great Sovereign who so wisely presides over her destinies, and most desirous to be united by material, moral, and intellectual bonds, with all nations, England will applaud and accept with pleasure the propositions which we may adopt with a view to introducing uniformity in the coinage of all countries.

INTERNATIONAL MONETARY CONFERENCE.

Report addressed to the Lords Commissioners of the Treasury by the Master of the Mint and Mr. C. R. Wilson on the International Monetary Conference.

December 2, 1867.

May it please your Lordships,

WE have the honour to lay before you the minutes of the proceedings of the recent International Monetary Conference which we were instructed to attend on behalf of Her Majesty's Government.

The invitation to the Conference emanated, as your Lordships are aware, from the French Government, and its object was stated to be the discussion of the means by which a complete or partial uniformity might be established between the various monetary systems at present in existence in the countries of Europe and in the United States of America.

The Convention of 23rd December, 1865, concluded between the Governments of France, Belgium, Italy, and Switzerland, which established an identity in the weight and fineness of the coins of those countries, as well as in the conditions under which they might be manufactured and pass current, was especially indicated as a basis for the deliberations of the Conference; the right of joining the Convention having, by the 13th clause, been reserved to all other countries which might be prepared to adopt its provisions.

The necessity for an understanding between the Governments of those four States, originated in the alteration of the relative value of the precious metals occasioned in recent years by the influx of gold from the newly discovered fields of California and Australia, and the disturbing effect thereby created upon the currencies of those countries which had adopted a double standard.

The law under which the system of the double standard operates in France assumes the hypothesis of an arbitrary relation of value between silver and gold in the proportion of $15\frac{1}{2}$ to 1; and although no doubt this proportion was exact at the period when the law was passed (1803), it has been considerably modified by the cause above-mentioned, which, during the last fifteen years, has thrown upon the market of the world gold to the extent of 340,000,000*l.* in excess of the provision requisite for sustaining the proportion contemplated by the French law

In France, and in Belgium, Italy, and Switzerland, where the French system has been adopted, and where, consequently, each of the precious metals is a legal tender, it naturally followed that gold gradually displaced silver as an instrument of exchange, and that the latter almost entirely disappeared from circulation.

The inconvenience occasioned by this state of things was principally felt in the scarcity which it created in the smaller denominations of currency, for which gold is inapplicable and which are indispensable in the ordinary transactions of life, and some attempts at a remedy were made in Switzerland and Italy, and subsequently in France, by increasing the proportion of alloy in some of the smaller silver pieces, thereby reducing them to the position of subsidiary or token coins. The legislation in the three countries was, however, not unanimous, and differed in some essential particulars, while in Belgium no alteration of any kind was attempted.

Under these circumstances overtures were addressed by the Government of the country last-mentioned to the French Government, suggesting a joint examination by France, Belgium, Italy, and Switzerland, of the difficulties which had arisen, and of the remedies to be applied.

The proposal was accepted, and has resulted in the Convention of the 23rd of December, 1865.

The Convention maintains the double standard, fixing the proportion of pure metal in the case of the gold coins of 20, 10, and 5 francs, and of the silver coin of 5 francs at nine-tenths with one-tenth of alloy, as heretofore, but reducing the proportion of fineness in the silver coins below 5 francs from $\frac{900}{1000}$ to $\frac{835}{1000}$, these subsidiary coins being only made a legal tender to an amount not exceeding 50 francs (the same limit as that fixed in the case of the English silver token coinage).

Uniformity of coinage is established by the Convention among the countries that are parties to it, but the obligation of accepting reciprocally the coins struck by the different Governments is confined to the public Treasuries.

Although the causes which led to this Convention were of a special nature, nor are we aware that the promoters of it contemplated any ulterior extension of its principles, the union of so considerable a section of the population of Europe seems at once to have

given rise to the expectation that it might be made the means of ultimately realizing the idea, which has been a subject of speculation at various times, of a Universal Monetary Confederation.

That project has now been officially adopted by the French Government, and it was for the consideration of it in common that the recent Conference was convoked.

Before coming to a decision upon the advisability of accepting the invitation, your Lordships had carefully to consider the grounds upon which the participation of Her Majesty's Government in the proposed inquiry could be justified, and the position which should be assumed by their Representatives in the event of their deciding that the proposal should be accepted.

Upon the one hand, the inconvenience experienced by some of the countries of the Continent owing to the abstraction of silver from circulation, to which we have alluded, has not been felt in England, whose currency is based upon a gold standard, and where, ever since 1816, silver has occupied a subordinate position, the coins of that metal being of the nature of tokens, and only legal tender to the extent of 40*s*.

Moreover, the currency adopted by the Convention of December 1865, and avowedly recommended as the model for imitation, being based upon the decimal system, offered so wide a divergence from that in operation in this country, which, whatever differences of opinion may exist as to its theoretical perfection, adapts itself well to the requirements of the nation, that a transition from one system to the other, with its many attendant difficulties and disadvantages, or even any sensible modification of our system in the direction of that contained in the provisions of the Convention of December 1865, could only be contemplated on the strongest grounds of expediency.

Upon the other hand, the advantages to be derived from international uniformity of currency, admitting such a consummation to be feasible, were too obvious to be overlooked, and of too vast an interest not to warrant many sacrifices for their attainment: and it was well known that the subject had already attracted a considerable share of public interest in this country; while the interest evinced in the project by the French Government, and the anxiety expressed by them for the co-operation of this country, would naturally carry due weight in influencing the determination of Her Majesty's Government.

Upon a review of these considerations your Lordships decided that it would be proper that Her Majesty's Government should be represented at the Conference, but that their delegates should be instructed to abstain from any act or opinion that might appear to pledge Her Majesty's Government to the adoption of any particular course of action, and that their mission should be confined to a general consideration of the questions that might be brought forward.

The Conference was attended by Representatives from twenty different States,* and with the exception of the Austrian Commissioner, Baron von Hock, who immediately after the termination of the Conference negotiated on the part of his Government, and signed a preliminary Treaty of adhesion to the Convention of December 1865, none of our colleagues appeared to have received more ample authority than that which we possessed.

Under these circumstances we felt little hesitation, notwithstanding the reserve imposed upon us by your Lordships, in recording our votes upon most of the resolutions submitted to the consideration of the Assembly.

We proceed at once to state the several propositions which, with more or less agreement, but in all cases after minute discussion, were affirmed by the Conference, and which your Lordships will doubtless consider worthy of attention, as embodying the authoritative opinion of the Representatives of so many countries, and such various systems of currency, as to the most desirable form of monetary union, and as to the most practical means of accomplishing it.

1. The first question which engaged the attention of the Conference was, whether it were desirable to seek among existing systems one which could be adopted, in its integrity or with modifications, for the proposed International Coinage, or whether an entirely new system should be devised.

Whatever the theoretical advantages or perfections which the latter plan might appear to afford—by allowing, for instance, of the creation of a system based upon a gold decimal unit—it was obvious that the acceptance of such a suggestion was inadmissible in practice, owing to the fundamental changes that it would necessitate. The Conference, therefore, had no difficulty in affirming the proposition that "monetary unification may be most readily attained by the adjustment of existing systems, taking

* Austria, Baden, Bavaria, Belgium, Denmark, United States, France, Great Britain, Greece, Italy Netherlands, Portugal, Prussia, Russia, Spain, Sweden and Norway, Switzerland, Turkey, Wurtemberg.

into consideration the scientific advantages of certain types and the number of the populations by which they have already been adopted," nor in indicating the system of the Convention of December 1865 as that which might be examined with the greatest advantage. It was understood, however, that this resolution involved no opinion upon the subject of the standard, which was reserved for subsequent and separate discussion, and that it was only intended to imply, with regard to the Convention itself, that its relative completeness, its subordination to the metrical system, and the large number of the population (72,000,000) that had already adopted it, recommended it generally as a nucleus for the further development of the principles of an International Coinage.

It should be mentioned that in the early part of the present year the Papal Government joined the Convention of 1865, and that in the month of April last a law was passed in Greece by which the currency of that country has been remodelled upon the provisions of the Convention.

2. An inquiry for the purpose of determining the proper standard to be adopted in any general system of coinage might have been expected to elicit much diversity of opinion in an assembly where the three systems of a gold standard, a silver standard, and a double standard were represented; and the unanimous declaration of the Conference in favour of a single and a gold standard may be considered as one of the most important features in the deliberations of the Conference.

The importance of the decision will be the better appreciated when it is borne in mind that only two of the States represented—viz., Great Britain and Portugal—possess exclusively a gold standard, and that the question of the relative advantages of a single or double standard—which in France has been much contested—was, as lately as May last, examined in that country by a Government Commission, composed of eminent economists, who pronounced by a majority of voices in favour of maintaining the double standard. We annex a copy of their Report.

The difficulties to which the adoption of a gold standard would be likely to give rise in the countries possessing a silver standard during the period of transition formed naturally the next subject for consideration; and the Conference expressed the opinion that the silver standard might be maintained as a transitory arrangement until such time as gold should become the principal instrument of circulation.

3. With the view of facilitating and accelerating the transition from a silver to a gold currency, it was thought advisable to add a recommendation that care should be taken to fix the relative value of the two metals at such a proportion as would permit the free introduction and maintenance of gold.

4. It was resolved that a common unit should be adopted for the gold coinage possessing identity of fineness.

The standard of fineness was recommended to be 0·900, *i.e.*, 9 parts fine to 1 alloy, and, although differing from the proportion in use in our Mint, which allows $\frac{11}{12}$ths fine and $\frac{1}{12}$th alloy, we saw no reason to prevent us from joining in the recommendation of the other Commissioners, considering that the proportion of $\frac{9}{10}$ths is not only that which was adopted by the Convention of December 1865, but is the almost universal rule in the mints of Europe and in the United States, and has even been recently introduced in the coinage of silver dollars at the Hong Kong branch of Her Majesty's Mint.

The chief recommendation of the proportion of $\frac{11}{12}$ths consists in the superior hardness of the alloy; but the advantage which it affords in that respect over the coins of $\frac{9}{10}$ths fineness is of no considerable importance. At the same time, to guard against any misapprehension, we thought it right to qualify our vote by the explanation that the adoption of the standard of $\frac{9}{10}$ths could only be introduced in England in the event of a re-coinage.

5. The renunciation of the principle of a currency based on a standard of silver seemed to imply and necessitate the adoption of a common unit of higher value than that at present prevailing in countries not possessing a gold standard, and the piece of 5 francs was that which, in spite of individual objections, found favour with the majority of the Commissioners.

Exception was taken to it by some of the members for the practical reason of its insignificant dimensions, and upon the more theoretical ground that it does not perfectly harmonize with the decimal system.

We shared this opinion, and were prepared to have suggested as preferable a 10-franc piece, which would not only be free from these drawbacks, but would be more likely to be acceptable in England, which is accustomed to the higher unit of the sovereign.

A new British coin having the same quantity of gold as the 10-franc piece, with

the same proportion of alloy, would be within $\frac{3}{4}d.$ of 8*s.* in value. Such a piece could be legally introduced into circulation as an additional member of the present coinage, provided it was issued as a token coin for 8*s.*, and made a legal tender to a limited amount only, such as 4*l.* or ten pieces. It could have inscribed upon it "10 francs," in addition to its current value of "8 shillings." This coin would become the unit of computation, the new pound or metrical pound, or it might be made the tenth part of a new metrical pound, if a denomination of higher value were demanded. We would thus become possessed of an international coin.

The scheme of coinage which it would be the means of suggesting is one resting upon the penny reduced 4 per cent. in value, and would include a silver piece of ten such pence, in addition to the gold piece of 100 pence. The ultimate adjustment of the European and American coinages contemplated would present:—

In the French coinage—

1 franc divided into 100 centimes;

In the American—

5 franc (dollar) divided into 100 cents;

In the British—

10 francs (gold florin, one metrical pound, or one-tenth of a metrical pound), divided into 100 pence; with the addition, if desired, of 100 francs (one metrical pound, 4*l.* sterling), divided into 1,000 pence.

Such a coin as the gold 8*s.* piece could be produced without expense, owing to the seignorage of $\frac{3}{4}d.$ which it would yield as a token, and the piece could be made sufficiently distinctive by giving it a plain edge. For the issue of such a piece there is the precedent of the silver florin, which was devised to represent the pound and mil system, and to bring that system under the notice of the public. The 8*s.* piece proposed would represent the metrical system founded upon the penny, which has always been a rival with the former in general estimation, and which seems entitled to equal consideration at the hands of Government. The issue of such a piece, while it brought the metrical system of coinage into notice, would not be conclusive as to the ultimate adoption of that system, but would leave it possible to advance in such a course, or to recede from it at any time without embarrassment.

We may mention that M. de Jacobi, the Representative of Russia, threw out the suggestion that the objections to the 5-franc piece on account of its small size might be obviated by the introduction of platinum as the metal of which it should be composed, observing that a supply in sufficient quantities could be obtained from the Russian and South American mines, and that the disadvantages formerly presented by the difficulties of working it had been, in a great measure, removed by recent improvements.

By a subsequent vote, in which we did not feel called upon to join, an innovation was recommended in the principle of the Convention of 1865, which limited the reciprocal obligation of accepting the coins of the Union to the public Treasuries, by a proposal that the common coin of 5 francs should be made a legal tender throughout the countries which might unite in a Monetary Convention.

6. The next proposition, viz., whether the proposed system should include a coin equivalent to 25 francs, offered considerations of more special interest to the English Delegates, inasmuch as it indicates what, at present at all events, is believed by many persons to be the only probable method by which an alliance may be effected between the English monetary system, and that adopted under the Convention of December 1865 by so large a portion of the Continent of Europe, and which will, no doubt, receive a still wider extension.

Indeed, as we had occasion to point out, the 25-franc piece is by no means a necessary ingredient or consequence of the scheme recommended by the Conference, and was, avowedly, proposed and supported chiefly in the hope of securing the adhesion of Great Britain, to which, on account of her large monetary circulation, the activity and extent of her commercial transactions, and the influence which they exercise in every foreign country, a natural importance was attached.

At various stages of the discussions the question of equalizing the pound sterling with 25 francs of French gold was brought forward by different members of the Conference, with no undue depreciation of the difficulties which must be encountered in carrying the alteration into effect, but with a generally expressed conviction that these difficulties were in no way insurmountable.

The English sovereign contains 123·274 grains troy, including $\frac{1}{12}$th of alloy; that is to say, 113·002 of fine gold, equivalent to a weight in French grammes of 7·322.

A gold piece of 25 francs would contain 7·258 grammes of pure gold, besides $\frac{1}{10}$th of alloy, representing a difference in favour of the English coin of 0·064, or 64 milli-

grammes, and an excess of pure gold in the English over the French coin of 0·825 per cent., equal to, as nearly as possible, 20 centimes, or, speaking roundly, 2*d.*

The process of assimilation would, therefore, consist in diminishing the value of the pound sterling by 2*d.*, and substituting for the present sovereign a coin (reduced in fineness to 0·900) which would exactly correspond in value with the proposed French gold piece.

The mode by which the process might be effected was freely debated, and opinions were expressed that the existing sovereigns might be maintained in circulation by taking advantage of the loss of weight by wear allowed by law, and which permits a divergence of 0·774 grain, or 0·628 per cent. (1½*d.* nearly) from the exact weight; but we felt it our duty to declare our opinion that such an expedient would be considered inadmissible in England, and that we were satisfied that so essential a change could only be carried out at the cost of a re-coinage of our whole gold currency, variously estimated at from 80,000,000*l.* to 120,000,000*l.*

It was allowed that the sovereign might continue to be divided, as at present, into 20 shillings; but it is obvious that, unless the sovereign were divided into 25 francs, small progress would be made towards a general unification of coinage. Now the division of our pound into 25 would be found inconvenient in calculation, and would soon lead, in all probability, to the issue of a 20-franc piece to supersede the former.

We do not feel called upon, in the present Report, to enter into any discussion upon this question, which would doubtless form the subject of serious consideration hereafter, should Her Majesty's Government determine to institute an inquiry into the possibility of associating this country in the system of international coinage recommended by the Paris Conference.

We confine ourselves to reporting the earnestness with which the proposition above-mentioned was pressed upon our attention, and with which the hope was expressed that it would be made the subject of mature consideration by Her Majesty's Government.

Our attention was directed to a small variation in the weight of the sovereign proposed upon other grounds. It is well known that all gold brought to the Mint is returned in the form of sovereigns without deduction or charge; and there is no doubt that our practice is correct in principle, for the metal which, like gold, is adopted as the measure of value. But it is at the same time undeniable that some additional value is imparted to the metal by the work applied to it in coining, and a small charge to cover, or partially cover, the Mint expenses is on that account generally imposed upon coin in the countries of the Continent, under the name of *brassage*. In France the charge thus borne by the holders of bullion amounts to 6 francs 70 centimes on a kilogramme of gold, which is coined into 155 napoleons, or 3,100 francs, being equivalent to 4·32 centimes on a 20 franc-piece. The system of Free Mintage has also, since 1853, been abandoned in the United States, where, in addition to the charge for refining, a charge of ½ per cent. (50 cents on 100 dollars) is now taken upon all gold brought for conversion into coin. A small Mint charge does not appear to be complained of anywhere. The charge acts usefully for the preservation of the coin, by removing any inducement to melt it down for any ordinary technical purpose, or even to supply bullion to foreign Mints. We have reason to fear, from what we learned from professional Members of the Monetary Conference, that the British gold coinage is liable to suffer heavily in this way. London is the entrepôt for the precious metals from which other countries draw their supplies. Now, gold may be procured from London either in the form of bars or sovereigns at the same price; while to the foreign purchaser, if a Mint contractor, sovereigns offer the following advantages: the assay may be safely relied upon, the gold is already alloyed with copper, and, more than all, the suitability of the metal for coining is insured. Further, sovereigns are taken by number, and the aggregate weight may be as nearly as possible correct. But that is not true of the weight of individual pieces, which, from the unavoidable imperfection of manufacture, are some heavy and some light within a certain small range, recognized as the *tolerance* in coining. There is reason to believe that large masses of new British sovereigns are occasionally treated so as to separate out the heavy pieces, and these are disposed of as bullion; while the lighter pieces, which may still be all of legal weight, are preserved and put into circulation. This fact will not surprise those persons who are aware of the small margin of profit upon which bullion transactions are often conducted.

A small Mint charge on the British sovereign thus appears to be called for, as the necessary means of preservation to the coin; while the measure is further recommended as an equitable repayment to the country of the cost of coinage.

Although this question of the introduction of a Mint charge into our system of coinage was only incidentally considered by the Conference, we have thought it desirable to mention it somewhat prominently, in consequence of the notice which it has occasionally attracted in this country, and the importance which it would doubtless assume as an element of discussion in the consideration of any scheme involving a re-coinage of the gold currency.

We must state that the adoption of the 25-franc piece was warmly supported by Mr. Ruggles, the Representative of the United States, who informed the Conference that his Government attached much importance to the coinage by France of pieces of that denomination.

Mr. Ruggles made the important statement that the United States were prepared to re-coin the whole of their gold, with a view of remodelling their system upon the basis of the Convention of December 1865; and that notwithstanding the serious loss which such a proceeding would entail, involving a diminution of no less than 3 per cent. in the value of their gold circulation, a far greater proportion than that involved in the proposed conversion of the English sovereign, they looked to no reciprocal advantage beyond the coinage of a 25-franc piece, which would exactly correspond with the half-eagle.

7. Considerable difference of opinion was expressed upon the proposal that a piece of 15 francs should be included in the recommendations of the Conference. The object of the suggestion was to secure the creation of a coin nearly identical in value with 7 florins of Holland or South Germany, and 4 thalers of Prussia, as an inducement to those countries to adopt a coin representing denominations of their own currency, but which would be interchangeable with a French 15-franc piece.

In common with several of our colleagues we abstained from voting upon this question, respecting which no final decision was taken.

8. Having thus enunciated principles for the construction of an international monetary system, the Conference added an expression of their opinion that it would be convenient, and in accordance with the idea of union sought to be established, that the Governments of such States as might decide on introducing modifications in their system of coinage based upon an adoption of those principles should, as far as possible, make any measures to be taken for that purpose the subject of Diplomatic Conventions.

9. At the final meeting of the Commissioners, his Imperial Highness Prince Napoleon, the President of the Congress, expressed to them the anxiety of the French Government for a practical and early realization of the scheme embodied in the recommendations of the Conference, and encouraged them with considerable earnestness to communicate to their respective Governments the hope which the Imperial Government entertained that in those countries whose circumstances might render their immediate or complete adhesion to the proposed system impossible, some inquiry might, at all events, be forthwith instituted for the examination of its merits and of its adaptability to their own systems and their own peculiar requirements.

His Imperial Highness accordingly proposed that an early date should be fixed by which the several Governments should be invited to come to some decision as to the course which they might consider it advisable to adopt, and that their views should be then communicated to the French Government, who would examine, upon a review of the several opinions expressed, whether a further combined consideration of the question would be desirable.

We expressed our disinclination to indicate any fixed period within which it could be expected that the English Government would be able to announce a final decision upon so difficult and momentous a question, but stated that in the event of the feeling of the Conference being in favour of accepting the suggestion of the President, we could only desire that a sufficiently long delay should be named to admit of Parliament having an opportunity, should it think proper to do so, of discussing and pronouncing an opinion upon the subject. With this view, we suggested the 1st June, 1868, as a date by which Her Majesty's Government might possibly be in a position to make some official communication of their views and intentions.

The anxiety, however, expressed by Prince Napoleon for an earlier consideration of the matter, was shared by the majority of the Conference, who fixed the 15th of February, 1868, as the date by which the Governments should be invited to make known their intentions to the Government of the Emperor.

It will be for Her Majesty's Government now to determine whether any special inquiry should be established into the results of the deliberations of the Conference, and, if so, what form the inquiry should assume.

Your Lordships will no doubt consider that such an investigation is properly due to the intrinsic importance of the question, as well as to a consideration of deference to the earnest interest with which its development from theory to practice has been advocated by the French Government, under whose auspices the Conference was assembled, and which has expressed so cordial a desire for the further co-operation of this country.

We have, &c.

Her Majesty's Treasury.

INTERNATIONAL COINAGE.

Royal Commission.

VICTORIA R.

Victoria, by the Grace of God, of the United Kingdom of Great Britain and Ireland, Queen, Defender of the Faith, to Our Right Trusty and Well-beloved Cousin and Councillor, Charles Viscount Halifax, Knight Grand Cross of Our Most Honourable Order of the Bath; Our Right Trusty and Well-beloved Councillor Charles Pelham Villiers; Our Right Trusty and Well-beloved Councillor Stephen Cave, Our Paymaster-General and Vice-President of the Committee of Privy Council for Trade and Plantations; Our Right Trusty and Well-beloved Councillor John Wilson Patten, Chancellor of Our Duchy and County Palatine of Lancaster; Our Right Trusty and Well-beloved Councillor Mountifort Longfield, Doctor of Laws; Our Trusty and Well-beloved Sir John Lubbock, Baronet; Our Trusty and Well-beloved Thomas Baring, Esquire; Our Trusty and Well-beloved Lionel Nathan Rothschild, Esquire, a Baron of the Austrian Empire; Our Trusty and Well-beloved John Benjamin Smith, Esquire; Our Trusty and Well-beloved Thomson Hankey, Esquire; Our Trusty and Well-beloved John Gellibrand Hubbard, Esquire; Our Trusty and Well-beloved Thomas Newman Hunt, Esquire, Governor of the Bank of England; Our Trusty and Well-beloved George Biddel Airy, Esquire, the Astronomer-Royal; and Our Trusty and Well-beloved Thomas Graham, Esquire, Master and Worker of Our Mint; Greeting:

WHEREAS the Commissioners of Our Treasury have represented unto Us that they deemed it advisable to appoint two Commissioners to attend the International Monetary Conference held at Paris last year for the discussion of the means by which uniformity might be established between the various systems of Coinage at present in existence; and whereas the said Commissioners of Our Treasury have further represented unto Us that the Commissioners so appointed have reported to them the Proceedings of the said International Conference, and have made certain suggestions thereon, which demand further and careful investigation:

And whereas We have deemed it advisable for these and other good causes and considerations that a Commission should forthwith issue, to consider and report upon the Proceedings of the said International Monetary Conference, and the Report of the said Commissioners in reference to that Conference, and to examine and report upon the recommendations of the Conference, and their adaptability to the circumstances of the United Kingdom, and whether it would be desirable to make any, and what, changes in the Coinage of the United Kingdom in order to establish, either wholly or partially, such uniformity as the Conference had in contemplation.

Now know ye that We, reposing especial trust and confidence in your approved wisdom and fidelity, have assigned, nominated, and appointed, and by these Presents do assign, nominate, and appoint you, the said Charles Viscount Halifax, Charles Pelham Villiers, Stephen Cave, John Wilson Patten, Mountifort Longfield, Sir John Lubbock, Thomas Baring, Lionel Nathan Rothschild, John Benjamin Smith, Thomson Hankey, John Gellibrand Hubbard, Thomas Newman Hunt, George Biddel Airy, and Thomas Graham, to be Our Commissioners for the purposes aforesaid.

And We do, by these Presents, give and grant unto you, Our said Commissioners, or any five or more of you, full power and authority to call before you, or any five or more of you, such persons as you shall judge necessary by whom you may be the better informed of the truth in the premises.

And also to call for, have access to, and examine all and singular Records, Books, Papers, and other Documents as may afford the fullest information on the subject, and to inquire of and concerning the premises by all other lawful ways and means whatsoever.

And We do by these Presents require and command you Our said Commissioners, or any five or more of you, as soon as can reasonably be, to report to Us in writing under your hands and seals, all and every your proceedings by force of these Presents, and your opinions touching and concerning the premises.

And We do by these Presents declare and ordain that this Our Commission shall continue in full force and virtue, and that you Our said Commissioners, or any five of you, shall and may from time to time proceed in the execution thereof, although the same be not continued from time to time by adjournment.

And for your assistance in the execution of these presents We have made choice of Our Trusty and Well-beloved Charles Rivers Wilson, Esquire, to be Secretary to this Our Commission, and to attend you, whose services and assistance we require you to use from time to time as occasion may require.

Given at Our Court at St. James', the eighteenth day of February, 1868, in the Thirty-first Year of Our Reign.

By Her Majesty's Command,
(Signed) GATHORNE HARDY.

No. 1.

WESTERN AUSTRALIA. No. 1.

Copy of a DESPATCH from Governor Hampton to His Grace the Duke of Buckingham and Chandos.

(No. 52.)

Government House, Perth, March 21, 1868.

My Lord Duke, (Received, May 22, 1868.)

I have the honour to forward the Comptroller-General's Report on the Convict Department for the year 1867, referring almost exclusively to the statistical information enclosed therewith, and not seeming to require any comment from me. 5th March 18

I have, &c.

Enclosure in No. 1. Encl. in No.

Sir, Comptroller-General's Office, Perth, March 5, 1868.

I have the honour to submit the following as my report on the Convict Department for the year 1867.

I entered upon the duties of my office on the 16th May 1867.

The returns which I enclose are prepared in the same form as those submitted by the Acting Comptroller-General in his report for the year 1866.

The first return of the number, 3,220, of Convicts in the Colony on 31st December 1867 shows a reduction of 85, as compared with the number on 31st December 1866. The number was, however, increased by 279 on the arrival of the "Hougoumont" on 9th January 1868, on which date the number of Convicts in the Colony attained its maximum, and was about 600 more than on 31st December 1865.

The second return shows in like manner a decrease of 79 in the number of Convicts maintained by the Imperial Government, which was a few days afterwards changed into a considerable increase.

One Convict ship only, the "Norwood," arrived in 1867 (Return No. 3.) bringing 253 Convicts, 580 having arrived in the previous year.

Return No. 4 shows a decrease of 55 Convicts employed on public works on 31st December 1867, as compared with the same date in 1866.

The next return of the distribution of Convicts on public works throughout the Colony does not call for any remark.

Return No. 6 is very satisfactory as showing that as compared with 1866, while there were 75 ticket-of-leave holders less than in the previous year earning their own livelihood, there was a diminution of the number maintained by Government of 27, and that the number of magisterial sentences passed upon that class of Convicts in 1867 was 85 less than in 1866.

By Return No. 7 the number of Conditional Releases which had been issued up to 31st December 1867 was 59, and during that year three releases were revoked for offences committed by the holders.

WESTERN AUSTRALIA.

During the year 23 men who either held conditional pardons or whose sentences had expired were received under new sentences (Return No. 8).

The return (No. 9) of offences committed by Convicts on public works shows an increase of offences as compared with 1866 of no less than 383. This increase is chiefly under the heads of "Idleness" and "Miscellaneous." The number of offences indicative of the personal demeanour of the Convicts, and of their conduct to their officers, was somewhat less. The number of assaults upon officers was 8 in 1867 as against 15 in 1866. Under the head of "Escapes or attempts to escape" the number for 1867 is 33 in excess of that for 1866. It is right that I should point out that the large majority of the cases included under this head, although coming under the definition of absconding laid down in the local law, are not of men who really sought either to quit the Colony surreptitiously, or of men who in the Colony sought or expected to free themselves permanently from control, but were cases in which men from some cause or another, such as disagreements with their officers or fellow prisoners, wished for removal to other stations, and quitted their own in the hope that the punishment inflicted would involve the desired change. In such cases the men either were speedily taken by the police, or voluntarily gave themselves up.

Return No. 10 exhibits a diminution of 85 in the number of magisterial convictions of Convicts holding tickets-of-leave as compared with 1866. This fact cannot be otherwise than highly satisfactory, looking to the small number of instances of serious crimes committed by Convicts of this class. Drunkenness has somewhat diminished also among these men, but the proportion of cases of that crime is still unhappily very large, being more than one third of the total number of offences.

There occurred during the year 58 deaths of Convicts (Return No. 11), of which 16 were the result of accident, 2 the extreme penalty of the law, and 1 an escaped Convict, who, being armed and resisting his apprehension, was shot by the police.

The health of the Convicts generally throughout the Colony has been good upon the whole, and considering that a large proportion of them are men with constitutions impaired by irregularity of life.

The officers of the service throughout the Colony have generally performed their duties in a satisfactory manner, and considerable credit is due to a large number of warders who have been placed singly in remote and isolated localities, and without any practical means of coercion in charge of detached working parties of Convicts.

Special commendation is, I think, due to the surgeon (Mr. Attfield), and the chaplain (Rev. R. Alderson), of the Fremantle Prison, which always contains a larger number of Convicts and men of worse character than are to be found in any other station throughout the Colony, and where alone exist the means of preserving strict discipline among the Convicts.

I beg to enclose a statement of the expenditure on account of Convict service during the year, and the reports of the surgeon of Fremantle Prison, and of the surgeon superintendent of the Lunatic Asylum, and statements of public works performed in the various districts of the Colony.

I have, &c.
HENRY WAKEFORD,
Comptroller-General.

His Excellency the Governor,
&c. &c. &c.

SCHEDULE of RETURNS to accompany the REPORT of the COMPTROLLER-GENERAL for the Year ended 31st December 1867.

1. Number of Convicts.
2. Number of men maintained by Government.
3. Number of Convicts that have arrived.
4. Number of Convicts employed on public works on 31st December 1866 and 1867 respectively.
5. Distribution of men on public works throughout the several districts.

Amounting to one hundred and fourteen thousand one hundred and forty pounds ten shillings and elevenpence sterling.

Commissariat, Western Australia,
Perth, 28th February, 1868.

No. 13.

SIR, Fremantle Prison, January 1, 1868.

WITH the exception of an epidemic of diarrhœa and dysentery, which has been prevalent during the last two months, the health of the prisoners, as will be seen by the annexed returns, has been extremely good during the past year. Notwithstanding the effects of this epidemic, the number of hospital admissions has been less than the previous year, and the number of deaths almost unprecedently small.

An absence of fevers of low type, of diarrhœa and of dysentery, may, I think, always be looked upon in a prison as an indication that hygienic precautions are carefully taken, and that probably the water is of good quality and supplied plentifully, the drainage effectual, and the ventilation good. These desiderata have always obtained in this prison, and consequently a marked freedom (considering this hot climate) from epidemic disease has hitherto existed. During the latter part of the past year the main sewer became blocked up, and frequently tainted the air throughout the divisions, and I have no doubt was the paramount cause in producing the numerous cases of diarrhœa and dysentery which were lately under treatment, both amongst the casual sick and in the hospital wards.

An attempt is now being made throughout the prison to substitute the "earth closet system" instead of the sewer and cesspool plan, and I have no doubt whatever that this change will be very beneficial. Part of the old sewer was made of wood, and has now been in use for a number of years; no patching up would, I think, render it safe.

Table II. shows the number and the causes of the deaths that occurred last year. One resulted from a stab through the heart, a case of homicide, one resulted from accidental drowning, three of the remaining seven cases were from tubercular disease, two from dysentery, one from diarrhœa, and one from brain disease.

Table III. shows the diseases for which patients were admitted to hospital, and there is little in it requiring comment. The aggregate number of cases admitted is less than usual, but the number of those suffering from diarrhœa and dysentery is larger.

Table V. has reference to the state of health of the discipline warders of the prison. It shows that there was a daily average strength on the staff of 36, that there were 264 days during the year lost to the service on account of sickness of various sorts, and that the average duration of illness of each officer was 10 days, in fact 26 out of the 36 officers were sick and incapacitated at various times. Most of the illnesses were trivial in character. One officer, Warder Green, was on the sick list for 90 days, consequent on injuries received from a violent assault by a prisoner; this officer has since been "invalided." Warder Ryan also was 30 days off duty on account of being incapacitated by varix; he also was invalided. The officer who died, Warder Scott, had served in the capacity of warder at Bermuda; he arrived here with a broken-down constitution, and was on sick leave for a long time before

WESTERN AUSTRALIA.

his death. Leaving out of account these three officers, the general health enjoyed by the remainder has been very fair.

Table VI. shows that 13 men were in the hospital during the year under treatment and observation on account of mental disorders, and that six were ultimately sent to the lunatic asylum. There is nothing in the discipline of this prison which tends to produce mental alienation. Comparatively speaking there is little separate confinement carried out here. Every convict ship brings out a certain number of men of weak intellect, and a few years residence in this hot climate develops the idiosyncracy and brings them under observation.

I have great pleasure in again testifying to the daily painstaking care and attention shown by Compounder Lyons in carrying out my orders with regard to the sick in hospital.

I have, &c.

No. 14.

Lunatic Asylum, Fremantle,
January 1, 1868.

SIR,

I HAVE the honour herewith to enclose you a Return showing the number of admissions, discharges, deaths, &c. at the Lunatic Asylum during the past year.

Since reporting to you last year, the assistant colonial surgeon at Fremantle has been charged with the care of the Fremantle lunatics.

Nine males (connected with the convict department) and seven colonial males have been admitted as patients during the year, five male patients have been discharged, and six have died.

I have not anything in particular to remark concerning the nine convict males beyond saying, that I do not think their insanity could in any way be connected with the prison discipline of this country, they were all for a long time under treatment and observation in hospital before being sent to the asylum, and they were all more or less delusional.

Of the seven colonial males sent to the asylum during the year, three were highly delusional and quite crazed, three others were partly demented and imbecile, had partial paralysis, and were free from delusions. I consider these symptoms to be indicative of structural disease of the brain rather than that of "insanity," and that on the ground of expediency alone (i.e. there not being any other place of refuge for them) it is right to send these cases to a lunatic asylum, the remaining case out of the seven was one of what in France is termed dypsomania (a mania for drinking): there this habit is recognized as a distinct species of mania, justifying detention in an asylum; but this is not the case in England.

Three convict males were discharged during the year and sent back to prison discipline, and as yet they have not relapsed. One colonial male patient, a pensioner who had been an inmate of the asylum for 19 months was discharged, as also was, after a detention of five days, the case of delirium tremens.

One convict male patient, an old man with a broken-down constitution who had been an inmate of the asylum only six weeks, succumbed to an attack of dysentery; five colonial male patients also died from brain disease, these, however, I think, for the reasons above stated, should have been added to the Tables of Mortality in an hospital or a poor-house rather than those of a lunatic asylum.

The general health of the lunatics of the asylum has been excellent, the male patients have been occupied, busied, and employed about the two gardens and the yard as much as possible: there are not any workshops in the asylum, nor indeed would they be as useful and remunerative here as in other places, as by far the larger proportion of the inmates are merely field labourers. The grounds belonging to the asylum are spacious and cheerful looking, there are now plenty of flowers, shrubs, and vines growing; a kitchen garden also brings in a good supply of vegetables for the patients during the year; there is also a tolerably fair cricket ground, and also a very good fives court.

There is a plentiful supply of books sent down monthly from the prison, which, though not exactly of the sort most suited to the capacity of lunatics, is made tolerably fair use of.

No mechanical restraint whatever has been made use of during the year, seclusion for a few hours, on the exhibition of an unruly temper, has been found quite sufficient.

No attempt at suicide or escape has been made, nor have any assaults worthy of note been made on either fellow patients or the officers.

I have great pleasure in again testifying to the exceeding great care and attention paid, and to the good discretion exercised by Principal Warder Ramsay in the discharge of the many duties attendant on his post as officer in charge of the asylum.

I have, &c.
(Signed) G. C. ATTFIELD,
Surgeon.

The Hon. the Comptroller-General,
&c. &c. &c., Perth.

TASMANIA.

No. 2.

COPY of a DESPATCH from Governor T. GORE BROWNE, C.B., to His Grace the Duke of BUCKINGHAM AND CHANDOS.

(No. 22.)

Government House, Hobarton, Tasmania,
August 20, 1867.

(Received, October 21, 1867.)

MY LORD DUKE,

I HAVE the honour to forward the annual reports of the Comptroller-General and the Civil Commandant at Port Arthur.

I entirely approve and confirm these reports, which are so complete that comment on my part would give your Grace unnecessary trouble.

Having reference to my Despatch, No. 11, June 24th, 1867, I have been specially unwilling to sanction any new expenditure at Port Arthur which could possibly be avoided. That which has been incurred has been indispensable, and the additions and repairs will be required whether the establishment is retained under the control of Her Majesty's Government or transferred to that of the Colony, and in either case the division of the expense will remain unaltered.

I have, &c.

(Signed) T. GORE BROWNE,
Governor.

His Grace
the Duke of Buckingham and Chandos,
&c. &c. &c.

Enclosure in No. 2.

SIR, Comptroller-General's Office, August 14, 1867.

I HAVE the honour to forward, for transmission to the Right Honourable the Secretary of State, my annual report on the Convict Department in this Colony for the year ending 30th June 1867.

2. The office of the Comptroller-General is the same as last year, consisting of the Comptroller-General, two clerks, and one messenger.

3. The Convict Station at Port Arthur is the sole establishment under the direction and control of the Imperial Government.

I enclose the report of the Commandant, which will be found to contain full information as to the establishment under his charge. It consisted on the 30th of June 1867 of 494 male convicts under sentence, 238 paupers, and 90 lunatics; of these, 387 convicts, 56 paupers, and 4 lunatics, were chargeable to Colonial funds.

No absconding has occurred during the year, and the general conduct of the prisoners has been satisfactory. The buildings are in good condition, with the exception of quarters for some of the inferior officers and the quarters for the lunatics. A new building for the latter will be completed at the close of the year, which will provide in an efficient manner for their accommodation; for these quarters there will be a charge of 600*l.*, being the wages for twelve months of six carpenters, whom I have found it necessary to hire for their completion.

The condition of the whole establishment is most satisfactory, and continues to reflect the greatest credit on the Commandant.

4. At the Prisoners' Barracks there were 20 men chargeable to Imperial funds, 17 of whom were paupers awaiting removal to Port Arthur, and 3 under sentence.

5. At the Cascade Factory there were 15 women, of whom 13 were paupers and 2 were under sentence; there was also one child chargeable to Imperial funds.

6. At the New Norfolk Asylum there were 44½ inmates.

7. At the Colonial Hospital there were 7 wholly and 4 half chargeable.

8. At the General Hospital, Launceston, there were 2 patients.

9. At the Queen's Orphan Asylum there were 88 children wholly and 50 half chargeable to Imperial funds, being equivalent to 113.

10. I enclose the usual returns; 1. and 2. showing the distribution of the convicts, No. 3. showing the number chargeable upon Colonial and Imperial funds; also No. 4. giving a summary of convicts in Tasmania on the 30th June 1867, from which it will be seen that the number of male convicts has been diminished by 26, and females by 2.

11. The cost of the convicts will be shown in my report on the estimate for 1868–69.

I have, &c.

His Excellency the Governor, &c. &c. &c.

(Signed) W. NAIRN,
Comptroller-General.

Civil Commandant's Office, Port Arthur,
Tasmania, August 10, 1867.

SIR,

I HAVE the honour to lay before you my annual report on this establishment for the year ending 30th June last.

Conduct of the Subordinate Officers.

The conduct of the officers generally has been satisfactory, and they have discharged their important duties in a zealous and efficient manner.

The following changes have taken place, viz.:—One district constable and one coxswain superannuated, two assistant overseers resigned, one superintendent of timber reduced by abolition of office, one schoolmaster dismissed, and one under keeper of insane, deceased.

Civil Guard.

The pay of the Civil Guard having been materially reduced on the 1st January last, a saving of 51*l.* 13*s.* 9*d.* per annum has been effected in this item of the expenditure, without in any degree impairing efficiency or lessening the security of the establishment.

State of the Buildings.

The buildings generally are in good condition, except those in which a portion of the insane and the infirmary patients are lodged; as also several of the officers' quarters, which being old weather-boarded structures, will shortly have to be replaced. For the former class the new asylum, adverted to in my last report as being in course of erection, will very soon be completed, and afford excellent accommodation for the mentally afflicted.

Two of the exercise yards at the separate prison have been covered over, and fitted up, one as a workshop for shoemakers and saddlers not under separate discipline, but whom it has been found expedient to employ under the closest supervision; the other is used for store purposes.

The bone and saw mills have been much improved.

The whole of the General Prison has been repainted and the wood work of the large dormitory refitted.

The tower near the guard room, used for storing ammunition and blasting powder, has been re-roofed for safety, lead having been substituted for shingles.

A new semaphore has been provided at Norfolk Bay Police Station, and an iron steam tank fixed in the prisoners' bath room at Port Arthur.

A tannery has also been fitted up, which will prove an economical arrangement, by enabling me to have a large quantity of kangaroo and other skins converted into leather for the manufacture of boots for the inmates, thereby saving purchases to a considerable extent.

In addition to these works, a large amount of repairing has been effected in the buildings throughout the Peninsula, in the launches, boats, semaphores, jetties, bridges, &c.

Conduct of the Prisoners.

The general conduct of the prisoners has been satisfactory. Return (A.) appended shows the nature and number of offences and of punishments during the year. There were 146 offences committed upon an aggregate strength of 592; in the former 12 months 154 offences were recorded with a total of 616 convicts.

No crime of a serious character has to be reported, nor has any case of absconding occurred.

Suicide.

The only case of suicide by a prisoner which has taken place for many years occurred in the month of April last, when number 20,471 hanged himself with the straps of his cell hammock. The prisoner was under a commuted sentence of 10 years imprisonment for a capital offence, and had only been confined in the separate prison five weeks, during which period neither the medical officer in his daily visits, the chaplain, nor any of the discipline officers had noticed anything unusual or suspicious in his manner or appearance.

Re-conviction of discharged Convicts.

198 prisoners were discharged during the two years ending 30th June 1867, and of those 14, or about 7 per cent., have been again received under sentence; some of these men are, however, of the idle, incorrigible class, who no sooner complete one sentence than they commit some other offence, and are returned to a prison or penal settlement; others are becoming too old and infirm to earn an honest livelihood, and are a constant burden on the public either as prisoners or paupers.

New Dietary.

On the 1st of May 1867 new scales of approved dietary were introduced for the convicts, paupers, and lunatics, with perfect order and success. The former rations of meat and bread have been considerably diminished; but various changes of food adopted, with a superior system of cookery, thereby rendering the present dietary much less monotonous than the old, and at the same time securing a very important saving. The reduction of expense for two months, during which the new dietary has been in operation, amounts to 215*l.* 7*s.*, or at the rate of nearly 1,300*l.* per annum.

Increasing Age and Infirmities of the Prisoners, and consequent Incapacity of many for Hard Labour.

In my last report I drew attention to the large proportion of the convicts who were becoming physically unfit for effective work, and to the advanced ages of the men in general.

During the past 12 months the majority of the prisoners received have been pronounced by the medical officers on arrival to be only fit for 2nd or 3rd class labour, while many of the general body have also been exempted, on medical report, from any but the lightest employment. It has, therefore, been impossible to keep up the former strength of the bush and other effective labour parties; this, however, is not surprising, when it is borne in mind that almost the whole of the present convicts originally arrived from England or other places as prisoners many years ago, and that only the worn-out and most useless class are now received.

Employment of the Prisoners.

The appended Return (B.) shows the various descriptions of work carried on.

*(C.) the quantities of farm, dairy, and fishery produce.

*(D.) the quantities of building and other materials, fuel, &c. obtained.

*(E.) the clothing and other articles of stores made and repaired; also the washing performed.

General Observations.

Appendix (F.) gives the number of prisoners, invalids, paupers, and lunatics on 30th June 1866 and 30th June 1867 respectively, with the funds upon which they were chargeable.

(G.) the number of prisoners received and discharged.

(H.) the mortality during the year, and number of persons in the hospitals on 30th June 1867.

(I.) the present classified ages of all the prisoners.

Appended also is a list of the principal visitors, with their recorded observations.

The Governor inspected the whole of the establishment in the month of February last, and a copy of his Excellency's official minute will be found with the entries made by visitors.

I have, &c.

The Honourable the Comptroller-General, &c. &c. &c.

(Signed) J. Boyd,
Civil Commandant.

COPY of the ENTRIES made in VISITORS' BOOK.

Having been on Tasman's Peninsula for the past eight days, we beg to express our satisfactory opinion as to the very perfect and skilful arrangements of the various departments connected with the Port Arthur Establishment. The simple yet perfect construction of the model prison is peculiarly striking, while being on a comparatively small scale, it can the more readily be appreciated. The Penitentiary, holding so important and extensive a position in the establishment, affords the greatest satisfaction to the visitor by its regularity and order. Having visited all the departments on the Settlement, we were much attracted by the prevailing air of cleanliness and neatness.

With regard to the treatment of the prisoners, it is evident that while there is a complete absence of undue severity there is no want of necessary discipline to enforce upon their minds the retributive punishment crime entails, and also to train them to a useful course of life. The visits we have made suggest the conclusion, that great credit is due to the Civil Commandant, whose aim is eminently calculated to tone, without unnecessary coercion, the vicious habits of the unfortunate persons under his authority. Indeed, so admirable is the administration of his establishment, that it is fully deserving of the distinguished position it holds, as the best arranged and most perfect in Australia, and would bear favourable contrast with similar institutions in the mother country.

Port Arthur, August 7, 1866. (Signed) THOS. SHEEHY, Barrister-at-Law, Hobart Town.
DAVID AHERNE, Barrister-at-Law, Lincoln's Inn.

Having visited this library, it affords us great pleasure to testify that it is being kept in a manner to reflect the greatest credit to its conductors and supporters. We were certainly not prepared to find it in so complete a form, and only regret that we had not sufficient time to make a more minute examination. We cannot, however, refrain from particularly mentioning the extreme politeness of the librarian in pointing out objects of special interest, and we wish further to compliment the members of the institution for the beautiful and correct picture of the Civil Commandant, J. Boyd, Esq., which adorns the institute.

(Signed) J. M. GOLDREICH, Hebrew Minister, Hobart Town.
BEHREAD, Acting Secretary, Hobart Town.

Having visited this establishment, and been kindly shown over the whole, there cannot be any doubt of the perfect system of management throughout, and the excellent arrangements made to economise labour in various ways. The perfectly healthy appearance of the aged, and the thankful manner of expression of many of them, prove that these unfortunate beings are not only well cared for, but most kindly treated by all the officers.

Port Arthur, August 21, 1866. (Signed) JOHN MEREDITH, M.H.A.
Dr. LEWIS, M.H.A.
WM. DODERY, M.H.A.
Mr. and Mrs. T. THOS. COOKSON, New Zealand.
JOHN SCOTT, M.H.A.
A. T. COX, Captain, P. and N.Z. Royal Mail Company.
W. N. WARREN, Lieutenant, R.A.
H. LEIGHTON, New Zealand.
J. PARKER, New South Wales.

Visited the library, and am much delighted with everything I have observed.
September 18, 1866. (Signed) J. HONEY, Commissariat Clerk.

Having visited this establishment, and been shown over it, we have been much delighted with its thorough cleanliness and perfect order, and we desire to record in the most emphatic manner our approval of the establishment as a whole. The attention of the officers to their respective duties appears to us to be beyond all praise. Their attention to visitors is highly satisfactory.
December 17, 1866. (Signed) JAMES ALLEN, Editor, "Mercury" Office.
L. SHAWN, Bank of Victoria, Melbourne.
E. SHAWN.
Mrs. J. ALLEN.
WALTER WATKINS, Melbourne, Agent, T. S. N. Company.

I have visited the greater part of the establishment, and am much pleased with the perfect order and discipline maintained throughout.
December 17, 1866. (Signed) RICHARD DRY, Premier.

I have gone over the establishment, and feel much pleasure in bearing testimony to the perfect manner in which every department is conducted.
(Signed) J. DWYER, Lt.-Col. 2/14th Regiment, Commanding Troops in Tasmania.
J. W. SAUNDERS, Captain, 2/14th Regiment.

I have visited this establishment, and have been delighted with the admirable arrangements and perfect order throughout the whole.
(Signed) F. W. QUILTER, M.A., Incumbent of St. John's, Newtown.

I have carefully inspected this establishment, and have only to repeat what I have so often said before, and to express my continued approval of Mr. Boyd's system, and of his unremitting zeal and attention.
February 17, 1867. (Signed) T. GORE BROWNE, Governor.

I have been much pleased to find everything so near the mark at Port Arthur, and that such excellent rules remain unbroken.
February 17, 1867. (Signed) ROCHFORT MAGUIRE, H.M.S.S. "Challenger,"
Commodore Commanding Australian Squadron.

We have visited the several departments on the Settlement, and are pleased to be able to confirm the general report, as to the able and efficient manner in which everything is conducted, which is very creditable to those in charge.
March 11, 1867. (Signed) P. LEVY, President, Hebrew Congregation, Hobart Town.
MORITZ MICHAELIN, Melbourne.
HERMANN BITTNER, Melbourne.
J. M. GOLDREICH, Minister, Hebrew Congregation, Hobart Town.

Having visited this establishment, and having been prepared by report to find everything in the strictest order, I can only observe that the reality of having witnessed the order, cleanliness, regularity, and comfort of the inmates, far exceeds all which any person could imagine to exist on an establishment composed of the worst characters; even the healthy and cheerful appearance of most of the men is a feature of great satisfaction.
March 11, 1867. (Signed) EDWD. FREEMAN, A.M., Colonial Chaplain.
Mr. and Mrs. WARD, Victoria.
WILLIAM ELDER, J.P.
JOHN ELDER, junior.
EDWD. LUCAS, Commander, "S. Cross" S.S.
Mrs. G. LUCAS.
Miss M. LUCAS.
Mrs. LAMB.
C. T. BELSTEAD, Civil Service.
H. LAMB, Staff Assistant Surgeon.
J. M. SHORT.

Having been kindly permitted to visit this establishment, I have great pleasure in saying that it exceeds my expectation in every particular as to the arrangements generally. I have been much struck with the provision made for proper employment of the inmates, as well as with the mode in which such appears to be carried out. I have also to add that I am much indebted to the Civil Commandant, and to the gentlemen otherwise connected with the establishment, for the courtesy shown me.
March 20, 1867. (Signed) GEO. DINHAM, Bank, Van Dieman's Land, Hobart Town.

Having visited this establishment, and been kindly shown over it, I must express great pleasure at seeing the cleanliness and systematic order with which it is regulated.
May 20, 1867. (Signed) H. L. GARRETT, J.P.

TASMANIA.

Having visited this establishment, and having also been most courteously conducted over it by Mr. Boyd, I cannot do otherwise than express my admiration of the extreme good order and management of the same, being equal to any of the same establishments I have visited in England.

(Signed) N. G. HARDEN, New South Wales.
WM. KENT, jun., J.P., New South Wales.

Mr. Harden and Mr. Kent were accompanied by Thos. Trail Watt, Esq., Collector of Customs.

J. BOYD,
Civil Commandant.

No. 3.

No. 3.

COPY of a DESPATCH from Governor T. GORE BROWNE, C.B., to his Grace the Duke of BUCKINGHAM AND CHANDOS.

(No. 8.)

Government House, Hobarton, Tasmania, February 27, 1868.

MY LORD DUKE, (Received, April 27, 1868.)

I HAVE the honour to forward the Comptroller-General's returns of convicts and other persons chargeable to Imperial funds.

I have before drawn your Grace's attention to the reduction of numbers chargeable to colonial funds, in comparison with previous returns, referred to by the Comptroller-General in the enclosure, and as I wait your Grace's decision on my despatch relative to the transfer of the establishment, I need say no more on the subject now.

I have, &c.

His Grace (Signed) T. GORE BROWNE,
the Duke of Buckingham and Chandos,
&c. &c. &c. Governor.

Enc. 1. in No. 3.

Enclosure 1. in No. 3.

SIR, Comptroller-General's Office, February 26, 1868.

A.

I HAVE the honour to forward for transmission to the Right Honourable the Secretary of State the usual returns showing the number of convicts and other persons chargeable to the Imperial Government or maintained in Imperial establishments in Tasmania on the 31st of December 1867.

2. Returns Nos. 1. and 2. show the total strength on the 31st of December, and also the strength as compared with that on the 30th of June 1867. Return marked 3 shows the total number of persons maintained at Port Arthur, the only Imperial establishment in the Colony, viz., 314 chargeable to Colonial, and 357 to Imperial funds; the great reduction in the number chargeable to Colonial funds in comparison with the previous returns has been caused by the removal of all the Colonial paupers, and a large number of the men under sentence of penal servitude, to Colonial establishments. The return No. 4. gives a summary of convicts, showing a total of 596 males and 14 females: of these, 153 males and 12 females were not supported by the Government.

3. The number of children shown in Return No. 1. as at the Queen's Orphan Asylum, viz., 97, is made up of 75 children wholly, and 44 half chargeable to the Imperial Government, being equal to a charge for 97 children.

I have, &c.

His Excellency the Governor, (Signed) W. NAIRN.
&c. &c. Comptroller-General.

Return of Distribution and Strength of Convict Department for Half Year ending 31st December 1867.

SEVENTH ANNUAL REPORT

OF

THE MANAGERS APPOINTED UNDER THE PRISONS (SCOTLAND) ADMINISTRATION ACT.

TO THE RIGHT HONOURABLE GATHORNE HARDY,

One of Her Majesty's Principal Secretaries of State.

11, Melbourne Place,
Edinburgh, 8*th February* 1868.

Sir,

In terms of the provisions of the Prisons (Scotland) Administration Act, we have the honour to lay before you our Seventh Report. The statutory directions, in terms of which the Report has been prepared, are the following :—

Statutory directions for Annual Report to Secretary of State, in terms of 23 and 24 Vict. c. 105, sect. 60.

'The Managers shall, on or before the 15th day of *February* in every year, 'make and transmit to one of Her Majesty's Principal Secretaries of State a full 'Report of their whole proceedings during the year ending on the 31st day of '*December* preceding, and an Abstract of their whole receipts and expenditure, 'classifying the separate articles thereof; and in the said Report, or in the Ap- 'pendix thereto, there shall be set forth all new rules or alterations of rules for 'Prisons which shall have been made by such Secretary of State as aforesaid, any 'orders issued by such Secretary of State constituting a new Prison or altering 'the classes of prisoners for which a Prison is legal, and such information and statistics 'regarding Prisons in *Scotland* as such Secretary of State may require.'

Proceedings as to Criminal Lunatics, in terms of 25 and 26 Vict. c. 54, sects. 19-24.

In addition to the matters on which we have thus to report under the Prisons Act, we have to give an account of certain proceedings relating to Criminal Lunatics, arising out of the provisions of the Lunacy Act of 1857, as affected by the Act of 1862, 'to make further provision respecting Lunacy in Scotland.'

The Managers.

The Managers consist of the Sheriff of Perth, the Inspector of Prisons for Scotland, and the Crown Agent in Scotland, all *ex officio*, along with one person appointed by Her Majesty to be Stipendiary Manager and Secretary to the Managers.

CUSTODY OF CONVICTS AND MANAGEMENT OF THE GENERAL PRISON.

The General Prison for Scotland at Perth contains a Prison proper, or Penal Department; and an Establishment for the Criminal Lunatics of Scotland, or a Lunatic Department. The purposes to which each of these departments is applicable, continue to be, as they have been set forth in our last and previous Reports, the following :—

'The Penal Department.

The Classes of Prisoners admitted to General Prison.

'This Department is constituted for the reception of—1*st*, Prisoners sentenced to imprisonment 'by the Courts of Law in Scotland. Such prisoners sentenced to nine months' imprisonment and 'upwards, are removed from Local Prisons to the General Prison, under the statutory powers of the 'Managers, unless the sentence contains a clause specially declaring that the prisoner shall not be 'removed to the General Prison. Prisoners sentenced to shorter periods can be removed to the 'Prison by the Secretary of State under his statutory powers, should an occasion occur for the 'exercise of these powers.

Sentenced to Imprisonment.

Convicts.

'2*d*, Convicts under sentences of transportation or of penal servitude. These are removed to 'the Prison by order under the hand of the Secretary of State.

'The Lunatic Department.

Criminal Lunatics.

'This Department is constituted for the reception of—1*st*, Persons who, by judgment of the 'Criminal Courts, have been placed at Her Majesty's disposal on the ground of insanity, either at the 'time when they committed the offence charged against them, or at the time of trial; and

'2*d*, Prisoners who have become insane while undergoing punishment.'

The Prison of Ayr. App. No. XX.

A portion of the County Prison of Ayr continues to be at the Secretary of State's disposal for the reception of Female Convicts sentenced to penal servitude, under a contract between the Government and the Prison Board of Ayrshire.

Referring for more full details to the Appendix, the following Table sets forth the distribution of the accommodation at our disposal, and the manner in which it was occupied throughout the year 1867 :—

GENERAL PRISON.

Penal Department.

I. Accommodation—	Males.	Females.	Both.
Cells,	342	373	715
Average Occupation of Hospitals,	13	15	28
Total,	355	388	743

II. Occupation—	Prisoners Sentenced				Both.
	To Imprisonment.		To Transportation or to Penal Servitude.		
	M.	F.	M.	F.	
At commencement of the year,	265	143	72	212	692
Admitted during the year,	279	139	109	57	584
Total,	544	282	181	269	1276
Disposed of during the year,	271	134	109	65	579
In custody at the end of the year,	273	148	72	204	697
Daily average throughout the year,	275	145	70	198	688

Lunatic Department.

I. Accommodation—	Males.	Females.	Total.
Apartments for	40	18	58

II. Occupation—	Inmates.		
	M.	F.	Both.
At commencement of the year,	34	11	45
Admitted during the year,	5	6	11
Total,	39	17	56
Disposed of during the year,	8	3	11
Inmates at the end of the year,	31	14	45
Daily average throughout the year,	32	13	45

PRISON OF AYR.

Proportion at the disposal of the Secretary of State for Female Convicts.

Cells,	96
Occupation—	
At the commencement of the year,	82
Admitted during the year,	33
Total,	115
Disposed of during the year,	30
In custody at the end of the year,	85
Daily average throughout the year,	87

We append, according to custom, Reports by the chief Officers of the General Prison down to the close of the year, referring to them for information on the following particulars, viz. :— Reports by Chief Officers.

To the Governor's Report for information on— App. No. VI.

The adjustment of the Staff, and the conduct of the Officers.
The general Statistics of the Establishment.
The Discipline of Prisoners.
The Labour of Prisoners.
The Industrial Training of Prisoners.
The Exercise of Prisoners.
The Conduct of Prisoners.
The Receipts and Expenditure, and the relative Cost of the Establishment. App. Nos. X. to XI

To the Chaplain's Report for— App. No. XIV.

The Religious and Secular Instruction of Prisoners.
The Educational Statistics.
The Prospects and Condition of Liberated Prisoners.
Re-imprisonments and other matters bearing generally on the Moral influence of the Discipline.

To the Resident Surgeon's Report for— App. No. XV.

The Health, mental and bodily, of Prisoners.
The Illnesses, and their Causes and Treatment.
The Deaths.
The Management of the Lunatic Department.
The Management of the Hospital Department.
The general Sanitary Condition of the Establishment.

The Appendix also contains— App. No. VII.

1. An analysis of the ages, with reference to their respective sentences, of all the prisoners who were, during the year, in the Penal Department of the Prison.
2. Table of the number of prisoners received during the year from each county in Scotland. App. No. VIII.
3. Table of the offices and emoluments of the Staff. App. No. IX.

In our last Report we drew attention to the structural history of the building, as having been originally intended for the detention, not of criminals, but of prisoners of war, and to the repeated and costly changes which had consequently been necessary to adapt it to its present purposes. Throughout the past year the new works executed were of a trifling character, being rather intended as a satisfactory completion of works adopted in former years than for the accomplishment of any material change in the structure or extent of the building. The most important of these works consisted in the strengthening of the arched roofs of the cells in the highest gallery of the old building. A serious latent defect in these had been proved by the facility with which a prisoner, in an ineffectual attempt to escape, was able to ascend to the roof. Condition of the Building.

We expressed in our last Report a hope that we had now reached the conclusion of the works necessary to adapt the Establishment to its present purposes, and we have the satisfaction to state that we have not found it necessary to render an estimate for any new work to be executed during the ensuing financial year.

Throughout the year the Staff of the Prison has, under the superintendence of Mr. Parkyn, the Governor, been in thorough order and efficiency. On the conduct of the Officers the Managers have had to entertain no serious complaint. They have to regret the serious and, they fear, hopeless illness of a very valuable officer, Mr. Cruickshank, the Deputy-Governor and Steward. The Managers fear that either a cause, or an accompaniment, of his malady, was an excessive anxiety about the performance of his duties, which prevented him from taking advantage of those relaxations from business which would readily have been allowed to him. The Staff.

The Secretary of State having taken into consideration the religious instruction of such of the prisoners as belong to the Church of England and other Episcopalian communities, came to the conclusion that it would be proper to obtain the services of a clergyman of their creed to act as episcopal visiting clergyman in the Prison, and, in that capacity, to assist in the performance of the duties of the Chaplain. The character of the assistance which he is thus expected to give is set forth in Nos. 44 and 45 of App. No. XXVII. Visiting Episcopal Clergyman.

the Rules for the Government of the Prison. The Rev. Henry Humble was appointed to this office by the Secretary of State.

Other additions.

The only other alteration made on the number of the Staff during the year was the additional Warder to be afterwards mentioned in connexion with the Lunatic Department.

The Managers have always followed the policy of supplying the whole Establishment with full work, and to that end, of keeping the permanent Staff down to the point at which it is just sufficient effectually to perform all the duties of the Establishment. As accidents may, however, necessitate additional assistance, they obtained power from the Secretary of State to authorize the Governor, from time to time, to obtain temporary assistance, provided the whole charge for such assistance, as rendered in his accounts for any one month, does not exceed the minimum monthly pay of a Warder.

Rules for the Government of the Prison.

As the recent readjustments of Convict discipline had been completed, and there was no immediate prospect of any other material change in the system of discipline and management applicable to the inmates of the General Prison, the time seemed to have come when the Rules applicable to the Establishment should be collected together into one Code. These Rules were to be found partly in Statute law, partly in the Rules for all the Prisons in Scotland certified by the Secretery of State in the year 1854, and partly in Rules so certified specially applicable to the General Prison, as an establishment directly under the control of the Government. There were, besides these, Instructions by the Secretary of State arising out of special circumstances, and there were provisional directions by the late General Board of Prisons, to be effectual until the Secretary of State should supersede them.

This unarranged mass of materials was found to consist of two distinct groups, the one general and constitutionally important as affecting the liberty of the subject, the other connected with mere details for preserving order and accuracy in the carrying out of the objects of the Establishment. Of the former kind were those rules which, on the one hand, communicate powers or privileges ; or, on the other hand, enforce restrictions, duties, and obligations. It was thought proper that all rules partaking of this character should be sanctioned by the Secretary of State, in terms of the provisions of the Statute. These enact that all Rules for Prisons in Scotland, certified under the hand of one of Her Majesty's principal Secretaries of State, shall continue in force until superseded by other rules so certified, and empower such Secretary of State to alter, modify, or suspend any existing rule by a writing under his hand.

23 and 24 Vict. cap. 105, sects. 7 and 9. Subsidiary Regulations.

Hence the Rules so certified do not profess to deal with the daily routine of duty, but direct the Managers to provide for these details in 'Regulations,' which they are authorized by the Rules to prepare and issue. By Statute, the Managers are required to set forth, either in the body of their Report, or in an Appendix to it, any new Rules for Prisons certified during the year by the Secretary of State. In the new Rules so certified by you for the General Prison, it is provided that any Regulations adopted by the Managers, under the directions of these Rules, if they be for permanent observance in the Prison, shall be appended to their next Statutory Report. There hence appear in the Appendix ———

App. No. XXVII.

1. 'Rules for the Government of the General Prison for Scotland at Perth,' as certified by Her Majesty's Principal Secretary of State for the Home Department.

App. No. XXVII.

2. 'Regulations issued in terms of No. II. of the Rules, for the Government of 'the General Prison for Scotland at Perth.'

App. No. XXVII. Laws, Rules, and Regulations.

Since we required to append these two documents, the opportunity was taken of also printing, as an introduction to them, the various statutory provisions applicable to the General Prison. This portion of the Appendix thus contains all the Laws, Rules, and Regulations at present in force in the General Prison.

Working of the Mark System.

In our Reports for the years 1865 and 1866, we gave some account of the Mark System as a method of testing the claims of Convicts for partial remission of sentence, by Order of License, commonly called Ticket-of-Leave. The Mark System was part of the policy inaugurated by the Penal Servitude Act of 1864. In Scotland it has only been applied to Convicts sentenced since the passing of the Act on the 25th of July 1864. Virtually, in Scotland, it applies to female Convicts only, since male Convicts do not come under its operation until they are removed to public works. The earliest cases for remission under the system were brought under your consideration towards the end of the year. They were those of women who had been sentenced to five years penal servitude just after the passing of the Act. As remission of a third of the sentence may be gained by a full complement of marks, those who had been sentenced towards the end of July in 1864, might gain remission in January 1868. In stating

the balance of Marks debited and credited to the Convict, and deducing from that the extent of remission, the following form is used :—

	1	2	3	4	5	6
Convict A. B.	Commencement of Record.	No. at 6 per day to gain full period.	Col. 2 with addition of marks forfeited, viz., 84.	Commencement of full period.	Number gained as at 31st December 1867.	Day of completing Total as p. Col. 3 at 6 per day.
Record of Marks.	1864. 19th September.	7304	7388	1868 20th January.	7171	1868. 6th February.

This summation appears in a schedule containing the date and duration of sentence, and other particulars by which the accuracy of the figures may be tested. As we have already explained, the stated number of marks with which each Convict is daily credited is four. If, instead of four, the Convict makes six daily, she gains a day in every three; and if she go on doing so, and forfeits none, she earns the longest period of remission, equivalent to one-third of the sentence. In this instance, as the schedule which supplies the data for the above Abstract would show, the length of the sentence is five years, and the number of marks, which at six per day would cover two-thirds of this period, is 7304. The Convict did gain all these, and if she had forfeited none of her gains by misconduct, she would have obtained her remission on 20th January 1868. She forfeited 84, however, for misconduct, and these have to be added to the total, because continuing to gain six marks per day, the Convict gains back a third of what she has forfeited, as well as of what she was originally due. The debt to be swept off is thus 7388 marks, and so the forfeitures postpone the remission until the 6th of February.

We have in former Reports remarked that this system cannot be worked without entrusting considerable powers to subordinate Officers. The chief effective checks on them are the practice of taking an estimate beforehand of the task to be assigned to the Convict, and noting with precision any deficiency in the performance of it, instead of forming a general estimate of the Convict's industry from the work done. The Warder's note of the day's gain of marks cannot be altered should any cause of prejudice against the prisoner arise; and when a week's marks are examined by a superior Officer, and the whole credited to the Convict, the record of them cannot be afterwards altered. No precautions, however, are so effective as the character of the staff. In this respect the public are much indebted to the ability and zeal of the head of the female department of the General Prison, who is well assisted by her subordinates.

It is still the opinion of the Officers who carry out the Mark System in the General Prison, that it is a stimulus to industry; and the Governor of the Prison of Ayr, who was for some time an Officer in the General Prison, has given in his Annual Report an emphatic support to that opinion, App. No. XX.

Gratuities to ordinary Prisoners.

Our experience in this matter has suggested to us that a stimulus to industry might advantageously be applied to prisoners under sentence of Imprisonment. Gratuities are payable to them on liberation up to the maximum of £2. Of this sum, 5s. are invariably paid as subsistence money, on the principle that it is unwise to liberate a criminal with no immediate means of satisfying his wants. The remainder, however, £1, 15s., is available as a source of reward. The practice we have experimentally adopted is to credit each prisoner with £1, to deduct so much from that sum for each offence, and to add so much for an amount of diligence which is testified by considerable industrial results.

Gratuities to Female Convicts.

A change on the arrangements for paying gratuities to female Convicts has been applied to those on the Mark System. Under the original rule the sum increased with the length of detention, and those sentenced to the longest periods, who may be presumed also to have been the greatest criminals, received the largest sums. A woman under sentence of twenty years might thus be entitled to a sum exceeding £20. By the new arrangement the amount is not increased by the length of the sentence, but is fixed at a maximum of £4, liable to deductions for misconduct. We find it desirable that the amount allowed should be payable in small instalments.

Department for reception of Criminal Lunatics.

The Department for the reception of the Criminal Lunatics of Scotland appears to us still to answer the expectations formed of it, as a suitable method of disposing of all those lunatics whose form of lunacy is so dangerous that the interests of the public require them to be detained under the direction of responsible Officers of the Government. The fears we entertained of a future pressure on the accommodation have not yet been realized; we have found room for all whom it has hitherto been desirable to admit, and in all probability will continue for some time to do so. In our last Report we drew attention to a peculiar class of cases—that of persons charged with murder,

or some other formidable crime, who are put at Her Majesty's disposal on the ground of lunacy at the time of the committal of the act, and who have since recovered their sanity. A communication raising certain questions as to the proper method of the disposal of such persons is now before you.

The Secretary of State was pleased to concur in a suggestion made by us, that the Superintendent of the Lunatic Department should be a person who, though he might not have received a professional education, should have had such experience in the treatment of lunatics as might enable him to direct the conduct of the ordinary attendants, and to take the proper steps on the occurrence of any emergency. The salary attached to the office was accordingly raised from a minimum of £60 and a maximum of £80, to a minimum of £120 and a maximum of £150, which secured to us the services of Mr. John Crichton, who has had much experience in an office of responsibility in the Murray Asylum, near Perth. An additional male Warder was assigned by the Secretary of State to this Department.

Deaths, and condition as to Health.

It will be seen from the Report of the Resident Surgeon that the number of deaths occurring among the prisoners throughout the year was 17. This is the highest number that has been recorded in any one year. The next highest numbers were 16 in the year 1860, and 15 in the year 1864. The numbers, however, are not sufficient to provide for any one year at a time steady and instructive statistics. In 1866, for instance, the number was 9, and in 1865, 2. The number for the past ten years was 102, being an average slightly above 10 in the year, or 1½ per cent. We call attention to the statements made in the Report of the Resident Surgeon concerning some causes of sickness in local Prisons, and other places of detention, as bearing on considerations of a very important character.

Projects for Drainage of town of Perth.

As a matter likely to affect the future health of the prisoners, the Managers have looked with some anxiety at certain works partly executed, and partly only projected, for the drainage of the town of Perth. At present the drainage passes into the River Tay at three several outlets, all upwards of half a mile above the Prison. From time to time branches have been added to these drains communicating with streets and houses, and thus ever adding to the amount of sewage transmitted to the river. Of late these branches have increased very rapidly. Both the town of Perth and the General Prison are supplied with water from the Tay for drinking and cooking. An analytical examination was made in the year 1855 of the water so consumed in the General Prison. The examination was made under different states of the tide, and in comparison with the water of the Tay taken in such conditions as to reveal any special contaminating influences, if there should be any, in the water so consumed in the Prison. The result was satisfactory. Lest any change should be occasioned by the increased volume of sewage sent into the river, the Managers obtained, towards the end of last year, another comparative analysis by Professors Christison and Maclagan, which was still satisfactory, and indeed showed that if the water consumed in the General Prison in any way differed from that consumed by the citizens of Perth, the difference was in favour of the General Prison. It is now, however, proposed to collect all the sewage that passes through the three outlets, into one main or catch sewer which shall discharge its contents into the river close to the General Prison. The Managers can easily suppose, that although the water consumed in the Prison has hitherto escaped contamination, it might not continue to do so under the contemplated change. They have therefore requested the Board of Her Majesty's Works, in whom the property of the Prison is vested, to oppose the prosecution of the design, and, if necessary to that end, to institute legal proceedings.

Sect. 61. Monthly Visits of Inspection.

In the Prisons Administration Act it is provided, that 'one or more of the 'Managers shall, once at least in every month, see and communicate with each Prisoner, 'shall examine the books, accounts, and documents kept in the Prison, shall inspect 'the Prison premises and stores, shall examine into the conduct of the several officers, 'shall investigate all complaints, and alleged or apparent abuses or deviations from the 'rules, shall inquire into the cause and nature of every punishment that has been 'administered, shall ascertain how far the health, education, and industrial training 'of the Prisoners are in a satisfactory condition, and shall make a report, in writing, 'under these heads, which shall be laid before, and specially considered by, the 'Managers.'

This statutory instruction was carried into full effect during the past, as it had been in previous years. The results were in every way satisfactory, as showing the establishment to be in good order and discipline. Examinations so frequent and so full have, among other beneficial effects, that of rather obviating than encouraging complaints by Prisoners. Sometimes a visiting Manager will not receive one complaint from the whole seven hundred Prisoners he has spoken to, or even encounter an insolent look among them.

Female Convicts in the Prison of Ayr.

During the past year, the arrangements for the custody of Female Convicts in the Prison of Ayr continued in terms of the contract with the Prison Board of Ayrshire, entered on in 1863, and referred to in our previous Reports. The arrangement has proved throughout the year satisfactory, with the exception of one calamitous event, for which we could not hold any of the Officers responsible;—on the 14th May, one of these Convicts committed suicide in a very deliberate and determined manner. She was well known to the Officers both at Ayr and the General Prison, and had not been noted as exhibiting any suicidal tendency. The building occupied by the Convicts has three storeys above the ground floor, all with open railings opposite to the cell doors. This Convict was carrying water to wash her cell with, when, suddenly taking off her shoes, she slipped unobserved into the staircase, and mounting to the highest corridor, took a stool out of a cell, stepped from it on the railing, and threw herself over. The act was the more alarming as it was followed a few days afterwards by an attempt of another Convict to imitate it. The County Board very properly had the galleries fenced with cross bars. Such precautions are not always to be commended, as they are apt to suggest mischief; but when such an example as that just mentioned has been set, there arises a propensity to follow it, which leaves no alternative but the means of prevention.

MISCELLANEOUS FUNCTIONS.

Statistics of Prisons.

The usual returns of Statistics were transmitted to us through the Officers of the respective County Boards with much regularity and accuracy. In the few instances in which perfect accuracy had not been accomplished in the first instance, the Tables were readily revised and corrected, when sent back from this Office for the purpose.

It is proper for ascertaining the tenor of the documents in the Appendix, to remember that the general Tables of Statistics, applicable to all the Prisons in Scotland, cover the year down to the end of June in 1867; while the Reports relative to the General Prison, and the Orders issued by the Secretary of State, are rendered for the year down to the end of December.

In accordance with long-established practice, we bring under your immediate notice, in the body of our Report, a comparative Table of the daily average of Prisoners in the Prisons of Scotland, by continuing the Table of last year down to the end of 1867.

Table of average numbers of Prisoners since 1840.

AVERAGE DAILY NUMBER OF PRISONERS IN THE PRISONS OF SCOTLAND FROM 1840 TO 1867 INCLUSIVE, EACH YEAR ENDING IN DECEMBER.

Period.	Civil.			Criminal.		
	Males.	Females.	Total.	Males.	Females.	Total.
In 1840	98	10	108	1,264	676	1,940
1841	90	7	97	1,222	742	1,964
1842	88	6	94	1,557	865	2,422
1843	84	6	90	1,499	789	2,288
1844	83	5	88	1,492	766	2,258
1845	69	5	74	1,323	769	2,092
1846	54	6	60	1,359	848	2,207
1847	44	2	46	1,596	932	2,528
1848	51	2	53	1,928	1,041	2,969
1849	58	4	62	2,035	1,108	3,143
1850	68	1	69	1,974	1,016	2,990
1851	75	1	76	1,885	1,015	2,900
1852	78	4	82	1,915	1,004	2,919
1853	66	2	68	1,771	953	2,724
1854	55	4	59	1,742	924	2,666
1855	57	5	62	1,452	864	2,316
1856	69	3	72	1,239	971	2,210
1857	56	2	58	1,196	1,005	2,201
1858	70	2	72	1,119	995	2,114
1859	69	1	70	1,098	1,093	2,191
1860	62	2	64	1,044	1,057	2,101
1861	57	2	59	1,072	1,011	2,083
1862	68	2	70	1,211	1,014	2,225
1863	81	2	83	1,347	1,055	2,402
1864	67	5	72	1,345	1,112	2,457
1865	59	3	62	1,294	1,122	2,416
1866	62	3	65	1,309	1,085	2,394
1867	54	4	58	1,432	1,045	2,477

Fluctuations in Daily Average.

So far as a test of the criminality of a country can be found in the number of its inhabitants detained in Prison, we have thus a close and accurate rendering of the account for more than a quarter of a century. The daily average number is found for each Prison by taking the number of days in which each Prisoner has been in the Prison throughout the year, adding up all the numbers so acquired, and dividing the sum total by 365. Few educated persons require such information about the nature of an average, but it is necessary to keep this simple process under the eye of the public, since, in the remote Prisons, it is often difficult to make the persons who have to render the returns understand it.*

In any endeavour to draw close conclusions from the incidence of such a Table, it will not only be necessary to keep in view the annual increase in the population of Scotland, but also to attend to a much wider source of variation, in the classes of Prisoners by whom the daily average is made up. Fifty-two Prisoners each for a week, and 365 each for twenty-four hours, will severally make a unit in the daily average, and one Prisoner for a year will do exactly the same. An important question then arises, Whether a preponderance in the abstract is caused by long sentences indicative of great crimes, or by brief periods, which may imply a strict police? It will be observed that the daily average of last year was 2477. The year coming nearest to this in the early portion of the Table is 1847, when the number was 2528. In that year (taking the twelve months ending in midsummer) the total number of sentences was 15,451, while last year the number was 23,537. Then, on the other hand, the number sentenced to transportation in 1847 was 374; while the corresponding number sentenced to penal servitude in 1867 was 176.

This Table, as we have often had to remark, shows an almost uniform ascent to 1849, when it reaches 3143, and then nearly as uniform a descent to 1861, when it falls to 2083. It then rises again up to the year 1864, when there comes a slight decline; but the number again rises, and has continued to rise. Taking the quarterly averages, the highest point reached was in the September quarter of 1849, when the number was 3161. The lowest point reached was in the March quarter of 1861, when the average was 1938. In the slight reaction that followed, the highest point reached was 2524 in September 1863. In the March quarter of 1865, the number had gone down again to 2328. In our last Report we had to state that the balance had turned towards the end of the year 1866, when the tendency again was upwards. The result over the two years shows a decided increase from 2394 in 1866, to 2477 in 1867. The numbers for the September and December quarters were respectively 2578 and 2541, as against 2475 and 2414 in the same quarters of 1866.

The ratio of increase is so far from being of a uniform character throughout the Prisons, that some of them show a decrease. Nor can it be said that either the increase or decrease is so continuous and uniform in any particular Prison, as to admit of fixed conclusions concerning the increase or decrease of crime in the surrounding district. Comparing in each instance the daily average with that of the same quarter in the previous year, it is found that in Edinburgh there was a decrease of 16 in the March and of 35 in the June quarter; while the September quarter shows an increase of 38, and the December an increase of 15. In Glasgow there was a decrease of 22 in the March quarter, and an increase of 74 in the December; while in the neighbouring Prison of Airdrie, there was an increase of 2 in the March, and a decrease of 16 in the December quarter. In Hamilton there was an increase of 2 in the March quarter, a decrease of 12 in the June, and again an increase of 8 in the December quarter.

App. No. IV. No. 26.

An increase in the number in a Prison may be detrimental to discipline or to health, by causing a pressure on the accommodation. The Tables of the General Statistics of Health scarcely show a perceptible increase of disease, but the items of which these Tables consist do not, like those containing the numbers in confinement, partake of the character of exact statistics. A more distinct inference regarding the state of health of the inmates of the smaller Prisons may be derived from the

App. No. XV.

information furnished in the Report of the Resident Surgeon of the General Prison about the health of the prisoners received there.

The Managers do not consider it within their duty to comment on the causes of any peculiarities in the statistics collected and arranged by them. However clearly these may point to remarkable social conditions, or to local peculiarities in the method

* For reasons stated at length in our Report for 1861, we state all averages by the nearest unit. This gives a true result, as a general rule, in these Tables, where large numbers predominate. In the one or two instances where the numbers are small, the result is not so satisfactory. Thus, in Table IV. No. 26 (4), where there is an average of the number of days when Prisoners were off work from sickness, the average on the male side is 4, and on the female 5, but the collective average is 4, as being the nearest unit.

of administering justice, they think it should be left to others to make the relevant comment. They satisfy themselves that the figures are accurate, and represent in each Prison the same class of facts; and they believe that it would tend to lessen instead of strengthening the public confidence that these conditions are fulfilled, if a further step were taken, and the revisal of the statistics were made an occasion for the propagation of opinions. They give this expression to their notions of their own duty, because more than once complaint has been made that they have not pointed to the causes by which exceptional peculiarities in the statistics collected by them may be accounted for.

It has been the practice, however, to note in passing the simple fact when any large or emphatic results appear on the face of these statistics. We have thus always drawn attention to the more prominent totals as showing increase, decrease, or a stationary condition. In the same manner we have noted the fact when there are great discrepancies in the items of the same class of statistics, as rendered from different parts of the country.

Specialties on Female side of Prison of Edinburgh.

We had thus in our last, and in some previous Reports, to draw attention to the preponderance in the Prison of Edinburgh, on the female side, of the class against whom numerous re-committals are recorded. In the column for those who had been fifty times in Prison and upwards, in our last Report, the numbers in Edinburgh were,—on the male side 7, and on the female side 229; while the number on the female side of the same column was, for all the other Prisons of Scotland collectively, 122.

On turning to No. 15 of Table IV. of the Appendix to this Report, it will be found that, in the column representing those who have been 50 times and upwards previously in prison, the numbers for Edinburgh are 14 on the male and 206 on the female side. The following is an enumeration of all that occur on the female side of the column in any other Prison in Scotland, viz., Aberdeen 7, Dundee 67, Glasgow 2, Airdrie 3, Perth County Prison 12, Perth Police Cells 1, Paisley 7, Greenock 2—total 101.

As there was last year some misunderstanding about the practical influence of this portion of the statistics of the Department, it may be necessary to explain that the returns do not distinguish the portion of the 50 times and upwards committals which may have occurred in the year for which the return is made, from the portion which may have occurred in previous years. Hence, in the 206 comprehended in the female column, it is not indicated how many may have been *committed* twice or oftener within the year, and consequently *enumerated* twice or oftener to make up the 206. This is a peculiarity for which allowance must be made in all the statistics which deal with persons in temporary conditions, such as the number of passengers by any railway, or the number of persons who have attended an exhibition or a public institution within the year. To carry, through the subdivisions of the elaborate tables in the Appendix, a distinct notation, which shall not only separate those who have been but once in the prison during the year from those that have been oftener, but shall also separate those who have been twice from those that have been three times, four times, and so on, would demand an organization for the collection and arrangement of statistics far beyond the reach of this Department. Nor is it usual for other Government departments to carry out so complicated an analysis of the facts with which they have to deal. It is only in the grand totals that any approach to such an analysis has been made. It will be seen on turning to No. 3 of Table IV. that the sum total received into each prison within the year is given in the gross, without discounting recommitments, under the title 'Number received during the year, including cases of recommitment within the year;' while the adjoining column contains those received, 'not including cases of recommitment of the same prisoner within the year.' If the names were given of all the prisoners enumerated in this latter column, no name would occur more than once as an inmate of any one Prison, but among those enumerated in the other column, the same name might recur any number of times. The grand total of this column, that is, the column including recommitments, is 26,515. The grand total of the other column is 19,421. This is the sum total of the return from each Prison of the number of individual persons, male and female, who entered it throughout the year. Thus if A. B. were ten times committed to the Prison of Edinburgh throughout the year, he would be counted only once in this sum total; but if he were committed five times to the Prison of Edinburgh, and five times to the Prison of Glasgow, he would be counted twice. The grand total of 26,515 is made up of 16,325 male and 10,190 female prisoners; the grand total of 19,421 is made up of 12,783 on the male and 6,638 on the female side. Thus in both, taking the whole of Scotland, the predominance is on the male side. There is, however, a marked exception in the Prison of Edinburgh. The numbers, including recommittals, are 2453 male and 2878 female, while the column excluding recommittals shows 2043 males and 1610 females. It is thus clear that

many of the previous commitments set down against the female side occurred within the year to which the returns apply.

No. 7 of Table IV. shows the average daily number of prisoners, found by the process already described. The daily average for Edinburgh will be seen to be 170 on the male and 153 on the female side. These figures, by reversing the preponderance on the female side, shown in the grand total of commitments, point to the sentences of female prisoners being, on an average, shorter than those of the male. Accordingly, on turning to No. 17 of Table IV., it will be seen that of sentences of 10 days and under to the Prison of Edinburgh, 295 are on the male and 394 on the female side. Under the head of 11 days and not above 60 days, the numbers are, male 831, female 1023. After this point, the proportion is reversed thus—above 60 days and under 6 months, 14 and 4; 6 months and under 1 year, 35 and 11; a year and upwards, 10 on the male and none on the female side; to penal servitude, 38 on the male and 10 on the female side.

Orders by Secretary of State Licensing Prisons.

App. No. II.

Among the documents appended to the Report, are, in terms of the instructions in the Statute, every Order issued by the Secretary of State under Sect. 27, which either licenses any new building for Prison purposes, or alters the purposes for which any existing Prison could be lawfully applied. Down to the passing of the Act of 1839 the public documents in which the buildings set apart as Prisons were identified, and their special purposes as Prisons specified, were Acts of the Supreme Courts of Law; an Act of Sederunt of the Court of Session legalizing any part to be used for Civil Prisoners, and an Act of Adjournal of the Court of Justiciary legalizing the Criminal Prison. After the passing of the Act of 1839, the power and duty of legalizing new Prisons, and defining or altering the purposes of those already in existence, passed to the late General Board of Prisons. The Act of 1860 vested the power in the Secretary of State, and the Orders here referred to were issued by him accordingly. These Orders are as follows:—

Prison of Kilmarnock

On the 10th April, rendering, on and after the 13th May, the Prison of Kilmarnock, in the county of Ayr, as altered and enlarged, legal, subject to the restrictions previously applicable to it.

Prison of Stonehaven.

On the 10th of April, rendering, at the same date, in the same circumstances, the Prison of Stonehaven, in the county of Kincardine, a legal Prison for all descriptions of prisoners.

Prison of Rothesay.

On the 2d November, rendering, on and after the 2d of December, in the same circumstances, the Prison of Rothesay, in the county of Bute, a legal Prison for all descriptions of prisoners.

Prison of Linlithgow.

On the 7th of December, rendering, on and after the 7th January, the Prison of Linlithgow, as recently altered, a legal Prison for all descriptions of prisoners.

In each of these instances the issuing of the Order was the completion of transactions ranging over a period of time of more or less extent, and involving sometimes a considerable amount of correspondence.

Licenses of Police Cells.

By the Summary Procedure Act of 1864, the Secretary of State is empowered to license Police Cells for the reception of convicted prisoners for periods not exceeding three days. The objects held in view in this provision have been referred to in our late Reports. Two Orders for licenses under this clause had been issued before the year 1867, applicable to Kilsyth in Stirlingshire, and Lochgilphead in Argyleshire.

Police Cells of Oban.

On the 4th of October, an Order was issued under this provision rendering, on and after 21st November, certain Cells in the Burgh of Oban, in the county of Argyle, a legal place of detention of convicted prisoners for a period not exceeding three days.

We receive some Returns as to the occupancy of the buildings so licensed, but as yet their contents are of a very meagre character, and we think it would be scarcely worth while, in their present condition, to assign to these statistics a distinct department of our Annual Report.

Suicides in Local Prisons.

We reported to you during the year four acts of Suicide, intimated as having occurred in Local Prisons.

In Prison of Ayr.

One by a female convict in the Prison of Ayr, has been referred to above.

In Prison of Linlithgow.

On 4th March an untried male prisoner committed suicide in the Prison of Linlithgow. The intimation of the act was accompanied by a Report, which was transmitted to you, accompanied by an opinion that it appeared to be so complete as to render any further inquiry unnecessary. The method of the act, however, deserves attention, should it be followed by other instances. The Prisoner cut his throat with a razor, given him, according to usual practice, that he might shave himself. This is, so far as the Managers know, the second instance of such an occurrence. The first was in the neighbouring Prison of Alloa. It occurred so lately as the 7th of August 1866, and is referred to in our last Report.

On 1st June a female prisoner, under a sentence for five days, committed suicide in the Prison of Dundee, by hanging herself by a sheet from a window stanchion. We stated an opinion that the matter had been so fully investigated by the County Board as to render any further proceeding unnecessary. In Prison of Dundee.

On the 30th September a male prisoner, sentenced to 14 days imprisonment, committed suicide in the Prison of Selkirk by suspending himself from a gas-pipe with his towel. The usual intimation of this occurrence had not been made to the Crown Agent, but on its being discovered otherwise, it was intimated to the Home Office in the usual manner. In Prison of Selkirk.

We reported to you during the year 4 escapes intimated as made from Local Prisons. Escapes from Local Prisons.

On the 2d of February an untried male prisoner escaped from the County Prison of Perth. He was afterwards recaptured. Having perused certain documents relating to the occurrence, transmitted to us by you, from which it appeared that the Governor had been censured and admonished as to the future, we reported that all steps proper to the occasion appeared to have been taken by the County Board. From the County Prison of Perth.

On the 26th of July a male prisoner, sentenced to imprisonment for six months, escaped from the Prison of Dundee. We made the usual Report to the Home Office, suggesting that the County Board should be directed to report on the event to the Secretary of State. From the Prison of Dundee.

On the 7th August an untried male prisoner escaped from the Prison of Tain, under the management of the County Board of Ross and Cromarty. The prisoner was immediately retaken. There had been an escape from the same Prison in the year 1863. Her Majesty's Inspector had noticed that in this Prison there was but one male officer. The County Board have intimated their intention to provide him with assistance. From the Prison of Tain.

On 21st of June an untried male prisoner escaped from the Prison of Dingwall, under the management of the County Board of Ross and Cromarty. That Board having reported to you on the matter, we expressed an opinion that their report was unsatisfactory, and that fuller explanations should be demanded. On these having been sent to us by you, we noted, in returning them, that in 1863 an attempt to escape from this Prison would have been successfully accomplished but for the accidental presence of a person not employed in the Prison, and that in the year 1864 a prisoner actually escaped from the Prison. We recommended that the County Board should be required to take steps for obviating such occurrences in future. From the Prison of Dingwall.

In our last Report we referred to some irregularities connected with the Prison of Wick in the County of Caithness. During the year we placed the particulars of these in the shape which we thought best fitted for bringing them under the cognisance of the authorities, and we hope that steps may be ultimately taken towards a remedy. Irregularities affecting Prison of Wick.

We directed and superintended throughout the year the removal of prisoners from one prison to another, in terms of Sect. 67 of the Prisons Act. For particulars of this service in relation to Convicts, we refer to the Table in the Appendix. Removals of Prisoners. App. No. XXIV.

The Prisons Act requires us to report to you an Abstract of our whole receipts and expenditure within the year, classifying the separate articles thereof. Receipts and Expenditure.

The only branches of expenditure in which the public money passes directly through our own hands are—The current expenses of our Establishment in Edinburgh, for which the sum of £255, 10s. was voted, and the expense of the removal of convicts and other prisoners, for which the sum of £1700 was voted, both for the financial year 1867. Of our accounts for the issues to us during the year, under the votes for these branches, as rendered to the Commissioners of Audit, an Abstract follows :— App. No. XXVI.

Current Expenses of our Establishment.

	Charge.				Discharge.		
Balance due by Managers,	£117	1	7	Expenditure during the year,	£256	14	1
Cash from Treasury, . .	200	0	0	Balance, . . .	67	0	7
Interest from Bank, . .	6	13	1				
	£323	14	8		£323	14	8

Removal of Convicts Sentenced to Penal Servitude.

	Charge.				Discharge.		
Balance due by Managers, .	£337	18	6	Payments . . .	£946	3	9
Cash from Treasury, . .	1000	0	0	Balance, . . .	391	14	9
	£1337	18	6		£1337	18	6

Removal of Criminals Sentenced to Imprisonment.

Charge.		Discharge.	
Balance due by Managers,	£290 15 3	Payments,	£499 13 8
Cash from Treasury,	550 0 0	Balance,	341 1 7
	£840 15 3		£840 15 3

The Salaries of the Officers of the Establishment are paid by the Queen's and Lord Treasurer's Remembrancer in Exchequer, and amounted last year to £1244, 10s.

The cost of the maintenance of the General Prison is defrayed by Parliamentary vote, the amount voted for the year 1867 being—

For current annual expenses,	£17,876 19 0
For works,	1813 17 0
For maintenance and repairs,	750 0 0
Total,	£20,440 16 0

The issues on this sum are paid to the Governor on imprests, through the Remembrancer in Exchequer, granted on our Certificate. The Governor's accounts are audited by us before transmission to the Commissioners of Audit in London. An
App. No. XIII. Abstract of them is printed in the Appendix. It shows the following results :—

Current Expenses.

Charge.		Discharge.	
Receipts,	£30,710 6 0	Payments,	£25,156 1 11
		Balance,	5,554 4 1
	£30,710 6 0		£30,710 6 0

App. No. XIII. *Works and Repairs.*

Charge.		Discharge.	
Receipts,	£1,255 17 6	Payments,	£1,255 17 6

App. No. XXVI. The following is an Abstract of the Accounts for the expense of maintaining Female Convicts in the Prison of Ayr, for which the sum of £2340 was voted :—

Charge.		Discharge.	
Receipts,	£2,284 3 3	Payments,	£2,284 3 3

App. No. XXV. The Treasury refund to County Boards the cost of maintenance of convicted prisoners who have either been tried by jury or committed on Sheriff's warrants. The amount does not pass through our hands, but is paid by the Remembrancer in Exchequer. He has furnished us with the Table of Expenditure under this department for the half years ending 31st March and 30th September 1867, printed in the Appendix, which shows the amount for the year 1867 to be £5017, 3s. 4d., including £48, 13s. 7d. of arrears of the previous half year.

Thus the total expenditure of monies voted by Parliament for the Prisons Department in Scotland for the year 1867, of which we are enabled to give an account, stands as follows :—

Current expenses of General Prison,	£25,156 1 11
Works and Repairs at do.,	1,255 17 6
Salaries of the Paid Staff of the Managers' Department,	1,244 10 0
Miscellaneous Expenses of the Managers' Department,	256 14 1
Expense of removals of convicts and prisoners,	1,445 17 5
Expense of Female Convicts in the Prison of Ayr,	2,284 3 3
Maintenance of Prisoners in Local Prisons (two half-years),	5,017 3 4
	£36,660 7 6

Assessments Voted by County Boards.

App. No. XXI. By your direction, County Boards furnish us with returns of the assessments annually voted by them for the current expenses of their Prisons, and for building purposes, with a statement of the portions to be levied on landward or rural and on burghal

districts respectively. A Table of these returns, printed in the Appendix, shows the amount voted throughout the counties to have been as follows :—

For Current Expenses.		For Building Expenses.	
Rural, .	£20,460 19 2	Rural, .	£1,245 15 9
Burghal, .	13,385 16 10	Burghal, .	978 17 7
Total,	£33,846 16 0	Total,	£2,224 13 4

We have the honour to be,

SIR,

Your very obedient Servants,

JOHN TAIT.

T. G. MURRAY.

HERBERT P. VOULES.

J. H. BURTON.

APPENDIX.

No. I.—A LIST OF THE PRISONS IN SCOTLAND

(AS AT 1ST JANUARY 1868).

With a reference to any Declarations by the late General Board of Prisons or Orders by the Secretary of State defining the purpose for which they are legal.

LOCAL PRISONS.

ABERDEEN—*Aberdeen.*—Legalized in 1840. Consists of two edifices, called the East and West Branches. Second Report, pp. 18-20.

Peterhead.—Legalized in 1845. Certain classes of civil prisoners excepted. Period for convicted prisoners, not exceeding 60 days. Seventh Report, p. 10.

Huntly.—Legalized in 1847. All classes of civil prisoners excepted. Period for convicted criminals, not exceeding 10 days. Ninth Report, p. 16.

Fraserburgh.—Legalized in 1848. All classes of civil prisoners excepted. Period for convicted criminals not exceeding 10 days. Tenth Report, p. 15.

ARGYLE—*Inveraray.*—Legalized in 1848. Tenth Report, p. 15.

Campbeltown.—Legalized in 1847. Ninth Report, p. 16.

Tobermory.—Legalized in 1865, Twenty-seventh Report, p. 11.

Fort-William.—Common to the Counties of Argyle and Inverness. Legalized in 1849. All classes of civil prisoners excepted. Period for convicted criminals not exceeding 60 days. Eleventh Report, p. 15.

AYR—*Ayr.*—Legalized in 1853. Fifteenth Report, p. 24.

Kilmarnock.—Fifteenth Report, p. 25. Legalized as altered in 1867, per Secretary of State's Order in App. IV., No. 1.

BANFF—*Banff.*—Legalized in 1844. Sixth Report, p. 19.

Keith.—Legalized in 1844. Certain classes of civil prisoners excepted. Period for convicted prisoners not exceeding 10 days. Sixth Report, p. 19.

BERWICK—*Greenlaw.*—Legalized before the constitution of the General Board. Fourth Report, p. 17.

Dunse.—Legalized in 1843. Certain classes of civil prisoners excepted. Periods on warrants of imprisonment not exceeding 14 days. Fifth Report, p. 17.

POLICE CELLS LICENSED UNDER 'THE SUMMARY PROCEDURE ACT 1864'

(not under County Boards).

Kilsyth, in the County of Stirling.—Police Cells legalized in 1865. Period for convicted prisoners not exceeding 24 hours. Twenty-seventh Report, p. 11.

Lochgilphead, in the County of Argyle.—Old Prison, legalized as a place of imprisonment as Police Cells. Period not exceeding three days. Twenty-eighth Report, p. 17.

Oban, in the county of Argyle.—Police Cells legalized in 1867. Period not exceeding three days, as per Secretary of State's Order in App. IV., No. 2.

THE GENERAL PRISON FOR SCOTLAND AT PERTH,

67. Declared by the Prisons' Act to be for prisoners sentenced to imprisonment, and for such convicts under sentence of transportation or penal servitude as may be sent thither by Secretary of State's warrants. The Act declares, that every prisoner sentenced to nine months' imprisonment and upwards may be removed to the General Prison, unless the sentence contains a clause that the prisoner shall not be removed thereto. Also a place of detention for the Criminal Lunatics of Scotland under 25 and 26 Vict. cap. 54.

No. II.—Orders issued by the Secretary of State in the **Year 1867,** under Section 27 of the "Prisons (Scotland) Administration Act 1860."

1. *Prison of Kilmarnock.*

The Right Honourable Spencer Horatio Walpole, one of Her Majesty's Most Honourable Privy Council, and Principal Secretary of State, etc. etc. etc.

Whereas the *Prison of Kilmarnock*, in the County of Ayr, has recently been altered and enlarged, in so far that the same contains within the boundary wall thereof sixteen Cells for Male Prisoners, five Cells for Female Prisoners, a Reception Cell, a House for the Governor, an Office, and a Store house.

In virtue of the powers contained in the Prisons (Scotland) Administration Act 1860, I do hereby Order and Intimate that the said Prison of Kilmarnock, as so altered and enlarged, shall, on and after the 13th day of May next, be a Legal Prison for the detention of Criminal Prisoners; provided that, in the case of such Prisoners undergoing sentences of imprisonment, the same shall only be a Legal Place of Imprisonment for periods not exceeding three months from the date of their respective sentences; and that every Prisoner under a sentence which may exceed three months shall, before the expiry of three months from the date thereof, be removed from the said Prison of Kilmarnock to the Prison of Ayr, by or under the direction of the Prison Board for the County of Ayr.

Given under my hand at Whitehall, the 10th day of April 1867, in the thirtieth year of Her Majesty's reign.

S. H. Walpole.

2. *Prison of Stonehaven.*

The Right Honourable Spencer Horatio Walpole, one of Her Majesty's Most Honourable Privy Council, and Principal Secretary of State, etc. etc. etc.

Whereas the *Prison of Stonehaven*, in the County of Kincardine, has recently, with the consent of one of Her Majesty's Principal Secretaries of State, been altered and enlarged, in so far that the same contains ten Cells for Male Criminal Prisoners, three Cells for Female Criminal Prisoners, two Sleeping-rooms, and two Day-rooms for Civil Prisoners, a Punishment Cell, a Bath-room, Airing-yards, a Governor's House, and Office Accommodation.

In virtue of the powers contained in the Prisons (Scotland) Administration Act 1860, I do hereby Order and Intimate that the Prison of Stonehaven, in the County of Kincardine, as so altered and enlarged, shall, on and after the 13th day of May next, be a Legal Prison for the detention of all descriptions of Civil and Criminal Prisoners.

Given under my hand at Whitehall, the 10th day of April 1867, in the thirtieth year of Her Majesty's reign.

S. H. Walpole.

3. *Police Cells at Oban.*

The Right Honourable Gathorne Hardy, one of Her Majesty's Most Honourable Privy Council, and Principal Secretary of State, etc. etc. etc.

In virtue of the powers contained in the Prisons (Scotland) Administration Act 1860, and in the Summary Procedure Act 1864, I do hereby Order and Intimate that the four Police Cells attached to or adjoining the Court-house in the Borough of Oban, in the County of Argyle, shall, on and after the twenty-first day of November next, be a legal place for the detention of convicted Prisoners: Provided that, in the case of Prisoners under sentence of imprisonment, the same shall only be a legal place of imprisonment for periods not exceeding three days from the date of their respective sentences; and that every Prisoner under a sentence which may exceed three days shall, before the the expiry of three days from the date thereof, be removed to another Prison.

Given under my hand and seal at Whitehall, the 4th day of October 1867, in the thirty-first year of Her Majesty's reign.

Gathorne Hardy.

4. *Prison of Rothesay.*

The Right Honourable Gathorne Hardy, one of Her Majesty's Most Honourable Privy Council, and Principal Secretary of State, etc. etc. etc.

Whereas the *Prison of Rothesay*, in the County of Bute, has recently, with the consent of one of Her Majesty's Principal Secretaries of State, been altered and enlarged, in so far that the same contains within the boundary wall thereof thirteen Cells for Male Prisoners, eight Cells for Female Prisoners, three Cells or Rooms for Debtors, a Kitchen, Storeroom, Bathroom, and Wash-house, with a residence for the Governor, and Airing-yards for Male and Female Prisoners.

In virtue of the powers contained in the Prisons (Scotland) Administration Act 1860, I do hereby Order and Intimate that the said Prison of Rothesay, as so altered and enlarged, shall, on and after the 2d day of December next, be a Legal Prison for the detention of all descriptions of Civil and Criminal Prisoners.

Given under my hand and seal at Whitehall, 2d November 1867.

Gathorne Hardy.

5. *Prison of Linlithgow.*

The Right Honourable Gathorne Hardy, one of Her Majesty's Most Honourable Privy Council, and Principal Secretary of State, etc. etc. etc.

Whereas the *Prison of Linlithgow*, in the County of Linlithgow, has recently, with the consent of one of Her Majesty's Principal Secretaries of State, been altered, in so far that the same contains within the boundary wall thereof twenty Cells for Male Criminal Prisoners, five Cells for Female Criminal Prisoners, two Rooms for Civil Prisoners, two Exercising Galleries, a residence for the Governor, Office, Storerooms, and enclosed areas.

In virtue of the powers contained in the Prisons (Scotland) Administration Act 1860, I do hereby Order and Intimate that the said Prison of Linlithgow, as so altered, shall, on and after the 7th day of January next, be a Legal Prison for the detention of all descriptions of Civil and Criminal Prisoners.

Given under my hand and seal at Whitehall, the 7th day of December 1867.

Gathorne Hardy.

No. III.—Comparative Statement of the Average Daily Number of Criminal Prisoners in the several Prisons in Scotland, in the two quinquennial periods ending 30th June 1861 and 1866, respectively. Also the number in each of the two years ending 30th June 1866 and 1867. *Compiled from the Reports on Prisons in Scotland.*

	Yearly number on an average in the five years ending		In the years ending	
	30th June 1861.	30th June 1866.	30th June 1866.	30th June 1867.

INSPECTION OF LOCAL PRISONS—*continued.*

COUNTIES.	PRISONS.	Has the Rule been observed in all respects in each Prison?	If the Rule has not been observed in all respects, state to what extent not observed, with the reason.	Total number of Inspections during the year.	General Results of Inspection in regard to							Remarks.
					State of Buildings.	State of Prison Discipline and conduct of Officers.	Treatment of Prisoners.	Employment of Prisoners.	Instruction, Moral and Religious, of Prisoners.	Sufficiency of Exercise.	Health of Prisoners.	
	1.	2.	3.	4.	5.	6.	7.	8.	9.	10.	11.	
	Keith, ...	No.	See Remarks.	.....	Good.	Good.	Good.	No employment, Prison only legalized for 10 days.	No instruction, owing to shortness of imprisonments.	No exercise, owing to short imprisonments.	Good.	There is no resident Member of the Board, but the Clerk and Chief Constable are appointed to visit.
5 Berwick, ...	Greenlaw, ...	No.	Reference to correspondence with the late General Board of Prisons.	7	Good.	Good.	Good.	Shoemaking, oakum teasing, sand beating, sewing and mat-making.	Good.	Sufficient.	Good.	
	Dunse, ...	.....	.....	.....	.....	.....	.....	.....	.....	.....	.....	No regular system of inspection is pursued with reference to this Prison, as there are not often Prisoners in it.
6 Bute, ...	Rothesay, ...	Yes.	.....	19	Under repair and alteration.	Good.	Good.	Picking oakum, and hair teasing.	Attended to.	Sufficient.	Generally good.	
7 Caithness,	Wick, ...	Observed.	.....	18	Good.	Satisfactory.	In terms of Rules.	Employed.	Attended to.	Sufficient.	Good.	
8 Clackmannan,	Alloa, ...	Yes.	.....	15	.....	.....	.....	.....	.....	.....	.....	These special heads are not referred to in the Minutes of the inspecting Members; but they all bear that everything is in good order, and no complaints made.
9 Dumbarton,	Dumbarton, ...	Yes.	.....	12	Good.	Good.	According to Rules.	Various.	According to Rules.	Yes.	Good.	
	Helensburgh, } Kirkintilloch, }	....	....	....	....	....	....	... ...	....	....	....	These Prisons are visited quarterly by the Governor of Dumbarton Prison, who is appointed to visit. They are also visited occasionally by members of the Prison Board.
10 Dumfries,	Dumfries, ...	No.	.....	10	In very good state.	Good.	In strict conformity with Rules.	Fully employed.	Good.	Yes.	Good.	
11 Edinburgh,	Edinburgh, ...	Yes; so far as stated in columns 3 and 4.	In every case all the prisoners were not visited, but the visits were to such an extent as the Members thought to be necessary.	19 by Members of the Board.	Good.	Satisfactory.	In terms of Rules.	All engaged in suitable employment.	In accordance with Rules, and results satisfactory.	Sufficient.	Good.	
	Court Buildings Prison,	Do.	This Prison is principally visited by the Governor of the Prison of Edinburgh, who, in every instance, extends his visit to all the cells and prisoners.	3 by Members of the Board.	Good.	Satisfactory.	In terms of Rules.	Only prisoners under examination are confined here, and there is, therefore, no work done.	There is service once a week by one of the Teachers of the Prison of Edinburgh.	No airing-ground, but prisoners are only a few days in this Prison.	Good.	

]	Musselburgh,	Do.	This Prison was visited by Members of the Board and by the Governor of the Prison of Edinburgh, who, in each instance, inspected every cell and visited every prisoner.	3 by Members of the Board, and 13 by the Governor.	Good.	Satisfactory.	In terms of Rules.	The periods of imprisonment are very short; convicted prisoners are employed in teasing oakum.	The Prisoners are visited and instructed by the Minister of the parish or his Assistant.	There is no airing-yard, but, the rooms being large, the prisoners can have sufficient exercise in them.	Good.	
12 Elgin, ...	Elgin, ...	With one exception.	.....	11	Good,	Good,	According to Rules.	All suitably employed.	In accordance with Rules.	Sufficient.	Good.	
	Forres, ...	So far as stated in columns 3 & 4.	The Prison was visited by Members of Town Council and the Governor of the Prison of Elgin.	8 by Members of the Town Council and 6 by the Governor of Elgin Prison.	Good.	Satisfactory.	In terms of Rules.	No employment; Prison only legalized for 10 days.	None, owing to short imprisonments.	None, owing to short imprisonments.	Good.	
13 Fife.....	Cupar, ...	Yes.	.....	45	Good.	Good.	According to Rules.	All employed.	Regularly attended to.	Sufficient.	Good.	
	Dunfermline, ...	Yes.	.....	33	Good.	Satisfactory.	According to Rules.	All employed.	Regularly attended to.	Sufficient.	Good,	
14 Forfar, ...	Dundee, ...	Yes.	.....	15	Good.	Good.	Good.	Various; viz., weaving, heckling, tailoring, shoemaking, teasing, sewing, knitting, etc.	Visited by Teacher & Chaplain, as also by Governor occasionally, who reads to them.	Sufficient.	Good.	
	Forfar, ...	Except as to number of inspections.	.....	9	Good.	Good.	Good.	Generally employed in weaving, winding, teasing oakum, teasing hair, teasing tow strings; sewing, and knitting.	Chaplain performs divine service in the Chapel on Sundays, and visits the prisoners in their cells during the week. The Governor teaches the prisoners to read and write.	Exercise regularly given according to Rule.	Good.

F

GENERAL PRISON.

No. VI.—Report by the Governor of the General Prison at Perth for the Year 1867; with Tables of Expenditure and State of Accounts.

General Prison, Perth, 14th January 1868.

Gentlemen,—I have the honour to submit my Report of the state of this Prison for the year 1867, together with the usual Returns connected therewith.

OFFICERS.

It is with great regret that I have to speak of the illness of the Deputy-Governor and Steward, Mr. Cruickshank. He has now been absent on sick-leave for a considerable time, and from the serious nature of his disease, and his protracted illness, I fear there is but little prospect of his ever again being able to resume his duties. Should my anticipations be realized, the service will lose a very zealous and careful officer.

From the other principal Officers I continue to receive the most cordial co-operation and support.

In April, the Rev. Mr. Humble was appointed visiting Episcopalian Clergyman.

The Warders, both male and female, have conducted themselves in a very satisfactory manner. There has been no dismissal, nor any exceptions to the general good conduct which required more than a caution or slight reprimand.

One additional male Warder has been appointed to increase the staff of the Lunatic Department, and one female Warder has been nominated, on trial, in the room of one who resigned for the purpose of being married.

PRISONERS.

The Prisoners have been quiet and well behaved. There have been no assaults upon Officers nor any attempts to escape. The number of punishments was below the average of the previous four years; for though, in the quarter ending June the 30th, the number had risen to 129, in the December quarter it fell to 85—the total being 411 for the present year, against an average of the four years of 456. Fortunately, neither the offences nor the punishments in the June quarter were of a serious nature, but the increase was considerable and rather sudden. I was somewhat at a loss how to account for such a state of things, but I am inclined to think that the chief cause is to be found in a spirit of laziness, which, just at that time, appeared to be creeping in among the Prisoners, but more especially among the males.

The health of the Prisoners has been very good. There has been no epidemic or contagious disease of any kind to cause the slightest anxiety. The death rate certainly has been much higher than usual, but in many of the cases the Prisoners were labouring under incurable diseases when brought to the Prison. This, however, is a professional matter, and one which the Medical Officer, Mr. Thomson, will doubtless treat of more fully in his Report.

The Mark System was introduced here in the beginning of 1866, and was in full operation during the whole of 1867. There has been but little difficulty in carrying it out, and I have every reason to believe that the benefits to be derived from it are fully understood and appreciated by the well-intentioned and industrious Prisoners.

BUILDINGS.

The Buildings are in very good condition. Some cells in the Main Prison, which I spoke of in my last Report as being defective in their construction, have now been made secure, by having been cased with sheet-iron. And the staircase in Wing IV. has been further protected by additional rails.

RULES.

A new code of Rules, sanctioned by the Secretary of State for the Home Department, has been put in force, and, to the best of my knowledge and belief, it has been faithfully followed, except in such cases as have been brought to your notice.

I have the honour to be,

Gentlemen,

Your most obedient Servant,

FRED. S. PARKYN, *Governor.*

To the Managers of the General Prison for Scotland, Edinburgh.

The following Table is given in reference to the Trades in Prison :— (No. VI. *Continued.*)

General Prison, Perth,
14th *January* 1868.

Fred. S. Parkyn, *Governor.*

No. XIV.

REPORT by the Rev. WILLIAM BROWN, Chaplain of the General Prison at Perth, for the Year 1867.

General Prison, Perth, 10th January 1868.

SIR,—I have the honour to submit, through you, to Her Majesty's Prison Managers for Scotland, this my Twenty-third Annual Report—a summary of proceedings in the Chaplain's Department for the year 1867; and I would desire, with all deference, to state that the Rules and Regulations issued for my guidance have been carefully and conscientiously attended to.

The following Table will show the number and classes of Prisoners—male and female—admitted and re-admitted in the course of the year :—

PRISONERS.	Sentenced to									Lunatic Criminals.			Grand Total.		
	Imprisonment.			Transportation.			Penal Servitude.								
	Males.	Fms.	Total.	Males.	Fms.	Total.	Males.	Fms.	Total.	Males.	Fms.	Total.	Males.	Fms.	Total.
Admitted, ...	278	139	417	...	...	...	109	60	169	3	2	5	390	201	591
Re-admitted, ...	48	32	80	...	...	...	43	45	88	...	1	1	91	78	169

The re-admitted Prisoners, in all 169—91 Males and 78 Females—(including 49 who had been here—8 Males and 31 Females twice, 3 males and 4 females thrice, and 3 females four times) left the Prison: —*The Males*, 1 in 1843, 1 in 1846, 1 in 1851, 4 in 1855, 1 in 1858, 3 in 1859, 4 in 1860, 6 in 1861, 4 in 1862, 8 in 1863, 6 in 1864, 12 in 1865, 30 in 1866, and 10 in 1867; *the Females*, 1 in 1858, 2 in 1859, 2 in 1860, 4 in 1861, 6 in 1862, 7 in 1863, 14 in 1864, 7 in 1865, 20 in 1866, and 15 in 1867. Of the re-admitted females, 9 having forfeited their Order of License were returned to complete their sentence.

The number of Prisoners in custody at the close of the year was 742—376 Males and 366 Females. Of these, 281 had been in the General Prison before—89 Males and 192 Females. The whole are described as follows :—

IN THE MAIN PRISON AND SUBSIDIARY WARDS.	Under Charge.			Re-Admissions.		
	Males.	Females.	Total.	Males.	Females.	Total.
Sentenced to—						
Imprisonment (*a*)	273	148	421	60	47	107
Transportation (*b*)	...	7	7	...	4	4
Penal Servitude (*c*)	72	197	269	27	137	164
Lunatic Criminals (*d*)	31	14	45	2	4	6
Total,.....	376	366	742	89	192	281

References:
(*a*) Males and females from 9 months, to periods not exceeding two years.
(*b*) Females, from 14 to 21 years, three for life; four—293/20, 385/21, 172/24, 121/25—having forfeited their order of license were returned to complete their sentence.
(*c*) Males from 5 to 20 years, and females from 4 to 21 years—6 for life; 11 females—c/ns. 365/25, 403/25, 557/25, 75/26, 191/26, 192/26, 276/26, 278/26, 362/26, 392/26, 513/26—having forfeited their order of license, were returned to complete their sentence.
(*d*) Including 5 males and 4 females, insanity having supervened since their admission.

The registered antecedents of our inmates as to previous imprisonments, in Local and other Prisons, also in the General Prison, are indicated in the following Table :—

64 Males and 179 Females have received instruction for one year and upwards, ...	On admission,	8	22	15	63	41	94	17	42	3	19	28	98	16	20	29	9	...	...
	On 31st December,	6	11	12	45	46	123	10	21	2	11	21	80	31	67	36	36	...	...

As usual, I periodically ascertain and personally note, in presence of their respective teachers, the Educational state and progress of the prisoners. Their improvement, as a reference to the Tables will show, is upon the whole satisfactory.

The appliances in force, with a view not only to the Educational, but to the moral and the spiritual well-being of our inmates, are ample.

I have pleasure in stating that the two Congregations—male and female—assembled in the Chapel for Divine Worship on the Lord's Day, and the female Convicts for Morning Prayers on week-days—serious or not serious—manifest, throughout the services, a reverential attention and propriety of conduct most becoming, and truly exemplary.

The Religious Denomination, so-called, of the Prisoners as registered, is duly respected; reliance, however, is not always to be placed on mere statements as to their creed.

The Library, comprising books and periodicals of an interesting and instructive nature, is used to its full extent, and much valued by the Prisoners generally.

The number of Prisoners discharged during the year was 586—385 males and 201 females, including 11 males and 6 females by death. Of the males, 107 Convicts were removed to Public Works in England.

The Table annexed will give a comparative view of their Educational state, as on admission and at departure, with their ages and sentences. With reference to this Table, it is necessary to remark that the attainments of the male Convicts, who are eligible for removal to Public Works on the expiry of nine months (probation period) from the date of conviction, are inserted in the respective columns of Sentences, according to the time actually passed by them in the General Prison.

Of 267 liberated male Prisoners (exclusive of the 11 by death, and the 107 Convicts removed to Public Works), 123 are entered in my register as expected to do well, and 133 as having obtained employment. Of those released prior to 1867, I also ascertained that 28 had, in addition to the number already reported on, got work. Of 195 discharged females (exclusive of the 6 by death), 16 are recorded by the Matron hopeful as to their future career; 39 got employment on liberation; 89 had friends willing to receive them; and 11 found a home in charitable institutions.

In the course of the year, Mr. John M'Laurin, having passed the Civil Service Examination, was duly appointed to the office of Teacher, in room of Mr. James Barnett, elected to the Mastership of a Parish School.

I have the honour to remain, Sir, your most obedient Servant,

William Brown, *Chaplain.*

To John Hill Burton, Esquire, LL.D,
etc. etc. etc.

(No. XIV. *Continued.*)

No. XV.

Report by J. B. Thomson, Resident Surgeon to the General Prison for Scotland at Perth, for the year ending 31st December 1867.

General Prison for Scotland, Perth, 21st January 1868.

Gentlemen,—I have the honour to lay before you my Annual Report of the general health, sickness, and deaths; also of the mental condition of prisoners in this Prison during the past year.

I. Of the General Health, Sickness, and Deaths of Prisoners.

II. Of the Mental Condition of Prisoners not in the Lunatic Department.

III. Of the Department for Criminal Lunatics.

General Health.

I. The general health of prisoners has been good throughout the year.

Kinds and Causes of Illness.

The kinds of illness have been chiefly of a chronic character, arising from hereditary taints, vicious habits, and at times from long and frequent imprisonments.

No Epidemic diseases have appeared in this Prison during 1867.

The scale of dietaries, certified and approved by the Secretary of State on 1st May 1866, works well here; and the ventilation and hygienic arrangements are satisfactory.

Cases of long detention followed by disease in Local Prisons.

Here I feel called upon to notice several cases of prisoners admitted suffering under diseases generally of a scrofulous nature, which seem to have been generated in the Local Prisons from whence they came: probably caused by long detention in Prisons deficient in proper airing-grounds, or other sanitary means necessary to keep up the physical condition for any lengthened confinement.

The three cases which follow of imprisonment prisoners had disease and a low state of the system, apparently brought on in Local Prisons by several months' detention without proper means of airing and exercise.

C/n. 177/26, G. H., aged 23, was admitted here from the Prison of Perth, under a sentence of 12 months' imprisonment, with scrofulous swellings in his neck, which, he says, neither he nor any of his friends ever had until now. He looks thin and emaciated. He was a slater to trade, and used to work always in the open air. Was in Dunblane Prison for about 3 months, where *there is no airing-ground*, afterwards was a month and 6 days in Perth County Prison; so that this prisoner had been 4 *months in Local Prisons* before his admission to the General Prison.

C/n. 541/26, J. M., aged 29, was admitted from the Prison of Fort-Charlotte, 23d November 1867, in a condition of health below par, with complaints of stiffness of limbs and general debility. He had been detained in Fort-Charlotte Prison 3 months, and along with his medical certificate the Prison Surgeon writes—'J. M. is 'a sailor; has suffered considerably during confinement, notwithstanding all the care we have been able to take 'of him. *He has suffered much from the want of an airing-ground.*'

C/n. 93/26, J. M'E., aged 20, was admitted here on the 6th March 1867 in a poor condition of body, with cough and phthisical symptoms. He had lain from 10th November till 6th March in the Prison of Dornoch, where, he states, that for 3 months he was kept in a cold cell without any airing or exercise, owing to the severity of the winter. To this he imputes his illness. During the greater part of his imprisonment here he has been on the sick-list, and is likely soon to sink under phthisis.

The next case seems to have suffered from long confinement in the Prison of Glasgow.

C/n. 287/26, J. M., aged 21, admitted from the Prison of Glasgow on the 30th July 1867, where he had been detained since 14th January 1867, being a period of 6½ months. On admission he had scrofulous swelling on neck, which first appeared about a month before his transference here. Such swellings, he states, were never seen before on him or his family.

The next case I offer is of still greater significance, being a convict invalided by inveterate scrofula, which emerged in the Glasgow Prison, where he had been detained 7 months before his admission to the General Prison.

C/n. 241/26, J. C., aged 22, a convict under a sentence of 8 years' penal servitude, was admitted here on the 20th June 1867 from the Prison of Glasgow, where he had been kept since 12th November 1866, a period exceeding 7 months. On admission he showed extensive scrofulous swellings of the glands of the neck, which, he says, never appeared until six weeks before he left Glasgow Prison, and declares such swellings or scrofula in any shape were unknown to his family. In spite of generous diet, cod-liver oil, and free open-air exercise, the glands of the neck have gone on to suppuration, and this prisoner must be regarded as unfit to do public work, and an invalid.

Male Convicts sent here invalided.

The following is an instance, of which we have had several during the year, viz., a male convict sent to the General Prison invalided; and of such prisoners, it is submitted whether they are not more fit to be at once sent to a Hospital Prison in England:—

C/n. 549/26, P. H., aged 27, under a sentence of 7 years' penal servitude, was admitted here from the Prison of Glasgow on the 25th November 1867, in a state of great general debility, with bronchitis and asthma. This man, like the one preceding, is only fit for a prison for invalids.

C/n. 219/26, P. L. or L., is an instance of the same. He was sent here in a dying state, under a sentence of 5 years' penal servitude, and his name appears on the Death List after being here 1 month and 15 days.

Belonging to the same category are two convicts, admitted on the 15th October last from the Prison of Inverness, who had been confined there for 11 months, viz.:—

C/n. 411/26, C. R., under a sentence of 7 years' penal servitude.

C/n. 412/26, J. M'G., under a sentence of 5 years' penal servitude.

These two prisoners were not in good physical condition, and had no milk during all the 11 months; but instead, were allowed the alteration in No. 10, page 6, of the approved Dietary.

I might have added other cases of prisoners who seemed to suffer from long detention in Local Prisons, but those given are the most prominent.

Scrofulous cases from Reformatories.

Further, I deem it my duty to inform you that, during the year, there were here 5 lads in a poor condition of body, and suffering from scrofula in a severe form, which now rarely appears among prisoners. All of these, if Prisoners' statements can be relied on, had been in Reformatories when the scrofula affected them, and denied having ever seen it in their families.

C/n. 51/26, W. M'L., aged 17, admitted with suppurating glands of the neck, which first appeared after being 2½ years in a Reformatory. This is his statement.

C/n. 502/25, J. H., aged 17, in the same condition as the above, and, he states, from the same Reformatory.

C/n. 215/26, J. B., aged 20, was in the same Reformatory with W. M'L. and J. H. in 1863; but says his scrofulous swellings began after being 2 months in Edinburgh Prison, where he had been 7 months.

C/n. 577/25, W. H., aged 17, admitted here with scrofulous suppurating glands of neck, which disease, he says, began in a Reformatory.

C/n. 177/25, J. M'., aged 17, in the same state as W. H., and says his sores began in the same Reformatory.

These lads all improved here under an extra diet of milk, beef, and cod-liver oil: all the open sores closed, and the physical condition improved much. The other cases noted also all improved here, with one exception, viz., C/n. 241/26, J. C., a convict, whose sores are still suppurating.

These scrofulous cases are all the more remarkable that I could not instance a single case of scrofula generated under the dietaries of the General Prison, although these cases noted gave rise at first to some anxiety as to the results of the new and reduced Scale of Dietaries.

I have submitted the foregoing notices of cases of scrofula to Professor Christison, who concurs in my accounts of them, and, as Visiting Physician, has already reported to you in regard to them.

Number of Prisoners on Sick Register.

The cases placed on the Sick Register were as follows:—

	Sentenced to Imprisonment.		Convicts.		Total.
	M.	F.	M.	F.	
On Register at commencement of 1867,	2	1	...	2	5
Put on during the year, ...	34	16	3	17	70
Total during the year, . .	36	17	3	19	75
Of whom removed, ...	30	15	2	15	62
Leaving at 31st December 1867, .	6	2	1	4	13

These cases when analysed showed—

Slightly ill, ...	28
Seriously ill, ...	42
	70
Diseases contracted before admission, . . .	44
Do. after do., . . .	26
	70

These figures show a large number seriously ill, and a more than usual proportion of these had been so before admission.

Childbed Cases.

In addition to the above 70 cases of sickness, there were 10 childbed cases, all of which were imprisonment Prisoners. The mothers made good recoveries; one child was premature, and two still-born.

Nursing Mothers.

Several nursing-mothers were admitted during the year, all imprisonment Prisoners.

Time in Prison of those who died.

Of the female Convicts admitted since October 1855, I offer a few particulars:—48 of them have died, and these had been in Prison as follows:—

(No. XV. *Continued.*)

Time in Prison.

Under 6 months,	9
6 months, and under 1 year,	8
1 year, and under 2 years,	9
2 „ „ 3 „	12
3 „ „ 4 „	3
4 „ „ 5 „	4
5 „ and upwards,	3
	48

Table of their ages :—

Under 20 years,	3
20 years and under 30,	22
30 „ 40,	13
40 „ 50,	7
50 „ 60,	3

Diseases fatal to Female Convicts.

The diseases which proved fatal to the female Convicts were—

Phthisis,	12	Dropsy,	2
Worn-out,	7	Syphilis,	2
Brain Disease,	4	Paralysis,	1
Scrofula,	4	Pericarditis,	1
Hæmoptysis,	2	Aneurism,	1
Heart Disease,	2	Pneumonia,	1
Uterine Disease,	3	Menorrhagia,	1
Gradual Decay from Insanity,	2	Gastric Fever,	1
Congestion of Lungs,	1	Liver Disease,	1

In the course of 1867 two Female Convicts became insane, and a number have been associated on account of their mental condition, but not insane.

The total who have become insane from our Female Convicts is 11; of whom 5 were re-convicted convicts, and 3 were known to have been in Lunatic Asylums before admission.

The next Table gives the weights of all Female Convicts liberated by remission or by expiry of sentence, showing the percentage who had not lost weight at liberation :—

Weights of Female Convicts.

	Numbers.	Stationary.	Gaining.	Losing.	Percentage. Who had not Lost Weight.
Liberated up to 31st December 1860, excluding Sick,	180	14	93	73	
Do. do. 1861, do.	90	4	51	35	
Do. do. 1862, do.	66	2	39	25	
Do. do. 1863, do.	82	4	41	37	
Do. do. 1864, do.	49	1	25	23	
Do. do. 1865, do.	68	7	25	36	
Do. do. 1866, do.	81	3	34	44	
Do. do. 1867, do.	61	7	20	34	
	677	42	328	307	54·5

During imprisonment Convicts maintain higher weights than at liberation, as in consequence of the excitement about going out they generally fall off previously.

Male Convicts.

The Male Convicts under the Dietary adopted in August 1863, continue to have high rates of increase in weight, and enjoy very good health.

	Number weighed.	Stationary.	Gaining.	Losing.	Percentage. Who had not Lost Weight.
Transferred to England in 1863,	49	2	36	11	
Do. in 1864, exclusive of Sick,	96	3	80	13	
Do. in 1865, do.	81	3	66	12	
Do. in 1866, do.	92	2	61	29	
Do. in 1867, do.	106	2	77	27	
	424	12	320	92	78·3

The imprisonment Prisoners also stand up well in this prison.

DISEASES for which Prisoners were treated during the decennial period 1858 to 1867 inclusive.

Total Diseases of 1858-1867.

DISEASES.	1858.	1859.	1860.	1861.	1862.	1863.	1864.	1865.	1866.	1867.	Total.

Deaths of Prisoners, 1842-1867.

Table showing the daily average population, the number and percentage of deaths during twenty-five years, viz., since 1842, when the General Prison was opened, to 1867 inclusive :—

Years.	Daily average Population.	Annual Deaths.	Years.	Daily average Population.	Annual Deaths.
1842	404	5	1855	498	10
1843	278	6	1856	583	11
1844	217	3	1857	593	12
1845	233	3	1858	561	10
1846	322	7	1859	632	12
1847	332	1	1860	675	16
1848	301	5	1861	637	8
1849	363	2	1862	688	5
1850	385	3	1863	714	8
1851	306	4	1864	692	15
1852	434	8	1865	693	2
1853	459	4	1866	719	9
1854	580	9	1867	732	17

The daily average population during 26 years being added up, the sum total makes 13,031, while the sum total of the deaths is 195, showing the average rate per annum of 1.5 per cent., or about 15 per 1000. There were no liberations last year on medical grounds; but since 1842, 77 have been liberated sick, and one-third of these being taken as probable deaths, would raise slightly the death rate.

Causes of Deaths, 1842-67.

FATAL DISEASES OR CAUSES OF DEATH.	1842.	1843.	1844.	1845.	1846.	1847.	1848.	1849.	1850.	1851.	1852.	1853.	1854.	1855.	1856.	1857.	1858.	1859.	1860.	1861.	1862.	1863.	1864.	1865.	1866.	1867.	Total.

Suicides,	...	...	...	...	...	...	...	...	...	1	1	...	...	...	1	...	...	...	...	...	...	...	...	...	...	...	3
Unknown,	...	...	...	...	...	...	...	...	...	...	1	...	...	...	...	...	...	...	...	...	...	...	...	...	1	...	2
Old Age,	...	...	...	..	...	...	...	...	...	..	...	...	...	...	...	...	1	...	...	..	...	...	1	...	...	...	2
Worn-Out,	...	1	...	...	...	...	..	...	1	...	1	...	...	3	...	4	...	2	1	...	1	...	1	...	...	1	16
	5	6	3	3	7	1	5	2	3	4	8	4	9	10	11	12	10	12	16	8	5	8	15	2	9	17	195

The above Table shows the greatest number of deaths that have occurred in any year since this Prison was opened was in 1867. I beg to refer to the remarks in the Death Table No. XVII. as to the causes, from which it will be seen that at least 10 of the fatal cases of 1867 were admitted into this Prison with the diseases from which they died in an advanced stage. None of the deaths could, in my opinion, be traced to the imprisonment in this Prison.

II. Of the mental condition of Prisoners not in the Lunatic Department.

Number associated.

Table No. XVIII. gives the particulars of all placed by the authority of the Surgeon in association, as unfit for separation, with the reasons for association in each case, viz.:—

Imbecile from Old Age, or Juvenile, . .	5
Do. from other causes, ...	34
Do. and Suicidal, ...	1
Epileptic, ...	10
In all, . . .	50

About one-half of these may be regarded as congenitally weak-minded—4 had been insane, and were associated by way of precaution.

Under special observation separate.

In addition to the above who have been associated, we had under special observation, at 31st December, as follows:—

Weak-minded,	25
Do. and Suicidal,	9
Total,	34

The number associated on mental grounds during the last ten years is given below:—

	1858.	1859.	1860.	1861.	1862.	1863.	1864.	1865.	1866.	1867.	Totals.
Mental Condition—											
Juvenile, Imbecile, or Weak-minded,	14	21	20	16	26	13	17	15	32	39	213
Do. and Suicidal,	2	4	7	9	6	2	4	1	4	1	41
Epileptic,	4	11	2	7	13	6	15	7	12	10	77
	20	36	29	32	45	21	36	23	48	50	331

Probable Causes of mental weakness.

A very considerable number of such cases are evidently derived from the degenerate state, bodily and mental, belonging to the criminal classes.

III. Of the Department for Criminal Lunatics.

Health of the Department.

The general health of this class has been good. Four appear on the Death Report, two of whom were, on admission, suffering from Brain disease frequent among the insane.

In Table No. XVI. the particulars are set forth of all confined in this department during 1867; 39 males, 18 females—in all 57.

Admissions, 1867.

Admissions during 1867—5 males and 6 females = 11. One from the Prisons of Edinburgh, Perth, Glasgow, Paisley, and Dundee respectively, and 6 from the General Prison Penal Department.

The removals were:—

	M.	F.	Total.
Recovered, and returned to Main Prison,	2	2	4
Sent back insane to the prisons whence they came,	2	2	4
Died,	4	0	4
			12

Removals.

All the recoveries were returned to the Penal Department of the General Prison, but were associated as unfit to bear the separate system.

Three were detained in the Lunatic Department, after expiry of sentence, in terms of 25 and 26 Vict. cap. 54, sect. 19, viz.:—

C/n. 232/25, P. W., whose offence was assault by cutting and stabbing to the great effusion of blood, etc.

C/n. 90/20, W. O., whose offence was assault by cutting and stabbing.

C/n. 426/26, J. M'D., whose offence was assault with intent to ravish.

Table of admissions during the last decennial period:—

	1858	1859	1860	1861	1862	1863	1864	1865	1866	1867	Totals.
From the General Prison,	4	6	6	4	2	3	3	9	7	6	50
From other Prisons,	6	8	2	1	3	1	5	6	1	5	38
	10	14	8	5	5	4	8	15	8	11	88

The number of Prisoners who have become insane while undergoing their sentences in the General Prison during the last ten years amounting to 50, and the average daily Prison population being 6743, we have the following equations, viz., $\frac{6743}{50}$ or 1 out of 135 becoming insane. From time to time new material and moral ameliorations have been introduced for the benefit of this class of Prisoners.

I have the honour to be, Gentlemen, your most obedient Servant,

J. B. Thomson, *Resident Surgeon.*

To the Managers of the General Prison for Scotland, &c. &c.

No. XVI.—Return by the Resident Surgeon of the General Prison at Perth, applicable to those Prisoners who have been confined in the Department for Criminal Lunatics during the year 1867.

	M.	F.	TOTAL.
Insane in Custody at 31st December 1866,	34	12	46
Admitted during 1867,	5	6	11
Total during 1867,	39	18	57
Liberated and removed in 1867,	8	4	12
Remaining in Custody at 31st December 1867,	31	14	45

No.	C/n.	Name.	Age on committal to Prison. M.	Age on committal to Prison. F.	Whence brought.	Brought to Lunatic Department.	Afterwards transferred to Lunatic Department.	Date of Admission to Lunatic Department.	Offence of which Accused or Convicted.	By what Court Tried.	Judgment of Court or other Judicial proceeding, with Date.	Whether admitted on Judicial Finding or Medical Certificate of Lunacy.	Form of Insanity.	Removed during the year. Date.	Removed during the year. Method.	REMARKS.
1	316/5	J. J., Jr.	11	...	Royal Lunatic Asylum, Glasgow.	1	...	Dec. 25, 1846	Assault	Sheriff Court, Lerwick.	Found not to be a fit subject for trial on account of imbecility and dumbness, and sentenced to imprisonment until further orders of the Court, or of the High Court of Justiciary, 5th May 1845.	Judicial Finding.	Idiocy	.....	.....	*Naturaliter Idiota;* Mischievous, dumb. Offences:—Pushed two children over Lerwick Pier, and assaulted several children, striking them severely; dangerous, suddenly rushes at persons, strikes, and kicks; is filthy.
2	95/6	T. M'K.	37	...	Royal Lunatic Asylum, Dundee.	1	...	May 4, 1847	Murder	Circuit Court, Glasgow.	On trial, found to be insane, and not an object of punishment, and sentenced to be detained in Prison all the days of his life, or until sufficient caution be found for his safe keeping in custody during life, 6th May 1839.	Do.	Homicidal Mania.	.....	.....	Had hallucinations; never had lucid intervals; murdered his own sister to save her from imaginary persecutions.
3	111/6	A. R.	30	...	Do.	1	...	... ...	Assault	Sheriff Court, Stirling.	Found to be insane and not a fit subject for trial, and sentenced to be detained in Prison, subject to future orders of Court, 26th May 1841.	Do.	Mania.	.....	....	Has delusions about his being a great personage; has scarcely ever been heard to speak for years.
4	169/6	T. B.	25	...	Dumfries Asylum.	1	...	July 9, ...	Assault with intent to ravish.	Circuit Court of Justiciary, Ayr.	Found to be insane and not a fit subject of trial, and sentenced to be detained in custody until further orders of the High Court of Justiciary, 15th September 1843.	Do.	Do.	.....	.....	Mischievous; suddenly rushes upon persons, strikes and kicks; sometimes low and moody.
5	242/6	M. P.	...	34	Morningside Lunatic Asylum.	1	...	Sept. 23, ...	Wilful fire-raising and malicious mischief.	Circuit Court of Justiciary, Jedburgh.	Found to be unfit for trial from the state of her mind, and to be detained in Prison until further orders of the High Court of Justiciary, 4th April 1842.	Do.	Do.	.....	.....	Quiet and harmless.
6	171/9	J. D.	28	...	Dumbarton Prison.	1	...	June 15, 1850	Assault, with intent to rob	Sheriff Court, Dumbarton.	Found to be insane and not fit for trial, and ordered to be detained in Prison until removed therefrom by competent authority, 7th June 1850.	Do.	Do.	.....	.....	Harmless; filthy.
7	172/9	W. K.	22	...	Perth County Prison.	1	...	... 18, ...	Murder	Circuit Court, Perth.	Found not in a fit state to be put on his trial, and the diet deserted *pro loco et tempore*, and grants warrant to commit him to the Prison of Perth, therein to be detained until further orders of the Court of Justiciary regarding him, 26th Sept. 1850.	Do.	Homicidal Mania	.....	.....	*Naturaliter Idiota;* was confined in Lunatic Wing untried from 18th June, until brought before the Circuit Court. Dangerous; makes sudden attacks on persons.
...	316/9	M. R.	27	...	Stirling Prison.	1	...	Nov. 12, ...	Theft by house-breaking and previous conviction.	Circuit Court, Stirling.	Found to be insane and not fit for trial, and to be detained in Prison until further orders of Court, 12th April 1850.	Do.	Mania.	.....	.....	Quiet and harmless.

Return by the Resident Surgeon, applicable to those Prisoners who have been confined in the Department for Criminal Lunatics—*continued.*

17	214/17	T. A. S. or F. or T. or T.	39	...	Edinburgh Prison.	1	...	Aug. 14, 1858	Murder .	High Court of Justiciary, Edinburgh	Found to be insane and not fit for trial, and ordered to be kept in custody until her Majesty's pleasure be known, 19th July 1858.	Do.	Do.	.....	.....	Has delusions that poison has eaten away his brain and stomach; suicidal.
18	41/18	A. M.	23	...	Perth County Prison.	1	...	Feb. 22, 1859	Murder .	High Court of Justiciary.	Found to have been insane at the time of committing the offence, and ordered to be kept in custody until Her Majesty's pleasure be known, 16th Nov. 1858.	Do.	Do.	.....	.....	Certified insane on admission; but has shown no mental disorder or delusion here. On the 30th Jan. 1861 was certified as sane, and, on the authority of the Prison Managers, was transferred to Main Prison on 5th March 1861, and put to prison service. Returned to Lunatic Department proper on the 17th December 1862.
19	88/15	C. M'K.	...	21	Glasgow Prison.	...	1	Dec. 20, ...	Theft and previous conviction.	Circuit Court, Glasgow.	15 years' transportation, 8th Jan. 1856, .	Medical Certificate.	Mania.	.....	.....	Admitted to Main Prison, March 19, 1856; Imbecile, May 7, 1859; sent to Imbecile Ward at its opening in Aug. 1859. Has delusions that she gets poison and rats in her food. Violent, threatens, and strikes. Formerly in Brixton and Millbank.

20	284/19	E. P. or M.	...	35	Stirling Prison.	1	...	Oct. 25, 1860	Murder.	Circuit Court, Stirling.	Verdict—Insane at time of offence. Her Majesty's pleasure, 21st Sept. 1860.	Judicial finding.	Homicidal mania.	.....	.....	She was found insane by a jury. Her delusion was that she and her family were to be burned in the Poorhouse at Stirling, and to avert this fate she threw herself and two of her children into the canal at Falkirk; one of the children was drowned. Reported sane, 3d July 1862. Has again become insane and violent.
21	69/20	R. A. H.	...	27	Edinburgh Prison.	...	1	May 4, 1861	Theft and previous conviction.	High Court of Justiciary.	8 years' penal servitude, 4th Feb. 1861.	Medical Certificate.	Mania.	.....	.....	R. A. H. was here formerly a convict under sentence of 4 years' penal servitude; always regarded as of weak mind; re-admitted weak-minded and violent. Insane delusions, soon after re-admission, took possession of her mind, that strange beings visited in her cell and tormented her. She became noisy, turbulent, and incoherent.
22	189/20	M. M'K. or M'G.	...	28	Perth Prison.	1	...	May 24, ...	Murder.	Circuit Court, Perth.	Verdict—Insane at time of offence. Her Majesty's pleasure, 26th April 1861.	Judicial finding.	Homicidal Mania.	.....	.....	Murdered her own boy, 4 years old, and attempted suicide under religious excitement after attending revival meetings. Reported as sane, 8th July 1862.
23	116 21	W. C.	46	...	Ditto.	1	...	April 15, 1862	Murder.	High Court of Justiciary.	Verdict—Insane at time of offence. Her Majesty's pleasure, 10th March 1862.	Do.	Do.	Sept. 27, 1867.	Died.	
24	217/21	R. P.	35	...	Glasgow Prison.	1	...	June 26, ...	Murder.	Circuit Court, Glasgow.	Verdict—Insane at time of offence Her Majesty's pleasure, 26th Sept. 1861.	Do.	Do.	.....	.....	This man was admitted June 26, 1862, and since that time has shown no symptoms of insanity. He murdered his own child under a fit of mania consequent upon habits of intemperance. Certified sane, 13th November 1862.
25	395/21	H. S., Jun.	30	...	Fort-Charlotte.	1	...	Nov. 19, ...	Assault.	Sheriff Court, Lerwick.	Verdict—Insane at time of offence. Her Majesty's pleasure, 14th Oct. 1862.	Do.	Mania.	.....	.....	This man's certificate bears that he believes in witchcraft, and that he can cure diseases by transferring them to himself. Noisy and troublesome.
26	17/22	T. D.	40	...	Glasgow Prison.	1	...	Jan. 7, 1863.	Assault with intent to ravish.	Circuit Court, Glasgow.	Verdict—Insane at time of offence. Her Majesty's pleasure, 23d December 1862.	Do.	Epileptic Mania.	.....	.....	On admission reported to have had epilepsy, succeeded by maniacal excitement at different times; also, that he held delusions. Since his admission he has had epileptic attacks, and in January made assaults upon the persons of fellow-prisoners.
27	229/23	T. A.	55	...	Alloa Prison.	1	...	June 11, 1864.	Murder.	High Court, Edinburgh.	Verdict—Insane at time of offence. Her Majesty's pleasure, 6th June 1864.	Judicial finding.	Homicidal mania.	.....	.....	Murdered a boy under the delusion that he was an emissary of the Free Church sent to injure him. Still holds delusions about his being persecuted by the Free Church.
28	375/23	J. S. L.	29	...	Glasgow Prison.	1	...	Oct. 7, ...	Murder.	Circuit Court, Glasgow.	Verdict—Insane at time of offence. Her Majesty's pleasure, 21st Sept. 1864.	Judicial finding.	Homicidal Mania.	June 17, 1867.	Died.	
29	461/23	A. W. or M'K.	...	24	Inveraray Prison.	1	...	Nov. 26, ...	Assault.	Sheriff Court Inveraray.	Verdict—Insane at time of offence. Her Majesty's pleasure, 30th August 1864.	Do.	Mania.	.....	.....	Her medical certificate bears that she is subject to insanity monthly, when she gets nervous and excited.
30	471/23	J. M'G. or G.	19	...	Greenlaw Prison.	1	...	Dec. 9, ...	Fire-raising.	Sheriff-Court, Greenlaw.	6 months' imprisonment, 27th Oct. 1864. (Detained, on expiry of sentence, by Secretary of State's Warrant, dated 31st March 1865.)	Medical Certificate.	Dementia.	.....	.....	Became insane after conviction, and was removed from Greenlaw Prison on Managers' authority, in terms of 25 and 26 Vict. c. 54, sect. 22; restless, mischievous, and dangerous.
31	485/23	M. M'L.	24	...	General Prison, Penal Department.	...	1	Mar. 3, 1865.	Theft and previous conviction.	High Court of Justiciary, Edinburgh.	7 years' penal servitude, 12th December 1864.	Do.	Mania.	.....	.....	Soon after admission his mind gave way to religious delusions, and, on 14th Jan. 1865, was sent to Imbecile Ward, where he became worse; he has delusions about good and evil spirits visiting him.

Return by Resident Surgeon, applicable to those Prisoners who have been confined in the Department for Criminal Lunatics—*continued.*

No.	C/n.	Name.	Age on committal to Prison. M.	Age on committal to Prison. F.	Whence brought.	Brought to Lunatic Department.	Afterwards transferred to Lunatic Department.	Date of Admission to Lunatic Department.	Offence of which accused or convicted.	By what Court tried.	Judgment of Court or other Judicial proceeding, with Date.	Whether admitted on Judicial Finding or Medical Certificate of Lunacy.	Form of Insanity.	Removed during the year. Date.	Removed during the year. Method.	REMARKS.
32	272/23	R. W. C. or C.	25	...	General Prison, Penal Department.	...	1	Mar. 10, 1865.	Theft by housebreaking.	Circuit Court, Perth.	10 years' penal servitude, 5th May 1864.	Medical Certificate.	Mania.	.....	.....	On 10th Feb. 1865, became excited, with delusions, and a suicidal tendency. He has lucid intervals, but relapses, and holds delusions about the devil appearing to him.
33	33/24	A. C.	...	32	General Prison, Penal Department.	...	1	... 15, ...	Theft and previous conviction.	High Court of Justiciary.	4 years' penal servitude, 20th June 1864.	Do.	Do.	.....	.....	On admission from Ayr, reported as subject to fits of mental excitement, with great violence of temper and divers delusions. She has intervals of quiet, but is fully worse than on admission. She was here formerly.
34	152/24	M. C. or B.	...	32	Ayr Prison.	1	...	April 29, ...	Murder.	Circuit Court, Ayr.	Verdict—Insane at time of offence. Her Majesty's pleasure, 19th April 1865.	Judicial finding.	Do.	.....	.....	This woman has been sane since admission—she threw her child into a well, where it was drowned, and afterwards attempted suicide. There is hereditary insanity, which has appeared in several members of the family. Reported sane since admission, 30th August 1865.
35	153/24	J. M'V.	50	...	Inveraray Prison.	1	...	... ...	Murder.	Circuit Court, Inveraray.	Insanity in bar of trial. Her Majesty's pleasure, 19th April 1865.	Do.	Dementia.	.....	.....	Suddenly, without any warning, lifted a hatchet and killed his son—attempted to strike his wife with the same weapon, and for a time furiously defied all about him. He is in a very demented state.
36	173/24	A. T.	45	...	Greenlaw Prison.	1	...	May 13, ...	Murder.	Circuit Court, Jedburgh.	Verdict—Insane at time of offence. Her Majesty's pleasure, 4th May 1865.	Do.	Homicidal Mania.	.....	.....	This man has been sane since admission. He killed his wife with an iron poker, tongs, and earthen jug, and went and told what he had done. His madness was consequent upon a long course of excessive drinking. A quiet prisoner.
37	266/24	G. S.	62	...	Aberdeen Prison.	1	...	June 8, ...	Murder.	Circuit Court, Aberdeen.	Death, but commuted to penal servitude for life, 19th April 1865.	Medical Certificate.	Epileptic Mania.	.....	.....	After a series of misfortunes, had an epileptic seizure, made an assignation with a female friend in a wood, and with an axe murdered her. He was quite calm after the act. He was sent here certified insane.
38	146/23	J. W.	27	...	General Prison, Penal Department.	...	1	June 30, ...	Assault, with intent to ravish, and previous conviction of assault.	Circuit Court, Jedburgh.	18 months' imprisonment, 19th April 1864. (Detained, on expiry of sentence, by Secretary of State's Warrant, dated 11th October 1865.)	Do.	Mania.	.....	.....	Was here formerly. He has various delusions that he is untried, has got a free pardon, and discovered a way to pay the national debt off; detained after expiry of sentence on the ground of being twice committed for assault with intent to ravish, in terms of 25 and 26 Vict. c. 54, sect. 22.
39	103/23	M. D.	...	30	General Prison, Penal Department.	...	1	Oct. 28, ...	Theft and previous conviction.	Circuit Court, Glasgow.	4 years' penal servitude, 22d December 1863.	Medical Certificate.	Mania.	16th April 1867.	Recovered and sent to Epileptic Hospital.	Was here formerly a Convict in bad health, phthisical, and with liver disease, became suddenly violent and incoherent, refusing food. She is recovered from the temporary insanity.
40	509/24	J. H.	27	...	Edinburgh Prison.	1	...	Dec. 4, ...	Murder.	High Court, Edinburgh.	Insanity in bar of trial. Her Majesty's pleasure, 27th November 1865.	Judicial finding.	Dementia.	.....	.....	With an iron bar which he had concealed he killed his mother and sister. A dangerous man.

41	217/25	J. R.	21	...	Aberdeen Prison.	1	...	May 21, 1866.	Theft.	Sheriff Court, Aberdeen.	Insanity in bar of trial. Her Majesty's pleasure, 8th November 1865.	Judicial finding.	Dementia.	.....	.....	Very imbecile, and not improved in mind; seems to have been congenitally weak.
42	166/25	J. M'F.	35	...	General Prison, Penal Department.	...	1	Aug. 14, ...	Bigamy.	Circuit Court, Stirling.	12 months' imprisonment, 26th April 1866.	Medical Certificate.	Do.	16th March 1867.	Recovered, and sent to Imbecile Ward.	On admission weak-minded, and not strong in body. Sent to the ward for imbeciles on 13th July, where he gave way to delusions about some one having murdered his child.
43	417/24	J. W.	24	...	General Prison, Penal Department.	...	1	Oct. 10, ...	Robbery.	Circuit Court, Glasgow.	15 months' imprisonment, 4th Oct. 1865.	Do.	Mania.	2d January 1867.	Sent insane to Glasgow Prison.	Soon after admission found to be weak-minded; and soon after his mind gave way to delusions about being injured by persons coming to him by night. He is given to threaten murder against officers.
44	281/25	J. M'P.	28	...	General Prison, Penal Department.	...	1	Nov. 27, ...	Lewd and libidinous practices, etc.	Sheriff Court, Glasgow.	12 months' imprisonment, 19th June 1866.	Do.	Dementia.	3d Apr. 1867.	Died.	
45	421/24	D. M'A.	19	...	General Prison, Penal Departmt.	...	1	Dec. 22, ...	Theft and previous conviction.	Circuit Court, Glasgow.	18 months' imprisonment, 5th Oct. 1865.	Do.	Mania.	3d Apr. 1867.	Sent insane to Glasgow Prison.	A scrofulous lad, often in prisons; suddenly became insane.
46	232/25	P. W.	25	...	General Prison, Penal Departmt.	...	1	Dec. 29, ...	Assault by cutting and stabbing to great effusion of blood, etc.	Sheriff Court, Linlithgow.	12 months' imprisonment. 4 months' hard labour. (Detained, on expiry of sentence, by Secretary of State's Warrant, dated 8th April 1867.)	Do.	Do.	.....	.....	Probably weak in mind congenitally; has delusions chiefly about his food; dangerous. Detained by Secretary of State's Warrant, in terms of 25 and 26 Vict. c. 54, sect. 22.
47	172/25	S. J.	...	31	General Prison, Penal Department.	...	1	Jan. 15, 1867.	Theft, habit and repute, and prev. conviction.	Sheriff-Court, Glasgow.	9 months' imprisonment, 25th April 1866.	Do.	Do.	23d January 1867.	Sent insane to Glasgow Prison.	Became excited about the state of her soul, with delusions that the devil and two girls, her old associates, now dead, come urging her to curse the Saviour, etc.
48	368/25	M. J. or B.	...	20	Do.	...	1	Feb. 25, ...	Theft and previous conviction.	Sheriff-Court, Dumfries.	15 months' imprisonment, 3d August 1866.	Do.	Do.	1st November 1867.	Sent insane to Dumfries Prison.	Held delusions that one leg was rotting off and the other getting bad; that her food is poisoned; used to sit huddled up in a corner refusing to speak, and otherways absurd in her conduct; on admission peculiar; here twice.
49	278/25	C. M'F.	13	...	Do.	...	1	... 26, ...	Theft by house-breaking.	Sheriff-Court, Wick.	12 months' imprisonment, 12th June 1866.	Do.	Do.	22d May 1867.	Recovered, and sent to Imbecile Ward.	On admission weak-minded; utterly ignorant; complained of his food being poisoned; became outrageous and incoherent generally. He recovered from insanity, but will always be weak-minded.
50	90/26	W. O.	40	...	Prison of Edinburgh.	1	...	Mar. 5, ...	Assault by cutting and stabbing.	Sheriff-Court, Edinburgh.	6 months' imprisonment, 28th January 1867. (Detained, on expiry of sentence, by Secretary of State's Warrant, of date 14th June 1867.)	Do.	Do.	27th Sept. 1867.	Died.	On admission this prisoner was far gone with softening of brain. Had been a habitual drunkard, and taking into consideration also his offence, which was cutting and stabbing his own wife, he was detained after the expiry of his sentence by authority of the Secretary of State, in terms of 25 and 26 Vict. c. 54, sect. 22.
51	160/26	J. K.	19	...	Prison of Perth.	1	...	April 20, ...	Murder.	Circuit Court, Perth.	Insanity in bar of trial. Her Majesty's pleasure, 8th April 1867.	Judicial finding.	Epileptic Mania.	.....	.....	In a quarrel in the Fife and Kinross Asylum, this prisoner killed a fellow patient. He is subject to severe epileptic attacks; is quarrelsome, dangerous, and filthy.
52	452/24	A. C. or T.	...	44	General Prison, Penal Department.	...	1	May 11, ...	Theft and previous conviction.	Do.	7 years' penal servitude, 28th Sept. 1864.	Medical Certificate.	Acute Mania.	14th Nov. 1867.	Recovered, and sent to Imbecile Ward.	This woman was admitted insane from Ayr, 31st October 1865; recovered, and was certified sane, 17th February 1866; again became insane here, and is now quite well. Has been in asylums often under attacks of acute mania, which go off in a few months; here formerly.
53	426/26	J. M'D.	20	...	Do.	...	1	... 16, ...	Assault, with intent to ravish.	Circuit Court, Glasgow.	12 months' imprisonment, 26th Dec. 1866. (Detained, on expiry of sentence, by Secretary of State's Warrant, of date 29th Oct. 1867.)	Do.	Dementia.	.....	.....	Ordered to be detained after expiry of sentence, in terms of 25 and 26 Vict. c. 54, sect. 22, his offence being assault, with intent to ravish. He never speaks, and refuses to take food, having to be fed by force.
54	441/23	C. B. or J.	...	48	Do.	...	1	... 31, ...	Theft, habit and repute, and previous conviction.	Circuit Court, Aberdeen.	6 years' penal servitude, 24th Sept. 1863.	Do.	Do.	.....	.....	For some time back has had symptoms of softening of brain and general paralysis, gradually sinking.
55	395/26	C. C.	...	30	Glasgow Prison.	1	...	Oct. 7, ...	Theft and previous conviction.	Circuit Court, Glasgow.	Insanity in bar of trial, 1st October 1867.	Judicial finding.	Mania.	. ....	.....	Here for the third time, always violent and weak-minded, and latterly insane. Has been in an Asylum elsewhere; was twice here under convict sentences.
56	410/26	M. H. or B.	...	26	Paisley Prison.	1	...	... 14, ...	Murder.	Do.	Verdict—Insane at time of offence, 2d October 1867.	Do.	Puerperal Mania.	.....	.....	Murdered her child; was insane in April; improved, but relapsed in May; is weak-minded, and irritable at all times.
57	566/26	A. B.	29	...	Dundee Prison.	1	...	Dec. 6, ...	Do.	High Court, Edinburgh.	Verdict—Insane at time of offence, 2d December 1867.	Do.	Mania.	.....	.....	Had been in Dundee Asylum, and soon after he was liberated, with an axe or hatchet killed his sister. Insane at present.

General Prison, Perth, 21st January 1868.

J. B. THOMSON, *Resident Surgeon.*

17		149/19	B. K.	26	Perth.	Circuit Court.	April 11, 1860.	Life.	May 25, 1860.	Dec. 14, 1867.	90	19	Precincts of Prison.	Do.	Before.	Unknown.	On admission, phthisical.

I certify that the dates of death, the diseases, whether contracted before or after admission, probable causes of disease of the above-named Prisoners, and the relative remarks, are correct, the columns having been filled up under my direction.

J. B. Thomson, *Resident Surgeon.*

I certify that the current numbers, names, ages, where tried, by whom tried, dates of sentence, sentences, dates of admission, period in prison, and where interred, are correct; and also that means were used to acquaint the relatives of the above-named Prisoners, in order that they might have an opportunity of removing the bodies for interment, if they wished so to do.

Fred S. Parkyn,
Governor.

General Prison for Scotland, Perth, 21st January 1868.

† Do., Do., on 2d October 1867, from the Prison of Edinburgh.

XX.—Documents relating to Female Convicts in the Prison of Ayr (communicated by the Prison Board of Ayrshire).

Report by the Governor of the Prison at Ayr for the Year 1867.

Prison of Ayr, 11th January 1868.

I have the honour to submit the following Report and returns relative to Female Convicts for the year ended 31st December 1867 :—

The Discipline has been in accordance with the Rules applicable to Prisoners in the General Prison at Perth.

The improvement in the conduct of the Convicts mentioned in last Report has been fully maintained. There is again a decrease in the number of offences and of Prisoners punished. The entire cessation of assaults upon officers, and the very few instances in which threats have been uttered against them, may be specially noted. This is in some degree owing to the aptitude and larger experience of the subordinate officers among whom no change has taken place for the last two years, but it would also appear that the forfeiture of marks for offences has had a deterring effect. There is no case of misconduct in Chapel.

The Chaplain and Teacher state that the Convicts have been attentive to their instructions, and have made tolerable progress in Education. The Library is ample, and has been largely taken advantage of.

With a view to test the value of the stimulus to exertion imparted by the Mark System, a comparison has been made of the average amount of work done by shirtmakers before and since it came into operation, and the result shows an increase under the Mark System of nearly 40 per cent., or rather more than the difference between a moderate day's work, and the steady industry that secures the maximum number of marks. The work is generally gone about in a cheerful spirit, and in some instances with a determination to do the utmost possible amount. Perplexing cases do occasionally occur, but the system as a whole works more smoothly than was at first anticipated. The Officers are of opinion that it tends to promote good discipline. The maximum number of marks is gained by a large proportion of the Convicts. A regular supply of labour has been obtained with great difficulty, and only at reduced prices.

R. Sutherland, *Governor.*

2.—Return relative to Female Convicts in the Prison of Ayr, for year ended 31st December 1867.

I. Accommodation :—

Number of Cells,		96

VI. Sickness of Convicts :—

On Register at the commencement of Year.	Number put on Register during the Year.	Total.	Number Removed from Register.	Number on Register at 31st December 1867.
4	9	13	11	2

Of these there were—

Slightly ill,	4	Contracted before Admission,	6
Seriously ill,	9	Contracted after Admission,	7

Prison of Ayr, 11th January 1868.

R. Sutherland, *Governor.*

I certify as to the correctness of Table No. VI. of this Return.

Robert Dobbie, M.D., L.R.C.S.E.

Report by the Surgeon of the Prison at Ayr, for the Year 1867.

The general health of the Convicts throughout the year has been very good. Thirteen cases of sickness in all have been put upon the register; of these, nine have been classed as serious, and four slight.

One death occurred, and that from suicide. The subject of it, M. T., aged 39 years, was almost deaf and dumb, it being impossible for any one to communicate with her, with the exception of a Convict who, it appears, had previously known her. She was also utterly ignorant, being unable to read or write, and was somewhat moody and excitable, this mental condition being referable to her physical defects and want of education, which together brought about a melancholy condition of isolation. During association hours she always seemed cheerful and contented, and it was not thought necessary to make any special arrangement regarding her, as, while undergoing previous terms of Penal Servitude in the General Prison at Perth, the matron—then an officer there—informed us that she was treated like the rest. No suicidal tendency was ever suspected, and the act was probably the result of a temporary depression, but accomplished in a very determined way. Taking advantage of the momentary absence of an officer, she slipped off her shoes, rushed upstairs, and threw herself over the railings of the upper gallery, a height of 36 feet. Her injuries were very severe, and proved fatal in about three hours.

A few days after this event, and perhaps in a spirit of imitation of it, another Convict, at the close of the Chapel Service, and in presence of all assembled, jumped over the railing of the first gallery, with the result of severely dislocating her ankle. This woman is somewhat weak-minded, and remarkably obstinate. The time and circumstances of her attempt, however, lead to the opinion that it was done only for effect, and without any intention to do herself much harm.

The recurrence of events like these has been rendered impossible by the placing of strong railings across the open spaces between the galleries.

Two cases occurred presenting scorbutic symptoms. Both were Convicts of the reformatory class, and were attributable to loss of appetite, and not to any defect in the scale of diet. At the time of their removal to Perth both had nearly recovered.

One woman, the subject of cancerous disease, has been recommended to the Home Secretary for liberation, as her case must prove fatal. The result of the application is yet unknown.

One left associated at the end of last year on account of epilepsy was returned to separation, and has continued well; no attack having occurred since she came here.

One birth took place, mother and child did well.

The heating and ventilation are very satisfactory.

Robert Dobbie, M.D., L.R.C.S.E.

RETURN by the Surgeon of Ayr Prison of Prisoners put in Association as better suited to their Mental Condition than Separation, during the Year ending 31st December 1867.

No.	C/n.	NAME.	Age when committed to Prison.	Prison whence received.	Date of Sentence.	Duration of Sentence.	Date of Admission.	Date of putting on Treatment.	Condition.	Probable Cause of Condition.	Whether before or after Admission.	REMARKS.

No. XXVII.

LAWS, RULES, AND REGULATIONS

OF THE

GENERAL PRISON FOR SCOTLAND AT PERTH.

I.—STATUTORY PROVISIONS.

Under the Prisons (*Scotland*) Administration Act, 1860 (viz., 23d and 24th Vict. c. 105), and 28th and 29th Vict. c. 84, Managers are appointed for the management of the General Prison, and other purposes, "any two of whom shall be a quorum." They are "the Sheriff of the County of *Perth*," "the Inspector of Prisons for *Scotland* appointed under an Act passed in the fifth and sixth year of the reign of His late Majesty King *William* the Fourth, intituled *An Act for effecting greater Uniformity of Practice in the Government of the several Prisons in* England *and* Wales, *and for appointing Inspectors of Prisons* in Great Britain; the Crown Agent in *Scotland* for the time being; and one person who shall be appointed and may be removed by Her Majesty." To these Managers, and the Management of the Prison, the following provisions in the Prisons Administration Act are applicable:— Managers.

"Such last-mentioned person shall also discharge all the duties of Secretary to the Managers; and, except as herein provided, the Managers shall not derive any profit or emolument for the performance of any duties under this Act, nor shall they be personally responsible for anything done *bonâ fide* in the execution of this Act, or in the exercise of the powers herein contained. (§ 52.)

"From and after the commencement of this Act the General Prison at *Perth* as at the said date belonging to and vested in the General Board of Directors of Prisons, and all rights of property, action, or recovery relative thereto, and all other lands and heritages at the said date belonging to and vested in the said General Board, shall be and are hereby transferred to and vested in the Commissioners of Her Majesty's Works and Public Buildings, for the purposes and subject to the provisions of this Act: Provided that it shall be lawful for the Managers to sue for, recover, and discharge all debts or sums of money due to the said General Board at the commencement of this Act, and to receive from the said General Board all moveable property, records, and documents belonging thereto, and to hold and dispose of the same for the purposes and subject to the provisions of this Act and to any directions to be given relative thereto by one of Her Majesty's Principal Secretaries of State, (§ 55.) General Prison at Perth, and Rights, etc., belonging thereto, vested in the Commissioners of Works and Public Buildings.

"The Managers, or any one or more of them, may, with the authority in writing of such Secretary of State, proceed to any Prison and inquire into the condition and management thereof, and may require access to all documents therein or in reference thereto, and may require the attendance of any witness, by service by any Sheriff-officer or Constable of a written intimation to such witness personally or at his usual place of residence, and may examine such witness on oath; and any person interrupting such inquiry, or failing, when required, to produce any document, or to attend or give evidence, shall, on summary complaint and conviction before the Sheriff, be liable to a penalty not exceeding ten pounds, or to be imprisoned for any period not exceeding thirty days. (§ 58.) Provisions for Inquiries into Condition and Management of Prisons.

"The Managers shall, on or before the fifteenth day of *February* in every year, make and transmit to one of Her Majesty's Principal Secretaries of State a full report of their whole proceedings during the year ending on the thirty-first day of *December* preceding, and an abstract of their whole receipts and expenditure, classifying the separate articles thereof; and in the said Report, or in the Appendix thereto, there shall be set forth all new Rules or alterations of Rules for Prisons which shall have been made by such Secretary of State as aforesaid, any orders issued by such Secretary of State constituting a new Prison or altering the classes of Prisoners for which a Prison is legal, and such information and statistics regarding Prisons in *Scotland* as such Secretary of State may require; and a copy of every such report shall be laid before both Houses of Parliament within fourteen days after the fifteenth day of *February*, if then assembled, or if Parliament shall not be then assembled, within fourteen days after the next meeting thereof. (§ 60.) Annual Report to be made to Secretary of State by Managers.

"The Managers, subject to the provisions of this Act, and the Rules in force in terms thereof, and also subject to such instructions as they may from time to time receive from one of Her Majesty's Principal Secretaries of State, shall have the administration and government of the General Prison at *Perth*, and shall from time to time visit the said Prison: Provided that one or more of the Managers shall once at least in every month see and communicate with each Prisoner, shall examine the books, accounts, and documents kept in the Prison, shall inspect the Prison premises and stores, shall examine into the conduct of the several officers, shall investigate all complaints and alleged or apparent abuses, or deviations from the Rules, shall inquire into the cause and nature of every punishment that has been administered, shall ascertain how far the health, education, and industrial training of the Prisoners are in a satisfactory condition, and shall make a report in writing, under these heads, which shall be laid before and specially considered by the Managers and Visitors. (§ 61.) Managers, subject to Instructions of Secretary of State, to have the Administration of the General Prison.

"Besides such Rules for the government of the General Prison, and for the custody, discipline, and dietaries of the several classes of Prisoners therein, as may exist at the commencement of this Act, or may thereafter be adopted, provision shall be made by further Rules for the method in which the establishment of Officers in the said Prison shall from time to time be adjusted, and for the appointment and dismissal of such Officers, and the fixing of their salaries; and until such Rules come into force no appointment or dismissal of an Officer, and no alteration of an Officer's salary in the said Prison, shall take effect unless the same be approved by one of Her Majesty's Principal Secretaries of State. (§ 62.) Rules to be made for the Staff of the General Prison.

"The General Prison at *Perth* shall be a Prison for the reception and detention of Prisoners sentenced to Imprisonment by the Courts of Law in *Scotland*, and also for the reception and detention of such Convicts Classes of Prisoners to be confined in the General Prison.

under sentence or order of Transportation or of Penal Servitude, as Her Majesty may please to direct to be removed to such General Prison under the powers contained in an Act of the tenth and eleventh year of the reign of Her present Majesty, intituled *An Act to amend the Law as to the Custody of Offenders;* and of an Act of the sixteenth and seventeenth year of the reign of Her present Majesty, intituled *An Act to substitute in certain Cases other Punishments in lieu of Transportation;* and of an Act of the twentieth and twenty-first year of the reign of Her present Majesty, intituled *An Act to amend the Act of the Sixteenth and Seventeenth Years of Her Majesty, to substitute in certain Cases other Punishments in lieu of Transportation.* (§ 63.)

0 and 11 Vict. c. 67.
6 and 17 Vict. c. 99.
0 and 21 Vict. c. 3.

Sentences of Nine Months and upwards to be carried out in the General Prison.

"From and after the commencement of this Act, when a sentence is pronounced by any Court of competent jurisdiction adjudging any person to Imprisonment for a period of nine months or upwards, such sentence, whether the General Prison at *Perth* be mentioned therein or not, or whether the name of any other Prison be mentioned therein or not, shall be deemed to be and is hereby declared to be a sentence which may be carried into effect in the said General Prison, unless such sentence contains a clause especially declaring that the Prisoner shall not be removed to such General Prison; and any person undergoing a sentence which may be so carried into effect in the General Prison may be removed thereto at any time in terms of the provisions of this Act for the removal of Prisoners; and if such sentence adjudge the Prisoner to Hard Labour for any period, effect shall be given to such adjudgment in the General Prison, so far as the same has not been carried into effect in a Local Prison. (§ 64.)

As to removals of Prisoners by Managers.

"Save as herein excepted [viz., as to removals within Counties], all removals of Prisoners from one Prison in *Scotland* to another Prison in *Scotland*, and all removals of Convicts sentenced to Transportation or to Penal Servitude from any Prison in *Scotland* to any one of Her Majesty's Prisons or Penitentiaries in *England*, in virtue of Warrants granted by one of Her Majesty's Principal Secretaries of State under the provisions of the Statutes to that effect, shall be carried out by or under the direction of the Managers, who may issue regulations or instructions for carrying out such removals, and fix from time to time the remuneration and allowances to be paid to the persons employed therein; and such regulations and instructions shall, so far as the same are not inconsistent with the existing Laws or Statutes, be binding on the persons to whom any such warrants by order of Her Majesty's Principal Secretaries of State are addressed, and all other persons employed in carrying into effect such removals of Prisoners. (§ 67.)

As to removals under order of Secretary of State.

"It shall be lawful, in virtue of an order under the hand of one of Her Majesty's Principal Secretaries of State, to remove any Prisoner from any Prison in *Scotland* to any other Prison in *Scotland*, being a legal Prison for the class of Prisoners to which such Prisoner belongs, and the sentence or warrant under which he is committed shall be as effectual in the Prison to which he is so removed as in the Prison named therein. (§ 68.)

Prisoners removed to General Prison may be taken back to Local Prison.

"Any Prisoner sentenced to a period of Imprisonment who has been removed from a Local Prison to the General Prison may, at any time before the expiry of his sentence, be removed back to the Local Prison whence he was brought, under the provisions of this Act relating to the removal of Prisoners. (§ 69.)

Not to interfere with removal by Court of Law.

"Nothing in this Act contained relating to the removal of Prisoners shall affect the power possessed by any Court of Law to direct the removal of any Prisoner to be carried out by any Officer of such Court or other Officer of the Law. (§ 70.)

Persons who are entitled to visit Prisons.

"The following persons shall be entitled to visit the several Prisons in *Scotland;* namely, Her Majesty's Principal Secretaries of State, or any persons appointed by them or any of them, the Lords Lieutenant of Counties in *Scotland*, the Members of Her Majesty's Privy Council, the Judges of the Court of Session, the Lord-Advocate and Solicitor-General of *Scotland*, and the Managers appointed by or under the authority of this Act: The following persons shall also be entitled to visit the Local Prisons within their respective Counties and Burghs, namely, Sheriffs, Conveners of Commissioners of Supply, Members of County Prison Boards, Justices of the Peace, and Magistrates of Burghs; and any person visiting a Prison which he is hereby empowered to visit shall have access, if he desire it, to every Prisoner confined therein, or otherwise to such Prisoners as he may desire to see, and may report his observations on the discipline and management of such Prison to the Administrators thereof, or to one of Her Majesty's Principal Secretaries of State: Provided that in any Rules for Prisons adopted under this Act provision may be made for authorizing other persons to visit any Prisons under such restrictions as the Rules may contain; and that the Administrators of any Prison may by an order in writing grant special permission to any person to visit the same. (§ 71.)

Removal of Prisoners diseased or in danger of Life to Hospitals, etc.

"When in reference to any person confined in a Prison it is certified by two Medical Practitioners who have visited and carefully examined him, that he is afflicted with any contagious or infectious disease which renders his removal necessary for the health of the other inmates of the Prison, or that he is afflicted with any disease which threatens immediate danger to life and cannot be treated in Prison, or that from his condition continued confinement would cause his death, it shall be lawful for the Sheriff, on summary application at the instance of the administrators of the Prison, accompanied by such certificate, to order the Prisoner to be removed to an hospital or other fit place, under such precautions as to the Sheriff may seem necessary and proper. (§ 72.)

As to Prisoners sentenced to Hard Labour.

"When any sentence awarded by any court of competent jurisdiction for any crime or offence is a sentence to a period of imprisonment, to be accompanied, during either the whole or a portion of such period, with Hard Labour, such Hard Labour shall be exacted and performed in the manner set forth in the Rules applicable to the Prison for the time being under this Act; and in any Rules which may be hereafter made in terms of this Act, it shall be competent to include Rules for carrying out sentences of Hard Labour. (§ 73.)

Power to order Male Juvenile Offenders to be punished by private Whipping.

"In every case where it is competent for any Judge or Magistrate to award sentence of Imprisonment, or of Fine with the alternative of Imprisonment, it shall be lawful for such Judge or Magistrate, in the case of any juvenile offender, being a male, whose age in the opinion of such Judge or Magistrate shall not exceed fourteen years, to adjudge such offender, instead of Imprisonment or of Imprisonment and Hard Labour, or in addition to Imprisonment or Imprisonment and Hard Labour, to be punished by private Whipping, in such manner and according to such regulations as have been or shall be made by the Lord Advocate of *Scotland* in that behalf, and approved by one of Her Majesty's Principal Secretaries of State. (§ 74.)

Penalty for introducing prohibited Articles into Prisons.

"If any person shall carry or bring, or attempt or endeavour, by throwing over the walls or by any other means, to introduce into any Prison in *Scotland* any letters, tobacco, spirits, or other articles not allowed by the Rules of such Prison, it shall be lawful for any person to apprehend such offender, and to carry him before the Sheriff, or any two Justices of the Peace of the County, or any Magistrate of a Burgh in which such Prison is situated, who are hereby empowered to hear and determine such offence in a summary way; and if the person complained of shall be lawfully convicted of such offence, the Sheriff, Justices, or Magistrate shall forthwith sentence such offender to Imprisonment, with or without Hard Labour, for any period not exceeding one month, unless such offender shall immediately pay such penalty, not exceeding five pounds nor less than forty shillings, as such Sheriff, Justices, or Magistrate shall impose; and such penalty shall be applied towards the expense of such prosecution, and the surplus, if any, towards the maintenance of such Prison. (§ 75.)

"For enabling the said Commissioners of Her Majesty's Works and Public Buildings, and any County Board, to purchase, take, and acquire lands for the purposes of this Act, 'The Lands Clauses Consolidation (*Scotland*) Act, 1845,' shall be incorporated with and form part of this Act: provided that the clauses of the said Lands Clauses Consolidation Act with respect to the purchase and taking of lands otherwise than by agreement shall not be incorporated herewith, except for the purpose of acquiring lands adjoining to a Prison for the purpose of enlarging such Prison; and the expression 'the Special Act' in the said Lands Clauses Consolidation Act shall mean this Act; and the expression 'the promoters of the undertaking' in the said Act shall mean and include the said Commissioners of Her Majesty's Works and Public Buildings, and any County Board seeking to acquire lands under this Act. (§ 77.)

8 and 9 Vict. c. 19, incorporated with this Act for Acquisition of Lands.

"All Rules for Prisons in *Scotland* which have been certified under the hand of one of Her Majesty's Principal Secretaries of State, and have not been superseded by other Rules so certified, shall, except in so far as the same are superseded by this Act, be the Rules for Prisons in *Scotland*, and as such shall be binding on all persons whom they may concern. (§ 6.)

Rules as existing to continue until altered.

"It shall be lawful at any time for one of Her Majesty's Principal Secretaries of State to alter, modify, or supersede any Rule applicable at the time to any Prison in *Scotland*, and all Rules, whether applicable to particular Prisons therein named or applicable to Prisons in *Scotland* generally, issued under the hand of one of Her Majesty's Principal Secretaries of State, shall be specially communicated to the administrators of every Prison to which they apply and published in the *Edinburgh Gazette*, and shall thereafter be binding on all persons whom they may concern. (§ 9.)

Secretary of State empowered to alter Rules, or make new Rules.

"The Chaplains to be so appointed to the General Prison and Local Prisons aforesaid shall be Ministers or Licentiates of the Church of *Scotland*. (§ 15.)

Chaplains.

"Medical Practitioner shall mean a person registered in terms of an Act passed in the twenty-first and twenty-second year of the reign of Her present Majesty, intituled *An Act to regulate the Qualifications of Practitioners in Medicine and Surgery*, and an Act passed in the twenty-second year of the reign of Her present Majesty, intituled *An Act to amend the Medical Act* (1858)." (§ 4.)

Medical Practitioners.

The following Provisions are contained in other Statutes:—

"The Commissioners [viz., in Lunacy], shall and may, once or oftener in each year, on such day or days, and at such hours in the day or night, and for such length of time as they shall think fit, visit any Prison in which there shall be, or be alleged or supposed to be, any Lunatic, and shall make all such inquiries as to the Lunatics in such Prison as they shall deem proper, or as the Board may direct." (20 and 21 Vict. c. 71, § 18.)

"If at any time within sixty days of the expiration of the sentence of any Convict or other Prisoner confined in the General Prison at *Perth*, it is certified on soul and conscience by two or more medical persons, that they have personally visited and carefully examined the Prisoner within the said sixty days, and that he is in their opinion insane, and that his insanity is of a kind which renders it advisable that he should be detained in the Lunatic Department of the said General Prison rather than in a Lunatic Asylum, it shall be lawful for one of Her Majesty's Principal Secretaries of State, by a writing under his hand, to authorize such Prisoner to be detained in the said General Prison after the expiration of his sentence, and such Prisoner may thereupon be detained accordingly; provided that it shall at any time thereafter be lawful for Her Majesty to give such Order for the safe custody of such Prisoner during Her Majesty's pleasure in such place and in such manner as to Her Majesty shall seem fit. (25 and 26 Vict. c. 54, § 19.)

Insane Prisoners may, on expiry of sentence, be detained in General Prison.

"If any person, having been charged under an indictment or criminal libel, shall be ordered by the Court, under the provisions of the first-recited Act, to be kept in strict custody until Her Majesty's pleasure shall be known, such Order, whether the General Prison at *Perth* be mentioned therein or not, or whether the name of any other Prison or place be mentioned therein or not, shall be deemed and is hereby declared to be an Order which may be carried into effect in the said General Prison (unless such Order expressly directs that such person shall not be removed to the said General Prison); and the person to whom such Order applies may (excepting in the case above provided) be removed thereto, under the Provisions for the removal of Prisoners contained in the 'Prisons (*Scotland*) Administration Act, 1860,' and shall be detained in such Prison until Her Majesty's pleasure be known; and it shall thereafter be lawful for Her Majesty to give such Order for the safe custody of such person during Her Majesty's pleasure, in such place and in such manner as to Her Majesty shall seem fit; provided that within eight days after the reception of such person within the said General Prison, intimation of such reception, under the hand of the Governor of the General Prison, shall be transmitted to one of Her Majesty's Principal Secretaries of State, and also to the Secretary of the Board. (*Ib.* § 20.)

Orders may be carried out in General Prison.

"If it shall be certified on soul and conscience by two medical persons that they have personally visited and carefully examined a Prisoner confined under sentence in a Local Prison, in terms of the said Prisons Administration Act, and that such Prisoner is insane, the sentence, although for a shorter period than nine months, shall be deemed to be a sentence which may be carried into effect in the said General Prison, and such Prisoner may be removed thereto, in terms of the Provisions of the said Prisons Administration Act for the removal of Prisoners. (25 and 26 Vict. c. 54, § 22.)

Sentences for less than nine months may be carried out in General Prison.

"If, within fourteen days of the period when a prisoner in the said General Prison would fall to be liberated by expiry of sentence or otherwise, it shall be certified on soul and conscience by two medical persons that they have personally visited and carefully examined such Prisoner, and that he is insane, such Prisoner may be removed back to the Local Prison to which he had been committed until liberated in due course of law, and such removal may be carried out in terms of the provisions of the said Prisons Administration Act for the removal of Prisoners; and if arrangements shall have been completed for the reception of such Prisoner within a Lunatic Asylum in any part of *Scotland* in which he can be lawfully received and detained, he may be removed to such Asylum as if the same were such Local Prison, in terms of such Provisions for the removal of Prisoners. (*Ib.* § 23.)

Insane Prisoners may be removed to an Asylum.

"The provisions of the first recited Act [20 and 21 Vict. c. 71], and of this Act, authorizing Her Majesty to give Orders for the safe custody of any person during her pleasure, may be carried into effect by a writing under the hand of one of Her Principal Secretaries of State, and such writing shall be binding on all persons concerned." (*Ib.* § 24.)

Secretary of State may give orders for custody of persons during Her Majesty's pleasure.

"When any Prisoner shall hereafter be received into a Prison by removal from another Prison, it shall be lawful, under the rules in force in the Prison into which he is so received, to punish him for any misconduct which he may have committed in the course of such removal, or within the period of twenty-four hours before the commencement of the same, as if such misconduct had been committed by him within the Prison into which he is so received." (26 and 27 Vict. c. 109, § 1.)

As to punishment of Prisoners for misconduct during removal from one Prison to another.

II.—RULES for the Government of the General Prison for Scotland at Perth, in terms of the Prisons (Scotland) Administration Act, 1860 (23 and 24 Vict. c. 105).

N.B.—*The word "Managers" in these Rules is to mean The Managers appointed under the Prisons (Scotland) Administration Act,* 1860. *The word "Convict" to mean a Prisoner sentenced to Transportation or to Penal Servitude. The words "Ordinary Prisoner" to mean a prisoner under sentence to a period of imprisonment. The word "Juvenile" to apply to any prisoner not above fourteen years of age. Rules, where the masculine gender only is used, are to apply to Female Prisoners, unless they are inapplicable or inconsistent with any Rules specially intended for Female Prisoners.*

I. The Prison is a Legal Place of Detention for—

IN THE PENAL DEPARTMENT.

The Penal Department.

1. Ordinary Prisoners. Those sentenced to nine months and upwards are removable to the Prison by the Managers. The Secretary of State has powers to order the removal thither, for any special purpose, of prisoners sentenced to shorter periods.
2. Convicts removed to the Prison by warrant of the Secretary of State.

IN THE LUNATIC DEPARTMENT.

The Lunatic Department.

Persons indicted for a crime, and placed at Her Majesty's disposal on the ground of insanity, or persons undergoing sentence, and certified to be insane.

THE MANAGERS.

General Powers.

II. The Managers have power to issue, under the hand of their Secretary, such Regulations and Instructions for the management of the Prison, as may be consistent with, and tend to give effect to these Rules.

Special Regulations and Instructions.

III. It is the special duty of the Managers to prepare and enforce such Regulations and Instructions as may be necessary to carry into effect the following purposes:—

Conformity to Regulations, etc.

1. The enforcement within the Prison of all Laws and Regulations, whether set forth in Statute, or otherwise legally sanctioned.

Investigation of Irregularities.

2. The investigation of all breaches of Regulation, or other irregularities, and taking the proper steps for a remedy.

Security.

3. The security of the Prison.

Cleanliness and Ventilation.

4. The preservation of cleanliness, and ventilation.

Health.

5. The preservation of health.

Officers and their routine of Duties.

6. The routine of duties by the respective Officers, their hours of attendance, and the time for opening and closing the Prison for external business.

Their periodical increase of Salary.

7. The conditions under which Officers may obtain periodical increase of salary under the scale sanctioned by Secretary of State.

Their leave of absence.

8. Leave of absence to Officers.

Accounts and documents.

9. The method of keeping the journals, accounts, and records, and the other documents proper to the Prison.

Clothing.

10. The provision of clothing for the prisoners sufficient for the preservation of health.

Manufactures.

11. The management of the manufacturing department, and the trade in manufactured goods.

Religious Instruction.

12. The education and religious instruction of prisoners.
13. The ascertaining and recording of the religion or denomination to which each prisoner belongs, for the purpose of his receiving the appropriate religious instruction.
14. The assembling of prisoners for religious service, administered by the Chaplain or by a paid visiting clergyman.

Prisoners communicate with relations.

15. Communication with the relations or friends of prisoners, with a view to their proper disposal on liberation.

Communication with the liberated.

16. Communication with, and visits to, prisoners after their liberation, with a view to their benefit.

Daily visits to prisoners.

17. Visits to the prisoners by the Chaplain, Scripture Readers, Teachers, and other Officers, to the effect that each prisoner in separation or in hospital shall receive, at least, ten visits daily.

Documents to accompany removed prisoners.

18. The schedules, or other proper documents, to accompany a prisoner removed to any other Prison, or otherwise removed in custody.

Periodical search.

19. A complete search once a quarter of each prisoner's person and clothing, and of each cell and apartment frequented by any prisoner, with all the furniture and moveables within it.

Prohibition of liquors and narcotics.

20. The prohibition of the introduction of tobacco, intoxicating liquor, and narcotics, within the Penal Department, unless for medical purposes.

Effective separation of Female Department.

21. Rendering it impracticable for any male officer, or other male person, to enter the female side of the Penal Department, or of the Lunatic Department, without being attended by a female officer.

Separate discipline of ordinary prisoners and probation convicts.

22. Preventing ordinary prisoners, and convicts in the probation period as fixed by the Secretary of State, from holding communication with any of their fellow-prisoners.

Exercise.

23. Prisoners taking daily exercise in the open air, the arrangements being such that when the length of the day and other circumstances permit, each shall spend at least an hour daily in the open air.

Treatment of convicts in advanced stages.

24. Convicts in advanced stages obtaining relaxation of discipline according to their conduct and industry.

Carrying out mark system.

25. Ascertaining and recording the daily industry of Convicts, and otherwise giving effect to the Mark system (or any other arrangement adopted, for the time being, by the Secretary of State for the purpose of testing the claims of convicts for liberation on license) and allowance of gratuity.

Gratuities to prisoners.

26. Ascertaining and recording the merits of Ordinary Prisoners, so as to apportion to them the proper amount of gratuity payable on liberation at conclusion of sentence.

Lunatic Department.

27. The special treatment of the inmates of the Lunatic Department in such manner that they shall not be subject to penal discipline for the purpose of inflicting punishment on them, but shall, so far as the public safety permits, be dealt with as lunatic patients under curative and alleviative treatment.

28. The special treatment, in separate hospitals or wards, of prisoners certified by Medical authority to be imbecile, or to be epileptic, or to be in such a state of bodily health as to require hospital treatment. Hospital cases.

29. The issuing of the Certificates and Notices, and taking any other steps necessary for giving effect to the Statutes relating to lunatics, so far as these affect the General Prison. Statutory provisions as to Lunatics.

IV. The Managers are empowered to adjust the periods and method of payment of the salaries of the Officers, the conditions as to warning, or otherwise, under which they may leave the service, and the retention of portions of salary as deposit or fine, provided that they do not disturb, to the prejudice of any Officer, the arrangements in practice at the time of his entering the service. Adjustment of pay, time, retention, etc.

V. The Managers are empowered, if they see fit, to frame regulations for the reception by prisoners of visitors likely to serve the objects of Prison discipline, by communicating to them instruction or good advice. Power to sanction Visitor

VI. Of every Regulation or Instruction adopted under the above powers for permanent observance in the Prison, a copy shall be appended to the next Statutory Report of the Managers to the Secretary of State. Regulations and Instructions to be appended to Annual Report.

VII. Each Manager is entitled at all times to enter and inspect all parts of the Prison, and to inspect all books and documents kept in the Prison. Power of Inspection.

OFFICERS GENERALLY.

VIII. All appointments and all dismissals are to be made by the Secretary of State, who will intimate his pleasure on each occasion to the Managers in the manner in which he communicates his ordinary instructions to them. Appointments and dismissals to be by Secretary of State.

IX. Whenever a vacancy occurs, whether temporary, from suspension, or illness, or permanent, the Managers shall arrange for the performance of the duties by the other Officers; and when this is not practicable, they may appoint a person to perform the duties *ad interim* until an appointment is made by the Secretary of State; provided that the allowance to the person so appointed *ad interim* shall not exceed the minimum salary attached to the Office. Temporary employment in case of vacancy.

X. Every Officer is to hold office during pleasure, and to be liable to dismissal, either immediate, or with such warning as may be deemed proper. Officers to be during pleasure.

XI. Every dismissed or suspended Officer must, when required, vacate any premises occupied by him within the bounds of the Prison, and restore any uniform or other effects in his possession belonging to the establishment. Officers dismissed or suspended to vacate premises, etc.

XII. When a vacancy occurs, the Managers shall intimate it to the Secretary of State, mentioning the duties, the emoluments, and their opinion whether the office should be filled. Intimation of vacancies.

XIII. The Managers may suspend an Officer, and the Governor may suspend an Officer, intimating the fact by a letter posted on the same day to the Managers, whose instructions he will follow. No suspended Officer shall continue to possess a key, or to have access to any of the Prison buildings in which there are prisoners. The Managers may, in consideration of special circumstances, authorize any amount, not exceeding half his wages, to be paid to an Officer during suspension. When a suspended Officer is restored, the unpaid arrears may be wholly or partly forfeited, or may be paid to him as the Managers on consideration of the case may determine. Suspensions.

XIV. Effect must be given to the Regulations of the Civil Service Commission in relation to appointments. Civil Service Regulations.

XV. No Officer shall have any pecuniary dealings of any kind with prisoners, or receive any money from prisoners or their friends. No Officer shall have any interest in the supply of the food or any other article to the Prison, or have perquisites of any kind, or receive fees or gratuities of any sort. No presents, perquisites, fees, or gratuities allowed.

XVI. No Officer shall employ any prisoner in making clothes for him, or in his private service in any way, even though he be willing to pay the full value of the work. No prisoner to be employed in private service of Officer.

XVII. The houses provided for male Warders and their families are to stand at their disposal in the order of seniority in the service; so that when a house becomes vacant the oldest Officer desiring to occupy it is entitled to do so. This Rule is affected by the following modifications and conditions:— Officers' Houses.

1. With the view of giving, as far as is consistent with the claims of seniority, facilities for adjusting the premises to the requirements of families, it shall be allowable, subject to the approval of the Managers, for the Officer entitled to any house to arrange for its occupation by another Officer; but any such arrangement shall be personal only to the Officer entitled to the house, and shall not bind an Officer succeeding to his right.
2. Except for the purpose of giving effect to No. 1, the occupants of a house shall not let any part of it, or keep any lodger in it.
3. The premises occupied by Officers shall at all times be open to inspection of the Managers, the Governor, and the Medical Officers; and those occupied by female Warders to inspection also by the Matron.
4. If the occupant of any house undertakes to cultivate ground attached to it, he must keep it in good order, to the satisfaction of the Governor, who may otherwise dispose of it if dissatisfied with the manner in which it is kept.
5. No dogs, pigs, or poultry are to be kept on the premises by Warders, except with permission of the Governor.

XVIII. There shall be kept in the Prison, and amended from time to time as may be necessary, Directions by the Governor for the duty and conduct of Warders and other subordinate Officers, and these shall be read out to them for their instruction on the first lawful day of every month. Every such Officer, however, by accepting an engagement in the Prison, is understood to have undertaken whatever duties the Governor may impose on him, subject to the revision of the Managers. Directions for duty and conduct and general obligations in Subordinate Officers.

THE GOVERNOR.

XIX. The Governor is the responsible head of the Prison, and superior in authority to every other Officer. Head of the Establishment.

XX. In the management of the Prison, he is subject to the lawful instructions of the Managers, when transmitted to him under the Signature of one of their number. To take instructions from Managers.

XXI. In all cases of doubt as to the interpretation of a Rule or an Instruction, his decision is to be binding on the other Officers, and to relieve them from responsibility. His decision to bind other Officers.

XXII. On questions pending during the official visit of a Manager, he is to take the Manager's decision; but it shall be optional to him to require that it be given in writing, and he may refer it to the consideration of the Managers as a body. Reference to Visiting Manager.

To award Punishments.

XXIII. Every punishment of a prisoner is to be awarded by the Governor, and intimated by him to the prisoner to be punished.

Conditions as to Punishments.

The following conditions must be observed on every awarding of punishment:—

1. The punishment is to be entered in the Register of Punishments before it is inflicted, and its purport is to be read by the Governor from the Register to the prisoner punished.
2. No reduction of diet shall be awarded without the consent of the Resident Surgeon, who will put his initials to the entry in the Register.
3. Every punishment by putting in irons or confinement in dark cell must be intimated to the Resident Surgeon.
4. The name of the Officer who has given in the complaint or information leading to the punishment, is to be recorded along with the names of any other Officers who have given testimony or information in the matter.
5. No Officer whose name is so recorded is to be employed in giving effect to the punishment.
6. When any force is necessary in giving effect to a punishment, at least two Officers must be told off to carry it out.

To give effect to Resident Surgeon's Requisitions.

XXIV. He shall give effect to the requisitions which the Resident Surgeon is authorized to make as per No. LIX.

If, on any occasion, he should apprehend that important bad effects may be caused by giving effect to such requisition, he may refuse to do so until directed by the Managers, to whom he shall intimate such refusal by the earliest post.

Admission of visitors to the Prison.

XXV. The only persons whom he is, as a general rule, to admit as visitors of the Prison, are, 1*st*, those who are authorized by Statute to visit; 2*d*, clergymen under Rules XLIV. and XLV.; 3*d*, visitors authorized under Rule V.; and 4*th*, persons presenting an order signed by a Manager. If any person should desire to visit the Prison, who cannot conveniently wait until communication is had with the Managers, the Governor has a discretionary power to admit him for a special cause; as, for instance, that he is a person connected with the administration of prison discipline, and desires to have the benefit of observing the arrangements of the Prison. Every such admission, with the special cause, shall be entered in the Governor's Journal, and reported to the Managers. This Rule does not apply to the visits which prisoners may receive from relations or friends.

Deputy-Governor.

XXVI. When the Governor is not in the Prison, the Deputy-Governor exercises his powers, and is subject to his responsibilities. In such case, wherever the word Governor is used in these Rules, the words Deputy-Governor are to be held as substituted for it.

Attendance.

XXVII. The Governor shall never sleep beyond the outer gate of the Prison, without recording in his Journal the fact of his absence and its cause, and reporting the same to the Managers. He must not, unless in case of emergency, be absent from the premises for a period exceeding six hours while the Deputy-Governor also is absent. Should any emergency render the absence of both necessary for a longer period, the Governor is to name in writing, and record in his Journal, an Officer to act for him during the time when he and his deputy are both absent.

Suspension of Rules.

XXVIII. He may, in any case of emergency, suspend a Rule, giving immediate intimation of the suspension to the Managers.

To receive no prisoners without proper authority.

XXIX. He shall receive no person into the Prison as a prisoner unless such person come within the definitions in Rule I.; and also unless such person be accompanied by—1*st*, The warrant under which he is detained, or an extract thereof; and 2*d*, The proper authority for his removal to the General Prison.

Visits and Inspections.

XXX. The Governor is responsible for making all personal inspections necessary for seeing that the Rules are enforced, and the following stated visits devolve on him:—1. To go through the Male Department and see every prisoner once a day. 2. To go through the Female Department, and see every female Prisoner once a week. Once a week to go through the Prison at an uncertain hour, between Eleven o'clock at night and Five o'clock in the morning, and to record in his Journal the visit, with the hour, and the state of the Prison at the hour. These duties are not to be transferred to the Deputy-Governor, unless when the Governor is absent on leave, or certified to be disabled from the duty by bad health; but it is sufficient, if under the first, the Governor himself personally see every male prisoner three times a week.

Applications for removal of prisoners in danger.

XXXI. When the Resident Surgeon brings under his notice a certificate under Rule LV., and the 72d section of the Act, it shall be his duty to make the summary application to the Sheriff, prescribed by the Act, in the name of the Managers, sending immediate notice to them of his proceedings.

Deaths and escapes.

XXXII. Upon the death of any prisoner, he shall give immediate information to the Managers, to the Procurator-Fiscal for the county, and when practicable, to the nearest relations of the deceased; and shall record the fact of his having done so in his Journal. If any prisoner makes his escape, or if any other unusual and important occurrence takes place, he shall send immediate intimation thereof to the Managers In the case of an escape of a prisoner, the Governor shall instantly give information to the Procurator-Fiscal, and to the Superintendent of Police, or Chief Constable of the district, sending them at the same time a full description of the prisoner.

Letters by prisoners to the Authorities.

XXXIII. The Governor is to see that every prisoner intimating his desire to write a letter of complaint to the Secretary of State, or any of the Managers, be supplied with paper for the purpose; and that every such letter, when delivered to a warder, be immediately posted. When such letter is closed the Governor is to take order that it be not opened at the Prison unless under special circumstances, to be reported to the person to whom the letter is addressed and to the Managers. The Governor is at liberty to forward, along with an unopened letter, any explanations he may think it proper to make regarding the prisoner who has written it.

To take order for Religious Instruction.

XXXIV. The Governor is to take order for giving effect to the following arrangements for religious instruction:—1. To see that all prisoners of the Established Church, and others who accept of the ministrations of the Chaplain, have an opportunity of doing so. 2. To see, as far as he practically can, that other prisoners have spiritual instruction from clergymen of their own denominations. To this end, when such a Clergyman, whether salaried or not, visits the Prison, the names of all prisoners belonging to his denomination are to be intimated to him; and, on the other hand, it is to be made known to each such prisoner that he may receive a visit from the Clergyman if he desire it. 3. To preserve a separate list of all prisoners attending the ministrations of a paid visiting Clergyman.

Prisoners to be made acquainted with Rules.

XXXV. The Governor is to take order for giving effect to the following arrangements, for making each prisoner acquainted with the Rules applicable to his treatment and conduct: viz., A printed copy of such Rules to be attached to the wall of the place where the prisoner sleeps; within twenty-four hours after the admission of the prisoner his attention to be called to the Rules, which are to be read over to him if he cannot read; and to be at the same time interrogated whether he fully understands them, and explanations to be given to him when his understanding of them seems imperfect.

XXXVI. The Governor must keep a Journal written with his own hand, and record in it all occurrences of importance. He is especially to record in it all acts of irregularity or misconduct on the part of any of the Officers; all occasions on which he admits a visitor on his own responsibility; every occasion on which he permits a prisoner to write a letter or receive a visitor out of due order, with the reason; every suppression of a letter to or from a prisoner, with the reason. Every occasion on which an Officer of the Law with a warrant, or any person having authority, is admitted into the Prison during the time when it is by regulation closed for external business. Journal.

XXXVII. The Governor is to take order for the observance of the following regulations:— Miscellaneous arrangements.

1. That on the removal of a prisoner to another Prison, there be sent with him an extract from the Register of Criminal Prisoners, and such other documents as the Managers may direct. Removals to other Prisons.
2. That before any prisoner under the age of 18 is discharged, information be sent to the prisoner's relations or friends (if there are any of good character whose names and residence he can ascertain) on what day and at what time he will be discharged, that they may have an opportunity of attending to receive him. Intimation to friends of prisoners before their discharge.
3. That when, on account of the mental condition of a prisoner, he is removed back to the Local Prison for liberation, or is sent to his destination accompanied by an officer, notice be sent to the Procurator-Fiscal, and to the Parochial Board of the district, in order that any necessary precautions may be taken for the public safety. Removals on account of mental condition.
4. For transmission to the Managers of such reports and returns as they may from time to time require. Reports and returns.
5. For the opening and perusal of all letters addressed to prisoners, and withholding their delivery when they are found to contain improper matter. Prisoners' Correspondence.
6. For enabling prisoners to write and receive letters in terms of Rule LXXIV.
7. For the opening and perusal of all letters written by prisoners, and not addressed to persons in authority, and for retaining them when they are found to contain improper matter.
8. For giving immediate information to a prisoner of the occurrence when a letter addressed to him is not delivered, or a letter written by him is not forwarded in terms of No. LXXV.
9. For registering each instance in which, on medical grounds, there is a modification of a sentence of hard labour, or a suspension of any rule of discipline, along with the requisition or the certificate on which it is founded.

THE CHAPLAIN.

XXXVIII. He engages to give his whole time to the duties of his office. He engages to give punctual attendance for performance of divine worship at the prescribed hour. He is to take the superintendence of the arrangements for the moral and industrial training of the prisoners, and for communication with the relations and friends of prisoners, and with prisoners themselves after liberation. He is not to hold any other benefice or appointment. General duties.

XXXIX. He shall have a general charge of the Educational Department, and, subject to a reference to the Governor, the Scripture-readers and the Teachers shall be under his direction. Charge of Education.

XL. He shall have the general management of the Prison Library, and may direct any of the Teachers to assist him in taking charge of it. Library.

XLI. If, in any instance, the Chaplain should think that the instructions of the Governor are inconsistent with the proper performance of his own duties, or with the observance of any rule laid down for his guidance, it will be his duty to communicate his views, in writing, to the Managers, apprising the Governor of the necessity of his taking such a step. Recourse, in case of differing in opinion with Governor.

XLII. He shall transmit to the Managers such reports and returns as they may from time to time require. Reports and returns.

XLIII. When absent, during his prescribed holidays or on Prison duty, he is entitled to have a substitute provided for him, who will be subject to these Rules. Substitute in absence.

VISITING CLERGYMEN.

XLIV. When any person professing to be a Clergyman, not of the Established Church, desires access to a prisoner of his own denomination, the Governor, if satisfied that his statement is true, is to give him access to such prisoner, unless he see reason to the contrary, which he shall record in his Journal. Admittance to prisoners.

XLV. The following Rules apply to any visiting Clergyman other than the Chaplain, who receives an allowance out of the vote for the maintenance of the Prison, and who is nominated by the Secretary of State to visit the Prison, and draw such allowance:— Arrangements for paid visiting Clergy.

1. A register shall be kept of all prisoners professing to belong to his denomination, and shall be open to his inspection.
2. He shall be permitted to visit every such prisoner, and also to perform religious services for such prisoners, at such times and in such manner as may be consistent with the observance of the Rules and the discipline and order of the Prison.
3. The Rules requiring the Chaplain to see or visit prisoners shall not apply to prisoners so registered.
4. Such prisoner shall not be compelled to attend Divine Service performed in the Prison by the Chaplain; and all such prisoners shall be at liberty to attend the religious services performed by the visiting Clergyman of their denomination.
5. Such visiting Clergyman shall give such information to the Managers regarding his attendance and duties as they may require for the completion of the information furnished by the Chaplain's Reports.
6. Such visiting Clergyman within the Prison must respect the rules, and the arrangements for discipline and order administered by the Governor; and if he considers that any proceeding of the Governor unduly interferes with the performance of his functions, he may represent the matter to the Managers.
7. In case of inability to attend the Prison from illness, or other cause, such visiting Clergyman may nominate a deputy, with the approval of the Managers, to act for him during his absence.

THE VISITING PHYSICIAN.

XLVI. He is not to act as an Officer subordinate to the Governor, but to be in communication with the Managers, to whom he undertakes the performance of the following services:— Communication with Managers.

1. To visit the Prison once in the course of each two months, and to pay such other special visits as the Managers may request. Duties undertaken.
2. In the course of each visit to see, besides any prisoners to whom the Governor or Surgeon may request his attention, all prisoners in the classes following:—

(1.) On the Register of Sickness.
(2.) In the Lunatic Department.
(3.) In the wards for Imbeciles.
(4.) In the wards for Epileptics.
(5.) Associated on account of mental condition.

3. In each such visit to examine the Register kept by the Resident Surgeon, and, by such other inquiries as he may think proper, make himself acquainted with the method of treatment adopted by the Resident Surgeon.

4. To enter the result of his observations in a schedule to be transmitted to the Managers after each visit.

THE RESIDENT SURGEON.

To reside within the Premises. General duties.

XLVII. He shall reside within the Establishment, and devote his whole time to the duties of his office.

XLVIII. He shall have the general charge of the health of the prisoners, and of the sanitary condition of the Establishment.

Examination of Prisoners on Admission.

XLIX. He shall see every prisoner as soon after the prisoner's admission as practicable; he shall see that each prisoner is weighed, and shall carefully examine him as to the hardness or softness of his muscles, the pliancy or stiffness of his limbs, and the general state of his health—the result being duly recorded. Any evident peculiarities in the mental qualities of prisoners shall be noted.

Visits to prisoners requiring to see the Surgeon.

L. He shall visit, with as little delay as possible, every prisoner requiring to see him, and shall enter the name of every prisoner who may require medical treatment in a list; which list shall be laid before the Visiting Physician on the occasion of his visits.

Visits to Prisoners on Sick list.

LI. He shall visit each prisoner on the Sick-list every day, and as much oftener as the different cases may require.

Each Room and Cell to be visited twice in each week, and result of examinations to be recorded.

LII. He shall twice at least in each week go into every room and cell in the Prison, and see every prisoner, and at the same time ascertain whether there is any cause of sickness in operation. If he discovers any cause of sickness, he shall immediately proceed, in terms of the Rules, to carry out such measures as his medical knowledge may suggest.

LIII. Once in each month he shall make a special examination of each prisoner, similar to that on admission; recording the result, and comparing it with the state of the prisoner's health on admission.

Register of Sickness and Death.

LIV. He shall enter in his Register every case of death, and every case of illness which is sufficient to prevent a prisoner from working, or which is infectious.

LV. In any case where it is proper to give effect to the provisions in Sect. 72 of the 'Prisons Act,' for removals in the case of infectious or dangerous diseases, he is responsible for promptly taking steps to procure the proper certificates, and making the Governor acquainted with the circumstances.

Short Absences reported. Longer Absences on leave.

LVI. He shall not absent himself from the Prison for a period exceeding six hours, unless he has reported his intention of being longer absent to the Governor. He shall not be absent more than twenty-four hours without the leave, in writing, of the Managers. When intending to be absent for a whole day, or a whole night, he must make an arrangement for the performance of his duties by a substitute. When absent during his prescribed holidays, or on Prison duty, he is entitled to have a substitute provided for him.

To attend Prison Officers.

LVII. It shall be his duty to give the necessary medical attendance on any of the Prison Officers, or their families, who may call for his services.

Procedure on difference of opinion.

LVIII. If, in any instance, the Surgeon should deem the instructions of the Governor inconsistent with the proper performance of his own duties, or with the observance of any rule laid down for his guidance, or with the health of any prisoner, it shall be his duty to communicate his views in writing to the Managers, apprising the Governor of the necessity for his taking such a step.

Requisitions of Resident Surgeon to be given effect to.

LIX. The Resident Surgeon is entitled to make requisitions in writing for the following services, and is responsible for making such requisitions in all cases where it is necessary or proper to do so:—

1. Supply of medicines.
2. Supply of medical comforts.
3. Special diet to any prisoner on medical grounds.
4. The suspension of any discipline rule on medical grounds.
5. Special supply of bedding or clothing to any prisoner on medical grounds.
6. The attendance of another medical man to assist him in any operation or case of emergency, or to certify in those cases in which a double medical certificate is necessary by the law or the Prison Rules, or to relieve him of duty when he is absent in conformity with regulations.
7. The attendance of a nurse on any special occasion.
8. Limiting or enlarging, on medical grounds, the exercise to be allowed to any prisoner.
9. Adjusting the temperature of the bath to be taken by any prisoner.
10. Adjusting the temperature of any part of the Prison for the purpose of promoting health.
11. The convoy of a liberated prisoner on account of health.
12. The removal of a prisoner to or from the sick, imbecile, and epileptic hospitals respectively.
13. The removal of a prisoner to or from the Lunatic Department on certificate, as per Nos. XCV. and XCVI.
14. The separation of prisoners under infectious or contagious disease.
15. Cleansing and disinfecting premises occupied by such prisoners; and fumigating, purifying, or destroying clothing or bedding used by them.

THE MATRON.

Powers.

LX. The Matron is, under the Governor, superintendent of the female side of the Penal Department, and her subordinates will take her orders as if they came from the Governor; but any subordinate may, in such case, refer the matter to the Governor himself, and take his decision.

Daily inspection and other duties.

LXI. The Matron, or a person specially appointed by her with the approval of the Governor for that duty, shall go through the whole Female Department, and see every female prisoner at least once each day. The Matron must herself see every female prisoner at least three times in each week. It is her duty to attend the Governor when he visits the female side of the Prison.

Sub-Matron.

LXII. The Sub-Matron is to assist her, to represent her in her absence, and to perform such of her duties as may be arranged by the Governor.

THE STEWARD.

LXIII. As House-Steward, he shall keep account of the victuals, clothing, bedding, furniture, tools, books, stationery, and medicines. He shall require delivery to himself, and take account of all articles not in actual use. Besides employing the proper requisitions and delivery notes, it will be his duty to take general survey of the Establishment, and see that there is no waste or fraud. He shall take charge of, and be responsible for, the clothes and other property of Prisoners. He shall superintend the delivery of all articles sent to wash, and satisfy himself that they are returned and delivered to the Officers responsible for their custody. House functions.

LXIV. In the Manufacturing Department, he shall keep account of the stores, both raw material and finished goods, accounting for all raw material in the proper amount of finished goods, and for all finished goods as merchandise. He is to take orders, and generally conduct the business of the Establishment. He shall balance the books quarterly, and report the result to the Governor that it may be communicated by him to the Managers. Manufacturing Department.

LXV. He shall have the immediate superintendence and direction of the Clerks in his Department, and the Labourer in the Store.

THE CLERK OF WORKS.

LXVI. Although responsible for the performance of his duties to the Board of Her Majesty's Works, he must be, in other respects, amenable to the Rules for Prison Officers, and subject to the authority of the Governor, whenever it may be necessary to exercise the same for the discipline of the Prison. To be under authority of Governor.

LXVII. He shall be in attendance, at all times, whether during regular or extra hours, when workmen are employed on the premises. He shall make such surveys and reports regarding the state of the premises, and take such steps for their preservation and order, and for carrying out new works, as the Managers may direct. Attendance.

LXVIII. He may employ the services of any prisoner assigned to him by the Governor on any piece of work which he finds such prisoner capable of executing. Employment of prisoners.

GENERAL RULES FOR PRISONERS.

LXIX. All prisoners must obey the Officers having charge over them. Should a prisoner at any time consider himself aggrieved, he is at liberty to complain to the Governor; or, if the case relate to the Governor himself, he may complain to any of the Managers visiting the Prison, or by a letter directed to their Secretary. Obedience to Officers—reference to Managers.

LXX. Every prisoner on admission shall be examined for the purpose of seeing whether he is clean in his person and clothes, and free from infectious disorder; and, as soon as convenient afterwards, he shall, if it be judged necessary, go into a bath, or be washed. His clothes, and every other article in his possession, shall, on admission, be taken from him and put away, and he shall be clothed in the Prison dress. An inventory shall be made of all the articles taken or received from any prisoner, which shall be shown to the prisoner; and which, if he can write, he shall sign as evidence of his having examined it and found it correct. Admission to Prison. Personal examination. Bath, Clothes, etc. Inventory to be made.

LXXI. The discipline for Ordinary Prisoners and Convicts in Probation period is that of Separation, each being confined in a separate cell, and debarred from all intercourse with fellow-prisoners at exercise and otherwise. The authorities are authorized to relax the separation in the case of Convicts in advanced stages, of Juveniles, and of those for whom association is recommended on medical authority; but, in such instances, intercourse will be prohibited if it is found to occasion noise, confusion, or contaminating conversation. Discipline, separate and associated.

LXXII. During the first month of sentence prisoners are not allowed a hammock, or bedstead with bedding, unless such be granted on medical grounds, but are to sleep on a wooden guard-bed furnished with a wooden pillow, a sufficient quantity of covering being allowed for warmth. Guard-bed.

LXXIII. The persons from whom prisoners may receive visits, and with whom they are permitted to correspond, are relations by consanguinity or marriage, or, in the absence of any such, persons who are in the position of guardians or instructors. Such a visit may be allowed at the end of three months after sentence, and at the end of each succeeding period of three months. In the case of any emergency, such as extreme sickness, the Governor has a discretion to permit a visit at any intermediate time. No prisoner can receive a visit from any person who is also a prisoner in the General Prison. In each instance the Authorities of the Prison will satisfy themselves whether the proposed visitor or correspondent comes within the permission. Visits to Prisoners.

LXXIV. A prisoner may, immediately after his admission into the General Prison, be permitted to write a letter, and to receive a letter addressed to him, and the same permission may be given at the end of each succeeding period of three months. The period may be abbreviated in favour of convicts who have undergone two years of their respective sentences, if they have conducted themselves so as to deserve the privilege. Correspondence prisoners.

LXXV. All letters written by prisoners are liable to be opened and read by the Authorities of the Prison. All such letters, when not addressed to a Manager or some person in authority, are systematically opened and read before they are allowed to leave the Prison; and when any such letter is found to contain objectionable matter, it is not sent to its address.

Letters addressed to prisoners are in like manner opened and read; and any such letter containing objectionable matter will not be delivered to the prisoner to whom it is addressed.

LXXVI. No articles, other than letters, sent for the use of prisoners will be delivered to them during their imprisonment, and the Authorities will not be responsible for taking charge of such articles. Articles sent to prisoners.

LXXVII. A gratuity is payable for the benefit of each convict on liberation. It is not to exceed £4. Gratuities to prisoners.

Each ordinary prisoner is, on liberation, to be allowed 5s. for subsistence money. A further sum, not exceeding 35s., may be paid for his benefit as a gratuity.

The sum payable in the shape of gratuity may be paid in instalments, or may be paid to any party for the benefit of the liberated prisoner, or may be invested in clothes or other articles considered appropriate.

LXXVIII. All prisoners are allowed an opportunity of taking daily exercise, and those who are in sufficient health shall be required to take the exercise offered to them. Exercise.

LXXIX. The following are the authorized methods of punishment:— Punishments.

1. Deprival of work for a period.
2. Setting to hard labour for a period in terms of No. LXXXIII. to LXXXVI.
3. Isolation at exercise.
4. Isolation in chapel.
5. Forfeiture of the privilege of association.
6. In the case of convicts, forfeiture of marks or reduction of class.
7. Reduction of diet.

8. Restraint of the limbs.
9. Putting in irons.
10. Confinement in dark punishment cell.
11. Sleeping in wooden guard-bed, as per No. LXXII.
12. Forfeiture of gratuity.

Punishment may be awarded by one or more of such means.

No putting in irons or confinement in dark cell is to be for more than seventy-two hours.

Punishable offences.

LXXX. Every prisoner is liable to punishment for any one of the acts following :—

Breach of any Rule or Regulation.
Disobedience to the orders of any Officer.
Insolence to any Officer or Visitor.
Disturbing the Prison by noise or otherwise
Profane swearing.
Assaulting or quarrelling with a fellow-prisoner.
Using indecent words or behaviour.
Idleness or negligence at work.
Wilfully or carelessly damaging or destroying any part of the Prison premises or furniture, clothing, bedding, implements of work, materials, or wrought goods.
Attempting by speaking, writing, or signal, to communicate with any other prisoner with whom he has not special permission at the time to communicate.
Failing to give up money or other articles in his possession on admission.
Having any article hidden about the person or otherwise.
Obtaining liquor or tobacco.
Tampering with the arrangements for ventilation, heating, or lighting.
Failure to perform the prescribed amount of work or labour.
Refusing, without excuse, to take exercise in the manner prescribed.
Leaving the cell or other place where by regulation or order the prisoner ought to be.
Failure to rise from or go to bed at the prescribed time.
Refusing without excuse to attend divine service.
Irreverent behaviour during divine service.
Refusing to be photographed, or wilfully obstructing the process of photographing.

LXXXI. Any prisoner injuring himself, or showing a tendency to suicide, is liable to such restraint as shall be found necessary to the occasion.

Work.

LXXXII. Every prisoner, not specially exempted, shall be required to do ten hours' work each day (exclusive of the time occupied at meals, exercise, and instruction) except on Sundays. Those on the Chaplain's list are to be exempted also on general Fast-days; Episcopalians and Roman Catholics on Good Friday and Christmas-Day; and Jews on Saturdays. The work prescribed to a prisoner may be in the service of the Prison, but must not be in the personal service, or for the personal benefit, of any Officer.

Hard Labour.

LXXXIII. In the case of all prisoners sentenced to imprisonment accompanied with Hard Labour, employment in one or other of the following modes shall constitute Hard Labour, viz. :—1. Employment at crank machinery. This to be for males only. 2. Employment at picking oakum *dry*, and in sufficient quantity to require the incessant and unremitting occupation of the prisoner throughout the whole ten hours of daily work prescribed by the immediately preceding Rule.

LXXXIV. In the case of each male employed at Hard Labour, it shall be determined by the Governor, with the advice of the Resident Surgeon, whether it shall be by Crank Machinery, or by Picking Oakum, subject to this provision, that all who are either aged or of very tender years, shall be employed at Picking Oakum. No prisoner who, in the opinion of the Resident Surgeon, as certified by him in writing, could not be employed at either kind of Hard Labour without risk to health shall be so employed.

LXXXV. The revolutions of the Crank Machine shall on each lawful day, excepting Saturdays, be, in the case of every adult, a number not exceeding 14,400; and in the case of each juvenile, a number not exceeding 12,000. On Saturdays, the respective number of revolutions shall be reduced by one-fourth in each case. The number of revolutions and the weight to be in each case fixed by the Governor, with the advice of the Medical Officers, and proportioned to the age and strength of the party at work, but the weight not to exceed eleven pounds in any case.

LXXXVI. Prisoners employed at Hard Labour by Picking Oakum, shall, according to the strength and capacity for such work of the prisoners, which is in each case to be determined by the Governor with the advice of the Resident Surgeon, be required to work as follows, viz. :—

1. Every male adult prisoner so employed, shall be required to pick from Two and one-half to Five Pounds of dry Oakum every lawful day, except on Saturdays, when he shall be required to pick three-fourths of the quantity allotted to him on other days.
2. Every juvenile male prisoner and every adult female prisoner so employed, shall be required to pick from One and one-half to Three pounds of dry Oakum every lawful day, except on Saturdays, when they shall be required to do three-fourths of the ordinary quantity allotted to them on other days.
3. Every juvenile female prisoner so employed, shall be required to pick from One to Two and one-half Pounds of dry Oakum every lawful day, except on Saturdays, when she shall be required to do three-fourths of the ordinary quantity allotted to her on other days.

Prison Hours.

LXXXVII. Except on Sundays, the time of rising for prisoners (subject to the exceptions hereafter set forth) shall not be later than six o'clock at any season of the year; and the period between rising and going to bed shall not be less than fourteen hours. On Sundays, prisoners may, at the discretion of the Governor, rise an hour later, and go to bed an hour earlier.

Liberation.

LXXXVIII. No prisoner shall be entitled to be liberated after seven o'clock P.M., or between that hour and eight o'clock on the following morning. The following, which is one of the Rules declared to be in force by the Act, shall remain unaltered, viz. :—'Whenever the period which any prisoner may be sentenced to remain in confinement expires on Sunday, such prisoner shall not be released till the day following.'

Interpretation of Rules to be by Officers.

LXXXIX. In the interpretation of the Rules, no Officer is to be considered responsible to the prisoners for the due observance of them; and should a prisoner's treatment depart in any way from that set forth in the Rule, the Officer who is the cause of the departure will be responsible only to his superiors, and will be justified if they are satisfied that in the circumstances his conduct was proper.

DIETARIES.

XC. The following are the Tables of Dietaries for the several classes of Prisoners in the Penal Department. Dietaries.

Females and Juveniles, being Ordinary Prisoners, or Convicts in the first or Probationary period of discipline.

BREAKFAST.	DINNER.	SUPPER.
8 oz. of oatmeal made into porridge, with ¾ pint of milk.	2 pints of barley-broth, with 8 oz. of wheaten bread; or, 2½ lbs. of potatoes, with ¾ pint of milk, and 4 oz. of wheaten bread.	1½ lb. of potatoes, with ½ pint of milk; or, 4 oz. of oatmeal made into porridge, with ½ pint of milk.

Females and Juveniles, being Convicts advanced beyond the first or probationary class.

ON FOUR DAYS OF THE WEEK.		
BREAKFAST.	DINNER.	SUPPER.
8 oz. of wheaten bread, with ½ pint of tea.	6 oz. of meat with 1⅛ oz. of cheese; and either 6 oz. of wheaten bread, and 1 lb. of potatoes, or 12 oz. of wheaten bread.	The same as Breakfast.
ON TWO DAYS OF THE WEEK.		
6 oz. of oatmeal made into porridge, with ¾ pint of milk.	2 pints of barley broth, with 8 oz. of wheaten bread.	The same as Breakfast.
ON ONE DAY OF THE WEEK.		
The same as on two, except that the barley broth is to be 1½ pint instead of two.		

Adult Males, being Ordinary Prisoners.

BREAKFAST.	DINNER.	SUPPER.
8 oz. of oatmeal made into porridge, with ¾ pint of milk.	2 pints of barley broth, with 12 oz. of wheaten bread; or, 2½ lbs. of potatoes, with ¾ pint of milk, and 8 oz. of wheaten bread.	2 lbs of potatoes, with ½ pint of milk; or, 6 oz. of oatmeal made into porridge, with ½ pint of milk.

Adult Males, being Convicts in the first or Probation period.

BREAKFAST	DINNER.	SUPPER.
8 oz. of oatmeal made into porridge, with ⅜ pint of sweetmilk; or, 12 oz. of wheaten bread, with ⅜ pint of sweet milk.	On two days of the week— 2 pints of barley broth or pease-soup, with 12 oz. of wheaten bread; or, 2½ lbs. of potatoes, with ¾ pint of milk, and 8 oz. of wheaten bread. On one day— 12 oz. of fish and 12 oz. of wheaten bread. On four days— 6 oz. of meat, and 1 pint of broth or soup, with 12 oz. of wheaten bread.	2 lbs of potatoes with ⅜ pint of sweet milk; or, 6 oz. of oatmeal made into porridge, with ⅜ pint of sweet milk.

Prisoners under punishment for Prison offences, for terms not exceeding three days,—1 lb. of bread, with water, per diem.

Prisoners under punishment for Prison offences, for terms exceeding three days,—

Breakfast,—1 pint of gruel; 8 oz. of bread. *Dinner*,—8 oz. of bread. *Supper*,—1 pint of gruel; 8 oz. of bread.

XCI. The following Directions relate to the foregoing Dietaries, viz.:—

1. Two pints of barley-broth must contain—first, 4 oz. of barley, or 3 oz. of barley and 1 oz. of pease; second, 2 oz. of marrow-bones or ox-head, or 1 oz. of hough or neck, or 1 oz. of some other meat, or ½ oz. of dripping or suet; and, third, a proper quantity of onions, leeks, carrots, turnips, cabbages, or other vegetables. The oatmeal gruel, when made in quantities exceeding 50 pints, to contain 1½ oz. of oatmeal per pint, and 2 oz. per pint when made in less quantities. The gruel on alternate days to be sweetened with ¾ oz. of molasses or sugar, and seasoned with salt.
2. Half a pint of tea must contain ⅛ oz. of tea, ½ oz. of sugar, and 1 oz. of milk.
3. An equal quantity of potato-soup, or pease-soup, or barley-milk, may (with the limitations hereafter specified) be substituted for the barley-broth. Two pints of potato-soup must contain 1 lb. of potatoes (instead of 4 oz. of barley), with the same ingredients in other respects as two pints of barley-broth. Two pints of pease-soup must contain 4½ oz. of pease, the other ingredients being the same as in the barley-broth and potato-soup, except that the quantity of vegetables may be smaller by about one-half. Two pints of barley-milk must contain 4 oz. of barley (boiled in water till it is soft, and the water partly boiled away), with ½ pint of good skimmed sweet milk and a little salt; the rest of the quantity being made up with water.
4. Fish and barley-broth may be substituted the one for the other, at the rate of 6 oz. of fish for one pint of broth.
5. Barley-bannocks, or bread made of wheat and oatmeal mixed, may be substituted for wheaten-bread on one day of each week, and oat-cake on another day; the oat-cake to be of the same weight as the wheaten bread, but the barley-bannock must contain a weight of *meal* equal to the weight of wheaten bread, making the bannock itself somewhat heavier. The wheaten-bread may be made of second flour or over-beads.
6. Potatoes, whether in their ordinary form or made into soup, must not be given for dinner more than twice each week; but they may be given for supper as often as may be convenient, provided that they be not given on the days on which the prisoners have potatoes or potato-soup for dinner.
7. Either fresh skimmed-milk, or butter-milk, may be used.
8. Salt must be given with each meal.
9. If, from any unforeseen emergency, milk should not be obtainable, there may be substituted for it a like quantity of treacle water, at the rate of 1½ oz. treacle to a pint of water; but when this substitute is used, there must be added to the dietary, in the proper table, 6 oz. of ox-heads in the broth or soup, or 4 oz. of cheese.
10. A change of food being beneficial to health, it is directed that the dinner, on at least two days in the week, shall be different from the dinner on the other days.
11. In weighing or measuring the food, the imperial weights and measures must always be used.
12. Potatoes and other vegetables must be weighed after they are washed, but before they are cooked. Meat must also be weighed before being cooked.
13. The hours of meal throughout the year shall be as follows:—Breakfast at ½ past 7 in the morning, dinner at 1 in the afternoon, and supper at 7 in the evening.
14. In the evening, work should cease a quarter of an hour before supper time; and no prisoner should be required to work after supper unless he has neglected to perform his stated quantity in the ordinary working hours.

SPECIAL TO LUNATIC DEPARTMENT.

ipline Rules not to ly.

XCII. The foregoing Rules, so far as they relate to discipline, labour, and dietary, are not to be binding in the Lunatic Department.

r.

XCIII. The Superintendent of the Lunatic Department is to have, subject to the Governor, authority over both the male and female sides of the department. The senior male Warder is to take charge of the male side, and the senior female Warder of the female side in his absence.

pection by Matron.

XCIV. The Matron has the right at all times to inspect the female side of the Lunatic Department, and to report the results of her inspection to the Governor.

movals to Lunatic De- ment.

XCV. No prisoner shall be removed from the Penal to the Lunatic Department, unless on a certificate on soul and conscience by two Medical persons that they have personally visited and carefully examined the prisoner, and that he is in their opinion insane.

movals from Lunatic partment.

XCVI. No prisoner shall be removed from the Lunatic Department to undergo discipline in the Penal Department, unless on a certificate on soul and conscience by two Medical persons that they have personally visited and carefully examined the prisoner, and that he has in their opinion recovered from insanity.

APPROVED.

GATHORNE HARDY.

WHITEHALL, 29*th May* 1867.

III.—REGULATIONS Issued in terms of No. II. of the "Rules for the Government of the General Prison for Scotland at Perth," certified by Her Majesty's Principal Secretary of State for the Home Department.

INTRODUCTORY EXPLANATION.

The Managers, in the preparation of the following Regulations, have been careful to avoid all instructions of a general character, the due fulfilment of which may be matter of opinion, and to restrict themselves to direct injunctions, the performance or neglect of which must be a distinct fact. It will be obvious, however, to the whole staff, that there are many points of duty incapable of being set down in this distinct manner, which yet go far in the estimate of an Officer's value in the eyes of the superiors under whom he works.

The service is one requiring peculiar precision and exactness. In this, and in the absolute necessity that unhesitating effect be given to the orders issued by superiors, it has features in common with those of the military service.

In other respects the two services are very different. Prison Officers have in their hands an unfortunate and degraded class of their fellow-creatures whose condition calls for peculiar treatment and special qualifications. It is ever the object of the Managers to support a broad line of distinction between this class and the Officers, as persons whose character and conduct entitle them to be intrusted with highly responsible duties. The Managers trust that the Officers themselves will co-operate in this effort by showing on all occasions a worthy self-respect. They will remember that they are dealing with persons who are feeble in mind as well as sinful, and if they should find that they have to encounter irritability, passion, and unreasonableness, they will show their superiority by preserving a demeanour of quiet firmness. Nothing so completely insures an Officer's command over the criminal class as their finding it impossible to irritate him into any unworthy display of passion.

Sobriety has, of course, a great tendency to support the influence of every Officer. The Managers would be sorry to suppose it necessary to inquire how their Officers conduct themselves in their domestic circle; but it is absolutely necessary that an Officer on duty should not only be in a state fit for its performance, but should have no smell of liquor which may be perceptible to the prisoners or his fellow-officers.

Those who live on the premises ought to see that their families are respectable in their conduct and tidy in their habits. Even one exception to this would deprive all the other families of the great advantage of living in a quiet respectable neighbourhood.

There should be no wrangling, and no Officer should express his opinion of the acts or conduct of another so as to be overheard by other Officers or by prisoners.

Officers while on duty should not talk about other matters, nor employ themselves in reading, even though of an improving kind. It has a beneficial effect on their charge to see them always busy and alert. A Discipline Officer can seldom fail in finding something to occupy his attention while he is within the Prison. It is his duty to be perpetually on the watch to detect irregularities. For instance, every such Officer, when he enters a cell, should take a quick glance all round, and satisfy himself that there is no symptom of an attempt to escape, or of any other irregularity.

An Officer of any kind, seeing any symptoms of serious illness in a prisoner, should, although the prisoner may not complain, take steps for letting the Surgeon know what he has seen. With this view, those attending on epileptics or other prisoners subject to fits should carefully observe their condition.

The most serious casualties likely to happen in a Prison being suicides, assaults, and escapes, Officers ought ever to be vigilantly on the watch to remove any cause which may tend towards any of these results. To this end knives, tools, and working instruments likely to be used for such purposes should never be left in the hands of a prisoner, unless when he is absolutely using them.

I.—PRECAUTIONARY ARRANGEMENTS.

Exterior of the Prison.

1. The Prison walls must be kept free of anything that may facilitate escape, as trees growing, or rubbish piled against them. All ladders, spades, tressels, or other articles used by workmen, must be carefully removed when they are not at work.

Inner Gates.

2. Neither of the inner gates of the Prison is ever to be left open; nor shall their keys either be left in the locks or taken within the Prison, but shall invariably remain in charge of the Inner Gate Warder. When he opens one of the inner gates to allow passage out or in, he is to re-lock it before he unlocks the other.

Attendance.

3. No Warder shall leave the Prison during the prescribed hours of duty without the permission of the Governor. Any Officer compelled by sickness, or other emergency, to be absent without leave, shall lose no time in reporting his absence, and the cause of it. Leave of absence shall be asked for on the printed forms provided for the purpose.

4. The Inner Gate-Keeper shall each day enter in his book the exact time at which each Officer first enters the Prison, and finally leaves it. When, during the hours of duty, a Warder either leaves the Prison or enters it, at any other than the proper time for going to or coming from a meal, it is to be noted in the book.

5. No Door-Warder shall leave his post until he is relieved.

6. When an Officer requires to leave unfinished any business he may be engaged in, and which cannot be left over till his return, he shall ascertain who is to relieve him, and give such information to his successor as shall enable him to carry it out.

Closing time.

7. The Outer Gate-keeper shall shut the gates and doors every night at 10.30 P.M.; and after midnight he shall not open them for the admission of a Prison Officer until 5.45 A.M.

8. With the exception of those who have leave of absence, each Male Officer shall be within the gates before 10.30, and each of the Female Officers within the quarters appropriated to their use before 9.30 P.M.

Leave of absence.

9. Leave of absence shall not be extended to Male Officers beyond 12 P.M., nor to Female Officers beyond 10.30 P.M. Leave of absence shall be granted to the Males by the Governor, by note of permission to be left with the Gate-keeper, who shall enter it in his Gate-book, and who shall afterwards enter the precise time at which the Officer returned. The Gate-book, with the notes of permission, shall be laid before the Governor

every Monday morning. Leave to Female Officers is to be given by the Matron, and the above provision as to the Gate-keeper is to refer to the female Warders' House-keeper and her book.

Warders in charge.

10. The Warder in charge of a prisoner on reception is responsible that when the Prisoner is stripped for the bath, there shall be careful search of his person and his clothes, and if any prohibited article be found, it is to be reported.

11. Before entering a cell, the Officer shall take the cell-door key from the lock, but before doing so shall shoot the bolt or lock, so that the door cannot be closed upon him. But the door of any cell in which a prisoner is confined is never at any time to be kept unlocked longer than is absolutely necessary; and this shall also be the case in regard to all Stair, Gallery, and Passage doors. No Officer shall lay down a key, or let it out of his possession, until it is returned to the key-box.

12. The Officer in charge shall, once a day at least, carefully inspect every cell, and particularly examine the Window-gratings.

13. The Officer in charge is responsible that all implements or materials of work calculated to facilitate escape, shall be carefully collected and removed each night from the cells.

14. Whenever a prisoner requires to leave his cell for any particular purpose, the Officer in charge is responsible that he is never lost sight of by an Officer until he is locked up again. In taking a prisoner beyond the Entrance-door the Officer is to precede him, and in returning he will make the prisoner enter first.

15. No Warder shall, without special authority, permit a prisoner under his charge to leave his cell, unless on the stated occasions, such as worship and exercise, or for the purpose of serving as a passage-worker, according to the authorized rotation. Passage-workers must not be permitted to communicate with each other by word, sign, or otherwise; and to this end the following arrangements shall be observed:—

16. The Warder in charge of passage-workers shall turn out one of them at 6 A.M. during the gas-lighting season, to put on the gas and light the corridors. When the Warder has lighted the cells, and allowed out the night vessels, he shall turn out the second passage-worker: the two shall then begin emptying at a few seconds of interval (to prevent their coming in contact with each other at the sink), the one from the right hand, the other from the left hand cell at the extremity of the gallery, towards the centre—the emptying of the other half to proceed in the same way. The Warder shall move about to prevent collision or communication between them and the other prisoners. The same routine shall be observed in the evening.

17. In serving meals, the Warders in charge shall allow only two or three cells' distance between the passage workers, and follow close behind them.

18. Any business about the food between gallery and gallery, and the bringing down the empty food cans, shall be performed by the Warders, assisted when necessary by the passage-workers.

Alarm Bells.

19. When an alarm bell of the airing-yard is rung, the door-keeper shall immediately ring the alarm bell at the Governor's office, and exhibit to the Warders in the galleries the red signal flag kept in the lodge: on seeing the flag, or hearing the alarm bell, the Warders shall lock up every prisoner, and proceed to render assistance wherever it may be most required.

20. When the large bell over the gateway is vigorously and continuously rung, in distinction from the signal peal at meal hours, and for rising in the morning, it shall be understood as an alarm call for every Officer, whether on duty or not at the time, to assemble at the Prison for any special service.

Searching Prisoners on admission.

21. On the admission of each prisoner, the Officer in charge of the stripping of the prisoner, as per No. 22, is to search the prisoner's person and his clothes, and is responsible that all property be taken from him, and accurately entered in full in the books for the purpose kept by the Head Warder or Sub-Matron, who shall cause the prisoner to sign his name thereto. Money, watches, and other valuables shall be deposited with the Steward, and the clothing, with a correct inventory, handed over to the General Storekeeper.

II.—SANITARY ARRANGEMENTS.

Cleansing on admission.

22. The Warder in charge is responsible that each newly-admitted prisoner shall be taken to the reception room, where he shall be stripped, and shall then bathe or thoroughly wash himself, and shall at once be examined by the Surgeon, to whom notice of admission shall be sent.

Preservation of cleanliness.

23. Each Warder in charge is responsible for giving effect to the following provisions for the preservation of cleanliness:—

(1.) The corridors, galleries, cells, and other apartments shall be thoroughly swept and cleaned daily, and washed every Saturday, or oftener if necessary. No dirty water shall be allowed to remain in the basins.

(2.) The daily morning cleaning shall be completed before 9.30 A.M.

(3.) The Warder in charge shall not attend to any other work during the cleaning time: he shall turn out two passage-workers from his gallery, causing them to begin, one on each side from the extremity, and seeing that they work along to the end.

(4.) There shall be an extra cleaning on Saturday afternoon, when the Warders shall be careful that, in each cell in their respective galleries, the table and stool are well scoured, the jack-boxes thoroughly cleaned out, the basin-stand washed with soap and sand, and the gas-brackets and tubes perfectly polished.

(5.) The prisoners shall wash their cells, as far as practicable, before going to the airing-yard, that they may dry while the prisoners are out.

(6.) When prisoners are removed from one gallery to another, or from one cell to another, the Warder removing them shall see that the cells about to be vacated are in a proper state of cleanliness and good order in every respect, that the night-vessel, basin, etc., are properly rinsed; and he shall be careful that the prisoners take with them their Bible, Catechism, Slate, Copy-book, and other books used in their instruction; but that the Library books are left in the cell for the Teacher's inspection.

(7.) The prisoners' bedding shall be uniformly folded in the morning, and remain so till bed-time, except twice a week, on the days appointed for airing them, when the bed-clothes shall be neatly folded and hung over the rails of the galleries.

(8.) Prisoners who make water in bed shall have their bedding aired, and the straw changed frequently.

(9.) The doors of unoccupied cells shall be kept closed, with the windows and ventilators open; and, as a mark of the cell being unoccupied, the cell stool shall be placed outside the door.

Exercise.

24. All prisoners shall have an opportunity of taking daily exercise, either in the open air, or in a gallery with openings to the external air.

25. The Warder in charge is responsible that each prisoner be properly clothed, with walking shoes on, and that immediately on opening the door the prisoner leaves his cell at once, without having it in his power to carry with him any improper article. The Officers passing out the prisoners shall be so posted as most effectually to watch the movements of all the prisoners, in order that no written communication be dropped or picked up by the way, and that no conversation may take place between the prisoners.

26. The Exercising Warder who receives the prisoners sent out shall count them, and repeat the number aloud to the Warder from whom he received them. He shall see that the prisoners do not straggle, and that a regular marching distance betwixt prisoner and prisoner be maintained throughout.

27. All the Warders in a wing shall assist, when necessary, in passing the prisoners to and from exercise; there must not be less than three Officers present; and if there happen to be fewer in the wing from which the prisoners are passing, that number shall be made up from another wing.

28. On the return each Warder shall make sure at once that all the prisoners under his charge have been received back.

29. The utmost attention is required from the Warders in the Prison to the calls for assistance and relief at the appointed hours by the Exercising Warders, that no portion of the time allowed for exercise be lost. Any unnecessary delay in changing the yards shall be reported to the Head Warder for the information of the Governor.

30. When the exercise for the day is over, each Warder shall ascertain by inspection that all the prisoners under his charge have been returned to their respective cells, and locked up; he shall then report the result to the Senior Officer of the wing, and he shall inform the Head Warder of the same.

III.—ARRANGEMENTS FOR DISCIPLINE.

Separation.

31. In giving effect to the separate system under Rule 71, each prisoner is to inhabit a separate cell, unless when at exercise and in attendance at worship. In the general case, the exercise is to be taken in the circle, each prisoner walking at such a fixed distance from others as may render secret communication impossible, and the attendance at worship is to be in the open pews. When, however, from the conduct of the prisoners, or from other circumstances, either of these arrangements becomes inconvenient, the exercise may be in compartments, and the attendance at worship in the closed stalls. In either case a record is to be preserved of the exception, and the reason for it.

Female Convicts.

32. Towards female convicts not under the mark system, the practice of classification and conferring of badges, as in use under the Regulations promulgated by the late General Board, is to continue.

First Reformatory Class

33. At the end of the year of Probation, all female convicts who do not forfeit the privilege by misconduct pass into the First Reformatory class. At exercise and work they are to be parcelled in groups, not exceeding four in each—the exercise to be in the circles, subject to the exceptions in No. 31. At exercise each may talk decorously to her neighbours in the same group. They are to be assembled once a week to practise sacred music.

Second Reformatory Class.

34. At the end of the second year of sentence, female convicts who do not forfeit the privilege by misconduct pass into the Second Reformatory class. The regulations of the first reformatory class continue to apply to them, with the following exceptions:—The exercise is to be for two hours—one in the forenoon, the other in the afternoon. They are to be associated at work for three hours, during which they may talk decorously each with the others at the same table. The education is to be either in classes or in separation, each receiving at least two lessons in the week. After a convict has undergone five years of her sentence, the Matron has a discretion, subject to the approval of the Governor, to give her employment and recreation in the open ground in front of the Lunatic department, as an incentive to good behaviour.

35. Convicts are bound to preserve perfect silence when assembling for or returning from chapel, when moving from one part of the Prison to another, and on all occasions except those in which they are specially permitted to converse.

IV.—ARRANGEMENTS FOR WORK.

Employment and Work-Sheets.

36. Prisoners shall have a weekly task assigned to them, according to their ability and the description of work, which shall be carefully entered from time to time on the work-sheet.

37. The work-sheets shall be hung up in the cells at all times, except when required for making up. They are to be made up each Monday for the previous week. But when a month does not end with the end of a week, the odd days at the end of the month, counting from the end of the preceding week, shall be reckoned as a period by itself, and extended. The odd days of the latter part of the week in the beginning of the next month shall also be reckoned as a period by itself, and extended; each month shall be made up by itself, and the addition made from the first to the last day inclusive.

38. All deficiencies in the quantity or quality of the work shall be reported to the Governor by the Warder in charge.

Special as to Work of Female Convicts.

39. So long as it is the pleasure of the Secretary of State that the claims of female convicts for remission should be dealt with on the Mark system, the following arrangements shall be followed, viz.:—The amount of work which the convict must complete to obtain the greatest number of marks is to be fixed under the direction of the Matron, and stated to the convict. The marks actually earned, according to this scale, are to be entered by a Warder in her book at the end of each day. Early in each week the entries during the preceding week are to be examined by the Matron, or some other superior female Officer deputed with the Governor's approval for this duty, and are to be subject to her correction. The sum total for the week is then to be entered and certified by the initials of the examining Officer, and the entry so certified cannot be altered.

40. When any punishable offence is committed by a convict on the mark system, it must be reported to the next visiting Manager, who will certify by his initials the number of marks to be forfeited.

Tools and Implements.

41. The Warder in charge is responsible that no tools, except such as from their size cannot be removed conveniently, shall be allowed to remain in the cells when not required for use.

42. A printed or other card shall be furnished for each prisoner employed at any trade, containing a list of the tools required in such trade. At the head of each card the letter of the gallery, and number of the prisoner's cell, shall be written, and a cross put opposite to each article supplied to the prisoner. The articles according

to this list shall be delivered to the prisoner every morning by the Warder in charge of the gallery, and they shall be withdrawn by him at night, when he shall compare the articles with the list, and see that the whole are returned.

43. When any implement is broken or becomes unfit for use, it shall be replaced by the Warder in charge, and he shall produce the implement itself, or as much of it as possible, at the quarterly condemnation, when all articles condemned shall be finally given up.

V.—GENERAL.

44. When two Officers of the same rank are employed together, if there be no special direction to the contrary, the senior in the service of the Prison is to be counted the superior Officer, and to be accountable for the execution of the duty, and for giving such directions to the other as may be necessary to that end.

45. These Regulations are to be interpreted along with the "Rules," and with any general Directions which the Governor is authorized to prepare under Rule 18. A copy of every General Direction made by the Governor is to be transmitted to the Managers. Any subordinate Officer considering himself aggrieved by such General Direction, may send through the Governor a representation of his case to the Managers.

46. When, in these Regulations, the term "in charge" is used, it is to apply to the Officer who has got directions in the matter from a superior; or when there is no such direction, to the Officer assigned to the duty by the "Directions" so prepared by the Governor.

47. Although these Regulations, for the sake of brevity and clearness, deal with the male sex only, they are to apply to the female sex, unless in any case where they may be positively inapplicable.

48. The several books, and the schedules and other documents heretofore in use in the Prison, shall continue to be used, subject to any alterations which may be adopted by the Managers.

EDINBURGH, 31*st December* 1867.

REPORTS of the INSPECTORS of CONSTABULARY for the Year ending 29th September 1867, made to Her Majesty's Principal Secretary of State, under the Provisions of the Statute 19 & 20 Vict. c. 69.

No. 1.—Eastern Counties, Midland, and North Wales District - p. 4

No. 2.—Northern District - - - - - - - - - p. 81

No. 1. Eastern Counties, Midland, and North Wales District.

No. 1.—EASTERN COUNTIES, MIDLAND, AND NORTH WALES DISTRICT.

ELEVENTH REPORT of Lieutenant General *Cartwright*, Her Majesty's INSPECTOR of CONSTABULARY for the EASTERN COUNTIES, MIDLAND, and NORTH WALES DISTRICT, for the Year ending 30th September 1867.

To the Right Honourable *Gathorne Hardy*, Her Majesty's Principal Secretary of State for the Home Department.

Sir,

I HAVE the honour to lay before you this my Eleventh Annual Report of the state and efficiency of the Police in No. 1, or the Eastern Counties, Midland, and North Wales District.

Of the 25 counties under my inspection, I have to report the following efficient:—

COUNTIES.	Population, 1861.	COUNTIES.	Population, 1861.
ENGLAND:		ENGLAND—*continued.*	
1. Bedford	121,805	15. Salop	217,379
2. Bucks	160,022	16. Stafford	630,829
3. Cambridge, with Isle of Ely	140,575	17. Suffolk, East and West	292,631
4. Derby	272,400	18. Warwick	193,123
5. Essex	291,924	19. Worcester	249,154
6. Hertford	141,209		
7. Huntingdon	64,256		
8. Leicester	169,350	NORTH WALES:	
9. Lincoln	343,140		
10. Norfolk	317,295	20. Anglesea	54,609
11. Northampton, and the Liberty of Peterborough.	190,509	21. Carnarvon	92,776
		22. Denbigh	104,316
12. Nottingham	207,691	23. Flint	69,849
13. Oxford	140,730	24. Merioneth	38,888
14. Rutland	21,867	25. Montgomery	66,919

Of the Borough Forces under my inspection, I have to report the following efficient:—

EFFICIENT BOROUGHS.	Population, 1861.	EFFICIENT BOROUGHS.	Population, 1861.
1. Albans, St.	7,675	20. Lichfield (City)	6,893
2. Banbury	4,055	21. Lincoln (City)	20,995
3. Bedford	13,412	22. Louth	10,468
4. Birmingham	295,955	23. Ludlow	5,178
5. Boston	15,038	24. Newark	11,562
6. Cambridge	26,351	25. Newcastle-under-Lyme	12,638
7. Chesterfield	9,835	26. Northampton	32,813
8. Colchester	23,730	27. Norwich (City)	74,414
9. Coventry	40,937	28. Nottingham	74,531
10. Derby	43,081	29. Stamford	8,044
11. Grantham	4,954	30. Shrewsbury	23,000
12. Great Grimsby	11,032	31. Stratford-on-Avon	3,672
13. Great Yarmouth	34,573	32. Sudbury	6,879
14. Hertford	6,769	33. Walsall	37,762
15. Ipswich	37,719	34. Warwick	10,589
16. Kidderminster	15,399	35. Wisbeach	9,218
17. King's Lynn	15,981	36. Wolverhampton	60,858
18. Leamington (Town)	17,452	37. Worcester	32,000
19. Leicester	68,168	38. Wycombe	4,222

Boroughs consolidated with Counties having Efficient Forces.

BOROUGHS.	Population, 1861.	BOROUGHS.	Population, 1861.
ENGLAND:		ENGLAND—*continued.*	
1. Beccles	4,266	13. Stafford	12,532
2. Bury St. Edmunds	13,318	14. Tamworth	4,326
3. Dudley	44,975	15. Thetford	4,208
4. Evesham	4,680	16. Wenlock	16,699
5. Eye	2,430	NORTH WALES:	
6. Godmanchester	2,428	17. Bangor	6,738
7. Harwich	5,070	18. Beaumaris	2,558
8. Huntingdon	3,816	19. Carnarvon	8,512
9. Orford	948	20. Denbigh	5,946
10. Oswestry	5,414	21. Flint	3,540
11. Retford	47,330	22. Montgomery	1,276
12. Saffron Walden	5,474	23. Welchpool	5,004

The following Forces remain inefficient either as to number or discipline :—

Boroughs over 5,000 Population.

BOROUGHS.	Population, 1861.
1. Bridgnorth	6,086
2. Oxford (City)	28,261
3. Glossop (now a Borough)	17,000

Boroughs with Inefficient Forces under 5,000 Population.

BOROUGHS.	Population, 1861.	BOROUGHS.	Population, 1861.
ENGLAND:		ENGLAND—*continued.*

GENERAL REPORT.

COUNTY FORCES.

The county forces are all efficient in number and discipline.

The borough of Glossop has established an independent force, thereby releasing a number of constables, all of whom have been retained in the county of Derby, where the accession of strength was much required.

In the county of Carnarvon, North Wales, a gross outrage has again been committed in the parishes of Caerhun and Llanbedr by throwing down a large length of walling during the night. No evidence having been obtained (no doubt by intimidation, and the connivance of the parties), it has been thought advisable to form those parishes into a district under the 27th Section of 3 & 4 Vict. c. 88, a measure which, I believe, will have a just and good effect.

The resignations and dismissals of constables have much decreased, and more candidates offer themselves for appointment than in previous years, which is much to be attributed to the increase in the pay, which took effect last year. The limit in classes, and the uncertainty of the advantages of superannuations, still remain as an impediment in keeping the force as efficient as it would be, if the tried and valued constables remained instead of seeking other employment; two points on which I will again state my opinion before I close my report.

The extra duties performed remain much as during the previous year, but as some misconception prevailed as to the payment of the police officers who are appointed inspectors of weights and measures, I think it right to state that in no instance am I aware of the fees taken being applied to the benefit of the inspectors, as they are generally placed to the credit of the county or borough fund, and only the remuneration for expense out of pocket allowed to the inspectors. I do not hesitate to say that I know of no duty which has been undertaken by the police more valuable than this to the community, and the poor in particular.

The inspection of common lodging houses and nuisances is more or less given to the police, and the relief of vagrants has been more generally placed under them during the year, but upon this subject I will report hereafter.

BOROUGH FORCES.

The borough forces reported efficient are the same as last year. The city of Oxford and borough of Bridgnorth are still in the same state of inefficiency. I am, however, in hopes that there will be a consolidation with the city and university of Oxford shortly, a measure I have in vain advocated for some years. The determination of the authorities of Bridgnorth to continue in their inefficiency of force still prevails in the council, and I see no hopes of an alteration at present. The new borough of Glossop, asserting its right, has appointed a weak and inefficient force in number, instead of having the assistance of the county force as heretofore. Should this borough obtain a certificate of efficiency, it will have to double, at least, its present number of constables. A few other small borough forces remain in their usual state of inefficiency, and will do so until compelled to consolidate.

The extra duties in boroughs and counties are much assimilated.

Judicial Statistics.

The explanation circulated from the Secretary of State through the counties and boroughs, together with the addition of the column for non-prosecution, will, I have no doubt, tend to increase the accuracy in the annual criminal returns

returns sent to the Home Office, but in comparing detection of crime with crimes reported in counties and boroughs, much disproportion is shown, as the number of committals must vary, many persons occasionally being committed for one offence, and on the other hand some offenders being committed for more than one offence. In order to remedy this seeming discrepancy, I should suggest a column in Table 3, following column 1, crimes committed, to be headed,—Number of indictable offences detected, with an explanation stating that of the number of indictable offences reported to the police, exclusive of those taken under the Criminal Justices Act, so many have been detected as led to the committal of one or more offenders. Thus the detected cases would be at once shown as correct, and the disproportion of offenders committed to crimes detected would then be explained.

Relief of Vagrants.

The great increase in the number of vagrants, as reported by the police, who act as assistant relieving officers for casual poor, requires much attention, as it is clear that the dislike to police investigation by the experienced tramp is wearing out, and that some further test is required to separate the professional beggar from the destitute wayfarer.

The ticket-of-way system fostered under the care of Mr. Baker, of Hardwick Court, whose exertions have been very zealous in the cause, is sufficiently extended to give it a fair trial. It is now applied to nearly all the unions in Gloucestershire and Worcestershire, and in some in the counties of Hereford, Monmouth, Wiltshire, Oxfordshire, Westmorland, and Norfolk. The system is thus explained by Mr. Baker in page 6 of his report of the paper read by him at the Social Science Meeting held at Belfast on the 19th of September 1867:—

"The first principle decided on was, that every vagrant should be secure of relief, and of at least the absolute necessaries of life, at every workhouse to which he may apply.

"2nd. That every vagrant who wishes for it, shall have the means of showing, by a way ticket, the route he has travelled and the distance he has made on each day, with the view that, if he is travelling straight forwards at his best speed, he may be excused from task-work and well treated.

"3rd. That the facts of a certain supply of sufficient food and proof of honest travel afforded by a way ticket, should be made known to the public by the Guardians, each informing his own parish, by the local press, by handbills posted along the roads (or rather by boards), and that the public should be urged to give nothing to those who had no tickets, and only food to those who had shown by their tickets that they had walked a fair distance from their sleeping place.

"The fourth point is the most difficult, and has as yet been only carried out in a few unions, viz., that every vagrant who does not show by his way ticket that he has walked a reasonable distance in the direction in which he professed to be travelling, should be set to four hours' hard work, and be sent to prison if he refuse or neglect to perform it."

In considering the system, I have only to repeat the difficulty which there is when workhouses are too far distant from each other, and where an intermediate house of refuge must be adopted, by some means or other, to complete the chain of communication.

On experience, notwithstanding the cry that may be used of uniting poverty with crime, I am inclined to think that, in lieu of the police acting as assistant relieving officers for vagrants at a distance, the system might be strengthened by each Board of Guardians appointing the tramp master in the workhouse (who might in his leisure hours be made otherwise useful to the Board), a constable, under the 19th section of 3 & 4 Vict. c. 88, by which means prompt discipline could be enforced in the tramp ward if necessary, and the assistance of the police could be given generally in supervising the vagrant on his journey, and confining him to the main road when he has left the workhouse or refuge, with or without ticket of way. There is one remarkable fact connected with this subject, to which I must again allude, namely, the various modes of treating vagrancy in different localities.

As a proof, I take some adjoining counties in the return under the head of

No. 1. Eastern Counties, Midland, and North Wales District.

persons proceeded against for begging, or having no visible means of subsistence, in the Judicial Statistics, Table 7, for 1866–67.

Counties.	Proceeded against for Begging.	Or no Means of Subsistence.	Total.
Beds	10	16	26
Bucks	52	26	78
Derby	80	49	129
Essex	2	20	22
Hertford	81	7	88
Hunts	4	1	5
Leicester	16	3	19
Lincoln (Three Divisions)	522	55	577
Northampton	20	29	49
Nottingham	26	10	36
Oxford	22	18	40
Rutland	1	1	2
Salop	89	37	126
Stafford	288	250	538
Warwick	28	5	33
Worcester	66	5	71

This table shows the counties of Lincoln and Stafford to have been very much the most active in the suppression of vagrancy, where it was meeting with success, but the return for the neighbouring counties proves that it had little or no support from them; so that the offence which the counties of Lincoln and Stafford were endeavouring to control, appears to have been very sparingly treated by their neighbours.

The question of vagrancy is one of very great importance, particularly as connected with crime, but until some regular system is adopted, indiscriminate relief withheld, and professional vagrants equally treated by the magistrates, the drone will live upon the bee, and mendicancy will thrive notwithstanding the partial efforts made to suppress it.

The Ticket of Leave, or Licence Holder.

There is a marked decrease of licence holders this year in the district, perhaps to be attributed to the longer time of actual imprisonment enforced under the late Act, but those men who are under supervision have generally conducted themselves well, and obtained employment without difficulty, and often with the assistance of the police.

The Licensing System of Public and Beer Houses.

The return of drunkenness in the Appendix, I regret to state, shows that this vice rather increases than diminishes. I find a general expression against the present licensing system; and if the beer houses and public houses were placed upon the same footing, both being under the magistrates' jurisdiction as to the granting of licences, and some stringent clause deprived each house of its licence for a time upon conviction of any offence against such licence, and for ever, if under a cumulative conviction, I believe much benefit would be derived; thus making the owners of the property directly interested in the conduct of their tenants as occupiers of these houses. At all events the present loose mode of procuring a licence for a beer house requires improvement, as no sooner is a public house deprived of its licence, than it opens as a beer house in defiance of the magistrates, upon the certificate of a few ratepayers of the parish.

The Limitation of Classes.

The pay of both county and borough forces now having been increased, great encouragement is given to men to enter the service and make it a profession; but there still remains the difficulty in obtaining promotion where classes in forces are limited to a particular number, so that unless a vacancy occurs no promotion can be granted. In some forces, the 1st class is very numerous, but still it is limited: in others the 1st class is few in number, and limited; of course there is better chance of vacancies in the first case; but still in well-regulated forces, the number of 1st class will soon be filled; and then a clog is placed upon the exertion of the lower grades, as there is no hope for them to rise, perhaps for months or years. From 11 years' experience, I venture to suggest as the most advantageous step to the authorities, as well as to the constables, the opening of all classes, subject in counties to the recommendation of the chief constable (if a chief constable of five years' standing), to act upon his own responsibility, and in boroughs to be carried out under the discretion of the watch committee. In some boroughs this has taken place, and its benefit has been clearly demonstrated. In answer to this point I have been told that the chief constable would soon have the whole force 1st class constables; this would not be the case if the chief constable had the confidence of the magistrates, unless they were all fit for such promotion; and I do not hesitate to say that if any force could have constables really deserving of the 1st class promotion, that instead of being the most expensive force it would by its works show itself the contrary, as nothing is more easily proved that the prevention of crime is pecuniarily of great importance to the ratepayer. To this I may add that the great expense of the continued change in a force is the cause, not only of the greater outlay, and a most unsatisfactory mode of increasing the burden of the police rate, but a severe blow to the real efficiency of the force.

Superannuation Fund.

This all-important subject I take upon myself once more to report as vital to the efficiency of the force; the uncertainty of obtaining a pension, and the certainty of the superannuation funds being exhausted, are points for serious consideration. Under the present Act of Parliament it has been shown by Dr. Farr, and corroborated by the insolvency of the metropolitan fund, that a few years must place both counties and boroughs in the same predicament, although boroughs, having the extra payment made to their funds by the sums received for service of summonses and execution of warrants, will in some measure protract their existence.

The main point to the constables as recipients of pensions appears to be the uncertainty of the present system, based as it is upon age. In this particular I have no doubt that age should be superseded by service, but at what period of service pensions should be granted, I do not even venture to suggest; whether by limited pensions for short service, and pension for life at a period of lengthened service (with increase of pay in lieu of its acceptance, if the ability still to serve is proved), is a question which appears well worthy of consideration. If it were only the granting pensions out of an unlimited fund, the question might more readily be solved, but as the system of superannuation must be taken into consideration with the interest of those who are hereafter to be called upon to pay the pensions out of the county or police rate, it must require much investigation. I do not, however, scruple to state that the maintenance and elevation of the character of the force in counties and boroughs requires some impartial tribunal to be called into action, where all opinions and interests may be thoroughly sifted, so that the present uncertainty of pensions being granted may be removed, and an established code of superannuation duly authorised by Act of Parliament.

Mutual Assurance Society.

In connection with the Superannuation Fund, I consider it my duty to state that a mutual friendly society has been voluntarily established during the year by individuals in both county and borough forces, for payment towards the widow or children of a deceased constable subscribing thereto; also, by the bene-

No. 1. Eastern Counties, Midland, and North Wales District.

volence of some kind friends, the opening of an orphan asylum for the whole force, metropolitan, city, county, and borough. Both these institutions must commend themselves to the public, and the fraternal feeling in aiding and assisting each other must be highly valuable if placed under due and proper authority. Their organisation, however, should be based upon some authorised system, and confirmed by those most competent to regulate such societies, by which proceeding, not only the police, but those who wish to subscribe to the institution, should be guaranteed some security for the soundness and permanence of the institution.

In the Appendix will be found the statistics of crime and drunkenness as classified in former reports, but in comparing these tables with those of former years, the great increase of vagrancy as a source of crime should be taken into account.

Cutlass drill.

Circumstances having led to the arming of several forces with cutlasses, in cases of emergency, suggests the necessity of all forces occasionally being drilled to the sword exercise, a good specimen of which I witnessed at my last annual inspection of the Lincolnshire constabulary.

If cutlasses are to be given out, it is evident the constables should know how they are to be used for attack or defence.

I have, &c.,
(signed) *William Cartwright*, Lieut. General,
Her Majesty's Inspector of Constabulary for
No. 1 District.

REPORTS upon the COUNTIES and BOROUGHS respectively.

COUNTY of BEDFORD.

This force has been increased by 10 constables, besides having been relieved from the Borough of Glossop, which has its own independent force.

Extra duties: Inspector of weights and measures, common lodging-houses, and nuisances; high constables, and as assistant relieving officers for casual poor, of whom 3,878 have been relieved during the year, being an increase of 1,885 over the number relieved the previous year. Twenty-nine constables resigned, and three were dismissed during the year. The station-house at Buxton still requires improvement. Eight ticket-of-leave men regularly reported themselves during the year; two changed their residence under regulation, one broke his condition of license, and one has been re-committed. The force is efficient.

Public Houses - - - -	1,006	12	11	1
and Beer Houses - - - - -	827	26	24	—

Extra duties performed by the police: Inspectors of weights and measures, common lodging-houses, and nuisances,—all hold deputations under the Board of Customs,—and assistant relieving officers for casual poor, of whom 16,003 have been relieved during the year, being an increase of 7,605 over the number relieved the previous year. In the Brentwood Division, which adjoins the Metropolitan District, the number of vagrants relieved during the year is no less than 4,828. Nine constables resigned during the year, and none were dismissed, indeed during the last three years only two constables have been dismissed from this large force; the resignations also are few in number in proportion to the strength of the force; one constable died during the year. Five ticket-of-leave men have regularly reported themselves; four have changed their residence under the regulation, and two have broken their condition of license. The force is efficient.

Borough of Colchester.

	627	37	- -	31

Extra duties performed by the police:—Inspectors of weights and measures, common lodging-houses and nuisances, and as high constables. Nineteen constables resigned during the year, and nine were dismissed. One constable died. A new station-house has been built at Frodingham. One ticket-of-leave man has regularly reported himself during the year, three have changed their residence under the regulation, one has broken his condition of license, and one has been re-committed.

No. 1. Eastern Counties, Midland, and North Wales District.

The police do not act as assistant relieving officers for vagrants, but vagrancy has been much checked by the vigilance and activity of the police and determination of the magistrates to support them in this duty by committing most of them to prison. This point has been reported upon in my general report; the want of uniformity of action in adjoining counties has, however, led to a less rigid mode of treatment, but the trial for one year has proved to have had a beneficial result. The system of appointing qualified men as intermediate class between the constables and serjeants is still in force, and merits well the approval of the chief constable. The force is efficient.

The pay of the head constable, serjeant, and constables, has been increased during the year. Extra duties performed by the police during the year:—Inspectors of weights and measures, common lodging-houses, and vagrants, of whom 2,338 were relieved, being an increase of 735 over the number relieved during the previous year. One constable was dismissed, and two resigned, during the year, being a large proportion of the force. One ticket-of-leave man broke his condition of license, and one was re-committed during the year. The force is efficient.

	540	25	—	23

Extra duties performed by the police:—Inspectors of weights and measures, common lodging-houses and nuisances; 21 police officers act as relieving officers for casual poor, of whom 1,352 were relieved during the year, being an increase of 428 over the number relieved the previous year. Ten constables resigned and seven were dismissed during the year. The station-houses are all good and in order with the exception of Torrington, which again I have to report as requiring enlargement. Two ticket-of-leave men regularly reported themselves during the year; two changed their residence under the regulation; one broke the condition of his license, and one was re-committed. The criminal statistics for the year show an increase of crime and good amount of detection; drunkenness has, however, increased, as have also the number of proceedings taken against public houses, four of which were deprived of their licenses.

* These are Detectives.

The pay of the serjeants has been increased. Extra duties performed by the police :—None.

The police act as assistant relieving officers for casual poor, of whom 792 were relieved during the year, being an increase of 323 over the number relieved the previous year. Three constables were dismissed and seven resigned during the year. Three ticket-of-leave men reported themselves regularly, and three changed their residence under the regulation, during the year. Twenty-seven public houses are stated to have been deprived of their licenses during the year, out of 71 proceeded against.

This is a large number, and the result of such an example must be interesting, as shown in the next year's return.

The force is efficient.

The police do not undertake any extra duty. Six constables were dismissed and seven resigned. Eight ticket-of-leave men reported themselves regularly; three changed their residences under the regulation, and one was re-committed during the year. The return of indictable offences shows a very large decrease in the present year, but I have always considered that too many offences reported were entered as indictable heretofore, which will partly account for the great decrease alluded to as above.

The number of drunk and disorderly cases has also considerably diminished.

The force is efficient.

This force remains in its state of inefficiency, being now the only force of importance so reported upon in the district. Each year I have stated my hope that something might be done to improve it by consolidation, under an Act of Parliament. The number of constables required by the united university and city would be as nearly as possible that which the University and Borough of Cambridge retain, with its population of rather less than Oxford; this might fairly be taken as the requirement for an efficient force in case of any arrangement taking place as to consolidation. In the return sent in, I find no less than 152 public-houses, of which only four were proceeded against, and 103 beer-houses, of which only two were proceeded against.

The cells remain in the same discreditable state, and the force is in number, classification, and discipline inefficient.

Since this report was written, the late riot has taken place, proving the urgent necessity of action by the authorities.

and Beer Houses - - - -	400	40	—	33

An increase of six constables, and the promotion 1st class constables to the rank of serjeant, as suggested on my inspection, are to be considered at the January quarter sessions.

Extra duties performed by the police:—Inspector of nuisances, common lodging-houses, and assistant relieving officer for casual poor, and many of them only lately appointed. Eleven constables resigned during the year, and 10 were dismissed. The head quarters station has been improved, and Church Stretton repaired. The station at Wellington is quite unfit for the serjeant stationed in it. Four ticket-of-leave men regularly reported themselves during the year; two failed in their condition of license, and three were re-committed.

The force, although weak, is efficient.

Borough of Bridgnorth.

	Number of.	Proceeded against.	Fined.
Public Houses - - - - -	58	3	3
and Beer Houses - - - - -	4	—	—

The police undertake the duties of inspectors of weights and measures, nuisances, and common lodging-houses, and assistant relieving officers for casual poor, of whom 946 were relieved during the year, being an increase of 340 over the number relieved the previous year. Two constables resigned during the year. The low pay is most disheartening to the men, and in the end most expensive to the authorities, as they only train men for other forces instead of keeping them when they become valuable. Two ticket-of-leave men reported themselves regularly during the year, one changed his residence under the regulation, and one failed in his condition of license.

The force is efficient.

Public Houses - - - -	2,085	174	6	140
and Beer Houses - - - - -	2,467	414	-	349

Extra duties performed by the police: inspectors of common lodging-houses, nuisances, and assistant relieving officers for casual poor; of whom in the unions of Rugely, Stafford, Stoke-upon-Trent, Uttoxeter, and West Bromwich, 16,175 were relieved during the year, being an increase of 3,348 over the number relieved in those unions the previous year. In six other unions the police have this year undertaken this duty, but no comparative return can be made till 1868.

Fifty constables resigned, including one superintendent, one inspector, and one serjeant. Three constables pensioned. Twenty-five constables were dismissed, and three died during the year. The station-house at Bilston has been repaired and improved; that at Brierly Hill has had an addition of two cells, and a house is being built at Stafford for a superintendent, one serjeant, and 18 men. Twenty ticket-of-leave men reported themselves regularly during the year, and 13 changed their residences under the regulation; two failed in the condition of their license, and four re-committed. A scheme for re-inforcing each district has been laid before the court of quarter sessions, and will, I have no doubt, receive due consideration. The importance of the efficiency of this force cannot be over-rated; and although I have every reason to report most favourably of the force, the additional strength would prove a very valuable assistance, and eventually be a saving in the power of preventing crime.

The force is efficient.

1864-65 -	68	33	32	131	81	3
1865-66 -	126	48	29	124	88	2
1866-67 -	84	46	28	93	37	31

	Number of	Proceeded against.	Fined.
Public Houses and Beer Houses - - - -	179	13	8
	132	15	11

Extra duties performed by the police: inspectors of weights and measures, common lodging-houses, and nuisances. Seven constables resigned during the year, which, although, is too large a number, is less than the resignations in former years; and as the first class has been strengthened, and an opportunity is always given to those of the lower class to be promoted for good conduct without waiting for a vacancy, I hope to find the force more settled and fewer resignations in future.

The return of indictable offences shows a marked decrease over those of the previous year, but the detections are weak in proportion. The drunk and disorderly have also considerably decreased. Three ticket-of-leave men reported themselves regularly during the year. The new cells are very good, and every thing in order.

The force is efficient.

Borough of Wolverhampton.

No. 1. Eastern Counties, Midland, and North Wales District.

Extra duties performed by the police: inspectors of weights and measures, and common lodging-houses, 358 in number. There has been a large amount of promotion, particularly into the second class, during this year, and the resignations have been only four, and the dismissals four. One constable died. The indictable offences reported are about an average number, and the detection favourable to the force. There is a remarkable decrease in the number of drunk and disorderly proceeded against. The services and exertions of this force during Her Majesty's visit to the borough, and more recently during the disturbances that took place in consequence of certain lectures, were arduous and continuous, but were performed to the entire satisfaction of the authorities and the public. The new police station is, I trust, likely to be shortly commenced, a work urgently required. Six ticket-of-leave men regularly reported themselves; 10 changed their residence under the regulation, and two failed in the condition of license during the year.

The force is efficient.

Extra duties performed by the police: inspectors of weights and measures and common lodging-houses, and assistant relieving officers for casual poor, of whom 1981 were relieved during the year, being an increase of 977 over the number relieved the previous year. Three constables were dismissed and six resigned during the year. One ticket-of-leave man has reported himself regularly during the year. The criminal returns show an average amount of crime and detection. The drunk and disorderly are rather fewer than former years. The station-house at Beccles was reported to be in an unhealthy state, which I brought under the notice of the authorities. At the inspection at Ipswich the chief constable was unable to attend, and the superintendent was absent in stamping weights and measures, which caused me to inquire into the number of days each superintendent is obliged to be absent from his other duty during the year, and they appeared to me to be unnecessarily numerous.

The police act as assistant relieving officers for casual poor, of whom 1,116 were relieved during the year, being an increase of 241 over the number relieved the year previous. Crime and drunkenness have increased, and the force continues to change more than others, having this year lost four constables by resignation, eight by dismissal, three by gratuities being given for service, and one appointed turnkey in the prison. I have in vain endeavoured to trace out the cause for so great changes; the pay is about the average, and there is no limit to classes. In this case I should suggest a certificate of efficiency being given this year, with an understanding that if these changes again occur to so large an extent, the certificate for next year should be withheld. The head constable acts as inspector of common lodging-houses. One ticket-of-leave man reported himself regularly during the year. A new police station is in course of erection.

There has been an increase in the Aston district of two constables. Extra duties performed by the police—inspectors of weights and measures, common lodging-houses, and nuisances, and assistant relieving officers for casual poor, of whom 3,938 were relieved during the year, being an increase of 414 over the number relieved the previous year. 16 constables resigned, and 14 were dismissed during the year. All the stations in the county have been repaired during the year. The station at Shipston is very inferior, and hardly fit for use; the lease will soon be out, when the question of a joint station between the counties of Warwick and Worcester will be urged. In every other respect the force is in good order; three ticket-of-leave men reported themselves regularly during the year, and two changed residence under the regulation.

	1,300	324	—	233

This important force received an increase of 23 constables during the year, making the force now, including all ranks, 400 men, a point I have for some years advocated, on account of the increase of population, streets, and the weakness on some beats of constables, which may now be remedied. Fifty-six constables resigned during the year, which is a large number, but most of them were from the lower grades; 17 were dismissed, and two constables died, making a total of 75 vacancies. Forty-four ticket-of-leave men reported themselves regularly, 17 changed their residence under the regulation, 23 broke their condition of license, and four were re-committed during the year. The indictable offences reported to the police have largely increased, but last year they were particularly low, and I have reason to believe the returns are more systematically kept than formerly; the detections are below the proportion returned last year. The drunk and disorderly proceeded against are rather lower than in 1865-66. Of the 698 public houses within the borough 132 were proceeded against, of which 104 were fined; only one license, however, was taken away. Of the 1,300 beer houses the large number of 324 were proceeded against, and 233 fined; showing the vigilance of the police, and the laxity in those who hold the licenses, in keeping proper house or order. The annual inspection took place again this year, in Aston Park, when everything appeared in the best order, although the force had been much harassed by riots that had lately occurred. I know of no borough within the district where more attention is paid by the authorities to the interest of the force, or where the welfare of the force is more encouraged than in this borough. I have once more the satisfaction of reporting the force efficient.

The inspection of nuisances continues under the police; the number of indictable offences and detections are satisfactory, the former being below the average, and the latter being in good proportion, although not so high as last year. The number of drunk and disorderly proceeded against is low, but they were almost all convicted, proving that the police did their duty in taking them before the magistrates. The public-houses and beer-houses proceeded against are few in number, taking into consideration the large number of the former there are in the town. Three constables resigned, and two were dismissed during the year. A new station house with cells has been erected, and the cells at the town hall, although badly situated, are kept very clean. No ticket-of-leave man has been under supervision. The force keeps up its character of being smart and active, and, I believe, gives general satisfaction. I regret to add, the vagrants are still free from supervision.

The force is efficient.

An addition of three constables was made to the force during the year.

Extra duties performed by the police—inspectors of weights and measures, common lodging-houses, and nuisances. High constables in two hundreds, and assistant relieving officers for casual poor in seven unions, in which 13,068 were relieved, being an increase of 743 over the number relieved the previous year.

No. 1, Eastern Counties, Midland, and North Wales District.

In several of these unions the ticket-of-way system is in force. Twelve constables resigned, and 10 were dismissed during the year; three constables died. Ten ticket-of-leave men reported themselves regularly; one changed residence under the regulation, three failed in their condition of license, and two were re-committed during the year. The criminal statistics are much upon the average of former years, both as to crime reported and detection, as also the return of drunken and disorderly. The co-operation between this force and Birmingham, Wolverhampton and Stafford, is very satisfactory.

The force is efficient.

Public Houses - - - - -	24	—	—
and Beer Houses - - - - -	9	—	—

This small and inefficient force remains the same as to pay as last year. The head constable receives 52 *l.* and the only other constable 15 *l.* per annum. The former receives 3 *l.* 10 *s.* as inspector of nuisances, and it appears takes the fees for the inspection of weights and measures which is illegal; the only constable resigned during the year; this is perhaps the most flagrant case of inefficiency in this part of the district. One ticket-of-leave man reported himself regularly during the year.

The force is inefficient.

This force is in its usual state of weakness, being composed of one head and one other constable. The head constable has recently been appointed inspector of weights and measures; he is also inspector of nuisances and has lately been appointed assistant relieving officer for casual poor.

The force is too weak for the population and area, and is inefficient.

Borough of Kidderminster.

The head constable acts as inspector of weights and measures and common lodging houses, and as assistant relieving officer for casual poor, of whom 2,350 were relieved during the year, being an increase of 369 over the number relieved the previous year.

The number of indictable offences reported have rather increased during the year, but the detections are much higher in proportion. Four constables resigned

No. 1. Eastern Counties, Midland, and North Wales District

during the year, being a large number in so small a force. Four ticket-of-leave men reported themselves regularly during the year; three changed their residence under the regulation and one failed in his condition of license.

The force is efficient.

City of Worcester.

Strength of Force - - - - 31.

City of Worcester.

Population, 1861 - - -	32,000	Population to one constable - -	1,032

Public Houses - - - -	190	31	21
and Beer Houses - - - - -	104	19	14

A serjeant is appointed assistant relieving officer for casual poor, of whom 5,371 were relieved during the year, being an increase of 862 over the number relieved the previous year. Four constables were dismissed and four resigned during the year, and one died; making a larger number of vacancies than usual. Two ticket-of-leave men reported themselves regularly, and one changed his residence, during the year. The return of crime shows a decrease in the indictable offences reported, and an increase in detections; both satisfactory points. The change in the force cannot be the fault of the authorities, as the pay of the force is good, and every encouragement is given to promotion for good conduct, by throwing open all classes for competition.

The force is efficient.

NORTH WALES.

County of Anglesey, with Beaumaris.

Strength of Force - - - - 23.

Population, 1861 - - -	54,609	Population to one constable - -	2,374

	12	2	- - -	2

Extra duties performed by the police: inspectors of weights and measures, and in two Unions assistant relieving officers for casual poor, of whom 537 were relieved during the year, being an increase of seven over the number relieved the previous year; which is an extraordinary circumstance, as in general the increase has been very large. One constable resigned to better himself. The criminal return shows a decrease in crime, and average amount of detections, and also a decrease in the number of drunk and disorderly proceeded against during the year.

The force is efficient.

County of Carnarvon, with Bangor and Carnarvon Boroughs.

Strength of Force - - - - 56.

	Number of.	Proceeded against.	Fined.
Public Houses - - - - -	468	29	24
and Beer Houses - - - - -	41	8	6

The police act as inspectors of weights and measures and nuisances, and as assistant relieving officers for casual poor, of whom 2,469 were relieved during the year, being an increase of 503 over the number relieved the previous year. Four constables resigned, and one was dismissed during the year, which shows a great improvement in the constables remaining in the force over previous years. Two constables died. The station-houses at Conway and Carnarvon have been improved. A small station for the serjeant at Bettws-y-coed would be very useful. That at Nefyn must await the consolidation with Pwllheli, which may, I trust, soon take place. The criminal returns in this force have each year shown above an average amount of crime reported, and a low average of detections. It is supposed that the returns vary in the different counties and boroughs, and that this county is the only county returning its crime strictly. This I cannot consider the fact, as there is now an established system by which all outrages are at once reported and entered, and the result of each is followed out clearly and distinctly. The amount of cases will vary with the committals occasionally in double cases, but that will not account for the unsatisfactory returns year by year sent in from this county; besides this, a gross outrage upon property has again been committed without detection in the destruction of at least a mile of walling in one night in the parish of Caerhun. This has led to the formation of a district composed of the parishes of Llanbredr and Caerhun, with a force, to protect it from similar offences, of one serjeant and two constables. Should the force not prove sufficient, I should recommend its being doubled, so as to make the ratepayers feel an interest in the prevention and detection of this system of lawless outrage.

In other respects the force is efficient.

Borough of Pwllheli.

and Beer Houses - - - - -	163	13	13

The police act as inspectors of weights and measures, common lodging houses, and nuisances, and assistant relieving officers for casual poor, of whom 9,536 have been relieved during the year, being the large increase of 3,588 over the number relieved the previous year. Three constables resigned, and three were dismissed. A new lock-up is about to be made at the old prison. One ticket-of-leave man was recommitted during the year. The criminal returns show an increase of offences reported, and an average number of detections. The drunk and disorderly have considerably diminished.

The force is efficient.

No. 1. Eastern Counties, Midland, and North Wales District.

County of Flint, with the Borough of Flint.

Strength of Force - - - - 39.

County of Flint, with Flint Borough.

Population, 1861 - - -	69,849	Population to one constable - -	1,791

Public Houses and Beer Houses - - - - -	404	30	5	21
	91	19	- - -	16

The pay of the force has been increased and each rank benefited at the last court of quarter sessions. The police act as inspectors of weights and measures, common lodging-houses and nuisances, and as assistant relieving officers for casual poor, of whom 3,205 have been relieved during the year, being an increase of 1,045 over the number relieved the previous year. Two constables resigned and one was dismissed, and two died during the year. Four ticket-of-leave men reported themselves regularly. The returns of crime show an average amount reported and detected, and the return of drunkenness is much the same as last year.

The further increase in the pay, including that of the chief constable, shows the approbation in which the force is held, and I have every reason to report it efficient.

County of Merioneth.

Strength of Force - - - - 26.

County of Merioneth.

Population in 1861 - - -	38,888	Population to one constable - -	1,493
Area in acres - - - -	383,581	Area to one constable - - -	15,445

1866-67 - -	50	39	29	135	109	7

	Number of	Proceeded against.	Deprived of License.	Fined.
Public Houses and Beer Houses - - - -	156	5	1	2
	11	2	- - -	2

The police act as inspector of weights and measures and nuisances, and assistant relieving officers for casual poor, of whom 3,652 were relieved during the year, being an increase of 1,191 over the number relieved the previous year. There has been no change in the constables, who appear to remain in the force steadily. The station house at Towyn is building; the return of crime reported and detection, as also of drunk and disorderly persons proceeded against and fined, is about the average, and show the good working of the force.

It is efficient.

County of Montgomery, with the Boroughs of Montgomery and Welchpool.

Strength of Force - - - - 31.

Population, 1861 - - -	66,919	Population to one constable - -	2,158

No. 1. Eastern Counties, Midland, and North Wales District.

The pay and classification of the force is precisely the same as last year. The police act as inspectors of weights and measures and common lodging houses, and as assistant relieving officers for casual poor, of whom 4,432 were relieved during the year, being an increase of 2,463 over the number relieved the previous year. Four constables resigned during the year. The lock-up at Machynlleth has been improved. One is about to be built at Llanfair, which will complete everything of the sort requisite for the county. Two ticket-of-leave men reported themselves regularly; three changed their residence under the regulation, and one failed in his condition of license during the year. The returns of crime reported and detected are rather higher than last year. There is a large increase in the relief to vagrants, which, however, appear to have been the case throughout the whole district.

The force is efficient.

No. 2.—NORTHERN DISTRICT.

No. 2.
Northern District.

ELEVENTH ANNUAL REPORT of the Inspector of CONSTABULARY and POLICE FORCES in the Northern District, for the Year ended 29th September 1867.

COUNTY OF CHESTER.

County of Chester.

Population in 1861	329,227
Area in acres	692,979
Number of constables	245
Population to one constable	1,344

There having been an addition of one man to the constabulary force of this county since the last report, it consisted in the whole, when inspected between the 31st of May and the 5th of June, of 245 officers and constables, of whom 13 ordinary constables had been appointed under the provisions of the Act 3 & 4 Vict. c. 88, s. 19.

In this county there are 31 police station-houses, 10 of which are provided with excellent court rooms and offices, for the transaction of business at petty sessions; they contain also in the aggregate 129 cells for prisoners, and afford comfortable accommodation for about 39 officers and constables, the most of whom are married men.

These buildings being widely distributed, it was not deemed necessary to inspect the whole of them; those, however, which were inspected, were very clean and in good order.

At the period of the inspection, there were two men required to complete this establishment, which in the opinion of the Inspector has been maintained in its usual high state of discipline and general efficiency.

BOROUGH OF BIRKENHEAD.

Borough of Birkenhead.

Population in 1861	37,532
Area in acres	1,577
Number of constables	98
Population to one constable	383

This police force has had an addition of three men since the last report; it consisted, therefore, when inspected on the 3rd of June, of 75 officers and constables appointed for the service of the borough, and a body of one inspector and 22 constables attached to the docks, and maintained at the expense of the Docks and Harbour Company, the whole forming one establishment under the command of the head constable, whose salary has been increased from 300 *l.* to 400 *l.* per annum.

This force is composed of a remarkably fine and well-trained body of men, well clothed and well supplied with the requisite accoutrements; the whole of which were in good serviceable condition.

The books appeared to have been well kept, and the offices, charge-rooms, and bridewells, of which there are three, containing in the aggregate 13 cells for prisoners, were very clean and in good order.

The Inspector is of opinion that this police force has been maintained in a highly satisfactory state of efficiency.

No. 2.
Northern District.

City of Chester.

City of Chester.

Population in 1861	31,101
Area in acres	3,518
Number of constables	36
Population to one constable	864

At the inspection made of this police force on the 3rd June, there was one man required to complete the establishment, which consists in the whole of 36 officers and constables, there having been no variation in respect of strength or organisation since the last report; an addition, however, had been made of 50 *l.* a year to the pay of the chief constable, and of 2*s.* a week to serjeants of the first class.

The men are well clothed, and supplied with the customary accoutrements, which were in good condition, and the books seemed to have been well kept.

During the year much progress has been made in the re-building of the Town Hall, in which extensive accommodation is to be provided for police purposes, in all respects sufficient and very commodious, though there appeared to be a lack of sound judgment as respects the interior fittings of the cells for prisoners.

The Inspector is of opinion that the efficiency of this force has been well maintained.

Borough of Congleton.

Borough of Congleton.

Population in 1861	12,338
Area in acres	2,564
Number of constables	5
Population to one constable	2,467

The police force of this borough consists of five men unprovided with uniform. The station house having been built, in part, against a bank of earth, some two or three of the cells for prisoners are very damp and unfit for use, and the stability of the building itself seems to be precarious.

This establishment as it is now constituted, cannot be recognised as an efficient police force in the ordinary acceptation of that term; nor can the Inspector allow that, in his opinion, it is of sufficient strength for the ordinary duties of the borough.

Borough of Macclesfield.

Borough of Macclesfield.

Population in 1861	36,095
Area in acres	2,410
Number of constables	17
Population to one constable	2,123

No alteration has taken place in the police force of this borough, in respect to numbers or pay, since the last inspection.

The men looked well, their clothing was in good condition, and their accoutrements well kept. The books were in good order, and the cells for prisoners clean, though the Inspector must again remark that their position is objectionable.

This police force is still insufficient in number.

Borough of Stalybridge.

Borough of Stalybridge.

Population in 1861	24,806
Area in acres	883
Number of constables	25
Population to one constable	992

This police force when inspected on the 10th of May, was found complete in number, and of the same strength as last year; it was observed, however, that there had been since the last inspection very numerous changes among the constables, brought about principally by resignation, and some few dismissals.

Upon

Upon inquiry it appeared that all, or nearly all, of these casualties were confined to the probationary class, who were required to serve full 12 months before they could be considered entitled to advancement; as there was no other apparent or probable cause for so large a number of changes, limited as it seemed, to that particular class, it occurred to the Inspector that they could only be attributed in the main to the unusual length of the period of probation; he suggested, therefore, that it might be desirable to try the effect of more speedy advancement.

The watch committee thereupon took the matter into consideration, and at their next monthly meeting, on the 6th June, passed a resolution limiting the period of probation to three months. The effect of this measure will be seen hereafter, provided sufficient care and discrimination be exercised in the selection of men of good character and properly qualified.

The men were well clothed, and well provided with the usual accoutrements, and presented a smart and respectable appearance. The books on the whole seemed to have been well kept, and the offices, charge-rooms, and cells for prisoners (six in number, though four only are required for use) were sufficiently commodious, clean, and in good order.

This force has been well kept up to its full complement, and in that respect at least has, in the opinion of the Inspector, been maintained in a satisfactory state of efficiency.

Borough of Stockport.

Population of 1861	54,681
Area in acres	3,167
Number of constables	21
Population to one constable	2,604

Borough of Stockport.

There has been some modification, and a corresponding degree of improvement, in the constitution of the police force of this borough since the last report.

The services of the scavengers hitherto required to act occasionally in aid of the police have been dispensed with, and a small addition of six men made to the regular establishment, which consists now of one chief superintendent, one inspector, two serjeants, 16 constables, and a clerk.

When inspected on the 31st of May, there was one constable absent with leave, one suspended for misconduct, and one required to complete. Those assembled for inspection presented a very creditable appearance, being remarkably well clothed, and well provided with the usual accoutrements.

The books appeared to have been well kept, and the office, charge room, and cells for prisoners were sufficiently commodious, and as usual, very clean and in good order.

The Inspector, however, is constrained to add that, in his opinion, the strength of this establishment is not sufficient to discharge effectually the most ordinary duties of a police force in this large and populous borough.

Counties of Cumberland and Westmoreland.

Population in 1861	224,638
Area in acres	1,482,863
Number of constables	150
Population to one constable	1,497

Counties of Cumberland and Westmoreland.

The constabulary force of the counties of Cumberland and Westmoreland (united for police purposes) was inspected between the 26th June and the 2nd July, both dates inclusive, at which time the establishment was complete, and consisted of one chief constable, nine superintendents, nine inspectors, nine serjeants, and 122 constables. Included in the number of constables were 13 appointed under the provisions of Section 19, and one under Section 20, of the 3 & 4 Vict., c. 88; and also three of the body of men, referred to in the last report, specially appointed to assist in the endeavour to prevent the spread of the cattle plague.

The pay of the chief constable has been raised from 400 *l.* to 500 *l.* per annum; in

No. 2. Northern District

in every other respect the scale for payment of the several ranks and classes, given in the last report, remains in force.

This constabulary force is well supplied with clothing and the customary accoutrements. The books are well kept, and the station-houses and cells for prisoners, of which there were, of the former, 27, and of the latter, 70, were clean, and in good order.

The station-houses afford permanent accommodation for about 27 officers and constables, with their families.

In the opinion of the Inspector, this force has been maintained in a satisfactory state of efficiency.

Borough of Carlisle.

Borough of Carlisle.

Population in 1861	29,436
Area in acres	3,842
Number of constables	31
Population to one constable	950

This police force, consisting in the whole, of 31 men, has not varied in number since the last report. When inspected on the 2nd July the establishment was complete, and in general appearance seemed to be composed of a respectable and healthy body of men, fully supplied with the usual articles of clothing and accoutrements, in fair serviceable condition.

The books appear to have been well kept, and the office and cells for prisoners were very clean; these latter, however, being susceptible of improvement both in respect of interior fittings, and in the mode of warming them.

The Inspector is of opinion that the general efficiency of this force has been well maintained.

Borough of Kendal.

Borough of Kendal.

Population in 1861	12,028
Area in acres	2,720
Number of constables	6
Population to one constable	2,004

There has been an addition of one man to the strength of this police force since the last report. It consists of one serjeant and five constables, and required one man to complete the establishment when inspected on the 26th of June.

These men, by an arrangement entered into by the Town Council with the justices of the county, are placed under the command of one of the superintendents of the county constabulary, much, as it would seem, to the advantage of the borough, though without any apparent benefit to the county.

The books seemed to have been well kept; the men well supplied with clothing and the usual accoutrements; and the charge-room, office, and cells for prisoners were very clean and in good order.

The Inspector is of opinion that this force is not of sufficient strength for the ordinary duties of the borough.

County of Durham.

County of Durham.

Population in 1861	333,934
Area in acres	608,902
Number of constables	305
Population to one constable	1,095

There has been no alteration made in the strength, organisation, or scale for pay of this constabulary force since the last report. The authorised strength, when inspected between the 15th and 25th July, was 305; consisting of one chief constable, 12 superintendents, one inspector, 36 serjeants, and 204 constables of the permanent establishment, and 51 additional constables, appointed under the provisions of the 19th section of 3 & 4 Vict. c. 88.

There were at that time two men required to complete the establishment, which

which is to all appearance composed of an intelligent and effective body of men, well supplied with clothing and accoutrements, all of which were in good condition. The books appeared to have been well and systematically kept.

This constabulary force has in its charge 29 police station-houses, the property of the county, including 11 rooms suitably arranged for the transaction of petty-sessions business, and eight station-houses rented, in two of which there are similar rooms.

These station-houses afford comfortable accommodation for nine superintendents, 31 serjeants, and 57 constables, many of whom are married men. The station-houses, offices, and cells for prisoners were clean, and in good order.

In the opinion of the Inspector, this constabulary force has been maintained in a satisfactory state of discipline and general efficiency.

City of Durham.

City of Durham.

Population in 1861	13,743
Area in acres	8,599
Number of constables	13
Population to one constable	1,057

The police force of this city, consisting of one superintendent, two serjeants, and 10 constables, was inspected on the 18th of July, when it was found complete.

This establishment is paid in accordance with the following scale:—Superintendent, 120*l.* a year; serjeants, 24 *s.* a week; and constables, 21 *s.*, 20 *s.*, and 19 *s.* a week.

The books appeared to have been well kept, and the clothing and accoutrements supplied to the men were good, and in serviceable condition.

In the opinion of the Inspector, this police force has been maintained in a satisfactory state of efficiency.

Borough of Gateshead

Borough of Gateshead.

Population in 1861	33,589
Area in acres	3,255
Number of constables	35
Population to one constable	959

The police force of this borough, consisting of one chief constable, one inspector, six serjeants, and 27 constables, was inspected on the 13th July, when it was found complete; one man was, however, reported sick.

The clothing and accoutrements were good, and in serviceable condition. The books seemed to have been well kept, and the cells for prisoners, office, and charge-rooms were clean, and in good order.

The Inspector is of opinion that this police force has been maintained in a satisfactory state of efficiency.

Borough of Hartlepool.

Borough of Hartlepool

Population in 1861	12,205
Area in acres	990
Number of constables	12
Population to one constable	1,017

The police force of the borough of Hartlepool, consisting of one head constable, one inspector, two serjeants, and eight constables, was inspected on the 20th July, when it was found complete.

The men were well supplied with clothing and accoutrements, all of which were in good condition. The books appeared to have been well kept.

In the opinion of the Inspector, this police force has been maintained in a satisfactory state of efficiency.

No. 2. Northern District.

Borough of South Shields.

Borough of South Shields.

Population in 1861	35,223
Area in acres	2,566
Number of constables	35
Population to one constable	1,006

The police force of the borough of South Shields, consisting of one superintendent, one inspector, five serjeants, and 28 constables, was inspected on the 12th July, when it was found complete; one man was, however, reported sick.

The books appeared to have been well kept, and the office, charge-room, and cells for prisoners were clean and in good order.

The scale for pay of this force, now in operation, is as follows:—Superintendent, 150 *l.* a year; inspector, 78 *l.* a year; serjeants, 27 *s.* 6 *d.* and 25 *s.* 6 *d.* a week; constables, 22 *s.* 6 *d.*, 21 *s.* 6 *d.*, and 20 *s.* a week.

The Inspector is of opinion that this force has been maintained in a satisfactory state of efficiency.

Borough of Stockton-upon-Tees.

Borough of Stockton-upon-Tees.

This borough is consolidated with the county for police purposes.

Borough of Sunderland.

Borough of Sunderland.

Population in 1861	80,324
Area in acres	3,772
Number of constables	86
Population to one constable	934

The police force of this borough, consisting of one head constable, four inspectors, two sub-inspectors, 12 serjeants, and 67 constables, was inspected on the 13th July, together with one inspector, one sub-inspector, five serjeants, and 19 constables of the River Wear police, under the command of the head constable of Sunderland.

There were also four constables who have been appointed under the provisions of the Act 3 & 4 Vict. c. 88, s. 19.

Both establishments were complete, and had the appearance of a fine and well-trained body of men. The books appeared to have been well kept, and the clothing and accoutrements with which the men had been supplied were of excellent quality, and in good condition,

The following is the scale of pay now in force:—Head constable, 240 *l.* a year; inspector, 90 *l.* 10 *s.* a year; sub-inspectors, 29 *s.*; serjeants, 26 *s.* and 25 *s.*; constables, 24 *s.* 6 *d.*, 23 *s.* 6 *d.*, 22 *s.* 6 *d.*, 21 *s.*, and 20 *s.* a week.

In the opinion of the Inspector, this police force has been maintained in a satisfactory state of efficiency.

County of Lancaster.

County of Lancaster.

Population in 1861	1,085,404
Area in acres	1,184,067
Number of constables	826
Population to one constable	1,314

The inspection of this constabulary force commenced on the 8th, and was completed on the 25th June. The authorised strength at that time was 826; consisting of one chief constable, one assistant chief constable, two clerks, 20 superintendents, 18 inspectors, 116 serjeants, and 649 constables, of the permanent establishment, together with two serjeants and 17 constables who have been appointed under the provisions of the Act 3 & 4 Vict. c. 88, s. 19.

At

No. 2. Northern District.

At the period of the inspection there were 28 required to complete the establishment, which is to all appearance a very fine and healthy body of men, well clothed, and supplied with the customary accoutrements, all of which were in good serviceable condition.

The scale for pay and allowances, which at the date of the last report had then very recently been revised, continues in force.

This county is provided with 112 station-houses, 42 of which have been built at the public expense. Besides serving as residences for about 282 officers and constables, the greater part of whom are married men, they contain in the whole, 229 very good cells for prisoners; and there are also 16 court-rooms, suitably fitted up for the transaction of petty sessions business. The greater part of these buildings were inspected, and found, together with the offices and cells, clean, and in excellent order.

In the opinion of the Inspector, this constabulary force has been maintained in a very satisfsctory state of efficiency.

Borough of Ashton-under-Lyne.

Borough of Ashton-under-Lyne.

Population in 1861	34,894
Area in acres	1,737
Number of constables	23
Population to one constable	1,517

The inspection of this police force, consisting of one chief constable, one inspector, four serjeants, and 17 constables, was made on the 10th May.

The strength of this force has not varied since the last report, and the Inspector has again to express his opinion that it is not sufficient for the ordinary duties of the borough.

Borough of Blackburn.

Borough of Blackburn.

Population in 1861	63,125
Area in acres	3,610
Number of constables	42
Population to one constable	1,503

The police force of this borough, having had an augmentation of four constables since the last report, consisted, when inspected on the 17th June, of one head constable, one inspector, seven serjeants, and 33 constables.

The several ranks and classes are paid in accordance with the following scale:—Head constable, 220 *l.* a year; inspector, 95 *l.* a year; serjeants, 31 *s.*, 30 *s.*, 27 *s.* 6 *d.*, and 26 *s.* 6 *d.* a week; constables, 25 *s.*, 24 *s.* 6 *d.*, 23 *s.*, 22 *s.*, 21 *s.*, 20 *s.*, and 19 *s.* a week.

The books were found in some respects irregular, and the Inspector is of opinion that the force is still insufficient for the ordinary duties of the borough.

Borough of Bolton.

Borough of Bolton.

Population in 1861	70,396
Area in acres	820
Number of constables	40
Population to one constable	1,760

This police force consisted, when inspected on the 18th June, of one head constable, one inspector, four serjeants, and 34 constables.

This establishment is paid in accordance with the following scale:—Head constable, 180 *l.* a year; inspector, 95 *l.* a year; serjeants, 31 *s.* 8 *d.* and 28 *s.* 6 *d.* a week; constables 25 *s.* 3 *d.*, 24 *s.* 8 *d.*, 24 *s.* 1 *d.*, 23 *s.* 6 *d.*, 22 *s.* 6 *d.*, 21 *s.* 6 *d.*, and 20 *s.* 6 *d.* a week.

The Inspector is of opinion that the number of this force is not sufficient.

Borough of Burnley.

This borough is incorporated with the county for police purposes.

Borough of Lancaster.

Borough of Lancaster.

Population in 1861	13,521
Area in acres	1,240
Number of constables	13
Population to one constable	1,040

This police force, which consists of one superintendent, one inspector, one serjeant, and 10 constables, was inspected on the 24th June.

The following is the scale for pay now in force:—Superintendent, 100 *l.* a year; inspector, 65 *l.* a year; serjeants, 23 *s.*; and constables, 20 *s.*, 19 *s.*, and 18 *s.* a week.

The books appeared to have been well kept, and the clothing and accoutrements with which the men had been supplied were of excellent quality, and in good condition. The charge-room and cells for prisoners were clean, and in good order.

In the opinion of the Inspector, this police force has been maintained in a satisfactory state of efficiency.

Borough of Liverpool.

Borough of Liverpool.

Population in 1861	443,874
Area in acres	5,300
Number of constables	Docks, 339 Town, 740 River, 22 1,101
Population to one constable	403

The police force of this borough, the general organisation of which, together with the scale for payment of the several ranks and classes, was given at large in the report for the year ended the 29th September 1865, consists now in the whole, when complete, of 1,101 officers and constables, there having been an augmentation during the current year of one man appointed engineer to the fire brigade.

The inspection of this force was made on the 11th and 12th May, at which time there were 59 men required to complete the establishment.

The Inspector is of opinion that this police force has been maintained in a very satisfactory state of efficiency.

City of Manchester.

City of Manchester.

Population in 1861	338,346
Area in acres	4,069
Number of constables	674
Population to one constable	502

There having been an addition of four men since the last report, the authorised strength of this police force inspected on the 8th and 9th May, was 674, consisting of one chief constable, five superintendents, 28 inspectors, 62 serjeants, and 578 constables, of which total number one constable only was required to complete.

The several ranks and classes are paid in accordance with the following scale, chief constable, 600 *l.* a year; superintendents, 200 *l.* and 175 *l.* a year; inspectors, 98 *l.*16 *s.* and 88 *l.* 8 *s.* a year; serjeants, 30 *s.* and 28 *s.* aweek; constables, 25 *s.*, 23 *s.* 6 *d.*, 22 *s.* 6 *d.*, 21 *s.*, and 20 *s.* a week.

The Inspector is of opinion that this police force has been maintained in a very satisfactory state of discipline and efficiency.

Borough of Oldham.

Borough of Oldham

Population in 1861	72,334
Area in acres	4,617
Number of constables	55
Population to one constable	1,315

This police force, which was inspected on the 18th June, consists of one chief constable, five inspectors, eight serjeants, and 41 constables, being an addition of one constable to the authorised strength, at the period of the last inspection.

The men presented a creditable appearance; the books seemed to have been well kept; and the office and cells for prisoners were clean and in good order.

The Inspector is of opinion that this police force is not sufficient in number for the ordinary duties of the borough.

Borough of Preston.

Borough of Preston.

Population in 1861	81,077
Area in acres	2,753
Number of constables	82
Population to one constable	988

This police force, consisting of one head constable, four inspectors, nine serjeants, and 68 constables, was complete when inspected on the 19th June.

The following is the scale for pay now in force: head constable 300 *l.* a year; inspectors 110 *l.*, 85 *l.* 16 *s.*, and 80 *l.* 12 *s.* a year; serjeants 29 *s.*, 27 *s.*, 25 *s.* 6 *d.*, and 24 *s.* 6 *d.* a week; constables 23 *s.*, 22 *s.*, 21 *s.*, 20 *s.*, and 19 *s.* a week.

This force appeared to be composed of an effective and well-chosen body of men. The clothing and accoutrements with which they had been supplied were good, and in excellent condition. The books seemed to have been well kept; and the office, charge room, and cells for prisoners were clean and in good order.

The Inspector is of opinion that this police force has been maintained in a satisfactory state of efficiency.

Borough of Rochdale.

Borough of Rochdale.

Population in 1861	38,164
Area in acres	1,131
Number of constables	38
Population to one constable	1,004

This police force, which consists of one chief constable, two inspectors, five serjeants, and 30 constables, was complete when inspected on the 21st June.

The following is the authorised scale for pay:—Chief constable 150 *l.* a year; inspector 78 *l.* a year; serjeants 25 *s.*, constables 22 *s.*, 21 *s.*, 20 *s.*, and 19 *s.* a week.

The men are well supplied with clothing and accoutrements, the books appeared to have been well kept, and the offices and cells for prisoners were clean and in good order.

In the opinion of the Inspector, this police force has been maintained in a satisfactory state of efficiency.

Borough of Salford.

Borough of Salford.

This police force, the authorised strength of which was one chief constable, 12 inspectors, 13 serjeants, and 89 constables, an augmentation of three con-

No. 2. Northern District.

stables having been made on the 8th March last, was inspected on the 7th May, when there were two constables and one serjeant reported sick; and two constables required to complete the establishment.

The scale for payment of the several ranks and classes is as follows:—Chief constable, 300 *l.* a year; inspectors, 150 *l.*, 94 *l.* 18 *s.*, 84 *l.* 10 *s.*, 82 *l.* 2 *s.* 6 *d.*, and 74 *l.* 6 *s.* a year; serjeants 28 *s.* 6 *d.*, 26 *s.* 6 *d.*, 25 *s.* 6 *d.*, and 24 *s.* 6 *d.*; and constables, 21 *s.* 6 *d.*, 20 *s.* 6 *d.* and 19 *s.* 6 *d.* a week.

The men were supplied with excellent clothing, and the usual accoutrements, all of which were in good condition, the books were well kept, and the charge rooms and cells for prisoners were clean and in good order.

The Inspector is of opinion that this force has been maintained in a satisfactory state of efficiency.

Borough of Warrington.

Borough of Warrington.

Population in 1861	25,953
Area in acres	2,507
Number of constables	28
Population to one constable	927

This police force, when inspected on the 6th June, required three men to complete the establishment, which consisted, when at the full strength, of one chief constable, one inspector, two serjeants, and 24 constables.

This force is paid in accordance with the following scale:—Chief constable 145 *l.* a year; inspector 78 *l.* a year; serjeants 26 *s.* and 25 *s.* a week; constables 23 *s.*, 21 *s.*, 20 *s.* and 19 *s.* a week.

The men are well supplied with clothing and the requisite accoutrements; the books appeared to have been well kept; and the cells for prisoners were clean and in good order.

In the opinion of the Inspector, the authorised strength of this police force is sufficient, and it has been maintained in a satisfactory manner.

Borough of Wigan.

Borough of Wigan.

Population in 1861	37,657
Area in acres	2,161
Number of constables	37
Population to one constable	1,017

This police force was complete when inspected on the 13th June; it consists of one chief constable, two inspectors, three serjeants, and 31 constables.

The existing scale for the payment of the several ranks is as follows:—Chief constable, 210 *l.* a year; inspectors, 87 *l.* 19 *s.* 4 *d.* and 83 *l.* 8 *s.* 4 *d.* a year; serjeants 29 *s.* 2 *d.*, 28 *s.*, 26 *s.* 10 *d.*, and 25 *s.* 8 *d.* a week; constables, 24 *s.* 6 *d.*, 23 *s.* 11 *d.*, 23 *s.* 4 *d.*, 21 *s.* 7 *d.*, and 20 *s.* 5 *d.* a week.

The men were well supplied with clothing and necessary accoutrements, which were in good condition.

In the opinion of the Inspector, this police force has been maintained in a satisfactory state of efficiency.

County of Northumberland.

County of Northumberland.

Population in 1861	186,492
Area in acres	1,230,035
Number of constables	127
Population to one constable	1,468

The inspection of this constabulary force commenced on the 4th, and was concluded on the 9th July. At that time the establishment was complete, and consisted in the whole of 127 officers and constables, there having been an augmentation of four men since the last report. Of this number, one inspector, one serjeant, and 12 constables have been appointed under the provisions of the Act 3 & 4 Vict., c. 88, s. 19.

This

No. 2. Northern District.

This is a very fine and healthy body of men, well clothed, and well supplied with the customary accoutrements, all of which were in good serviceable condition. The books, both at head-quarters and in the several divisions, seemed to have been well and systematically kept, and the station-houses, of which there are in the whole 24, containing in the aggregate 91 cells for prisoners, and affording accommodation for 43 officers and constables, were very clean, and in good order.

The Inspector is of opinion that this force has been maintained in a highly satisfactory state of discipline and efficiency.

Borough of Berwick.

Borough of Berwick.

Population in 1861	13,254
Area in acres	8,767
Number of constables	5
Population to one constable	2,652

This police force, five in number, was inspected on the 9th July.

The men are supplied with the usual articles of clothing and accoutrements, and presented an appearance of respectability. An improvement was observed in the manner of keeping the books, and the cells for prisoners were clean, though it must be added that in some respects they are far from being well constructed, and in others, somewhat difficult and inconvenient of access under certain circumstances.

The Inspector is of opinion that this force is not of sufficient strength for the ordinary duties of the borough.

Borough of Morpeth.

Borough of Morpeth.

This borough is consolidated with the county for police purposes.

Borough of Newcastle-upon-Tyne.

Borough of Newcastle-upon-Tyne.

Population in 1861	109,291
Area in acres	5,336
Number of constables	157
Population to one constable	696

The total strength of this police force, when inspected on the 3rd July, was 157, being an addition of three men since the last report; five, however, of the number have been appointed for the service, and are maintained at the expense of two commercial companies, and there were two required to complete the establishment.

This is a fine and, in general appearance, a very effective body of men, having their clothing and accoutrements, with which they are well supplied, in good serviceable condition. The books, both at head-quarters and in the several divisions, appeared to have been properly kept; and the men's quarters, offices, and charge-rooms were clean and in good order; but the cells for prisoners, upon the deplorable state of which it has been necessary so frequently to report, are, without exception, the very worst now remaining in use in the Northern District.

This police force, in the opinion of the Inspector, has been maintained in a satisfactory state of efficiency.

Borough of Tynemouth.

Borough of Tynemouth.

Population in 1861	33,991
Area in acres	5,161
Number of constables	34
Population to one constable	999

At the inspection made of this police force on the 12th July it was found complete, and the same in point of number and organisation as last year; there had, however,

No. 2. Northern District.

ever, been some increase of pay granted to the serjeants and constables, though not to that of the superintendent and inspector.

The men assembled for inspection looked remarkably well, and had their clothing and accoutrements, with which they are exceedingly well supplied, in admirable condition. The books appeared to have been well and methodically kept, and the cells for prisoners were very clean and in good order.

The Inspector has pleasure in reporting that, in his opinion, the police force of this borough has been maintained in a highly satisfactory state of efficiency.

County of York, East Riding.

County of York, East Riding.

Population in 1861	131,711
Area in acres	761,168
Number of constables	84
Population to one constable	1,568

The inspection of this constabulary force, consisting in the whole of 84 officers and constables, was commenced on the 29th July and concluded on the 6th August, at which time the establishment was complete. The pay of the chief constable has been raised from 250 *l.* to 350 *l.*, but the allowance granted to him to cover travelling expenses has been reduced from 150 *l.* to 100 *l.* per annum. The clothing and accoutrements of the men were in good serviceable condition, and the books, both at head-quarters and in the several divisions, seemed to have been, on the whole, well and properly kept.

This riding is well provided with police station-houses, 12 of which have been built at the public expense, and, besides serving as residences for the superintendents of the several divisions, contain in the aggregate 30 very good cells for the temporary confinement of prisoners, and in the main sufficiently commodious court-rooms for business at petty sessions. Seven other buildings have been rented as stations for police constables, in six of which strong-rooms or cells for prisoners have been fitted up,

In the opinion of the Inspector, the efficiency of this force has been well maintained.

Borough of Beverley.

Borough of Beverley.

Population in 1861	9,654
Area in acres	2,228
Number of constables	10
Population to one constable	965

The police force of this borough, consisting in the whole of 10 men, required one man to complete the establishment when inspected on the 1st August; since the last report an addition of 10 *l.* a year has been made to the pay of the head constable.

The men looked well, and had their clothing and accoutrements in good condition; the books seemed to have been well kept, and the office and cells for prisoners were clean and in good order.

The Inspector is of opinion that the general efficiency of this force has been satisfactorily maintained.

Borough of Hull.

Borough of Hull.

Population in 1861	98,994
Area in acres	5,123
Number of constables	152
Population to one constable	651

The police force of this borough was inspected on the 2nd August, when there was one man required to complete the establishment, a constable having died on the eve of the inspection.

In

In the last report it was stated that the maximum of pay granted to police constables was 22 *s.* a week ; it appears now that some few of them are in receipt of 23 *s.* weekly.

The force consists of one chief constable, five inspectors, 13 serjeants, and 133 constables, no change in respect of number having been made since the last report, although the constitution of the force has been varied by the substitution of a serjeant for a constable.

Those assembled for inspection had the appearance of a respectable and effective body of men, well supplied with clothing and accoutrements: the books appeared to have been well kept, and the offices, charge-room, and cells for prisoners were clean and in good order.

The Inspector is of opinion that this force has been maintained in a satisfactory state of efficiency.

County of York, North Riding.

Population in 1861	190,134
Area in acres	1,343,494
Number of constables	153
Population to one constable	1,423

The constabulary force of this riding has had an augmentation of two men since the last report. When inspected between the 25th and 31st of July the establishment was complete, and consisted of one chief constable, nine superintendents, one of whom holds the appointment of deputy chief constable ; seven inspectors, 22 serjeants, and 114 constables ; of this number three serjeants and 12 constables have been appointed under the provisions of Section 19, and one under Section 20 of the 3 & 4 Vict. c. 88 ; and one constable under the provisions of the Act 1 & 2 Vict. c. 80.

The scale for payment of the several ranks and classes of this constabulary force remains unaltered.

In this riding there are 26 police station-houses, 18 of which have been built at the public expense, containing in the aggregate 61 cells for prisoners. These station-houses afford comfortable accommodation for about 36 constables. The cells, offices, and constables' quarters were clean and in good order.

The clothing and accoutrements of the men were in good serviceable condition, and the books appeared to have been well kept.

In the opinion of the Inspector, this force has been maintained in a satisfactory state of efficiency.

Borough of Middlesbrough.

Population in 1861	32,000
Area in acres	1,800
Number of constables	47
Population to one constable	681

This police force, consisting of one head constable, five inspectors, seven serjeants, and 34 constables, was complete when inspected on the 25th July ; of these, two serjeants and 14 constables are maintained at the expense of various commercial firms.

The pay of the head constable has been raised from 230 *l.* to 240 *l.* per annum, and an addition has also been made to the pay of both classes of serjeants of 1 *s.* per week.

The men were well supplied with clothing and the customary accoutrements, and the books appeared to have been well kept. The cells for prisoners were, for the greater part, clean and in good condition ; some of the cells in the lower range, however, were much out of order, and needed repair.

In the opinion of the Inspector, this force has been maintained in a satisfactory state of efficiency.

No. 2.
Northern District.

Borough of Richmond.

Borough of Richmond.

Population in 1861	4,290
Area in acres	2,341
Number of constables	2
Population to one constable	2,145

Since the date of the last report, one man has been added for the service of this borough. The force now consists of one superintendent at 52 *l.* per annum, and one constable at 19 *s.* a week, and, in the opinion of the inspector, it is not sufficient for the ordinary duties of the borough.

Borough of Scarborough.

Borough of Scarborough.

Population in 1861	18,380
Area in acres	2,586
Number of constables	20
Population to one constable	919

This police force, the constitution of which has been varied since last report by the appointment of an inspector in place of one of the constables, was complete when inspected on the 31st July. One man was reported sick.

There has been an addition made of about 1*s.* a week to the pay of the several classes of constables.

The men of this police force presented a very creditable appearance, being well supplied with all requisite clothing and accoutrements. The books appeared to have been well kept, and the offices and cells for prisoners were particularly clean, and in very good order.

In the opinion of the Inspector, this police force has been maintained in a satisfactory state of efficiency.

County of York, West Riding.

County of York, West Riding.

Population in 1861	863,571
Area in acres	1,647,997
Number of constables	645
Population to one constable	1,139

The inspection of the constabulary force of this riding commenced on the 11th, and was concluded on the 30th May. At that time there were four men required to complete the establishment, which, having been augmented by 15 men since the last report, consisted, in the whole, of 645 officers and constables, of whom nine constables had been appointed under the provisions of the Act 3 & 4 Vict. c. 88, s. 19.

The pay of the chief constable has been increased from 500 *l.* to 650 *l.* per annum, with an annual allowance of 250 *l.* for travelling expenses; the scale established last year for the payment of the force in other respects remaining unaltered.

The men assembled for inspection in their respective divisions presented an appearance of respectability and general fitness for the duties required of them; their clothing and accoutrements were in good condition, and the books appeared everywhere to have been well and systematically kept.

In this division of the county there are 61 police station-houses, 37 of which are the property of the riding. Twenty-two of these station-houses are provided with excellent court-rooms for the transaction of petty sessions business; they contain also, in the aggregate, 157 cells for prisoners, and afford comfortable accommodation for about 102 officers and constables. The greater part of the men's quarters and cells for prisoners were inspected, and found everywhere clean and in good order.

In the opinion of the Inspector, this force has been maintained in a satisfactory state of efficiency.

Borough of Bradford.

Population in 1861	106,218
Area in acres	6,590
Number of constables	133
Population to one constable	798

Borough of Bradford.

The police force of this borough has had an augmentation of three serjeants and 11 constables since the last report, and consists now of 133 officers and constables; there were, however, two men required to complete the establishment when it was inspected on the 21st May.

The men looked well, and had their clothing and accoutrements in good condition. The books appeared to have been well kept, and the station-houses, offices, and cells for prisoners, were very clean and in good order.

In the opinion of the Inspector, the efficiency of this force has been well maintained.

Borough of Dewsbury.

Population to one constable	1,512

Borough of Dewsbury.

This police force consists in the whole of 12 men, being the same in point of number as last year, which, in the Inspector's opinion, is not sufficient for the ordinary duties of the borough.

Borough of Doncaster.

Population in 1861	16,430
Area in acres	1,879
Number of constables	18
Population to one constable	913

Borough of Doncaster.

This force, having had an augmentation of two men, now consists of 18 officers and constables, all of whom were present at the inspection made on the 20th May.

The scale for payment has been revised, and is as follows:—Chief superintendent, 150*l.* a year; inspector, 82*l.* 2*s.* 6*d.* a year; serjeants, 28*s.* and 25*s.* 8*d.* a week; and constables, 24*s.* 6*d.*, 22*s.* 9*d.*, 22*s.* 2*d.*, 21*s.*, and 19*s.* 10*d.* a week.

The men are well supplied with clothing and accoutrements, which were in excellent condition; the books seemed to have been properly kept, and the cells for prisoners were very clean and in good order.

The Inspector is of opinion that this force has been maintained in a very satisfactory state of efficiency.

Borough of Halifax.

Population in 1861	54,000
Area in acres	3,538
Number of constables	56
Population to one constable	964

Borough of Halifax.

The police force of this borough, in which there has been no change in respect of number or organization since the last report, consisted, when inspected on the 15th May, of one superintendent, two inspectors, 10 serjeants, and 43 constables. An

No. 2. Northern District.

An addition of 2*s.* per week has been made to the pay of first-class constables. The clothing and accoutrements that had been issued to the men of this police force was of good quality, and in good serviceable condition. The books appeared to have been well kept, and the cells for prisoners were clean and in good order.

The Inspector is of opinion that this police force has been maintained in a satisfactory state of efficiency.

Borough of Huddersfield.

Borough of Huddersfield.

Population in 1861	22,140
Area in acres	700
Number of constables	31
Population to one constable	711

The police force of this borough, in respect of which the only change since the last report has been the appointment of a serjeant in place of a constable, consists of one chief constable, two inspectors, five serjeants, and 23 constables.

The force was complete when inspected on the 29th May, and presented a creditable appearance, being well supplied with good clothing and accoutrements, all of which were in serviceable condition.

The books appeared to have been well kept, on the whole; the Inspector, however, had occasion to remark upon an irregularity in respect to some of the charges for the subsistence of prisoners.

The Inspector is of opinion that this police force has been maintained in a satisfactory state of efficiency.

Borough of Leeds.

Borough of Leeds.

Population in 1861	207,153
Area in acres	19,221
Number of constables	270
Population to one constable	767

The police force of this borough was complete when inspected on the 23rd May, and consisted of one chief constable, two superintendents, seven inspectors, five sub-inspectors, 26 serjeants, and 229 constables; in the whole, 270.

The men presented a creditable appearance; the clothing, together with the usual accoutrements, were in good condition, and the offices and cells for prisoners were clean and in good order.

At the time of the inspection the several ranks and classes of this force were paid according to the scale published in last year's report. The Inspector has since been informed that, by a resolution of the borough council, the scale has been revised, and that it is now as follows:—Chief constable, 310 *l.* a year; superintendents, 130 *l.* a year; inspectors, 91 *l.* a year; sub-inspectors and serjeants, 30 *s.*, 27 *s.*, 26 *s.*, and 24 *s.* 6 *d.* a week; and constables, 24 *s.*, 23 *s.*, 22 *s.*, 21 *s.*, 20 *s.*, and 19 *s.* a week.

The Inspector is of opinion that this police force has been maintained in a satisfactory state of efficiency.

Borough of Pontefract.

Borough of Pontefract.

Population in 1861	5,340
Area in acres	1,860
Number of constables	5
Population to one constable	1,068

The police force of this borough was inspected on the 24th May, and consisted of one superintendent at 120 *l.* a year, one serjeant at 25 *s.* and three constables at 19 *s.* a week.

The

The force was complete, and the men presented a creditable appearance; the clothing, together with the usual accoutrements, were in good condition.

The books seemed to have been well kept, and the office and cells for prisoners were clean and in good order.

In the opinion of the Inspector, this force has been maintained in a satisfactory state of efficiency.

Borough of Ripon.

Population in 1861	6,172
Area in acres	1,446
Number of constables	2
Population to one constable	3,086

There are two men employed in this borough as a police force; the one a superintendent, at 80 *l.* 12 *s.* a year, the other an ordinary constable at 24 *s.* a week.

The Inspector is of opinion that this number is not sufficient.

Borough of Sheffield.

Population in 1861	185,157
Area in acres	22,830
Number of constables	245
Population to one constable	756

This police force, consisting of one chief constable, eight inspectors, 22 sub-inspectors and serjeants, and 214 constables, was inspected on the 16th May, when there were nine men sick, and seven required to complete the establishment.

The clothing and accoutrements in the men's possession were of excellent quality and in good condition, and the books appeared to have been well kept.

The several ranks and classes of this force are paid in accordance with the following scale:—Chief constable, 500 *l.* a year, out of which he is required to find and keep a horse; inspectors, 120 *l.*, 83 *l.* 4*s.*, 78 *l.*, and 72 *l.* 16 *s.* a year; sub-inspectors and serjeants, 28 *s.*, 27 *s.*, 26 *s.*, 25 *s.*, and 24 *s.* a week; constables, 22 *s.*, 21 *s.*, 20 *s.*, 19 *s.*, and 18 *s.* a week.

The want of proper cells for the temporary confinement of prisoners, upon which the Inspector has had occasion to remark in former reports, has been supplied, 19 well-arranged and convenient cells having been provided in the new police station.

The Inspector is of opinion that this police force has been maintained in a satisfactory state of efficiency.

Borough of Wakefield.

Population in 1861	23,181
Area in acres	630
Number of constables	24
Population to one constable	966

At the inspection of this police force on the 11th May, the establishment was complete, and consisted of one chief constable, one superintendent, two inspectors, and 20 constables.

The clothing and accoutrements in the possession of the men were in good serviceable condition; the books seemed to have been well kept, and the cells for prisoners were clean and in good order.

The Inspector is of opinion that this police force has been maintained in a satisfactory state of efficiency.

No. 2.
Northern District.

Borough of York.

Borough of York.

Population in 1861	40,377
Area in acres	2,720
Number of constables	40
Population to one constable	1,009

At the inspection of this police force, which took place on the 17th May, the establishment was complete, and consisted of one chief constable, two inspectors, five serjeants, and 32 constables, including two detectives.

The following is the present scale for the payment of the several ranks and classes of this police force:—Chief constable, 175 *l.* a year; inspectors, 97 *l.* 10 *s.* and 78 *l.* a year; serjeants and detectives, 26 *s.* a week; and constables, 23 *s.*, 22 *s.*, 21 *s.*, 20 *s.*, and 19 *s.* a week.

The men presented a very creditable appearance, and had their clothing and accoutrements in good condition. The books had been well kept, and the cells for prisoners were clean and in good order.

In the opinion of the Inspector, this police force has been maintained in a satisfactory state of efficiency.

RETURN showing the authorised Strength of the several CONSTABULARY and POLICE FORCES in the Northern District, including the additional Constables appointed at the Expense of Companies and Private Persons, in each Year, from 1856 to 1867.

and Police Forces in the Counties and Boroughs of the Northern District.—29 September 1867.

| YEARLY PAY AND ALLOWANCES. | | |

No. 3.—SOUTH OF ENGLAND AND SOUTH WALES DISTRICT.

South of England and South Wales District.

ELEVENTH ANNUAL REPORT of Captain *Edward Willis,* Her Majesty's Inspector of Constabulary and Borough Police Forces of the Southern Counties of *England* and of *South Wales,* for the Year ended the 29th September 1867.

Sir,

I have the honour to inform you that very few alterations have taken place during the year either in the numbers or rates of pay of the different police establishments in the south district.

In Hampshire, however, an arrangement which was under consideration for an alteration of the rates of pay at the date of my former report has since been carried into effect, and by such arrangement the pay of all ranks below that of the superintendents has been augmented, whilst that of the superintendents themselves has been reduced in amount.

Whether the rates of pay which have been established are too low to induce good men to offer themselves in this county, is a matter deserving the consideration of the magistrates, as the chief constable has experienced difficulty during the year in obtaining eligible candidates for the police service.

In two or three of the other forces also, both county as well as borough, small augmentations have been carried into effect in order to provide better protection in places which have increased in buildings and population; but no alterations have been made in the rates of pay.

With respect to the larger borough forces which have heretofore been reported as efficient, I am glad to state that a desire appears to be entertained by the borough municipal authorities, as well as the officers in command of the forces, that the establishments should be maintained in an efficient state; and any reasonable suggestions which have been made from time to time by the inspector have generally received considerate attention.

In regard to those borough forces which might obtain the Government grant, if placed in an efficient state, I have to report no alteration or improvement, and although in many of the different corporations of such boroughs a good many of the members would be glad to see the forces placed in a more satisfactory state, the majority seem to be indifferent about the matter.

Such boroughs should, I think, be required by Act of Parliament to employ a fixed minimum number of men in proportion to the population, say not less than one constable for every thousand of the inhabitants, or else be obliged to enter into an arrangement for the consolidation of their police with those of their respective counties.

Of the small boroughs with populations of less than 5,000 persons, one (Bodmin in Cornwall) has united during the year with the county for police purposes, and I understand that the arrangement is working well and giving general satisfaction.

As respects the small boroughs generally, it would, I think, be desirable that they should also be required by Act of Parliament to unite with the constabulary of their respective counties for police purposes, for their police arrangements are usually of an inefficient character, and they have also generally large areas attached to them, which it is quite impossible for the limited number of police which are employed to patrol and watch.

With respect to the state of crime in the district, the returns which have been furnished to me, show that about 155 fewer indictable offences are reported to have been committed than in the previous year, but that for such offences about 353 more persons were apprehended, and 103 more committed for trial; and that as regards offences which are disposed of summarily by the magistrates, that about 358 less persons were proceeded against.

In regard to vagrancy, the police are now very extensively employed in assisting in the relief of such class of persons when on tramp; the duty consists

consists in providing vagrants with shelter, at places in the immediate charge of the police, or in supplying them with tickets to lodging-houses or the unions, and in very many instances, the police are also empowered to grant food as well as shelter.

The total number of vagrants who are reported to have been provided with shelter and relief by the police during the year, in the south district, is stated to have amounted to 168,024 persons.

In the previous year, the number reported to have been so aided was stated to have been 110,480 persons, so that during the year just ended, there has been an increase of 57,544 vagrants passing through the hands of the police for shelter and relief.

In some districts in Gloucestershire, Herefordshire and Breconshire, the system of granting pass-tickets to vagrant travellers from one union to another has been adopted: the pass secures for the traveller, who has proceeded a certain number of miles, relief at the next union at which he stops, without work being imposed before he starts on his next journey; the system, however, has not been extensively adopted, and it is reported to have had no effect, so far as it has been tried, in reducing vagrancy.

In the following 14 boroughs, viz., Reading, Penryn, Penzance, St. Ives, Devonport, Plymouth, Bristol, Portsmouth, Southampton, Hereford, Leominster, Gravesend, Ramsgate and Bath, the Permissive Act for closing public-houses between the hours of 1 and 4 o'clock in the morning, has been adopted by the town councils; and, with the exception of three of the boroughs, the officers in command of the police, report that the Act has worked beneficially in reducing drunkenness and promoting order in the streets during the night.

An alteration and improvement of the law, in regard to police superannuation, is one in which the police are much interested.

I did, in accordance with the instructions contained in your letter of the 16th of July ultimo, offer some suggestions in modification of those proposed by me in my last annual report, and also added some further suggestions for maintaining the principal sums of such funds from being intrenched upon; and also for augmenting the same, as well as the annual receipts from year to year. I am of opinion, however, that the only mode in which a really satisfactory settlement of the question can be obtained will be through a committee of inquiry.

The boroughs of Helston, Bideford, and Sandwich have, as yet, formed no superannuation funds, but in these boroughs there are no properly organised police establishments.

I have, &c.
(signed) *Edward Willis*,
Her Majesty's Inspector of Constabulary,
South Police District.

To the Right Honourable Gathorne Hardy, Esq., M.P.,
Her Majesty's Principal Secretary of State for
the Home Department, Whitehall,
London.

TABLE of MUNICIPAL BOROUGHS in the South Police District, arranged according to the state of Efficiency or Inefficiency of their respective Police Establishments.

BOROUGHS consolidated for Police purposes with the Constabulary of their respective Counties whose Police Forces are reported to be EFFICIENT.

Wallingford.	Shaftesbury.	Glastonbury.	Marlborough.
Bodmin.	Gloucester City.	Wells.	Aberystwith.
Dartmouth.	Tewkesbury.	Yeovil.	Cardigan.
Honiton.	Andover.	Calne.	Aberavon.
Bridport.	Lymington.	Chippenham.	Pembroke.
Lyme Regis.	Romsey.	Devizes.	

No. 3. South of England and South Wales District.

BOROUGHS having independent Police Establishments the Populations of which respectively exceed 5,000 Persons, and whose Police Forces are reported to be EFFICIENT.

Abingdon.	Bristol.	Gravesend.	Reigate.
Newbury.	Portsmouth.	Maidstone.	Brighton.
Reading.	Southampton.	Margate.	Hastings.
Windsor.	Winchester.	Ramsgate.	Hove.
Barnstaple.	Hereford.	Rochester.	Chichester.
Devonport.	Leominster.	Tunbridge Wells.	Salisbury.
Exeter.	Canterbury.	Monmouth.	Carmarthen.
Plymouth.	Deal.	Newport.	Cardiff.
Dorchester.	Dover.	Bath.	Neath.
Poole.	Faversham.	Guilford.	Swansea.
Weymouth.	Folkestone.		

BOROUGHS having independent Police Establishments the Populations of which respectively exceed 5,000 Persons, but whose Police Forces are reported to be INEFFICIENT.

Falmouth.	Truro.	Newport, Isle of Wight.	Brecon.
Penzance.	Bideford.	Bridgwater.	Haverfordwest.
St. Ives.	Tiverton.		

SMALL BOROUGHS having independent Police Establishments, but with Populations of less than 5,000 Persons.

Maidenhead.	South Molton.	Hythe.	Godalming.
Helston.	Torrington.	Sandwich.	Rye.
Launceston.	Totnes.	Tenterden.	Arundel.
Liskeard.	Blandford	Chard.	Tenby.
Penryn.	Basingstoke.		

COUNTY of BERKS.

County of Berks, including the Borough of Wallingford.

Force - - - - 114 persons.

Area in acres - - - - 442,022 | Acres to each constable - - - 3,877

Population in 1861 - - - 125,955 | Population to ditto, as per census 1861, 1,104

RANKS.	Yearly Pay in £. and Shillings.							Weekly Pay in Shillings and Pence.					
		Superintendents.				Inspectors.		Serjeants.		Constables.			
	Chief Constable.	Merit Class.	1st Class.	2nd Class.	3rd Class.	1st Class.	2nd Class.	1st Class.	2nd Class.	Merit Class.	1st Class.	2nd Class.	3rd Class.
Number of each Rank and Class	1	–	3	2	3	2	–	1	11	16	30	30	15
Rates of Pay of each ditto	£. 400	–	£. s. d. 126 4 7	£. s. d. 115 11 8	£. s. d. 104 18 9	£. s. d. 85 3 4	–	s. d. 27 5	s. d. 25 1	s. d. 23 4	s. d. 22 2	s. d. 19 10	s. d. 18 1

Chief constable—Horse and travelling allowance, 150 *l.*
Superintendents—Horses, forage, carts, stabling, &c. &c. provided.

The police force of this county is composed of 94 married, three widowers, and 17 single men, and the changes which have taken place during the year consequent upon resignations and dismissals, have been five and four respectively, but these have taken place from amongst the men comprising the two lowest class of constables. The greatest length of service in this force extends to 11 years, and 31 persons have served for such period, and 10 for nine years, seven are under one year's service.

During the year 59 cases of breach of cattle regulations were reported, and 51 persons were fined for such offences.

The indictable offences which have been reported, are considerably less in number than in the previous year, but more persons have been apprehended and committed

committed for trial for such offences; for offences, however, which are determined summarily, the return shows a very large decrease as compared with those of the previous year, in the number of persons who have been proceeded against and punished.

The passing of vagrants to the workhouses for shelter by night is undertaken by the police in three unions, and 6,666 of such persons are reported to have been so assisted during the year; in the previous year the number passed by the police to the unions for shelter amounted to 4,963 persons.

The station-houses are in good order, the police well clothed and equipped, and the duties satisfactorily provided for, and I consider the force to be in an efficient state.

Borough of Abingdon.

Force - - - - - 6 persons.

Area in acres - - - -	340	Acres to each constable - - -	57
Population in 1861 - - -	5,680	Population to ditto, as per census 1861,	946

Borough of Abingdon.

RANKS.	Yearly Pay in £. and Shillings.										Weekly Pay in Shillings and Pence.									
	Head Constable or Chief Superintendent.	Superintendents.					Inspectors.				Serjeants.				Constables.					
		1st Class.	2nd Class.	3rd Class.	4th Class.	5th Class.	1st Class.	2nd Class.	3rd Class.	4th Class.	1st Class.	2nd Class.	3rd Class.	4th Class.	Merit Class.	1st Class.	2nd Class.	3rd Class.	4th Class.	5th Class.
Number of each Rank and Class	1	–	–	–	–	–	–	–	–	–	1	–	–	–	–	4				
Rates of Pay of each ditto -	£. 91	–	–	–	–	–	–	–	–	–	s. 21	–	–	–	–	s. 18				

In this borough the pay of the constables has been raised from 17 *s.* to 18 *s.* per week; but in other respects the force has undergone no alteration.

The force is composed entirely of married men, and no changes have taken place during the year, either on account of resignations or dismissals.

The service of the majority of the force ranges between seven and 10 years.

The returns of crime show, as compared with those of the previous year, an increase in indictable offences, as well as in the number of persons who have been apprehended and committed for trial; and rather more persons are also reported to have been proceeded against summarily.

The cells in the new station, which are now in use, are well constructed and satisfactorily maintained; and the force is properly clothed, and working efficiently.

Boroguh of Maidenhead.

Force - - - - - 4 persons.

Area in acres - - - -	2,560	Acres to each constable - - -	640

No. 3. South of England and South Wales District.

An augmentation of one constable has been made to the police force of this borough since the date of my former report.

The police are all married; and there have been no changes, arising from resignations or dismissals during the year.

The service of the head constable extends to 11 years; but that of the other members of the force is for shorter periods, and one is under one year's service.

The indictable offences which have been reported, are one less in number than in the previous year, as are also the apprehensions and committals for trial for such offences; but considerably more persons have been proceeded against for offences which are disposed of summarily.

The duties are now better provided for than formerly; but a proper police station, with suitable cells, is also much required.

Borough of Newbury.

Force - - - - - - 8 persons.

Borough of Newbury.

Area in acres - - - -	1,722	Acres to each constable - -	215
Population in 1861 - - -	6,161	Population to ditto, as per census 1861,	770

RANKS.	Yearly Pay in £. and Shillings.										Weekly Pay in Shillings and Pence.									
	Head Constable or Chief Superintendent.	Superintendents.					Inspectors.				Serjeants.				Constables.					
		1st Class.	2nd Class.	3rd Class.	4th Class.	5th Class.	1st Class.	2nd Class.	3rd Class.	4th Class.	1st Class.	2nd Class.	3rd Class.	4th Class.	Merit Class.	1st Class.	2nd Class.	3rd Class.	4th Class.	5th Class.
Number of each Rank and Class	1	–	–	–	–	–	–	–	–	–	1	–	–	–	–	2	3	1		
Rates of Pay of each ditto	£. s. d. 105 7 6	–	–	–	–	–	–	–	–	–	s. 23	–	–	–	–	s. 19	s. 18	s. 7		

In this borough the pay of the police force has been raised, and an alteration made in the classes of the constables; but in other respects the force has undergone no change.

The force is composed of seven married men and one single man; and the only change which has taken place during the year has been occasioned by the resignation of one serjeant.

Most of the members of this force have served for some years, and only one is under one year's service.

The indictable offences which have been reported are considerably more in number than in the previous year, as are also the apprehensions and committals for trial for such offences; and more persons are also reported to have been proceeded against for offences which are determined summarily.

The number of vagrants passed by the police to the union for shelter and relief are stated to have amounted to 2,061; in the previous year the number so assisted amounted to 18,778 persons.

The police are well clothed and equipped, and the duties are satisfactorily provided for; and I consider the force to be efficient.

Borough of Reading.

Force - - - - - - 34 persons.

Area in acres - - - - 1,922 | Acres to each constable - - 56
Population in 1861 - - - 25,045 | Population to ditto, as per census 1861, 736

Borough of Reading.

RANKS.	Yearly Pay in £. and Shillings.										Weekly Pay in Shillings and Pence.									
	Head Constable or Chief Superintendent.	Superintendents.					Inspectors.				Serjeants.				Constables.					
		1st Class.	2nd Class.	3rd Class.	4th Class.	5th Class.	1st Class.	2nd Class.	3rd Class.	4th Class.	1st Class.	2nd Class.	3rd Class.	4th Class.	Merit Class.	1st Class.	2nd Class.	3rd Class.	4th Class.	5th Class.
Number of each Rank and Class	1	–	–	–	–	–	1	1	1		5	–	–	–	3	7	8	6		
Rates of Pay of each ditto	£. 145	–	–	–	–	–	£. s. 72 16	£. s. 70 4	£. s. 67 12		s. 24	–	–	–	s. 22	s. 21	s. 20	s. d. 18 6		

An augmentation of two constables has been made to the police force of this borough during the year, in order to provide for requirements arising from the extension of buildings and increase of population.

The force is composed of 17 married and 17 single men, and the changes by resignations and dismissals during the year have amounted respectively to 12 and four persons; but of these the majority were composed of constables of the 2nd and 3rd class.

The service of nine members of the force extends from seven to 20 years; but the majority of the force are under four, and 10 are under one year's service.

In this borough the Permissive Act for closing-public houses after one o'clock at night has been adopted; but it is reported not to have had much effect in reducing drunkenness, as the public-houses generally used to close prior to one o'clock before the adoption of the Act.

The indictable offences and apprehensions for such offences are rather more in number than in the previous year, but fewer persons have been proceeded against summarily.

The number of vagrants who were provided with shelter and food during the year is stated to have amounted to 4,311 persons; in the previous year the number so assisted amounted to 3,318 persons.

The police are well clothed and equipped, and the duties generally well provided for; and I consider the force to be efficient.

Borough of Windsor.

Force - - - - - 13 persons.

Area in acres - - - - 2,890 | Acres to each constable - - - 222
Population in 1861 - - - 9,520 | Population to ditto, as per census, 1861 732

Borough of Windsor.

RANKS.	Yearly Pay in £. and Shillings.										Weekly Pay in Shillings and Pence.									
	Head Constable or Chief Superintendent.	Superintendents.					Inspectors.				Serjeants.				Constables.

Number of each Rank and Class	1	–	–	–	–	–	–	–	–	–	1	1	–	–	–	5	5			
Rates of Pay of each ditto	£. 90	–	–	–	–	–	–	–	–	–	s. 21	s. 20	–	–	–	s. 19	s. 18			

No. 3. South of England and South Wales District.

The police arrangements of this borough have undergone no change during the year.

The force is composed of 11 married and two single men, and the service of one member extends to 30 years, and that of four others to upwards of 19 years the remainder have only short periods of service.

The indictable offences which have been reported, are very much less in number, as are also the apprehensions and committals for trial for such offences, than in the previous year, but considerably more persons have been proceeded against for offences which are determined summarily.

The number of the police who are employed are sufficient for the duties, and the force is generally efficient, but the office arrangements require improvement, as considerable delay is displayed in providing information in regard to the duties and state of crime.

County of Cornwall.

Force - - - - - - 193 persons.

County of Cornwall, including the borough of Bodmin.

Area in acres - - -	868,502	Acres to each constable - - -	4,500
Population in 1861 - -	320,218	Population to ditto, as per census 1861,	1,659

RANKS.	Yearly Pay in £. and Shillings.									Weekly Pay in Shillings and Pence.						
	Head Constable or Chief Superintendent.	Superintendents.				Inspectors.				Serjeants.			Constables.			
		Deputy.	1st Class.	2nd Class.	3rd Class.	1st Class.	2nd Class.	3rd Class.	4th Class.	1st Class.	2nd Class.	3rd Class.	Merit Class.	1st Class.	2nd Class.	3rd Class.

Rates of Pay of each ditto -	£. 350	£. s. d. 140 7 6	£. s. d. 110 7 6	£. s. d. 100 7 6	-	£. s. d. 76 - 10	-	-	-	s. d. 26 2	s. d. 25 1	-	-	s. 20	s. 18	

Chief constable—Horse and travelling allowance, 150 *l.*
Superintendents—Horses, forage, carts, stabling, &c. &c. provided.

The police force of this county has been augmented by two constables during the year, consequent upon the consolidation of the police force of the borough of Bodmin with that of the county.

The force is composed of 139 married persons, one widower and 53 single men, and the changes which have occurred during the year, from resignations and dismissals, amounted to 22, and eight respectively; but with the exception of one of the former and two of the latter, the changes have taken place from among the lowest class of the constables.

The greatest length of service in this force extends to 10 years, and 38 persons have served for such period, and 20 for nine years; 24 are under one year's service.

The number of breaches of cattle regulations which were reported by the police, are stated to have amounted to 126, and 104 persons were fined for such offences, and 18 otherwise punished.

The indictable offences which have been reported, are more in number than in the previous year, and more persons have been apprehended and committed for trial for such offences; for offences, however, which are determined summarily, fewer persons have been proceeded against and punished.

In respect to casual vagrants, the police are employed in providing shelter only in four unions, and the number who have been provided with lodgings, and sent to the unions during the year, is stated to have amounted to 222 persons, in the previous year the number so provided only amounted to 165 persons.

The station-houses are in good order, the police well clothed and equipped, and the duties satisfactorily provided for, and I consider the force to be in an efficient state.

Borough of Falmouth.

Force - - - - - 4 persons.

Area in acres - - - - - - 40 | Acres to each constable - - - - 10

Rates and Pay of each ditto	£. s. d. 80 – –	–	–	–	–	–	–	–	–	–	–	–	–	–	–	s. 21				

No alteration has taken place in the number or pay of the police of this borough since the date of my former report.

Three members of the force are married, and one is single; and no changes have taken place during the year on account of resignations or dismissals.

The service of the head constable extends to 32 years, and that of one of the constables to 11 years; the others have short service.

The indictable offences which have been reported are more in number than in the previous year, and more persons have been apprehended and committed for trial for such offences; but for offences which are determined summarily, fewer persons have been proceeded against.

The police do not undertake the relief of vagrants.

The organisation of this force is not satisfactory, and more men are required to place the force in an efficient state.

Borough of Helston.

Force - - - - - 1 person.

Area in acres - - - - - - 292 | Acres to each constable - - - - 292
Population in 1861 - - - - 3,843 | Population to ditto, as per census 1861, 3,843

There is no properly organised police force in this borough, nor any police station; and the cells, which are in an isolated building, are quite unfit places for the detention of prisoners.

One person is appointed to act as constable; but the police arrangements are altogether of an inefficient character, and no superannuation fund has been established.

No alteration has taken place in the number or pay of the police force of this borough during the year.

The services of the two constables, who are both married, extend to 19 and 20 years respectively.

The indictable offences which have been reported, are more in number than in the previous year, but no more persons have been committed for trial. More persons are also reported to have been proceeded against for offences which are determined summarily.

The police do not act for the relief of vagrants.

Considering the extent and population of this borough, I am of opinion that more men are required to perform the duties in an efficient manner.

Borough of Penryn.

Force - - - - - - 2 persons.

Area in acres - - - - 298 | Acres to each constable - - - 149
Population in 1861 - - - 3,547 | Population to ditto, as per census 1861, 1,773

No changes have taken place during the year in the composition of the police force of this borough.

Both of the constables are married, and one has served for 10, and the other for three years.

Two indictable offences only are reported to have taken place, and one person to have been apprehended and committed for trial. Sixty-two persons were pro ceeded against summarily, which is rather more than in the previous year.

The Permissive Act for closing public-houses between one and four o'clock in the morning has been adopted by the town council, but it is reported not to have had any visible effect in reducing drunkenness.

The duties, to be efficiently provided for, both by day and night, would require the services of another constable.

Borough of Penzance.

Force - - - - - - 7 persons.

Area in acres - - - - 440 | Acres to each constable - - - 62
Population in 1861 - - - 9,414 | Population to ditto, as per census 1861, 1,347

Rates of Pay of each ditto.	£. 105	-	-	-	-	-	-	-	-	-	s. 22	-	-	-	-	s. d. 18 8				

The police force of this borough is composed of married men only, and no change has taken place during the year on account of resignations or dismissals.

The service of three of the constables is under five years, but all the other members of the force have served for nine years and upwards, and the head constable for more than 25 years.

The indictable offences which have been reported, are one less in number than in the previous year, but one more person has been committed for trial for such offences, and more persons have also been proceeded against than in the previous year for offences which are determined summarily.

No. 3. South of England and South Wales District.

The police act, to a certain extent, for the relief of vagrants, and are empowered also to grant food when necessary. Twenty-one of such persons are reported to have been provided with shelter during the year.

The Permissive Act for closing public-houses between one and four o'clock in the morning has been adopted by the town council, and it is stated to have reduced drunkenness, and promoted order and quiet.

The police force of this borough is insufficient in number for the general requirements of the district and population under their charge.

Borough of St. Ives.

Force - - - - - - 1 person.

Borough of St. Ives.

Area in acres - - - - 1,876 | Acres to each constable - - - 1,876
Population in 1861 - - - 7,072 | Population to ditto, as per census 1861, 7,072

Rates of Pay of each ditto	-	-	-	-	-	-	-	-	-	-	-	-	-	-	-	s. 15			

The constable of this borough, in addition to his pay as constable, is allowed yearly 3 *l.* for being inspector of nuisances, 5 *l.* for being inspector of weights and measures, and 2 *l.* 10 *s.* for being manager of the town clock. The constable is married, and has served for a period of nine years.

One indictable offence only is reported to have taken place during the year, and for such offence one person was apprehended and committed for trial; for offences which are determined summarily, 99 persons were proceeded against, which is less than in the previous year.

The Permissive Act for closing public-houses after 12 o'clock at night has been adopted by the town council, and it is stated to have worked advantageously.

The area of the borough is extensive, and the population considerable, and it is therefore quite impossible for one man to afford adequate protection.

Borough of Truro.

Force - - - - - - 6 persons

Borough of Truro.

Area in acres - - - - 1,103 | Acres to each constable - - - 183

Rates of Pay of each ditto	£. s. 76 14	-	-	-	-	-	-	-	-	-	s. d. 20 6	-	-	-	-	s. 17	s. 16		

In

In this borough the police arrangements have undergone no alteration during the year.

The force is now composed of six married men, and the changes among the constables arising from resignations and dismissals during the year amounted to two and one respectively.

The service of the head constable extends to 29 years, and that of one of the constables to six years, but the service of none of the others exceeds two years.

The indictable offences which have been reported, are more than in the previous year, and more persons have been apprehended and committed for trial for such offences, but for offences which are determined summarily, fewer persons have been proceeded against.

The police do not undertake the relief of vagrants.

The duties are inadequately provided for, and I have again to report the police force of this borough to be in an inefficient state.

County of Devon.

Force - - - - - - 334 persons.

Area in acres - - - -	1,616,717	Acres to each constable - -	4,840
Population in 1861 - - -	399,535	Population to ditto, as per census 1861,	1,196

County of Devon, including the boroughs of Dartmouth and Honiton.

RANKS.	Yearly Pay in £. and Shillings.									Weekly Pay in Shillings and Pence.						
		Superintendents.					Inspectors.			Serjeants.			Constables.			
	Chief Constable.	Deputy.	1st Class.	2nd Class.	3rd Class.	4th Class.	1st Class.	2nd Class.	3rd Class.	1st Class.	2nd Class.	3rd Class.	Merit Class.	1st Class.	2nd Class.	3rd Class.
Number of each Rank and Class	1	1	6	7	–	–	–	–	–	24	10	–	–	90	130	65
Rates of Pay of each ditto -	£. s. d. 400	£. s. d. 156 5 3¾	£. s. 109 10	£. s. d. 100 7 6	–	–	–	–	–	s. d. 25 1	s. d. 22 2	–	–	s. 21	s. d. 18 8	s. 16

Chief constable—Horse and travelling allowance, 200 *l.*
Superintendents—Horse and keep costs 45 *l.*, and 9 *l.* in lieu of clothing.

The police force of this county is composed of 241 married men, 7 widowers, and 86 single men, and the changes arising from resignations and dismissals during the year have amounted to 36 and 12 respectively; but, with the exception of one resignation, the changes have been confined to the two lower class of constables.

The greatest length of service in this force extends to ten years, and 83 persons have served for such period, and 23 for nine years; 45 are under one year's service.

The number of breaches of cattle regulations which have taken place, are reported to have amounted to 427, and 374 persons were fined for such offences, and 21 otherwise punished.

The criminal returns show a decrease in indictable offences, but rather more persons are stated to have been apprehended and committed for trial for such offences. For offences, however, which are determined summarily, a very considerable decrease is reported in the number of persons who have been proceeded against.

As respects casual vagrants, the police act as assistant relieving officers in three unions, and are empowered to grant food, and the number who have been passed by them to the unions during the year are stated to have amounted to 6,666 persons, of whom 1,510 were provided with food. In the previous year the number passed to the unions amounted to 4,963 persons.

The station-houses generally are in good order, and a new station-house is in course of erection at Topsham. I have, however, again to draw attention to the necessity of a proper police-station, with suitable lock-up places in Torquay, as the places at present in use for the detention of prisoners are quite unfit to detain persons in for any length of time. The police are well clothed and appointed, and the duties satisfactorily arranged, and I consider the force to be in an efficient state.

No. 3. South of England and South Wales District.

Borough of Barnstaple.

Borough of Barnstaple.

Force - - - - - 10 persons.

Area in acres - - - - 2,549 | Acres to each constable - - - 254
Population in 1861 - - - 10,743 | Population to ditto, as per census 1861, 1,074

Rates of Pay of each ditto	£. 120	–	–	–	–	–	–	–	–	–	s. 24	–	–	–	–	s. 18	s. 17			

The wages of the constables of this borough have been raised 1 *s.* per week, but in other respects the force has undergone no change.

The force is composed of nine married and one single men, and no changes arising from resignations or dismissals have taken place during the year.

The service of one of the constables extends to 14 years; but that of all other members of the force does not exceed six years.

The return of crime shows a decrease in indictable offences, but the committals for trial are the same as in the previous year; fewer persons, however, are reported to have been proceeded against summarily.

The number of vagrants provided with shelter, and in some instances also with food, are stated to have amounted to 13 persons; in the previous year only nine persons were so aided.

The police are well clothed and equipped, the duties satisfactorily arranged, and I consider the force to be efficient.

Borough of Bideford.

Force - - - - - 2 persons.

Borough of Bideford.

Area in acres - - - - 4,510 | Acres to each constable - - - 2,255
Population in 1861 - - - 5,742 | Population to ditto, as per census 1861, 2871

Rates of Pay of each ditto	£. s. 72 16	–	–	–	–	–	–	–	–	–	–	–	–	–	–	s. 18				

The police force of this borough has undergone no change of any kind during the year.

Both officers are married, and one has served for 13 and the other for five years.

The returns of crime show, as compared with those of the previous year, a considerable increase in indictable offences, as well as in the number of persons who have been apprehended and committed for trial for such offences; rather fewer persons are, however, reported to have been proceeded against summarily.

The

The police do not act for the relief of vagrants.

The lock-up places are very badly situated, being underground, and are quite eficient of natural light and ventilation.

No superannuation fund has been established.

The duties are not properly provided for, and the force is insufficient in number for the proper watching of the borough.

Borough of Devonport.

Force - - - - 46 persons.

Area in acres - - - -	2,380	Acres to each constable - - -	51
Population in 1861 - - -	50,440	Population to ditto, as per census 1861 -	1,096

The police of this borough has undergone no alteration since the date of my last report.

The force is composed of 39 married, one widower, and six single men, and the changes which have taken place during the year have been occasioned by the resignation of six, and the death of one constable.

The service of several of the officers extends to more than 20 years, but the great majority of the force are under six years' service, and seven are under one year's service.

The returns of crime show a decrease in indictable offences, as well as in the number of persons who have been committed for trial, but more persons have been proceeded against and punished summarily than in the previous year.

The Permissive Act for closing public-houses between 1 and 4 o'clock in the morning has been adopted by the town council, and is reported to have operated beneficially in reducing drunkenness and promoting order in the town.

The force is well clothed and equipped, and the duties fairly provided for, and I consider the force to be efficient.

City of Exeter.

Force - - - - 44 persons.

No. 3. South of England and South Wales District.

An augmentation of one inspector and six constables has been made to the police force of this city during the year.

The force is composed of 32 married, one widower, and 11 single men; and the changes which have taken place during the year, owing to resignations and dismissals, have amounted to four and one respectively.

The service of the head constable and another officer extends to 20 years and upwards, that of seven others to upwards of 10 years, and 13 are under one year's service.

The returns of crime show a decrease in indictable offences, as well as in the number of persons who have been apprehended and committed for trial for such offences; and fewer persons are also shown to have been proceeded against summarily than in the previous year.

The police do not act for the relief of vagrants.

The duties for all ordinary purposes appear to be sufficiently provided for, and I consider the force to be efficient.

Borough of Plymouth.

Force - - - - 79 persons.

Borough of Plymouth.

Area in acres - - - -	600	Acres to each constable - - - -	7

Number of each Rank and Class	1	1	–	–	–	–	2	2	–	–	1	5	1	–	3	20	20	23		
Rates of Pay of each, ditto -	£. 120	£. 120	–	–	–	–	£. 78	£. s. 72 16	–	–	s. 25	s. 24	s. 24	–	s. 22	s. d. 20 6	s. 19	s. 16		

An addition of one constable was made to this force in January last.

The force is composed of 53 married, two widowers, and 24 single men, and the changes which have taken place during the year, owing to resignations and dismissals, have amounted to 13 and 9 respectively, chiefly, however, from the 3rd or lowest class of constables.

The service of six members extends to upwards of 20 years, and that of 10 others to between 10 and 20 years, and 26 are under one year's service.

The return of crime shows a considerable increase in indictable offences, as well as in the number of persons who have been apprehended and committed for trial, and considerably more persons are also shown to have been proceeded against, and punished summarily than in the previous year.

The police act for the relief of vagrants, and 660 of such persons are stated to have been provided with shelter and sent to the union during the year; in the previous year the number so aided amounted to 709 persons.

The Permissive Act for closing public-houses between one and four o'clock a.m. has been adopted by the town council, and it is stated that it acts beneficially in tending to promote order in the town during such hours.

The police are well clothed and equipped, and the duties properly provided for, and I consider the force to be efficient.

Borough of South Molton.

Force - - - - - 2 persons.

Area in acres - - - - 6,264 | Acres to each constable - - - 3,132
Population in 1861 - - - 3,830 | Population to ditto, as per census 1861, 1,915

Number of each Rank and Class	1	-	-	-	-	-	-	-	-	-	-	-	-	-	-	1				
Rates of Pay of each, ditto	£. 78	-	-	-	-	-	-	-	-	-	-	-	-	-	-	s. d. 16 6				

The police force of this borough has undergone no change during the year.

One officer is married, and the other is a widower, and both have been in the service of the borough for a considerable number of years.

Fewer indictable offences are reported to have taken place than in the previous year, but the same number of persons have been committed for trial; fewer persons are also reported to have been proceeded against and punished summarily.

Fourteen vagrants are reported to have been provided with shelter by the police; in the previous year the number relieved by the police amounted to 21 persons.

The area of this borough is very extensive, and it would be quite impossible for two officers to patrol and watch it efficiently.

Borough of Tiverton.

Force - - - - 7 persons.

Area in acres - - - - 17,650 | Acres to each constable - - - 2,521
Population in 1861 - - - 10,447 | Population to ditto, as per census 1861, 1,492

Rates of Pay of each, ditto	£. 70	-	-	-	-	-	-	-	-	-	s. 21	-	-	-	-	s. 19	s. 15			

The police force of this borough is composed of seven married persons, and there have been no changes in the force during the year.

The service of one of the constables extends to 16 years, but that of all the other members of the force is under seven years.

The returns of crime show a decrease in indictable offences as well as in the number of persons who have been apprehended and committed for trial, and fewer persons are also reported to have been proceeded against and punished summarily than in the previous year.

The police do not act for the relief of vagrants.

The area of this borough is very extensive, and the police force is too limited in number to provide efficiently for the watching and protection of the district under their charge.

No. 3.
South of England and South Wales District.

Borough of Torrington.

Force - - - - - 2 persons.

Borough of Torrington.

No alteration has taken place during the year in the police arrangements of this borough, nor had any alteration been carried into effect to improve the cells at the date of my inspection.

The borough authorities, however, talked of providing a proper police station, with improved lock-up places.

No return of crime or duties has been furnished.

The police are insufficient in number to provide for the proper watching of the borough by day and night.

Borough of Totnes.

Force - - - - - 3 persons.

Borough of Totnes.

Rates of Pay of each, ditto	£. 60	-	-	-	-	-	-	-	-	-	-	-	-	-	-	s. 18				

No alteration has taken place during the year in the police arrangements of this borough.

The force is composed of two married persons and one widower, and their respective services extend to between seven and ten years.

Two indictable offences only have been reported during the year, and only one person was committed for trial.

For offences which are determined summarily, 25 persons were proceeded against, which is a decrease in the number so dealt with as compared with the previous year.

The police do not act for the relief of vagrants.

Although

Although the police force of this borough numbers three persons, two only are able to take active duty, and considering the area and population of the district, I do not consider the force sufficient for the duties.

County of Dorset.

Force - - - - 133 persons.

Area in acres - - - - 624,758 | Acres to each constable - - - 4,697
Population in 1861 - - - 159,303 | Population to ditto, as per census 1861, 1,197

County of Dorset, including the Boroughs of Bridport, Lyme, and Shaftesbury.

Rates of Pay of each, ditto	£. 300	£. s. d. 158 3 4	£. s. d. 136 17 6	£. s. d. 126 4 7	£. s. d. 115 11 8	–	–	–	–	–	s. d. 26 10	s. d. 25 1	–	–	–	s. 21	s. d. 19 3	s. d. 18 1		

Chief Constable.—Horse and travelling allowance, 150 *l.*

Superintendents.—Horses, forage, carts, stabling, &c. provided.

The police force of this county is composed of 110 married and 23 single men, and the changes which have taken place during the year from resignations and dismissals have amounted to 13 and four respectively; the latter, however, were altogether from the lowest class of the constables. Two constables resigned, owing to bad health and inability to serve.

The greatest length of service in this force extends to 11 years, and 30 persons have served for such period, and 20 for 10 years; 10 are under one year's service.

During the year 91 cases of breach of cattle regulations were reported by the police, and 77 persons were fined for such offence.

The indictable offences which have been reported are less in number than in the previous year, and considerably fewer persons have been apprehended and committed for trial for such offences; for offences, however, which are determined summarily, there has been a considerable increase in the number of persons who have been so proceeded against.

The police act for the relief of vagrants in eight unions, and the number of this class of persons who have been lodged by the police and sent to the unions, is stated to have amounted to 2,814 persons; in the previous year the number so assisted amounted to 1,645 persons.

The station-houses are in excellent order, the police well clothed and equipped, and the duties properly provided for; and I consider the force to be in an efficient state.

As the chief constable is about to retire, I take this opportunity of recording my opinion of the very valuable services he has rendered to the county, both by the admirable manner in which he organized the police force, as well as by his mode of administering the duties, whereby the force has been maintained in a high state of discipline and efficiency.

No. 3.
South of England and South Wales District.

Borough of Blandford.

Force - - - - 2 persons.

Borough of Blandford.

Area in acres - - - -	27	Acres to each constable - - -	13

Rates of Pay of each, ditto	–	–	–	–	–	–	–	–	–	–	–	–	–	–	–	s. 16				

No alteration has taken place in the police arrangements of this borough.

The two constables are both married, and their respective periods of service extend to two and three years. The superintendent who looks after them, and who receives 5*l.* a-year for this appointment, has served the borough in such capacity for 16 years, but he takes no active police duty.

The indictable offences and committals for trial for such offences which have been reported are one more in number in each instance than in the previous year, but a more considerable increase is reported in the number of persons who have been proceeded against for offences which are determined summarily.

The police do not act for the relief of vagrants.

In order to be efficiently watched, the borough ought to have two men for night and one for day duty.

Borough of Dorchester.

Force - - - - 7 persons.

Borough of Dorchester.

The police force of this borough has undergone no change since the date of my former report.

The force is composed altogether of married men, and no changes have taken place among the members during the year.

The service of the head constable extends to 19 years, but that of the other members of the force ranges between one and eight years.

The indictable offences which have been reported are about the same as in the previous year, but rather more persons have been committed for trial. For offences, however, which are determined summarily, considerably fewer persons have been proceeded against than in the previous year.

A new

A new station-house was in course of construction at the period of my inspection.

The police are well clothed and equipped, and the duties generally well provided for, and I consider the force to be efficient.

No. 3. South of England and South Wales District.

Borough of Poole.

Force - - - - 14 persons.

Area in acres - - - -	4,749	Acres to each constable - - -	339
Population in 1861 - - -	9,759	Population to ditto, as per census 1861,	697

The police force of this borough has undergone no alteration since my last report.

The force is composed entirely of married men, and the changes during the year amounted to two dismissals from the rank of constables.

Two members of the force have served for 20 years and upwards, but the service of none of the others has exceeded 10 years, and seven are under three years' service.

The indictable offences which have been reported, as well as the apprehensions and committals for trial for such offences, are considerably less in number than in the previous year, and fewer persons are also reported to have been proceeded against for offences which are determined summarily.

Thirty vagrants are reported to have been passed by the police to the union; in the previous year 20 were so assisted.

The police are well clothed, and the duties well provided for, and I consider the force to be efficient.

Borough of Weymouth.

Force - - - - 12 persons.

Area in acres - - - -	1,600	Acres to each constable - - -	133
Population in 1861 - - -	11,383	Population to ditto, as per census 1861,	948

No. 3. South of England and South Wales District.

The police force of this borough is composed of 11 married men and one single man, and the only change among the members during the year was occasioned by the resignation of one of the constables.

The service of one of the officers extends to 21 years, and five have served for upwards of 10 years; the remainder of the force are of short service.

The indictable offences which have been reported are considerably less in number than in the previous year, as are also the apprehensions and committals for trial for such offences, and considerably fewer persons have also been proceeded against summarily.

The police act for the relief of vagrants, and are empowered, in cases of necessity, to grant food; 339 of such class of persons were provided with shelter and sent to the workhouse during the year; in the previous year only 228 persons were so assisted.

The police are well clothed and equipped, and the duties generally well provided for, and I consider the force to be efficient.

County of Gloucester.

Force - - - - 288 persons.

County of Gloucester, including the City of Gloucester and Borough of Tewkesbury.

Chief Constable.—Horse and travelling allowance, 100 *l.*
Superintendents.—Provide their own horses, and allowed 40 *l.* each for keep, &c.

The police force of this county has undergone some slight alterations in the classes of the constables, but the general number is the same as at the date of my former report.

The force is composed of 172 married, 7 widowers, and 109 single men, and the changes, from resignations and dismissals during the year have amounted to 22 and 19 respectively; but, with the exception of one dismissal and one resignation from the rank of serjeant, the remainder have taken place from among the two lower classes of the constables.

The greatest length of service in this force extends to 27 years, and 12 persons have served for such period, 34 for upwards of 20 years, and 58 between 10 and 20 years; 32 are under one year's service.

The number of breaches of cattle regulations which have taken place during the year are stated to have amounted to 129, and 104 persons were fined for such offences.

The indictable offences which have been reported are less in number than in the previous year, but rather more persons have been apprehended and committed for trial for such offences. For offences, also, which are determined summarily there is a decrease in the number of persons who have been proceeded against.

In this county the police act for the relief of casual vagrants in 11 unions, and the number of persons which have been passed by them to lodging-houses and the unions has amounted to 18,517 persons; in the previous year the number so assisted amounted to 14,630 persons. As the system of giving pass tickets to vagrants is adopted in parts of this county, it appears extraordinary that, instead

instead of a decrease of vagrancy, the returns should show so large an increase of this class of persons applying to the police for relief; the system, however, requires extension, in order to judge fairly of its merits.

A new and very satisfactory station-house has been constructed at Whitminster, and another is in the course of building at Stow-on-the-Wold. At Westbury-on-Trym, near to Bristol, the police are very inconveniently circumstanced for the want of a proper police station, as many prisoners have to be taken in charge there. I understand, however, that, since my inspection, the chief constable has brought the matter before the notice of the magistrates, who have consented to provide a station in that locality.

The clothing of the police of this county has latterly been very much improved, both in quality and make, and it is now equal to that of other county forces. The duties are satisfactorily provided for, and I consider the force to be in an efficient state.

City of Bristol.

Force - - - - - - 303 persons.

Area in acres - - - -	4,683	Acres to each constable - - -	15
Population in 1861 - - -	154,093	Population to ditto, as per census 1861,	508

RANKS.	Yearly Pay in £. and Shillings.										Weekly Pay in Shillings and Pence.

		1st Class.	2nd Class.	3rd Class.	4th Class.	5th Class.	1st Class.	2nd Class.	3rd Class.	4th Class.	1st Class.	2nd Class.	3rd Class.	4th Class.	Merit Class.	1st Class.	2nd Class.	3rd Class.	4th Class.	5th Class.
Number of each Rank and Class	1	–	–	–	–	–	5	–	–	–	4	8	26	–	–	1	194	58	6	
Rates of Pay of each, ditto -	£. 380	–	–	–	–	–	£. 117	–	–	–	s. 30	s. 26	s. 25	–	–	s. 24	s. 21	s. 18	s. 16	

Head Constable.—Annual allowance for horse, 50 *l.*

The police force of this city is composed of 199 married, 12 widowers, and 92 single men, and the changes during the year which have been occasioned by resignations and dismissals have amounted to 26 and 16 respectively; three others were obliged to leave on account of bad health and inability to serve, and four were superannuated.

The service of six members of the force exceeds 31 years, that of 25 others to more than 25 years, and of 14 more to upwards of 20 years; eight others have served 15 years and 61 upwards of 10 years; the remainder have different periods of shorter service, and 38 have not completed one full year.

The indictable offences which have been reported are considerably more in number than in the previous year, and more persons have also been apprehended and committed for trial; but for offences which are determined summarily fewer persons have been proceeded against.

The police do not act for the relief of vagrants.

The Permissive Act for closing public-houses between 1 and 4 o'clock in the morning has been adopted in this city by the town council, and the chief superintendent is of opinion that it has tended to reduce drunkenness and promote order.

The new police-station which is building in the St. Philips' district of the town appears to be well arranged, and will, I think, add considerably to the convenience of the police, and the benefit of the service generally.

The police are properly clothed and equipped, and the duties satisfactorily provided for, and I consider the force to be in an efficient state.

Chief Constable.—Horse and travelling allowance, 150 *l.*
Superintendents.—Horse, forage, carts, stabling, &c., provided.

In this county a re-arrangement of the pay of the force generally, and of the classes of the constables, has taken place during the year; that of the superintendents has been reduced in amount, but the pay granted to the other ranks and classes appears rather to have been augmented.

The force is composed of 180 married, seven widowers, and 66 single men, and the changes from resignations and dismissals during the year, are stated to have amounted to 33 and 22 respectively; but with the exception of the dismissal of one superintendent and the resignation of one serjeant, the other changes appear to have taken place entirely from the two lower classes of the constables, and mainly from the lowest class, or the men of very short service; six other constables left the force on account of bad health and inability to serve.

The greatest length of service in this force extends to 27 years, and five persons have served for such period; 20 others for more than 20 years; and 59 for periods between 10 and 20 years; 43 are under one year's service.

During the year 96 cases of breaches of cattle regulations are reported to have taken place, and 77 persons were fined for such offences.

The indictable offences which have been reported are less in number than in the previous year, and fewer persons have been apprehended and committed for trial for such offences; fewer persons are also reported to have been proceeded against for offences which are determined summarily.

The number of vagrants who were passed by the police to the unions during the year, are stated to have amounted to 12,118 persons; in the previous year the number so provided with shelter amounted to 8,767 persons.

The station-houses are in excellent order, and the police are well clothed, equipped, and also well perfected in drill, but the force has not been maintained during any portion of the year up to the established number, and at times the deficiences have been considerable, and had it not been that a reserve of six constables is allowed at head quarters for filling up the different beat vacancies, I should scarcely have felt myself justified in reporting the force as having been maintained sufficiently effective in numbers for the due fulfilment of the duties.

Borough of Basingstoke.

Force - - - - 5 persons.

Area in acres - - - - 4,036 | Acres to each constable - - - 807
Population in 1861 - - - 4,654 | Population to ditto, as per census 1861, 930

Borough of Basingstoke.

The police arrangements of this borough are the same as at the date of my former report.

The force is composed entirely of married men, and no changes have taken place among the members during the year.

The service of one constable extends to 12 years, but that of no other member of the force exceeds six years.

The indictable offences which have been reported are less in number than in the previous year, as are also the apprehensions and committals for trial for such offences; but more persons have been proceeded against for offences, which are disposed of summarily.

The police do not act for the relief of vagrants.

This borough has a large country area, which cannot be effectually watched by so small a force; but if the duties of the police were confined to the town the force would be sufficient.

Borough of Newport (Isle of Wight).

Force - - - - 5 persons.

Area in acres - - - - 156 | Acres to each constable - - - 31
Population in 1861 - - - 7,934 | Population to ditto, as per census 1861, 1,586

Borough of Newport.

The police of this borough are all married men, and there have been no changes during the year among the members of this force.

The service of the head officer extends to 29 years, and that of one of the constables to 17 years, and the service of the other members of the force ranges between 10 and 7 years.

No. 3. South of England and South Wales District.

The indictable offences which have been reported are considerably in excess of the number reported last year, and considerably more persons have been apprehended and committed for trial for such offences. For offences also which are determined summarily, the returns show a considerable increase in the number of persons who have been proceeded against.

This force is defective in organization, and insufficient in number, and I am, therefore, again under the necessity of reporting the force as inefficient.

Borough of Portsmouth.

Force - - - - 95 persons.

Borough of Portsmouth.

Area in acres - - - -	4,515	Acres to each constable - - -	47
Population in 1861 - - -	94,799	Population to ditto, as per census 1861,	787

RANKS.	Yearly Pay in £. and Shillings.										Weekly Pay in Shillings and Pence.									
	Head Constable or Chief Superintendent.	Superintendents.					Inspectors.				Serjeants.				Constables.

Number of each Rank and Class	1	–	–	–	–	–	6	–	–	–	1	12	–	–	–	22	24	29		
Rates of Pay of each, ditto -	£. 240	–	–	–	–	–	£. 85	–	–	–	s. d. 29 6	s. 26	–	–	–	s. d. 23 6	s. 21	s. 19		

The police of this borough is composed of 79 married, two widowers, and 10 single men, and the changes which have taken place among the members on account of resignations and dismissals during the year, have amounted to 16 and 10 respectively, and two members are reported to have died.

The service of two officers extends to upwards of 25 years, and that of three others to upwards of 20 years; seven have served for upwards of 15 years, and 10 for more than 10 years; the remainder have different periods of short service, and 16 are under that of one year.

The indictable offences which have been reported are less in number than in the previous year; but about the same number of persons have been apprehended and committed for trial for such offences; for offences which are determined summarily more persons have been proceeded against.

During the year, 3,808 vagrants were passed by the police to the union; in the previous year, the number so assisted amounted to 3,598 persons.

The Permissive Act for closing public-houses between 1 and 4 o'clock a. m., has been adopted by the town council, and it is stated that the adoption of the Act has tended to promote order in the town during such hours.

The head quarter station is inconveniently small, and the cells very defective in construction.

The police are well clothed and equipped, and the duties generally well provided for, and I consider the force to be in an efficient state.

Borough of Southampton.

Force - - - - 63 persons.

Area in acres - - - -	2,630	Acres to each constable - - -	41

The police of this borough consists of 53 married persons, and eight single men, and the changes which took place during the year were occasioned by the resignation of five, and the dismissal of two of the constables.

The service of the head constable extends to 32 years, and that of the inspector to 30 years, and the service of 10 other members ranges between 27 and 21 years. One serjeant has also completed 19 years, and the service of the remainder ranges between one and 14 years, and five are under one year's service.

Rather more indictable offences are reported to have taken place than in the previous year, and more persons have been apprehended and committed for trial for such offences; but fewer persons have been proceeded against for offences, which are determined summarily.

The Permissive Act for closing public-houses between 1 and 4 o'clock a. m., has been adopted in this borough, and is said to have had much effect in reducing drunkenness, and promoting order in the streets.

The police are well clothed, and the duties satisfactorily provided for, and I consider the force to be efficient.

City of Winchester.

Force - - - - 15 persons.

Area in acres - - - -	1,043	Acres to each constable - - -	69
Population in 1861 - - -	14,776	Population to ditto, as per census 1861	985

Rates of Pay of each, ditto	£. 104	–	–	–	–	–	–	–	–	–	s. 22	–	–	–		s. 20				

No alteration has taken place in the police arrangements in this city since the date of my former report.

The force is composed of 14 married and one single man, and no changes have taken place during the year among the members.

No. 3. South of England and South Wales District.

The service of two members of the force extends to upwards of 25 years, and that of nine others to more than 10 years; the remainder have different periods of short service.

The return of crime shows a decrease in indictable offences, as well as in the number of persons who have been apprehended and committed for trial for such offences, and fewer persons are also reported to have been proceeded against summarily than in the previous year.

The relief of vagrants is not undertaken by the police.

The police are well clothed and appointed, and the duties generally well provided for, and I consider the force to be in an efficient state.

County of Hereford.

Force - - - - - 262 persons.

County of Hereford.

Area in acres - - - -	510,686	Acres to each constable - - -	8,236
Population in 1861 - - -	102,359	Population to ditto, as per census 1861	1,650

		Deputy.	1st Class.	2d Class.	3rd Class.	4th Class.	1st Class.	2nd Class.	3rd Class.	4th Class.	1st Class.	2nd Class.	3rd Class.	4th Class.	Merit Class.	1st Class.	2nd Class.	3rd Class.	4th Class.	5th Class.
Number of each Rank and Class	1	–	3	3	3	–	–	–	–	–	6	6	–	–	–	15	15	10		
Rates of Pay of each, ditto -	£. 255	–	£. s. d. 118 12 6	£. s. d. 109 10 –	£. s. d. 100 7 6	–	–	–	–	–	s. 28	s. 25	–	–	–	s. 21	s. d. 19 10	s. d. 18 1		

Chief Constable.—Horse and travelling allowance, 90 *l.*

Superintendents—Provide their own horses; and an allowance for keep, &c., one 48 *l.*, one 44 *l.*, and seven 40 *l.*; carts and harness are provided by the county.

The police force of this county has undergone no alteration during the year either in number or pay, but the chief constable, who now holds also the appointment of chief constable for Radnorshire, has received notice that it is intended in Radnorshire, to appoint during the forthcoming year, a chief constable for that county solely.

The force is composed of 41 married, one widower, and 19 single men, and the changes which have occurred from resignations and dismissals during the year amount to eight and five respectively; with the exception, however, of the dismissal of one serjeant, all the other changes have taken place from the two lowest classes of the constables.

The greatest length of service in this force extends to 10 years, and 16 persons have served for such period; 11 are under one year's service.

The number of breaches of cattle regulations which have taken place are stated to have been 75; and 46 persons were fined, and 22 otherwise punished for such offences.

The returns of crime show a decrease in indictable offences, but rather more persons have been apprehended and committed for trial for such offences; more persons are also reported to have been proceeded against summarily than in the previous year.

The police act for the relief of vagrants in five unions in this county, and the system of giving pass tickets to this class of persons is adopted in three of the unions, but the system has not been long enough in operation to ascertain whether it will work advantageously. The number of vagrants who have been passed by the police to the unions during the year is stated to have amounted to 5,916 persons; the number passed to the workhouse in the previous year amounted to 5,104 persons.

The station-houses are generally in good order, but some require alteration and improvement. The police are well clothed and equipped, and the duties satisfactorily arranged, and I consider the force to be in an efficient state.

City of Hereford.

Force - - - - - - - 30 persons.

Area in acres - - - -	4,670	Acres to each constable - - - -	155

The police force of this city is composed of 19 married and 11 single men, and the changes which have taken place during the year in consequence of resignations and dismissals, have amounted to five and four respectively, and one constable is reported to have died.

The service of three members of the force extends to 25 years, and that of three others to upwards of 10 years; 12 are under one year's service.

The indictable offences which have been reported are less in number than in the previous year, as are also the apprehensions and committals for trial for such offences; and fewer persons are also reported to have been proceeded against summarily.

The Permissive Act for closing public-houses between 1 and 4 o'clock a.m. has been adopted by the town council, and it is said to have tended to reduce drunkenness and promote order in the town.

The police are well clothed, and the duties generally well provided for; and I consider the force to be in an efficient state.

Borough of Leominster.

Force - - - - - - - 8 persons.

Area in acres - - - -	7,284	Acres to each constable - - -	910
Population in 1861 - - -	5,658	Population to ditto, as per census 1861	707

Rates of Pay of each, ditto	£. 104	–	–	–	–	–	–	–	–	–	s. 22	–	–	–	–	s. 18	s. 16			

The police force of this borough is composed of six married and two single men, and the changes which have taken place during the year, arising from resignations and dismissals, have amounted to three and two respectively; indeed in this force the changes have for some time been very numerous, and the service of the oldest member does not exceed four years.

No. 3. South of England and South Wales District.

The crime return shows a decrease in indictable offences as well as in the apprehensions and committals for trial for such offences; but more persons are shown to have been proceeded against for offences which are disposed of summarily.

Some improvements have been made to the police station, and it is contemplated building more convenient cells.

The Permissive Act for closing public-houses between 1 and 4 a.m. has been adopted by the town council, and is reported to have acted beneficially in reducing drunkenness and promoting order in the town.

The police are well clothed, and the duties generally well provided for, and the force is effective in number.

County of Kent.

Force - - - - - - 262 persons.

County of Kent.

Area in acres - - - - 945,566 | Acres to each constable - - - 4,180

Rates of Pay of each, ditto	£. 400	–	£. s. d. 139 18 4	£. s. d. 130 15 10	£. s. d. 118 12 6	–	£. s. 109 10	–	–	–	s. 28	s. d. 24 6	–	–	–	s. d. 22 9	s. 21	s. d. 18 8		

Chief Constable.—Horse and travelling allowance, 200 *l.*
Superintendents.—Horses, forage, carts, stabling, &c. provided.

The police force of this county is composed of 203 married men, 3 widowers, and 56 single men, and the changes which have taken place during the year, from resignations and dismissals, amount to 27 and 11 respectively; but, with the exception of the resignation of one serjeant and two first-class constables, the whole of the other changes have taken place from among the two lowest class of constables or men of short service; three others resigned on account of bad health and inability to serve.

The greatest length of service in this force extends to 10 years, and 72 persons have served for such period; 33 are under one year's service.

During the year 127 cases of breach of cattle regulations were reported by the police, and for such offences 102 persons were fined, and one otherwise punished.

The criminal returns show an increase in indictable offences, but rather fewer persons are reported to have been apprehended and committed for trial for such offences than in the previous year. For offences, however, which are disposed of summarily, more persons have been proceeded against.

The police act in seven unions for the passing of vagrants to the workhouses who are seeking shelter by night, and 9,407 of such persons are reported to have been so aided by the police during the year. In the previous year the number so assisted amounted to 6,042 persons.

The station-houses are all in admirable order, and those recently constructed, especially that at Malling, are very much improved in the arrangements which have been made for the accommodation of the resident officers.

The police are well clothed and equipped, and the duties effectively arranged and well provided for; and I consider the force to be in an efficient state.

City of Canterbury.

Force - - - - 21 persons.

Area in acres - - - -	3,568	Acres to each constable - - -	169
Population in 1861 - - -	21,324	Population to ditto, as per census 1861	1,015

Rates of Pay of each, ditto	£. 104	–	–	–	–	–	£. s. 75 6	–	–	–	s. 26	–	–	–	–	s. d. 22 6	s. 21	s. d. 19 6		

The police force of this city is composed of 19 married and two single men, and no change of members has taken place during the year.

The service of one constable extends to 30 years, and that of another to 21 years, and four others have upwards of 14 years' service; the service of the remainder extends downwards from nine to two years.

The indictable offences which have been reported are the same in number as in the previous year, but two more persons have been committed for trial for such offences; for offences, however, which are determined summarily, considerably fewer persons have been proceeded against.

The number of vagrants who were provided with shelter (and in some instances also with food) by the police during the year amounted to 61; in the previous year the number so assisted amounted to 79 persons.

The cells for prisoners in the police station in this city are of very inferior construction.

The police are well clothed and equipped, and the duties satisfactorily provided, and I consider the force to be efficient.

Borough of Deal.

Force - - - - 8 persons.

Area in acres - - - -	1,159	Acres to each constable - - -	144
Population in 1861 - - -	7,531	Population to ditto, as per census 1861	941

RANKS.	Yearly Pay in £. and Shillings.										Weekly Pay in Shillings and Pence.									
	Head Constable or Chief Superintendent.	Superintendents.					Inspectors.				Serjeants.				Constables.

Rates of Pay of each, ditto	£. 140	–	–	–	–	–	–	–	–	–	s. d. 26 6	–	–	–	–	s. d. 22 6	s. d. 21 6	s. d. 20 6		

An augmentation of three constables has been made to this force during the year in order to meet requirements arising from an increase of buildings and population.

The force is composed of 25 married and three single men, and the changes from resignations and dismissals during the year amounted to three and one respectively.

The service of two members extends to 19 years, and that of four others to 16 years and upwards; the service of the remainder is for different periods between one and eleven years.

The indictable offences which have been reported are rather less in number than in the previous year, as are also the committals for trial for such offences, but more persons have been proceeded against and punished summarily. During the year 1,958 vagrants were passed by the police to the workhouse; in the previous year the number so aided amounted to 1,080 persons.

The police office is inconveniently small, and I am of opinion that better accommodation should be provided for the head officer.

The constables are well clothed and equipped, and also well drilled; the duties are also satisfactorily provided for, and the force is in an efficient state.

Borough of Faversham.

The

The police force of this borough is composed altogether of married men, and no change of members has taken place during the year.

The service of one member extends to 20 years, and that of the others varies from one to eight years.

The returns of crime show an increase of one indictable offence, and of one more person apprehended and committed for trial han in the previous year, but fewer persons are reported to have been proceeded against and punished summarily.

During the year, 1,327 vagrants are stated to have been passed by the police to the union; in the previous year the number so assisted amounted to 906 persons.

The police are well clothed and equipped, and the duties generally well provided for, and the force is working efficiently.

Borough of Folkestone.

Force - - - - - 11 persons.

Area in acres - - - - -	2,697	Acres to each constable - - -	245
Population in 1861 - - - -	8,507	Population to ditto, as per census 1861,	773

Borough of Folkestone.

RANKS.	Yearly Pay in £. and Shillings.										Weekly Pay in Shillings and Pence.									
	Head Constable or Chief Superintendent.	Superintendents.					Inspectors.				Serjeants.				Constables.					
		1st Class.	2nd Class.	3rd Class.	4th Class.	5th Class.	1st Class.	2nd Class.	3rd Class.	4th Class.	1st Class.	2nd Class.	3rd Class.	4th Class.	Merit Class.	1st Class.	2nd Class.	3rd Class.	4th Class.	5th Class.
Number of each Rank and Class	1	-	-	-	-	-	-	-	-	-	1	-	-	-	1	4	5			
Rates of Pay of each, ditto -	£. 120	-	-	-	-	-	-	-	-	-	s. 26	-	-	-	-	s. d. 21 6	s. d. 20 6			

The police force of this borough is composed of nine married, one widower, and one single man, and there have been no changes among the members during the year.

The service of three members extends to 11 years, and that of two others to 10 years; the service of the remainder is for different short periods.

The indictable offences and committals for trial for such offences are nearly the same as in the previous year, but rather fewer persons have been proceeded against for offences which are disposed of summarily.

During the year, 455 vagrants were provided with shelter by the police; in the previous year the number so assisted amounted to 574 persons.

Some of the beats in this borough are too extensive; and, considering the large increase of buildings and population which of late has been taking place, I am of opinion that the services of a couple more constables are required.

The force is well clothed, and in other respects appears to be in a satisfactory state.

Borough of Gravesend.

No. 3. South of England and South Wales District.

The police force of this borough is composed of 21 married and four single men, and during the year the changes in the force have amounted to one resignation and four dismissals.

The service of two members extends to 16 years, and that of six others to upwards of 10 years; the service of the others is for different short periods, and three are under one year's service.

The indictable offences which have been reported are rather less in number than in the previous year, but more persons have been committed for trial and more persons also proceeded against for offences which are disposed of summarily.

The number of vagrants who were passed by the police to the union is stated to have amounted to 6,075 persons; in the previous year the number so aided amounted to 5,844 persons.

The Permissive Act for closing public-houses between one and four o'clock a.m., has lately been adopted by the town council, but sufficient time has not elapsed to test its working.

The police are well clothed and equipped, the duties satisfactorily provided for, and the force efficient.

Borough of Hythe.

Force - - - - - 2 persons.

Borough of Hythe.

Area in acres - - - -	882	Acres to each constable - -	441

No changes have taken place during the year in the composition or number of this force.

Both of the police are married, and the service of the senior officer extends to 23 years, and that of the constable to four years.

The indictable offences which have been reported are one less than in the previous year, and one person less has been apprehended and committed for trial for such offences: as respects offences which are determined summarily, precisely the same number of persons have been proceeded against, viz., 29, as in the previous year.

The duties to be efficiently provided for by day and night would require the services of another constable.

Borough of Maidstone.

Force - - - - - 23 persons.

Area in acres - - - - 4,232 | Acres to each constable - - 184
Population in 1861 - - - 32,016 | Population to ditto, as per census 1861, 1,000

The police force of this borough is composed of 20 married and three single men; and no changes have taken place in the force during the year on account of resignations or dismissals.

The service of four members of the force extends to 22 years and upwards, and that of six others to between 10 and 16 years; the remainder are under 10 years' service.

The indictable offences which have been reported are more in number than in the previous year, and more persons have been apprehended and committed for trial for such offences; but fewer persons have been proceeded against and punished summarily.

The number of vagrants provided with shelter by the police amounted to 322 persons; in the year previous the number so assisted amounted to 304 persons.

The police are well clothed and equipped, and the duties well provided for, and I consider the force to be in an efficient state.

Borough of Margate.

Force - - - - - 10 persons.

Area in acres - - - - 240 | Acres to each constable - - - 24
Population in 1861 - - - 8,874 | Population to ditto, as per census 1861, 887

No alteration has taken place during the year in the number or pay of the police of this borough, nor have there been any change of members. The force is composed chiefly of married men, and the service of two of the constables extends to 20 years; that of the others is for much shorter periods.

The indictable offences which have been reported are about the same in number as in the previous year, as are also the apprehensions for such offences, but rather fewer persons have been committed for trial, and also fewer persons proceeded against summarily.

No. 3. South of England and South Wales District.

The police are well clothed, and the duties, with the exception of one beat, which is too extended, are generally fairly provided for. In all other respects I consider the force to be working efficiently.

Town of Ramsgate.

Force - - - - - - - 13 persons.

Town of Ramsgate. Area in acres - - - - 260 | Acres to each constable - - - 20
Population in 1861 - - - 11,865 | Population to ditto, as per census 1861, 912

Number of each Rank and Class	1	–	–	–	–	–	–	–	–	–	2	–	–	–	–	4	3	3		
Rates of Pay of each, ditto	£. 115	–	–	–	–	–	–	–	–	–	s. 24	–	–	–	–	s. 21	s. 20	s. 19		

The police force of this town is composed of 12 married men and one widower, and the only changes which occurred during the year were occasioned by the resignation of two of the constables.

The service of one member (the head constable) extends to 27 years, and that of the two serjeants to 19 and 15 years respectively, and that of one constable to 11 years; the remainder have only served for short periods, and two are under one year's service.

The return of crime shows a considerable increase in indictable offences, and considerably more persons have been apprehended and committed for trial than in the previous year; but fewer persons have been proceeded against and punished summarily.

The Local Board have lately adopted the provisions of the Permissive Act for closing public-houses between 1 and 4 o'clock in the morning, but more time is required to ascertain whether it will work advantageously.

The police are well clothed, and the duties generally well provided for, and I consider the force to be efficient.

City of Rochester.

Force - - - - - - 32 persons.

City of Rochester. Area in acres - - - - 2,715 | Acres to each constable - - - 84

Rates of Pay of each, ditto	£. 30	-	-	-	-	-	-	-	-	-	-	-	-	-	-	s. 18				

The police of this borough are all married, and there have been no changes in the force for many years.

The service of the head constable extends to 31 years, and that of one of the ordinary constables (who has also attained the respectable age of 72 or 73 years) to 32 years; the other two men have served respectively for 14 and 11 years, and they are also getting on in years.

One indictable offence only is reported to have taken place during the year, and

No. 3. South of England and South Wales District.

and for such offence two persons were apprehended, and committed for trial. Twelve persons were proceeded against on account of offences which are determined summarily.

The number of vagrants who were passed by the police to the workhouse for shelter during the year, are stated to have amounted to 978 persons; in the previous year 815 of such class of persons were so assisted.

This borough has a very extensive area; and as there are only two men for night and one for day duty, it is impossible that the country portion can be properly watched.

Town of Tunbridge Wells.

Force - - - - - 21 persons.

Town of Tunbridge Wells.

Area in acres - - - - 3,350 | Acres to each constable - - - 159
Population in 1861 - - - 13,807 | Population to ditto, as per census 1861, 657

The police force of this town is composed of 18 married and three single men; and during the year two constables resigned, and four were dismissed.

The service of two members extends to 20 years and upwards, and that of three others to more than 13 years; but the service of the remainder is for short periods.

The indictable offences which have been reported, as well as the apprehensions and committals for trial for such offences, are nearly the same in number as in the previous year, but rather more persons have been proceeded against for offences which are determined summarily.

During the year, 1,287 vagrants were provided with shelter by the police, and sent to the workhouse; in the previous year the number so aided amounted to 876 persons.

The police are well clothed and equipped, and the duties generally well provided for; and the force is working efficiently.

County of Monmouth.

County of Monmouth.

Force - - - - - 98 persons.

Chief Constable.—Horse and travelling allowance, 100 *l.*
Superintendents.—Provide their own horses, and allowed 60 *l.* each for forage, &c.

The

The police force of this county has undergone no alteration during the year, either in number or in the established rates of pay; but as additional pay is granted for length of service to the higher grade of officers, the salaries of those officers is now rather higher than they were stated to be at the date of my former report.

The force is composed of 69 married and 27½ single men: and the changes which have occurred during the year, owing to resignations and dismissals, have, including two resignations on account of bad health, amounted to 17 and 9 respectively; these changes, however, with the exception of the resignation of one serjeant and three first-class constables, and the dismissal also of one constable of the first class, have taken place exclusively from the ranks of the three lower grades of constables.

The greatest length of service extends to 10 years, and 10 persons have served for such period, and 13 for nine years; 15 members of the force are under one year's service.

During the year 97 cases of breach of cattle regulations were reported by the police, and 82 persons were fined for such offences, and one person committed to prison.

The indictable offences which have been reported are more in number than in the previous year, and more persons have been apprehended and committed for trial for such offences; for offences, however, which are determined summarily, fewer persons have been proceeded against.

The police act in three unions for the relief of vagrants; and during the year, 7,550 of such persons were provided by the police with tickets for lodging-houses and the unions; in the previous year the number so assisted by the police amounted to 4,879 persons. The system of granting pass tickets to vagrants is adopted in the Monmouth union, but it is not supposed to have had any effect as yet in repressing vagrancy.

At Tredegar a new police station has been erected, and is now in the occupation of the police; the other stations are in satisfactory order.

The police are well clothed and equipped, the duties satisfactorily provided for, and I consider the force to be in an efficient state.

Borough of Monmouth.

Force - - - - - 6 persons.

Area in acres - - - -	5,407	Acres to each constable - - -	901
Population in 1861 - - -	5,783	Population to ditto, as per census 1861,	963

Borough of Monmouth.

RANKS.	Yearly Pay in £. and Shillings.										Weekly Pay in Shillings and Pence.

The police force of this borough is composed entirely of married men, and no change has taken place among the members for several years.

The longest service extends to ten years, and the shortest to five years.

The number of indictable offences which have been reported is considerably more than in the previous year, as are also the apprehensions and committals for trial for such offences; and more persons are also reported to have been proceeded against summarily.

The number of vagrants which have been passed by the police to the workhouse for shelter amounted to 2,420; in the previous year the number so reported amounted to 1,911 persons.

No. 3. South of England and South Wales District.

A better police station is much required in this town, and the municipal authorities have consented to provide one.

The clothing of the force is good, and the duties are generally well provided for, and I consider the force to be efficient.

Borough of Newport (Monmouthshire).

Force - - - - - 28 persons.

Chief Constable.—Horse and travelling allowance, 200 *l.*
Superintendents.—Provide their own horses, and allowed 46 *l.* each for forage, &c.

The

The police force of this county has undergone no alteration in number during the year, but the rates of pay have been increased, in accordance with an arrangement which is in operation for giving increased pay for length of service.

The force is composed of 234 married, 2 widowers, and 50 single men, and the changes which have taken place during the year on account of resignations and dismissals have amounted to 23 and 7 respectively; as respects the resignations, one was from the rank of the serjeants, one from the first class, and five from the second class of constables; the remainder, as well as the dismissals, were from the lowest class of the constables.

The greatest length of service extends to 11 years, and 37 members of the force have served for such period, and 62 for 10 years; 19 are under one year's service.

During the year, 240 cases of breach of cattle regulations have been reported; and for such offence 197 persons have been fined, one sent to prison, and two otherwise punished.

The criminal returns show, as compared with those of the previous year, a decrease in indictable offences, as well as in the number of persons who have been apprehended and committed for trial for such offences; but more persons are reported to have been proceeded against for offences which are determined summarily.

The police act in three unions for the relief of vagrants, and 1,677 persons of such class of persons are stated to have been provided with tickets for lodging-houses and the unions. In the previous year the number so assisted by the police amounted only to 484 persons.

The station-houses are all in admirable order, the police well clothed and equipped, and the duties satisfactorily arranged and provided for; and I consider the force to be in an efficient state.

City of Bath.

Number of each Rank and Class	1	–	–	–	–	–	4	1	1	1	1	12	–	–	–	1	12	10	18	27
Rates of Pay of each, ditto -	£. 250	–	–	–	–	–	£. 100	£. s. 92 6	£. s. 85 16	£. 65	s. 30	s. 24	–	–	–	s. 24	s. 21	s. 20	s. 19	s. 18

The police force of this city consists of 68 married, 2 widowers, and 19 single men, and the changes which have taken place during the year among the constables have amounted to 7 resignations and 5 dismissals; two members also died, and one was superannuated.

The service of six members extends to 30 years and upwards; that of four others to 28 years; and that of six others to upwards of 21 years; and 13 more have served for different periods, between 19 and 15 years; the service of 12 others is between 10 and 15 years, and 15 are under one year's service.

The indictable offences which have been reported are less in number than in the previous year, and fewer persons have been committed for trial for such offences, but more persons are reported to have been proceeded against and punished summarily.

The number of vagrants who have been provided with shelter and food by the police are stated to have amounted to 5,964 persons; in the previous year the number so helped amounted to 4,807 persons.

No. 3. South of England and South Wales District.

The Permissive Act for closing public-houses between one and four o'clock in the morning has been adopted by the town council of this city, and it is reported to have acted very beneficially in decreasing drunkenness and promoting order.

The police are well clothed and equipped, and the duties are satisfactorily provided for, and I consider the force to be sufficient.

Drill is also established.

Borough of Bridgewater.

Force - - - - - 7 persons.

Borough of Bridgewater.

Area in acres - - - -	976	Acres to each constable - - -	139
Population in 1861 - - -	11,320	Population to ditto, as per census 1861,	1,617

The police force of this borough is composed entirely of married men, and there have been no changes in the force during the year.

The service of the head constable extends to 25 years, and that of two other members to 13 and 10 years respectively; the remainder have only service of short periods.

The indictable offences which have been reported are more in number than in the previous year, but the apprehensions are the same, and fewer persons have been committed for trial.

For offences which are determined summarily, considerably more persons have been proceeded against.

The number of vagrants who were provided with shelter by the police are stated to have amounted to 740; in the previous year only 180 were so assisted.

The number of police provided for the watching and protection of this borough are too limited in number; I am therefore under the necessity of reporting the force to be inefficient.

Borough of Chard.

Force - - - - - 2 persons.

Borough of Chard.

In

In this borough the police arrangements have undergone no change for some years.

There is no police station, and the cell which is provided by the town authorities for the detention of prisoners is quite unsuitable for the purpose, being dark and damp, and unprovided with any apparatus for generating warmth; indeed, in cold weather, the constables have been obliged to take prisoners to their own homes.

There is no proper supervision over the constables.

County of Surrey.

Real Force employed - - - - 123 persons.

Area in acres - - - - 371,032 | Acres to each constable - - - 3,016
Population in 1861 - - - 115,315 | Population to ditto, as per Census 1861 937

Rates of Pay of each, ditto	£. 500	£. s. 200 15	£. 146	£. s. 127 15	–	–	£. s. 91 5	–	–	–	s. 28	s. d. 25 1	–	–	–	s. d. 23 4	s. 21	s. d. 19 3	–	–

Chief Constable.—Horse and travelling allowance, 100 *l.*

Superintendents.—Horses, carts, harness, and stabling provided, and each allowed 45 *l.* 15 *s.* annually for forage and shoeing.

The police force of this county nominally numbers 133 persons, as that was the total number of the force allowed by the magistrates prior to the formation of Reigate into a borough and separate police district; since the separation of Reigate, however, the number of police who are allowed to be employed by the chief constable for ordinary duty purposes have been reduced by 10 men, consequently the true and real force now engaged is composed of only 123 persons, including all ranks.

The force on the 29th of September was composed of 99 married, 2 widowers, and 18 single men (four men being then wanted to complete), and the changes during the year arising from resignations and dismissals had been 24 and eight respectively; but with respect to these, saving the resignation of one inspector and one first-class constable, all the changes had occurred in the ranks of the two lowest class of constables.

The greatest length of service extends to 16 years, and 16 members of the force have served for such period, and 24 others for upwards of 10 years; 23 are under one year's service.

During the year 37 cases of breach of cattle regulations were reported by the police, and 28 persons were fined for such offences.

The indictable offences which have been reported are more in number than in the previous year, and more persons have been apprehended and committed for trial for such offences; more persons are also reported to have been proceeded against for offences which are disposed of summarily.

The police act in three unions for the relief of vagrants, and 1,391 of such class of persons are stated to have been sent to lodging-houses and the unions; in the previous year the number of persons so assisted amounted to 1,062 persons.

The station-houses are in good order, the police well clothed and equipped, and the duty arrangements satisfactory, and I consider the force to be in an efficient state.

No. 3. South of England and South Wales District.

Borough of Godalming.

Force - - - - - 2 persons.

Borough of Godalming.

Area in acres - - - - - 480 | Acres to each constable - - - - 240

The police force of this borough is composed of nine married and three single men, and during the year three constables resigned and two were dismissed.

The service of one officer extends to 12 years, and that of another to 10 years; but the service of all other members is for short periods.

The indictable offences which have been reported are considerably more than in the previous year, but the apprehensions for such offences are the same, and the committals for trial less in number.

For offences which are determined summarily, fewer persons are reported to have been proceeded against.

The police are well clothed and equipped; and although the force has been reduced in number (on account of the usual November disturbances having been put down), the ordinary duties are fairly provided for, and I consider the force to be efficient.

Borough of Reigate.

Force - - - - - 14 persons.

Area in acres - - - - 5,909 | Acres to each constable - - - 422
Population in 1861 - - - 9,974 | Population to ditto, as per Census 1861, 712

RANKS.	Yearly Pay in £. and Shillings.									Weekly Pay in Shillings and Pence.									
	Head Constable or Chief Superintendent.	Superintendents.					Inspectors.				Serjeants.				Constables.					
		1st Class.	2nd Class.	3rd Class.	4th Class.	5th Class.	1st Class.	2nd Class.	3rd Class.	4th Class.	1st Class.	2nd Class.	3rd Class.	4th Class.	Merit Class.	1st Class.	2nd Class.	3rd Class.	4th Class.	5th Class.
Number of each Rank and Class	1	–	–	–	–	–	–	–	–	–	2	–	–	–	–	5	3	3		
Rates of Pay of each, ditto	£. 120	–	–	–	–	–	–	–	–	–	s. 24	–	–	–	–	s. 22	s. 21	s. 20		

The police force of this borough is composed of 11 married and 2 single men, and the changes in the force during the year amounted to six resignations, all on the part of the constables.

The greatest length of service of any member of this force does not exceed three years, and four are under one year's service; but it is proper to state that the formation of the police force is only contemporaneous with the formation of Reigate into a municipal borough.

The indictable offences which have been reported are less in number than in the previous year, but the same number of persons have been committed for trial for such offences. Fewer persons are also reported to have been proceeded against on account of offences which are disposed of summarily.

The police have only lately been appointed to act for the relief of vagrants, but since so appointed, 270 of such class of persons have been passed to the workhouse for shelter and relief.

The cells in the police station in Reigate town are quite unfit places for the detention of prisoners, as they are dark, extremely limited in space, and very defective in ventilation.

The police are well clothed and equipped, and the duties are generally well provided for, and I consider the force to be efficient.

County of Sussex (East Division).

Force - - - - - 117 persons.

Area in acres - - - - 503,813 | Acres to each constable - - - 4,306
Population in 1861 - - - 135,620 | Population to ditto, as per Census 1861, 1,159

Chief Constable.—Horse and travelling allowance, 100 *l.*
Superintendents.—Carts and harness provided, and allowed 50 *l.* each to provide and maintain a horse.

No. 3. South of England and South Wales District.

The police force of this division of the county has been increased to the extent of three constables since the date of my former report.

The force is composed of 96 married, 3 widowers, and 18 single men, and the changes which have taken place during the year in resignations and dismissals have amounted to four and two respectively; but as respects these, the whole have taken place from the lowest rank of the constables. One constable, also, died during the year.

The greatest length of service extends to 27 years, but only one officer (the chief constable) has served such period. Seven of the superintendents, however, and two serjeants and one constable have served upwards of 20 years, and 34 other members of the force over 10 years. Eight are under one year's service.

During the year 66 cases of breach of cattle regulations have been reported, and 35 persons were fined for such offences.

The criminal returns show an increase in indictable offences, but the apprehensions and committals for trial for such offences are very nearly the same as in the previous year. For offences, however, which are determined summarily, the returns show a considerable diminution in the number of persons who have been proceeded against.

The police in this county act in four unions for the relief of vagrants, and the number who have been provided with shelter, and sometimes with food also, and who have also been sent to the unions, is stated to have amounted to 3,545 persons. In the previous year the number so assisted amounted to 2,207 persons.

The station-houses are in good order, the police well clothed and equipped, and the duties satisfactorily arranged and provided for; and I consider the force to be in an efficient state.

Borough of Brighton.

Force - - - - - - 100 persons.

Borough of Brighton.

Area in acres - - - -	2,320	Acres to each constable - - -	23
Population in 1861 - - -	77,693	Population to ditto, as per Census 1861,	776

RANKS.	Yearly Pay in £. and Shillings.										Weekly Pay in Shillings and Pence.										
	Head Constable or Chief Superintendent.	Superintendents.					Inspectors.				Serjeants.				Constables.						
		1st Class.	2nd Class.	3rd Class.	4th Class.	5th Class.	1st Class.	2nd Class.	3rd Class.	4th Class.	1st Class.	2nd Class.	3rd Class.	4th Class.	Merit Class.	1st Class.	2nd Class.	3rd Class.	4th Class.	Clerk.	Detectives.
Number of each Rank and Class	1	2	–	–	–	–	1	6	–	–	4	–	–	–	–	35	11	34	1	1	3
Rates of Pay of each, ditto	£. 27	£. 255	–	–	–	–	£. 130	£. s. 85 16	–	–	s. 28	–	–	–	–	s. 26	s. 24	s. 22	s. 20	s. 40	s. 33

This force is composed of 71 married, 4 widowers, and 24 single men; and during the year two constables resigned and eight were dismissed. Three other members of the force were superannuated, and one died.

The service of four members extends to 30 years, and that of one to 27 years: 11 others have completed 20 years and upwards; five more than 15 years, and 10 between 10 and 15 years: the remainder have served for different short periods, and 11 are under one year's service.

More indictable offences are reported to have taken place, and more persons have been apprehended and committed for trial than in the previous year; but fewer persons are stated to have been proceeded against and convicted summarily.

I have again to report the cells at the head-quarter station as being in a very unsatisfactory state; they are dark and badly ventilated, and are only fit for stores for goods.

The police are well clothed and equipped, and the duties properly provided for, and the force is efficient.

Borough of Hastings.

Chief Constable.—Horse and travelling allowance, 100 *l.*
Superintendents.—Horses, forage, carts, stabling, &c., provided.

An

An augmentation of seven constables was made to the police force of this division of the county of Sussex in January last, but the rates of pay have undergone no alteration.

The force is composed of 59 married, four widowers, and 26 single men (one being wanted to complete); and the changes during the year amounted to 12 resignations, of which four were made compulsory owing to misconduct, and one on account of bad health.

The greatest length of service extends to 10 years, and 22 members of the force have served such period, and seven for nine years; 14 are under one year's service, but of these seven are occasioned by the augmentation of the force to such extent in January last.

During the year 17 cases of breach of cattle regulations were reported, and 12 persons were fined for such offence.

The indictable offences which have been reported are the same in number as in the previous year; but more persons have been apprehended and committed for trial for such offences, and more persons also proceeded against for offences which are determined summarily by the justices.

The police in this division of the county have only since March in the present year been appointed to act as assistant relieving officers of casual vagrants; they are now employed so to act in seven unions, and the number of vagrants who have been passed by them to the different workhouses is stated to have amounted to 2,922 persons.

The station-houses are in excellent order, the police well clothed and equipped, and the duties satisfactorily arranged and provided for, and I consider the force to be in an efficient state.

No alteration has taken place during the year in the number or pay of the police of this borough.

The force is composed of married men, and the greatest length of service only extends to seven years.

No indictable offences are reported to have taken place during the year, but 40 persons were proceeded against summarily.

The number of vagrants relieved by the police during the year are stated to have amounted to 2,000 persons.

The duties for the town portion of the borough are sufficiently provided for, but there is a large country area which cannot be efficiently watched.

No alteration has taken place during the year in the number or pay of this force; the service has not been stated.

In regard to crime, the returns show the same number of indictable offences to have been committed as in the previous year, as well as the same number of apprehensions and committals for trial for such offences, but fewer persons are stated to have been proceeded against summarily.

As regards vagrants, 153 of such class of persons were sent to the union by the police; in the previous year the number amounted to 160 persons.

The police are well clothed, and the duties generally well provided for, and I consider the force to be efficient.

County of Wilts.

Force - - - - - - 201 persons.

Wilts, including the Boroughs of Calne, Chippenham, Devizes, and Marlborough. Area in acres - - - - 799,033 | Acres to each constable - - - 3,975
Population in 1861 - - - 237,033 | Population to ditto, as per census 1861, 1,179

RANKS.	Yearly Pay in £. and Shillings.										Weekly Pay in Shillings and Pence.

Number of each Rank and Class	1	–	2	2	3	3	13	–	–	–	13	13	–	–	–	50	80	10	11	
Rates of Pay of each, ditto	£. 500	–	£. 150	£. 130	£. 120	£. 110	£. s. 77 12	–	–	–	s. d. 26 11	s. d. 25 2	–	–	–	s. 21	s. 19	s. 18	s. d. 17 6	

Chief Constable.—Horse and travelling allowance, 50 *l.*
Superintendents.—Horses, carts, and harness provided, and allowed each 2*s.* 1*d.* per diem for forage and farriery.

The police force of this county is composed of 169 married, 3 widowers, and 29 single men; and the changes which have taken place during the year were occasioned by the resignation of 23, and the superannuation of two, of the constables, and the death of one of the superintendents.

The

The greatest length of service extends to 27 years, and 17 members of the force have served for such period, 27 over 20 years, and 56 over 10 years; 21 are under one year's service.

Nineteen officers and constables are superannuated, and receiving yearly pensions, and the yearly allowance for pensions and gratuities amounts to about 997 *l.* The total fund amounts to about 13,000 *l.*, and the yearly receipts from all sources to about 1,000 *l.*; therefore the yearly payments very nearly approach the annual receipts.

During the year 95 cases of breach of cattle regulations were reported by the police, and 76 persons were fined for such offence, and one sent to prison.

The indictable offences which have been reported are considerably less in number than in the previous year, and fewer persons have been apprehended and committed for trial for such offences; fewer persons are also reported to have been proceeded against for offences which are disposed of summarily.

The police act in 12 unions for the relief of casual vagrants, and 9,344 of such class of persons were sent to the unions and provided with shelter by the police (and to a large extent also with food), during the year. In the previous year the number so assisted by the police amounted to 7,036 persons.

The system of giving pass tickets to vagrants has been adopted in one of the unions, but it is reported to have had no effect in repressing vagrancy.

The station-houses are in good order, the police well clothed and equipped, and the duties satisfactorily arranged and provided for, and I consider the force to be in an efficient state.

City of Salisbury.

City of Salisbury.

Force - - - - - 12 persons.

The police force of this city is composed of nine married and three single men; and during the year three changes took place, owing to the resignation of the head officer and two of the constables.

The service of two members extends to 12 years, and one to 10 years; the others have served for shorter periods, and three are under one year's service.

The indictable offences which have been reported are less in number than in the previous year, and fewer persons have been apprehended and committed for trial for such offences; fewer persons are also reported to have been proceeded against and punished summarily.

During the year, 1,680 vagrants are reported to have been provided with shelter by the police; in the previous year the number so helped amounted only to 584 persons.

The police are well clothed and equipped, and the duties generally well provided for, and I consider the force to be efficient.

Chief Constable.—Horse and travelling allowance, 50 *l.*
Superintendents—Provide their own horses, and allowed 38 *l.* each for forage, &c.

The police of this county is composed of 24 married, three widowers, and eight single men (one being wanting to complete); and the changes which have taken place during the year, from resignations and dismissals, have amounted to three and one respectively.

The greatest length of service extends to 10 years, and six members of the force have served for such period, one for nine and one for eight ditto; eight are under one year's service.

During the year 44 cases of breach of cattle regulations were reported by the police, and 29 persons were fined for such offences.

The criminal returns show a considerable increase in indictable offences, as well as a large increase in the number of persons who have been apprehended and committed for trial for such offences; for offences, however, which are determined summarily, fewer persons have been proceeded against than the previous year.

The number of vagrants who have been provided with lodgings and sent to the unions by the police are stated to have amounted to 1,468 persons; in the previous year the number so aided by the police amounted to 993 persons.

The station-houses, with the exception of the one at Hay, are in a satisfactory condition, the police well clothed and equipped, and the duties generally well provided for, and I consider the force to be in an efficient state.

Rates of Pay of each, ditto -	£. 250	–	£. 150	£. s. d. 101 9 6	–	–	–	–	–	–	s. d. 25 1	–	–	–	–	s. d. 21 –	s. d. 19 3	s. d. 17 6		

Chief Constable.—Horse and travelling allowance., 50 *l.*

Superintendents—Provide their own horses, and allowed 50*l.* each for forage, and 10 *l.* each for clothing

The police force of this county is composed of 22 married, two widowers, and 11 single men, and the changes during the year have amounted to three resignations (one on account of bad health), and one dismissal; one constable also died.

The greatest length of service extends to 23 years, and two members of the force have served for such period, one for 22 years, and 13 for upwards of 10 years; three are under one year's service.

No breaches of cattle regulations have been reported in this county during the year.

The indictable offences which have taken place are about the same as in the previous year, as are also the committals for trial for such offences, but more persons have been proceeded against for offences which are disposed of summarily.

The police act in two unions for the relief of vagrants, and, when necessary, are empowered to grant food; during the year 1,903 of such class of persons were provided with shelter and sent to the unions by the police; in the previous year the number so assisted by the police only amounted to 571 persons.

The station-houses generally are maintained in good order, but the one in the town of Cardigan, and which belongs to the borough authorities, is altogether deficient of any means of supplying warmth to prisoners in cold weather, and the one at Aberystwith is very old and badly constructed, and requires rebuilding. A new police station is also required in the town of Llandyssil.

The clothing and equipments are of good quality, the duties satisfactorily provided for, and I consider the force to be in an efficient state.

Number of each Rank and Class	1	–	3	–	–	–	–	–	–	–	10	–	–	–	–	9	27			
Rates of Pay of each, ditto -	£. 350	–	£. 160	–	–	–	–	–	–	–	*s. d.* 25 1	–	–	–	–	*s. d.* 22 2	*s. d.* 20 5			

Chief Constable.—No allowance; expenses out of pocket.
Superintendents—Provide their own horses, and allowed 50 *l.* each for forage, &c.

The police force of this county is composed of 35 married and 15 single men, and the changes which have taken place during the year, arising from resignations and dismissals, are reported to have amounted to seven and six respectively.

The greatest length of service extends to 25 years, and one officer (the chief constable) has served for such period, five others for upwards of 20 years, and seven for 10 years and upwards; eight are under one year's service.

During the year 110 cases of breach of cattle regulations have been reported, and 98 persons have been fined for such offences, and three otherwise punished.

The indictable offences which have been reported are more in number than in the previous year, and more persons have been apprehended for such offences, but about the same number of persons have been committed for trial; more persons are also reported to have been proceeded against for offences which are disposed of summarily.

The police act in two unions for the relief of vagrants, and are empowered, when necessary, to grant food as well as shelter. During the year 2,209 of such class of persons have been passed by the police to lodging-houses and the unions. In the previous year the number of persons so aided amounted to 930 persons.

Two new station-houses were erected last year: one at Llansawel, and the other at Llanboidy, and the former is now in occupation; both of these stations might, with the same money which has been spent upon them, have been constructed so as to afford more comforts to the police.

The cells in the station at Newcastle Emlyn have undergone no alteration, and are quite unfit for the detention of prisoners, being totally devoid of light and ventilation.

The clothing and equipments are of good quality, the duties satisfactorily provided for, and I consider the force to be in an efficient state.

The police force of this borough is composed of eight married, one widower, and three single men, and during the year seven changes took place in consequence of the resignation of seven constables.

The service of the head constable extends to 19 years, and that of two other members of the force to 18 and 13 years respectively; the others have only short periods of service, and four are under one year' service.

The indictable offences which have been reported, as well as the apprehensions for such offences, are less than in the previous year, being in each instance as five against eight, but the committals for trial are the same, being only one person in each year.

For offences which are determined summarily, considerably fewer persons have been proceeded against; the number having been 133 as against 192 in the previous year.

The police have good clothing and appointments, and the duties are generally well provided for, and I consider the force to be efficient.

County of Glamorgan.

Superintendents—Provide their own horses, and allowed 50*l.* each for forage, &c., and 13 *l.* ditto to provide clothing.

No. 3. South of England and South Wales District.

The police force of this county has undergone no alteration during the year either in numbers or pay, but a new chief constable has been appointed to take charge of the force in the place of Captain Napier (deceased), who had served the county from the formation of the corps in the year 1840.

The force is composed of 77 married, one widower, and 56 single men, and the changes which have taken place during the year, arising from resignations and dismissals, have amounted to 20 and 19 respectively, but with the exception of one resignation and two dismissals from the first class of constables, the other changes have taken place altogether from the lowest class of constables.

The greatest length of service extends to 26 years, and four members of the force have served for such period, four others for upwards of 20 years, and 19 for upwards of 10 years; 30 are under one year's service.

During the year 174 cases of breach of cattle regulations were reported by the police, and 130 persons were fined for such offence, and six others otherwise punished.

The indictable offences which have been reported are considerably more in number than in the previous year, and more persons have been apprehended and committed for trial for such offences; more persons are also reported to have been proceeded against for offences which are disposed of summarily.

The police act in one union for the relief of vagrants, and are empowered, when necessary, to grant food as well as shelter; 14,299 of such persons were provided with lodgings and sent to the union during the year, and 649 were supplied with food; in the previous year the number so assisted by the police amounted to 7,053 persons.

One new station, which will be provided with four cells and constructed to accommodate one resident officer and five constables, is in the course of erection at Ponty-pridd; the other station-houses are generally in tolerable order, but the one at Aberdare is sadly deficient of proper accommodation for the police.

The police are well clothed and equipped, and the duties satisfactorily provided for, and I consider the force to be in an efficient state.

Borough of Cardiff.

An augmentation of seven constables has been made to the police force of this borough since the date of my former report.

The force is composed of 40 married, one widower, and 10 single men; and the changes during the year have amounted to five resignations and 10 dismissals, the latter having been altogether from the two lowest classes of the constables.

The service of four members extends to 16 years, but that of the others is for shorter periods, ranging from one to 11 years, and 12 are under one year's service.

The indictable offences which have been reported are less in number than in the previous year, and fewer persons have been committed for trial; fewer persons are also reported to have been proceeded against for offences which are disposed of summarily.

The police only provide vagrants with tickets for the union, and 1,434 of such class of persons are reported to have been so helped during the year. In the previous year the number sent to the union amounted to 1,026 persons.

The police are well clothed and equipped, and the duties generally well provided for, and I consider the force to be efficient.

Chief Constable.—Horse and travelling allowance, 25 *l.*
Superintendents—Provide their own horses, and allowed 25 *l.* each for forage, &c.

The

The police force of this county is composed of 48 married and two single men, and the changes which have taken place during the year, on account of resignations and dismissals, have amounted to five and six respectively, but none have been from any of the ranks above that of second-class constables.

The greatest length of service extends to 10 years, and 11 members of the force have served for such period; 10 are under one year's service.

Four cases of breach of cattle regulations were reported during the year, and three persons were fined for such offence.

The indictable offences which are reported to have taken place are more in number than in the previous year, and considerably more persons have been apprehended and committed for trial for such offences. The number of persons who have been proceeded against for offences which are determined summarily are about the same as in the previous year.

The police in this county act in three unions for the relief of vagrants, and are empowered, when necessary, to grant food; 1,040 of such class of persons were provided with shelter and sent to the unions during the year, and 392 were also relieved with food. In the previous year, the number so assisted by the police amounted to 722 persons.

The station-houses are maintained in good order, but I have again to report the one at Maenclohog as being extremely deficient of proper accommodation for the resident officer, and the stations generally as being deficient of any proper apparatus for providing warmth to the cells in cold weather.

The allowances to the superior officers for providing and maintaining a horse for the performance of their police duties is, I think, insufficient to meet the expenses which the proper performance of such duties must entail.

The police are well clothed and equipped, and in other respects performing their duties in a satisfactory manner, and I consider the force to be efficient.

The police force of this borough are all married, and during the year one change has taken place, owing to the resignation of one of the constables.

No. 3 South of England and South Wales District.

The service of one member extends to 10 years, and that of two others to shorter periods, and one is under one year's service.

Fewer indictable offences, as well as fewer apprehensions and committals for trial for such offences, are reported to have taken place than in the previous year, and rather fewer persons are also reported to have been proceeded against summarily.

During the year 586 vagrants are reported to have been provided by the police with shelter and food. In the previous year the number so aided amounted to 366 persons.

The police force of this borough is too small in number to watch and protect the large district under thier charge, and consequently I am obliged to report the force as inefficient.

Borough of Tenby.

Borough of Tenby.

The police arrangements of this borough have undergone no change during the year.

Both of the constables are married, and the service of one extends to eight years, and that of the other to less than one year.

No indictable offences are reported to have taken place during the year, but 118 persons were proceeded against for offences which are determined summarily. As respects vagrants, 130 of such class of persons are stated to have been provided with shelter by the police.

There is no proper police station in this borough, and the cells, which are in an isolated and uninhabited building, are badly constructed, dark, and ill ventilated.

The police force is also insufficient in number to provide efficiently for the duties, and especially during the season when the population of the town is considerably augmented with visitors.

County of Radnor.

Force - - - - - - - - 16 persons.

Area in acres - - -	273,111	Acres to each constable - - -	18,207
Population in 1861 - -	25,382	Population to ditto, as per census 1861	1,586

Chief Constable.—Horse and travelling allowance, 30 *l.*

Superintendents—Provide their own horses, and are allowed, one 50 *l.*, and the other 40 *l.* for forage, &c. Carts and harness are supplied to them.

The police force of this county has undergone no alteration during the year either in numbers or pay, but the chief constable, who is also the chief constable for Herefordshire, has received notice that in January next the magistrates intend to appoint a chief constable solely for the county of Radnor.

The force is composed of 13 married and two single men, one being wanting to complete, and the only changes which have taken place during the year have arisen through the resignation of three constables of the second or lowest class.

The greatest length of service extends to 10 years, and two members of the force have served for such period, and two for nine years; three are under one year's service.

Eight cases of breach of cattle regulations were reported during the year, and seven persons were fined, and one otherwise punished for such offences.

The indictable offences which have been reported are less in number than in the previous year, and fewer persons have been apprehended and committed for trial for such offences, and fewer persons also proceeded against summarily. The police in this county act in three unions for the relief of vagrants, and during the year 1,276 persons were provided with passes to lodging-houses; in the previous year, the number so aided by the police amounted to 953 persons.

The new station-houses which were reported last year to be building at Knighton and Rhayader are now nearly completed, but they have not been occupied by the police.

At Presteign, the station-house very much requires alteration and improvement both as regards the accommodation required for prisoners as well as the resident officer.

The police are well clothed and equipped, and the duties satisfactorily arranged, and I consider the force to be efficient.

TENTH REPORT of Colonel *John Kinloch*, Her Majesty's Inspector of the Constabulary of *Scotland*, for the Year ending 15th March 1868.

GENERAL REPORT.

To the Right Honourable *Gathorne Hardy*, M.P., Her Majesty's Principal Secretary of State for the Home Department.

Sir, Logie, Kirriemuir, N. B., 25 April 1868.

General Report

I HAVE the honour to lay before you this, my Tenth Annual Report, on the state and efficiency of the Police Forces of the counties and burghs in Scotland.

The increase to the pay of the police last year has been attended with satisfactory results; there has been a diminution in the number of resignations and dismissals, and there are more applications from candidates as vacancies occur.

Most forces, both of counties and burghs, are divided into two or more classes, but in some the number in the first and second is so much limited that promotion is too slow to induce many good men to continue in the service for the length of time necessary to obtain a step to a higher class, when, after all, the additional pay is not above from 1*s.* to 1*s.* 6*d.* per week. If no limit were put on the number allowed to be in the first or second class, when duly qualified, good men on attaining that position would be more willing to remain, and the public would have the advantage of the services of experienced men instead of the recruits who take their places.

I have been told that if there were no limit, the force might soon consist of first-class constables only, and thus increase the expense. It is the interest of the chief officers at the head of forces, as well as of the ratepayers, to have really experienced and efficient men under their command, and they would not promote men into the first class unless duly qualified.

An intelligent and experienced constable is in reality a cheaper servant to the ratepayer, at first-class pay of 20*s.* to 21*s.* per week, than the recruit who takes his place at 17*s.* 6*d.* per week, and who cannot in general be considered thoroughly to know his duties under a year's service.

In Roxburghshire and Selkirkshire the upper classes of constables are not limited, but open to any who prove themselves fit for promotion.

I have in my reports for the last 10 years recommended the establishment of a superannuation and retiring fund for officers and constables of county and burgh forces, and every year convinces me more strongly that it is essentially necessary to preserve the efficiency of the police. Such a measure is most anxiously looked for by every officer and constable in the country, and I beg leave to urge this, most earnestly, to be taken into consideration, and carried into effect as early as possible.

Superannuation fund.

The only superannuation fund in the burghs is that at Greenock.

In Kincardineshire, as I have formerly reported, the lives of the constables are insured for the sum of 70*l.*, to be paid to them on attaining the age of 55, or at their death, if it should take place before that time.

General Report.

The expense of insurance is divided equally between the county and the constable; the rate, of course, depends on the age of the insured.

During last year a constable died at 32 years of age, and of only four years' service, and his widow and family immediately received 70*l.* His annual premium of insurance was 2*l.* 4*s.* a year, or less than 6*d.* a week to himself and the county.

Counties.

I have been able to report all the county forces efficient, with the exception of Stirlingshire.

Supernumeraries.

The vacancies that still take place show the disadvantage of not having a few supernumerary constables at head quarters in training, to qualify them to take charge of vacant beats, instead of, as at present, sending recruits entirely ignorant of their duties as police constables; indeed, a force is never kept up to its authorised strength, where frequent vacancies take place.

Police stations.

A number of new stations with lock-ups have been erected in Lanarkshire; one in Fife; one in Dumfriesshire; one in Linlithgowshire; and one at Stornoway in Ross-shire.

Extra duties.

In a few counties the constabulary act as inspectors of nuisances, sanitary improvements, and lodging-houses in towns and villages, but the forces are generally too weak to enable them to undertake these duties effectually, as they occupy much of their time.

Co-operation of county and burgh forces.

I regret to find that there is not such cordial co-operation between some of the county and burgh police forces as there ought to be for the public interest. The union of these forces, in terms of the 61st section of the Act, would remedy this fault, and would provide a more efficient police for all parties concerned.

Dismissed constables.

The rule of the Secretary of State, prohibiting any person who has been dismissed from any police force from being appointed in any other police force, is not so strictly observed as it ought to be; the heads of some police forces not making themselves sufficiently acquainted with the antecedents of candidates, particularly of those who have left other police forces. This rule requires to be rigidly enforced.

Burghs.

I regret to be unable to report the police force of the Burgh of Inverness as having been efficient during the last year, it having been too much reduced in numbers.

Nine small burghs, that I have for the last 10 years reported inefficient, continue in the same state as before.

Police stations.

In the City of Glasgow extensive additions and improvements have been made to the Cowcaddens and Gorbals stations; and a large and complete station is being built for the Calton district.

At Govan a good station has been erected, containing offices, cells, and accommodation for most of the men of the police force.

At Galashiels a good station has also been built, with cells, and providing lodgings for two men of the force.

The station at Dunfermline has been enlarged and improved.

Many of the stations in other burghs still require improvement, particularly at Falkirk, in the county of Stirling; the station there being too small, and the lock-ups very bad, as I have formerly reported.

The station and cells at Helensburgh are also bad; but it is proposed to erect a new police station.

The

The office and lock-ups at Leith have been enlarged.

During the Fenian alarm most of the county and burgh police forces were provided with arms (revolvers and cutlasses), and the officers and constables instructed, more or less, in the use of them; but, happily, they were not called into use.

Special constables.

Large bodies of special constables were enrolled in some of the counties and burghs, particularly in Ayrshire, Dumfriesshire, Lanarkshire, and Renfrewshire, and in the city of Edinburgh, and burgh of Leith.

The chief constables of Ayrshire and Lanarkshire took an active part in the organisation of the special constables in their respective counties.

Vagrancy.

By the annexed Return of 62,076 cases of vagrancy reported by the police, there is an increase in 24 counties, and a slight decrease in seven. The increase amounts to 12,702 (3,009 children) above that of the year before. The number of children in the present Return (13,762) being 22 per cent. of the total number.

The "Trespass Act" is found to be very easily evaded, as vagrants find so many people ready to allow them to lodge on their premises.

The vagrants seem to come from all parts of the country; some are English, and a good many Irish; the latter, during the last year, in many instances denied their connection with Ireland, but their names and accent betrayed them.

The children, a new generation, are fast treading in the footsteps of their parents; most of them are without education of any kind, except in begging and pilfering.

The amount that is given to these people by farmers, cottagers, their wives and servants, in the country, in money, food, and other perquisites, and lodgings (from a mistaken feeling of charity), would keep more than double the number of the unfortunate paupers in their parish poorhouses. So long as this custom prevails the police are powerless, and vagrancy increases as a profitable occupation and trade. Some legislative measure is loudly called for, in all parts of the country, to suppress or diminish this crying evil. It is well described by Lieutenant General Cartwright in his last Report on the constabulary of the central district of England and North Wales:

"The question of vagrancy is one of very great importance, particularly as connected with crime; but until some regular system is adopted, indiscriminate relief withheld, and professional vagrants equally treated by the magistrates, the drone will live upon the bee, and mendicancy will thrive notwithstanding the partial efforts to suppress it."

The above quotation is equally applicable to vagrancy as it prevails at the present time in Scotland.

As some of the vagrants are reported by several constables in the same county, the actual number of vagrants may amount to above 20,000 persons, or one-third of the number of cases of vagrancy reported by the Police.

Salmon-fishing protection.

The convictions of breaches of the "Tweed" and other salmon-fishing Acts have exceeded those of the year before by 64, and the fines and expenses of prosecutions exceed those of last year by 799 *l.* 4 *s.* 1 *d.*

General Report.

Counties.	Rivers.	Persons Convicted.	Fines and Expenses.
			£. s. d.
1. Berwickshire -	Tweed and its tributaries.	47	151 16 6
2. Peeblesshire -		74	648 3 3
3. Roxburghshire -		98	531 18 3
4. Selkirkshire -		44	165 18 –
		263	£. 1,497 16 –
1866-67 -	- - - -	191	651 9 11
	Increase - - -	72	£. 846 6 1
5. Dumfriesshire -	Esk, Annan, and Solway.	50	£. 129 17 –
1866-67 - -	- - - -	58	176 19 –
	Decrease - - -	8	47 2 –
	Total Increase - -	64	£. 799 4 1

These results show, that while salmon poaching continues, the police have been active and successful in obtaining 313 convictions, and that the offenders were fined to the amount of 1,627 *l.* 13 *s.*, including expenses, and those who did not pay their fines were punished by imprisonment.

Detectives.

The employment of a staff of a few experienced detectives, to assist local detectives and police constables in the country, in cases of importance and difficulty, would be attended with valuable results.

Weights and measures.

The inspection of weights and measures is now very generally placed under the police in counties and in many of the burghs; the counties of Nairn, Renfrew, and Sutherland having recently followed the example of others.

Police Gazette.

I have again strongly to recommend that a "Police Gazette" for Scotland should be established for the use of the police, and all persons employed in the prevention and detection of crime, as information of crimes and offences are not, and cannot be circulated so quickly and extensively by the heads of police forces.

The number of officers and constables in counties amounts to 1,021 (being 18 more than the year before), or one to 1,801 inhabitants; in burghs to 1,861 (being an increase of 60), or one to 630. Total, 2,882, or one to 1,040, according to the Census of 1861 (excluding the county of Orkney and Shetland).

I have, &c.
(signed) *John Kinloch.*

LIST of BURGHS that have United with their respective Counties, in Terms of the 61st Section of the Act 20 & 21 Vict. c. 72.

John Kinloch.

COUNTIES.

No. 1.—ABERDEENSHIRE.

Population in 1861	159,569
Area in acres	1,270,740
Strength of force	79
Population to each constable	2,019

One chief constable, one superintendent, seven inspectors, six serjeants, and 64 constables in three classes.

Seven constables have been added during the year; two in Peterhead, for night duty, and five for the new "Aberdeen District."

A constable is stationed at Balmoral, and paid by Her Majesty.

The burgh of Peterhead forms a separate police district of the county.

The burghs of Fraserburgh, Huntly, and Inverurie are united with the county under the 61st section of the Act.

A new district has been formed of some of the suburbs of Aberdeen, lying within the Parliamentary burgh, containing above 12,000 inhabitants, and is called the "Aberdeen District;" for which a serjeant and nine constables are appointed, half of whom are on duty at night; thus affording a protection to the residents that was much required.

The new station at Lumsden is finished and occupied.

Twenty-one of the officers, serjeants, and constables are appointed sheriff's officers.

Four constables resigned during the year, three of them to obtain other situations.

638 vagrants, 207 of them children, were reported by the police, being three more than the year before.

The "Trespass Act" appears to have been more effective here than in other counties.

The force has been maintained in a good state of efficiency and discipline.

No. 2.—ARGYLESHIRE.

Population in 1861	79,724
Area in acres	2,083,126
Strength of force	46
Population to each constable	1,733

One chief constable, two superintendents, two inspectors, one detective, three serjeants, and 37 constables in three classes.

One constable has been added to the force, and is stationed at Tighnabruach, in the Kyles of Bute. Three constables resigned.

The force for the protection of herring fishing in Loch Fyne has now been reduced to one man, a serjeant, "trawling" for herrings having recently been legalised.

A new station with office has been erected for the head quarters' staff at Lochgilphead, but is not yet quite finished.

A station at Inverary, the capital town of the county, is much required; and the station at Dunoon is much in need of enlargement and improvement for the resident inspector and the six constables of that district, which includes Inellan, Kirn, and Sandbank—populous places, particularly in summer and autumn.

2,252 vagrants, 1,213 of them children, were reported by the police, being 386 more than last year.

The force is efficient.

Counties.

No. 3.—Ayrshire.

Ayrshire.

Population in 1861 - - - - - -	167,103
Area in acres - - - - - - -	650,156
Strength of force - - - - - -	91
Population to each constable - - - -	1,836

One chief constable, four superintendents in two classes, three inspectors in two classes, 12 serjeants in two classes, four detectives, and 67 constables in three classes.

One inspector has been added to the force during last year.

A constable is employed by the Girvan Salmon Fishing Association, and two on railways in course of formation in the county.

The burgh of Maybole is united with the county, in terms of the 61st section of the Act, and pays for two constables.

The continued and rapid increase of mines and manufactories, and the consequent increase both of population and crime, necessitate an increase in this force, which has been recommended by the Police Committee to be submitted to the next county meeting.

The merit class, and "good service" pay after five years of good conduct, are wise and just rewards to deserving officers and constables.

The alarm that prevailed during part of the past year called into existence a large force of special constables; about 6,500 were enrolled and organised by the chief constable, Captain Young, in a very efficient manner.

A good and complete station-house has been erected at Troon for a married serjeant and a single constable, with office, guard room, and three cells for prisoners, with wash-house and other out-buildings.

There were 14 vacancies during the year, 11 resignations, two dismissals, and one discharged as inefficient.

12,527 vagrants were reported by the police, 415 of them children, being 938 more than last year.

The force has been maintained in a good state of efficiency and discipline.

No. 4.—Banffshire.

Banffshire.

Population in 1861 - - - - - -	52,149
Area in acres - - - - - - -	439,219
Strength of force - - - - - -	18
Population to each constable - - - -	2,897

One chief constable, one inspector, two serjeants in two classes, and 14 constables in three classes.

The same as last year as to number and rate of pay.

Ten of the serjeants and constables are provided with station-houses rent free.

372 vagrants were reported by the police, of whom 101 were children, being 66 less than the year before.

This force has been maintained in a satisfactory state of efficiency for the last year.

No. 5.—Berwickshire.

Berwickshire.

Population in 1861 - - - - - -	36,613
Area in acres - - - - - - -	309,375
Strength of force - - - - - -	23
Population to each constable - - - -	1,592

One chief constable, one superintendent, one inspector, one detective, three serjeants, and 16 constables in five classes.

This force is the same as to numbers and rate of pay as last year.

Three constables resigned.

Counties.

Twenty-one men (one inspector, two serjeants, and 18 constables) were employed to protect salmon fishings in the Tweed, including its mouth and the sea coast.

Six constables were employed to enforce the game laws, from August to February.

Forty persons were convicted of salmon poaching, and fined 151 *l.* 16 *s.* 6 *d.*; one boat and 197 nets were seized and forfeited.

A new police station is to be erected at Coldstream, for four consables, with two cells.

664 vagrants, 228 of them children, were reported by the police, being 35 less than last year.

The force is efficient.

No. 6.—Buteshire.

Buteshire.

Population in 1861	9,209
Area in acres	109,375
Strength of force	7
Population to each constable	1,315

One chief constable, one serjeant, and five constables in three classes.

This force continues the same, as to number and rate of pay, as the year before.

The serjeant is stationed in Arran.

The chief constable has now been provided with a room for an office at Rothesay.

A station with lock-up is much required at Millport in the island of Cumbrae, where a house for the constable can only be obtained at a very high rent.

Forty-five vagrants, 12 of them children, were reported by the police, being 14 more than the year before.

The force is efficient.

No. 7.—Caithness-shire.

Caithness-shire.

Population in 1861 (about)	42,000
Area in acres	455,708
Strength of force	18
Population to each constable	2,333

One chief constable, three serjeants, and 14 constables in two classes.

Three constables have been added to the force to do duty in the burghs of Wick and Pulteneytown.

There were four vacancies during the year, three resignations, and one dismissal.

The serjeant at Thurso is allowed 30 *l.* a year for a horse, and providedwith a stable for keeping a horse, and dogcart, and outlay of expenses when on duty from home.

No station or lock-up has yet been erected at Lybster, although authorised by the county for several years past.

Tinkers inhabit caves on the sea coast; being "uninclosed places," they cannot be interfered with by the "Trespass Act."

632 vagrants, 103 of them children, were reported by the police, being 11 more than the year before.

The burghs of Wick and Pulteneytown are now patrolled by eight constables, belonging to three different police establishments, not working cordially together, but each independently, under their own separate authorities. It is time this dispute were settled, as the result is most unsatisfactory.

The force is efficient.

Counties.

No. 8.—Clackmannanshire.

Clackmannanshire.

Population in 1861	15,010
Area in acres	29,744
Strength of force	7
Population to each constable	2,144

One superintendent, one serjeant, and five constables in two classes.

There is also a constable employed by the railway company.

One constable has been promoted to be serjeant, and one has been dismissed.

470 vagrants, were reported by the police, of whom 195 were children, being 110 less than last year.

The force is efficient.

No. 9.—Cromartyshire.

Cromartyshire.

Population in 1861	2,267
Strength of force	None.

No police force has yet been established in this county, and no return of vagrants has been kept.

No. 10.—Dumbartonshire.

Dumbartonshire.

Population in 1861	31,566
Area in acres	189,844
Strength of force	22
Population to each constable	1,435

One chief constable, one superintendent, one inspector, two serjeants, and 17 constables in two classes.

This force is the same as last year, as to numbers and rate of pay.

Eleven married men, including the inspector, two serjeants, and eight constables, have houses provided by the county, and pay 1*s.* per week; the others receive 1*s.* per week for lodging money.

There were seven vacancies, three resigned on getting better situations, two were recommended to resign, being unfit for the service, and two were dismissed.

1,620 vagrants were reported by the police, 619 of them children, being 477 more than last year.

The force is efficient.

No. 11.—Dumfries-shire.

Dumfries-shire.

Population in 1861	61,983
Area in acres	722,813
Strength of force	32
Population to each constable	1,936

One chief constable, one superintendent, one inspector, four serjeants in two classes, one detective, and 24 constables in two classes.

The strength of this force and the rate of pay are the same as for the year before.

There are seven constables employed for the protection of fishings in the county.

There have been nine vacancies during the year, three deaths, four resignations, and two dismissals.

The superintendent, inspector, and 19 serjeants and constables are provided with

with stations or houses; the others have 2 *s.* per week, if married, and 1 *s.* 6 *d.* if single, for lodging money, in addition to their pay.

A new station has been erected at Gretna, and one is to be built at Moffat, and a house is to be provided at Dunscore.

There were 50 convictions under the different Fishing Acts in the county, for which fines were imposed to the amount of 129 *l.* 17 *s.*

There were also 26 convictions under Poaching Acts, and 13 under the Trespass Act.

8,677 vagrants were reported by the police, 2,762 of them children, being 2,602 more than the year before.

A merit class has been established; five receive 1 *s.* per week after five years' service.

The force is efficient.

No. 12.—County of Edinburgh, or Mid-Lothian.

Population in 1861	72,248
Area in acres	254,300
Strength of force	46
Population to each constable	1,570

One chief constable, one superintendent, four inspectors, four serjeants, and 36 constables in four classes.

This force is the same as to numbers and rate of pay as the year before.

An extra constable is stationed at Portobello during the summer.

There are also two constables employed at Granton Harbour, and one by the Edinburgh Water Company, three on railways in course of formation in the county, and two extra constables watching the powder magazine.

The burghs of Musselburgh and Portobello continue to be united to the county for police purposes.

The station in the new buildings at Portobello is now occupied by the police, instead of the one temporarily used for the last two or three years.

There were 13 vacancies in the force, three dismissals, and nine resignations, the latter for other employments.

The progressive rates of pay continue in force; two constables were added to the merit class, and two promoted to the first and second class.

The chief constable is employed as procurator fiscal to the justices of peace, and to the magistrates of the burghs of Musselburgh and Portobello.

1,742 vagrants, 371 of them children, were reported by the police, being 431 more than the year before.

No station has yet been provided at Duddingston, and the one at Jockslodge is in the same state as formerly reported.

The force is efficient.

No. 13.—Elgin, or Morayshire.

Population in 1861	35,152
Area in acres	340,000
Strength of force	15
Population to each constable	2,343

One chief constable, two serjeants, and 12 constables in three classes.

The same as to numbers and rate of pay as last year.

The burgh of Forres is united with the county for police purposes.

A good station has been erected at Knockanda, for which the lord of the manor, Mr. Grant, of Elchies, gave the site, a good large garden, and contributed 50 *l.* to the expense of the building.

A station and lock-up is very much required at Fochabers.

710 vagrants were reported by the police, 192 of them children, being 17 less than the year before.

The force is efficient.

Counties.

No. 14.—Fifeshire.

Fifeshire.

Population in 1861 - - - - - -	138,967
Area in acres - - - - - - -	322,031
Strength of force - - - - - -	59
Population to each constable - - - -	2,355

One chief constable, one superintendent, four inspectors, four serjeants, and 49 constables in three classes.

This force continues the same as to numbers and rate of pay as the year before.

There is also a constable at Kingsbarns paid by landed proprietors in the neighbourhood, and another at Kelty, in a mining district, who is paid half by this county, and partly by the county of Kinross, and partly by private parties in the neighbourhood.

I have already reported this force as weak in numbers for the extent and amount of population, particularly for a mining and manufacturing population, and the great amount of crimes and offences that the police have to deal with.

The chief constable's criminal return of last year shows these to have been, as usual, very numerous. Simple thefts alone have increased 50 per cent. above the year before.

The detection of offences against property is high, being 92 per cent.

This result effected by a force so weak in numbers is very creditable to it, and appears to show that a stronger force might prevent some of the crimes that are committed; prevention is better, and less expensive, than detection and conviction.

The burghs are especially weak in the number of constables appointed 10 years ago on their uniting with the county for police purposes, and I consider the time has arrived for a rearrangement of the agreements made with the burghs by the county, and that they should, like others with police forces of their own, have a sufficient number of men to provide a night watch or patrol. This is particularly necessary in the burghs of Kirkcaldy and St. Andrew's.

There have also been a great number of fatal and other accidents, suicides, fires, and shipwrecks, all of which are investigated by the police.

Cholera raged to a serious extent in some parts of the county, 197 cases of which were fatal. The police were employed in carrying out sanitary measures during the period of its existence in the county.

There were 12 changes in this force, seven resignations, and five dismissals; of the former, one was from bad health, and five obtained better situations.

A new police station for a serjeant and constable has been erected at Newport, but no provision has been made for warming the cells in winter.

A new station is to be provided at Leuchars, where it has long been much required, and another at Ferryport on Craig, in place of the former one, which is now out of lease.

The general distribution of the force requires to be reorganised, and the weak points strengthened.

In addition to an increase in the burghs of Kirkcaldy and St. Andrew's, the Denhead beat is too extensive for one man to protect efficiently; there is no resident constable at the populous fishing village of Buckhaven, and the mining districts in the west are still weakly protected.

The constable at Kelty might with advantage to that district be wholly employed in the county of Fife alone, and withdrawn entirely from Kinross-shire.

A considerable increase appears also in the number of vagrants, there having been 4,898 (790 of them children), being 638 more than the year before.

Notwithstanding the numerous and responsible police duties that devolve on the chief constable in this great county and the united burghs, he is also required to act as procurator-fiscal to the justices of peace, and attend petty session courts, prosecuting road offences, public-houses, and shebeens and poachers; these are not the duties of a chief constable or other police officer, and occupy his time and attention that ought to be devoted to police duties.

The force appears to have been efficient during the past year, but I consider it my duty most strongly to recommend it to be increased in numbers during the present year.

Counties.

No 15.—Forfarshire.

Population in 1861	61,917
Area in acres	568,750
Strength of force	32
Population to each constable	1,935

Forfarshire.

One chief constable, two superintendents, two inspectors, four serjeants, and 23 constables in five classes.

The same as to numbers and rate of pay as last year.

There were three resignations during the year.

There is a constable at Brechin Castle, paid by the Earl of Dalhousie, and one is employed on the Forfar and Dundee Railway.

A superintendent and inspector are stationed in Dundee, the head-quarters of the Dundee division, which consists of 16 parishes.

There is a great amount of crimes and offences committed in this populous district, in some years as much as in the 39 parishes in the Forfar district, and the force is particularly weak in the Dundee division.

Broughtyferry, a populous newly-created burgh, is in this division, for which only two constables are appointed, and there is no police station or lock-up; persons taken into custody require to be conveyed to Dundee, a distance of four miles, thus depriving the burgh of one of its already too weak force, and at times when the whole of them are required there. Prisoners can be conveyed by railway during the day, but at night the constable must march his prisoner to Dundee on foot, or hire a carriage. There is no office or room at Dundee for the superintendent, inspector, and constables of the division who may require to go there on duty, to transact the police business in, which has long been found to be very inconvenient.

The ferry from Fife is not so regularly attended on the arrival and departure of steamers as it ought to be, and was formerly the case; and there is no night watch or patrol in the streets.

The station and lock-up at Newtyle are very indifferent, and require to be enlarged and improved.

2,254 vagrants, 180 of them children, are reported by the police, being 1,282 more than the year before.

The force appears to have been efficient during last year, but I consider an increase is now necessary at Broughtyferry, to provide some protection at night, and also an office or room at Dundee for the police business to be transacted in, and with lock-ups for persons taken into custody by the constables of that division.

No. 16.—Haddingtonshire, or East Lothian.

Population in 1861	29,941
Area in acres	185,937
Strength of force	26
Population to each constable	1,151

Haddingtonshire, or East Lothian.

One chief constable, one superintendent, one detective, three serjeants, and 20 constables in five classes.

The same as to numbers and rate of pay as last year.

One detective and three constables resigned.

Two constables are employed as inspectors of nuisances and lodging-houses and cleaning in towns and villages in the county.

1,454 vagrants were reported by the police, 201 of them children, being 142 more than the year before.

This force is maintained in a good state of efficiency and discipline.

Counties.

No. 17.—Inverness-shire.

Inverness-shire.

Population in 1861	76,389
Area in acres	2,723,501
Strength of force	37
Population to each constable	2,064

One chief constable, one superintendent, three inspectors, two serjeants, and 30 constables in three classes.

The same as to numbers and pay as the year before.

A new superintendent has been appointed in place of the one who was obliged to resign from bad health.

One constable resigned, and one was dismissed.

A new station, with lock-ups, has been built at Portree, in the Isle of Skye.

Stations with lock-ups are much required for the use of the constables in the west and north of the county, at wide distances from each other and from head-quarters at Inverness, and where suitable accommodation for the men and their families cannot be found.

1,104 vagrants, 396 of them children, were reported by the police, being 97 more than the year before.

The force is efficient, but there does not appear to be such cordial co-operation between the police of this county and that of the burgh as there ought to be.

No. 18.—Kincardineshire.

Kincardineshire.

Population in 1861	34,466
Area in acres	252,250
Strength of force	16
Population to each constable	2,152

One chief constable, three serjeants, and 12 constables in three classes.

There have been three vacancies in the force; one by death, one superannuated, and one resigned.

The advantage of the insurance on the lives, and providing a retiring allowance at 55 years of age for the constables, as is done in this county, was proved on the death of one who had been only four years in the force; his life was insured, at the age of 27, for the sum of 70 *l.*, to be paid to himself if he lived to the age of 55, and to his widow or heirs on his death. His widow immediately received the 70 *l.* on his death.

The annual amount paid for this constable was only 2 *l.* 4 *s.* a year, half by the county, which was therefore less than sixpence a week to each party.

The station at Laurencekirk has been improved.

448 vagrants, 127 of them children, were reported by the police, being four less than the year before.

The force is efficient.

No. 19.—Kinross-shire.

Kinross-shire.

Population in 1861	7,977
Area in acres	49,531
Strength of force	5
Population to each constable	1,595

One superintendent, and four constables in two classes.

Two vacancies were caused by transferring two constables to Perthshire.

A constable is stationed at Kelty, in Fife, who also does police duty in this county, being paid 5 *l.* by the county, and the rest by subscription from private parties.

This force was under the chief constable of Perthshire, but the superintendent is to be promoted to this place next year.

The weights and measures have not been placed under the constables, as was proposed

proposed last year, but under an inspector who is not connected with the police force.

The police constables of this county do not visit the public-houses, as those of other forces, both of counties and burghs.

485 vagrants, 110 of them children, were reported by the police, being 75 more than last year.

The force is efficient.

No. 20.—Kirkcudbrightshire.

Population in 1861	38,849
Area in acres	610,734
Strength of force	18
Population to each constable	2,158

One chief constable, one superintendent, two serjeants, and 14 constables in two classes.

The same as to numbers and rate of pay as last year.

Two constables resigned last year.

Nine men of the force occupy station-houses rent free.

1,819 vagrants, 143 of them children, were reported by the police, being 145 more than the year before.

There were four convictions of the Trespass Act during the year.

The force is efficient.

No. 21.—Lanarkshire.

Population in 1861	176,452
Area in acres	593,680
Strength of force	157
Population to each constable	1,123

One chief constable, five superintendents, eight inspectors, 16 serjeants, and 127 constables in three classes.

Four constables have been added to the force during last year: one in the Airdrie, one in the Lanark, and two in the Wishaw districts.

There are also four constables employed on the railway in course of formation between Holytown and West Calder.

There were 22 vacancies during the year: three deaths, six resignations, and 13 dismissals.

The rate of pay continues the same as the year before.

The superintendents of divisions are provided with horses and spring-carts for conveying prisoners and the weights and measures.

40 *l.* a year is allowed to each superintendent for the keep of the horse, in addition to his salary of 150 *l.* a year.

The weights and measures continue to be under the charge and inspection of the county police.

Thirteen new police stations are being built, and expected to be finished and occupied in spring: in the Airdrie district, at Bellshill, Chapelhall, and Whifflet, for two constables each; in Hamilton district, at Cambuslang, Carfin, and Strathaven, for two constables in each; in the Lower Ward district, at Bishopsbriggs, Millarston, Moodiesburn, and Shettleston, for two constables each; in the upper ward, or Lanark district, at Carnworth, for two; and at Crossford and Leadhills, for one constable each; being 13 stations for 24 married men.

3,000 special constables have been enrolled in the county; the chief constable assisted in their organisation.

3,200 vagrants, 850 of them children, were reported by the police, being 199 more than the year before.

The force has been maintained in a good state of efficiency and discipline.

Counties.

No. 22.—Linlithgowshire.

Linlithgowshire.

Population in 1861	38,645
Area in acres	64,375
Strength of force	21
Population to each constable	1,840

One chief constable, one superintendent, one inspector, one serjeant, and 17 constables in three classes.

The same as to numbers and rate of pay as the year before.

There were seven resignations in the force during the year, one being the superintendent, on being appointed governor of the Linlithgowshire poor-house.

Bathgate and neighbourhood form a separate police district.

There are five constables employed on the railways: three by the Caledonian and two by the North British.

There are nine stations, accommodating 10 constables. One is in course of erection at Broxburn, and a new one is to be built at Whitburn.

The men occupying station-houses pay 1 *s.* per week for rent; those not provided with houses receive 1 *s.* per week for lodging money.

976 vagrants, 206 of them children, were reported by the police, being 17 less than the year before.

The force has been maintained in a good state of efficiency and discipline.

No. 23.—Nairnshire.

Nairnshire.

Population in 1861	10,065
Area in acres	137,500
Strength of force	6
Population to each constable	1,677

One chief constable, one serjeant, and four constables in two classes.

One man resigned for a better situation.

The burgh of Nairn is united with the county, and pays for two constables.

A police station is to be erected in Nairn, with office, room for weights and measures, and accommodation for the serjeant and one constable, and cells for prisoners.

279 vagrants, 86 of them children, were reported by the police, being 41 more than last year.

The force is efficient.

No. 24.—Peebles-shire.

Peebles-shire.

Population in 1861	11,408
Area in acres	226,488
Strength of force	8
Population to each constable	1,426

One chief constable, one serjeant, and six constables in two classes.

The same as to number and rate of pay as the year before.

There were three resignations: one by a constable, appointed town officer of Peebles, and two others, elderly men, obtained other less active employment.

Four constables are employed permanently, and eight temporarily, by the Tweed Commissioners for the protection of salmon in the River Tweed and its tributaries; they receive 20 *s.* per week, and are provided with the county police uniform.

Seventy-four persons were convicted of salmon poaching under the Tweed Fishing Acts," and fined to the amount of 648 *l.* 3 *s.* 3 *d.*, including 91 *l.* 18 *s.* 3 *d.* of expenses. Fifty-four paid the fines, five absconded, and 15 were imprisoned in default of payment.

A number

A number of leisters, nets, and other articles for the destruction of salmon were seized by the police.

The police station, containing office, and good accommodation for the serjeant and one constable, and four cells, is now occupied.

Five vagrants were convicted under the Trespass Act.

2,037 vagrants, 791 of them children, were reported by the police, being 754 more than the year before. Of these 964 were Irish, few of whom admitted they had any connection with Ireland; but their names and accent betrayed them.

The force is efficient.

No. 25.—Perthshire.

Population in 1861	106,900
Area in acres	1,814,063
Strength of force	56
Population to each constable	1,908

One chief constable, two superintendents, two inspectors, seven serjeants in two classes, two detectives, and 42 constables in three classes.

An additional constable has been appointed and stationed at Alyth.

There were six vacancies during the year; a detective and constable dismissed, three resigned, and one reported as "discharged."

The pay of the first class constables has been raised to 21 *s.* per week, limited to seven; second class to 19 *s.*, limited to 14; while 21 remain in the third class at 17 *s.* 6 *d.* a week.

Officers, serjeants, and constables occupying station-houses, pay 1 *s.* per week for rent.

There is still a great need of stations in the western part of the county, where houses for the police can with difficulty be obtained.

5,324 vagrants, 1,625 of them children, were reported by the police, being 628 more than last year.

The Trespass Act is much evaded in this county by persons giving vagrants leave to lodge in or on their premises.

This force is efficient.

No. 26.—Renfrewshire.

Population in 1861	77,304
Area in acres	150,000
Strength of force	43
Population to each constable	1,797

One chief constable, one superintendent, four inspectors, seven serjeants, one detective, and 29 constables in two classes.

A detective has been added to the force and stationed in the eastern district, where an officer of this description was much required.

Two constables are to be added to the burgh of Port Glasgow, which is united with the county for police purposes.

The force in the eastern, or Pollockshaws district is still weak in numbers for the great and increasing population.

There were nine vacancies: one death, five resignations, and three dismissals.

1,132 vagrants, 220 of them children, were reported by the police, being 206 more than last year.

The force is efficient.

Counties.

No. 27.—Ross-shire.

Ross-shire.

Population in 1861	77,648
Area in acres	2,016,375
Strength of force	28
Population to each constable	2,773

One chief constable, two superintendents, one inspector, two serjeants, and 22 constables in three classes.

The same as to numbers and rate of pay as the year before.

There were three resignations and two dismissals.

An additional constable might with advantage be stationed in the Lochalsh and Kintail district.

A superintendent and five constables are stationed at Stornoway and other places in the Island of Lewes.

A new station has been built at Stornoway, and is nearly finished.

There were 17 less crimes and offences reported by the police in the mainland, and 25 more in the Island of Lewes, than last year.

There were 299 vagrants, 58 of them children, reported by the police, being 92 more than the year before.

The force is efficient.

No. 28.—Roxburghshire.

Roxburghshire.

Population in 1861	39,114
Area in acres	460,938
Strength of force	36
Population to each constable	1,086

One chief constable, one superintendent, two inspectors, three serjeants, and 29 constables in four classes.

The same as to number and pay as last year.

There were seven resignations and two dismissals.

There are eight constables employed permanently by the "Tweed Commissioners," and by the "Esk and Liddesdale Fishery Association," for the protection of salmon.

Ninety-eight persons were convicted under the Tweed Acts, and fined to the amount of 531 *l.* 18 *s.* 3 *d.* including expenses, 24 of whom were sent to gaol in default of payment.

1,785 vagrants, 346 of them children, were reported by the police, being 843 more than the year before.

Twelve vagrants were convicted under the Trespass Act.

The force has been maintained in a good state of efficiency and discipline.

There is no limit to the number of constables in the first and second classes, they are open to all who are properly qualified and deserving of promotion.

No. 29.—Selkirkshire.

Selkirkshire

Population in 1861	7,449
Area in acres	170,313
Strength of force	8
Population to each constable	931

One inspector, and seven constables in three classes.

The chief constable of Roxburghshire is also chief constable of this county.

Three constables resigned during the year.

Five constables were employed permanently, and five temporarily by the "Tweed Commissioners," for the protection of salmon.

Forty-four persons were convicted under the "Tweed Acts," and fined to the amount

amount of 165 *l.* 18 *s.*, including expenses, nine of whom were sent to prison in default of payment.

956 vagrants, 100 of them children, were reported by the police, being 540 more than last year.

The force is efficient.

There is no limit to the number of constables in the 1st and 2nd classes; as in Roxburghshire, they are open to all who are properly qualified and deserving of promotion.

No. 30.—Stirlingshire.

Population in 1861	78,212
Area in acres	295,875
Strength of force	35
Population to each constable	2,120

One chief constable, two superintendents, five serjeants, and 27 constables in three classes.

This force is the same as to numbers and rate of pay as the year before.

Two constables have been appointed by the "Carron Company," for their iron works at Carron.

There were six vacancies: four resignations, one dismissal, and a superintendent died.

I reported last year the necessity of increasing the force for the burgh of Falkirk, and to provide a night watch and patrol, the three constables being insufficient in number. I also stated "that it was with considerable hesitation I could on that occasion report the force of the county as efficient in numbers, while Falkirk and its vicinity continued without more police protection."

I regret to find that no addition has been made by this county, and I am therefore unable to report this force as having been efficient during the last year.

I also reported the want of more lock-ups being provided in the eastern or Falkirk division, and the unfitness of those in the burgh for the purpose, and which I had also stated to the Police Committee for several years past, but nothing has been done to enlarge and improve them.

The want of more accommodation for persons taken into custody is shown by the number of persons locked up in this district during last year, and compared with the Stirling or western division. There were 135 in the Alva, Denny, and Kilsyth stations in the Stirling division, and 509 in the eastern, with only the two small cells at Falkirk to accommodate whatever number there might be imprisoned at a time.

In addition to more accommodation for prisoners being required at the station in Falkirk, the (head-quarters of the eastern division) lock-ups are much required at Grangemouth and Slamannan; and at Bridge of Allan and Lennoxtown, in the Stirling division.

3,644 vagrants, 969 of them children, were reported by the police, being 2,742 more than the year before.

No. 31.—Sutherlandshire.

Population in 1861	25,246
Area in acres	1,207,188
Strength of force	9
Population to each constable	2,805

One chief constable, one serjeant, and seven constables in three classes.

The same as to number as the year before.

The salary of the chief constable has been raised from 200 *l.* to 210 *l.* a year.

Constables occupy station houses rent free. Two constables, without houses, were allowed 1 *s.* 6 *d.* per week for lodging money.

There was one resignation.

Counties.

An extra constable is appointed at Helmsdale during the herring fishing season.

Three constables were employed on the railway to Golspie during its formation.

New stations have been provided at Golspie and Helmsdale.

288 vagrants, 87 of them children, were reported by the police, being 171 more than the year before.

The force is efficient.

No. 32.—Wigtownshire.

Wigtownshire.

Population in 1861 - - - - - - -	38,115
Area in acres - - - - - - - -	327,815
Strength of force - - - - - - -	16
Population to each constable - - - -	2,382

One chief constable, one superintendent, one serjeant, and 13 constables.

The same as to numbers and rate of pay as the year before.

There were three resignations and two dismissals.

There is still only one constable at Newton Stewart, an important station, including a populous town and a considerable extent of country to patrol and protect.

A police station with a lock-up is much required at Stranraer, it being the head-quarters of the western division of the county. The station and lock-up at Port Patrick are bad, and the one at Newton Stewart is much in need of improvement.

629 vagrants, 59 of them children, were reported by the police, being 506 less than the year before.

The force is efficient, but I consider it is now necessary to appoint an additional constable at Newton Stewart.

CITIES AND BURGHS.

No. 1.—City of Aberdeen (County of Aberdeen).

Aberdeen.

Population in 1861 (about)	62,000
Strength of force	89
Population to each constable	696

One superintendent, two lieutenants, two detectives, eight serjeants in two classes, and 76 constables in three classes.

There is one constable less than last year.

There were 14 vacancies: four deaths (a lieutenant and three constables), and 10 constables resigned.

No increase has been made to the pay of this force.

Five constables are lodged in the temporary police station now occupied until the new one is erected; it has been found very convenient having these men lodged in the station, and immediately available for duty when suddenly required.

I have recommended the authorities to provide lodgings for a greater number of the men in future.

The force is efficient.

No. 2.—Airdrie (County of Lanark).

Airdrie.

Population in 1861	12,918
Strength of force	11
Population to each constable	1,174

One superintendent, one inspector, one serjeant, and eight constables in three classes.

This force remains the same, as to numbers and rate of pay, as the year before.

There was one vacancy in the force.

The superintendent is inspector of the weights and measures, common lodging houses, and of sanitary measures of the burgh.

The police force acts as a fire brigade, and takes charge of the fire engines.

The force is efficient.

No. 3.—Alloa (County of Clackmannan).

Alloa.

Population in 1861	6,440
Strength of force	4
Population to each constable	1,610

One superintendent, one serjeant, and two constables in two classes.

Two constables resigned.

The pay of the constables has been raised 1 *s.* per week, and they are allowed free lodgings, coals, and gas.

The force is efficient.

No. 4.—Annan (County of Dumfries).

Annan.

Population in 1861	3,473
Strength of force	2
Population to each constable	1,736

One superintendent and one constable.

The same as last year, and is efficient.

Cities and Burghs.

No. 5.—Arbroath (County of Forfar).

Arbroath.

Population in 1861	17,657
Strength of force	16
Population to each constable	1,103

One superintendent, three serjeants, in two classes, and 12 constables in three classes.

One constable has been added to the force, one resigned, and one was dismissed. The third class are promoted to the second, after a year's good conduct service.

The force is efficient.

No. 6.—Ardrossan (County of Ayr).

Ardrossan.

Population in 1861	2,951
Strength of force	1
Population to each constable	2,951

The police force of this burgh consists of the "burgh officer," and is inefficient.

No. 7.—Ayr (County of Ayr).

Ayr.

Population in 1861	8,219
Strength of force	10
Population to each constable	821

One superintendent, two serjeants, and seven constables in two classes.

The police cells still afford "protection" to many vagrants and others who apply for a night's lodging in them.

The force appears to be efficient.

No. 8.—Banff (County of Banff).

Banff.

Population in 1861	3,939
Strength of force	3
Population to each constable	1,313

One superintendent and two constables.

The same as to numbers and rate of pay as the year before, and is efficient.

No. 9.—Blairgowrie (County of Perth).

Blairgowrie.

Population in 1861	3,600
Strength of force	2
Population to each constable	1,800

One superintendent and one constable.

A new superintendent and a constable have been appointed.

This is a small force for so populous a manufacturing town; but the police duties appear to have been efficiently performed during the year. An additional constable will probably be required ere long.

The cells, as reported last year, have been improved, and are now sufficient for the purposes intended.

Cities and Burghs.

No. 10.—Brechin (County of Forfar).

Population in 1861	7,180
Strength of force	6
Population to each constable	1,196

Brechin.

One superintendent, one serjeant, and four constables in two classes.

There has been one vacancy in the force during the year.
The same as to numbers and rate of pay as the year before, and is efficient.

No. 11.—Cromarty (County of Cromarty).

Population in 1861	1,491
Strength of force	1
Population to each constable	1,491

Cromarty.

This burgh continues to employ one constable, and is inefficient.

No. 12.—Dumbarton (County of Dumbarton).

Population in 1861	8,253
Strength of force	7
Population to each constable	1,179

Dumbarton.

One superintendent, one serjeant, and five constables in three classes.

A serjeant has been appointed during the last year. There were two resignations.
The force is efficient.

No. 13.—Dumfries (County of Dumfries).

Population in 1861	10,440
Strength of force	10
Population to each constable	1,044

Dumfries.

One superintendent, one serjeant, and eight constables in three classes.

There were three resignations and two dismissals in the force during the year.
The office and cells are now in good order, and the force is efficient.

No. 14.—Dunbar (County of Haddington).

Population in 1861	3,796
Strength of force	3
Population to each constable	1,265

Dunbar.

One superintendent, and two constables in one class.

This force is the same as last year, and is efficient.

No. 15.—Dundee (County of Forfar).

Population in 1861	90,425
Strength of force	123
Population to each constable	735

Dundee.

One superintendent, two lieutenants, five inspectors, eight serjeants in two classes, four detectives, and 103 constables in three classes

The same as to organization, number, and rate of pay, as the year before.
There were 30 vacancies during the year, being three less than the year before: 15 resignations, and 15 dismissals.

Cities and Burghs.

There is only one sub-station, that at Lochee, in this large burgh, with now more than 100,000 inhabitants. I have before reported the great want of sub-stations, with lock-ups, in the eastern and western parts of the town, which are inconveniently distant from the central office, but none have yet been provided. I consider the efficiency of the police would be much increased by sub-stations erected as above mentioned, and with some of the constables lodged in them, as at Lochee.

Three married and two unmarried constables are lodged in the Lochee sub-station, and 14 single men in the central station.

The force is efficient.

No. 16.—Dunfermline (County of Fife).

Dunfermline.

Population in 1861	13,504
Strength of force	9
Population to each constable	1,500

One superintendent, one serjeant, and seven constables.

The bounds of the burgh of Dunfermline now include that part of the Parliamentary burgh that has hitherto been a separate police district of the county, containing 5,103 inhabitants. Three constables have been added to the burgh force, in consequence of this augmentation.

The pay of the superintendent has been raised from 115 *l.* to 140 *l.*, and a serjeant has been appointed. These changes took place on 1st January 1868.

There were two resignations and one dismissal.

The police station has been enlarged and improved, with good cells.

The force is efficient.

No. 17.—City of Edinburgh (County of Edinburgh or Mid-Lothian).

Edinburgh.

Population in 1861	168,098
Strength of force	337
Population to each constable	498

One superintendent, four lieutenants, three inspectors, 10 detectives, 19 serjeants, and 286 constables in five classes; also two superintendents' clerks, one court officer, three main office keepers, and eight station-house keepers=337 effectives.

There are also maintained on the police establishment of the city, one assistant criminal officer, one assistant serjeant, six constables (elderly men), and 11 assistant constables, making 356 persons in all.

Twenty-four constables are also employed by the Government, banks, and other public offices, and paid by them.

The force has been increased by two constables during the year.

There have been 51 vacancies in the force, being 21 less than the year before: four deaths, 30 resignations, and 17 dismissals.

Sixteen men were absent from my inspection, from sickness.

The superintendent and two lieutenants have houses rent free. None of the serjeants or constables are provided with lodgings at any of the stations, or elsewhere.

Of the six constables (elderly men) who receive 13*s.* per week, the average age is 64 years; the average length of service 29½ years.

Of the assistant criminal officer, assistant serjeant, and the 11 assistant constables who receive 7 *s.* per week, the average age is 69⅓, and average length of service 32⅔ years.

These elderly men, who have served the best part of their lives in the police service, have no pension, superannuation, or retiring allowance to look forward to when quite unfit for further duty. In the meantime they are employed in the lightest duties in the police offices. A superannuation fund is most urgently called for in this force, still more so than in any other police force in Scotland.

I have in former reports pointed out the want of sub-stations in those parts of the city situated far from the central office in High-street. The neighbourhood of the new station of the Caledonian Railway, in Lothian-road, or at Fountain Bridge,

Bridge, would be a most convenient locality for a police station, and to provide accommodation for some of the force. Another sub-station appears also to be required in the southern part of the city, near Grange or Morningside. Fire engines might also be kept at the stations, under charge of the police, as there are none at present within a convenient distance of these districts, where the population is increasing. Cities and Burghs.

The authorities have now under consideration the employment of a few mounted constables to patrol round the suburbs and outskirts of the city, and who would certainly be very useful.

The pay of the superintendents' clerks are 37*s.* and 29*s.* per week; court officer, 33*s.*; main office keepers, 28*s.* and 25*s.*; and station-house keepers, 25*s.* per week.

The force is efficient.

No. 18.—City of Elgin (County of Elgin).

Population in 1861	7,543
Strength of force	6
Population to each constable	1,257

Elgin.

One superintendent, one serjeant, and four constables in two classes.

The same, as to numbers and rate of pay, as the year before.

The force is efficient.

No. 19.—Forfar (County of Forfar).

Population in 1861	9,258
Strength of force	7
Population to each constable	1,322

Forfar.

One superintendent, one serjeant, and five constables.

A constable has been added to the force; one died; there were no resignations or dismissals.

The force is efficient.

No. 20.—Galashiels (County of Selkirk).

Population in 1861	6,944
Strength of force	6
Population to each constable	1,157

Galashiels.

One superintendent, one serjeant, and four constables in two classes.

There were three resignations during the year.

A good office and cells have been erected, with accommodation for two of the constables; and the force has been maintained in a state of efficiency.

No. 21.—City of Glasgow (County of Lanark).

Population in 1861	403,276
Strength of force	805
Population to each constable	501

Glasgow.

One chief constable, seven superintendents, 21 lieutenants, 26 inspectors, 24 detectives, 50 serjeants in three classes, and 676 constables in five classes, =805 effectives.

There are also maintained in the police establishment of the city, one surgeon, five district surgeons, two powder-magazine keepers, three storekeepers and tailors, four lamp-trimmers, 11 waiters, and six female turnkeys—in all 837 persons.

Cities and Burghs.

There have been 50 added to the city force during last year, 46 of the Clyde, or marine division, and four extra constables.

Nineteen men were absent from the inspection: 15 sick, three on leave, one suspended.

There were 154 vacancies during the year, being 35 less than last year: 10 deaths, 45 dismissals, 92 resignations (of which 10 emigrated), five desertions, and two superannuations.

The increase to the pay has tended to diminish the number of resignations and dismissals.

The marine division, formerly under the "Clyde Trustees," now forms part of the city of Glasgow police force, and consists of 46 officers, serjeants, and constables.

The Southern or Gorbals station has been considerably enlarged, and extensive additions have been made to the Cowcaddens station. A house adjoining the latter affords good accommodation for eight officers and constables.

A new station is in course of being erected for the Calton district, containing ample accommodation for offices, and cells for prisoners. This is estimated to cost 14,000 *l.*

Ninety-five married and 109 unmarried officers, serjeants, and constables, 204 in all, are provided with lodgings in the stations, or in houses in the immediate neighbourhood.

Detectives receive 6*l.* a year in lieu of clothing.

This force has been maintained in a good state of efficiency and discipline.

No. 22.—Govan (County of Lanark).

Govan.

Population in 1861 - - - - - -	12,092
Strength of force - - - - - -	14
Population to each constable - - - -	863

One superintendent, one inspector, one serjeant, and 11 constables in three classes.

The same as to numbers as last year.

The pay of the superintendent has been raised from 140 *l.* to 160 *l.* a year.

There were four resignations and four dismissals.

A new police station has been erected, with offices and good accommodation for most of the men of the force, and cells for prisoners.

The population of Govan increases rapidly, owing to the number of public works in full employment.

The force is efficient.

No. 23.—Greenock (County of Renfrew).

Greenock.

Population in 1861 - - - - - -	42,100
Strength of force - - - - - -	104
Population to each constable - - - -	404

One superintendent, four lieutenants, three inspectors, two detectives, nine serjeants in two classes, and 85 constables in four classes, being an addition of four constables, in consequence of the extended area of the burgh requiring police protection.

There were 29 changes in the force, being 20 less than the year before: one death, 23 resignations, and five dismissals.

There are always a great number of changes in this force, particularly by resignations, which I understand is owing to the very high price of lodgings in this overcrowded burgh, and shows the necessity of providing lodgings for the men at a moderate rent, which could easily be done by the authorities renting or building houses for them, and sub-letting them at a moderate rent, which would still pay the expense, and not incur more to the ratepayers.

The population of this burgh has greatly increased since 1861.

The

The superannuation fund, the only one established in any burgh in Scotland, continues to give general satisfaction. The magistrates have power to grant gratuities out of the fund to the widows and children of any members dying in the service, but this can only be done to a limited extent. Cities and Burghs.

The force is efficient in numbers and discipline.

No. 24.—Haddington (County of Haddington).

Haddington.

Population in 1861	3,897
Strength of force	3
Population to each constable	1,299

This force now consists of a superintendent and two constables, and appears to have been efficient during the last year.

No. 25.—Hamilton (County of Lanark).

Hamilton.

Population in 1861	10,686
Strength of force	9
Population to each constable	1,187

One superintendent, two serjeants, and six constables in two classes.

There were two resignations and one dismissal.

This force is the same as to number and rate of pay as the year before, and is efficient.

No. 26.—Hawick (County of Roxburgh).

Hawick.

Population in 1861	10,684
Strength of force	9
Population to each constable	1,187

One superintendent, two serjeants, and six constables in two classes.

A new superintendent has been appointed, and a second serjeant.

There were two resignations, and one discharged on account of ill-health.

The station, office, and cells are kept in good order, and the force is efficient.

No. 27.—Helensburgh (County of Dumbarton).

Helensburgh.

Population in 1861	4,749
Strength of force	7
Population to each constable	678

One superintendent, one serjeant, and five constables in two classes. The same as the year before.

There were three resignations and one dismissal.

The cells are, as formerly reported, in a very bad state, but I am informed new town buildings are to be erected, and a police office and cells provided.

The force appears to have been efficient during the year.

No. 28.—Inverness (County of Inverness).

Inverness.

Population in 1861	12,499
Strength of force	13
Population to each constable	961

One superintendent, three serjeants, and 9 constables in three classes.

At my inspection on the 6th of March last, I found that three constables had been struck off the strength of the force on the 1st July last year.

Cities and Burghs.

I consider that this was too sudden and too great a reduction; and the efficieney of the force was still further weakened by the superintendent being prevented from incurring expenses for the pursuit and capture of criminal offenders.

I regret, therefore, that I can only report this force as having been efficient from the 16th March to 30th June 1867, and inefficient from 1st July 1867 to 15th March 1868.

The railway company employ and pay for a constable in charge of the station.

The town of Inverness is long and straggling, and extends to the locks of the Caledonian canal. The town is divided by the river Ness into nearly two equal parts, being, it may be said, two towns for the police to patrol and protect.

The population has considerably increased since 1861; there are public works connected with the railways, and they (the railways) bring great numbers of tourists and visitors during a considerable part of the year; so the population in the town greatly exceeds the number of the census of 1861.

The criminal return of the last six months, since the reduction of the force, shows an increase beyond that for the same period of the year before, the majority of the cases being theft, and some of them of an aggravated nature.

The superintendent is inspector of weights and measures, of lodging houses, and the sanitary measures in the burgh.

There does not appear to be so cordial a co-operation between the police force of this burgh and that of the county as there ught to be.

No. 29.—Johnstone (County of Renfrew).

Johnstone.

Population in 1861 - - - - - -	7,007
Strength of force - - - - - - -	6
Population to each constable - - - - -	1,168

One superintendent, one serjeant, and four constables in three classes.

There were eight vacancies in this force during the year.

Five resigned for other appointments, and three were dismissed.

The fire-engines are in charge of the police; and the force appears to have been efficient, notwithstanding the numerous changes.

No. 30.—Kelso (County of Roxburgh).

Kelso.

Population in 1861 - - - - - -	4,309
Strength of force - - - - - -	3
Population to each constable - - - -	1,436

One superintendent and two constables.

No changes have been made in this force, either in nnmber or rate of pay, and I consider it is not efficient in number for so large and important a burgh.

No. 31.—Kilmarnock (County of Ayr).

Kilmarnock.

Population in 1861 - - - - - -	20,698
Strength of force - - - - - -	18
Population to each constable - - - -	1,150

One superintendent, one inspector and detective, two serjeants in two classes, and 14 constables in four classes.

The inspector, serjeant, and constables have 1 *l.* a year for boot money in addition to their pay.

There were two resignations, and two dismissals.

The cells are not yet provided with means for warming them in winter.

The force is efficient.

Cities and Burghs.

No. 32.—Kirkintilloch (County of Dumbarton).

Population in 1861	7,486	Kirkintilloch.
Strength of force	4	
Population to each constable	1,871	

One superintendent, one serjeant, and two constables.

The same as to number and rate of pay as the year before, and is efficient.

No. 33.—Kirriemuir (County of Forfar).

Population in 1861	3,425	Kirriemuir.
Strength of force	1	
Population to constable	3,425	

There is a superintendent, assisted by three men, who light the lamps, and clean the streets when required.

The superintendent is an active, intelligent, police officer, but I cannot report this as an efficient force.

An office and two cells have been provided during last year.

The superintendent's salary has been raised from 67 *l.* to 80 *l.* a year.

No. 34.—Leith (County of Edinburgh).

Population in 1861	33,628	Leith.
Strength of force	64	
Population to each constable	525	

One superintendent, one inspector, three detectives, eight serjeants, and 51 constables in three classes.

The same as to numbers and rate of pay as last year.

There were 23 vacancies during the year, one detective died, eight constables resigned, and 14 were dismissed.

Additional accommodation for cells has been provided, which was very much required.

The force is maintained in a good state of efficiency and discipline.

No. 35.—Macduff (County of Banff).

Population in 1861	3,067	Macduff.
Strength of force	2	
Population to each constable	1,533	

This force consists of two constables, but I cannot report it as an efficient force.

No. 36.—Maryhill (County of Lanark).

Population in 1861	5,225	Maryhill.
Strength of force	7	
Population to each constable	746	

One superintendent, one serjeant, and five constables in three classes.

The same as to numbers and rate of pay as the year before.

The force is efficient.

No. 37.—Maxwelltown (County of Kirkcudbright).

Population in 1861	3,646	Maxwelltown.
Strength of force	1	
Population to constable	3,646	

This force consists of one constable, assisted by a man who "watches at night," and is inefficient.

Cities and Burghs.

No. 38.—Montrose (County of Forfar).

Montrose.

Population in 1861	14,563
Strength of force	15
Population to each constable	970

One superintendent, three serjeants in two classes, and 11 constables in three classes.

A serjeant and constable resigned during the year.

Third class constables are promoted to the second class after a year's good service.

The force is efficient.

No. 39.—Newburgh (County of Fife).

Newburgh.

Population in 1861	2,300
Strength of force	1
Population to constable	2,300

No addition has been made to this force; there is still only one constable, an inefficient force.

No. 40.—Paisley (County of Renfrew).

Paisley.

Population in 1861	47,419
Strength of force	44
Population to each constable	1,078

One superintendent, one lieutenant, one inspector, four serjeants, and 37 constables in three classes.

The same as to numbers and rate of pay as the year before.

There were 10 vacancies, one death, and nine resignations.

The force is efficient.

No. 41.—Partick (County of Lanark).

Partick.

Population in 1861	10,917
Strength of force	17
Population to each constable	642

One superintendent, three serjeants, and 13 constables in three classes.

The same as to numbers as the year before.

The superintendent's pay has been increased from 140*l.* to 160*l.*, and the serjeants have been increased 1*s.* per week.

There were five resignations and one dismissal.

A constable is employed at the new college buildings at Gilmorehill, and paid by the contractor.

The force is efficient.

No. 42.—City of Perth (County of Perth).

Perth.

Population in 1861	23,000
Strength of force	27
Population to each constable	851

One superintendent, two inspectors, three serjeants, two detectives, and 19 constables in three classes.

This force is the same as to numbers and rate of pay as the year before.

There were two resignations and one dismissal.

I have already, in former reports, described the want of proper accommodation for

for prisoners, the cells being small, dark, and badly ventilated, and too few for the number of persons that are from time to time confined in them. Cities and Burgh

A new police station with office, charge-room and cells is much required.

Vagrants are still permitted to claim "protection" or lodgings in the cells, already too limited for the purpose for which they are intended.

The force appears to have been efficient during the past year.

No. 43.—Pulteneytown (County of Caithness).

Population in 1861 - - - - - about	5,000	Pulteneytown.
Strength of force - - - - - - -	3	
Population to each constable - - - -	1,666	

One chief officer and two constables.

This force, consisting of one "chief officer" with 50 *l.* a year and two constables with 15 *s.* per week, is maintained by the Commissioners of Pulteneytown.

The Commissioners of Supply claim the right to assess this burgh for police purposes, and there are now two different police forces employed.

The Pulteneytown force is inefficient.

No. 44.—Renfrew (County of Renfrew).

Population in 1861 - - - - - -	3,731	Renfrew
Strength of force - - - - - -	4	
Population to each constable - - - - -	932	

One superintendent, one serjeant, and two constables in two classes.

The same as to numbers as the year before.

The serjeant and constables have houses rent free.

The force is efficient.

No. 45.—Rothesay (County of Bute).

Population in 1861 - - - - - -	7,122	Rothesay.
Strength of force - - - - - -	6	
Population to each constable - - - - -	1,187	

One superintendent, and five constables in three classes.

The same as to numbers and rate of pay as the year before.

The new office and cells are kept in good order, and the force appears to have been efficient during the last year.

No. 46.—Stirling (County of Stirling).

Population in 1861 - - - - - -	13,714	Stirling.
Strength of force - - - - - -	14	
Population to each constable - - - -	979	

One superintendent, two serjeants, and 11 constables in two classes.

This force is the same as to numbers and rate of pay as last year.

There were two resignations and two dismissals.

The force is efficient.

Cities and Burghs.

No. 47.—Stranraer (County of Wigtown).

Stranraer.

Population in 1861 - - - - - -	6,274
Strength of force - - - - - -	5
Population to each constable - - - -	1,254

One superintendent and four constables.

The same as the year before.

The force appears to have been efficient during the last year.

No. 48.—Wick (County of Caithness).

Wick.

Population in 1861 - - - - about	2,000
Strength of force - - - - - -	2
Population to each constable - - - -	1,000

One superintendent and one constable.

An additional constable is appointed during the herring fishing season, for about two months.

The Commissioners of Supply of the county claim the right to provide a police for the burgh, so both forces are employed at present.

The Wick force is inefficient.

POLICE (SCOTLAND).

REPORT of the INSPECTOR of CONSTABULARY for the Year ended 15th March 1868, made to Her Majesty's Principal Secretary of State under the Provisions of the Statute 20 & 21 Vict. c. 72.

(*Presented pursuant to Act of Parliament.*)

Ordered, by The House of Commons, *to be Printed,*
22 *May* 1868.

296.

Under 8 *oz.*
